IT is the last day in October; such as even that month can seldom produce. Scarlet, gold, crimson, purple, in every direction. The ash trees, that run down the hillside highway, shade royal purple. Water maples are groves of crimson, and the valley is as full as the hillsides, as far as the eye can see, of wealth of color. No flowers can compare with this ripe leafage. Magnolias hang heavy in great brown foliage—ready to drop tomorrow. The beeches and the oaks are a deep brown, while a sweet odor of luscious ripeness fills the absolutely unstirred air. Persimmon trees are yet of the deepest green, but the fruit in great golden clusters nestles in the leaves. In the orchard the Spys have a warm, yellowish red, and the Swaars hang in rich golden festoons. It seems a crime to strip the fruit of the deep, dark red Spitzenburgs and the red McIntosh from the overfull trees. You smell the Walter Pease everywhere —the triumph of apple breeding. And everywhere, everywhere, leaves drop, drop, drop, in gold, in crimson and in purple.

We walk in the garden of the gods. The winds even are worshipful in silence. The holy music of infinite peace enthralls them. Then winds become voiced and murmur softly, making the leaves to fall zigzaging, like shuttles of love weaving the purposes of the year into joy and rest. No one can now help being glad that this is a work world. *Laborare est orare;* worship and work are one. The heart beats a new song, and that song is gratitude and love to Him who fills all and wills all.

The leaf is the cloth of Nature, woven on the loom of life. It is the transformation of air into matter that shall be transformed into soil. It is the gift of the year to the earth born. Only man is fool enough to waste them. They are the world's wealth—the annual creation. Out of them we shall grow our fruits, our vegetables and our roses. The transformation is slow, but what insanity is it that burns leaves, and sends back Nature's gift into the atmosphere.

Leaves are not wholly ours until they fall. On the trees they have not only the specific office of elaborating life, but of shading the trunk from the hot sunshine. The tree always lives and carries on its functions in a bower of shade. It cannot go on without this shelter; otherwise the bark splits and decay begins. They also throw off clean oxygen, for the purification of the air. But it is in October that the trees hold their glad holiday, a farewell to their foliage. Then the leaves are allowed to drop for man's use. Now

they become garden stuff, and incipient vegetables, and other such things as love sweet humus and deep soil. For the present they will be a warm carpet for the earth, and a mulch for the lawns, and a bedding for the cattle; in them the boys will kick their way hunting beechnuts; and in the drifted piles the rodents will hide their hoards. Ah, but this fragile leaf is really a wonderful thing, and it is most wonderful of all when it gives up its life on the road of evolution.

What a carpet is this! Your millionaire, in his drawing rooms, has nothing to rival the poorest cottager's lawn carpet; and why should not we have our fine things out of doors as well as in? Every hue in serenest blending, and so exquisitely soft to the tread! Down the road comes the barefooted urchin, kicking his way thru the leaves with a song; then suddenly stops to listen and look about, for a poem is finding birth in the boy's brain.

The sun goes down in gold. The air is full of specks of gilded dust—not haze; and the very air itself is yellow. The Norway maple is canary color, and has a sunset of its own. The apple pickers down behind the barn shout as they start the huge loads houseward.

Tonight there will be a husking bee in neighbor North's barns and yards. The clean, dry stooks stand around in great masses. The leaves rustle as you touch them; and the cows in the stable, hearing the familiar sounds, moo softly with anticipation. A squirrel, on thievish errand, jumps thru; and the farmer laughs, for he knows that the overflow of his field must go to a very wide clientage of Nature's children. Happy hens get lost winding thru the mazes, here and there picking at an exposed ear. Tonight the huskers will sit on piles of sweet beech leaves, and as the ears fly, so will also fly the jokes.

An October evening is a nocturne without words, a rhythm without end. It needs no moon. Our senses are reversed, for now we see and we hear thru smell and touch. The leaves are under foot, instead of overhead; and in death they are sweeter than in life. Yet an October moonlight is never perfect until seen thru the bared limbs of the ash and the butternut. These are the real trees, with their brawny limbs; the leaves are only a summer clothing. As they drop from the limbs the fruits are more apparent. Birds of passage, traveling all night, just at daybreak, drop down into our vineyards, or on to our mountain ash trees. What a carnival! They eat all day; perhaps two days, and then at night move on southward. These are not our robins; they are less civilized. Evidently they are not overfed, and in these gardens of ours they find a rare good feast. So hungry are they that they waste half of the berries. When they leave us, they leave behind no beauty nor feasts for other birds. Let us also migrate! The leaves have fallen; the fruit is gathered; why should we stay? Oh wonderful October! Oh days that are poems! Oh thoughts that are mellow as new cider! Oh juices of the happiest of the months! Oh leaves that have finished their work and gone on! Man also moves forward.

Mr. Hearst's Insincerity

It is true that Mr. Hearst gave to the Government the documentary evidence by means of which the New York Central & Hudson River Railroad Company has been convicted of violating the law forbidding discrimination in freight rates. Upon the same evidence, or other similar written statements, it is expected that other carriers and the Sugar Trust will be found guilty. Mr. Hearst also, by litigation conducted at his own expense, procured for the Government much evidence relating to the combination alleged to have been made by railways for control of the anthracite coal industry. We had in mind these acts of his when we said, three weeks ago, that he had used his money and his influence to enforce justice. These acts were a part of the record which led many to believe that he was sincerely and unselfishly a friend of the people and a champion of honesty and purity in politics.

Proof of his insincerity was seen in the alliances by which his nomination at the Buffalo Convention was procured. We have already spoken of the character of the men who represented his interests in that convention and of the shameful acts by which they accom-

plished their purpose. Since the adjournment of the convention abundant additional proof of his insincerity has been brought to light. It serves in many ways to exhibit the contrast between his professions and his practice, both in politics and in business. What his professions have been everybody knows. Day by day he has been setting them before the public in his newspapers.

An extraordinary statement of irreconcilable differences has been built up during the progress of the brief campaign. We recall nothing like it in the record of any other candidate for public office. Let us begin with the convention. Mr. Hearst had constantly asserted that he was the bitter foe of bosses and boss rule. The boss whom he hated most of all was Charles F. Murphy. In his papers he was never weary of calling this man all sorts of names, of threatening him with the penitentiary, of publishing cartoons showing him in prison clothes. "He should be in Sing Sing, wearing stripes." With this man he joined hands to obtain the nomination. He was willing to take it from one who, his papers had said, was "as evil a specimen of the criminal boss as we have had since the days of Tweed." And, having asked the public to believe that he stood for honesty in elections, he took a nomination for which his representatives prepared the way by a brutal exclusion of many delegates who had been regularly and fairly chosen.

Mr. Hearst has professed to be fighting for independent courts and unbossed judges. Less than a year ago he said:

> "The people have reason for anxiety when they hear Mr. Jerome say that the Judges go hat in hand to Murphy, for they know that Murphy goes hat in hand to Ryan, and they see that Ryan keeps his hat on, dictating with a nod or through some trusted corrupt subordinate what shall be done by those whose orders should come from the people only."

And it was with this same Murphy that he divided the judicial nominations, permitting the Tammany boss to name six for the Supreme Court, while he took four. Of course, neither he nor Murphy would accept any of the worthy gentlemen named by the non-partisan committee of the New York Bar. Professing to oppose corporations and lawyers employed by them, he accepted Murphy's men who had been in the service of corporations, of the Beef Trust and the Theatrical Trust.

Corporations that evade the law, tax dodgers, New Jersey holding companies for trusts or for groups of corporations —these Mr. Hearst had denounced daily. And yet it has been shown that his own corporations have those obnoxious characteristics, that they are controlled by a New Jersey holding company (as the Great Northern and Northern Pacific railroads were, and as the Standard Oil subsidiary corporations are), and that the network of them is so ingenious and complicated that only with the greatest difficulty can process servers or tax collectors get at them. Even Sheriff Erlanger, now a Hearst-Murphy candidate for Judge of the Supreme Court, officially certified that "Mr. Hearst evades service and personal service cannot be had." With respect to no other matter is the difference between Mr. Hearst's professions and his practices more distinct than in regard to corporations and corporate devices.

A professed champion of labor, he chose for chairman of his campaign committee William J. Conners, of Buffalo, a coarse and illiterate man, whose treatment of his employees was the cause of a memorable strike at the docks in that city, a strike in which workmen revolted against a system which required them to take their wages in their employer's saloons. Protesting against the employment of Chinese on the Panama Canal route, because they would displace Americans (who will not work there as ordinary laborers), he is confronted with evidence that for years Chinese have been employed on the Hearst estates in California.

At the close of the life insurance investigation, Mr. Hearst in his papers warmly commended Mr. Hughes, who, he asserted, had done all that could be done in the allotted time. All that is now forgotten. It appears to Mr. Hearst now that Mr. Hughes was a corporation lawyer, the mere tool of powerful insurance company millionaires. And in his papers Mr. Hearst now even asks readers to believe that the remarkable reform laws

which were the fruit of that memorable inquiry are worthless, and were designed to be so by those who framed them.

Mr. Hearst must not be surprised if voters judge him and measure him by this record. He made it deliberately. It has given force to the remark of Mr. Hughes that political sincerity is the great issue of the campaign. We take no pleasure in pointing out these remarkable differences between professions and practice. We sincerely regret that they exist. All honest men who see that they do exist must admit that a candidate having such a record should not be elected to any office. That is our opinion, altho we think that Mr. Hearst was really elected Mayor of New York, and was robbed of the place to which he was entitled. He was asserting until a few months ago, it will be remembered, that Murphy was the robber—the same Murphy with whom he was afterward in alliance at the convention, and with whom he has since divided the possible judicial spoil.

How much effect the exposure of his insincerity will have at the polls we do not know. It ought to be enough to put him out of politics. If he could have come before the people with a clear record of consistency, many thousands of disgusted Republicans, weary of Platt and Depew, Odell, Quigg, and their kind, might not have given their support even to so admirable a candidate as Mr. Hughes. But we cannot think that they will vote for a man the proof of whose inconsistency and insincerity, after having been shown so plainly at the Buffalo convention, has been piling up ever since. And Mr. Hearst needs the support of many who have voted on the Republican side to make up for his inevitable loss of a host of Democrats.

Segregated Chicago

THE announcement by Dean McClintock that the University of Chicago is carrying out plans for the complete separation of the male and female students in all their work excites no surprise. In 1902, when the partial segregation of the classes of the Junior College, that is of the first two years, was proposed, it was generally understood that this meant the abandonment of the principle of coeducation, altho the advocates of segregation loudly asserted that it did not and that it was "merely a question of administrative detail." President Harper, in laying down the rules under which the battle was to be fought, stated as one of them that

> "Those who disapprove of the movement" "should accept the statement of the advocates of the movement that it is not intended to extend the separation to other classes than those which are announced as Junior College course."

Those who did accept the statements of the advocates of the movement—if there were any such—must now realize that their confidence was betrayed.

The movement against coeducation came to the front in February, 1902, when the following question was presented for the consideration of the University Senate:

> "Will the senate advise the trustees of the University to accept a gift of a million or a million and a half of dollars, to be used in erecting, on a separate block of land, dormitories, gymnasium, clubhouse, assembly hall, recitation halls and laboratories, to be used exclusively for women, and, as concerns recitation halls and laboratories, by women in the junior colleges?"

It was explained that this question was "hypothetical," tho it is hard to see why so many months should have been devoted to the discussion of a merely hypothetical question. Our courts refuse to consider hypothetical questions, and the time of professors and trustees is as valuable as that of judges. The trustees unanimously approved of the segregation scheme, but energetic protests on the part of some of the faculty, students and alumni made it necessary to reopen the question.

The president and certain trustees eliminated the financial clause because

> "it was agreed that a mistake had been made in coupling the question of a gift with a question of so much educational importance, inasmuch as it was feared that some might actually believe that the University had permitted the decision of an educational question to be influenced by the probability of a gift for that purpose which might not be secured for another purpose."

Thus authoritatively freed from any suspicion of a hypothetical bribe, the proposal for segregation was forced thru the various faculty bodies and adopted by the trustees in spite of the

fact that fifty-eight of the professors petitioned them to postpone action. The Congregation, which is the most democratic of the University assemblies, voted in favor of coeducation by a vote of three to one, but at a late summer meeting this vote was reversed by two to one. President Harper often stated that in all cases of educational policy the final decision would rest with the members of the Congregation instead of with the trustees. but, unfortunately, he did not see fit to apply it in this case. If a referendum vote had been taken of all the non-resident doctors and members of the faculty who were entitled to be heard on the question, coeducation would have been maintained.

For the alumni of the University, those who bore its name and stood in their respective communities as its representatives and supporters, wanted a chance to do more boasting and less apologizing. The University on its establishment attracted the most enterprising and progressive students of the West and South. It appealed to them because it broke away from scholastic traditionalism and promised to bring higher education in touch with the times. The four equivalent terms, the abolition of the college classes, the flexibility of the courses, the extension of university instruction by lecture and correspondence schools, the establishment of a university press, the emphasis laid on research, the higher salaries for professors, and all its novel and ingenious schematization aroused the interest and enthusiasm of the young people of both sexes.

But a change came over the spirit of the dream.

The University of Chicago has aged rapidly. The first ten years did for her what a century did for Eastern colleges. It has been an artificial aging process like that nowadays used for whisky. Each successive year the alumni returning to their Alma Mater found that her hair had been bleached whiter, and that new wrinkles had been painted on her benevolent face. Traditions were invented, customs imported, and a fictitious scholastic pedigree contrived. Her most loyal alumni were forced to admit that their Alma Mater was afflicted with chronic atavism.

The University of Oxford was taken as a model. They might have done worse, of course. We ought to be thankful that they did not take the University of Cairo. Club life for young men was deliberately cultivated. An elaborate ritual was devised with processions and recessions, gowns and hoods and Latin speeches. A monastic seclusion was held forth as the ideal for the scholar, altho in its earlier days one of the advantages claimed for the University was that it was situated in the heart of a great city, instead of nestling under the elms of a country town. Professor Veblen was able to get all the illustrations of the affectations of aristocracy and caste customs that he needed for his book on "The Theory of the Leisure Class" without going off the University campus.

Segregation of the sexes is a consistent part of the un-American, antidemocratic and reactionary policy now dominant in the University of Chicago. It is announced that young men and women students will meet only on social occasions. If this rule were reversed there would be some sense in it. "We descend to meet" is especially true when applied to the sexes. Good looks, fine clothing and smart conversation become the attractions in set social meetings, but the recognition of the deeper mental and moral qualities comes only from frequent association in daily tasks.

The young woman who knows young men only in dress suits will get a very false opinion of them. "Woman in her hour of ease" is a very inferior creature to woman at work, and it is inevitable that a man who knows her only in the former guise will get an unfavorable opinion of the sex. When a young man gets to looking on women as an amusement his moral ruin is impending, because he can find plenty of women who are very amusing, but not otherwise fitted for his companionship. Men and women will always attract each other, but it is only by meeting in their everyday work as helpmeets and rivals, as comrades and companions, that they will respect each other. All artificial substitutes for such normal mingling, whether devised for scholastic, religious or financial purposes, have resulted in diseased conditions of the imagination.

But the University of Chicago has decided otherwise. It opens its halls when young men and women want to waltz together, and it closes them when they want to study together. The monastery and the convent are to be on separate blocks, with no connection except for the wireless telegraphy that laughs at locksmiths. The botanical department will see to it that only diecious trees are planted and these decently segregated on the proper campuses. We read in the Chicago papers that the Sophomores have ordered the Freshmen to wear green caps. Once there were no Freshman and Sophomore classes and no hazing at Chicago. And quite in harmony with this growing class and caste spirit we hear that one of the dormitories under the control of the Young Men's Association—it is better to drop the word Christian in this connection as manifestly inappropriate—will expel a student from the room he has rented and paid for, because he is a negro. From a university with all the modern improvements Chicago is becoming a university with all the ancient evils.

We have always defended the University of Chicago against the malicious ridicule of the press. We have praised the scholarly products of its seminars and laboratories. We have called attention to the fact that its influence has perceptibly raised the intellectual level of a vast region in the West and South. Therefore we feel we have a right to express our opinion that unless its present tendency is changed the atmosphere of the Midway campus will become so murky with medievalism as to stifle the free-born youths and maidens of the great West. The University should not remain longer acephalous. An energetic, progressive and broadminded president is much needed now to make the University what its friends once hoped it would be.

To Enlarge the Cabinet

THE proposition made by a company of mining authorities at Denver the other day to add to the President's Cabinet a Department of Mining, with a head of full Secretary rank, does not seem likely to meet early approval. The time may come when all our mines shall be owned by the Government, as is the case, for example, with the Russian oil wells at Baku, and perhaps also operated by the Government, which is not the case at Baku; and then a Secretary of Mining will be required. The task of directing all the mines of coal, iron, lead, copper, silver and gold would be an enormous one, and would probably absorb the present Bureau of Geology.

But there is another department which is more likely soon to be required, that of Education. At present we have simply a Bureau of Education under the Secretary of the Interior. In other countries education is a full department, but that is because the national Government directs the interests of education, while in our country education is the business of the State or Territory. There has been left for the Bureau of Education little besides the work of collecting information. Unlike the new Department of Commerce and Labor, which not only collects statistics, but also has much executive work to do, its duties have not been at all executive, except in its charge of the few Indians and Eskimos of Alaska, while the Alaskan whites provide for their own schools.

It was much against Commissioner W. T. Harris's will that the care of the Alaskan natives, in their education, was put in his bureau. Nevertheless, it was for their best advantage that this should be done. The Bureau of Education has been quite out of politics. It has a good record in its escape from the spoils system. It has, with small appropriations, and with a ridiculously small salary for the Commissioner — hardly half that of other Commissioners — done excellent work; and its reindeer herd has not only supplied the best industrial education, but it has assured the Eskimos against extinction.

Commissioner Harris was unwilling to have the work of his bureau enlarged. He had no taste for hustling with Congress and pushing his measures against unsympathetic legislators. He was a student, and his resignation is in part due to his desire to pursue his studies in philosophy. There was a time when the charge of the education of the Indians, now under the Indian Bureau,

would have been given to him if he had been willing to take it, but he objected. Of course the Indian Bureau can continue to care for the Indian schools, but properly they belong to the experts of the Bureau of Education, and we presume that the new Commissioner, who is a man of a different temper, would not object to such a transfer.

The Indian Bureau may be expected to be, like the Indian reservations, a vanishing institution. The Indians are to be rapidly absorbed in the general population, to be under the State laws, to send their children to the common schools, and to be like the rest of us. It it well to hasten the process, and it should be understood that the Bureau's business is to shorten its own life. For this, among other reasons, it would be well to pass the Indians over to a more permanent bureau, even altho Indian schools are not to exist indefinitely.

But the Indians and the Eskimos are not the only possible field of service that properly belongs to the Bureau of Education. To be sure, the Territory of Hawaii is as competent to take care of its own schools as is Massachusetts, but that is not the case with Guam, Samoa, Porto Rico and the Philippines, even altho the expense of the schools is paid from the local revenues. We have no criticism to make here of the conduct of schools in Porto Rico and the Philippines. It has been generally good—remarkably good; and yet we think it would have been quite as good, or better, if the teachers and schools had been under the charge of the Bureau of Education. Besides, it would seem that the general Government should make quite as large an appropriation for teachers as for soldiers. They are quite as efficient officers of the peace. It is they who tranquillize the country. The ten millions of people in those islands will long need the care of American instruction, with the English language taught. The task is enough to require a multitude of teachers and a considerable staff of officials and clerks.

Further, those States which do not find themselves able to provide a full system of schools for all the children should be helped by the general Government. We have no fear of pauperizing any States by helping its school system. We heartily hope that such aid may be given. About this time the tide must turn and the expenses of pensions will rapidly diminish. Some of the money thus saved might well go to help our poorer Southern States. If this were done it would provide yet further work for the Bureau of Education.

But any such enlargement of functions and service would properly require a Cabinet officer in charge of a full department, with its several bureaus. Our Government is serving education scurvily. We give money by the hundred millions for the army and navy, and we grudge a few tens of thousands for education. We know the liberality with which some States have supported schools and even a university, but there are other States which are too poor to do such a work. They have comparatively little wealth, and their people are rural. They need the nation's help. But when the nation gives help, the nation has to guard and control its own appropriations. Not yet, perhaps, but before long we hope that we shall have a Department of Education, and that the nation, thru its Congress, will deal generously in the education of its Indians and Eskimos, of the citizens of the States ravaged by the Civil War, and of the various peoples which inhabit our new possessions. It is not well that we should delay the task of teaching them the principles of liberty and self-government.

The Nation's Wards

It is now twenty-five years since a little company of men and women, representing various religious bodies, met for a three days' session in the sitting room of a missionary, Dr. A. L. Riggs, at Santee Agency, Neb., to consult as to the interests of the Indians. Out of that meeting grew the annual session of the Mohonk Lake Indian Conference, which met last week for the twenty-fourth time with Mr. Albert K. Smiley, and out of it, too, has grown the corresponding Peace and Arbitration Conference at the same place.

The quarter-century has nearly settled the Indian question. Its great prin-

ciples have been fixt along the lines proposed at these conferences. The Indians are being absorbed in the general population, as their reservations are being broken up and they are placed on their several farms. They are taught in schools, are learning industry, and are ceasing to depend on rations from the Government. But meanwhile other races dependent upon us have come to claim our attention, fifty times as many in number as the American Indians. Their interests need protection against selfish greed, and the Mohonk Conferences have done their part to create a strong public sentiment in their behalf.

The time has past when it was safe to say that it was merely vengeance that drove our Government to the war with Spain, or that the attitude of our nation was one of mere selfish exploitation. There has never been a previous example in the history of the world in which so much of altruism has led to the deliverance of a subject, and when people, as in the case of the Cubans and Filipinos, and in which the effort has been made not only to rule them fairly, but also to develop them into independent self-government. The best examples hitherto have been the rule of Great Britain over India and Egypt, but in neither case has the aim been to create self-governing states. The British policy has been well described by Mr. Alleyne Ireland, who sharply criticises our method in the Philippines as Utopian. We believe that what we have attained other races can also attain. This is not only the theory of our foreign missions, but also of our free government, for which any people can be fitted by intellectual and moral culture.

After three days of discussion by those who are best acquainted with the present problems, the Conference at Mohonk Lake made its recommendations. It asked that the revenues derived from our detached possessions be segregated and devoted to their use, after paying the cost of administration. This is only fair; the nation should make no profit out of its new territories, but should rather help them; and accordingly it is recommended that an adequate school system be provided for all children, the cost of which should be supplemented by the general Government where the local revenues do not suffice.

In particular it was recommended for our Indian tribes that the registration of all Indians, with their family relationships, be speedily completed; that the tribal funds be broken up as soon as possible and the individual holdings thus assigned be paid to the Indians as fast as they can learn the use of money; that the courses of study in the larger Indian schools be so extended that graduates can pass directly into the agricultural colleges; that Congress definitely prohibit the use of Indian trust funds for denominational schools; and that Christian churches and other religious bodies be urged to unite for the spiritual uplift of the Indians.

For Alaska it is urged that Indians and Eskimos who can read and write be allowed to vote for the Delegate to Congress; that the general Government provide them with industrial and day schools, with hospitals and sanitary care, that they, as well as the reindeer herd, be kept under the Bureau of Education; and that an ample system of courts of justice be supplied.

For our island possessions it is urged that in Porto Rico citizenship be conferred upon the people, as already recommended by the President; that industrial training be given in the day schools; that trades schools be established; and that the need of hospitals and medical relief be called to the attention of philanthropic organizations. For Hawaii it was particularly recommended, since it has lost the very important income from the customs receipts by annexation, that all excess of customs there received over the cost of administration be returned for education and other needs. And for the Philippines it was urged that the Senate pass the bill already past by the House providing for the reduction of the tariff; and that civil replace military government as fast as possible.

These recommendations represent the steps in advance for which we must aim this year. Each one could be argued at length; together they represent the progressive moral education of our people, as against the indifference of many and the selfishness of certain interests which

would exploit these helpless people for personal advantage. It is nothing less than contemptible, for example, that sugar and tobacco should unite to wrong the Philippine people.

Chinese on the Canal Zone

The announcement attributed to Chairman Shonts, of the Canal Commission, that Chinese had not been engaged for work on the Canal and never would be, probably means that the Government will not directly employ Chinese. This does not exclude the possibility that private contractors may. In fact, it looks as tho the contract system was adopted with a view of relieving the Government from the odium of using Chinese. If there was no intention of getting coolie labor, why did the Commission waste its time in drawing up specifications and getting bids? But we cannot see how the Chinese can be legally introduced into the Canal Zone in any case. Both the United States and the Republic of Panama have laws excluding the Chinese, and the Canal Zone, however ambiguous its status, must belong to one or the other. It is held that the American tariff law does not apply to Panama, but that the American eight-hour law does hold in regard to American labor. Trial by jury, habeas corpus and other constitutional rights are not valid on the Zone, and there is no appeal from its courts to the Supreme Court of the United States. Our employees cannot import tobacco without paying to Mr. Isaac Brandon two or three times its value, for he has been granted the monopoly by the Panaman Government, in violation of its agreement with the United States. But apparently it is held an American contractor can import Chinese, altho this is likewise contrary to Panaman law. The prospect for Chinese labor in Panama is not very good anyway. When the railroad was building, 800 Chinese were imported, but died off as rapidly as any other race. According to Tomes, less than 200 were left when, a few months later, the remnant was shipped to Jamaica. Besides those who died from disease, some became seized with the Oriental suicide mania and strangled themselves with their cues or sat on the Pacific shore until the high tide came up and drowned them. Matachin, a station on the Panama Railroad, gets its name, meaning "dead Chinamen," from this grewsome incident. Now, of course, the sanitary conditions are much improved, but the experiment is a dubious one. The British Government is trying to get rid of the coolie system in South Africa, and would doubtless be glad to have us take off their hands a few of their 54,000 if we want them. After the Chinese are got on the Zone, it will be impossible to prevent them from escaping into the territory of Panama without restraints as strict as those imposed on convict labor, because the jungle extends fifty miles along both sides of the Zone, only five miles away from the Canal route.

Reform by Social Ostracism

THE INDEPENDENT was not of those who ridiculed President Hadley's proposal to secure reform by refusing to invite to dinner the men who had secured wealth by shrewd legal or illegal rascality. That was half a dozen years ago, and now we have seen not a few cases in which the uttered contempt of the public has driven such men into disgraced retirement or even to suicide. Only the other day a millionaire gambler, king of gamblers, shot himself for this reason. The exposure of the conduct of the insurance companies has hastened the death of more than one of their managers; and a United States Senator from New York, formerly very much in the public eye, has been practically in hiding ever since it was shown that he was heavily paid for doing practically nothing. These are only a few illustrations. What President Hadley desired was not so much that such men should be excluded from certain fashionable functions as that they should feel the weight of public condemnation, that the public conscience should be awakened to recognize and condemn the criminality of their character. After all, it is the enlightened and aroused public sentiment that accomplishes the ends of justice, that is stronger than law itself, as it is the creator of law. If we believe conduct is wrong we should say so plainly, and

should not invite the wrong-doer to dinner. Let him be left to his own seclusion, banished from reputable society; and this is very nearly as effective as solitary confinement in prison, when that cannot also be assured.

Labor Treaties

Two very important labor treaties were signed at the recent international diplomatic conference in Berne which deserve wide notice; one by the representatives of seven governments, providing for the prohibition of the use of white phosphorus in the manufacture of matches, and the other by fourteen governments, providing for the prohibition of night work for women in manufacturing establishments employing ten or more female workers. This latter treaty is to be ratified before January 1st, 1909, and is not to be renounced inside of twelve years thereafter. Both treaties were initiated by the International Association for Labor Legislation, and constitute the first great step toward the international regulation of labor conditions. We expect that the respective governments will ratify them and thus inaugurate the beginning of a new era in the policy of labor protection.

Japanese Resentment

The distance from the eyes to the nose is as far as the San Francisco Sandlotters and their allies can see. They have succeeded in making China our enemy, and now they have no care whether they destroy the good will of Japan toward us. At least the Board of Education of San Francisco ought to have been able to see that a rule excluding all Japanese and Korean children, as well as Chinese, from the public schools, and requiring them to attend a separate school by themselves, would provoke the indignation of a people who have good reason to believe that they are as good as anybody else. It was a blunder worse than a crime. It does not pay for us to provoke Japan, with which country we have been on the best of terms. It is among possibilities that one of these days Japan may declare war against the United States; and in that case the Philippines and Hawaii—yes, and the Pacific Coast would be at the mercy—for a while at least—of the Japanese navy. This is a fact worth considering. We do not expect it, but that school board has done its best, by its act of unjust discrimination, to provoke Japan to reprisal. If such a war should ever come—which God forbid—a war which would be mostly on the seas, it is extremely doubtful if with any force which we could command we could at its conclusion drive out the Japanese from Hawaii and the Philippines, which they would surely have seized. Further, if such a war should be deferred a few years China would almost certainly be in it with Japan, and that would be a most serious contingency for our coasts as well as for our island possessions. We are speaking here solely of the danger to us of provoking sensitive neighbors by our contemptuous Anglo-Saxon or Celtic arrogance. There is the higher consideration of Christian decency which it would not be profitable to present to these mischief-makers.

We have seen reports in the press of the death of Mrs. Mary Baker Eddy, founder of the Christian Science body. We have official notice that this is not true in the following note from Mrs. Eddy:

PLEASANT VIEW, CONCORD, N. H.,
October 19th, 1906.

To the Editor of The Independent:

DEAR SIR—Another report that I am dead is widely circulated. I am in usual good health, and go out in my carriage every day.

Yours truly,
MARY BAKER EDDY.

The coat of arms at the head of her letter is guarded by two lions rampant; and the mottoes above and below are: *"Tria juncta in uno"* and *"Vincere aut mori."*

United States Senator Burton, of Kansas, has gone to prison the past week, convicted of violating a reasonable law which was meant to prevent lawmakers from having a pecuniary interest in legislation. And yet it is to be feared that he is not the only Senator that has violated the law, while being its only victim.

Insurance

The New York Life and Its Campaign

THE drastic and very widespread criticism of the New York Life because of the sending out of mutilated ballots has been based upon the assumption that the campaign has been conducted with money belonging to the company's policy-holders. Thousands and tens of thousands of ballots have been sent out containing the printed lists of each ticket as required by the insurance law. One of these ballots has reached THE INDEPENDENT office. It bears the policy number of the insured person to whom it was sent. Thru each and every name appearing on the International Committee ticket an eliminating line has been drawn, leaving only the administration ticket as a voting possibility. Now it is clear that if the cost of sending out these mutilated ballots is charged against the entire body of policy-holders, some of whom might wish to vote the International Committee ticket, an injustice has been done to those opposed to the administration. THE INDEPENDENT is in a position to say, however, that the various officers now in administration of the company's affairs have themselves, out of their own pockets, borne the expenses incidental to the sending out of the campaign literature favoring the election of the "administration" ticket. Those now in executive office in the New York Life have sought to perpetuate themselves in their several offices at their own and not at the company's or the policy-holders' expense. To THE INDEPENDENT the names on the administration ticket, it may also be said, appear as more desirable than do the names on the opposition ticket—altho there are some good names on the latter list.

Nitro-Glycerine Hazard in Robbed Safes

THE State Bank of Carlos, at Carlos, Minn., was recently robbed. Incidents of this kind are by no means uncommon. In point of fact, the activity of safe-breakers is altogether too common. At Carlos the cracksmen demolished the front door of the safe and stole some currency from its outer compartment. Work on the inner portion of the safe had begun when the thieves were frightened away. The morning after, when the burglary was discovered, the cashier of the Carlos Bank sent for a safe expert and together they examined the partially wrecked safe. During the progress of the examination a novel accident took place, by means of which a charge of nitro-glycerine in the chest door was exploded and both men were seriously injured. The nitro-glycerine hazard after a safe robbery may now be reckoned with as a precautionary measure.

JUDGE WARREN D. TARRANT, of the Milwaukee Circuit Court, under date of October 22d, issued an order to the Equitable Life Assurance Society, of this city, to bring to Milwaukee for examination, all its books, records, and memoranda, or as an alternative to allow a thoro examination into its books and records at the company's home office in this city. The contention of the company is that it would be impossible to transport its books to Wisconsin, as a transfer of its records would tie up its world wide business. An immediate appeal will be taken from Judge Tarrant's order.

THE Travelers' Insurance Company, of Hartford, Conn., is now issuing a new contract on the five year convertible term plan. The annual cost of $1,000 of insurance under this plan ranges from $9.55 at the age of 20 to $24 at the age of 54. The contract is convertible into any regular life or endowment form without medical examination, at the pleasure of the insurer, within four years from date of issuance. The new contract will bear the same date as the one for which it is substituted and will carry the company's premium for the age of the insured at that time, provided the difference in premiums at 5 per cent. interest is paid to the company. If desired the new contract will be dated when the change is made, in which case it will be chargeable with the premium for the attained age of the insured. The limit on this form of insurance has been fixed at $10,000.

Financial

Currency Reform at the Bankers' Convention

Discussion of plans for currency reform was unwisely deferred, at the recent thirty-second annual convention of the American Bankers' Association in St. Louis, until the last day, and even then but little time was given to this highly important subject. In the hasty debate there was no indication of an agreement. Finally, the report of the Association's committee was referred to a commission of fifteen, to be appointed by the executive council. This commission was instructed to confer with the special committee of the New York Chamber of Commerce, and "after careful study of plans submitted, to confer with the proper Congressional committee" for the enactment of a bill.

In our judgment, the plan recently proposed by the committee of the Chamber is a very much better one than that of the Association's committee. It will be recalled that the leading feature of the Association's plan is the creation of a National Currency Commission of seven persons, to be appointed by the President, which shall have authority in its discretion to permit the issue, by a national bank, upon a deposit of approved securities, of credit currency up to 50 per cent. of its bond-secured circulation; and also authority to limit the life of this issue, compel the retirement of it by a tax, etc. The Chamber's committee proposes that the elasticity needed to meet the annual fluctuations in demand shall be obtained by authorizing a national bank (whose bond-secured circulation equals 50 per cent. of its capital) to issue additional notes equal to 35 per cent. of its capital, these notes to be subject to a tax so graduated as to insure withdrawal when they are not needed. It would also repeal the law restricting the retirement of notes to $3,000,000 in any month, and would require the deposit in national banks not only of the customs receipts, but also of all surplus money of the Treasury above a reasonable working balance. We hope that the Association's committee while conferring with the committee of the Chamber will be impressed by the advantages of this plan, which have been so clearly set forth in the Chamber committee's excellent report.

G. S. Whitson, vice-president of the National City Bank of New York, was elected president of the Association, and James R. Branch, of New York, was re-elected secretary of the executive council. One of the banking institutions that exhibited a gracious hospitality was the Mississippi Valley Trust Company, which promoted the comfort of many guests, giving to them the service of stenographers and opening its private library and reading rooms for their convenience.

The Bank of England's Rate

Following the Bank of England's advance of its discount rate, last Friday morning, to 6 per cent., prices declined sharply on the New York Exchange and also in London. On Monday there was a partial recovery. Only four times in twenty years has the Bank raised its rate to 6 per cent.; the last time was seven years ago. It seeks to replenish its reserve, which had fallen below the traditional safety line of 40 per cent. At the same time it seeks to check the profuse lending of London capital to American speculative borrowers and to draw back a considerable part of the capital so loaned. The advance to 6 per cent. in 1890 immediately preceded the Baring failure. Nothing of that sort is in sight now; in this country, where speculation—in real estate as well as in securities—has assumed very large proportions, the underlying conditions were never more satisfactory and favorable; nevertheless, this advance in the Bank's rate is a warning that speculative expansion should be checked here.

....At the recent annual meeting of the Chicago & Northwestern Railroad Company an issue of $100,000,000 of stock was authorized.

....Dividends announced:

American Tel. & Telegraph Co., 5 per cent., 3 yr. coupon notes, payable Nov. 1st.

Trenton Potteries Co., Preferred 2 per cent., payable Oct. 25th.

Lord & Taylor, quarterly common 1¾ per cent., payable Nov. 1st.

The Independent

VOL. LXI NEW YORK, THURSDAY, NOVEMBER 1, 1906 No. 3022

Survey of the World

Coming Changes in the Cabinet

It was officially announced at the White House on the 23d that after the retirement of Secretary Shaw and Attorney-General Moody, Postmaster-General Cortelyou would become Secretary of the Treasury, Secretary Bonaparte would be appointed Attorney-General, and Secretary Metcalf would take Mr. Bonaparte's place at the head of the Navy Department; also, that the two new members of the Cabinet would be Oscar S. Straus, of New York, and George von L. Meyer, of Massachusetts. Mr. Straus will be Secretary of Commerce and Labor; Mr. Meyer will succeed Mr. Cortelyou as Postmaster-General. It is said that Mr. Moody will retire at the end of the year, and that Mr. Shaw will remain until March 1st. Mr. Roosevelt has decided to appoint Attorney-General Moody an Associate Justice of the Supreme Court, to fill the vacancy caused by the retirement of Justice Henry B. Brown, altho there is already one Justice from Massachusetts. Mr. Moody is in his fifty-third year and was graduated at Harvard in 1876. He was a member of the House for four terms, and has been Secretary of the Navy as well as Attorney-General.

San Francisco Offends Japan

Some weeks ago the Board of Education in San Francisco adopted a resolution providing that all children of Oriental parentage should be excluded from the public schools and required to attend schools set apart for them. An order giving effect to this resolution began to be enforced on October 15th. It was obeyed by the Chinese and the Coreans, but the Japanese kept their children at home and made formal protest to the Board. Among those who addressed the Board in opposition to the order of exclusion or segregation was the Rev. Dr. Johnson, speaking as a representative of the Interdenominational Missions Congress, who undertook to prove that what the Board had done was "unjust, unwise, un-American, un-Christianlike, untimely, and unfair. It appears that before the great fire, Japanese children were permitted to attend any public school, altho Chinese and Coreans were in a school by themselves. The movement leading to the segregation of Japanese is said to have been started by the labor unions and the Japanese and Corean Exclusion League, an organization existing for the promotion of a Japanese Exclusion law. There has been no similar discrimination in other parts of California; in Oakland, across the bay, Japanese twenty years old attend the primary schools. The action taken in San Francisco excited much resentment in Japan. Evidence of this was seen in the Tokyo newspapers. Japanese pride had been wounded. On the 21st, Ambassador Wright sent a report to Washington. Replying two days later, Secretary Root said:

"The purely local and occasional nature of the San Francisco school question should be appreciated when the Japanese remember that Japanese students are welcomed at hundreds of schools and colleges all over the country. You may assure the Government of Japan in most positive terms that the Government of the United States will not for a moment entertain the idea of any treatment toward the Japanese people other than that accorded to the people of the most friendly European nation, and that there is no reason to suppose that the people of the United States desire our Government to take any different course. The President has directed the Department of Justice to make immediate and full investigation."

Viscount Aoki, Japanese Ambassador at Washington, called upon Secretary Root on the 23d and, in behalf of his Government, formally (also quite earnestly, it is said) asked that the Japanese in California should be accorded their full rights under the treaty of 1894, including the right of children to attend the ordinary public schools. Having said that while his Government realized that the treatment in question was local and not general, this was not understood by all Japanese people, he added:

"After all the years of friendship between the two nations, it seems too bad that the innocent little Japanese school children should be subjected to such indignities. Such action on the part of local authorities in this country is resented very bitterly by all Japanese."

It is known that the situation has been regarded with anxiety by the President and the Cabinet. On the 26th, the President directed Secretary Metcalf (whose home is in Oakland) to go to San Francisco and make a thoro inquiry. The employment of a Cabinet officer for this purpose must be regarded as evidence of our Government's sincere interest. Upon the application of certain citizens of San Francisco, Judge Wolverton has ordered the Board of Education to show cause on November 5th why a Japanese pupil excluded from one of the grammar schools should not be reinstated. The Board asserts that its action was taken for the good of the schools and was strictly in obedience to a law of the State. It is recalled that Japan contributed more than $100,000 for the relief of the people of the city after the fire. Conflicting reports are published as to the cause of the recent resignation of Asahi Kitagaki, the only Japanese midshipman at the Naval Academy. It is asserted that he was deficient in his studies; also that his withdrawal was suggested by the Embassy at Washington.

Prosecution of Trust Combinations

It continues to be asserted in dispatches from Washington that the Government will soon proceed against the Standard Oil Company to enforce the provisions of the Sherman Anti-Trust Law. According to one report, it will ask that the company, Mr. Rockefeller, Mr. Rogers, Mr. Archbold and other officers be subjected to a permanent injunction. —— There have been published reports that the beef packers were seeking financial support in New York for a combination of their interests, to be effected by means of a London holding company, and to be capitalized at $500,000,000. The Armour and Swift companies deny that they have been concerned in such a project or have heard of it. At Washington it is pointed out that Judge Grosscup's injunction is still in force. Reports from Mexico say that the Government, in opposition to the monopolistic control of the meat markets there by the Beef Trust, has decided to open Government meat markets in the capital city, maintain slaughterhouses, and sell beef at cost. At Little Rock, Ark., Judge Winfield has ordered that the Hammond Packing Company shall pay a fine of $10,000, it having failed to appear and testify before an Arkansas Commissioner at a recent hearing in Chicago. ——The Circuit Court of Ohio, upon appeal, has upheld in every particular the action of Judge Kincaid in Toledo last summer, concerning the combined dealers in ice, and has exonerated him with respect to all the charges concerning his conduct which were made by the defendants' counsel. For conspiracy he sentenced three men to go to jail for six months and also to pay fines.——Owing to the profits of the past warm season, the American Ice Company, at New York, on the 26th, declared six quarterly dividends of 1½ per cent. each upon its preferred stock of $15,000,000. No dividends had been paid for about four years. ——Among the attacks upon local combinations reported last week were the indictment of thirty coal dealers in Omaha, and the indictment of ice companies, lumber companies and meat dealers in Phœnix, Ariz. In Ohio the bridge companies (recently prosecuted) that failed to meet the demands of the court have been forbidden to do business in the State. Three of the others lose their charters and several have been punished by fines.

Against Corruption in San Francisco

Owing to the prevalence of crimes of violence in San Francisco, and to charges of corruption affecting the leading officers of the municipal government, a citizens' com-

mittee of one hundred persons was formed on the 13th, and District Attorney Langdon appointed as his deputy Francis J. Heney, of Portland, formerly United States District Attorney, who convicted Senator Mitchell and many other persons engaged in public land frauds. Rudolph Spreckels offered $100,000 in support of the movement against crime and grafting. Immediately after he assumed office it became known that Mr. Heney had obtained evidence which, in his opinion, would warrant the indictment and prosecution of Mayor Schmitz (now in Europe); Acting Mayor Gallagher, the Board of Supervisors, and "Abe" Ruef, commonly called the boss of the city. It was his purpose to lay this evidence before a new grand jury. On the 25th, Acting Mayor Gallagher suspended District Attorney Langdon (with the approval of the Supervisors) and promptly appointed Ruef in his place. Then Ruef removed Heney. Langdon procured from Judge Seawell a temporary order restraining Ruef and the Supervisors. Under this order Langdon retains his office for the present. At the meeting of the grand jury, on the 26th, prominent citizens, reporters and many others who sought to enter the courtroom were roughly handled and forcibly ejected by the police, and a riot was not easily averted. It is charged that the Police Department is corrupt and under the control of Ruef. Judge Graham refused to recognize either Ruef or Langdon as District Attorney, and adjourned the court for several days. Attorney-General Webb, who was present, says that if the court recognizes Ruef he will appoint Heney a Deputy Attorney-General, thus giving him authority to lay evidence before the grand jury. Ex-Mayor Phelan and Rudolph Spreckels say that Ruef's action is a confession of guilt. Mr. Heney publicly and boldly accuses the leading officers of the Government, saying that he has evidence of the corrupt and criminal conduct of "Mayor Schmitz, Acting Mayor Gallagher and each and every one of the eighteen members of the Board of Supervisors." It is "to prevent an exposure of their infamy before the grand jury," he adds, "that Ruef, Gallagher and the Superisors, in their fear of the felon's cell, have taken their utterly illegal action."

The Movement Against Rebates

Much testimony has recently been taken by the Interstate Commerce Commission in Omaha, Kansas City and elsewhere concerning the active interest of railway companies in the grain trade, the alleged concentration of the trade under the control of persons or corporations connected with the companies or favored by them, and the giving of rebates to these favored interests in the form of elevator charges. Immunity has been granted to several witnesses by a grand jury which is inquiring as to the alleged granting of rebates by the Great Northern road. At Des Moines, a local packing company has sued the Rock Island road for damages in $450,000, owing, it is alleged, to rebates granted on live stock to a company controlled by one of the great packing companies of Chicago.——The report of the Interstate Commerce Commission upon the investigation made last spring concerning the interest of the Pennsylvania, Baltimore & Ohio and other railways in the bituminous coal industry is nearly completed, and it will be submitted to Congress in December.——Argument was made in New York last week upon the demurrers of the Sugar Trust against the indictments charging that rebates were received by the Trust from several railroad companies.

The Thanksgiving Proclamation

On the 22d the President issued the customary Thanksgiving proclamation, which is as follows:

"Yet another year of widespread well-being has passed. Never before in our history or in the history of any other nation has a people enjoyed more abounding material prosperity than is ours, a prosperity so general that it should arouse in us no spirit of reckless pride and least of all a spirit of heedless disregard of our responsibilities, but rather a sober sense of our many blessings and a resolute purpose, under Providence, not to forfeit them by any action of our own.

"Material well-being, indispensable though it is, can never be anything but the foundation of true national greatness and happiness. If we build nothing upon this foundation, then our national life will be as meaningless and empty as a house where only the foundation has been laid. Upon our material well-being must be

built a superstructure of individual and national life lived in accordance with the laws of the highest morality, or else our prosperity itself will in the long run turn out a curse instead of a blessing. We should be both reverently thankful for what we have received, and earnestly bent upon turning it into a means of grace and not of destruction.

"Accordingly, I hereby set apart Thursday, the 29th day of November next, as a day of thanksgiving and supplication, on which the people shall meet in their homes or their churches, devoutly acknowledge all that has been given them, and pray that they may in addition receive the power to use these gifts aright."

Many Lives Lost in a Railway Train

An appalling accident occurred last Sunday afternoon near Atlantic City, on the new electric line of the Pennsylvania Railroad Company. A train of three cars from Camden, carrying 87 passengers, a majority of them residents of Philadelphia, was thrown from the drawbridge that crosses the neck of tidewater lying between Atlantic City and the mainland. The draw had been opened half an hour earlier, and the rails appear not to have been adjusted properly when the persons in charge closed it. Therefore the train left the track immediately after striking the bridge rails. The first two cars plunged into the water, which was twenty feet deep, and were entirely submerged. From these cars very few persons escaped. A part of the third car remained above the water. Nearly seventy lives were lost. Unfortunately, there were no guard rails on the drawbridge.

The Situation in Cuba

Owing to the lawless acts of small bands of revolutionists in the province of Santa Clara, the Fifteenth Cavalry has been ordered to garrison duty in Cienfuegos, Cruces and several other towns, in order that the Rural Guards heretofore stationed there may be free to pursue the marauders. It appears that the revolutionists gave up only such old guns as they had, and retained a good many modern rifles. Those which were surrendered have been cast into the sea from the walls of Morro Castle, together with a large number of other obsolete muskets found in that fortress, the accumulations of forty years. There is much bitter feeling between the two factions. Two duels were fought in Havana last week. In one the parties were a journalist connected with the newspaper *El Mundo* and a member of the City Council, who resented a charge published in that paper to the effect that the Council had corruptly granted a telephone franchise. In the other, an officer who was recently an aide of President Palma fought with a prominent Liberal lawyer. Swords were used in these affairs and all four of the duelists were wounded.——Governor Magoon has given places to two of the Garcia brothers. Justo, formerly Consul at Hamburg, has been made chief clerk of the State Department, and General Carlos, formerly Minister to Mexico, and recently a revolutionary leader, has been appointed Inspector of Prisons and Charities, at a salary of $5,000. Two prominent officers of the Palma Government—Gaston Mora, an under secretary, and Rafael Montalvo, Warden of Prisons (and formerly Secretary of Public Works)—have resigned. They had been active partisans, and were regarded as responsible in part for the frauds and violence of the recent election. The financial records of the late Government will be thoroly audited, under the direction of J. D. Terrell, of Michigan, who was auditor in Governor-General Wood's time. Claims of British subjects and companies for losses due to the insurrection amount to about $400,000; those of Spanish subjects are $600,000; and the total is said to be somewhere between $2,000,000 and $3,000,000. The public revenue has recently declined, and it is said that the Government will insist upon retrenchment, in order that a deficit may be avoided.

British Parliament

The opening of Parliament was enlivened by a mob of a hundred women suffragists who invaded the lobby of the House of Commons and demanded the ballot. Before Parliament could proceed to business the women had to be carried out of the building, struggling and screaming, by two or more policemen apiece. Ten of the women were arrested for rioting, arraigned in the police court and bound over to keep the peace for six months. The women were determined

to make martyrs of themselves, and refused to give sureties for their good behavior. Accordingly they were sent to jail. No important business was transacted in the House of Commons in the first sessions, but in the House of Lords it was decided to proceed with the debate on the Education Bill instead of postponing it until the decision by the highest court, and the question whether any existing law for local educational bodies are obliged to collect rates for the expenses of religious education. Mr. Augustine Birrell, President of the Board of Education, announced in the House of Commons that hereafter rifle shooting may be included in the curriculum of the elementary schools of England, the expenses of the target practice by the children to be paid for out of the public funds. It is expected that Sir Henry Campbell-Bannerman will soon be raised to the peerage and will lead the Liberals in the House of Lords, retaining his position as Premier. Mr. H. H. Asquith will then become the Liberal leader in the House of Commons. Mr. Brice, Chief Secretary for Ireland, may also come to the House of Lords and Winston Churchill will take his place in the Cabinet. A proposition has been presented in the Lambeth Borough Council which will solve the problem of the unemployed by cutting the working hours of the men employed by the Borough in half while leaving the wages the same. In that way twice as many men would be employed, each working four hours a day. It is rumored from London that a formal defensive alliance has been made between Great Britain, France and Italy, which is to come into effect whenever the Triple Alliance between Germany, Austria-Hungary and Italy shall expire "either by expiration of time or by other cause."

The French Government Program

M. Clemenceau has established his Cabinet and is preparing his legislative program to be submitted to the Chamber of Deputies when it meets on November 5th. With the addition of the new Ministry of Labor and Public Health, the Cabinet now consists of twelve members. Six are Radicals, two Independent Socialists, two members of the Democratic Left and one Democratic Unionist. That M. Clemenceau means to keep the control of the foreign policy of France in his own hands is evinced by the fact that he has not given the portfolio of foreign affairs to M. Millerand, who recently held it, but to M. Stephen Pichon, formerly an editorial writer on Clemenceau's newspaper *La Justice*. Editors predominate in the new Cabinet. The fact that M. Millerand is left out is taken to indicate that an anti-German policy will be adopted by the Government. The revelations of the Hohenlohe Memoirs have increased the distrust felt in France for the German Government. M. Clemenceau states emphatically that the churches of France will remain open for worship, tho how this will be done remains to be seen. It appears certain that even if the clergy maintain their present recalcitrate attitude the churches will not be closed on December 11th, but remain open for public worship for a year longer. The other property and revenues of the church will be sequestered by the Government. Clerical students may be forced to perform military service and the pensions now provided for the clergy may be stopped. It is also suggested as a possibility that Parliament may add an article to the Code empowering the Government to expel from France all persons who obey the behests of foreign sovereigns in contravention of the laws of France. Premier Clemenceau holds that since the passage of the law for the separation of Church and State, the Pope is simply a foreign sovereign and has no more rights than any other to interfere in French legislation or the administration of the laws. The first legislation to be brought before the Chamber will be the laws providing old-age pensions for workingmen; for the purchase of the western and some of the southern railroads by the State, and the creation of a State monopoly of petroleum and alcohol. Premier Clemenceau will reorganize the consular service, making appointments and promotions of consuls dependent upon business efficiency, instead of treating it as a minor branch of the diplomatic service. General Picquart, as Minister of War, shows no disposition to revenge himself upon the officers of the army who conspired against him when he defended Dreyfus.

One of these officers recently approached him with an apology and explanation, when General Picquart interrupted him by saying: "I know only one thing and that is that you have always been an excellent officer. You may be sure I shall not forget that." Major Dreyfus has been placed in charge of the preparation of the plans for the defense of the Alsatian frontier against Germany, which he was accused of betraying.

Germanizing Poland

The efforts of the German Government to extinguish the spirit of Polish patriotism and to make the Polish language obsolete are meeting with very violent resistance. A proclamation was widely circulated thruout Prussian Poland, despite the efforts of the police, calling upon Polish parents to boycott the schools after October 17th and to prohibit their children from answering the catechism questions in German. These recommendations have been very widely followed, and the Prussian Government finds it impossible to compel the Polish school children to say prayers, repeat the catechism and learn Bible history in German. Thousands of children have been placed under what is called "school arrest" for this refusal and detained in the schoolhouse for two hours every day after the close of the regular session. Other children meet outside of the schoolhouse and sing hymns in Polish. The German Secretary of Foreign Affairs at Rome has visited Cardinal Merry del Val, Papal Secretary of State, to arrange a settlement of the difficulty. The revolutionary movement in Russian Poland is spreading over the border and is likely to take a violent form. At Bendzikow a petroleum bomb was thrown into the schoolhouse and burned it to the ground. The Poles demand now that all the instruction in the public schools be given in Polish instead of in German. The Prussian Government spent enormous sums in buying up Polish estates and settling Germans on them. Last year $1,500,000 was expended for this purpose, and yet the results have been very slight, for the estates have in many cases gone back into Polish hands thru the assistance of Polish Patriotic Associations. The Prussian Minister of the Interior is likely to introduce a bill giving power to the Government to dispossess the holders of agricultural estates in Posen.

A Revolutionary Robbery

The chief excitement during the past week in Russia was the daring and successful "hold-up" of a Government Custom House carriage in St. Petersburg, and the seizure of about $200,000 in Government money. The affair was carefully planned, evidently for the purpose of obtaining funds for the Revolutionary organization. The Cashier of the Custom House drives twice a week from the Sub-treasury building with newly printed notes and other funds for current expenses. The carriage is guarded by four mounted gendarmes and inside by four officials armed with revolvers. On October 27th, as the carriage passed thru a narrow lane behind the Kazan Cathedral to the Katherine Quay, a bomb was thrown from the windows of a house and exploded under the carriage. The officers jumped from the other side of the carriage, leaving it unprotected while a body of fifteen revolutionists attacked the gendarmes. In the turmoil a boy seized the packages of coin and bank notes in the carriage and passed them to a woman, who escaped. The boy and four of the men supposed to be concerned in the robbery were seized. A number of guards and civilians were wounded and the neighboring buildings damaged by the explosion of the bombs and the revolver shots.——The condemnation of revolutionists and mutineers by summary courts-martial still continues, and revolutionary outbreaks are becoming rare. At Warsaw fourteen members of the Fighting Wing of the Socialist party have been condemned to death. The Committee of the Workmen's Delegates arrested a year ago on the charge of organizing an armed revolution, is being tried in St. Petersburg. Attorneys for the defense attempted to prove that the workmen were arming themselves to resist an attack by the Black Hundreds instigated by the Government, but the judges ruled out all the evidence tending to prove this. The lawyers then

declared that a fair trial was impossible and left the court, after shaking hands with the prisoners. The thirty prisoners were ordered back to the jail and the "trial" will proceed without their presence or that of their legal representatives. "Exile to Siberia by administrative process" is more common than ever before, and great misery is reported from the thousands of men, women and children who have been sent to barren and desolate regions of the North. The exiles receive $1 a month apiece for their support and it is often impossible to procure bread at any price in distant places, such as Archangel, where the river is open only six weeks in the year and the food of the natives consists of frozen fish eaten without salt. Under Alexander II and Alexander III the Minister of the Interior was the only person who had power to banish by administrative order. Now all local governors are exercising the power freely upon information from the local police without even the semblance of a trial.

The Next Duma

The elections for the new Duma will probably be held next month, and it is already evident that the new assembly will not be as unified a body as the last. The Constitutional Democrats have lost their dominant position, partly because of popular dissatisfaction with their failure to accomplish anything tangible, partly because their strongest men, members of the late Duma, are debarred from the new, as they are under indictment for treason for signing the Viborg manifesto. The Government, which really had no representatives in the first Duma, will have some power in the second, because the vote of the bureaucracy will be cast solidly, according to orders, for Government candidates, or at least for Octobrists who favor moderate and constitutional reform. Government officials of all grades are forbidden to promote in any way the election of Constitutional Democrats. Count Heyden, leader of the Octobrists, who was a member of the Duma and voted for most of its political program, but did not sign the Viborg manifesto, recently dined with members of the Cabinet, and advised them not to prosecute the Constitutional Democrats. There is little doubt that the next Duma will be more radical than the last, because the Socialists and workingmen who boycotted the elections before are now actively working to secure as large a representation as possible, especially from the peasants. Their political program contains as immediate demands a nine-hour working day, a weekly period of rest of not less than forty-two consecutive hours, the entire prohibition of work between the hours of 9 p. m. and 6 a. m., old-age pensions and trades courts composed of an equal number of representatives of employers and workmen, the abolition of outstanding debts owed by the peasants for the purchase of communal lands, the refunding to the peasants of the money they have already paid, and the appropriation without compensation of all Church and Crown lands. The division between the moderate, or opportunist, wing and the revolutionary wing of the Socialists is growing wider, and the struggle over principles, tactics and leaders is becoming very bitter. In some meetings the dispute has passed into a free fight, and Cossacks had to be called in to keep the peace.

A Sorcerer From Sahara

A few years ago Sultan Abdul Aziz, of Morocco, was riding a bicycle, kodaking the ladies of his harem and otherwise indicating an inclination to adopt the ideas, or at least the fads, of modern civilization. Now he is reported to be completely under the influence of a sorcerer from the desert, named Maelain, who is fanatically opposed to foreigners and foreign notions. The followers of Maelain raid the country and levy tribute at their will—even walled towns are not safe from them. The people of Marakesh, otherwise known as the city of Morocco, under the advice of the Sultan, raised a gift of $30,000 and presented it to the sorcerer. The German Consular Agent was beaten about the head at the entrance to the palace of the Governor of Marakesh, who declined to interfere. M. Lassallon, a French commercial agent, was attacked by ambushed natives near Marakesh last month, wounded and taken prisoner. The Governor is said to

be concerned in the outrage. A German caravan of forty camels was pillaged near Marakesh. At Casa Blanca Maelain's men looted a French store and wounded several Europeans. A bandit chief named Boreian seized the walled town of Arzila, on the Atlantic, doubtless with the intention of making himself governor after the manner of Raisuli. The shops of the Jews were looted and the entire population of the city were powerless either to protect themselves or to escape. But Raisuli accomplished what the Sultan could not do. He marched to Arzila with a strong force of his own men, and after a sharp fight of two hours captured Boreian and established himself in the Governor's palace. The Government is both too weak and unwilling to put a stop to the general disorder, and the Franco-Spanish police force authorized by the Conference of Algeciras cannot be established until the acts of the Conference are approved by the Powers represented. After the Conference there was something of a strife between the Powers to be the first to reach the ear of the Sultan. The French and Spanish representatives, on account of their peculiar position in Morocco, thought they should be allowed to go first to the capital, but the German and American Ministers were ready to start from Tangier and the latter, Mr. Gummere, got ahead of his rival, Dr. Rosen, by hiring all the available camels in the market. But Dr. Rosen, tho he reached Fez later, made the greater impression on the natives by the pomp of his caravan and the brilliancy of the uniforms of his retinue. Minister Gummere is pressing the Sultan for the punishment of the bandit, Raisuli, who kidnapped Perdicaris, an American citizen, three years ago. He also demands an indemnity for the assault on a son of Thami Slaoui, a Moroccan subject under the protection of the United States, inflicted by a Moroccan soldier who was afterward allowed to escape.

Reform in China

There is no doubt about the importance of the deliberations being carried on at Pekin in regard to the reform of the administration, but the reports of the proceedings which transpire thru Chinese and Japanese newspapers are so obscure and often contradictory that it is impossible to find exactly what the result will be. Those who are taking part in the Conference are the commissioners whom the Empress Dowager sent some months ago to investigate foreign countries, the Manchu Princes, prominent officials of the Imperial Government and the Viceroys of the different provinces. Not all of the latter are in attendance or even represented, and many of them are strongly opposed to any reforms. The leaders in the new movement are Yuan Shih-kai, Viceroy of Chili, and his chief supporter, Tang Shao-yi, who is Vice-President of the Foreign Office, and practically manages at present all negotiations with foreign countries. Prince Tuan Fang, who is the most prominent among the commissioners, has been appointed Viceroy at Nanking. As he has left Pekin for his Government, it would appear that the deliberations of the Council are to be indefinitely delayed. The conflict of opinion is chiefly upon the question of centralization. Those who are in favor of imitating the methods adopted by the Japanese for the regeneration of their country at the beginning of the Meiji era, among whom Prince Tsaitsz is prominent, realize that in order to make China a strong nation it is necessary to strengthen the Imperial power. The Chinese Viceroys, however, are not patriotic enough to relinquish their power, as did the Daimyos of Japan forty years ago. They believe their rights of maintaining provincial armies and levying taxes are essential to the stability of a country. Other and less fundamental reforms are being adopted, or at least recommended, without hesitation; among these are the separation of the judicial from the administrative offices, the suppression of fortune telling in the temples, the encouragement of education both in China and by sending students abroad, and the prohibition of opium. It has been decided that the central Government shall consist of a Cabinet presided over by a Premier and two Vice-Premiers, and that there shall be some sort of a General Assembly, consisting of the Royal Princes, nobles, officials of Pekin, and a delegate from each province, named by its Viceroy.

Ted

BY LOUISE DUNHAM GOLDSBERRY

BETWEEN "the dark and the daylight," Ted and I have our party every evening. If 'tis a rainy night, we watch at the window. The trees drip rain from every green feather, the gutter carries an ephemeral fleet of white sails. Suddenly, the street lamps wink; the black asphalt is all shining and thin yellow rivulets of light flicker along it. Yellow, wet, most tenuous of ribbands, from the street lamps. And the window pane is a miracle; every drop that shattered globe against it made a spatter of silver and turned the common glass into rare blown glass. And every gas lamp down the rain-blurred street is set in a prismic cross of rays fine as eyelashes; delicate as a painted bubble. And the drug store window drops rainbow-smears out on the wet pavement; orange and blue and green.

We tie a string to an apple-stem, Ted and I. We pick the very biggest and reddest; because the red is *so* red as the apple roasts. And we pile up the red coals; daintily sorting to this side and the other side. We pile them slowly and dally with the pleasure. We watch the ashes siftering and settling. We puncture with the poker the little boiling globules of tar on a burning coal and lazily listen to the babble and wheedling of the flames; the silken singings and purrings of it and the broken small laughters and delicate sighings of it. Ted and I. And, always, Ted leans over from my lap to scoop up handfuls of the warmth thus laughter and sigh and song-distilled, and leans back to pour the handfuls upon my head. And kisses me. And O, so sweet are Ted's kisses. In the hollow in my throat his lips search out the hid heart of me; and then, "I love you *so* dear," says Ted. With croodlings over my head clasped in his arms and sweets of the unutterableness of speech from his eyes.

Then, the apple.

Always, the apple that is lord of the basket since the bigger big one was eaten last night. Ted ties the string to the stem. And I hitch the other end of the string to the leg of the mantel clock. And there it is; a big apple tilting to and fro on the ruddy waves.

Then, that hollow in my shoulder. The blessed angels made that hollow just to measurement of the head it was made for. Ted's head. It just fits. But, of course, then, that tender hollow, soft and dear, the angels give to women 'twixt breast and the shoulder tip.

Pat and pat and pat, moves Ted's hand against my cheek. Slow and slow and cling of velvet fingers. And we assemble our guests. Ah, now, how did you know 'tis the Three Little Pigs come first? Why, they *always* come first to our party, those Three Little Pigs. Jaunty, satin-clean, wee-hoofed, always first, those dear little brats of Three Little Pigs.

And I'll huff, AND I'LL PUFF, AND I'LL BLOW YOUR HOUSE DOWN!

Ted always gives the same ecstatic wriggle. It is so deliciously fraught with threat of danger. And he assures me, protectingly, if the window chance just then to rattle and shake, "It aint a sure 'nuff wolf," tho he draws the fortress of my arms just a bit closer about him. And always sighs a man-sigh of content when the wolf comes splash into the chimney-pot and we've covered him in under pot-cover and let The Little Tin Soldier and The Big Bear and The Middle-Sized Bear and The Wee Wee Bear and The Forty Thieves in to our party; all on their behaviors.

Between whiles, we twirl the string. Ted twirls it and I hold Ted. We bend ravished ears to catch first creak of the bursting skin. We squeal with anticipation when there is a tiny report and

piff-paff of steam and out from the crack puffs a *bouuc-bouche*.

"Doosn't the smell of it tas' good," sighs Ted.

All our company keeps respectful silence while Ted and I hearken the unprisoned juices sing.

Down on the hearth is a saucer to catch the nectar drippings and Ted's finger makes trial trips. And Ted's apple-fragrant tongue shows pink between his lips as he lolls back into that hollow in my shoulder. My Ted. And the gold of his hair gilds my sleeve, stars the firelight wih golden sparkles. And darkness would shine, were his eyes the only lamps in it!

We like the ice-rimed days. They are so iridescent and bespangled. Along the curb each shrunken weedy stalk is in a corselet of ice. Cobweb ice-films lie delicately light on the grass as though palpable atmospheres frozen into aerial pattern; wisps and grays of fragilest patterned frost-films that a finger's touch would mar. But it is gone when the sunshine comes by and the little shrunk weeds droop along the curb, the grass-blades look lone and cold as the winds riffle them.

All summer that patch of grass was just one breathless song. Sweet, sweet, sweetest song ever the year's plenary dropped in a door-yard. Ted's house and mine is a little thing, set upon a terrace. It is one of a row; but tho all the roofs are angle and eave alike, Ted's house and mine seems most beautiful and palace-big and palace-fine. Because its narrow wood steps in-and-up from the street, open into such beautiful furnishing of love. And that green armful of yard is burstingful of song. First, too low for any ears to hear but Ted's ears and mine.

"The Fiddlers is arrove," he announced, his face an auroral shining.

"Sure?" I doubted at him.

"Precious, they *is!*" he dared me back; and the two hands that had been held, jewel-box, before him, spilled a cricket into my lap.

A little out-picket of summer that he had unturned from the cat-a-corner where wood steps and the brick sidewalk and the descending small terrace met. He had dug out a "Treasure-house," there last summer.

Do you know what a "Treasure-house" is?

You get your mother's flannel-cake turner, and your mother's best scissors. Sometimes the gift of the scissors is just assumed. But when you discover bronze flecks of rust, what could you say when Ted melts adorably into your arms and says "Precious, I planted a gold penny 'n I'm goin' to give you a great big gold mine, 'fen my penny sprouts"?

You put a cigar box into the hole the cake-turner dug, and you fit back over it, later, the oblong of turf the scissors cut out, for a lid.

And when you've put in your "treasures," the piece of turf goes over, carefully trodden down lest robbers find and "break thru and steal."

Then you wait for the penny to sprout.

That was where Ted found the cricket. And he told me it was borned from the morning glory seed he had planted when he sowed his gold penny.

So, we loosened a brick in the hearth and put the cricket there. And that night the little house was filled to eave and jamb with elfin strains. Sure, "the Fiddlers was arrove." And I had to waken Ted. I knew I'd betray it, and Ted would mourn because he had not heard.

"Ted, Ted, listen," I whispered into his dreams.

The firelight made rosy wainscot and the shadows hung dusky tatters in its fringes. The elfin wee fiddling searched out remotest rafter in the small house. It pervaded the roseate gloom with strange melodic strains and into Ted's sleep-drowned senses. I could see his drowsy blink, the sparkles on the long gold-tipped brown eyelashes, the glint of his eyes. And the smile that spread even to his crown of gold.

"O," he gasped, in utter ecstasy, "It's my cricket a-crickin'!"

We take walks, sometimes, in the early trailings of dusk when the sun-gold veins them. Ted always locks the front door; slips hand into mine with a kiss on it, and we go adventuring.

He always passes the time o' day with every cat and dog we encounter.

Perhaps our conversation is like this·

"*Ain't* he beautiful, Precious!"

"No," I answer, "he is so ugly it hurts."

"But *ain't* he nice, Precious!"

"No," I answer; "he is just a common little cur."

"But ain't he a *dear* little common cur!"

Then I succumb. And the manifold fibs I have fibbed over yellow dogs and motley cats and motherless kittens! But I *can't* take them in. Ted and I would have to scoop out a "treasure house" to live in if I accepted every cat and dog he introduces to me as a friend of his in our walks to take the air.

Ted does not call me mother. Nor do I know where he got the names he names me. I think they are divine; his heart's very whitest blossoms. It's "Precious" every other word or two; with "Lovely Dear" and "Treasure." Sometimes when he dreams out loud I catch the soft babblings, *"Treasure, Treasure,"* and I know Ted is telling me in turn the fairy sloughs of sleep and the rainbow lore of dreams.

And not for all of Hadassah's Orient weaves and jewels of jade and jewels of earth or ocean would I give one of these the jewel names from my baby's heart. Never, never. Nor for a stairway of stars, the wood steps to Ted's wee house and mine.

Ted used to beg for "some babies." There were twins, down the next square, and for a while Ted would not be comforted. He wanted a twin.

"Please det me some babies," he coaxed, head in the love hollow as we went a journey 'cross ocean in our rocker.

"But my lap is only just big enough for you," I pleaded.

His arms gripped me in a sudden fervor. He had not thought of having to share that. He was quiet for a long time, but the velvet palm clung to my face with fervid caress and the soft little body hugged close.

"Well, never mind, Precious," he finally said. "I fink I don't want a trin to come now."

But the renunciation cost him a struggle.

He asks questions; and says things.

"If they's a rainbow will we see some babies comin' down it?"

"Fot did God dig the hole with fen He made the ocean?"

"Fen my foot goes to sleep *fot* makes that buzzin' sound in it?"

"We jus' die to see fot heaven's like, *don't* we?"

Back in the very borders of childhood I loved babies. I loved them *so* that very early, very earnestly, I began praying for a baby, some time; over against the time when I should be grown up enough; with childish sureness that God could not ignore nor evade the saved-up prayers.

And when, years, years after *I knew.* Even now, I cannot recall, without sudden, sweet strangle of tears in my throat, the divine humility, the ineffableness that suffused all my being *when I knew!*

I?

And my baby and I went softly in the very shadow of the Almighty those sacrament days. Those prophecy days, when my prayer and I were drawing nearer and nearer to meeting and recognition. I could not have breathed aloud; how the blood sung thru my veins, how my heart went as to sound of timbrel and lute and burnt incense of altars, down the hours to the appointed meeting of my baby and me—*face to face!*

Was it wonder, then, that the heart chording its first beat to beat of the heart it lay under, was a very honeycomb of sweetness?

All the months I had been storing into it rapture of love; the loveliness my eyes saw, my ears heard; the beautifulness of earth and sky and song and book and spirit — and, Lord, God! Never a seraph's sunset or star rise or a moon glory but it haloed a little child's face. I never looked in flowers' faces but a little child's face was one with them.

Nor was it strange that the little lips took to speech, with the milk drops wet on them, as naturally as the rosy tongue cleaved to the breast that gave the milk. For he was but five months old when he said his first words, two words together; and always the face was luminous, the eyes starry-steadfast, fair, with a fairness most fair. Nor strange that the thoughts his speech brought to my knee later were very crystals of dew.

Had I not traversed all of eternity with God, begging His best to dower the child, body and spirit and heart?

And O, my baby! My baby!

I call them my love locks. I cut off the first when he was eleven days old; and one each birthday. I show them to few people; a mother or two. I added the last two days since. Long, fine as spider's silk, vivid gold.

The very goldenest hair; turns up at the ends in a great curly curve, shiningly along his shoulders. Face colorless, save the scarlet satin lips; great brown eyes, gold eyebrows, long, heavy dark-brown lashes—he is beautiful! People turn and look after him as they pass, at the vivid, virile baby face.

People speak yet to me of "the day your baby was christened"; not "the day the bishop preached."

Ted was exquisite.

He cooed and gurgled and baby blarneyed up at the bishop's face, then turned head over my shoulder and cooed and gurgled and made friends at the congregation.

Two months later the bishop again preached on a Sunday, and the young father and I again were at the altar; but he lay hid under, and the music of voices sobbed and wailed, and he did not hear.

And the white roses and he and I had met and vowed vows at that altar so brief while ago that the withered petals of the roses still held their white bridal fragrance.

But none knew, when they lowered him down into the sunset at his low house sill, that in his hands he carried a last love letter from me: a lamp to make bright the dark to him, a fire to make warm the cold to him.

And my baby, my pansy-eyed baby, became earth's horizon to me; yes, and heaven's heaven.

WASHINGTON, D. C.

The Old Courier-de-Bois

BY IVAN SWIFT

"A COMMON man was Père Gilbault"—
So will the townsmen say—
"A sodden leaf left by the snow
Upon the summer way.

"A relic of the older time,
He crooned of moldy years—
Unknown to fame of good or crime—
And sleeps unmourned of tears!"

And this the tribute of the world
To labor's humbler men—
"A thing the jesting winds have whirled
On earth and off again!"

What tho he spread the dauntless sail
And quit the shame of kings—
To break the rugged forest-trail
And dwell with silent things?

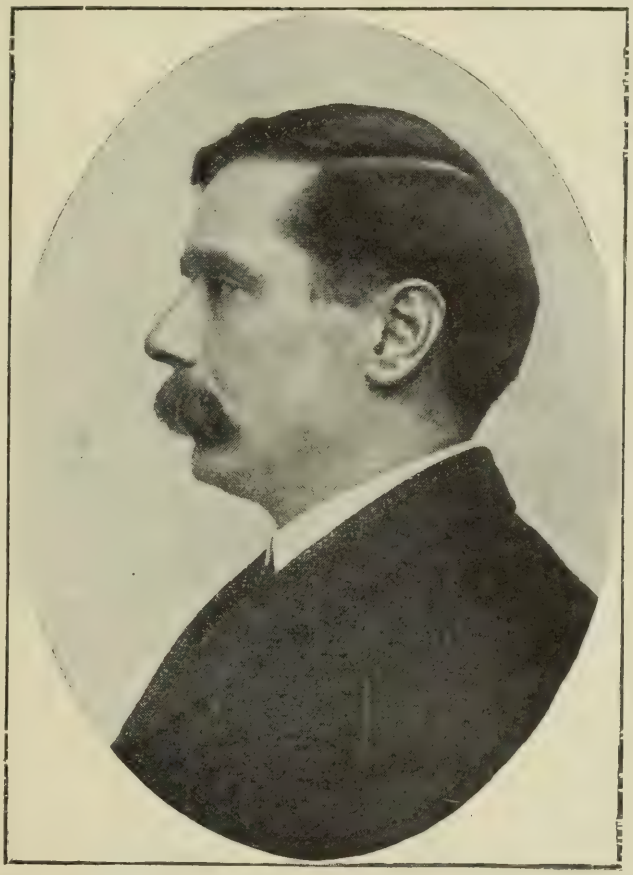
What tho he turned the blades to hoes,
And tamed the savage breeds?—
We hold their homes!—no bugle blows
A woodman's homely deeds!

He made a garden—sowed a seed—
But we have plucked the flowers!
He laid the faith—we made the creed—
What boots his lingering hours?

No mausoleum marks his grave,
No will divides his gold;
No pension soothes a whimpering slave,
His office none will hold.

His tomb is but the earth he trod,
His wealth—the poet's heart;
His gift—a love for man and God.
His post—the honest part!

A common *Man* was Père Gilbault.
And so the world must say—
"A sodden leaf left by the snow
Upon the summer way!"



HARBOR SPRINGS, MICH.

Socialism and the Family

By H. G. WELLS

[In last week's issue Mr. Wells discussed the relation of the middle classes to the Socialist movement and in this he concludes the discussion of socialism by giving his views of the effect that will be produced on family relationship by impending changes of the existing social order.—EDITOR.]

So much for the specifically creative and imagination-using professions. Thruout the whole range of the more educated middle classes, however, there are causes at work that necessarily stimulate thought toward Socialism, that engender skepticisms, desires, inquiries leading toward what I may call, I think without much exaggeration, the British Socialists' most jealously guarded secret—the relation of Socialism to the institution of the family. . . . The family, and not the individual, is still the unit in contemporary civilization, and indeed in nearly all social systems that have ever existed. The adult male, the head of the family, has been the citizen, the sole representative of the family in the state. About him have been grouped his one or more wives, his children, his dependents. His position toward them has always been—is still, in many respects, to this day—one of ownership. He was owner of them all, and in many of the less sophisticated systems of the past, his ownership was as complete as over his horse and house and land—more complete than over his land. He could sell his children into slavery, barter his wives. There has been a secular mitigation of the rights of this sort of private property; the establishment of monogamy, for instance, did for the family what President Roosevelt's proposed legislation against large accumulations might do for industrial enterprises; but to this day, in our own community, for all such mitigations and many euphemisms, the ownership of the head of the family is still a manifest fact. He votes. He keeps and protects. He determines the education and professions of his children. He is entitled to monetary consolation for any infringement of his rights over wife or daughter. Every intelligent woman understands that, as a matter of hard fact, beneath all the civilities of today, she is actual or potential property, and has to treat herself and keep herself at that. She may, by force or subtlety, turn her chains into weapons, she may succeed in exacting a reciprocal property in a man—the fact remains fundamental that she is either isolated or owned. . . . But I need not go on writing facts with which every one is acquainted. My concern now is to point out that Socialism repudiates the private ownership of the head of the family as completely as it repudiates any other sort of private ownership. Socialism involves the responsible citizenship of women, their economic independence of men, and all the personal freedom that follows

H. G. Wells, Author of "The Future in America." Harpers.

that; it intervenes between the children and the parents, claiming to support them, protect them and educate them for its own ampler purposes. Socialism, in fact, is the state family. The old family of the private individual must vanish before it, just as the old water works of private enterprise, or the old gas company. They are incompatible with it. Socialism assails the triumphant egotism of the family today, just as Christianity did in its earlier and more vital centuries. So far as English Socialism is concerned (and the thing is still more the case in America), I must confess that the assault has displayed a quite extraordinary instinct for taking cover, but that is a question of tactics rather than of essential antagonism.

It is possible to believe that, so far as the middle classes are concerned, this discretion, this delicacy, has been carried altogether too far. Socialists would have forwarded their cause better if they had been more outspoken. The middle class family, I am increasingly convinced, is a group in a state of tension. I believe that a modest but complete statement of the Socialist criticism of the family, and the proposed Socialist substitute for the conventional relationships, might awaken extraordinary responces at the present time. The great TERROR of the eighties and early nineties is, I believe, altogether over.

The whole of the present system is riddled with discontents. One factor is the enhanced sense of the child in middle class life; the old sentiment was that the parent owned the child, the new is that the children own the parents. There has come an intensified respect for children, an immense increase in the trouble, attention and expenditure devoted to them —and a very natural and human accompaniment in the huge fall in the middle class birth rate. It is felt that to bear and rear children is the most noble and splendid and responsible thing in life, and an increasing number of people modestly evade it. People see more clearly the social service of parentage, and are more and more inclined to demand a recognition from the state for this service. The middle class parent might conceivably be horrified if you suggested the state should pay him for his offspring, but he would have no objection whatever to being indirectly and partially paid by a differential income tax, graduated in relation to the size of his family.

With this increased sense of the virtue and public service of parentage there has gone on a great development of the criticism of schools and teaching. The more educated middle-class parent has become an amateur educationist of considerable virulence. He sees more and more distinctly the inadequacy of his own private attempts to educate, the necessary charlatanry and insufficiency of the private adventure school. He finds much to envy in the elementary schools. If he is ignorant and short-sighted he joins in the bitter cry of the middle classes, and clamors against the pampering of the working class, and the rising of the rates which render his efforts to educate his own children more difficult. But a more intelligent type of middle-class parent sends his boy in for public scholarships, sets to work to get educational endowment for his own class also, and makes another step toward Socialism. Moreover, the increasing intelligence of the middle-class parent and the steady swallowing up of the smaller capitalists and smaller shareholders by the larger enterprises and fortunes, alike bring home to him the temporary and uncertain nature of the advantages his private efforts give his children over those of the workingman. He sees no more than a brief respite for them against the economic cataclysms of the coming time. He is more and more alive to the presence of secular change in the world. He does not feel sure his sons will carry on the old business, continue the old practice. He begins to appreciate the concentration of wealth. The secular development of the capitalistic system robs him more and more of his sense of securities. He is uneasier than he used to be about investments. He no longer has that complete faith in private insurance companies that he once sustained. His mind broadens out to State insurance as to State education. He is far more amenable than he used to be to the idea that the only way to provide for one's own posterity is to provide for every one's posterity, to merge parentage in citizen-

ship. The family of the middle-class man which fights for itself alone is lost.

Socialism comes into the middle-class family offering education, offering assurances for the future, and only very distantly intimating the price to be paid in weakened individual control. But far profounder disintegrations are at work. The internal character of the middle-class family is altering profoundly with the general growth of intelligence, with the higher education of women, with the comings and goings for this purpose and that, the bicycles and games, the enlarged social appetites and opportunities of a new time. The more or less conscious *strike against parentage* is having far-reaching effects. The family proper becomes a numerically smaller group. Enormous numbers of childless families appear; the middle-class family with two, or at most three, children is the rule rather than the exception in certain strata. This makes the family a less various and interesting group, with a smaller demand for attention, emotion, effort. Quite apart from the general mental quickening of the time, it leaves more and more social energy, curiosity, enterprise free, either to fret within the narrow family limits or to go outside them. The *strike against parentage* takes among other forms the form of a strike against marriage; great numbers of men and women stand out from a relationship which every year seems more limiting and (except for its temporary passional aspect) purposeless. The number of intelligent and healthy women inadequately employed, who either idle as wives in attenuated modern families, childless or with an insufficient child or so, or work for an unsatisfying subsistence as unmarried women, increases. To them the complete conceptions of Socialism should have an extraordinary appeal.

The appearance of the feminine mind and soul in the world as something distinct and self-conscious is the appearance of a distinctive engine of criticism against the individualist family, against this dwindling property of the once ascendant male—who no longer effectually rules; no longer, in many cases, either protects or sustains; who all too often is so shorn of his beams as to be but a vexatious power of jealous restriction and interference upon his wife and children. The educated girl resents the proposed loss of her freedom in marriage, the educated married woman realizes as well as resents the losses of scope and interest marriage entails. If it were not for the economic disadvantages that make intelligent women dread a solitary old age in bitter poverty, vast numbers of women who are married today would have remained single, independent women. This discontent of women is a huge available force for Socialism. The wife of the past was, to put it brutally, caught younger—so young that she had had no time to think. She began forthwith to bear babies, rear babies, and (which she did in a quite proportionate profusion) bury babies—she never had a moment to think. Now the wife with double the leisure, double the education and half the emotional scope of her torn prolific grandmother, sits at home and thinks things over. You find her letting herself loose in clubs, in literary enterprises, in schemes for joint households to relieve herself and her husband from the continuation of a duolog that has exhausted its interest. The husband finds himself divided between his sympathetic sense of tedium and the proprietary tradition in which we live.

For these tensions in the disintegration of the old proprietary family no remedy offers itself today except the solutions that arise as essential portions of the Socialist scheme. The alternative is hypocrisy and disorder.

There is yet another and still more effectual system of strain at work in the existing social unit, and that is the strain between parents and children. That has always existed. It is one of our most transparent sentimental pretenses that there is any natural subordination of son to father, of daughter to mother. As a matter of fact, a good deal of natural antagonism appears at the adolescence of the young. Something very like an instinct stirs in them to rebel, to go out. The old habits of solicitude, control and restraint in the parent become more and more hampering, irksome and exasperating to the offspring. The middle-class son gets away in spirit, and in fact, to

school, to college, to business; his sister does all she can to follow his excellent example. In a world with vast moral and intellectual changes in progress, the intelligent young find the personal struggle for independence intensified by a conflict of ideas. The modern tendency to cherish and preserve youthfulness; the keener desire for living that prevents women getting fat and ugly, and men bald and incompetent by forty-five, is another dissolvent factor among these stresses. The daughter is not only restrained by her mother's precepts, but inflamed by her example. The son finds his father's coevals treating him as a contemporary.

Well, into these conflicts and disorders comes Socialism, and Socialism alone, to explain, to justify, to propose new conventions and new interpretations of relationship, to champion the reasonable claims of the young, to mitigate the thwarted ownership of the old. Socialism comes, constructive amid the wreckage.

Let me at this point, and before I conclude, put one thing with the utmost possible clearness. The Socialist does not propose to destroy something that conceivably would otherwise last forever when he proposes a new set of institutions and a new system of conduct to replace the old proprietary family. He no more regards the institution of marriage as a permanent thing than he regards a state of competitive industrialism as a permanent thing. In the economic sphere, quite apart from any Socialist ideas or Socialist activities, it is manifest that competitive individualism destroys itself. This was reasoned out long ago in the "Capital" of Marx; it is receiving its first gigantic practical demonstration in the United States of America. Whatever happens, we believe competitive industrialism will change and end—and we Socialists at least believe that the alternative to some form of Socialism is tyranny and social ruin. So, too, on the social sphere, whether Socialists succeed altogether or fail altogether, or in whatever measure they succeed or fail, it does not alter the fact that the family is weakening, dwindling, breaking up, disintegrating. The alternative to a planned and organized Socialism is not the maintenance of the present system, but its logical development, and that is all too plainly a growing complication of pretenses as the old imperatives weaken and fade. We already live in a world of stupendous hypocrisies, wherein rakes and rascals champion the sacred institution of the family, and a network of sexual secrets, vaguely suspected, disagreeably present, and only half concealed, pervade every social group one enters. Cynicism, a dismal swamp of base intrigues, cruel restrictions and habitual insincerities, is the manifest destiny of the present *régime* unless we make some revolutionary turn. It cannot work out its own salvation without the profoundest change in its determining ideas. And what change in those ideas is offered except by the Socialist?

In relation to all these most intimate aspects of life Socialism, and Socialism alone, supplies the hope and suggestions of clear and practicable solutions. So far Socialists have either been silent or vague, or—let us say, *tactful*—in relation to this central tangle of life. To begin to speak plainly among the silences and suppressions, the "find out for yourself" of the current time, would be, I think, to grip the middle-class woman and the middle class youth of both sexes with an extraordinary new interest, to irradiate the dissensions of every bored couple and every squabbling family with broad conceptions, and enormously to enlarge and stimulate the Socialist movement at the present time.

London, England.

Ristori: The Last Italian Tragedian

BY SALVATORE CORTESI

IN Italy the lights of other days are slowly dying out, leaving a generation, if not less clever, at least less illustrious. With regard to the stage the last great loss is represented by the death of Adelaide Ristori, and the last great survivor is Tommaso Salvini.

I visited the Marchesa Capranica del Grillo, as Adelaide Ristori was known to the Romans, shortly before she was taken ill in the old del Grillo palace, which is one of the smaller ones in Rome, and, like most of the others, is surrounded by small streets. Inside the palace the majestic rooms have been filled with "modern comforts," an Anglo-Saxon expression for which the Italians have no equivalent, and use the foreign word. One mounts a broad stairway with a turn, adorned with marbles and flowering plants. From here one passes into an ante-room and thence into the drawing-room, out of which Madame Ristori's sanctum opens. The chief feature of the drawing-room is an immense life-size oil portrait of the great actress in the costume of "Queen Elizabeth of England." A tragic story is connected with this picture, which occurred in New York, and has already been recounted to the readers of THE INDEPENDENT.[1]

The Latest Photograph of Adelaide Ristori.

She received me in her study, on the walls of which hang portraits of her

[1] THE INDEPENDENT, February 13th, "Adelaide Ristori, Marchioness del Grille," by Salvatore Cortesi.

father, who was himself an actor, and her mother, a gentle-looking old lady, from whose picture it is easy to see where Adelaide got her beauty. There were also portraits of her husband and children, of herself in various poses and characters, and of many celebrities. She was dressed as usual in black, with white lace, and a widow's cap, which in shape somewhat recalled the headgear of her favorite part, "Marie Stuart." Her hands, which were covered with magnificent rings and silk mits, were as expressive as ever, and as she used them to emphasize her meaning, and her beautiful modulated voice rose and fell, one could realize where her power chiefly lay. Her memory was wonderful to the very last days of her existence, and there was no incident of her career which was not as vivid to her as when it occurred. At the same time she was very modest about her successes, but what her genius had been may be gauged by the fact that even the invincible Rachel trembled for her supremacy and condescended to be jealous of her, perhaps the greatest tribute which Ristori ever received. Madame Ristori, when she went to Paris the first time, diffident of her own powers, intended to put herself under the protection of her "great sister in art," but Rachel was out of town. One night, as the young Italian actress was playing "Mirra," a veiled lady entered a box accompanied by a great personage. The lady listened intently for an act or so, when she jumped impulsively to her feet, exclaiming: *"Cette femme me fait mal, je n'en peu plus,"* and left the theater. It was Rachel. On the other hand, Madame Ristori always expressed the greatest admiration for the one whom others, not she, called her rival. Even during my last visit to her, in speaking to me of the *"grande tragedienne Française,"* she said: "I saw her the first time in 'Horace' of Corneille, and I understood and appreciated at once the fascination she exercised over her audiences. She was as beautiful as an ancient Greek statue; her majestic bearing, her royal look were the result of an admirable art; her voice had secrets unknown to other actors, giving her the possibility of finding such accents of fury and imprecation as to make the whole house tremble. I heard and saw nothing but her, and applauded frantically, understanding how right those critics were who said that any comparison between her and me was inadmissible, since she was classic and I romantic." When I asked her if she considered her visits in France as the most successful she answered: "Well, no, I cannot say that; but some high compliments were paid me there. I was invited by Napoleon III to stay a year in Paris at his expense to overcome the difficulties of the language, and then take the place left vacant by Rachel at the Comedie Française, but the condition was such that I had no choice but to refuse. They wanted me to act no more in other countries—not even in Italy—and as we were then going thru our struggles for unity and independence, I would have appeared as a real traitor. My refusal, however, did not interfere with my good relations with the public.

"Alexander Dumas, père, was one of my most fervid supporters. He bored all his friends who had not seen me until one turned upon him saying: 'Oh! leave me in peace; one does not always have six francs in his pocket!' 'Do you want six francs? Here they are; now go and see her!' When the friend went off in a rage he called after him: 'I will put them on this post, and the first beggar will take them,' and he also left. Two or three minutes after they met face to face before the post, both having reflected that it was a pity to waste six francs, and amid roars of laughter Dumas declared he would write up the scene and call it the 'Two Millionaires.'"

There was, however, another anecdote about Dumas père that the great tragedian liked very much to repeat. He one day said that her Italian cook was not as clever as she pretended, and that he could himself prepare maccaroni just as well. "Being nettled by our shouts of derision," she went on, "he agreed to come next day and try. He solemnly dressed himself in the cook's apron and cap, and thus equipped walked down stairs to the kitchen, thru rows and rows of grinning faces, all the people in the great hotel having gathered to see Alexander Dumas dressed as a cook. I

expect they never forgot the sight. At last the famous dish appeared, but it was so bad that the author of it was obliged to eat it himself. It was, however, noticed that he gave half to my cook. What the cook did with it is another question, certainly he did not eat it!"

Adelaide Ristori appeals to the Italians, not only as their greatest actress, but as an ardent patriot, because for years she helped Count Cavour at St. Petersburg, and especially because in Paris she gained much assistance for the cause of Italy. One letter of the great statesman to her, still unpublished, she has allowed me to copy and translate. It shows what ties existed between them and is as follows:

"TURIN, April 20th, 1861.

"DEAR SIGNORA MARCHESA—I am very grateful to you for the interesting letter you wrote me on my return from St. Petersburg. If you have not convinced Prince Gortchakoff, it must be said he is an impenitent sinner, as the arguments which you used so ably in support of our cause seem to me irresistible. However, I flatter myself that the Prince did not wish to show himself converted in your presence, but your words will have left in his mind a seed which will develop and bear good fruit. Continue in Paris your patriotic apostolate. You must find yourself in the midst of heretics to convert, as I am assured that the frequenters of the Paris 'salons' are very hostile to us. It is the fashion now in France to be Papal, and to be all the more so as they believe less in the principles which the Papacy represents.

"But like everything which is the fashion and does not rest on truth, these prejudices will not last, all the more if the persons who, like you, possess in any eminent degree the gift of moving and persuading, will preach the truth amidst that society which, notwithstanding many defects, more than any other knows how to appreciate genius and virtue.

"I congratulate you on the splendid success which you have had on the French stage. This new triumph will give you an irresistible authority over the public of Paris which must be very grateful to you for the services which you are rendering to French art. Use this authority for the advantage of our country and I will applaud you, not only as the first artist of Europe, but as the most efficient co-operator in diplomatic negotiations.

"Love me and believe me

"Your most devoted,

"CAMILLO CAVOUR."

This important document was in one of the drawers of her desk, kept jealously closed, where were also bundles of other letters from most of the great men of her time. Among them were several more from Count Cavour, from Garibaldi, Mazzini, Dumas, father and son, and over 100 from Dom Pedro, the Emperor of Brazil. She also preserved autographs of Rachel, George Sand, Alfred de Musset, Lamartine and many others in such numbers that one could not possibly note them all. Indeed she had a kind of religion for all souvenirs in connection with her glorious past, and everywhere in her rooms were statues and other mementos and presents offered long ago in homage to her achievements.

Her memory, as I have already remarked, was wonderful, and on my last

Marquis Giorgio Capranica del Grillo, Only Son of Adelaide Ristori.

visit she thanked me again for a number of THE INDEPENDENT containing an article about her which I sent her some time since, and which she informed me she forwarded to her "relatives in Australia." "In Australia," I echoed astonished. "Yes, at Melbourne. Signor Maieroni, a well known actor, but whom you will not remember, married my niece, daughter of a sister also an actress, and they settled in Melbourne, where Signor Maieroni died, leaving his wife and two sons, the latter of whom follow the family tradition and act in English, principally in

Australia and India. A brother of Signora Maieroni, and nephew of mine, Emanuele Tessero, has a hotel, the Clifton Hill, near Melbourne."

To conclude these few notes about the greatest Italian tragedian and to show that the enthusiasm she aroused was not a passing one, I will reproduce what Sardou wrote to a friend twenty years after having assisted for the last time at a representation given by her:

"I have been one of the greatest admirers of the Ristori. I have seen her in all her *rôles* and I must say that I am much indebted to her, as I have often used in my plays some scenic and physiognomic effects which were simply the remembrance of what I had seen her do. I have many of my characters modeled on that admirable actress. The whole scene of the denunciation in 'Patrie' is of the purest Ristorism. For my part I have never assisted at anything greater in the theater, and the evenings in which I saw her have remained the most memorable of my dramatic life."

ROME, ITALY.

Science in Our Outlying Possessions

BY JOHN TROWBRIDGE

PROFESSOR OF APPLIED SCIENCE IN HARVARD UNIVERSITY.

I AM firmly persuaded that science is destined to become the most important interest of any people who are not becoming degenerate; and its pursuit and encouragement are especially important to an industrial and commercial nation.

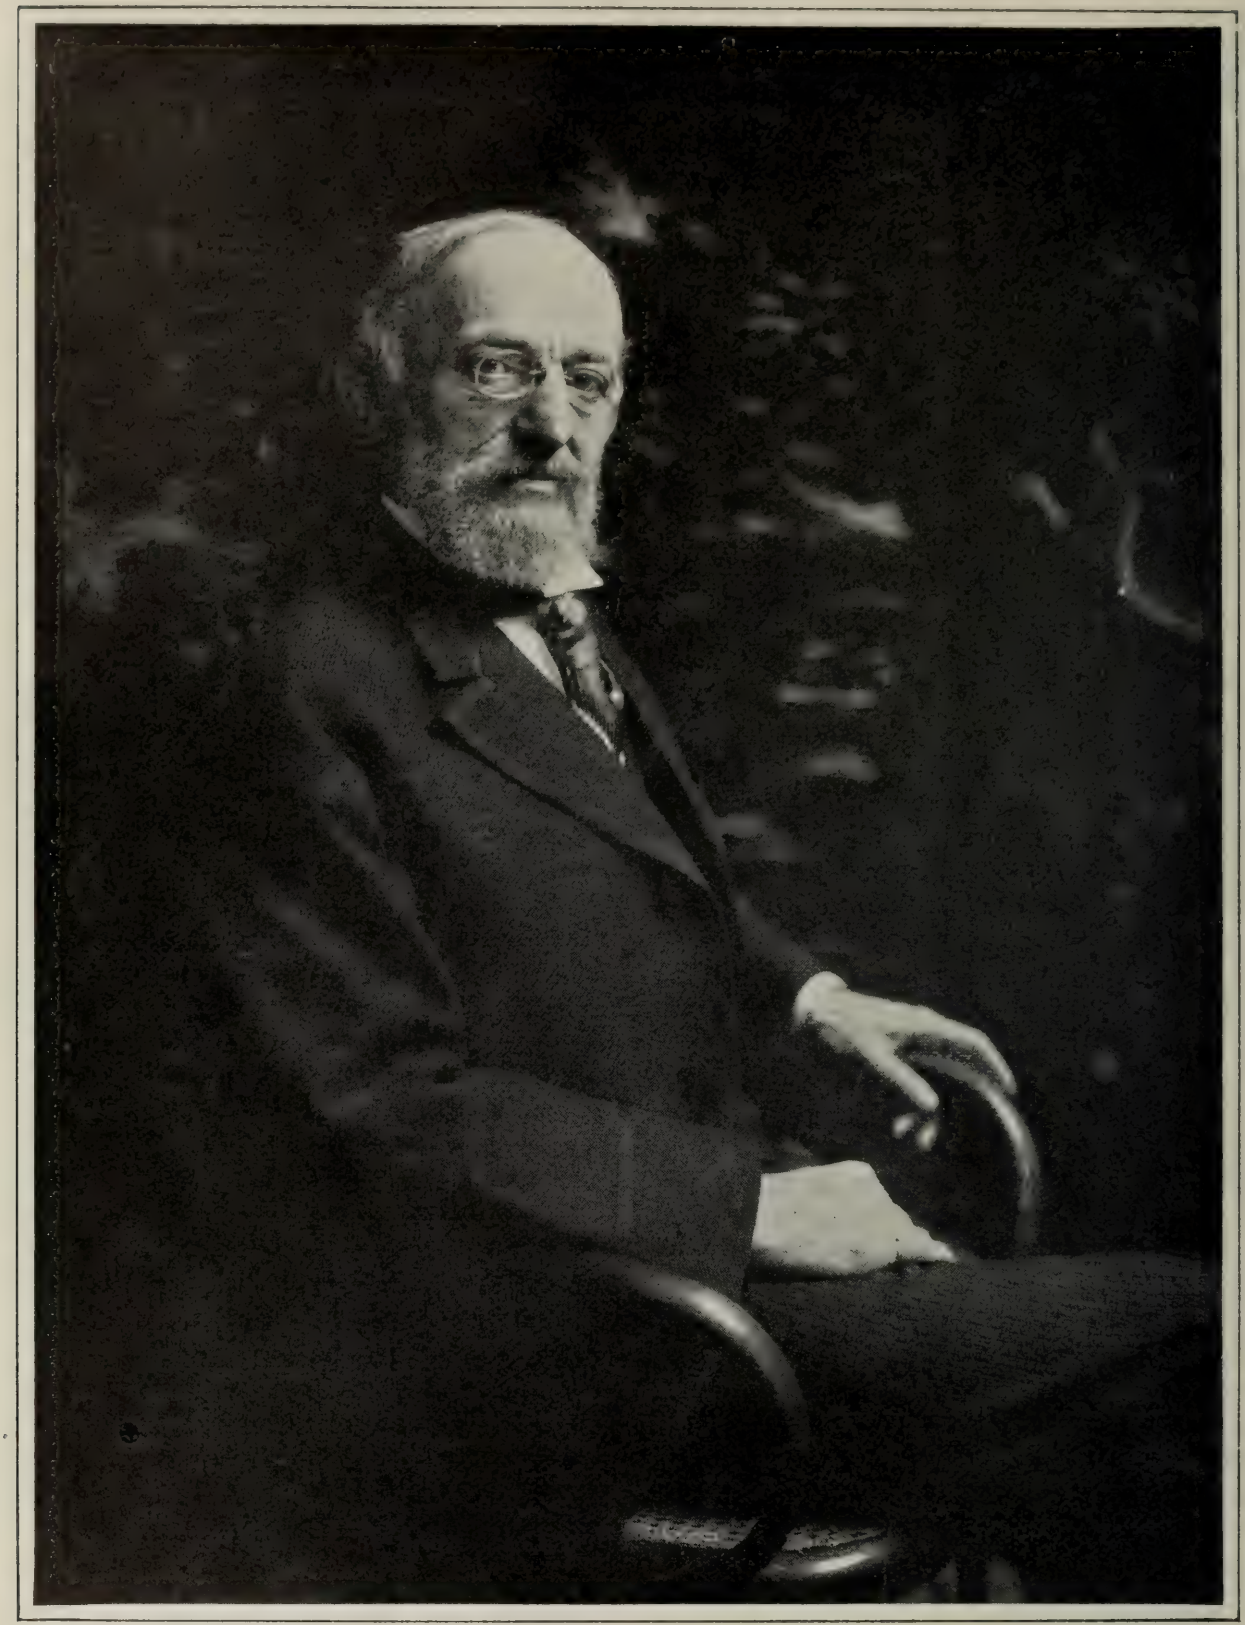
The Philippine Islands are almost directly underneath Porto Rico. The distance between these new possessions of the United States is about twelve thousand miles—one-half the circumference of the globe. These islands lie at the extremities of a diameter of the earth. When they are connected by cables, time and distance will be annihilated. Let us suppose that meteorological and magnetic stations are established in the Philippines, in Hawaii and in Porto Rico. Practically simultaneous observations could then be made on changes of temperature, pressure of the air-movements of the earth, electricity in the upper strata of the atmosphere, and fluctuations in the magnetic condition of the globe.

The Signal Service of the United States is at present extended over a comparatively limited area. It cannot be said to be anything more than local in respect to worldwide questions in meteorology. No one questions its extreme and increasing value, and the extension of its stations to Cuba and Porto Rico has already proved of value to commerce; but there are mysteries in regard to the movements of the atmosphere which cannot be solved by local observations. A belt of stations around the world is needed to study the conditions which depend upon the motion of the earth. Worldwide simultaneous observations might give us a trustworthy theory of storms, which at present can be said to be entirely lacking. Let us reflect what has already been accomplished by telegraphy in the weather service. A hundred years ago it was discovered or surmised that great storms arose in the United States first in the South and West, and moved in a northeasterly direction over great areas. It was not, however, until simultaneous observations had been made at a number of widely distributed stations, connected by telegraph, that weather charts could be prepared which showed local conditions and enabled observers to predict the arrival of the storm and its path. At present, simultaneous observations are made at certain hours of the day at the stations distributed over the United States. These observations are telegraphed to a central office, where they are used to make weather predictions. There are, perhaps, only two hundred of such stations over the great area of the United States. These stations can give observations on cyclonic movements after they have entered the United States, but can give no information in regard to the previous history of the cyclones in the Pacific. We cannot study the origin of the hot waves of great extent which precede the great cyclones and which are due to air blown from the warmer to the

higher and colder latitudes. The movements of great atmospheric disturbances are dependent, of course, on the rotation of the earth, and in order to follow them and utilize for commerce our study of them, we need meteorological stations around the world. We are not yet awake to the importance of the study of cosmical physics. Let us follow, for instance, an incomplete record of a storm:

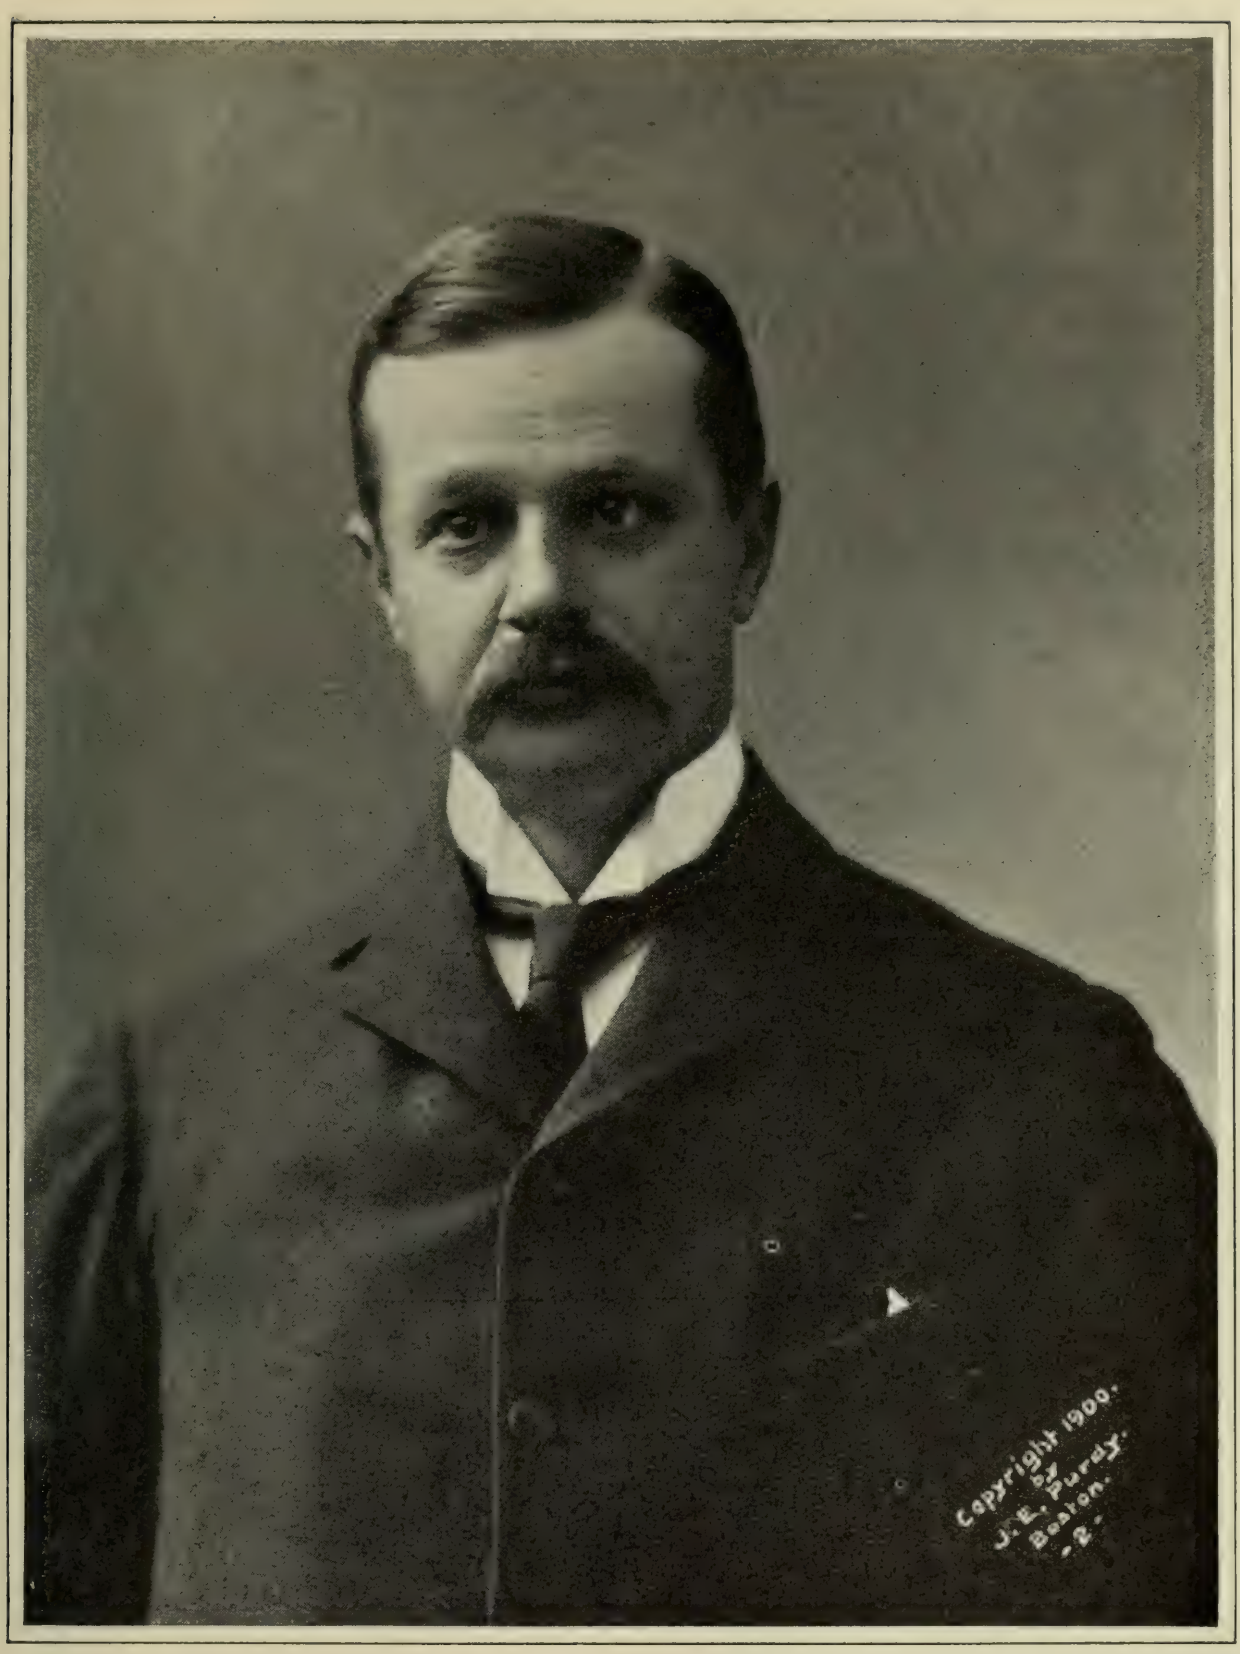
"The typhoon was traced from near Manila, where, on September 27, 1882, it had a movement forward of but five miles per hour, to the coast of Japan (about October 1), where it moved at the rate of 33 miles per hour, which increased to 51 miles per hour on October 3, just east of Japan; thence it passed to the Aleutian Islands, and to Oregon, which it reached on October 10; thence across the Rocky Mountains, at a rate of 37 miles per hour, and through the Northern United States and Canada, Hudson Bay, and Labrador, to Davis Strait; and thence past the southern point of Greenland to longitude 27° West, latitude 55° North, in the Atlantic Ocean, where it united with another cyclone. After this union, the cyclone remained stationary for nearly a week (from October 17th to October 24th), when it suddenly took a southeast course toward England, passed over the Bay of Biscay, and reached France on October 27th; took another northeasterly trend, and vanished in the region of the Baltic Sea on November 1st, having thus traveled over 14,000 geographical miles in 35 days."*

The observation of such important changes is at present local and meager. The fluctuations in the money markets of the world are followed far more accurately than physical phenomena, which affect the lives and occupations of thousands of human beings. This history of a storm which I have given is based upon unsystematic observations, almost haphazard, of mariners and amateur observers. Simultaneous observations in the Philippines, in Hawaii and in Porto Rico and Panama could enlighten us much in regard to such extensive disturbances of the air. While we have such incomplete records of great storms near the surface of the earth, we have absolutely no observations of changes in the higher regions of the air. Such observations could be obtained by means of kites or captive balloons.



There are, too, observations which should be made at widely separated stations on the magnetism of the earth. This force is one of the most mysterious in science. It directs the mariner's compass, it places the particles of iron and steel in such a position that cities of the world are lighted by its agency, and it enables forces almost Titanic to be developed. We know very little about it or its distribution on the globe. We have theories about its origin, but these theories need to be supported by careful simultaneous observations at such stations as we now can have in our new possessions.

There is another mystery closely related to magnetism perhaps—the electrical condition of the earth. Some suppose that the globe has a permanent charge of electricity, others that the electrical states we observe are due to the rotation of the latter, to the action of the sun, or to the chemical changes in the earth's atmosphere. We have no simultaneous observations of the electrical state which exists, even one hundred feet above the surface of the earth, and which occasionally increases locally to a tremendous extent and manifests itself in thunder-storms. In the higher regions of the air we have another manifestation in the phenomenon of the northern lights. There are undoubtedly widespread electrical storms even in a cloudless sky, for observations taken with kites show varying conditions in the electricity of the air even at moderate hights. These storms doubtless influence our wellbeing and conditions of growth, and, it may be, have an effect upon disease. It is known that electricity can open minute orifices or form such orifices in various forms or aggregations of matter, and in this way change circulation, and the pressure in enclosed spaces. It is widespread and Protean in its manifestations, and in order to advance in our knowledge of it, we must study it by simultaneous observations at the opposite ends of a diameter of the earth. An electrical disturbance in the upper regions of the air at Manila may make itself instantly felt in Porto Rico.



We have an opportunity of inaugurating observations on these various cosmical phenomena which would be unique in the history of science, and I believe that America would sink to a nation of the second class if it did not avail itself of the scientific opportunity it now has.

CAMBRIDGE, MASS.

* "ELEMENTARY METEOROLOGY," *Dr. Frank Waldo*, 1896.

Oscar Solomon Straus, who succeeds Victor L. Metcalf as Secretary of Commerce and Labor, was born in Otterberg, Rhenish Bavaria, on December 23d, 1850, of Bavarian ancestors. His early life was spent in Georgia, but his family moved North and he was educated at Columbia Grammar School, New York, and Columbia College, where he was graduated in 1871, standing fifth in his class. While at college Mr. Straus supported himself by writing for the papers and magazines. He was graduated from the Columbia Law School in 1873, and then took up the practice of law. He soon reached a high place in his profession and was for some time counsel for the Chamber of Commerce, the Board of Trade and several prominent corporations. In 1887 he was appointed Minister to Turkey by President Cleveland, succeeding the late S. S. Cox. He was reappointed Turkish Minister by McKinley. In 1902, President Roosevelt appointed him to the vacancy in the Permanent Court of Arbitration at The Hague, caused by the death of Ex-President Harrison. He is the author of a number of works on civic, historical and religious themes and is president of the New York Board of Trade and Transportation, and of the National Primary League, Vice-President of the National Civic Federation and a member of the International Law Association. It will thus be seen that he is interested in and even an authority on both commerce and labor. He will be the first Jew to hold a Cabinet office. The above photograph was taken October 24th especially for THE INDEPENDENT.

George von Lengerke Meyer, who succeeds George B. Cortelyou as Postmaster General, was born in Boston in 1858. He was graduated from Harvard in 1879, and has since been engaged in business. He is now president of the Ames Plow Company, and is interested in other important New England corporations. In 1900 he was appointed Ambassador to Italy, a post which he held until 1905, when he was transferred to Russia, from whence he will now go into the Cabinet. His appointment is the direct result of the favor which he found with President Roosevelt because of his services at St. Petersburg during the Russo-Japanese War, where he most skillfully aided the President in his efforts to bring about peace. He will be the second member of the Roosevelt Cabinet to come from the Russian Embassy, the other being Ethan Allan Hitchcock, the Secretary of the Interior. For some weeks it has been known that Mr. Meyer would enter the Cabinet, but what portfolio he would have was not certain. While Mr. Meyer's experience in postal affairs has hitherto been limited, he has had a wide diplomatic and political experience both at home and abroad, which should qualify him for the problems confronting the administration of this constantly growing department.

From Pulpit to Stump

BY THE REV. H. S. BIGELOW

[Mr. Bigelow is the pastor of the Vine Street Congregational Church of Cincinnati. When it was reported in the papers a few days ago that he had left the pulpit for the stump we asked him to give our readers his reasons therefor, and he has done so in the following brief article. Mr. Bigelow has long been prominent as a social reform leader, lecturer and writer, and in 1902 he accepted the Democratic nomination for Secretary of State of Ohio.—EDITOR.]

I HAVE been for ten years pastor of the Vine Street Congregational Church, which was in the beginning the storm center of the abolition movement, and which has been, in these last ten years, rather singular among the churches of the city for the emphasis we have placed upon the cause of economic betterment and political regeneration.

In the latter cause, at least, our efforts have not been fruitless. But a situation has arisen in Ohio which makes a change of method advisable for the time being. Owing to a readjustment of our election laws we shall have a meeting of the Legislature in the spring of 1908 and in the fall of the same year an election of a new Legislature to meet early in 1909. The 1908 meeting will be an adjourned session. An Initiative and Referendum bill has already passed the Senate by the requisite two-thirds majority, and is now reposing in the judiciary committee of the House.

I believe this measure is of supreme importance and that this is a favorable time to make a determined effort for it. My people consent to my leaving the church for a time, perhaps two or three years, that my efforts may be exerted directly for this measure. I propose to follow what seems to be the line of least resistance.

There are many close legislative districts in Ohio. I shall select for my campaign those districts that are close and where the representatives are hostile or indifferent. I shall make a newspaper and speaking campaign in these districts, reaching churches, labor unions, commercial and other organizations. I shall have a card catalog enrolling the friends of our movement in these districts. These I believe will be numerous enough, with vigorous organization, to control the balance of power. Then we shall go to the Representatives in 1908 and ask them to vote for our measure. If they refuse the people will not have two years to forget it, as is usually the case. The most of these Representatives will have to go before their constituents for re-election within a few months after they vote for or against the referendum.

I believe such a demonstration of public sentiment can be made for the referendum that it will be passed in 1908. If we fail in that, I believe we can defeat enough of our enemies to insure its passage in 1909. If that can be done I shall be content to go back to my church. For with the power to enact laws by a direct vote of the people, and to veto by a referendum any objectionable act of city council or State Legislature, the citizens of Ohio, like the citizens of Oregon, will have a new weapon in their hands with which they may easily cope with the bosses and the corporations.

The success of this or that party will then be a matter of comparative indifference. The expense of time and money to control nominating conventions and commit candidates to certain policies will be unnecessary. The humiliation of entreating our own representatives to protect the public interest against the monopolies will be spared us.

We shall no longer have to wade through the mire of politics to secure reforms. Over the heads of the politicians in conventions and legislatures and councils we may make our appeal to the people direct. The corporations cannot fight us in the secrecy of the lobby. They will have to come out in the open and meet us, not with bribes or lawmakers, but with arguments to the people. Every campaign will then have a distinct educational value, and we shall get progress as fast as the people want it.

As things are now, the reformer is under a serious handicap. We are living

under minority rule. So many are the obstacles that no important change is made, until not only a majority, but an overwhelming majority favor it. It takes a torrent of public sentiment to break down the barriers with which corporations are able to resist reforms long after they have become popular.

I do not leave my church to go into politics. I am leaving it to put an end to the necessity for the very disagreeable kind of politics which we now have.

CINCINNATI, OHIO.

Princeton's Preceptorial System

BY CHARLES C. WOODEN

[We printed an article on the Princeton Preceptorial System at the time of the inauguration of this most interesting experiment in American Higher Education from President Woodrow Wilson. We are glad now to offer our readers the following article from a Princeton Senior, which represents, we believe, the best undergraduate opinion in regard to the system.—EDITOR.]

THE unique Preceptorial System installed at Princeton University, in 1905, is now entering upon its second year. It is, of course, too soon to determine the ultimate value of the innovation, but it is being watched with such interest in educational circles that a few indications of its results and possibilities may be of interest.

Whatever else the system has accomplished, it is already an assured fact that the students are doing much more work than they did under the old *régime*. The reason is not difficult to find. In former years books were, it is true, assigned for required reading in connection with all lecture courses, but no pressure was brought to bear upon the student to ensure their perusal save the fear of examinations. Under the new system, this reading is done under the supervision of the preceptors and the student is required to meet a preceptor one hour a week in each of his five courses. As rarely more than half a dozen students meet the preceptor in one group, ignorance of the subject-matter assigned for reading is extremely difficult to conceal, and often becomes painfully apparent. Add to this the fact that the preceptor has the power to debar the student from examination as well as to save him from the consequences of a failure in examination if his term work has been good, it is easy to see that it behooves the student to do at least a portion of the assigned reading. If, perchance, he does it all, it requires several hours of reading per week for each preceptor. President Woodrow Wilson has in some measure realized thru the Preceptorial System one of his cherished ambitions,—to make reading men of the students. Reading men they have certainly become—under pressure—and no doubt many of them will continue so, after the pressure has been removed.

This result, however, might be expected to follow almost as a matter of course from the addition of fifty new men to the teaching force of any college or university. The greater division of labor ought alone to produce that result. What of the more unique results anticipated from the innovation; results relating not so much to the quantity as to the quality of the work done: have they been obtained in any measure?

Undoubtedly there was not only more work done by the students during the past academic year, but it was better done. The lecture-room work remains practically unchanged, save that one of the lecture hours has been given over to conference work with the preceptors, but there has been a great improvement in the manner in which the supplementary reading is done. The preceptorial meetings have afforded an excellent opportunity for free and open discussion of the books which are being read. The meeting place is, in many instances, the library or "den" of the preceptor, and it sometimes happens that the hour is spent in an easy chair before an open fire, with the smoke from the pipes of preceptor and student mingling in its ascent. Where such conditions exist, there can be little feeling of constraint, and the en-

suing discussion is not only interesting but highly profitable. Questions come thick and fast and there are none of the long exclamatory whistles that assail the member of a large class whose thirst for knowledge exceeds his discretion.

Important as are these quantitative and qualitative results, they are not those which the Preceptorial System was especially intended to produce. The main defect which the system was designed to remedy is the highly impersonal relations that exist between faculty and students in a large university. The fundamental aim was to establish a closer contact between teacher and student by means of small classes such as are found in a small college, with the idea that by this means the spirit and personality of the teacher—after all, the most potent factors in education—would then have free play. The preceptor was to be much more than a mere instructor—he was to be a companion and friend to the student. Has this ideal been attained in any degree?

Such a change of conditions must necessarily take place slowly, and it is not so apparent after one year as the results previously mentioned. It is becoming clear, however, that the machinery of the Preceptorial System is admirably designed to produce that result. Too many preceptors, however, have missed something of their high calling and allowed their conference hours to sink to the level of mere "quizzes." In general, it seems fair to say that as yet the relations of preceptors and students have been largely of a "business" nature. From this statement some of the preceptors are, of course, to be excepted, and it is these men who are showing what the system is capable of. If there is one thing clearer than another at this time, it is that it depends largely upon the preceptors whether the Preceptorial System is to fulfil the high purposes for which it was designed. It will always be possible to get more work out of the students with such a system, but, be it ever so admirably designed, the higher results aimed at will be nullified if the preceptors do not possess the requisite spirit and personality. Of itself, the mechanical side cannot do very much; but as an instrument in the hands of a born teacher it can produce results that will be evident not only in a higher standard of scholarship but also in the higher ideals, greater manliness and nobler purposes of the university's men.

President Woodrow Wilson, of Princeton, Who Conceived and Established the Preceptorial System.

PRINCETON, N. J.

Washington: The City Beautiful

BY WILLIAM PINKNEY WHYTE

United States Senator from Maryland

THE Constitution of the United States gives the Congress power to exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States.

The District of Columbia was laid out originally by Commissioners under the appointment of George Washington. Its area embraced one hundred square miles, including at that time Georgetown in Maryland and Alexandria in Virginia, all of which came to the Federal Government by cession from those States; but by the retrocession to Virginia of all of the land lying upon the west bank of the Potomac, the territorial extent of the District was largely reduced. The city of Washington proper covers about ten square miles.

The territory so selected was not to be ready for Federal use until 1800, while the Federal offices were to remain from 1790 to 1800 in the city of Philadelphia.

The new "Federal town" was to be planned by Major Pierre Charles L'Enfant, a French engineer of great promise, and already bearing credentials of high authority as to his exquisite taste and consummate skill in that profession. He was to be, and was, guided by Washington and Jefferson, then Secretary of State. His plan of the city of Washington was elaborate in the extreme: "The vistas and axes, sites for monuments and museums, the parks and pleasure grounds, fountains and canals," the broad avenues and wide streets, the location of the splendid public buildings, and all that goes to make a city a magnificent and consistent work of art, were regarded as essential in his plans, and his map, as drawn for the future development of the city, stands today as a monument to his finished, artistic skill. His work began as early as April, 1790. The plan of the Capital City, prepared under the authority of Congress, was submitted to that body by President Washington in a message on December 13th, 1791. It was an extensive plan, intended for a magnificent seat of government, unparalleled in any country, and, consequently, to cover in its work a period of many years.

But little progress was made in the execution of these admirable designs during the ten years set apart for the preparation of the Capital on the scale originally determined.

In October, 1800, the departure of the officers of the United States Government and the transfer of their official paraphernalia from Philadelphia to the "New National Settlement" was made, and the District of Columbia became the "seat of government." Washington was then a desolate place and looked more like a "deserted village" than the capital of a great republic, which was to be; and a sorrowful set were John Adams and his Cabinet when they established themselves in this dreary settlement. When Congress assembled shortly afterward, the disgruntled statesmen, who had left the comforts and charming society of Philadelphia, were little inclined to the task of bringing order out of the chaotic condition before them. There was scant improvement during the administration of Adams, Jefferson and Madison on the lines of the "great expectations" of L'Enfant and his coadjutors—either in the erection of public or private buildings, the beautification of the squares or reservations, or in the laying of proper pavements in the streets and avenues, or in the accretion of population, so necessary to the life of a city. But during the Presidential term of James Monroe, which was called the "era of good feeling," there was extensive advancement in the expenditure of public moneys for the public works too long delayed. The population was supposed to have increased to 12,000 or 15,000. After Monroe's administration, the march of improvement moved with leaden heels, and Washington was a sort of nondescript—more than a village, but without the altitude of a live city. Even in 1840 the buildings of note were few and far between, and the condition of things was in no wise cred-

itable to such a Federal Government. When Charles Dickens visited us in that year, his description of Washington in his "American Notes for General Circulation" evoked sharp condemnation from

William Pinkney Whyte.

that class of American readers who had perused with delight his fascinating books as they came from the press; for they conceived the idea that he wrote those "notes" with a prejudiced mind and warped judgment, notwithstanding he had been treated on his visit with marked cordiality and the most generous hospitality. However that might be, his pen photograph of Washington, as it then appeared to him, might have been somewhat mythical, yet it had more than slight foundation in fact at that early period. It is worth reproduction in the light of Washington's growth from a population

of from 12,000 to 15,000 to a city of 323,123 inhabitants.

"It is sometimes called the 'City of Magnificent Distances,' but it might with greater propriety be termed the 'City of Magnificent Intentions'; for it is only by taking a bird's-eye-view of it from the top of the Capitol, that one can at all comprehend the vast designs of its projector, an aspiring Frenchman. Spacious avenues that begin in nothing and lead nowhere: streets, mile long, that only want houses, roads and inhabitants: public buildings, that need but a public to be complete: and ornaments of great thorofares, which only lack great thorofares to ornament —are its leading features. One might fancy the season over, and most of the houses gone out of town forever with their masters. To the admirers of cities, it is a Barmecide Feast, a pleasant field for the imagination to rove in: a monument raised to a deceased project, with not even a legible inscription to record the departed greatness." * * * "Few people would live in Washington, I take it, who were not obliged to reside there, and the tide of emigration and speculation, those rapid and regardless currents, are little likely to flow at any time towards such dull and sluggish water."

If Charles Dickens was in the flesh, and could revisit Washington, he would find that some of the designs of the aspiring Frenchman have now been carried out to the letter, and Washington is beginning to lay the foundation for the title she will hereafter earn of "The City Beautiful." The early government of the District is largely chargeable for the slow progress of improvement in Washington. Its aid from Congress was always spasmodic and more in the nature of charitable benevolence than systematic public improvement. In 1802 Congress had incorporated the City of Washington with the usual municipal officers, such as Mayor and City Council, and their subordinates, with the common powers normally conferred on towns and cities. It was a sort of happy-go-lucky affair, with minor changes in its organization from time to time, but with no actual interference by Congress. Strange to say, such a rickety local government lasted until 1871.

Then there came a sort of earthquake in the quiet and sluggish city. By the Act of 1871, approved February 21st, a legislature was established, with all the appliances and machinery of a territorial government, and it was entitled the "District of Columbia," which covered all that part of the territory of the United States then held under that designation; and it was constituted a body corporate for municipal purposes. The Act created a Governor and Legislature and a Board of Public Works, the latter to consist of the Governor, as its president, and four other persons to be appointed by the President and confirmed by the Senate. The real government, however, was the Board of Public Works, of which Alexander R. Shepherd was the president. It was thru his influence, it was supposed, Congress made an appropriation to start the erection of the State, War and Navy Building, costing over $12,000,000, and under his administration enormous expenditures were made for street improvements, unsightly nuisances removed, grades of streets and avenues changed and other public works completed. The appropriations by Congress began to be large; debts were created for municipal purposes, and the property of those who could not pay their assessments for improvements was put under the hammer, and much was done to change the aspect of the city. In the years of the existence of the Board of Public Works, it can well be admitted, the City of Washington had undergone physical transformation, but there was still a lack of confidence in the stability of such a form of government, and the hope was departing that the Capital City would ever measure up to the aspirations of George Washington and his early associates.

It was then that the true construction of the Constitution relating to the seat of government was correctly understood, that is:

"that the Congress had supreme legislative power over the District of Columbia, and that in the exercise of this power *the citizens of the District have no right to participate, and can have no right except such as may be delegated to them by Congress itself.*" "In strict legal sense, there can be said to be no such thing as local government of the District of Columbia, for there can be no government within the District independent of that of the Federal Government," and "any government that may be established by Congress therein can only be regarded, legally, as an agency of the Federal Government."

In 1874 it began to dawn upon the Congress of the United States that

"the founders of the Capital City, evidently did not believe, that, in their time, the plan of

the City could be consummated; but they were establishing the permanent seat of government. It was as the Supreme Court said in Van Ness vs. City of Washington, 'The grants were made for the foundation of a Federal City, and the public faith was, necessarily, pledged, when the grants were accepted, to found such a City' * * * That the City was designed to last in perpetuity, *'capitoli immobile saxum.'* The Federal City foresaw a far distant future, when it was to be the center of a continent, under one form of government, looking to it for its laws and for its protection. It was to be a City, where all improvements made and expenses incurred were to be for the benefit of the *whole people.*"

Realizing the utter failure of the past experiments and the then existing mode of government, which had been tried for the District of Columbia, and the true relation between it and the United States, Congress in the discharge of its constitutional duty resumed its control of the District of Columbia *in behalf of the whole people of the United States.* The territorial government was abolished, and a temporary scheme of government was established by Congress on the 20th of June, 1874. The President was authorized, by and with the advice and consent of the Senate, to appoint a commission, consisting of three persons, to exercise the power and authority then vested in the Governor and Board of Public Works, except as afterward limited by the Act. The Act of 1874 merely abolished the government established by the Act of 1871, and substituted the temporary government by commissioners, but left mainly all the boards and machinery of the government as it was under the Act of 1871. All legislative powers outside of Congress thus ceased, and this Commission was confined to the administration of the legislation of Congress as the supreme legislative body in the District. This whole scheme was purely experimental, and did not at all meet the requirement of the Capital of the United States.

An unstable form of government was in no way calculated to inspire confidence in capitalists to invest their money in the large landed estates within the District, or to make the city a place of residence, where the advantages of literary pursuits and social life would be great attractions. Then it was, to meet the exigencies of the time, that the Senate and House of Representatives, at the first session of the Forty-fourth Congress, appointed a Commission (August 14th, 1876), "to frame a new government for the District of Columbia, consisting of Senators George E. Spencer, of Alabama; William Pinkney Whyte, of Maryland, and William Windom, of Minnesota, and Representatives George W. Hendee, of Vermont; Eppa Hunton, of Virginia, and Heister Clymer, of Pennsylvania." That Commission appointed Senator Whyte and Representative Eppa Hunton as a sub-committee to report a suitable form of government for the approval of the Commission. That sub-committee recalled the fact that Judge Poland, of Vermont, of the Judiciary Committee of the House, had, in 1874, used the following language in a report on the "Legal Relations of the Federal Government and the Local Government of the District of Columbia," viz:

> "There is something revolting to a proper sense of justice in the idea that the United States should hold free from taxation more than one-half the area of the Capital City, and should require to be maintained a city upon an unusually expensive scale, from which the ordinary revenues derived from commerce and manufactures are excluded; that, in such a case, the burden of maintaining the expenses for the Capital City should fall upon the resident population."

The justice of this commentary on the then condition of the law appertaining to the District being admitted, the important work of preparing a suitable form of government was begun. The Commission became convinced that it was the duty of Congress to make regular annual appropriations for the expenses of the District Government, and from a careful estimate of the value of the property then owned by the United States and that belonging to private persons and corporations, the Commission considered that the Federal Government should bear a fair proportional part of the annual expenses, and that the balance should be realized by taxation. This, it was conceived, was the pivotal point upon which the future of the Capital City depended. The sub-committee, in due course, prepared the bill and submitted it for the approval of the Commission, and it was concurred in and reported to Congress and became a law,

and as its title states, provided "a permanent form of government for the District of Columbia." (Supplement to Revised Statutes, Vol. 1, page 173, approved June 11, 1878). The act as passed required the United States to pay one-half of the expenses of the District and the citizens (taxpayers) to pay the other half; a provision which had never been any part of the Congressional legislation previously enacted in regard to the District of Columbia. There are many safeguards thrown around the Congressional appropriations, and the money contributed by the taxpayers; and the expenditures pass under the supervision and scrutiny of the accounting officers of the Treasury Department. From the time of the passage of this act the capital city was lifted out of the "slough of despond." The Act of 1878 has been regarded as the organic law of the District of Columbia, intended to dispose of the whole question of government therein.

"It is, as it were, a Constitution for the District. The word 'permanent' in its title is suggestive. It implies that prior systems had been temporary and provisional. As permanent, it is complete in itself. It is a system of government. The powers which are conferred are organic powers. * * * It is a simple complete act; the outcome of previous experiments and the final judgment of Congress, as the system of Government which should obtain."

The stability and permanence of this form of government was thus stamped upon it, many years ago, by the Supreme Court of the United States; it gave to the wealth of the country the guarantee that great landed investments and palatial buildings were safe from the despoiler and the oppression of the tax imposers.

In December, 1900, the Commemorative Centennial Celebration held in Washington was the setting in motion of new elements for the improvement of the District in a manner and to an extent commensurate with the dignity and resources of the American nation. The most distinguished architects were gathered into the counsels of the authorities acting under Congress, and it was their unanimous judgment that the original plan of L'Enfant had stood the test of a century and had met with universal approval. They deemed it eminently wise to carry out to the fullest extent the general design of that plan. There have been placed in the Congressional Library models of what Washington now is and what it is to be. The report of the Senate Committee on the District of Columbia, at the first session of the Fifty-seventh Congress, contains a statement of the work done and contemplated, and with it is a report of the commission of experts, which can hardly be excelled in the lucid discussion of the plans and of the opportunity for making, in time, the Capital City the most splendid and beautiful seat of government of any in the world. Already the march of improvement, casting aside its ancient leaden heels, has been moving with gigantic strides.

In April last, the corner stone of the office building for the House of Representatives was laid with imposing ceremonies, and within the last two months the like work for the Senate building was begun, but without pomp or circumstance; and when these majestic structures are completed, at a cost of $7,000,000, the plaza east of the Capitol will present a group of buildings unsurpassed in any capital city of the world. The new Union Station, costing $12,000,000, will add another majestic improvement to this section of the city. The projected buildings and improvements designed within recent years, some of which are nearly completed and others in the course of erection, are estimated to represent an expenditure of $54,000,000.

With the gradual advance of improvement toward the realization of L'Enfant's great conception, the population has increased, according to a recent census, to the number of 323,123 inhabitants. The total *assessable* real and personal property in the District, as represented by the Commissioners December 1st, 1905, has grown to the sum of $242,220,538.63. With such a review of the growth and splendor of the architectural adornments of the capital city, what true citizen of the United States can fail to be proud of it as it is, and sanguine in hope of what it is to be.

Baltimore, Md.

A Poe Miscellany

ANNOTATED BY PROF. JAMES A. HARRISON

[Professor Harrison is the editor of the Virginia Edition of Edgar Allan Poe's complete works, and is the leading Poe specialist in America. Tho this article is complete in itself, it naturally follows the one published by Professor Harrison in THE INDEPENDENT two years ago entitled "Reminiscences of Poe."—EDITOR.]

THE present instalment of twenty-two letters and documents covers the period 1849-1870, and may well be entitled "Echoes of the Tragedy:" Letters about Poe, from intimate friends, near relatives or literary foes. No death perhaps ever aroused such interest—in many quarters such compassion and anguish—in American literary circles, sending out even today tremors and reverberations like those from some far-off volcano. Most untimely deaths among men of precocious genius weep themselves to sleep in the course of generations; but the Adonais group — the Keats, the Shelleys, the Poes—lift themselves up in the attitude of immortal sculptures perpetuating a grief that cannot be comforted. Ever and anon the lamentation breaks forth afresh as in these documents, which are filled with a varied expression of sympathy, admiration, tenderest pity; even the hostility in some of them is tempered with wonder and astonishment that so much was accomplished under circumstances so adverse.

Dr. J. J. Moran to Mrs. Clemm.

Balti. City & Marine Hospital, Nov. 15/1849.
Mrs. Clemm,

My Dear Madam,

I take the earliest opportunity of responding to yours of the 9th Inst. which came to hand by yesterday's Mail.

Your deep solicitude, Madam, in reference to the "last moments" of him of whom you write, does not surprise me. It falls to the lot of but few, to enjoy the extensive popularity that was unquestionably his. Wherever talent—mental worth, nay Genius, was prized there "E. A. Poe" had warm friends. To his rarely gifted mind are we indebted for many of the brightest thoughts that adorn our literature to him is Belles Lettres indebted for the purest gems her Casket Contains. *"Poe is gone!"* How many hearts have heaved a sigh in uttering these three words! How many thousands will yet, and for years to come, lament the premature demise of this truly great man! Nor can there be found, in the list of his enemies (what *great* man ever lived without them?) one individual, who will withhold from him the meed of praise to which you refer when you speak of his "nobility of Soul." Posterity will not hesitate to award him a place in the Catalogue of those whose pens have strewn flowers in the pathway of life—flowers too, whose fragrance will last for the enjoyment of unborn millions, thereby preserving a memorial more lasting than the Sculptor's Chisel or the Art of the Statuary Could ever fabricate or invent. But now for the required intelligence. Presuming you are already aware of the malady of which Mr. Poe died I need only state concisely the particulars of his circumstances from his entrance until his decease.

When brought to the Hospital he was unconscious of his Condition—who brought him or with whom he had been associating. He remained in this Condition from 5. *Ock* in the afternoon—the hour of his admission—until 3 next morning. This was on the 3rd Oct.

To this state succeeded tremor of the limbs, and at first a busy, but not violent or active delirium—constant talking—and vacant converse with spectral and imaginary objects on the walls. His face was pale and his whole person drenched in perspiration—We were unable to induce tranquillity before the second day after his admission.

Having left orders with the nurses to that effect, I was summoned to his bedside so soon as Consciousness supervened, and questioned him in reference to his family—place of residence—relatives &c. But his answers were incoherent & unsatisfactory. He told me, however, he had a Wife in Richmond (which, I have since learned was not the fact.) that he did not know when he left that City or what had become of his trunk of Clothing. Wishing to rally and sustain his now fast sinking hopes I told him I hoped, that in a few days he would be able to enjoy the Society of his friends here, and I would be most happy to Contribute in every possible way to his Ease & Comfort At this he broke out with much energy, and said the best thing his best friend could do would be to blow out his brains with a pistol—that when he beheld his degradation he was ready to sink in the earth &c." Shortly after giving expression to these words Mr. Poe seemed to dose & I left him for a short time. When I returned I found him in a violent delirium, resisting the efforts of two Nurses to keep him in bed. This state continued until Saturday evening (he was admitted on Wednesday) when he Commenced Calling for one "Reynolds," which he did through the night up to *three* on Sunday Morning. At this time a very decided change began to affect him. Having become enfeebled from exertion he became quiet and seemed to rest for a short time, then, gently moving his head he said *"Lord help my poor Soul"* and expired!

This, Madam, is as faithful an account as I am able to furnish from the Record of his Case.

Mrs. Chapman was *not* with him, but he lacked nothing which the utmost assiduity of

Nurses and myself could supply. Indeed we considered Mr. Poe an object of unusual regard.

Medical Men & Students of the House sympathized earnestly with him. Your imperative request urges me to be candid, else I should not have been thus plain. Rather far would I conceal his errors than even hint a fault of his.

His remains were visited by some of the first individuals of the City, many of them anxious to have a lock of his hair. Those who had previously known him pronounced his corpse the most natural they had ever seen. Z. Collins Lee Esqr, and Nelson Poe with many other respectible individuals attended his funeral—The Revd. Mr. Clemm of this City attended officially on the occasion.

I have, thus, complied with your request, Madam, and therefore subscribe myself respectfully yours J. J. Moran, Res. Phys.*

G. Lippard to Griswold [*Griswold Collection MS.*].

Philadelphia, Nov. 22, 1849.

Dear Sir:

You will not attribute my delay in answering the letter which I received from you in regard to E. A. Poe, to a want of courtesy when I inform you, that I have only delayed in order to transmit to you satisfactory information, in relation to the matters in question. I have not been able to obtain any intelligence in regard to the missing valise.† The people at the Depot know nothing about it, and I fear that the valise, etc. are irrevocably lost.

I have before me, a letter from Poe, dated Richmond, July 19, in which he speaks of the loss of certain lectures, during his last stay in Phila. Myself and C. C. Burr did our best to find them, at that time, but in vain.

. . . It is but just to state, that C. C. Burr, John Sartain, L. A. Godey, S. D. Patterson, were the only persons in this city, whom (last summer), I could induce to give one cent to save Poe from Starvation. These gentlemen (and Mr. Miskey clerk of Sartain's I may add) acted in the most honorable manner.

I shall be glad to furnish you with any information in my power for your contemplated work.

Present my regards to Mrs. Clemm, and oblige yours Truly George Lippard.

Rev. Rufus W. Griswold.

Jno. R. Thompson to R. W. Griswold [*Griswold Collection: MS.*].

Richmond, 21 Dec. 1849.

My dear Sir,

I have too long delayed sending you the promised mems of poor Poe, and I fear that what I now enclose will be of little value, scarcely sufficient to warrant their incorporation into the Life. Two letters of Cooke's and a short statement relating to his connection with the Allans, are all that I have been able to get together.

I see the new edition of the Poets does not give my lines. Well, *n'importe*. . . . I did desire to see the poem on the "Greek Slave" in some collection for preservation, but if it does not come up to the standard of your imprimatur, I am glad that it has been left out.

Jno. R. Thompson.

R. W. Griswold, Esq.

P.S. Please return the letters when you have done with them.

Mrs. Clemm to Griswold [*Griswold Collection: MS.*].

Lowell, April 29th, 1850.

Dear Sir

On the receipt of your last letter, (in which you mentioned if I had my poor Eddie's Lectures you could dispose of them for me) I wrote again to "Dr. Moran" to make another application to Mr. Neilson Poe relative to my dear son's trunk, in which I supposed the lectures were. I have received an answer, in which he states, that the trunk has been sent to you at your request,* and for Miss Poe. I cannot understand this and wish you to let me know if there is any truth in it. Will you so much oblige me by so doing at your earliest convenience? Will you be so good as to enclose me a copy of the manuscript I left with Mrs. Lewis'? I mean the "Literati of New York." A couple of sheets will be sufficient for my purpose, You know they have all been published in Godey; you can if you need them refer to that magazine!

Yours respectfully

Maria Clemm.

[*Griswold Correspondence.*]

New York, 25th, Sept., 1850.

My dear James [Fields]:

I thank you very heartily for that notice in "The Bee." These attacks on me for the Life of Poe are certainly undeserved. Everybody who knows anything about Poe's life, understands perfectly well that I have suppressed much more than I have printed against him, and the preface to "The Literati" shows that I was absolutely compelled to write what I have written, by the assaults of Graham and Neal . . . . R.W.G.

[*Griswold Correspondence.*]

Charles Godfrey Leland on Griswold.

[Undated.]

Dr. Griswold was always a little "queer," and I used to scold and reprove him for it.

---

* From the MS. belonging to Miss A. F. Poe The editor prints this important letter *verbatim* as it has hitherto appeared only in abbreviated form.

† NOTE—It is now known (see Mrs. Weiss's statement, derived from her brother-in-law, Dr. J. C. Carter, Part First of this Miscellany) that Poe's "valise" [trunk] was forwarded after his death to his Baltimore relatives by Mr. Mackenzie. It is from this trunk that Griswold must have derived some of the material for his edition of Poe in 1849-56.

* This proves the fact that Poe's trunk was not lost at the time of his death and that Griswold had access to its contents. Another evidence of this is the curious "Introduction to the Tales of the Folio Club," printed for the first time in Vol. II, of the Virginia Edition. This fragment was copied by the editor from the original MS. found in the Griswold Collection.

He had got himself into great trouble by his remarks on Edgar A. Poe. Mr. Kimball and others, who knew the Doctor, believed, as I do, that there was no deliberate evil or envy in those remarks. Poe's best friends told severe stories of him in those days—*me ipso teste*—and Griswold, naught extenuating and setting down naught in malice, wrote incautiously more than he should. These are the words of another than I. But when Griswold was attacked, then he became savage. One day I found in his desk, which he had committed to me, a great number of further material collected to Poe's discredit. I burnt it all up at once, and told the Doctor what I had done, and scolded him well into the bargain.

He took it all very amiably. . . . It is a pity that I had not always had the Doctor in hand—though I must here again repeat that, as regards Poe, he is, in my opinion, not so much to blame as a score of writers have made out."

Charles Dickens to James McCarroll.
Gad's Hill Place
Higham by Rochester, Kent.

Sir—

When I have told you that I am truly sensible of the confidence your letter reposes in me, I fear I shall go on to tell you what you are not at all prepared to believe, but which is nevertheless the plain truth.

My influence with publishers, such as it is, is wholly personal and does not extend beyond my own productions. I never in my life succeeded in inducing any publisher to accept a book on my recommendation. To the best of my remembrance, the last trial I made in this wise was on behalf of Mr. Edgar Poe, then only known in the United States. It failed, and I have for many years relinquished the ungracious office, in which I always fared so ill. At least ten years passed, in the instance I have mentioned, before Mr. Poe's tales were republished in England—by another bookseller.

Convinced by experience that I can do nothing for a book in Manuscript that it cannot do for itself, I never mediate now with any publisher whomsoever. In this respect, therefore, I am quite unable to render you any service.

In reference to the abstract merit of your writings, and the probability of their finding a London publisher for themselves, I find it very difficult to arrive at a sound conclusion. The pieces in verse that you have sent me, appear to me to be more original in thought, and more strikingly expressed, than the prose tales. And yet I should deceive you if I concealed my belief that there are many writers of fugitive pieces who write as well, and yet who do not find it feasible or remunerative to collect their productions. In the prose tale I observe some very good description; I have not the means before me of judging of its merits in point of character or story,—but I have no doubt whatever that on this side of the Atlantic the Indian would scarcely interest any more, though he were in the hands of Scott himself.

On the whole I fear you have not yet done what would make its way here—or what would make a way for a poem of two thousand lines. But I can honestly add that your cultivation of literature evinces an earnestness of spirit, and a love and knowledge of nature, and a purity of taste, all very interesting and suggestive of advance.

Dear Sir
Faithfully yours
Charles Dickens.

James McCarroll, Esquire.*

The following three reminiscenses give us final glimpses of Poe and his sister, as viewed by two gentlemen and a lady, who knew them personally: Col. T. H. Ellis, Poe's early playmate and intimate, reared almost in the same house with him; Dr. D'Unger, a chance Baltimore acquaintance, and Mrs. Stone, matron of the Epiphany Church Home, Washington, D. C., where Rosalie Poe, the poet's sister, spent the last six months of her life.

Colonel Eilis's tribute to the "second" Mrs. Allan is notably emphatic and must remove all harsh prejudice against that refined and amiable gentlewoman. The letter is so rare and unknown that it is practically new and deserves a place here. Colonel Ellis, in his interesting communication to the writer (Biography, Vol. I, of the Virginia Edition), takes a milder and juster view of Poe's boyish pranks.

EDGAR ALLAN POE.

To the Editor of the Standard:
413 W. Randolph St., Chicago.
April 22nd, 1881.

Dear Sir,—

A letter, which I have received from my brother Charles this evening, informs me of the illness of Mrs. Louisa G. Allan, the widow of my fathers former partner in business, & the friend of my father's family for more than fifty years past. It is not improbable that before this communication reaches you or before the next ensuing issue of your paper, she will have attained the end of her appointed time; in which case, I request you to publish what I have now to say, in the Richmond Standard. This request is made in order that I may perform an act of justice to one of the most admirable ladies I have ever known.

My father, the late Charles Ellis, of Richmond, & Mr. John Allan were raised as clerks together in the store of Mr. Wm. Galt, who was the most successful merchant of his day in Virginia, & at his death, perhaps the wealthiest man in the State. In the year 1800, Charles Ellis & John Allan, encouraged thereto by Mr. Galt, who was an uncle of Mr. Allan, formed a mercantile partnership, under

* From MS. belonging to F. R. Halsey, Esq.

the firm name of Ellis & Allan, which continued until it was dissolved, by mutual consent, in 1824; their warm personal friendship was dissolved only by the death of Mr. Allan, in 1834.

Mr. Allan's first wife, Frances Keeling Valentine, of Princess Anne Co., Va., was a cousin of my mother, who was a native of Norfolk & who, when a young lady, spent two or three winters in Richmond, as the guest of Mr. & Mrs. Allan. They were exceedingly partial to her & it was during her visits to them that my father made her acquaintance. From the period of my father's marriage & as long as he lived, there was as much intimacy between his family & Mr. Allan's, as probably between any two other families in Richmond.

On the 8th of Dec., 1811, Mrs. Poe, "one of the actresses of the company (then) playing on the Richmond boards," died in Richmond, leaving three children. Wm. Henry, the eldest son, was adopted by his grandfather, Mr. Poe, of Baltimore, but died young. He was said to have been a youth of much promise. The second son, (born Jan. 19, 1809,) was adopted by Mr. & Mrs. Allan. The name of Edgar Allan was given him in baptism, by the Rev. Dr. John Buchanan. The third child, a daughter, was adopted by Mr. & Mrs. Wm. Mackenzie & the name Rose Mackenzie given her. The death of Mrs. Poe occurred eighteen days before the burning of the Richmond Theatre; & it is not improbable that Mr. & Mrs. Allan would have been present on that occasion but for the circumstance that they were spending the Christmas holidays at Mr. Bowles Cocke's, at Turkey Island, with Edgar.

The business of Ellis & Allan so prospered that at the close of the war of 1812, with Great Britain, they determined to establish a branch house in London, under the firm name of Allan & Ellis, to be in charge of Mr. Allan. For that purpose he went to England in the summer of 1815, & resided there about five years, having with him his wife, his sister-in-law, Miss Anne M. Valentine, & his adopted son, On his return, his own house having been leased so that he could not get possession of it, he & his family resided with my father's family, at the corner of Franklin & Second streets, for nearly a year. It was then & there that my recollections of Edgar A. Poe began.

No boy ever had a greater influence over me than he had. He was, indeed, a leader among boys; but my admiration for him scarcely knew bounds; the consequence was, he led me to do many things for which I was punished. The only whipping I ever knew Mr. Allan to give him was for carrying me out into the fields & woods beyond Belvidere, one Saturday, & keeping me there all day & until after dark, without anybody at home knowing where we were, & for shooting a lot of domestic fowls belonging to the proprietor of Belvidere, (who was, I think, at that time, Judge Bushrod Washington). He taught me to shoot, to swim & to skate, to play bandy, &c., & I ought to mention that he once saved me from drowning—for having thrown me into the Falls headlong, that I might "strike out" for myself, he presently found it necessary to come to my help, or it would have been too late.

Mr. & Mrs. Allan, having no child of their own, lavished upon him their whole affection; he was sent to the best schools, he was taught every accomplishment that a boy could acquire, he was trained to all the habits of the most polished Society. There was not a brighter, more beautiful & graceful, or more attractive boy in the city than Edgar Allan Poe. Talent for declamation was one of his gifts. I well remember a public exhibition at the close of a course of instruction in elocution which he had attended, (in the old frame building that stood high above the present grade of Governor Street, at the southwest corner of Governor & Franklin Streets,) & my delight when he bore off the prize from Channing Moore, Cary Wickham, Andrew Johnston, Nat Howard & others, who were regarded as among the most promising of the Richmond boys.

In February, 1826, he was entered as a student at the University of Va. There he fell into gambling & dissipation, squandered a large amount of money, & became so reckless that Mr. Allan went up to Charlottesville, enquired into his ways, paid every debt that he thought ought to be paid, & refusing to pay some gambling debts, (which Mr. James Galt told me, in his life time, amounted to about $2,500,) brought Edgar away, in the month of December following, & for a time kept him in Ellis & Allan's counting room (where they were engaged in winding up their old business,) thus attempting to give him some knowledge of bookkeeping, accounts & commercial correspondence.

It is no part of the object of this communication to speak harshly of Edgar A. Poe. There was a time doubtless, when if he had been told that he would do so & so, he would have exclaimed with the indignation of the prophet of old: "What! Is thy servant a dog, that he should do this great evil?" But, whatever may have been the particulars of his conduct towards Mr. & Mrs. Allan, her friends believe that his ingratitude, falsehood & deceptions contributed to her death, on the 28th of February, 1828.

Mr. Allan's second wife was Miss Louisa Gabriella Patterson, of New York, to whom he was married Oct. 5, 1830. She never saw Edgar Poe but twice in her life. The account I have heard of her first meeting him was this:

A short time previous to Mr. Allan's death, on the 27th of March, 1834, he was greatly distressed by dropsy, was unable to lie down & sat in an arm-chair night & day; several times a day, by the advice of his physician, he walked across the room for exercise, leaning on his cane & assisted by his wife & a man-servant. During this illness of her husband, Mrs. Allan was, on an occasion, passing through the halls of this house, when hearing

the front doorbell ring, she opened the door herself. A man of remarkable appearance stood there & without giving his name asked if he could see Mr. Allan. She replied that Mr. Allan's condition was such that his physicians had prohibited any person from seeing him except his nurses. The man was Edgar A. Poe, who was, of course, perfectly familiar with the house. Thrusting her aside & without noticing her reply, he passed rapidly upstairs to Mr. Allan's chamber, followed by Mrs. Allan. As soon as he entered the Chamber Mr. Allan raised his cane, & threatening to strike him if he came within his reach, ordered him out; upon which Poe withdrew & that was the last time they ever met.

I have forgotten the particulars of the other occasion on which she saw him, but my impression is that it was after Mr. Allan's death; that she was sitting at one of the front windows of her chamber & seeing him enter the gate & walk towards the door, sent her chamber-maid down to say that she begged to be excused from receiving him.

But in reference to the main point at which I am aiming, I will use her own words.

About ten years ago, a gentleman who was preparing a biography of Poe wrote to me requesting my reminiscences of Poe & a recital of any incidents I might be able to recall connected with him. Thinking it a suitable opportunity to correct misstatements relating to both Poe & Mrs. Allan, in all the biographies of Poe I had seen, I wrote to her asking several questions, to which she replied but briefly, & moreover requested that nothing should be said of her in such a connection. For this reason I did not prepare the communication I had thought of, but will now make an extract from her letter.

"As regards Edgar Poe, of my own knowledge I know nothing. I only saw him twice; but all I heard of him from those who had lived with him was a tissue of ingratitude, fraud & deceit. Mr. Poe had not lived under my husband's roof for two years before my marriage & no one knew his whereabouts. His letters, which were very scarce, were dated from St. Petersburg, Russia, although he had enlisted in the army at Boston. After he became tired of army life, he wrote to his benefactor, expressing a desire to have a substitute if the money could be sent to him; Mr. Allan sent it; Poe spent it; & after the substitute was tired out waiting & getting letters & excuses, he (the substitute) enclosed one of Poe's letters to Mr. Allan, which was too black to be credited, if it had not contained the author's signature. Mr. Allan sent the money to the man & banished Poe from his affections & he never lived here again. I must say, in justice, I never influenced Mr. Allan against him in the slightest degree; indeed I would not have presumed to have interfered or advised concerning him. Poe was never spoken of between us."

From the foregoing statement I think all must admit that Mrs. Louisa G. Allan is in no degree responsible for the estrangement that existed between Mr. Allan & his adopted son, or for Mr. Allan's refusal to be reconciled, after the son had been several times before taken back & renewed efforts made for his improvement & advantage.

Having reached this point, let me say something further about her & her family. Mrs. Allan's father was John W. Patterson, a lawyer of New York City, of fine attainments & good practice, an accomplished Latin, Greek & French scholar, speaking the French language with fluency & purity. He was educated at Londonderry, Ireland. Her grandfather was John Patterson, who anterior to the Revolution, was a Captain in the British Army; but quit that service, espoused the American cause, & I believe was the first United States Collector of the Port of Phila. His wife was Catharine Livingston, of Livingston Manor, which embraced Columbia and several adjacent counties in New York. As late as 1825, many of the lineal descendants of the original Livingstons continued to live in the villages of Claverick & Johnstown, a few miles back of the City of Hudson. General Harry Livingston, brother to Catharine, is mentioned in Revolutionary History. There was another brother commonly called "Oak Hill" John, after whom Johnstown was named. These Livingstons were English; the originals were granted manorial rights & possessions under the laws of Elizabeth, because of their colonizing the American possessions of Great Britain.

Mrs. Allan's mother was Louisa De Hart, youngest daughter of John De Hart & Sarah Dagworthy, of the ancient borough of Elizabeth, New Jersey. John De Hart was a lawyer & a member of the First Colonial Congress from New Jersey. The father of Sarah Dagworthy was an English Army officer.

Mrs. Allan's only sister, Lucy, married Captain Thomas Mann Randolph, of Tuckahoe, Va. One of Mrs. Randolph's daughters, Louisa, married, you know, Mr. George W. Mayo, of Richmond, a son of Mr. Edward C. Mayo, who was the son of Colonel John Mayo, of Bellville, whose wife, Abigail De Hart, was an aunt of Mrs. Allan & the mother of the distinguished beauty & belle, Mrs. General Winfield Scott. It was while Mrs. Allan was on a visit to her aunt at Bellville, that she first met Mr. Allan.

All the ladies of this family whom I have known, notably Mrs. Mayo, of Bellville, Mrs. Patterson & Mrs. Allan, were remarkable for the strength & firmness of their character, their self-reliance & excellent sense, as well as for fine physical development.

Out of eight brothers who grew to manhood, one is living—Mr. Henry Livingston Patterson, of St. Louis. When I knew him in New York, many years ago, he was one of the handsomest men I ever saw, with a splendid voice specially suited to the business in which he was then engaged, that of a dry-goods auctioneer, in connection with the large house of Austin, Wilmerding & Co. He married Miss Hunt, of St. Louis, & has long resided there, a wealthy & prominent citizen.

Mrs. Allan had three children, John, Wm. Galt & Patterson. To the careful training & education of these children she devoted herself with rare assiduity. The two eldest, when sufficiently advanced to leave home, were placed under the Rev. Dr. Muhlenberg, at his school near Flushing, New York; from there, they were sent to the Rev. Mr. Van Bokkelin, in Maryland; afterwards were advantageously placed at school among their Allan relations in Scotland & then entered at the University of Virginia. In order to be near them during their collegiate course, she removed to Charlottesville temporarily, placing Patterson at a preparatory school near by. When all three had passed through the University, she took them to Europe, spending eighteen months, or two years in travel. It was whilst in Rome that Patterson, the youngest, married a lady of Cincinnati; but this marriage was never congenial to her. John, subsequent to his return from Europe, married Miss Henrietta Hoffman, a charming lady & highly accomplished, the only child of Mr. Wm. Henry Hoffman, of Baltimore, by whom he had two children, now surviving,—Hoffman & Louisa Gabrielle: these young representatives of the house have been a special solace & comfort to their grandmother of late years. Their father, who as the Adjutant of a Cavalry Regiment in the Confederate service had evinced decided military talent, was killed on the retreat from the battle at Gettysburg, July 5, 1863. Never shall I forget the grief of Mrs. Allan when she sent for me to come to see her, on receiving the news of John's death! William, after the war in which he continuously served, married his brother John's widow, but died without issue. Patterson is also dead, leaving among other children, a daughter, Genevieve, who is said to possess, like her mother, special talent for Music & Art.

It is impossible that any lady could have performed more scrupulously & becomingly all the proprieties of widowhood than Mrs. Allan has done since the death of her husband, full seven & forty years ago. Her home has been, unvaryingly, one of elegance [and] hospitality. And I am persuaded the whole community of Richmond would, if necessary, rise up in her praise as a lady of whom any community might be proud. For many years she has been a communicant of St. Paul's Episcopal Church, Richmond.

One fact deserves prominent mention—the protection, kindness & support, which Mrs. Allan gave, without stint or abatement until dispensed with by death, to Miss Valentine, the maiden sister of Mr. Allan's first wife—a lady widely known for her cheerfulness, humor, buoyancy & wit. Mr. Allan had made provision for her in his will, but the home of her heart she found under Mrs. Allan's sheltering roof. She died on the 23d of January, 1850, in the sixty-third year of her age. Mrs. Allan was in her eighty-second year at the time of her death.

Praying you to accept this imperfect tribute to her worth from a long absent friend, I am

Truly yours, Thomas H. Ellis.

Two Reminiscences of Poe and his Sister.*

I.

Palmer House, Room 733.
Chicago. October 29, 1899.

My Dear Sir,

Your letter, seeking information as I pos sess regarding my acquaintance with the lamented Edgar Allan Poe, came to hand this morning; and in response I will furnish you, willingly, with what I knew of him, prior to his demise in 1849. I first met him in 1846, about a year previous to his wife's death. He was probably 12 or 15 years my elder at that time, as I was nearing my majority. Mr. John N. Millington, then foreman of the Baltimore *Patriot,* an evening paper, (also publishing a morning edition,) introduced me. The introduction took place in Guy's Coffee House, corner of Monument Square and Fayette street, but our conversation was quite brief, Mr. Poe being of a nervous, melancholy, glum disposition and not much inclined to converse. He spoke to Mr. Millington of the illness of his wife—she had then been an invalid for some years—and remarked that there was a slight improvement in her condition. I do not remember where he said she was, but she certainly was not in Baltimore at that time. As Mr. Poe stood up to the "Bar" and drank off a *big* drink of whiskey, (I believe this was his favorite tipple),—Mr. Millington and myself joining him—my drink "California Pop," as it was called, I formed the opinion that the poet had, in his time, seen many a barkeeper's countenance; and, really I pitied him, for I had read a number of his short stories, printed if my memory serve me correctly, in Graham's Gentleman's Magazine, a Philadelphia monthly and greatly admired his style of composition. I was "courting" those days and the men in the *Patriot* office, on account of my youth, twitted me a good deal about it. At that time I was assisting Mr. John Wills, who managed the commercial column of the *Patriot.* Mr. Millington joked me and mentioned the matter of my "courting" to Mr. Poe, who with the gravity of a Church beadle, remarked—"My young friend don't hurry yourself as to marriage. It has its joys, but its sorrows overbalance those." His manner when he uttered this sentence, actually *chilled* me. A second drink—called for by Mr. Millington,—was indulged in and we separated. It is fresh in mind that Mr. Poe, on this occasion, was entirely destitute of funds, because he took Mr. Millington aside and borrowed a trifle from him.

Mr. Poe did not seem the style of man to make friends; and I never knew of his having any prominent ones in Baltimore. He was a chronic grumbler at his want of "luck," and was eternally finding fault with the people who bought his writings, always claiming that a man could make more money carrying a hod then he could with his pen. He frequently asserted that such men as Dr. Johnson, author of "Rasselas," Oliver Goldsmith and himself never should have been born, because the

* The editor is permitted to print this letter of Dr. D'Unger by the Chevalier E. R. Reynolds, of Washington, D. C., to whom it was addressed.—*Ed.*

world didn't or wouldn't understand them. And, I remember, on one occasion, when Mr. Poe and I were standing on the corner of Baltimore and Light streets, that he quoted what Shakspere says: "What good men do is buried with their bones," or something near that. I met him very often at a then famous oyster house, I think it was located at the corner of Howard and Saratoga streets, and, on one occasion, whilst we were eating our "stews," he was unusually lively and tried to be witty—(there was no wit in him, however,) :—he told me the old, old story of the two bumpkins who were quarrelling over an oyster, who sought a lawyer's advice, and how the lawyer, opening the bivalve, ate the oyster and handed a shell to each of the disputants. Poe thought this story a great one. Where he had been, for a few months previous to this meeting at the oyster-house, I do not know and he would not tell me; but he had been *somewhere* and had just returned. He had about $10 and he thought that that sum was quite a large one *for him!* Indeed, he so expressed himself.

Mr. Poe was absent from Baltimore* a good portion of the time between 1846 and 1849, the year of his death. He was missed a great deal being a sort of "hanger on" around the newspaper offices and saloons. John Boyd's coffee-house, afterwards known as Reilly's, on South street, near Baltimore street—a "cellar" restaurant—was one of his favorite resorts. In this place was a small room, the walls of which were covered with portraits of actors and actresses, old theatre bills, &c. Poe would spend a happy hour or two in this room if he had "a chum," with him, provided he could get a glass or two of ale or brown stout whilst there. He often alluded to the circumstance that his mother, (who died when he was quite young), was an actress; but I never heard him refer to his father. After a visit to "Boyd's" he was the "moodiest of the moody." Poe was never a brilliant talker, but he was a hard worker (and a hard drinker) when he had work to do. His mentality was of a peculiar quality and, on some occasions, especially after a drinking "bout," his talk would run on the super-natural. I call to mind once meeting him on South Gay street, near Lombard; and, seeing a couple of books I had just bought, he asked what they were. One was Herman Melville's *"Omoo"*, the other *"Undine"* and "Sintram and his Companions." Remarking upon the latter volume, (which contained the two stories, he said he had read them and thought Fouqué, the author, was one of the "deepest thinkers" that ever put pen to paper. He remarked that the character of *Sintram* was *true to nature. "Every man had had his own devil."* As said before, Poe was not a man to make friends, or I may add, to keep them. He was conscious that he was not properly appreciated, and was continually on the "growl" when any one tendered him a compliment, as a writer: "People couldn't get meat and drink with compliments." What few friends he had were the poorly-salaried newspaper men of that day. I never knew him to be in any other condition than one of "hard luck." In one way he was a "periodical" drinker, that is, he had his sober spells—yet I never saw him brutishly drunk, no matter how many glasses of the ardent he swallowed. The story that one glass of liquor would "set him wild" is moonshine. The trouble with him was that he *"worked himself down"* and then became despondent. Drink was induced by this despondency, and he kept up the "drunk" as long as he had money; without getting beastly drunk. He drank until his, nerves were shattered, poured it down until he was actually sick. He ate very little whilst indulging. I suppose he told me a hundred times that *he was going to quit the habit,* and I am sure he was sincere in his wish to do so. All his drinks were followed by a weakening diarrhoea. That was what carried him off. The loss of his wife was a sad blow to him. He did not seem to care, after she was gone, whether he lived an hour, a day, a week or a year. She was "his all". As to his death, it took place, I believe in an infirmary or hospital, located on Broadway, East Baltimore. I was away visiting at the time; sometime after my return to the city a subscription was gotten up amongst the printers and newspaper men, with a view to place his remains in the burial yard of Westminster Church, Fayette and Green streets, and there they rest to-day. Now, whether he had been buried in "Potter's Field, (as has been asserted,) or whether he had just died when this subscription was gotten up is more than I can tell. As said above, I had been away from the city for some time and had lost sight of him for at least 6 months. He died, as I understood at the time from inflammation of the intestines, the diarrhoea preceding the fever. The story recently afloat to the effect that he was "cooped" by "road heelers," drugged and kept drunk in the rear room of a fire-engine house, on Calvert street, is mere twaddle. Poe was not a voter in Baltimore, being a non-resident; in addition, he was never looked upon as a "bum" and although in them very frequently, was not a bar room loafer. His drinking was that of a gentleman, if an unfortunate victim of alcohol can be rated a gentleman.

What the religious belief of Mr. Poe was I cannot say; but I am very sure he was a believer in spirit friends. "Spiritualism" was not then known; but, if it had been, I am sure confident Mr. Poe would have been a believer in the mystery, fraud or whatever it is.

I never heard Mr. Poe refer to his college days, nor did I ever hear him recite any of his own compositions. He rarely used a Latin or French word in his conversation, and he was reticent as to his knowledge of Greek. I have heard him speak of the Iliad and Odyssey, of Homer, and of the works of Horace. He was an admirer of Scott's poetical works, and also of the poems of Ossian.

And, dear Chevalier, this is all I can tell you about Edgar Allan Poe.

Very truly, R. D'Unger, M.D.
Room 733 Palmer House.

* Poe was at Fordham in 1846-49, and never lived in Baltimore after '33, '34 and '35. The above account is highly improbable.—*Ed.*

Dr. Clemm's Statement about Poe.

"Catonsville,
Baltimore Co., Md.,
February 20, 1889.

"Dear Sir:—

"Allow me to say that this remarkable statement of Dr. Moran* both confuses and surprises me because it positively contradicts the statement made to me personally by the Doctor; and surprises me because he did not years ago give to the public what he now avers to be the true cause of Mr. Poe's death.

"I think it due, therefore, to the truth of history, to give the Doctor's statement made to me by himself immediately upon the death of the poet, and while, as yet, he lay a corpse in the hospital.

"Let me premise, however, that at the personal request of Dr. Moran, I buried the lamented poet. I was stationed at the time at the Caroline Street Methodist Episcopal Church, in Baltimore, and it was in the parsonage of said Church that the Doctor called on me.

"The funeral was comparatively quiet and utterly without ostentation. But one hack was employed, and four persons occupied it—the late Hon. Neilson Poe, Z. Collins Lee, a prominent attorney of the Baltimore bar at the time, one other person and myself. He was buried in the Westminster Church Cemetery, corner of Green and Fayette Streets, Baltimore. The funeral service of the Methodist Episcopal Church was read at the grave by the writer.

"Subsequently Poe's remains, together with those of his late wife, were removed and reinterred in the same grave, in another part of the cemetery, and now a handsome and appropriate monument ornaments the place where reposes the sleeping dust.

"But to return from this unnecessary digression, to the statement of Dr. Moran, made to me on his visit to the parsonage to secure my services for the burial of Mr. Poe. The statement was substantially as follows:—

"'Mr. Poe', said the Doctor, 'came to Baltimore on his way to Philadelphia to be married.* He was handsomely dressed, and had with him an ample wardrobe neatly packed away in his trunk. Upon landing on the wharf from the Norfolk steamer, Mr. Poe was greeted by some of his old and former associates, who insisted that they should take a sociable glass of ardent spirits together for old acquaintance sake. To these persuasions the unfortunate poet yielded. This was the first drink he had taken for several months. Sad enough for Poe; it revived his latent appetite for drink, and the result was a terrible debauch which ended in his death. He lost all his wardrobe; was clad in tattered garments, and had on, when found, an old straw hat which no one would have picked up in the street. His appearance and condition were pitiable in the extreme, and in that drunken and stupid state he was brought to my hospital. Everything that medical skill and faithful nursing could suggest was done for him: but all to no purpose. He was unconscious or delirious during the entire time—some sixteen hours—with but one short interval, when for a moment reason returned, and during that short gleam of consciousness he looked at me and said with great emphasis,—'Dr. Moran, give me a pistol that I may blow my brains out!'

"'He then suddenly relapsed into his former delirious condition and soon died.'

"The preceding is in substance a truthful account of the statement made to me by Dr. Moran, and if he has proof that Mr. Poe died from other causes, by all means it should be produced.

W. T. D. Clemm,
Pastor Catonsville Methodist Episcopal Church, Baltimore Conference."

To Dr. Elmer R. Reynolds,
Washington, D. C.

* This, of course, is inaccurate.—*Ed.*

Motherhood

BY EDITH BROWNELL

Gray gloomed the hillside. Through the solemn hush
Of dole, the third dark hour—reluctant, shamed—
Slow yielded to its close.

Below the dross
The Holy Mother knelt in quivering calm,
Her waiting arms in anguish upward reached
To take again her Son, her little boy—
Her baby!—while, pale thru the mystic dusk,
Her lifted face in adoration dwelt
Upon her Lord!

Then, near at hand, there broke
A woman's sobbing, low and wrenched and fierce,
The cry of one whose hurt is worse than death;
And Mary, bending sweet within her veil,
Laid her high grief aside, o pray, "Dear God!
Ah, comfort Thou the mother of the thief!"

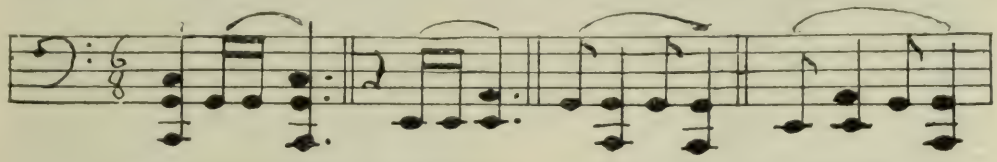
Washington, D. C.

Literature

The Frog Book

For many years amateur naturalists and nature-study teachers have been asking for a popular reference book on our common amphibians. We have long had an abundance of such books on birds, beasts, insects, trees and flowers; but somehow the authors and publishers have avoided the amphibians as subjects for popular nature books. This has been especially surprising to those who know that in the field of zoölogical science the frog is probably the best known and most studied animal and one to which dozens of technical works have been devoted. However, the need of a popular frog book is now well met, for Miss Dickerson has given just the information wanted by the general nature student and in a form which will surely win popular interest for these interesting vertebrated animals. As one reads this new book of frogs* the desire for actual acquaintance grows strong, and the personal experience of the reviewer makes him believe that many readers will find in the field study of frogs and toads pleasure no less satisfying than that found in identifying some rare bird in the bush or in finding some dainty flower in a crannied wall. Thus the new book will help us extend our esthetic appreciation and general interest in nature.

* The Frog Book. *By Mary C. Dickerson.* Pp. 253. New York: Doubleday, Page & Co. $3.50.



The book deals with all North American frogs and toads in the general outlines of their classification; and in addition the species of the Northeastern States are treated from the standpoint of life histories and habits. The introductory chapter deals with such topics as the distinction of batrachians (amphibians) from fishes and reptiles, their development, classification, ancestral history, hibernation, poisons, voices, regeneration of lost legs and tails, color changes and behavior. Then follow keys for the identification of North American frogs and toads. The next chapters deal with toads—the spadefoot, the American and the other species found in various parts of the continent. After the pages on toads the ever-interesting tree frogs, the "acrobats of the frog world," furnish materials for a very readable chapter. But the climax of interest for most readers will be the last chapter, the subject of which is the ranidæ—our common leopard frogs, pickerel frogs, green frogs, the wood frogs, and last and best of all the giant bullfrogs.

Concerning habits of life, which are always most fascinating to amateur naturalists, there is a mine of interesting information. Here are some examples: It will please the American small boy to learn from authority that toads do not cause warts, even tho their ejected secretions are strong

Toads in a pond in early May. The male sits more erect in the water. His throat is dark colored when not distended in singing. From "The Frog Book." Doubleday, Page & Co.

enough to make life somewhat uncomfortable for an enemy which takes a toad into the mouth. That the tadpole does not automatically amputate its tail when metamorphosing into the frog stage is well known in science, but this will be almost incredible news for many readers. The famous story of the jumping frog which seized shot rolled toward him until he was heavy with lead refers to the

Four Annotations of the Bullfrog's Call. From "The Frog Book."

common habit of seizing objects without taking time for examination. Toads never drink water with the mouth, but absorb it thru the skin. This is why they approach moist places around wells. Croaking is "an expression of the physical joy of existence." The frog chorus is not by an orchestra controlled by a leader who signals to the others. Such human interpretations will not answer in the frog world. The explanation is simply that one by one they begin to croak when there is no sign of danger, but a sudden movement will alarm any one and cause it to cease croaking, which is taken as a danger signal by the others. With such interesting facts and interpretations of behavior there are pages and pages filled to the very margins.

Of course a modern popular nature book must have elaborate illustrations. There are over three hundred photographs from life by the author, and nearly one hundred of these are half-tone plates, some of them splendidly colored.

The author and publishers have not adopted the reformed, nor even the usual American, spelling; and a lot of good ink has been used for the extra letter in the very oft-used words like colour and behaviour. In places a somewhat obsolete terminology has been used; for example, readers may look in vain in many recent zoölogical text-books for the word batrachia, instead of the now familiar word amphibia, and likewise Anura is now the familiar synonym for Salientia as a name for the order of tailless, frog-like amphibians. But these are minor points, and in no way impair the usefulness and interest of the book as a whole.

Wells's Latest Novel.

It is Mr. Wells's habit to use his fantastic literary *motifs* twice, first in a short story and afterward in an expanded form. This reminds one of the practice of sculptors in making first a small clay model of a large statue. It seems probable that Mr. Wells has adopted it, not as a method of testing technique, but because he finds now that he can make a more profitable use of the inventions of which he was so prodigal in the early exuberance of his literary career.

In his latest novel, *In the Days of the Comet*,* he has utilized the mechanism of the most artistic of his earlier short stories, "The Star," which is a little gem in its way without a superfluous word or a false tone. But those were the days when Mr. Wells was writing for pleasure; now he writes for a purpose, so the two stories resemble each other only in their common theme, the swishing across the earth by a comet's tail. In the former tale the event was viewed by a man in Mars who reported to his fellow scientists that the earth was little damaged, for the destruction of all life on it was too insignificant an event to be noticed at that distance. In the present book the earth was decidedly benefited, and the history is told by a man more foreign to us than the Martian, for he is a citizen of the new civilization that followed the "Great Change." A wonderful transformation had been effected in our atmosphere by its mingling with the cometary gases. The inert nitrogen of the air had been changed to some life-giving, clarifying and stimulating gas; it would be unfair to the author to infer that this was nitrous oxid, more familiarly known as "laughing gas." Under its influence the inhabitants of the earth perceive the evils of our present regime and realize that they are mostly avoidable if everybody had good intentions and good sense. As

* In the Days of the Comet. *By H. G. Wells.* New York: The Century Co. $1.50.

they look back upon their former mode of life before "The Change," it seems to them like a horrid dream. They see for the first time the ugliness of their houses and furniture, the stupidity of their social customs, the injustice of the government, the folly of war and the wickedness of hatred. So they make a bonfire of their tawdry and pretentious clothes, carpets, pictures, books, advertisements and decorations; a Pyre of Vanities like that Savonarola collected in Florence. They reconstruct a fairer and juster civilization of which the author unfortunately gives only glimpses.

The Fight Between White Fang and the Bulldog. From London's "White Fang." Macmillan.

Regarded as an argument for socialism —and all of Mr. Wells's books nowadays are to be regarded in that way—it is a very weak one, for it gives away the case by conceding, at the outset, the main ob-

jection of the conservative, that you will have to change human nature before socialism becomes possible. Of course if all men were well-meaning and wise socialism would be practical. It would also be unnecessary, because any social machinery, or, indeed, none at all, would work well enough under these conditions. The difficulty is to devise any changes that will make it work better with people as they are. That better people than we would be able to make for themselves better ways of living, nobody denies. That social institutions influence the character of individuals and that individuals influence the character of institutions are correlative truths, but it is difficult for most people to keep them both in mind. Mr. Wells's collectivist conversion by a "green gas" is much the same thing as individualist conversion by religious influence, but we know of instances of the latter while the former is purely hypothetical.

But, of course, the object of the book is not to show how socialism can come about, but to assist in making it come about by acting on readers as a dose of the "green gas" and opening our eyes to the vulgarity, silliness, squalor and wastefulness of our daily life. Mr. Wells is an artist by nature and a scientist by training, and ugliness and stupidity worry him more than wickedness and injustice. In fact, he would probably class all the evils of civilization under stupidity. But long ago it was said that against stupidity even the gods fight in vain, and it remains to be seen whether socialists will succeed better.

The most attractive pages of the book to us are those that describe "the festival of the rubbish burnings," tho Mr. Wells does not improve upon Washington Irving's treatment of the same theme. There are several things owned by our neighbors, even by relatives, which we should like to cast upon the flames. But we are afraid to light the bonfire lest the neighbors should burn up some of our treasures. That war is also an example of human stupidity, we agree, but just how to prevent it altogether until the rest of the world comes to our opinion, we do not understand. It takes two to stop a quarrel. The fleets of England and Germany were engaged in bombarding each other when the renovating comet struck the earth, but as soon as the eyes of the combatants and the "statesmen" who had instigated it were opened and their anger quenched, it seemed incredible to them that they should have sought to kill each other for such trivial and remote causes. Jules Verne has a similar scene in "Dr. Ox's Experiment," but in that case the gas acts in the opposite way to excite the sluggish inhabitants of a peaceful German village to make war against the neighboring village, and as soon as they are out of the contaminated atmosphere they look in bewilderment at the deadly weapons in their hands.

But the particular passion that Mr. Wells would sweep away by the breath of his comet is one which, in the opinion of most people, is necessary to the maintenance of morality, that is, jealousy. The young English workingman who tells the story is infuriated against the young aristocrat who had seduced his sweetheart and is pursuing them with a revolver when the "Great Change" comes. Then he is content to share her affections with his former rival and they all lived together happily ever after. In this issue of THE INDEPENDENT Mr. Wells gives his reasons for thinking that. whether we wish it or not, the family is disintegrating and that only under socialism, which will insure a support sufficient for independence to both men and women, can better relations be established.

Animal Stories

THIS is the season when the literary mammals come out of their dens and enter our homes, probably to get out of the cold, for they penetrate even to the cozy corners of our libraries and crawl into the stockings of our children. In spite of the abundant production of nature books during the past few years, there has been no decline in quality. When we find upon our table in one week books by Jack London, Ernest Ingersoll and W. J. Long we have no reason to complain, altho we miss Charles G. D. Roberts and Thomson Seton.

Mr. London[1] has fortunately obeyed the call of the wild and returned to the field

[1] WHITE FANG. *By Jack London.* New York: The Macmillan Co. $1.50.

of his early triumphs. This is quite a relief after the mediocre short stories he has been giving us of late. He apparently understands the psychology of brutes, animal and human, better than ordinary tamed and civilized men and women. It would, of course, take a reviewer who was half wolf and half dog to speak with authority on the truthfulness of character sketch of White Fang, but the reader will not need such expert testimony, for the story carries conviction with it. He resists the temptation to use animals to teach lessons to human beings after the manner of most tellers of animal tales from Esop to Kipling. White Fang does not talk, either in poetry or prose; in fact, he barks only twice in his life and then under great provocation. But we understand him and feel with him from the time he rolls out of the wolf's lair in Alaska as a gray cub and makes his first killing of ptarmigan nestlings to the time when, in California, he makes his last killing of a man and dies in the odor of sanctity after saving his master's life. It is the reverse of "The Call of the Wild." The tame blood tells and the savage becomes civilized. In workmanship it is as good as anything the author has done in this field, and no one has done better.

Mr. Ingersoll's *Wit of the Wild* consists of a series of short articles on the characteristics and habits of mammals, birds and insects, written in various styles because they were originally written for various periodicals, but all interesting and reliable. The book may be regarded as a popular postscript to his excellent work on "The Life of Mammals," published last year, and is particularly adapted for school and popular libraries. Mr. Ingersoll can popularize without misrepresenting, and his chapters on some of the facts and factors of evolution are comprehensible to anyone, and yet so carefully worded that the most rigid scientist could not find fault with them. He tells us of "animals that advertise," most of the advertising being of the matrimonial class; of "birds and beasts that bluff," and try to scare their foes by their horrid appearance when ruffled up; of "animals that wear disguises," especially insects that mimic leaves and sticks; and of "a good habit gone wrong," that is the habit of "playing possum," which Mr. Ingersoll thinks is a survival of no present value now to the opossum. He criticises Mr. Seton

Two Opossums Feigning Death. From Ingersoll's "The Wit of the Wild." Dodd, Mead & Co. Copyrighted Photograph by S. M. Lottridge.

sharply for saying that animals commit suicide.

Brier-Patch Philosophy[3] does not properly come under the title of "Animal Stories," unless we give the word animal its wider significance to include the human race, for Peter Rabbit is really the Rev. William J. Long partially disguised in a rabbit's skin. He thus criticises our civilization from an objective standpoint somewhat after the manner of other outsiders, such as the Chinese official, the man from Mars, the traveler from Utopia, the Huron Indian and the Persian ambassador. But B'rer Rabbit's eyes are sharp to see our faults and fallacies, and this volume of his observations quite confirms the legendary view that he is the shrewdest of animals. He stands up valiantly in defense of Mr. Long for saying that animals can reason after the manner of men, and turns the tables against his critics by showing that men do not reason very much, but are controlled by a host of irrational instincts and bound by very absurd traditions and customs. Accordingly he gives us some advice from his own experience "on training up a cub in the way he should go," on the ethics of hunting, on the fattening of oysters and hogs, and many other vulnerable points in our morals, religion and science. Our readers have had a foretaste of the book, for the chapter "On the Habits of Men and Other Animals" appeared in THE INDEPENDENT June 26th.

Recent Views of Christ

To one whose eyes have not been opened to the fact that the gospel records need comparison and sifting, to be treated, in fact, like all other documentary sources of history, the essay of Mr. Barrows, entitled *The Personality of Jesus*,[1] will prove suggestive and stimulating. It is evidently the product of sincere, reverent faith, of painstaking thoughtfulness and diligent application, and the author is certainly a man of real culture and spiritual discernment. Had he consented to learn of historical criticism, and in particular to subject the fourth Gospel to the examination to which he has treated the last verses of Mark, he might have produced a real contribution to the understanding of the New Testament. As it is his portrayal of Jesus is blurred and indistinct, and in some respects false to the facts, because of his endeavor to combine different strata of tradition into a consistent unity. He repeats the fable that Napoleon saw Jesus so much above himself "in his marshaling and mastery of men that he declared he must be a God." A similar disregard of the duty of sifting evidence distorts his description of the life and character of Jesus. For example, he asserts that Jesus was a rabbi by profession, which he certainly was not, and would not allow his disciples to be. Similarly he explains that Jesus used the title Son of Man "in contrast with individual men," as the "Perfection of Humanity," ignoring the fact that in Aramaic "Son of Man" was simply "man." This indifference to the large lessons to be learned from recent historical study of the Gospels is the more to be regretted, since the author proves himself so well qualified, in his general knowledge and by his warm religious feeling, to discuss the high theme upon which he has expended so much patient labor.

Dr. Forrest is an orthodox systematic theologian, and his book on *The Authority of Christ*[2] has something of the heaviness which characterizes doctrinal discussions of the older sort. The second chapter of the book, however, on "The Illegitimate Extension of Christ's Authority," is a valuable bit of argument. From the orthodox pre-suppositions he exposes the fallacy of appealing to Christ's authority to sustain the Davidic authorship of the 110th Psalm or to prove the historicity of the narratives concerning Abraham and Moses. He renounces the claim that Christ's word is final in all spheres, but seeks to establish the authority of Jesus in "what man is to believe concerning God, and what duties God requires of man." The illegitimate extension of Christ's authority is all too common in America; for example, in the matter of demoniacal possession, and it may be hoped that some who will not hear Cheyne nor

[2] THE AUTHORITY OF CHRIST. *By David W. Forrest, D.D.* New York: Imported by Charles Scribner's Sons. $2.00.

Wellhausen may be persuaded by a Scotch evangelical to attend to the counsel of Hooker to "take great heed, lest in attributing unto Scripture more than it can have, the incredibility of that do cause even those things which indeed it hath most abundantly to be less reverently esteemed."

The subject of the Hulsean Lectures by the Dean of Ely, on *The Christ of English Poetry*,[3] is not so spacious as their title might indicate, since he limits himself to consideration of the testimony to the Person and Spirit of Christ borne by four poets only—Cynewulf, Langland, Shakespeare and Browning. He chooses the poets as the representative men of their age, "the most prophetic, the most clear-sighted, the most deep-hearted men of their time," and the four poets named as examples of representative periods of English life. Dean Stubbs writes interestingly, in a manner to be expected of a gentleman of his scholarship and breeding, but his effort to find witness to Christ in some of these poets is somewhat labored. This is particularly the case in the exposition of Cynewulf. Shakespeare also may have been a prophet of Jesus, but he was a prophet of so many other things besides that his specifically Christian testimony needs a rather involved argument to elucidate it. Of course if Christianity be every good thing that ever came into the world and every truth the man of man has discovered—and this seems to be the conception of these Hulsean Lectures—then witness to Christ may be found in any embodiment of the stirrings of a great age. There are some, however, who prefer to take their Christianity straight, or from witnesses like Paul and Matthew. The Christianity of these lectures is a little too vague and indefinite to be either historically true or practically valuable. This is not to deny that the argument of the lecturer is often clever, and that contact with a spirit so tolerant, so hopeful, so appreciative of the best in English life, is refreshing and delightful.

It is a pity that the author of *The Religion of Christ in the Twentieth Century* should have chosen to conceal his name. A call for followers should not be anonymous, and this earnest confession of faith, warm with personal conviction and aglow with hope of a better day for religion, appears to us nothing less than an urgent plea for zealous adherents. That there is a religious faith which is something better than has yet been made out either by dogmatists or by ecclesiastics is something in which progressively minded people are all pretty much agreed. The author of this essay is somewhat jubilant in the discovery that there is such a faith, and that it is to be found in the religious consciousness of Jesus of Nazareth, where Amiel found it also. This he calls the Religion of Christ, which he defines as a way of life alone, in distinction from the Christian religion, which, as a matter of fact, is chiefly dogma and organization. Following Lessing he urges that the Christian religion having been tried for several centuries, it is high time the religion of Christ were given a fair trial, and he urges that we are now in better situation for such an experiment that when Lessing uttered his celebrated *bon mot.* In reaching his conclusion the author makes a searching examination of Roman Catholicism, still the most powerful representative of the Christian faith; of Unitarinism or Uutra-Protestantism, and of the Anglican Church or the *via media*, and his analysis of present conditions in those branches of Christianity is penetrating and skilful. The book is a shrewd, discerning critique of regnant forms of piety, and a discriminating projection of the faith and theology that ought to come.

Socialism. By Robert Flint. Philadelphia: J. B. Lippincott Co. $2.00.

This large volume is a reprint of a work which was mainly written in 1890, completed in 1894, and published in England at that date. It can be considered timely in America in 1906 only on the assumption that social development here lags several decades behind English development—an assumption in the main true. Doubtless the recent remarkable growth of interest in Socialism and the multiplying vote of the Socialist Party have given the courage needed to pub-

[3] The Christ of English Poetry. *By Charles William Stubbs, D.D.* New York, E. P. Dutton & Co. $2.00.

[4] The Religion of Christ in the Twentieth Century. New York: G. P. Putnam's Sons. $1.50.

lish at this late day so extensive a criticism of socialist theory. Professor Flint is a frank, well equipped and relentless enemy of Socialism; but he destroys in great part the force of his attack by cannonading some positions which Socialists have never held and to be determined. Socialists themselves, in their official program in America, for instance, stoutly claim that theirs is "the only political movement standing for the program and principles by which the liberty of the individual may become a fact." A little later Professor Flint

Illustration from "Brier Patch Philosophy." Ginn & Co.

others which contemporary leaders early abandoned. "Socialism, then, as I understand it," he says, "is any theory of social organization which sacrifices the legitimate liberties of individuals to the will or interests of the community." What a question-begging definition! What are the *legitimate* liberties of individuals? That is precisely the matter says that he does not expect any Socialist to accept his definition; but "I claim the right to define Socialism frankly and avowedly from my own point of view—the non-socialistic." Similarly a prohibitionist might define high license as the system of liquor selling which aims to make every man a criminal and every woman a drunkard. But useful discus-

sion could hardly be conducted on that basis. Equally wide of his antagonist does the author go in considering the relations of Socialism to morality and to religion. "Contemporary Socialism," he writes, "viewed as a whole . . . is plainly inconsistent with any recognition of religious duty"—a reckless statement in view of the activity and increase of Christian Socialists, and of the official declaration by the most materialistic of Socialist parties, the German Social Democrats, that a man's religion is entirely his private concern. On the whole, however, Professor Flint's book is better in argument and information than these quotations indicate, tho it is much too verbose and fine spun. His criticism of the Marsian theory of surplus value, claimed by some Socialists to be their pivotal economic belief, is trenchant. If Socialism depends for life upon this or any other theory of value, it is indeed in need of physicians. For no theory of value—demand and supply, final utility, marginal utility, labor cost and the rest —commands general acceptance for many years. Why in the world should Socialists stand so heroically by Marx's theory? That, granted the same efficiency of organization, the wage-earner would receive more if the landlord and the money-lender were eliminated and the entrepreneur put on a salary fixed by the workmen, is so clear that to fog the statement with discussions about "the social normal labor time incorporated in a commodity or necessary to its reproduction" is gratuitous folly—unless it be more important to Socialists to provide subjects for the scalpel of critics like Professor Flint than to win adherents to a more practical policy of social reconstruction.

Bembo: A Tale of Italy. By Bernard Capes. New York: E. P. Dutton & Co. $1.50.

The scene of this story is laid in Italy during the fifteenth century, when Galeazzo Maria Sforza was Duke of Milan and made sport for himself by starving his victims, by cutting out the tongues of his enemies or by having them broken on the wheel. "They were all madmen, moral abortions of that 'breeding in' of demigods which sows the world with chimeras," says the author; and into this dark chimera of license, lust and cruelty he lets Bembo descend like a shaft of light. The contrast is complete and the story is well told. It is a curious, sensuous and beautiful conception of Christianity, difficult to describe without giving the impression of blasphemy. Yet nothing was ever further from irreverence than this tale of Bembo, the little love child of Heaven, the pretty Cupid saint of holy love who withstood the temptations of the hideous times with a beauty of spirit unsurpassed. By way of explaining the character the author says: "Bembo derives from no legend, but the legend, mystic and unpronounceable, of the great human memory, which connects us, mortal exiles, bond slaves in Egypt, with a state and time before ever love knew betrayal of its innocence." When that was the author does not make clear, but by some "token" he concludes that "each man's future is his past, and the burden which he carries with him, whether of good or evil, shall be the measure of his happiness in his restoration to that his first kingdom." That sounds well, but it is really incoherent; and Bembo is also a demonstration and a contradiction of the author's conception of that "first kingdom." According to his doctrine love and innocency ought to have triumphed, but Bembo died, starved in a dungeon. Did the exigencies of the tale demand it, or is that the fate of love, lost forever out of the kingdom of innocence? In any case, the denouement proves the fallacy of the author's theory.

Jottings of an Old Solicitor. By Sir John Hollams. New York: E. P. Dutton & Co. Pp. viii, 247. $3.00.

From the point of view of commanding the immediate interest of American readers the last chapter in *Jottings of an Old Solicitor* should have come first; and from the same point of view it would have been advantageous if there had been a preface briefly explaining the position of solicitors and barristers in the economy of English law and English law courts. As it stands the book at first glance would not seem to appeal to American readers, even to those who

are fond of English biography; but a reading from beginning to end brings one into pleasant contact with a man of remarkably strong and likeable personality who has achieved much distinction in the legal world of London. In England lawyers are of two orders—barristers and solicitors. Barristers are the men who, attired in wig and gown, plead in the higher courts. Solicitors are the intermediaries between clients and barristers—the men who prepare the briefs and marshal the witnesses; and it is from the standpoint of a solicitor that Sir John Hollams writes of English law courts and judges. There is much that will appeal to American lawyers and law students who are interested in law as a science, particularly as regards changes in law procedure and law reform during the last sixty years.

Literary Notes

....Prof. William Lyon Phelps, of Yale, has published nine of *Stevenson's Essays* in a form suitable for school use. The numerous notes will be found worth reading by many who consider themselves beyond such aids. (Scribner. 75 cents.)

....The international Sunday School Lessons for 1907 are from the first books of the Old Testament. The *Illustrative Notes* published by Eaton & Mains are edited by Mr. John T. McFarland, with the co-operation of Professor Peritz, of Syracuse, and others. ($1.25.)

....*Country Life in America* is publishing a "Home Builders' Supplement," well calculated to draw population from the cities into suburbs and country by showing how easy and cheap it is to build homes. Prizes of $500 are offered for the best personal experiences in this line.

....Gosse's *Modern English Literature,* which for ten years has ranked as one of the very best single-volume histories of English literature, both for the school and the private reader, now appears in a revised edition with 64 half-tone portraits of great authors. (Stokes. New York. $2.50.)

....Mr. Orison Swett Marden has added another to his books on the attainment of success and the development of character. The title is *Every Man a King.* In addition to the name of Mr. Marden, "With the Assistance of Ernest Raymond Holmes" appears upon the title page. The volume is published by Thomas Y. Crowell & Co. ($1.00.)

....The last number of *The Burlington Magazine,* published by Robert Grier Cooke, New York, contains a number of large and handsome reproductions of paintings, of which the series from the National Gallery of Ireland is of especial interest. Raphael's "Madonna of the Tower" and the tinted head of Christ attributed to Leonardo da Vinci are included in the same issue.

...."Biblical Dramas," arranged by Harris G. Hale and Newton M. Hall, are adaptations of biographical portions of the Bible for readings, the narratives being assigned to different characters. Those published are *The Story of Jacob, The Story of Joseph and His Brethren,* and *Moses the Liberator,* each of which would make an interesting evening for a religious society of young people. The booklets come from the Pilgrim Press.

....The Rev. Francis N. Peloubet, D. D., author of the annual "Select Notes on the International Sunday School Lessons," has prepared an excellent text-book on the Book of Job, suitable for advanced classes or Biblical literature courses. One merit of Dr. Peloubet's works is the wealth of reference to general literature. The present volume is issued by Charles Scribner's Sons, and is entitled *Studies in the Book of Job.* ($1.00.)

Pebbles

A WOMAN was on the streets today with holes in her stockings. "These stockings," the woman said to a friend, "are on their last legs: I'll throw them away tomorrow."—*Atchison Globe.*

REMARKS FROM THE PUP.

SHE'S taught me that I mustn't bark
At little noises after dark,
But just refrain from any fuss
Until I'm sure they're dangerous.
This would be easier, I've felt,
If noises could be seen or smelt.

She's very wise, I have no doubt,
And plans ahead what she's about;
Yet after eating, every day,
She throws her nicest bones away.
If she were really less obtuse
She'd bury them for future use.

But that which makes me doubt the most
Those higher powers that humans boast
Is not so much a fault like that,
Nor yet her fondness for the cat,
But on our pleasant country strolls
Her dull indifference to holes!

Oh, if I once had time to spend
To reach a hole's extremest end,
I'd grab it fast, without a doubt,
And promptly pull it inside out;
Then drag it home with all my power
To chew it in a leisure hour.

Of all the mistresses there are,
Mine is the loveliest by far—
Fain would I wag myself apart
If I could thus reveal my heart.
But on some things, I must conclude,
Mine is the saner attitude.

—*Harper's Magazine.*

Editorials

Campaign Influences in New York

CERTAIN keen journalists who have been accompanying Mr. Hughes and Mr. Hearst in their campaign tours thru the State of New York report that the preferences and intentions of a large number of voters cannot be ascertained by the ordinary methods of observation. This was to be expected. Party lines have been broken. Prominent Democrats decline to support Mr. Hearst; there are Republicans, not so prominent, who will vote for him; and there are other men who are saying nothing.

The vote of New York, in years midway between Presidential elections, has recently been almost evenly divided. Four years ago, when 1,358,000 votes were cast, the Republican elected Governor had a plurality of less than 9,000. Eight years ago the Republican plurality fell below 18,000. In Presidential years, since 1892, the Republican pluralities have been very large. In 1904, Mr. Roosevelt's was 175,000. Altho the President earnestly desires the election of the Republican candidate this year, to many voters Mr. Hearst represents more distinctly than Mr. Hughes the domestic policies with which the President is most prominently identified. These voters may have been misled. Their attitude complicates the situation.

We have heretofore pointed out the evidence of Mr. Hearst's insincerity and almost grotesque inconsistency, saying that it ought to be enough to put him out of politics. We think that Mr. Hughes ought to be elected, and we still expect that he will be. It is well to consider, however, the influences that, despite Mr. Hearst's insincerity and his alliances with unworthy men whom he has justly denounced, may give him nearly as many votes as Mr. Hughes will have, or, possibly, elect him. At the present time these results, as well as his decisive defeat, appear to be within the range of possibilities.

Since the last election there have been interesting events that are impressed upon the average voter's mind, especially the mind of the average voter outside of this great city. In the hustle and bustle of the metropolis, one sensational disclosure quickly succeeds and displaces another. The shocking exposure of intrigue and corruption in the great life insurance companies is here an old story, partly forgotten. Not so in the up-State counties of New York; not so in the villages or on the farms. There such things are more justly accentuated and differentiated; there the memory holds them longer.

The people of the great city do not, as a rule, realize how great have been the disillusionment and loss of confidence, how intense the indignation and disgust, of many thousands of up-State voters, who read the reports of that memorable investigation and afterward determined to work at the polls for a house-cleaning at Albany. In the great city the distinctness of the revelations concerning our two United States Senators, our ex-Governor who was the leader of his party organization, and many millionaire financiers whose acts up to that time had at least not excited contempt, has been blurred or lost. In the country it has survived, and it urges many a voter to use his influence against the party under whose Governor and Insurance Superintendent these offenses were permitted, and in whose Legislature the "yellow dog" funds were expended. In nominating Mr. Hughes the party has sought to meet the complaints of such men. It was an admirable nomination. Will it suffice? That is the question. Mr. Hughes is honest and competent. If elected, he will be his own master. But the discredited and obnoxious political leaders of his party are not dead. Some are hidden in the bushes; others are very quiet. Complaint is made by a few thoughtless persons that these men are doing nothing for the party in the campaign. This is an error. Their most effective service is given by keeping out of sight. It was a blunder to elect as treasurer of the party's committee a man whose name and associations remind the public of a majority of them.

Not only on account of the life insurance disclosures has the average voter experienced a loss of confidence that may affect the result of the election. Other things have happened. In the national field, the unlawful and wicked rebating of railroads has been exposed. One of our greatest roads, a New York corporation, has been convicted. The favoritism and corruption of the officers of another great railway corporation, in its connection with the coal trade, have been uncovered. Great Trusts have been inindicted for meanly conspiring with the railroads against weak competitors and the public. Muck-raking magazinists have undertaken to lay bare the secret treachery of popular political idols. Even if a part of what they have written be untrue or unjust, it has had weight.

Because of the offenses of corporations, committed with the advice and aid of expert attorneys, by reason of the achievements of others of their kind in the service of life insurance "yellow dog fund" departments, and also owing to the successful labors of astute counsel in behalf of greedy public service corporations, lawyers have suffered in public estimation, and the people have lost a part of their former respect for candidates for the bench selected by committees of the bar. This may have an unfortunate effect in the great city, where Hearst and Murphy have divided ten nominations for the Supreme Court.

Mr. Hearst, in his enumeration of his contests with Trusts and grafters, and his estimate of what he thereby has accomplished, may be indulging in considerable exaggeration, but it is nevertheless true that he has been engaged in this kind of fighting on the side of the public. This has weight. He asks the people to look at those who oppose him. Naturally, no one connected with the Trusts or railroads or public service corporations which he has attacked is now supporting him in politics. Many who are identified with corporations and financial interests have worthy and sufficient reasons for their political hostility, but this is not taken into account by a considerable number of voters. If Mr. Hughes could manage in some way to get rid of a few hundred supporters whose affiliation with corporations of various kinds is widely known, and could drive them into the Hearst camp, he would gain something by thus killing an argument that must be reckoned with at the polls.

We have spoken of some of the influences that work for Mr. Hearst and to the disadvantage of Mr. Hughes. With many persons—in a State that has a host of voters not firmly bound to any party—these influences will not be overcome by the evidence of Mr. Hearst's insincerity, treachery, ingratitude, or conspiracies with bosses like Murphy, upon whom, in the recent past, he has exhausted a copious vocabulary of denunciation. To some of these, this evidence will not be known; others, familiar with it, will still prefer Hearst to Hughes because they hope by means of Hearst to cast out of power at the capital the Republican leaders who have disgraced the party which they have been permitted to lead. If the honest and patriotic opponents of Mr. Hearst are disagreeably surprised by the size of his vote on election day, it will not be difficult for them to account for it.

A Reorganized Cabinet

The President will next year have a new Cabinet. Three members of the Cabinet will change their portfolios, and two new members will fill the vacancies caused by the withdrawal of Secretary Shaw and Secretary Moody. They are Oscar S. Straus, who will take the Department of Commerce and Labor, and George von L. Meyer, who will be Postmaster-General, while Mr. Cortelyou will be Secretary of the Treasury, Mr. Metcalf Secretary of the Navy, and Mr. Bonaparte Attorney-General. Of the two new members of the Cabinet the accession of Mr. Oscar S. Straus is the more notable, and it was as unexpected as it is admirable. It was unexpected, because Mr. Straus has been a Democrat, a Gold Democrat to be sure, but a Democrat. He is also a Jew in race and religion; and this is the first time that one of the Hebrew race has been called to the Cabinet. Jews have been Senators, Governors, and Ministers to other nations, but not Presidents or Cabinet officers. It is to be noticed that in Mr. Bonaparte President Roosevelt has found an efficient

Catholic for his adviser, so that now these two forms of religion, which have been said to rest under a certain disability, in custom but not in law, in our country, are recognized and properly represented. But Mr. Straus's appointment is particularly excellent for personal reasons. Born in Bavaria, but brought to this country when emerging from infancy, his young boyhood was spent in Georgia during the Civil War, and he learnt his English letters in a Baptist Sunday school. On the close of the Civil War the family came to New York and established what has come to be a very large mercantile business, and have not only acquired large wealth, but one of the three brothers has been a Democratic Member of Congress active in constructing the Wilson Tariff Act; all of them have been devoted to philanthropic work, and are at the very head of all Jewish public interests; while Oscar, the only one of them who took the university training, is known as an author on historical subjects, has been president of the New York Board of Trade, vice-president of the National Civic Federation, was appointed Minister to Turkey under President Cleveland, and again, when a special exigency required his services, to the same post under President McKinley, tho a Democrat. He takes the Department of Commerce and Labor, for which his study of the conditions of both commerce and labor peculiarly fit him, while his experience in both diplomacy and philanthropy add elements of value. But we are especially pleased that President Roosevelt has called to this Department one who is a Hebrew by birth and of Democratic antecedents.

It is well that Mr. Bonaparte has been called from the position of Secretary of the Navy to that of Attorney-General. It best fits his tastes and training. It is also well that Mr. Metcalf has been transferred to the Navy Department, for he may be supposed to have some knowledge on that subject, having been a member of the Naval Committee of the House, and having, we believe, a son in the Naval Academy. One trouble about our Navy has been that our Secretaries of the Navy, since the Civil War, have taken the post with no knowledge of the subject, and have been obliged to leave the control to naval officers who have too often obtained charge of bureaus by political favoritism. Why should not some one in the Navy, or out of it, noted for his superior knowledge of naval affairs, be sometimes chosen, as in England, to this position? It is not a place for politicians. At present England is setting the pace with her new and better methods, while we are lacking in initiative and intelligent enterprise.

Mr. Cortelyou will take the more important office of Secretary of the Treasury. His rise to influence and position has been remarkable. A graduate of a normal school, a lawyer and a law reporter, principal of a city school, private secretary to various officials, then stenographer and private secretary to President Cleveland, President McKinley and President Roosevelt, he was made Postmaster-General, Chairman of the Republican National Committee, and now becomes Secretary of the Treasury. He has filled all posts with marked ability and success, and one asks what the next step will be for this young man of forty-four years.

President Roosevelt has reconstituted his Cabinet with rare fitness to the work of its members, and with no little political skill. It is well that he can retain Mr. Root and Mr. Taft.

The Apostle to the Genteels

THE significance of Mr. Wells's argument for Socialism, the concluding section of which we publish this week, lies in the fact that it is addressed to the middle classes. It represents the new socialistic movement in England, the aggressive campaign led by the Fabian Society on lines distinct from but parallel to the Marxian working class propaganda. The orthodox Marxian has little use for middle class people. He expects them to become extinct so shortly that it is no use trying to convert them. He takes no more interest in them than missionaries do in the Tasmanians. They will be ground fine between the upper and nether millstones of the trusts and the unions. Such individuals who survive will be able to do so only by becoming retainers of the capitalists, and as such will be engulfed with

them in the revolutionary cataclysm which will end the present era.

With a firm faith in this theory, it is no wonder that he often manifests annoyance at the slowness of the bourgeoisie in carrying out the part assigned them in the Marxian program. They do not disappear fast enough, nor do they show any eagerness to take sides either with the proletariat or with the capitalists. On the contrary, they view both with a certain distrust and antipathy, and maintain a curious confidence in their ability to manage both factions in the future as they have in the past. In short, they are not a negligible quantity, but hold the balance of power, at least for the present, and can retard or accelerate the progress of Socialism to a considerable tho an indefinite extent.

Obviously, if the middle class as a whole is to be converted to Socialism, it must be by different arguments than those found effective with the proletariat. The Manifesto does not appeal to them, because they have more to lose than their "chains." There must be something more alluring than a universal competency and a steady job to arouse them to the need of radical changes.

The sight of capitalists excites emulation and ambition rather than hatred and despair. A man is not inclined to vote millionaires out of existence so long as he cherishes a secret hope of becoming one. They do not see the proletarian papers and would be repelled by them if they did.

Mr. Wells's outline of the form that middle class propaganda should take presents several novel and interesting points, but the most conspicuous is his discussion of the effect of Socialism on family relations. His frankness and honesty in bringing that question into the open is in commendable contrast with the tendency of most advocates of Socialism to conceal or minimize the fact that any such profound rearrangement of economic relations as is involved in Socialism must inevitably affect the family, because the economic factor in this institution is undeniably great, altho how great is a matter of dispute.

Mr. Wells boldly attempts to convert a prejudice into an argument by appealing to the very classes which, it is generally supposed, would be repelled by the bare mention of the subject, to save the family from its impending disintegration by adopting Socialism.

That Mr. Wells is right in thinking that the problem of the family is a serious one at the present time is clearly shown by the statistics collected by Mr. Sidney Webb for the Fabian Society. He proves:

> "that the decline in the birthrate which is depriving England and Wales of at least one-fifth of every year's normal crop of babies is not accounted for by any alteration in the age, sex or marital condition of the population, by any refusal or postponement of marriage, or by any of the effects of 'urbanization' or physical deterioration of sections of the community. The statistical evidence points, in fact, unmistakably to the existence of a volitional regulation of the marriage state that is now ubiquitous thruout England and Wales among, apparently, a large majority of the population."

So much other statisticians have deduced, but Mr. Webb went farther and obtained a direct proof of his conclusion by the circulation of several hundred question blanks among middle-class families. The results are startling. Out of a total of 120 families reporting in one category, there were only seven in which the number of children was not intentionally limited. The average number of children in such limited families is one and a half, which is only one-third what it was twenty-five years ago. In about 60 per cent. of the cases "the poverty of the parents in relation to their standard of comfort" was a cause in the limitation of the family.

This shows how important a factor the increased expense of raising children has become in well-to-do families, and unless the population of the future is to be recruited very largely by the improvident, ignorant and debased, it points toward some form of state encouragement of the production of well-born children. Mr. Wells suggests a differential income tax. Dr. Galton advocates the endowment of gifted parents. The women of Holland have petitioned Queen Wilhelmina to have child-bearing women paid for their services as soldiers are. In Germany the *Mutterschutz* movement led by Dr. Helena Stöcker is exerting a strong influence. In France very radical legislation is being invoked to check

depopulation. In almost all countries there is a tendency to protect mothers from factory employment and to assist in the care and protection of infants.

We do not belong to the class of those who fear or of those who hope that Socialism or any other change in the economic condition of men and women will essentially alter the monogamous marriage. If the family has no other foundation than a financial one, then the institution has no such sacredness that we must protect it at all costs. If, as we believe, it has a more fundamental reason for existence then it will not be destroyed even by granting an independent support to every man, woman and child as is proposed by Socialism. We ought to rejoice if any alteration of social conditions will remove all shadow of justification for the charge that in modern marriage the woman gives her wifehood in exchange for her support. We would have no woman forced into matrimony to get a living, nor compelled, by inability to support herself, to live with a man when she has a good reason for leaving him. The idea of a marriage made solely for money is abhorrent, and a marriage continued for that reason alone is no less so.

Some Evils of Decentralization

Last week we spoke briefly of the very dangerous and vicious action of the school board of San Francisco in separating Japanese children in the public schools. We called attention to the sure results if at any time within a few years Japan should declare war against us, and the added danger if China should join Japan. We showed how not only would the Philippines and Hawaii be probably lost permanently to us, but how the Pacific Coast of our own country would probably be ravaged. These are unpleasant contingencies, but they are what would happen if we should provoke Japan to reprisal.

The silly and provocative act of the school board of San Francisco has been done, doubtless, without the slightest outlook beyond the limits of the devastated city. The school board did not stop to remember that in the day of disaster Japan sent $100,000 to help the men whose ill-mannered act has aroused such indignation. Why should they expend gratitude on yellow men six thousand miles away, when the yellow journals at home were demanding that Japanese be treated as insultingly as the Chinese? The Chinese stand it; why should not the Japanese? The school men ought to have known better, but perhaps the favorite pugilistic bouts at home had so occupied their minds that they had not observed a war in the East. Indeed, the members of the school board were hardly school men at all, and still less had any knowledge beyond that of ward politics.

But what the San Francisco school board did not know the President and his Cabinet did know. They speedily saw the international complication involved. For not simply did the cable bring us the news of the excitement over the wrong in Japan, but the Japanese Ambassador was not slow to present a protest in behalf of his Government. And President Roosevelt thought the matter so serious that he hastened to send a member of his Cabinet, ostensibly to make an investigation as to the facts, but no doubt really to see if the board could be persuaded to reverse its decision.

For under our treaty with Japan there is to be no discrimination against Japanese in this country. Yet there has been discrimination, not by Congress, not by any act of the Executive, but by so insignificant a body as the school board of a single city. They have done it to please the fanatics who are the legitimate successors of the Know-Nothings and A. P. A.'s of fifty years ago. Since the country had knuckled to them in its treatment of the Chinese, they thought it an easy task to put the Japanese under their feet also. But that is resented, and we trust the result may be to cause a revision of our wicked anti-Chinese laws. Not a few wars have been waged for a less cause than that which would have provoked China if she had been as strong as Japan is, or as she will be in ten years. The successful military maneuvers of the Northern and Southern Chinese armies last week, using all the modern implements of warfare, up to wireless telegraphy, may well give us occasion for thought.

But the President does not indicate

what further he can do. The trouble is that under our Constitution the central Government has no authority over the schools of San Francisco. They are managed by the State. It is rather humiliating for the President to be compelled to answer the Japanese Ambassador something like this: "To be sure, the treaty between the two countries solemnly declares that there shall be no discrimination against Japanese under our laws, but I am unable to enforce that agreement. I have not the legal or constitutional authority. Any State or any county or town official can snap his fingers at a treaty and I can do nothing." "Why not?" the Ambassador will ask. "Because," he will answer, "under our Constitution, which is my master, the National Government has no authority over the reserved functions of the States. They can do what they please, and I can do nothing." "Then why," replies the Ambassador, "did you make a promise which you cannot perform?" And to that question the reply is subdued silence and shame.

It may possibly be a question whether a State's legislation can nullify a treaty. That question should go speedily to the Supreme Court. An effort is making in San Francisco to decide whether the school board did not go beyond its authority. But we have, in the past, avoided that question. It has been presented not a few times, especially in that case when Italian subjects were dragged from a prison in New Orleans and killed by a mob. Then the Italian Government protested, and our Government was compelled to admit the wrong and to plead the baby act of its incompetence to interfere with the police work of the State of Louisiana; and it paid damages for the outrage. We may admire our dual system, but centralization also has its advantages, for no such difficulty would have been met if the wrong had been done in any European country, whether monarchy or republic. The tendency for forty years with us has been toward more centralization, and it would seem as if at least this much in addition were needed, that the United States should have the right and power to enforce at home its treaties with foreign Governments, so that treaties may be as supreme everywhere as is the Constitution itself. No country has enjoyed the good will of Japan like the United States. It was our Government that was the first to give up its special right of trying foreigners guilty of crimes in Japan. When we gave up our extra-territorial rights, and trusted our criminals to the Japanese courts, the other nations had to follow. From the beginning our relations have been most friendly. It is alarming, it is disgraceful, that a miserable, ignorant group of men in that burnt-out city, the underlings of the worst dregs of the coast, should have the power to destroy for the time this ancient good will. It is these same hoodlums, or those of their sort, who have made the United States of America the most hated of all nations among the Chinese. How long shall we submit to their audacious dictation? They have bulldozed Congress, debauched both political parties, and would smilingly involve us in war with all the East. It is all our fault, and chiefly the fault of Congress, that it has yielded so timidly to the demands of those presuming to speak for labor against the Chinese. But for that sad, cowardly blunder this new and more perilous one would not have been attempted.

The Test of the Church

THERE is an old story of a Pope boasting of the wealth of the Jubilee offering, who said to the pious priest by his side: "Peter cannot say now, 'Silver and gold have I none'"; and the priest replied: "No, your Holiness; neither can he say now, 'In the name of Jesus Christ, rise up and walk.'" The power to cure the ills of humanity and society is at least one test of the genuineness of the Church. This it still does to a certain degree, but not to such a degree as can give it much ground for gratulation.

The ills of humanity and society are very largely found with the poor. The test of the Church, then, is less to be found in its success with the rich than with the poor. In a sermon before the late Anglican Church Congress, the Bishop of Birmingham lamented that the Church of England had so far lost the lower and lower middle classes, and had become so far the Church of the titled

and the rich. This is less true of the Nonconformists and of the Catholics. But there is reason to fear that in Great Britain and in this country, as on the Continent to a great extent—in France, and Germany, and Italy, and Belgium—the artisan class have, at least in the cities, drifted far away from the Church.

And yet Jesus came to an artisan's home. His mother sang: "He hath put down the powerful from their thrones and exalted them of low degree." Jesus said: "Blessed are ye poor." He chose his disciples from the class from which he himself came. He bade the rich young man divest himself of his wealth; and he said: "How hardly shall they that have riches enter into the kingdom of God! It is easier for a camel to go thru the eye of a needle than for a rich man to enter into the kingdom of God." This is a hard doctrine, and it astonishes us as much as it did those that first heard it; for it is true that "there is much more in the New Testament against being rich and in favor of being poor than we like to recognize."

The English Bishop says, with great truth, that it is the chief test of the vitality of the Church in any country that it will represent the poor, the wage-earners, those that live by manual labor. If the Church is losing this class in this country—and it is, in part—there is evidence of great lack of faithfulness to its first history and its Master's ideal. It must be that it has, to too great an extent where wealth abounds, sought the favor and the support of the rich. It has built its churches to suit the taste of the rich. It has put their support out of the reach of the poor. It has given the best pews in the main aisle to those who can pay the most money. It has sought the counsel of those who had bought the choice seats. It has forgotten the terrible warning of James to those who say to the rich, "Sit thou here in a good place," and say to the poor, "Stand thou there or sit under my footstool." The Church should seek the poor more than the rich, but has reversed the rule.

And to a great extent the artisans have left the church. They have found what seems to them a better substitute in the labor union. That represents the social character of the Church, its brotherly equality and mutual helpfulness. When it holds its meetings on Sunday and adds its weekday evening meetings, it is a direct rival of the Church. Its members seem to find in the mutual helpfulness of the union in times of trouble, and the limited altruism, something almost religious and far more attractive. Why go to church, where they condescend to you, when you can meet your equals and feel yourself a man?

Only one word of suggestion do we here give. If there are three or four denominations in this country which boast that they are a Church of the rich, or of the socially fashionable; or which like to claim that they represent culture or education; which feel no grief that certain lower or ruder classes are not at home with them, but would send them elsewhere; which resent the adhesion and membership of those of less aristocratic culture; then such denominations do not well stand the test. "Art thou he that should come, or look we for another?" was the question which John the Baptist would ask of Jesus; and the answer came, "Go and tell John that unto the poor the gospel is preached." It was the poor, not the rich, that heard him gladly.

Faked Cable News

A FEW weeks ago THE INDEPENDENT emphasized the responsibilities of the proprietors and editors of the powerful and reputable daily journals for a scandal common to the less respectable daily newspapers which it is within the power of the respectable journals to reform. We would now point to another evil creeping over American daily journalism that can easily be checked by the proprietors and editors of the more responsible newspapers who are of the Associated Press. This evil concerns the growing volume of faked cable matter which is now appearing in many newspapers whose managers are in a position easily and profitably to deny themselves the use of such faked material.

Any man whose duties impose on him the work of going carefully over many daily newspapers must be aware of the increasing quantity of this stuff that is nowadays being foisted on newspaper readers. It does not need a trained newspaper man or a man of long experi-

ence in newspaper work to detect that much of the stuff that appears under a London heading, with a date that implies that it has come by cable, has never been on a cable operator's table. Much of the stuff is burdened with obvious internal evidence of faking; and newspaper managers who bespatter their pages with this cheap and fraudulent filling must either be convinced that their readers do not know what is cable news or the kind of matter that is likely to come by cable, or that they are indifferent as to what is palmed off on them as cable news.

A good example of the kind of news which suggests faked cablegrams appeared in a number of daily newspapers on Saturday, October 20th—in some in which this kind of newspaper enterprise comes as a surprise and a shock. There were three-quarters of a column of it, and in the first newspaper in which we noted it it was headed "Municipal Trade Costly; English Schemes Steadily More Unprofitable; Only Seven Out of 189 Electric Light Plants Solvent; Sixty-five of These Run at Dead Loss; Tramways as Bad; Rising Debts Threaten Bad Crash." The whole story was compiled apparently *apropos* of the electoral contests then going on in London's twenty-eight municipal divisions; but its object seems to have been to discredit the movement for municipal ownership in this country.

We cannot positively assert that none of this stuff—printed broadcast on October 20th—came over the cables; but after reading the statistics and quotations with which the article is padded out, we will assert that so far as the news value of the stuff is concerned it might as well have come over by a tramp freight-boat making the trip between Liverpool and New York in fifteen to seventeen days; for if the editor desired to print such matter it could easily have been vamped up from material which for weeks had been accumulating on the table of the exchange editor.

It may be that there are organized interests in this country which regard this misleading news as worth cable-tolls at the rate of ten cents a word. This conjecture is offered because the story had a propaganda bureau appearance stamped all over it. Whether this be so or not we suggest that the Associated Press should insist upon one of two courses with all its constituent members. It should insist either that they shall regularly denote what cable news they have received from the Associated Press, or that they shall denote the origin of all the other cable news they print. No newspaper man would ever imagine that the fustian to which we have directed attention originated with the Associated Press. Yet it was printed alongside Associated Press despatches; and there are newspaper readers not versed in newspaper office economy or in the economy of the Associated Press, and not familiar with the unquestioned high standing of that old and reliable and absolutely non-partisan organization, who might fall into the error of supposing that it was an Associated Press despatch, and had the authority of the Associated Press behind it as a buttress for the statements which it contained.

Civil Service Officials

A very interesting passage in Mr. Bryan's speech on the railroad question, repeated in various Southern States, and which he has reproduced in his own newspaper, has to do with the political activity of civil service officials. He says he has taken part as candidate in two campaigns, in the first of which a Democratic President was helping the Republican candidate, and in the second of which a Republican President was at the head of all the departments of Government. But he says:

> "In both campaigns the civil service employees gave me less trouble than the railroad employees, who were coerced by their employers into the support of the Republican ticket, and I say without hesitation that I would rather risk the influence which a President can bring to bear upon civil service employees than to risk the influence which railroad owners can bring to bear upon railroad employees."

We could hardly have a better testimony of the value of our civil service law, the leading champion of which has been President Roosevelt. Its spirit is not always maintained, but it has vastly improved, if not wholly revolutionized, our politics. Now the next thing to achieve is the elimination of money from elections.

Pentateuchal Heresies The Methodists, if we may judge from the action of the conference which decided not to try Prof. Hinckley G. Mitchell for heresy, propose to allow any one of its ministers to believe that the Books of Moses are not wholly historical. It will be remembered that the Board of Bishops refused to approve his reappointment as teacher of the Old Testament in the Theological School of Boston University. It is the New Testament, and the account of the Virgin birth of our Lord which is more troubling the Episcopalians in the case of Dr. Crapsey; but the Catholics are threatened in this country, as in France, with ecclesiastical censure for Pentateuchal heresy. Father Gigot, of Dunwoodie Seminary, is being sharply criticised for views published in his books on biblical criticism. He does not seem to accept quite gratefully the directions given to the Church by the Biblical Commission appointed by the Pope to tell Catholics what they must believe as to the Bible and its authors. The Catholic *Ecclesiastical Quarterly* tells him he will have to revise his chapter on the Pentateuch, and a leading Catholic weekly improves on this instruction by advising him, while he is about it, to throw all the other chapters into the fire. Father Gigot declares in an article that the pronouncements of the Biblical Commission are not at all infallible, but is told that they are infallible enough to shut out his teachings in the Church and those of the Abbé Loisy. There is trouble ahead; for Father Gigot's critics are sure to appeal to Rome, where Cardinals have more power than Methodist bishops have here.

Hasty Reports It is not strange that, with much that was true, the negro who wrote the article for us on the Atlanta massacre should have in his excitement accepted some statements which do not seem to be substantiated. All our daily papers told of two negro barbers dragged out of their shop to be killed. Our correspondent said that it was believed that white barbers led the mob. We are now informed by one who ought to know that only a single pane of glass was broken in that shop, and that Mr. Alonzo Herndon, the proprietor, says that there was no violence and no other damage. More surprising was the statement that "ten of the leading white pulpits of Atlanta are vacant because the pastors of moral courage have either been driven away or will not come to stifle their conscience in such service." Our later correspondent says this is certainly not the fact, nor is anything like it true. It would seem that it is sometimes as difficult for the negroes to see white objects without obliquity, as it is for the white people to see the truth about those of another color.

The Moslems in India A German publicist tells us that the coming half-century has great revolutions in store in both Asia and Africa; and among other things he prophesies a unification of the Moslem races in North Africa, which will drive out both the French and the British rulers. We hear not a little of late of Moslem solidarity, of the waking up of the Mohammedan world, and of the messengers of the faith who traverse all North Africa and travel even thru India to the eastern islands to proclaim the Moslem renascence. Of the 200,000,000 people of India, 50,000,000 are Mohammedans; and while they have been reasonably submissive to British control—for it is fate, and the punishment of their sins—they do not forget that they once were rulers of India; that they overthrew the pagan kingdoms, and they feel a contempt and hatred toward the Hindus which they do not feel toward the British. But of late the Hindus have been rising in intelligence and are coming more into official power, and are uneasily asking for more civil rights. This is putting them in advance of the Mohammedans, who, however they may seek education, know that they are in a hopeless minority, and that as self-government approaches they will be always outvoted. This they cannot endure, and they have asked Lord Minto to have the people represented, not by counting heads, but by their separate religions. That will be difficult to do, and there may be danger ahead, for Mohammedans, tho of the same race—for most

of them were converted by the sword—will not consent to be ruled by pagans. But there is one hope which the statesmen do not seem to consider. Christianity is spreading very rapidly in India. The number of converts is almost doubling every ten years, particularly among the Hindus. At the present rate in fifty years Christianity is likely to be the predominant religion and paganism will have lost its power. Then Moslems, many of whom will have become Christians, will no longer be faced by idolators, but by monotheists like themselves; and Christianity will be the universal solvent.

The Liberal Movement in Spain

The Liberals in Spain seem to think that they can trust the spirit of progress in their young King and his Queen, whose new faith has not perhaps struck in very deep. The questions are two, and are both religious, as is likely to be the case in a country in which the nation tries to run the religion. In our own country religious questions are kept out of politics. One of the questions in conflict between the Spanish Liberal Government and the Church is that of recognizing civil marriage as valid. The Spanish bishops have united in a declaration that such marriage is no better than concubinage; and the Government does not seem inclined to press its point, because it fears an adverse decision by the Supreme Court, which a year ago declared religious marriage the only legal form for those of the Catholic faith. This was, it is true, before the late royal order approving civil marriage, but the Supreme Court may regard it as an unconstitutional act. The other question has to do with the religious congregations, so many of which have come over from France, and which the Government, if it could, would be glad to suppress. It is now in conflict with the Pope and the bishops over the question of supreme authority, whether it is that of the nation or that of the Church. For example, the present Liberal Cabinet insists that civil law can release a member of the congregations of his vows, while the bishops declare that this can be done only by the Church. We should say that each has the power in its own sphere.

Something over a year ago Governor Vardaman vetoed the appropriation for the colored State Normal School at Holly Springs, Mississippi, an institution which had been running for thirty-seven years. He thought the negroes did not need such education as it would give; but the negroes thought differently, and Bishop Cottrell immediately started to establish in its place the Mississippi Theological and Industrial College. In a year he has raised $35,000, wholly given by the negroes of Mississippi, and $25,000 of it has gone into a very handsome building for which no white people in the State or out of it have been asked for a cent. It is one of the most encouraging and beautiful illustrations of a right spirit that we have seen. Bishop Cottrell is determined in the development of this enterprise to rebuke Governor Vardaman by refuting all that he is saying against the negro people of Mississippi; and we doubt not that now he has proved his ability and the courage of his people Bishop Cottrell will receive help from other sources.

The South Carolina negroes have devised a new way of rendering lynching unpopular. They have simply blacklisted men whom they regard as responsible for a lynching. There is one case in Saint George where a planter who has hundreds of bales of cotton lying in the field cannot get hands to gather it, and has lost several thousand dollars. But he may get the better of them, for he has had a dozen of the prominent leaders arrested for conspiracy against him, and he thinks he has the magistrates on his side.

Theoretical or academic anarchism may be free from the law; but when, as in a case in this city last week, a company of people meet to defend the murder of President McKinley by Czolgosz, to declare that he was properly killed, and that more men like Czolgosz ought to be ready to strike for the people, it is only proper that those who thus incite to murder be put where they will not do what they threaten. These men who denounce the violence of the law are themselves the promoters of violence.

It would have seemed absurd just a few years ago to imagine that General Picquart, the defender of Captain Dreyfus, could enter the Cabinet as Minister of War. No man in the French Army is better fitted for the position, which our politics scarcely allows to be given to a trained man. As Minister he will be in authority over those who persecuted him for his defense of Dreyfus; but his sense of justice, which made him take an unpopular side to his injury, will save him from taking pleasure in revenge.

Most rosy are the propositions which the Russian Cabinet is now putting forward for the benefit of the people. If words could become deeds, there would be a vast amelioration of the conditions in a very few years. There is to be a complete system of free education, at an expense that there is no present chance of being provided; and the peasants are to be allowed to leave their villages and change their homes without restraint. These are fine promises, but it will be hard to create confidence in them.

The necessity of a rule of war to be adopted at the next Hague Conference, forbidding the use of floating mines, is shown by the accident last week, when a Russian steamer leaving Vladivostok struck a floating mine and sank in two minutes, with the loss of two hundred passengers. Such mines are terribly dangerous to other than belligerent vessels; and, as this case shows, may make a voyage perilous long after the war is concluded.

A leading Army and Navy journal boasts that no such accident as sunk the French submarine "Lutin" with all on board during a trial, could happen to an American submarine, because our Navy does things better. We hope so, as to submarines, but the extraordinary succession of accidents to our vessels, running aground, bumping into each other, and exploding at practice of the guns, does not inspire overmuch confidence.

A man who makes a good part of his reputation by shocking people may be excused some freaky ways, but George Bernard Shaw has quite a contract on his hands if he has sold himself to overthrow the Ten Commandments. He is reported in a lecture as declaring that he finds them dangerous and undesirable. So he took them up one by one and condemned them, which is tantamount to condemning himself.

Senator Morgan and Senator Pettus boast that their candidacy for re-election to the Senate cost them but sixty or seventy dollars each. It was not wholly the primary system that reduced the price, for Hoke Smith and Clark Howell must have spent their thousands in seeking the Governorship of Georgia. A sign of improvement appears in the agreement of local political committees not to buy any votes.

Is Mrs. Eddy suffering from cancer? Of course not—has she not said in THE INDEPENDENT that she is enjoying her usual health and goes out riding every day? A chorus of her friends and her literary bureau say the same. But, what is of even more importance, there is no such disease as cancer, and no disease at all, if you only think so.

It is a standing joke in most colleges that it is not fair to admit Japanese students at the same tuition rates, because they carry away twice as much learning as the American students. We can think of no more valid excuse for the action of the San Francisco school authorities in excluding Japanese from the public schools.

Religious liberty makes steady progress the world over. A law has been past in Bolivia which amends the constitution of that country so as to permit the public exercise of any religious worship. This information has very lately been received at Washington from the American Minister to Bolivia.

Mr. Murphy, the leader of Tammany, is right for once when he threatens to sue for libel any one who pictures him before the public clad in prison stripes. Many of the political cartoons are libelous as well as indecent.

Insurance

The Insurance Elections

With the return to this country of Samuel Untermyer from European explorations, the insurance campaign takes on new life. The International Policy-Holders' Committee has now arrayed itself among the prophets and the sons of prophets. Notwithstanding the fact of the insurance election being some two months in the future, the prediction of victory for the policy-holders' committees in both the Mutual and the New York companies is confidently made by G. R. Scrugham, the manager of the International Policy-Holders' Committee. Figures derived from the Department of Insurance are said by Mr. Scrugham to show clearly that unless there is a decided change in the manifested preference shown by the ballots already cast, the present administration of both the Mutual and the New York Life will, to use the language of the conventional legal document, cease and determine early next year. The result, to which reference has here been made, if it can be called a result, is a great surprise. It was expected by the International Policy-Holders' Committee that great opposition to the administration would be developed, but the extent of the movement in this direction overwhelmed even those closely in touch with this sentiment. The danger that still lingers lies in the possibility that the policy-holders, lulled by a sense of security and strength, may grow lukewarm and thus permit the administrations, by what the committee calls the lavish but unauthorized and illegal expenditure of the policy-holders' money and by other devices, to perpetuate themselves.

Payment of San Francisco Earthquake Losses

Interest in the settlement of losses arising because of the San Francisco earthquake has been exceedingly widespread. The subject still attracts attention. An investigation into the insurance situation in San Francisco, undertaken by the Chamber of Commerce there, has not yet been completed. Enough has been learned thus far, however, to render possible a classification of the fire insurance companies with respect to payment and non-payment of losses because of fires due wholly or in part to the earthquake. Only forty-one companies out of all those represented in California have paid their earthquake losses with anything like reasonable promptness. Among the better known companies who have satfactorily settled losses without attempting to plead the earthquake clause as an excuse for evasion or discount are the following, viz:

Aetna of Hartford, Continental of New York, Liverpool and London and Globe, California of San Francisco, Hartford of Hartford (which includes the New York Underwriters), Home of New York, Connecticut of Hartford, Scottish Union and National of Edinburgh and London, Springfield Fire and Marine of Massachusetts, German-American of New York, German-Alliance of New York, Phœnix of Hartford, New Hampshire of Manchester, N. H., American Central of St. Louis, Providence-Washington of Providence, R. I., Niagara of New York, London Assurance of London, Insurance Company of North America, Sun of London, North British and Mercantile of London, Phœnix of London, Pennsylvania of Philadelphia.

The State assessors have notified the Surrogate of New York of their decision that life insurance policies issued by insurance companies in this State to non-residents in New York are not taxable under the inheritance tax law.

....Dividends announced:

N. Y. Central & H. R. R. Co. (R., W. & O.), 1¼ per cent. on capital stock, payable after November 15th.

Atch., Topeka & Santa Fé Ry. (common), $2.50 per share, payable December 1st.

Amer. Exch. Nat'l Bank (semi-annual), 5 per cent. on capital stock, payable October 23d.

Nassau Bank (semi-annual), 4 per cent., payable October 31st.

Fourteenth St. Bank (quarterly), 1½ per cent., payable November 1st.

American Chicle Co. (monthly), common, 1 per cent., extra 1 per cent., payable November 20th.

United Copper Co. (semi-annual), preferred, 3 per cent., payable November 15th.

Financial

Additional Circulation

THREE days after the Bank of England raised its discount rate to 6 per cent., Secretary Shaw gave notice that on and after October 23d deposits to facilitate the importation of gold would be discontinued, explaining that imports had exceeded his expectations, that he thought this country for the present had its fair share of gold, and that he had no desire to disturb conditions abroad by promoting the importation of an additional quantity. At the same time he gave notice of an experiment designed to impart a little elasticity to the volume of bank-note currency. He would at once stimulate national bank circulation to the extent of $18,000,000 by accepting "approved securities other than Government bonds" in lieu of bond deposits already made, upon condition that the bonds thus released should be used immediately (without withdrawal) as a basis for additional circulation. The banks when taking out this new circulation must make application for its retirement, and must agree to retire it between March 15th and August 10th, 1907, the order and the per cent. of retirement from month to month to be determined by the Treasury Department. At the end of last week, $13,000,000 of the new circulation had been taken, and it was known that the remaining $5,000,000 would soon be allotted.

There will be less than five months between March 15th and August 10th. The $18,000,000 cannot lawfully be retired in those five months, because withdrawals are limited by law to $3,000,000 in any month. This restriction ought to be repealed; perhaps the Secretary expects to see it repealed before March 10th. Owing to the difficulties attending retirement, the new issue cannot be a very convincing object lesson as to the value and need of such elasticity as can be imparted by emergency issues. Issue and retirement of additional circulation should be caused by natural forces in the business and financial world. Issue might reasonably be guarded, and retirement hastened (when the additional currency is not needed) by such a graduated tax as has been proposed by the Currency Committee of the New York Chamber of Commerce.

It may be recalled that the Secretary four years ago caused an issue of $18,500,000 in additional circulation upon similar conditions concerning security, conditions as to which many held that there was no clear warrant in the statutes. It was said then by some critics that he had come to the rescue of stock gamblers, and the same thing is said now. The Treasury cannot draw a line between speculation and ordinary business. It commonly happens, when such help as the Treasury is accustomed to extend is given to general business interests—when, for example, currency is needed for moving the crops—that speculators are also aided and gain some advantages. It does not follow that the Treasury's action is designed for their benefit. But the banks should be empowered, under proper restrictions, to meet the fluctuating demand for currency; the task is one that should not be committed to the Secretary's discretion.

.....The trustees of the Middlesex Banking Company, of Middletown, Conn., have declared a dividend of 2 per cent., and have given the stockholders to understand that the company has now resumed its place among regular dividend-paying concerns. During its career, the Middlesex has issued bonds for more than $30,000,000. Bonds representing more than $25,000,000 it has paid when due, or earlier, and the remaining $5,000,000 are in the hands of investors who receive their interest twice a year. The company's net earnings show a gratifying increase.

While Stuyvesant Fish declines to comment upon published reports to the effect that he has sold his Illinois Central holdings to E. H. Harriman and consented to retire from the presidency, men closely associated with him say that there is no truth whatever in the story, and that the directors may reasonably be expected to confirm the recent approval of Mr. Fish's excellent management by a majority of the stock.

The Independent

VOL. LXI NEW YORK, THURSDAY, NOVEMBER 8 No. 3023

Survey of the World

Close of the Campaign

At the close of the political campaign it was expected that the Republicans, while retaining control of the House, would lose a part of their present very large majority. Of the contests in the States, those in New York and Pennsylvania had excited much interest in other parts of the country. In New York, the leading candidates of the two great parties, Mr. Hughes and Mr. Hearst, were hard at work on the stump daily from the beginning to the end. The most impressive incident of the last week was a long address made by Secretary Elihu Root at Utica. It was well known that the head of the President's Cabinet would express the President's views concerning Mr. Hearst. Having described Mr. Hearst as an especially dangerous specimen of the demagog, Mr. Root asserted that Mr. Hughes was a conspicuous representative of the work of reform in the State, as Mr. Roosevelt was of the same work in the Federal field. There followed a long review of the evils attacked by the President and of the achievements of this "most powerful personality of our generation" in suppressing them. The remainder of the speech was devoted to Mr. Hearst. In this part of the address the most striking passages were those relating to the alleged effect of articles in Mr. Hearst's newspapers in suggesting the assassination of Mr. McKinley. The articles were read, including that one which spoke of the Goebel bullet speeding eastward to "stretch McKinley on his bier." "What wonder," asked the Secretary, "that the weak and excitable brain of Czolgosz answered to such impulses as these? The same kind of teaching is being continued now day by day in the Hearst journals." The closing words of this remarkable speech were as follows:

"I say to you, with his [President Roosevelt's] authority, that he greatly desires the election of a Republican House of Representatives to work with him in the next Congress; I say to you, with his authority, that he greatly desires the election of Mr. Hughes as Governor of the State of New York; I say to you, with his authority, that he regards Mr. Hearst as wholly unfit to be Governor, as an insincere, self-seeking demagog who is trying to deceive the workingmen of New York by false statements and false promises; and I say to you, with his authority, that he considers Mr. Hearst's election would be an injury and a discredit alike to honest labor and to honest capital, and a serious injury to the work in which he is engaged of enforcing just and equal laws against corporate wrongdoing.

"President Roosevelt and Mr. Hearst stand as far as the poles asunder. Listen to what President Roosevelt himself has said of Mr. Hearst and his kind. In President Roosevelt's first message to Congress, in speaking of the assassin of President McKinley, he spoke of him as inflamed 'by the reckless utterances of those who, on the stump and in the public press, appeal to the dark and evil spirits of malice and greed, envy and sullen hatred. The wind is sowed by the men who preach such doctrines, and they cannot escape their share of responsibility for the whirlwind that is reaped. This applies alike to the deliberate demagog, to the exploiter of sensationalism, and to the crude and foolish visionary who for whatever reason, apologizes for crime or excites aimless discontent.'

"I say, by the President's authority, that in penning these words, with the horror of President McKinley's murder fresh before him, he had Mr. Hearst specifically in his mind.

"And I say, by his authority, that what he thought of Mr. Hearst then he thinks of Mr. Hearst now."

Mr. Hearst responded vigorously on the following day by attacking Mr. Root, asserting that for many years the latter had been a faithful employee of the

Trusts and public-service corporations, insurance companies and other corporate enemies of the people, against all of which he (Hearst) had been fighting. In Pennsylvania, the supporters of the Fusion ticket (nominated by the Lincoln Republicans and the Democrats) gave great prominence to the charge that $4,000,000 or $5,000,000 of the $9,000,000 expended in furnishing the new capitol had been stolen or wasted. In this they had the aid of the present State Treasurer, Mr. Berry. The Rev. Dr. Swallow was accused of assisting the regular Republican ticket for a price. Therefore he sued the editor of the Philadelphia *Press* for criminal libel and sought to recover $400,000 in damages from that newspaper. In the closing days, Mayor Weaver deserted the City Reform party and joined the Republicans. Whereupon he was denounced by leading reformers as a traitor. D. Clarence Gibboney, reform candidate for District Attorney, asserted that Weaver had returned to "his old gang masters" because he feared that he (Gibboney), if elected, would prosecute him for his "connection with a combination of criminals." It was also asserted that the Mayor was angry because he had not been nominated for Governor, and that he expected to be placed on the bench by those for whom he had forsaken his recent associates.

Trust and Rebate Cases

It is reported that the Government will soon proceed against the Standard Oil Company for violation of the Sherman act, and that the trial will take place at St. Louis. The story comes from officers of the National Petroleum Association, whose members are independent refiners of oil. This association has recently filed with the Interstate Commerce Commission complaints against more than twenty railroads (all the leading companies being in the list), alleging the exaction of unreasonable rates for the transportation of their oil, with discrimination (in some instances) in favor of the Standard. In a public address at Salem, Mass., on the 3rd, Attorney-General Moody spoke of the inquiries he had been making. Out of our great industrial activity and prosperity, he said, great evils were arising, and the President was determined to remedy them if a remedy could be found:

"The great industries are no longer conducted by the individual, but by organized capital. Organized capital in modern industries is a necessity. The organization of labor and the organization of capital are here to stay, but we have the right to ask both that they shall obey the laws of the land. When the combination of wealth obtains great power —as it will—it destroys the individual initiative, disturbs the normal growth of commerce and sometimes the Government. I myself have seen written on a piece of paper the price of killing off a competition. I have seen the cost of driving out of business the bold independent and the division among all the confederates. It isn't wise that the people should let any combination like this exist. Mr. Havemeyer, the sugar man, says that the tariff is the mother of Trusts. It isn't the tariff that is the mother of Trusts. It is the railroad rebate that is the mother of Trusts and all of their collateral relatives.

"I am investigating the great and powerful coal and oil combinations at the present time. I will have no hesitation if I find no grounds of illegal combination to say so; and, on the other hand, if there are grounds to work on, I will proceed without regard to personal or political consequences."

——As a result of the recent trial and conviction at Findlay, the Standard Oil Company (of Ohio) has been required to pay a fine of $5,000. The criminal information pending against John D. Rockefeller goes over to the next term of court. A fine of nearly $6,000,000 would have been permitted by the statute.——In Arkansas, the suits against four cotton oil companies, under the anti-Trust law, have been dismissed upon payment of a fine of $5,000 and costs.——In New York City, the New York Central Railroad Company is again on trial before Judge Holt, this time in company with the Sugar Trust, the indictments relating to rebates on sugar shipped to Cleveland. ——The Illinois Freight Audit Company, an association of shippers organized to prosecute railroads for excessive charges, gives notice that it will sue several railroad companies for damages amounting to about $30,000,000, under the laws of Illinois, one of which forbids a road to exact more for a short haul than for a long one, and empowers a shipper to recover three times the amount of the bill. ——It is reported that at least one railroad company will attempt to retain possession of extensive coal property by resorting to the use of a foreign holding corporation.

Rights of Japanese in San Francisco

Secretary Metcalf arrived in San Francisco on the 1st and at once began the investigation which he had been directed to make. The President, he said, regarded the questions raised by the segregation of Japanese school children as of the gravest importance. At last accounts, no concession had been made by the Board of Education, whose President says that the action taken was not only for the best interests of the public schools but also in strict conformity with the law of the State, which directs that all children of Oriental parentage shall be placed in separate schools. The Board, it is asserted, will not recede from its position unless forced by the courts to do so. It awaits a legal decision of the question whether the law is at variance with the treaty and ought not to be enforced. The Superintendent of Schools even remarked that the visit of Secretary Metcalf was wholly unnecessary. Many of the "so-called Japanese children," he added, were "men from 20 to 25 years old who had no right to attend schools for boys and girls," and who, if they were Americans, would not be admitted. The Rev. Dr. George C. Adams, pastor of the First Congregational Church, who is now in the Eastern States, soliciting contributions for the rebuilding of churches, says, in a published interview, that the trouble is due to the desire of many full grown Japanese to enter schools of the grammar grade, and also to the lack of school room. American children, he asserts, were being crowded out by adult aliens. Missionary Bishop Harris, of the Methodist Church, who has lived in Japan many years, points out that the Japanese are very sensitive about children and their comfort, treating them with great consideration and striving to make them happy. On this account and because of their national pride, he says, it is easy to understand their grief and resentment when they learned of discrimination against Japanese children in San Francisco, where Italian, German, and Irish children were received in the schools on terms of equality. The Japanese and Corean Exclusion League has offered aid to Secretary Metcalf. Its officers say they expect his investigation will strengthen the League's cause, and that as a result of it "the separation of Asiatics from Caucasians" will be upheld. It is said that the Secretary was instructed to point out how discrimination, if permitted in schools, would be practiced elsewhere, and that our trade with the Far East would be very seriously affected.——The President desires that the legal questions involved shall be settled by the courts as speedily as possible. His attitude is indicated by Attorney-General Moody's instructions to District Attorney Devlin, who has been directed to assist the two attorneys employed by the Japanese in the proceedings before Judge Wolverton in behalf of I. Yasuhara, a Japanese pupil excluded from the general public school. Arguments with respect to the temporary injunction issued by Judge Wolverton are soon to be heard. Article VI of our Constitution says:

"This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

That part of our treaty of 1895 with Japan which is to be considered is as follows:

"In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will and otherwise, and the disposal of property of any sort and in any manner whatsoever which they may lawfully acquire, the citizens or subjects of each contracting party shall enjoy in the territories of the other the same privileges, liberties and rights, and shall be subject to no higher imposts or charges in these respects than native citizens or subjects or citizens or subjects of the most favored nation."

There are also provisions relating to the enjoyment of liberty of conscionce, of the right of private or public worship, and of the rights of burial according to religious customs. In the opinion of Senator Rayner, California's school law is not in conflict with this treaty. Reports from Japan say that since it became known that the President had decided to invoke Article VI of the Constitution there has been a much easier and more friendly feeling, owing to confidence in his fairness and love of justice. It is asserted, however, that Japan will be satisfied with

nothing less than the admission of Japanese to the schools upon exactly the same terms that govern the admission of the children of natives of European and other foreign countries.

Railway Wages

The Reading railroad company has increased by 10 per cent. the pay of all employees who have been receiving less than $200 per month. It is expected that an increase, probably amounting to 10 per cent., will soon be granted by the Pennsylvania company to about 140,000 employees. For some weeks past there have been indications of a general movement on the part of railroad employees for higher wages and a shorter work day. The enormous volume of traffic has increased, it is said, the amount of work required from each man, the companies' earnings have been very large, and the recent increases of dividends have convinced the workmen that the companies can afford to pay higher wages. Some ask for an addition in cents per hour; some for an eight-hour day; some for both these changes. To the switchmen of ten roads at St. Paul, who ask for both, the companies have consented to give the increase, but insist upon ten hours. It is thought that the course of the Reading and the Pennsylvania foreshadows wage concessions by the other railway systems. At Fall River, the cotton mill employees ask for an advance of 10 per cent.

Various Notes

The President intends to sail for Porto Rico and the Canal Zone early on the morning of the 8th, going on board the battleship "Louisiana," near Wolf Trap Light, at the mouth of Chesapeake Bay. He expects to keep in touch with Washington while at sea by means of the wireless telegraph.——The Canadian Parliament has been summoned to assemble on the 22d. Its most important work will be a revision of the tariff on the lines of the Tariff Commission's report and bill.——Several cotton-mill companies operating factories in North Carolina will be prosecuted for importing twenty-seven English workmen under contract.——In San Francisco, on the 29th ult., Judge Graham recognized District-Attorney Langdon as the rightful incumbent of the office from which the Acting Mayor and the Supervisors had attempted to remove him. His deputy, Mr. Heney, the well-known prosecutor of dishonest public officers, then proceeded to examine the men selected for a grand jury. This jury will be asked to indict prominent officers of the city government for corrupt conduct.——In New York, on the 27th ult., at a public meeting, three young men (Abraham Edelson, Max Moscow and Max Rubinstein) were arrested for preaching anarchy and commending Czolgosz. The charge is that they openly justified the assassination of President McKinley. At a similar meeting on the 30th, five young men, five girls and Emma Goldman were arrested upon a similar charge. All these persons have been held in bonds for the grand jury.——The recent death of the millionaire promoter, Robert M. Snyder, who was killed by an automobile accident, ends the boodle cases at St. Louis, the prosecution of which was begun by Circuit-Attorney Folk. Snyder was the principal witness in the pending cases against Uthoff and Ritter. He himself had been convicted once, and was to be tried again.

The Condition of Cuba

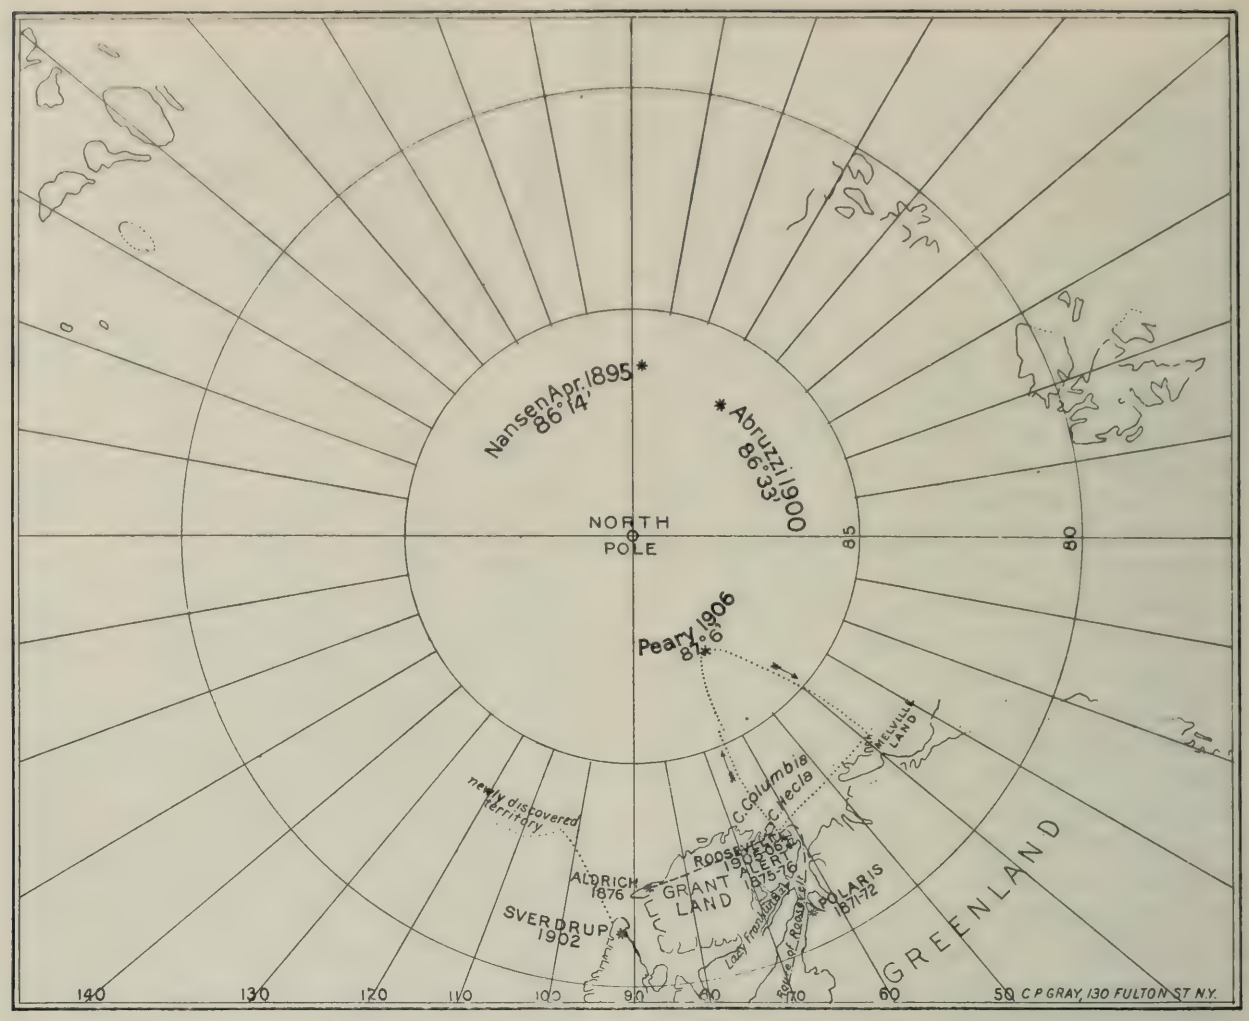
There are signs of unrest in several parts of the island, owing mainly to the inclination of fighting men in each faction to believe rumors that their opponents are planning secretly to attack them. At Cienfuegos, the Liberals offered the American commander the aid of 1,000 men to suppress an uprising of Moderates which they believed to be impending. It has been decided that the bands of disorderly persons infesting the rural districts shall be dispersed and that any one appearing in public with arms, but without a license to carry them, shall be disarmed.——At a convention of Moderates, the Moderate party has formally been dissolved. This was done under the direction of Gen. Ruis Rivera, who proposes that a new party be formed. He would have this party ask the United States to annul the present Constitution and to provide for a new one before hold-

ing the elections. He suggests that the President, elected for a term of six years, shall not be eligible for re-election, and that there shall be a standing army of 5,000 men.——Revenues have been falling, and the expenses of the Palma Government's defensive operations prove to have been unexpectedly large. To prevent a treasury deficit the present Government must insist upon rigid economy, and will probably find it necessary to nullify recent special acts of Congress appropriating about $9,000,000 for public improvements. Some say that this course will make the Government unpopular and expose it to disagreeable criticism. By order of Governor Magoon, the number of persons employed by Congress has been reduced from 114 to 20. This saves $100,000 a year.——Gen. Demetrio Castillo, a prominent Liberal and insurrectionist, has been appointed warden of the prison in place of Rafael Montalvo, who resigned.——The term of the exclusive franchise for telegraphic communication by cable with the States will expire in December, and the Commercial Cable Company has applied for permission to establish a competing line.

British Politics

The House of Lords is playing havoc with the Education Bill. Every clause so far taken up has received important amendments which will not be acceptable to the Commons when the bill returns to them. The House of Lords has not been so crowded in many years and the opposition overflows on the Government seats. The first clause of the bill was amended by a motion to make religious instruction compulsory in all the public schools. This was passed by a vote of 256 to 56. In its original form as sent up from the lower house the bill allowed parents to withdraw their children from schools during the hours when religious instruction was given. The Liberal Cabinet cannot hold its majority together for any such bill as the House of Lords is likely to send down: it will be forced into a direct fight against the Lords. Mr. Herbert Asquith, Chancellor of the Exchequer, stated in a speech at Manchester, that the nation had decided that all schools maintained by rates and taxes must be under unfettered public control. The Government could not if it would and would not if it could infringe on that decision. But the Liberals are losing ground among the people, as is shown by the municipal elections of November 1st. Almost everywhere there were large Conservative gains. In the triennial election of the London Borough Councils the Progressives, composed of Liberals and Laborites, who have had the management of the affairs of the city for several years, were overwhelmingly defeated by the Reformers, composed of those favoring a more conservative policy. The Reformers won 1,011 seats and the Progressives and Laborites 351. The reaction is due to the failure of municipal enterprises, such as the Thames ferry, which was run at a heavy loss, and the heavy burden of taxation caused by the extension of municipal activities.——The difficulties of the Government are increased by the embarrassment caused by the "Suffragettes." Ten of the women, who invaded the lobby of the House of Commons and created such disorder by screaming for votes that they had to be carried out by policemen, were arrested, and refusing to promise good behavior were sent to jail for two months as common criminals. They were subjected to the ordinary treatment, which involved being stripped naked and searched, and provided with plank beds and common prison fare, and were not permitted to correspond with their friends. This aroused so much indignation that the Government changed its policy and made them "first class misdemeanants," which allows them better quarters, meals sent in from outside, and servants. Mr. Keir Hardie claims that the credit for this is due to the Laborites, who threatened to move to adjourn if the women were not given better treatment. This gives further ground to the opposition to claim that the Government is under the thumb of the labor leaders, and they are utilizing the argument in the debate on the Trades Disputes Bill now under consideration in the House of Commons. The clause now being discussed is that which makes the funds of the labor unions immune from legal seizure on account of any action for damages which may be brought against the union.——Baron Grimthorpe, who

succeeded to the title a year ago and has repeatedly voted in the House of Lords. has hitherto refused to take the prescribed oath. The law provides a penalty of $2,500 for each offense in such illegal voting, and these fines amounted to $42,500. He has apologized to the House and taken the oath, so the fines will probably be remitted.



French Radicalism

As the new French Cabinet under Premier Clémenceau develops its program, it is seen to be a radical progressive policy, which, altho it is denounced by the Socialists as too "restricted," is probably as advanced as the country would endorse. The Government has introduced a bill providing for the abolition of the death penalty. It has also been decided to have the Government acquire the Western Railroad of France. This will bring under the control of the State over a third of the railroad lines of France, forming a connected system thru the heart of the country. General Picquart, Minister of War, has a plan for the reform of the courts-martial, which deprives them of the power which they have exercised so arbitrarily in the past, conspicuously in the condemnation of Dreyfus. All military officers and men committing offenses punishable by common law will be brought before the ordinary civil courts and only infractions of military discipline will be under the jurisdiction of disciplinary courts. Minister Picquart has decided that the anti-militarism campaign of the extreme Socialists has gone beyond the limits of toleration, and he has taken action against *Voix du Peuple,* which has been inciting the recruits to disobedience to their military officers. Professor Hervé and other Socialist leaders denounce patriotism as a crime against the brotherhood of man and declare that the soldiers ought to turn their arms against their officers rather than against the foreign foe. There are rumors in Paris that an extensive system of espionage has been unearthed and that documents of the highest political importance have been betrayed to a foreign Power. M. Barthou, Minister of Public Works, proposes that the State shall take over all the mines of France and run them under a co-operative plan, giving the miners a share in the profits. This movement is the result of the popular indignation aroused by the disclosures of the immense profits made by the owners of the coal mines, who have, at the same time, been paying very low wages to their operatives, and failing to comply with the law in regard to safety precautions and ventilation in the mines, causing the great mine explosion of a few months ago. M. Briand, Minister of Public Instruction and Worship, has stated the position of the Government in regard to the law providing for the separation of Church and State. He says the Government does not regard the Catholic Church as being in revolt against the law, and will take no action against it. The Church has simply decided not to take advantage of the privileges allowed under the law, and would, therefore, forfeit its $80,000,000 worth of property on December 11th, and the churches will become the property of the State or of the communes, and will remain open for Catholic worship. The Protestant, Jews and Greek Catholics, having complied with the provisions of the law, will hold their property. The Catholic Church, says the Minister, has a right to do what she chooses, and she has given an extraordinary example of humiliation, since she preferred poverty to riches, feebleness to force and impotence to cohesion.

Foreign Notes

The ridicule to which the Burgomaster of Köpenick and his fellow officials have been subjected will not be relieved by the discovery of the identity of the thief who forced them to turn over to him the funds in the Municipal Treasury by impersonating a military captain. It was assumed that no one, unless thoroly familiar by custom with military matters, could carry off the part so smoothly as to deceive soldiers, officers and civilians, but it turned out that the thief was a shoemaker named Wilhelm Voigt, 57 years old, who had spent more than half his life in prison and had never been in the army. His appearance is not in the least military, and his uniform had been picked up

here and there without regard to propriety. On his release from prison he had attempted for a year to earn an honest living at his trade, but was driven out from the towns where he located and so decided upon this bold and novel scheme. When arrested he related with great enjoyment his adventures as a captain. He said if any one had questioned his authority or asked for papers he would have simply told the soldiers to "take those fellows by the scruff of the neck and march them off into custody." His chief difficulty was to keep from laughing, especially when the Police Inspector of Köpenick came to him and asked leave to get off duty in order to take a bath.——The departure of Raisuli for Arzila left the city of Tangier unprotected from his rival tribe, the Anjera, which pillaged the villages on the east side of the bay and drove off the cattle. The Pasha in command of the Moroccan forces has drawn them all in to protect his own residence, thus leaving the suburbs and the residences of the diplomatic corps exposed to the raids of the tribesmen. The caravans between Morocco and Algeria have been subjected to so many robberies that commerce all along the frontier is prevented. The French are making preparations to establish order on the borders according to the special privilege allowed them by the Conference of Algeciras.——The International Radio-Telegraph Conference, which has been meeting at Berlin, has concluded its work, and a treaty has been signed by all the powers in regard to wireless telegraphy. Great Britain, holding that her interests and those of her colonies were pre-eminent, both on account of the leading part that England has taken in the development of wireless telegraphy in its earlier stages and her naval interests, refused to agree to any proposals tending to place the control of the wireless telegraphy system in an International Board. The effort of Great Britain to have the colonies represented in the International Bureau was rejected. The United States delegates proposed to make intercommunication compulsory between ship and ship. This was refused by the British delegates, who offered as a compromise that ships be required to receive all communications from other ships on matters relating to navigation alone. This compromise was rejected, and the proposal of the United States was made a separate article signed by all powers except Great Britain, Italy, Japan, Persia and Portugal. All the powers except these agreed to free ship-shore communication, with all stations open to the public except naval and military stations. Great Britain and those who voted with her reserve the right to establish other stations exempt of the operation of the general agreement of compulsory intercommunication. The convention, if approved of by the different powers, will go into effect on July 1, 1908. The next conference will take place in 1911.——The Government bill for the regulation of religious associations in Spain, drafted by the Liberal Cabinet and approved by King Alfonso, was presented to the Cortes by Minister of the Interior Davila. It met with the opposition, not only of Conservatives, but of many Liberals, led by both the Liberal ex-premiers, Señors Montero Rios and Moret. In addition to this measure the Government proposes the reorganization of the Bank of Spain, the abolition of the judicial oath, the suppression of the octrois or municipal tariff, the establishment of compulsory military service and education and placing the financial system on a gold basis. The revenues for the ensuing year are estimated at $190,650,000, and expenditure at $183,800,000. One-fifth of the surplus will be devoted to the payment of the national debt.——All the revolutionists who were concerned in the robbery of the Government treasure wagon in St. Petersburg, thirty-two in number, are reported to have been captured by the Government. The money, however, has not been recovered and is supposed to have been distributed among the branches of the revolutionary organization. The woman who carried off the money was the last to be captured. She is a Jewess of the name of Taisaia. Four of them have already been hanged. At Kronstadt fourteen persons, including two girls, were condemned to be hanged, but were shot instead because no one willing to hang them could be found. Even life convicts refused to do it for a free pardon and money. The girls were members of the university extension classes and their fellow students in the women's university and academies suspended work in their honor.

Commander Peary's Triumph

BY ALBERT WHITE VORSE

MEMBER OF THE PEARY RELIEF EXPEDITION IN 1892.

COMMANDER ROBERT E. PEARY has accomplished what may or may not turn out to be the culminating achievement in his long series of Arctic explorations. Certainly, regarded from the point of view of dramatic effect, his expedition of 1905-06 might well be deemed a triumphant conclusion to a life work. He has imposed upon our maps, in the blank space that surrounds the North Pole, one of those irregular lines which indicate knowledge; and he has carried his line nearer the pole, by a space that represents thirty-five miles than his predecessors have carried theirs. He has turned one of the series of dots that mean coasts conjectured into the series of shadings that mean coasts known. He has added a new island to our charts of the American archipelago. And he has accomplished these things in a single year, without death or illness in his party. That is a record in polar achievement.

Peary's Ship, the "Roosevelt."

In his first laconic dispatches no minor details of his journey are given. Perhaps, before this article shall be published, he will have sent further information. In any event, we have now his main accomplishments to consider, and these are as follows:

He carried the "Roosevelt" north, in safety, thru the dangerous channels and bays that lie above Baffin Bay. The ice in these channels, hurried to and fro and congested in narrow passages by a heavy tide, has crushed three exploring ships and turned back many others. Four ships had passed thru these channels before 1905. The "Roosevelt" surpassed all of these; her winter quarters, says Commander Peary, lay north of those of the "Alert," the flagship of the British expedition of 1875-76. The "Roosevelt," then, holds the northern record for vessels in American waters; and only one ship, Dr. Nansen's "Fram" has approached nearer to the north pole. Exactly where she found a winter harbor her commander does not tell us; but it must have been somewhere between Cape Sheridan and Cape Hecla.

In February of this year, before the sun had returned from its absence of five months, the leader began his sledge journey—almost two months earlier than has been usual in Arctic exploration. He pushed westward past Cape Hecla to Cape Columbia, and here betook himself to the floating ice. It is possible that he made this westerly march in order to anticipate in a measure the influence of the easterly current which sets across the polar basin from Bering Strait around the northern end and down the east coast of Greenland; a current of which indeed he felt the force. With two supporting parties, probably made up of Eskimos, he pushed northward beyond the 85th parallel, and here was delayed six days by a storm that "disrupted ice, destroyed caches, and cut off communication with supporting parties"—nevertheless he still pressed on northward until he reached the latitude of 87° 6′—about two hundred miles from the Pole. His return was doubtless forced by lack of food, for during the retreat he "ate dogs," and he arrived on the northern coast of Green-

From Bridge Looking Forward.

land "in a straitened condition." Here he was at home—he had discovered the region himself—and he shot musk oxen and sledged back to the ship, rescuing from starvation one of his supporting parties, both of which had been driven upon the Greenland coast.

To recuperate from what must have been the extraordinary hardships of this journey the leader rested aboard his ship for a week. Then he was off, westward, to a gap of about fifty miles left undiscovered in the coast line of Grant Land, between the explorations of Aldrich of the Nares expedition of 1875-76 and Sverdrup of the Norwegian expedition of 1901. This gap he filled in, and, furthermore, made his way over the ice westward to the 100th meridian, where he reached a new land.

He describes his return to civilization as a battle with ice, storms and head winds—which accounts for the lateness of his arrival in port. It must have been on this voyage that the "Roosevelt" was tried out. In the ice north of Cape York she lost "two rudders, stern post and two blades of propeller"; she must have sustained severe pressures. Her commander praises her as a "magnificent ice-fighter and sea boat." To be a good ice-fighter a vessel must be powerful enough to charge into a crack between two ice floes of an acre apiece and ram them apart; and again, be staunch enough to sustain the pressure against her sides of two similar floes closing together; a pressure which crumples up the meeting edges of the ice to a hight of several feet. It is no perfunctory compliment to a ship to call her a good ice-fighter.

The "Roosevelt" Riding at Anchor.

Commander Peary's latest dispatches suggest that he means to take her back for another battle with the ice. To those who know the extraordinary energy of the leader this suggestion can cause no surprise—only gratification.

New York City.

The Significance of the Third Pan-American Conference

BY L. S. ROWE, LL.D.

DELEGATE OF THE UNITED STATES OF AMERICA TO THE CONFERENCE.

At the first International Conference of the American States, held in Washington in 1889, Mr. Blaine formulated the ideals which, to his far-seeing vision, represented the goal toward which the united effort of the Governments of this Continent should be directed. Each successive Conference has marked a step toward the realization of these ideals.

In many respects the Third Conference, which has just been brought to a close, has been the most significant of the series. Profiting by the experience of the Washington and Mexican Conferences, it was able successfully to avoid the pitfalls into which they had fallen and which had so seriously impaired their usefulness.

The most important factor in the success of the Rio Conference was the agreement between the Governments represented, arrived at some months before the opening of the Conference, as to the topics to be included in the program. At both the previous Conferences much valuable time was lost in the discussion of chimerical schemes and individual hobbies. Six months before the meeting of the Rio Conference, the Governing Board of the International Union of the American Republics began the work of drafting a program, and four months before the meeting of the Conference this program was accepted by the Governments of the various Republics. That this method of procedure constituted a great step in advance is attested by the fact that the Mexican Conference of 1901 lost nearly two months in reaching an agreement as to the questions to be included in the program.

A further step which contributed considerably toward expediting the work of the Conference was the adoption, some months before the convening of the Conference, of the rules and regulations governing the proceedings. In securing the adoption of these rules the Governing Board of the International Union of the American Republics succeeded in eliminating from the Conference a number of exceedingly difficult and delicate problems. Both at the Washington and Mexican Conferences the discussions relating to the rules of procedure engendered much bitterness of feeling, and even threatened for a time to disrupt the Conference.

The conditions under which the Rio Conference met were, therefore, exceptionally favorable to a speedy termination of its labors. This was not sufficient, however, to assure success. Unless the spirit prevailing should be one of confidence and co-operation, no agreement on topics and rules could make the work of the Conference fruitful. It is in this respect more than in any other that the Third Pan-American Conference is to be distinguished from its predecessors. It would be gross exaggeration to say that all distrust between the Republics of the American Continent has disappeared, but it is true that a sincere effort was made by the delegations of every State to set aside all petty jealousies. There was a general determination not to permit local differences to jeopardize the work of the Conference. The spirit of compromise, the desire to avoid questions that might arouse sensibilities and antagonisms contributed more than anything else to make the execution of the program of the Conference relatively easy.

The two questions on the program which presented the greatest difficulty were the proposed arbitration resolution and the resolution relating to the use of force in the collection of public debts. As formulated in the program, the arbitration resolution simply affirmed the adherence of the American Republics to the principle of arbitration and expressed the hope that the Hague Conference would agree upon a general arbitration convention. It was feared that a resolution in this form would not satisfy those countries which were anxious to have the Conference commit itself to the principle of obligatory arbitration, for it was generally known that Peru was anxious to have the Tacna-Arica controversy with Chile submitted to an arbitral tribunal, and it was equally well known that Chile would not consent to any such plan. Peru was also anxious to have the principle of obligatory arbitration applied to her territorial controversies with Brazil. Similarly, Bolivia desired to have the question of the free navigation of rivers settled by arbitration, in order to settle the disputed question of the free use of the Amazon. Brazil was unalterably opposed to any such solution, and any attempt to force the issue would have given grave offense to the host of the Conference.

It was of the very greatest importance, therefore, that no form of arbitration resolution should be forced upon the Conference which would lead any of the Governments to withdraw and thus disrupt the Conference. All the tact and skill of the most influential delegates were necessary to reconcile the conflicting views. In this work the chairman of the delegation of the United States, the Hon. William I. Buchanan, performed invaluable service. On the 7th of August the resolution was presented to the Conference by the Arbitration Committee and unanimously adopted. According to its provisions, the Conference ratifies adherence to the general principles of arbitration and recommends that instructions be given to the delegates to the next Hague Conference to secure the acceptance of a general arbitration convention so effective and definite that, meriting the approval of the civilized world, it shall be accepted and put in force by every nation."

The resolution respecting the forcible collection of public debts presented even greater difficulties than the arbitration resolution. The program provided for "a resolution recommending that the Second Peace Conference at The Hague be requested to consider whether, and, if at all, to what extent, the use of force for the collection of public debts is admissible." At the time this question was inserted in the program it was generally agreed that reference to The Hague was the only possible basis for the consideration of this question. Inasmuch as most of the American Republics are debtor nations, it would be manifestly improper for them to dictate to their creditors the proper manner of securing the payment of public debts.

It was evident, soon after the first session of the Conference, that some of the delegations were inclined to avoid any consideration of the forcible collection of debts on the ground that any action along the lines of the proposed resolution would arouse the distrust of European capitalists ,and thus affect unfavorably the credit of Central and South American countries. This feeling was strengthened by the fact that, prior to the meeting of the Conference, the European press had exploited to the utmost the dangers incident to the enunciation of any such doctrine. As in the arbitration question, the committee in charge of the public debt resolution was composed of one delegate from each of the countries represented. It was, therefore, agreed to make every effort to settle all differences in committee, and thus avoid protracted discussion on the floor of the Conference. After agreement had been reached in the committee on the general policy to be adopted, great difficulty was experienced in finding a form of resolution which would satisfy all the delegations. Finally, on August 22d, the committee presented a resolution which was unanimously adopted and which provides that the Conference recommend to the Governments represented "that they consider the advisability of inviting the Second Peace Conference at The Hague to consider the question of the forcible

collection of public debts and the best means tending to diminish conflicts which have their origin in pecuniary claims."

The general question of the settlement of pecuniary claims as between the Republics of the American Continent, which formed the third topic of the program, offered no difficulties and was quickly disposed of. At the Mexican Conference a convention had been signed, providing for the settlement by arbitration of pecuniary claims. But six powers had ratified this treaty, and it was deemed best, therefore, simply to recommend the extension of this treaty for a further period of five years, *i. e.*, until the 31st of December, 1912.

With the settlement of these three questions the Conference completed the consideration of questions of general policy. The remaining questions of the program, while of equal importance, were more concrete, and rested, in the main, on the actual achievement of previous Conferences.

Of the more practical questions, that which attracted most attention was the reorganization of the Bureau of the American Republics. It was felt that one of the most important functions of the Conference was to place the work of the Bureau on a more permanent basis and to enlarge the scope of its activities. This work was taken up with great alacrity and pushed to successful conclusion by the committee within ten days after the opening of the Conference. The plan of reorganization, as presented to and unanimously adopted by the Conference, places the Bureau in a position to do incalculable service to the Republics constituting the International Union, to the Pan-American Conferences, and, in general, to that better understanding between the countries of North and South America.

The plan adopted does not attempt materially to change the organization of the bureau, but gives to it a number of new and important powers in addition to the purely commercial functions which it has heretofore exercised. The bureau will hereafter be required to compile and classify all information respecting the treaties and conventions between the American Republics, and between the latter and non-American States, to assist in securing the ratification of the resolutions and conventions adopted by the International American Conferences, and to prepare reports on all questions assigned to it by the Conferences. In this latter capacity it will solve one of the most serious difficulties with which the Pan-American Conferences have had to deal, viz., the lack of accurate information on many of the subjects included in the program. If, during the interval between Conferences, the bureau will undertake the preparation of carefully compiled reports on these questions, the fruitfulness of the labors of the Conferences will be materially increased. In order further to strengthen the position of the bureau in this respect, it was made the Permanent Committee of the International Conferences, entrusted with the power to recommend topics to be included in the program.

Another function assigned to the bureau will, if administered in the spirit intended by the Conference, be of great service to the cause of education thruout the American Republics. With each year the number of South and Central American pupils in our American preparatory schools and students in our universities is increasing. There is also a constant interchange of students as between the South and Central American countries. This interchange is contributing in no small measure toward developing a real unity of American sentiment. Every South American student trained in an American university is a center of pro-American influence.

It is made the duty of the Bureau of American Republics to furnish to any inquirer accurate information concerning educational conditions in any of the countries of this continent. This ability on the part of parents to secure trustworthy data will induce a far larger number to send their sons and daughters to preparatory schools and universities in the United States.

Closely associated with the bureau and designed to assist it in much of its work was the resolution passed by the Conference on the 13th of August recommending to the respective governments the appointment, in each country, of a kind of Pan-American Committee whose duty it shall be to assist in securing the ratification of the conventions and resolutions of the Conference and to furnish the bureau with such data as it may require.

In agreeing unanimously upon a general naturalization convention, the Conference gave final form to a principle for which the American Republics have been contending for many decades. The status of naturalized citizens returning to the country of their birth has been a source of constant irritation between American and European States. According to the terms of the convention agreed upon at Rio, the American States in their dealings with one another agree to abide by the rule that if a naturalized citizen returns to the country of his birth without the intention of returning to the country in which he was naturalized, he shall be considered as having reassumed his original citizenship and as having renounced the citizenship acquired by naturalization. The intent not to return is presumed to exist when the naturalized person has resided in his native country for more than two years. The crystallization of American opinion cannot help but have an important influence on the attitude of European countries toward this vexed question.

The ready agreement on the naturalization proposition increased the desire to give more definite form to American opinion on questions of private and public international law, and made it comparatively easy to give effect to the fifth question of the program. A convention was signed providing for the appointment of a Commission on Public and Private International Law which should first give its attention to the definite formulation of those principles as to which there exists substantial agreement among the American States. After hav-

ing completed this first part of its task the Commission will proceed to the consideration of those departments of public and private international law in which differences of opinion still exist. It was the general feeling among the members of the Conference that the important contributions which the republics of this continent have made to public international law, and especially to the law of neutrality, can be considerably increased by attempting a further formulation of the rules which should govern their relations with one another.

In the matter of sanitation the Conference adopted a resolution providing for the establishment of an "American Center of Sanitary Information," to be located in the city of Montevideo, and which shall maintain close personal relations with special sanitary committees to be appointed in each of the republics. The purpose which the Conference had in view in adopting this resolution and which tends to show how far the feeling of solidarity has advanced, is to assure to every country the benefit of the experience of the sister republics in matter of public sanitation.

In disposing of the commercial questions of the program, the Conference decided not to initiate any large new plans until the conventions signed at the Mexican Conference have received more genral approval.

The question of patents, trademarks and copyrights was disposed of by reaffirming adherence to the Mexican Convention, and, in addition, establishing two International Bureaus, one in Havana, the other in Rio de Janeiro, for the registration of patents, trademarks and copyrights.

A further resolution affecting commerce provides for the elaboration by the Bureau of American Republics of a plan for the encouragement of new steamship lines between the States of the American Continent, and recommending to the respective governments to take further measures for the improvement of railway, telegraphic and postal communication. Closely connected herewith is the resolution continuing the existence of the Permanent Committee of the Pan-American Railway, and recommending that the necessary surveys be pushed forward, so as to assure the early completion of the road.

Additional resolutions were passed: (1) Providing for an investigation of the history of the fluctuations of exchange between the American States and their effect on internal and foreign commerce; (2) providing for the creation of a special section on Commerce, Customs and Statistics in the Bureau of American Republics; and (3) recommending to the respective governments the advisability of taking some action in order to meet the crisis in the coffee trade.

These, together with a number of minor resolutions, constitute the record of achievement of the Third Pan-American Conference. Any attempt to estimate the significance of the Rio Conference must necessarily fail unless it is examined in relation to its predecessors —the Washington and the Mexican Conferences. Viewed in this light, it marks one of the steps toward the development of a distinctly continental opinion on important questions of public policy. The sum total of achievement of any one Conference may seem small, but when the combined influence of the three Pan-American Conferences is considered, it is evident that the republics of this continent have made real progress in reaching agreement on fundamental questions of American policy. In addition to the formal resolutions and conventions—and, at times, more important than any of these—is that understanding and mutual comprehension which comes from an exchange of ideas between representative men.

The Rio Conference was dignified by the presence of Secretary Root. His historic address to the Conference sounded the keynote of its labors. The high sense of public responsibility which pervaded his message impressed itself on every delegate, and paved the way for agreement on all the questions of the program.

Altho the Conference adhered to the precedent set in Mexico, to leave the time and place of meeting of the next Conference to the Governing Board of the Bureau of American Republics, it expressed a preference for Buenos Aires. It seems likely that the fourth Conference will be called in 1910, when the

Argentine Republic celebrates the centenary of its independence. Whatever the time and wherever the place, the results of the Rio Conference are such as to justify an optimistic view of the Conferences to come.

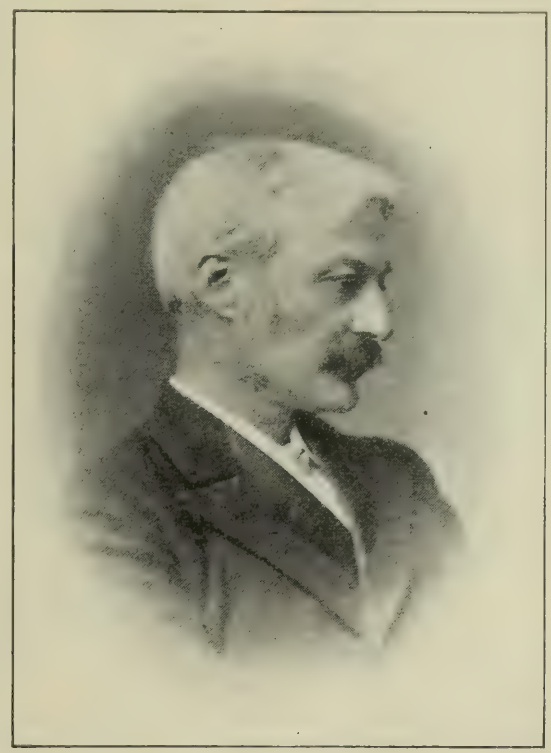
Before the next Conference meets, the machinery organized by the Rio Conference and designed to prepare material for the consideration of the fourth Conference, will be in full operation. With this advantage, we may confidently look forward to the future of this council of the American nations, with the assurance that each successive Conference will have a larger significance for the unity of American sentiment.

Rio de Janeiro, Brazil.

The "Occult" up to Date

BY ANDREW LANG

THO the American branch of the "British Society for Psychical Research" has, I understand, dissolved itself, there seems to be much more general interest in the subject among Americans than with us. The books of Mr. Hudson and Dr. Hyslop seem to attain an enviable number of editions, whereas, except the late Mr. Myers's hardly completed work on "Human Personality," no psychical books attract the British public. People are fond enough of telling and hearing "ghost stories" and saying "How queer!" by way of comment, but for exact study of evidence they do not care, nor do they reflect that, if one tale out of a thousand is true, the circumstance is of much stranger scientific interest than radium or wireless telegraphy. Take the thing on the lowest level; if one human being can become aware, by looking at a glass ball, or in any other way, of unknown events occurring at a distance, or of what is passing about unknown persons in the mind of a third person, then an entirely new problem is set before psychological science, and entirely new light is thrown on human nature.



I no more doubt, from personal experience and carefully sifted evidence, that these "queer" things do happen, than I doubt the fact that I am writing these words. I do not ask anybody to share my belief, but I do wish that scientific specialists would superintend experiments in what is called crystal gazing. This harmless wish I expressed more than once in the "Introduction" to a little book on the subject by Mr. N. W. Thomas. Then Mr. Clodd, who is, I understand, the president of the "Rational Press Association," very rationally expressed his "uneasy feeling that I am in the movement which arrests the explanation of the occult on scientific lines." Now I merely want "the occult" to be "explained on scientific lines," and I kept saying so. Mr. Clodd replied that I "must have read . . . Sully, Jastrow, Baldwin and others to small advantage," if I did not know that glass-ball pictures only bring out "latent and unconsciously received impressions. . . ." (Also consciously received impressions are reproduced.)

I know all this very well, but I want to know how "latent and unconsciously received impressions" of otherwise unknown distant events, and of the contents of a third person's thoughts are conveyed into "our marvelously complex brains." Or rather, I want science first to make the same sorts of experiments in this affair as I have made, and then to explain the successful results, if there are any successful results. Everybody who has glanced at the subject knows that latent memories, perhaps of incidents not consciously noted at the time of their occurrence, may be brought out by crystal gazing, just as they are brought out in dreams.

I cannot remember what Mr. Sully may have written on the topic, if he has written anything; but Professor Jastrow's new book, *The Subconscious*,* lies before me, and he says nothing about

* The Subconscious. *By Joseph Jastrow.* Boston: Houghton, Mifflin & Co. $2.50.

the topic which excites my curiosity. He accepts from the "Proceedings of the Society for Psychical Research" various anecdotes about the revival of latent memories by aid of crystal gazing (pp. 102-104). But when the very witness on whose evidence he relies, here or elsewhere, gives cases of "telepathy" in her experience, he never alludes to the fact, nor to other evidence more copious and conclusive. I understand Professor Jastrow to say (p. 535) that "there is 'no obligation to inspect' what is liable to affiliation with 'occult' conceptions." He avers that there exists "a great range of evidence, much of it collected with due regard for the ordinary precautions to be exercised in the record of narratives that tax credibility, and more of it plainly worthless" (p. 535. Note).

Andrew Lang.

Why is there "no obligation to inspect" evidence of the better value? Possibly Professor Jastrow means to inspect it on a later occasion. I hope so, but I have vainly tried to induce distinguished professors among my friends to look at a "great body of evidence," signed and attested by honorable witnesses, neighbors of the said professors. I do not gather that Professor Jastrow has made any experiments himself. The witnesses who would be accepted when they attest revival of relapsed memories will not, as a rule, be listened to when, with corroborative testimony to back them, they attest much more amazing experiences.

If Dr. Hyslop, in "Science and a Future Life," errs, it is in the very opposite direction. For example, I find myself cited as a precipient of what is called a "coincidental deathbed wraith," the appearance of the late Professor Coningtton in Oxford, when he was on his deathbed in Lincolnshire (pp. 50-51). My own words, written many years ago, are given, but, had Dr. Hyslop consulted me, he would have learned that I am very short-sighted; that the professor did not die till some twenty-four hours, at least, after the appearance; and that I have since seen, at my own door, where there could be no mistake of identity, a friend who had a slight cold which confined him to his own house, and a lady who (not in the costume in which I beheld her) was in the drawing-room when I spoke to her in the hall of a house. I might see such an appearance today, and be wholly free from anxiety about the health of the person apparently seen. In another case (p. 54), which I helped to report, Dr. Hyslop has obviously not understood what was published.

Again, if any one will carefully compare (p. 145) the story about Mrs. Piper's revelation to Sir Oliver Lodge of the incident of Sir Oliver's uncles "swimming the creek when boys together and running some risk of getting drowned," with the narrative of a survivor, he will see that there was no "risk of getting drowned," and that the two versions were entirely unlike each other. Such, at least, was the impression made on myself, and on a famous student of these matters.

Here is an anecdote of Mrs. Piper which made me feel more than ever disinclined to believe in the beliefs of her partisans. Pray, kind reader, mark what follows, because it is, as you will see, a splendid example of the stupidity of a skeptical critic—myself. I let the passage stand, in square brackets, as I originally wrote it, before revisal.

[Dr. Hyslop, during "the gold campaign of 1896," gave to his late father

a cane with a "gold bug" on it, I presume because his parent was not a bimetalist. He asked the person professing to be his father, and to speak thru Mrs. Piper, "if he remembered shaking a walking stick at Robert M'Clellan in the Presidential campaign." Now the fact is that the late Mr. Hyslop, when "unable to speak above a whisper owing to laryngeal trouble," was asked by Mr. M'Clellan "how he stood in politics?" To save his voice Mr. Hyslop took up and shook the cane with his political blazon, the gold bug. That was his simple reply; the incident was wholly unexciting. But the supposed communicator gathered from the form of the question put to him, or rather to Mrs. Piper, that the stick was shaken in a warlike manner during a hot discussion. This, taking the question as it stands, was a natural, but erroneous, guess. The communicator, clearly on the suggestion of the query: "Do you remember shaking a stick at Robert M'Clellan during the Presidential campaign?" wrote: "Well, I do. I never was more excited in my life. I think I was right, too." Dr. Hyslop adds with some naïveté: "I did not know that the occasion was an exciting one to him." It was *not* an exciting occasion, but the communicator clearly thought that the shaking of the stick was a fiery demonstration against Mr. M'Clellan.]

So I wrote, and thought that I had the better of Dr. Hyslop. But I had quite overlooked the fact, that, while Dr. Hyslop "did not know that the occasion was an exciting one" to his parent, it really *was* exciting. Dr. Hyslop says: "I learned from the wife of my cousin, he having died a year later than my father, that my father became so excited on the occasion that they left, for fear he would have a spasm of the larynx and die of it."

So far, in fact, the response of the communicator was veracious, tho whether the late Mr. Hyslop was the communicator, or whether a good and natural guess was luckily made by Mrs. Piper, one is unable to say. There are, confessedly, very many false answers, apparently the results of guessing.

Meanwhile I am glad to have caught myself out in the habitual carelessness of the skeptical critic. Being on Dr. Hyslop's side, on the whole, tho I differ from his estimate of the value of evidence in many cases, I ought not to have blundered as I did, and I must make allowances for the temptations to blunder which successfully beset some representatives of orthodox science.

Only a very enthusiastic reader will peruse Mrs. Verrall's long account of her own "automatic" or unconscious writings, in the new volume of the "Society for Psychical Research." Mrs. Verrall is a distinguished classical scholar at Cambridge. She can see pictures in glass balls, but they hardly ever, if ever, coincide with facts unknown to her. When she feels an impulse to let either of her hands scribble undirected, the hand writes the oddest mixture of English, with queer Latin and queer Greek; such Greek and Latin as she would never write consciously. Often the scrawl is incoherent and meaningless, but the hand is constantly trying to convey "messages." They come to very little that is verifiable, tho when Mr. Verrall wrote a brief strange phrase from the "Orestes" of Euripides without telling his wife, to see if her hand would reproduce it, the hand made constant efforts to do so, and came fairly near to getting the Greek words for "the one-horse Dawn," or "the lone-wandering Dawn," for the exact meaning of the Greek is dubious. In other cases, perhaps the hand coincided with what other people were doing or writing, or thinking, at a distance. Most of us know what we are thinking, and do not know that we think anything except what we do know that we think. Once, by tipping a table, I brought out ideas which, certainly, I did not know that I entertained, till people present told me what they had spelled out with the alphabet. The ideas were a correct account of the place where some lost objects, of which I knew nothing, were to be found; I did not even know of the existence of such a place.

Now, if this is true, and I ask nobody to believe it (tho I cannot disbelieve it), if even this one little tale is true, the fact concerns science: shows the existence of an unexplored field of human nature. Science declines even to look over the fence of that field, and why? I think I know the reason why.

St. Andrews, Fife, Scotland.

Charles E. Magoon at the Presidential Palace at Havana. Secretaries Taft and Bacon to his right.

JUDGE MAGOON, the new Governor of Cuba, has a striking personality. Over six feet in height and of corresponding physique, he is quite as impressive as Secretary Taft. His ancestors were of New England stock. His first appearance in Washington was in 1899, when he entered one of the minor divisions of the War Department as a law clerk under Secretary Root. Some of his work there was concerned with the problems arising in connection with the American occupation of Cuba. His report published by the Government Printing Office in 1902 was an exceedingly valuable document not only to the legal profession but to all persons interested in the intricate questions that arose from the military occupation of the islands ceded by Spain as a result of the Spanish War. The opinions of Judge Magoon as incorporated in this publication were luminous and exhibited an unusual degree of learning and ability. The book will remain as a lasting monument to its author. Judge Magoon subsequently rendered a signal service in the case of the Philippines and the various legal questions arising in connection therewith. In 1905 he was sent to the Isthmus of Panama as Governor of the Canal Zone and as United States Minister to Panama, to restore tranquillity and if possible to win over the native population to an attitude of confidence in the United States. He discharged this trust thoroly and well. In Cuba, as its American Governor, he will be confronted with a problem at once the most delicate and difficult of any that has yet been encountered by us in our new career of expansion and colonization among the non-English speaking peoples of the world.

Some Early Letters and Reminiscences of Sidney Lanier

BY PROFESSOR GEORGE HERBERT CLARKE

IN Sidney Lanier's life and work there are ample evidences of his *habitat*. Unlike Timrod and Hayne, however, his fellow singers, he was first of all a poet and afterward a Southerner, tho the "afterward" follows hard upon. Such greatness as he achieved—and it is beginning to be seen that that greatness is real—was due to several contributory causes, which may yet all be traced to the single source of his personal temper as man and poet. He possessed, alone among Southern poets, the universal outlook, tending to the timeless and placeless; he was a student of life and of literature; he was unashamedly sincere; he was a master of wordcraft, in point of music, meanings, individualities and kinships. He had more than the melodic power of Poe, much of the ideality of Emerson, the human sympathy of Whitman, the book-love of Lowell and Longfellow. That his work is not, as a rule, finished, and that he was, as both poet and critic, too often oppressed and overborne by his own theories of art, must be recognized frankly, but it must be remembered as well that other and greater poets have theorized and experimented, and not always to their ultimate hurt as artists. When Lanier came into his own, he knew his high moment and yielded to it all he had and was. It is surely time to stand up and say of this man's "Sunrise" and "The Marshes of Glynn" that they are unsurpassed in sheer beauty of form and depth of insight among American poems.

For America was in him and the South was in him. The Georgia of his day was very proud and very conservative, and tho Lanier reacted at times against both its "conceit," as he termed it, and its conservatism, yet he was a Georgian in heart and mind and body. The Macon in which he was born, February 3d, 1842, and which he called his home until the early seventies, was a quiet riverside town dreaming in the sunshine of middle Georgia, and much more interested in the graces and pleasures of reciprocal hospitality than in commercial enterprises of great pith and moment. Very jealously did the people observe the social and spiritual traditions of their distant British past, slowly adapting these to the warmer climate of Georgia, and taking on a clannishness of view and habit that, buried beneath a livelier outward being, still persists, in particular among the older families of the Macon of today. Indeed, Macon is one of the most characteristically Southern of all old Southern towns, foreign alike to the bustling modernness of Atlanta and Birmingham, and to the dual allegiances of Savannah and Nashville. Yet even here the life of the past has become objectively much modified, so that to walk out of the house or office of an alert young citizen into that of an ante-bellum gentleman is sometimes to feel a sense almost of bewilderment. The old South is still to be seen in the generous but wistful eyes of many noble men and women in Macon and kindred towns. It is there and will be there until they die. They are in it, and of it, and it is to them a holy place. And hardly less holy, as I have tried to suggest, is the devotion of their children to the same ideal, only that to them it is an ideal less closely linked with personal memories and less likely, in their thought, to suffer serious impairment by contact with the things that are new.

In this stately old community on the

river Ocmulgee, a town rambling up and down a range of little hills, liberally dowered with trees and lawns, and traversed by spacious streets, Sidney Lanier grew up, a gentle, honorable, sensitive Southern boy, strongly attached to his sister, Gertrude, now dead, and to his brother, Clifford, who still survives him. His father, Robert Sampson Lanier, has been described to me by several who knew him as among the most capable of office lawyers in old Macon, of fine physical presence, a well-connected and cultured man, and a true gentleman. His mother, Mary Jane Anderson, was the daughter of a Virginia planter, and a peculiarly tho not narrowly religious woman. The family life was gracious and affectionate, and, among the children, playful. The girl sang at the piano, or romped in the garden of their High street* home. The boys fished and hunted as well, and life ran very pleasantly.

Of Sidney's early schooling in the Bibb County Academy, several of his friends still living in Macon speak with clear memories. Mr. Charles E. Campbell, Colonel C. M. Wiley, and Messrs. C. P. Roberts (who now occupies the old Lanier home) and Matt. R. Freeman were all among his mates. They unite in describing him as a singularly attractive boy, not so much in physical appearance as in an indescribable air of gentlemanhood, reminding one of Tennyson's characterization of Arthur Hallam in "In Memoriam":

> "Nor ever narrowness or spite,
> Or villain fancy fleeting by,
> Drew in the expression of an eye
> Where God and Nature met in light."

In truth, Lanier was a boy of normal fun and energy, but keyed to an exquisite personal dignity and purity, a boy whose conduct unerringly reflected his character, and who was earnestly admired and beloved by his young comrades. Them he loved as ardently in return, tho a certain reticence forbade confidences passing beyond the give and take of boyhood. At tremulous peace with the inner self of his young visions, he awaited his time, half-conscious of he knew not what, living meanwhile an outward life of good cheer and hard work. Mr. Campbell, for his part, who was then and long thereafter very close to Lanier, tho he did not anticipate his friend's literary fame, was always aware of him as "a knightly and clean-tongued" boy.

The affairs of the Academy were administered by George H. Hancock, afterward a professor in Wesleyan Female College, and by P. A. Strobel, as principals, assisted by Frederick Polhill, William Hill, and one Ryan, an Irish mathematician of original habits and temper. All of these men found in Lanier an accurate and persevering pupil, tho fond of frolic and the minor sports. The Academy at length lost its best instructors, and its students were scattered among local teachers and tutors, Rev. Otis Smith, then president of Mercer University, taking about twenty boys, including young Campbell, while Lanier passed some three years or more of desultory study before entering Oglethorpe University, at Midway, Ga.

At this small Presbyterian college, which became defunct in 1872, Lanier developed rapidly on the intellectual and spiritual sides, later in life testifying to the fine influence exerted upon him by Prof. James Woodrow, of the chair of science. This man was, for his day, an advanced thinker and scholar, and was possessed also of a sunny humanness of temperament that went far to cover heretical lapses—lapses, no doubt, indifferently misunderstood by some of his colleags and most of the college trustees. Lanier was greatly broadened by contact with Dr. Woodrow, and became a zestful reader and explorer in several departments of study. His flute practice, too, begun in the Academy days, continued to express the music within him. "He played directly and naturally from the first," says Mr. Campbell, "as one hardly conscious of effort or obstacle." His early interest in the flute seems to have been actively fostered by his friend Campbell and by C. K. Emmell, another friend who played admirably, and who gave their initial musical impulse to a number of Macon young men. Mr. Campbell was with Lanier when he bought his first "real" flute, a humble but reasonably effective instrument costing $1.25. In Macon, indeed, nearly all of Lanier's closest friends were musical,

* A city ordinance is in contemplation, changihg this name to "Lanier Terrace."

and many are the memories of boyish concert meetings and moonlight serenades. Lanier soon developed an astonishing mastery over the flute, and might have played the Pied Piper of Hamelin when and where he would, for he could instantly charm any company into silence, tears or smiles. Music and romance were continually entering into him and escaping from him, in his life as on his lips. Several of the older ladies of Macon recall with affectionate appreciation his gracious manner toward women, and remember him as a dreamy lover of girls, who had, as varying symbols of a higher than human romance, "a sweetheart in every port."

Into the quiet happiness of these well-ordered days now broke the growling notes of war. Lanier, in common with every other young Southern man of courage and honor, heard the first shots with a curious feeling of mingled awe and exultation. Early in November, 1860, the people of Macon drew up a solemn statement of the wrongs of the South, and at midday of December 1st, "precisely at the hour the ordinance of secession passed in South Carolina," as John C. Butler narrates in his "History of Macon and Central Georgia":

"One hundred guns were fired in Macon amidst the ringing of bells and the shouts of the people. At night, a procession of fifteen hundred persons was formed, with banners and transparencies, and as they marched, another salute of one hundred guns was fired, while the bells kept up a lively ringing."

On January 19th, 1861, Georgia seceded, amid scenes of great excitement, and instantly there swept over the State the sounds of fiery orations, signs of the fighting-passion, and calls for volunteers.

To these calls Lanier and many other Oglethorpe boys were among the first to respond. He was not long deceived in his own mind, it is true, concerning the probable outcome of the war—it early became to him the "Lost Cause"—yet he fought on with sure loyalty until captured and committed to prison at Point Lookout. From the horror and bloodiness of war Lanier's whole soul constantly revolted, but his duty was seen and done. Military service was with him a matter far less of physical enthusiasm than of uncalculating allegiance to a high idea. An anecdote told me by Mr. Campbell illustrates the repugnance felt by Lanier to realizing in his own career as a soldier the ordinary "privileges" of a survivor on a field of battle. It was after Chancellorsville, when Lanier, well-nigh in rags, was passing the corpse of a Federal private. Suddenly the neatness and newness of the dead man's shirt caught his eye. He hesitated for a moment, but, quickly deciding that he could not take the shirt, moved on. Within a few minutes he had repented his squeamishness, reminding himself of his sore need of a whole garment, and urging upon himself the strong probability that the Federal would not, under the circumstances, begrudge the transfer. By the time he had returned, however, he found to his chagrin that a less tender-conscienced mate had dexterously captured the shirt *en passant*.

From December 1st, 1861, to April, 1862, Lanier was a member of Mess Number Four of the Georgia Barracks, camping in Norfolk fair grounds, Virginia. This mess was the model one of the camp, having ten members distributed among eight bunks. One bunk was occupied by Lanier, another by C. K. Emmell, and a third by W. A. Hopson and C. E. Campbell. All of the ten men were on terms of intimacy and good will—at one time they constituted themselves a "Pickwick Club"—and took a peculiar pride in maintaining the cleanliness and attractiveness of their quarters. Mr. Campbell recalls how faithful and amiable Lanier was in the performance of the services required of him and in his helpfulness on the social side of the camp life. A good deal of flute playing went on, and there were many animated discussions concerning things military, musical and intellectual. Most of Lanier's experiences here, as a member of the Macon Volunteers, were reasonably pleasant, but when, in 1862, a change was made to Wilmington, N. C., a harder life began. After engaging in the week's conflict about Richmond, and some minor battles, the company was sent to Petersburg, and Lanier was able to obtain and enjoy a much needed rest. At Petersburg he first saw Lee, regarding him with a knightly reverence, as Sir Guyon or Sir Galahad his Arthur. Early in 1863 he was permitted a fortnight's furlough to

be spent in Macon, and, upon his return, acted with his brother, Clifford, as a scout in Milligan's Corps in Virginia. This proved a not too arduous service, enlivened with many physical and social diversions. Headquarters were at Fort Boykin, and it was here that Lanier wrote the following poem* to "G. H.," whose identity is revealed in the succeeding passages from letters written about the same time. She was a young Virginia girl whose grace and charm had won the hearts of both the young brothers and of their friend and comrade, Hopson, to whom Lanier penciled the dim and faded copy from which I transcribe. She had written in a letter:

> Do you remember the "Brown Bird," in the 'Drama of Exile,' whose song, as he sat on his his tree in Paradise, was the last sound heard by Adam and Eve as they fled along the glare? So, friend, do I send my cry . . . across these broad stretches of moonlight . . .

In the copy set down a year or two later in "the battered old ledger that received Mr. Lanier's hoards of poems, essays, quotations, and so on" (I use Mrs. Lanier's words), there are slight variations in the last line of the second stanza, and in the first line of the concluding stanza.

TO G. H.

Thou most rare Brown Bird on thine Eden-tree,
All heaven-sweet to me
Cometh thy song of love's deep loyalty
And love's high royalty
And love's sweet-pleading loneliness in thee.

Our one Star yonder uttereth forth her light,
Her silver call to night,
Who, wavering between the Dark and Bright,
Oncometh with timid flight,
Like one who hesitateth 'twixt wrong and right.

O, never was a night so dark as I!
But thou hast sent a sigh
Of love, as a star would send a beam, to fly
Downward from out the sky,
And light a heart that's dark enough to die.

And so, O Bird, and so, thou Silver-Beam,
Let me forever dream
That I am Night, and thou a Star, whose stream
Of light like love shall seem—
Whose Love-light thru my Dark shall ever gleam!

On the other side of the manuscript appear the words:

So Boyhood sets; comes Youth,
A night of painful mists and dreams,
That broods, 'till Love's exquisite truth,
The Star of a morn-clear manhood, beams!

These verses were written by a young man of not quite twenty-two, during a romantic interlude in a life of growing anxiety and hardship. However tentative their execution, they show the genuineness of Lanier's feeling for life and nature. Amateur in expression, they are far from amateur in instinct, and the independent stanza, if cast in an apparently unrelated Hamlet-like strain, is yet a witness to the deeper seriousness of the poet's outlook and the high-bred quality of his humanity. This stanza, indeed, which serves to conclude "To ——," written during the same year at Fort Boykin, and published in the regular edition of Lanier's poems, was no doubt loosely appended to Mr. Hopson's copy of the present poem by way of a carried-over comment or reference that would be understood and responded to by the poet's friend. In point of time and circumstance and similarity of phrasing it would seem that both poems were addressed to "G. H." Lanier characterizes that already published as "a little poem which sang itself thru me the other day. 'Tis the first I've written in many years."

From the same place he wrote a letter to his friend Hopson, dated September 15th, 1863, from which I am at liberty to quote three of the most interesting paragraphs:

> I should have answered your kind letter long ago, but I have been indulging so liberally in chills and fever that I have had little leisure to devote to anything else. Your touching allusion to your own experiences in the chill line affected me almost to tears: I sympathized with you. Friend, when *thou* shookedst, *I* trembled; when *thou* wast feverish, *I* also burnt; and when *thou* perspiredst, *I*, in that selfsame moment (mine generally came about 11 a. m.) did sweat like the d——l. Verily, I have an idea of handing down to late posterity some fine dishes of juicy soul-meat, upon a poem for a dumb-waiter, the top shelf of which should be constructed "thus":
>
> Oh, Life's a Fever and Death's a *chill!*
> 'Tis a disease of which all men are ill;
> Earth for a Hospital surely was given—
> Hell's an eternal relapse: Health is Heaven!!
>
> etc., etc., etc. And I *would* do it, by the Nine!

* I am indebted to Mrs. W. A. Hopson, of Macon, for permission to use the poem and the passages that follow from the Lanier-Hopson correspondence.

only it looks menial and low to be shoving dumb-waiters up and down; even for Posterity, who, for all they say he's going to be so rich and lordly and refined, and all that, may, after all, turn out but a scurvy fellow that eats with his fingers; no better, if the truth was told, than we poor cooks and waiters of the present century.

How the Sublime and the Ridiculous do nudge each other! They remind me of recruits trying to march in file; whichever one goes in front, the hindmost is certain to step on his heels; and one knows not whether to weep for the wounds received thereby, or to laugh at the awkwardness that caused them.

* * * * * * * *

Ginna H. and I have become firm Soul-friends. She is a noble creature, and has the best-cultivated mind I've seen in a long time. I've initiated her into the beauties of Mrs. Browning and Robert B., together with Carlyle and Novalis; whereat she is in a perfect blaze of enthusiasm. She desires me to remember her very warmly to you, and to express to you her gratification that your only friend in Franklin of the female persuasion is cross-eyed and otherwise personally deficient; since so (she added) you will have less temptation to forget your friends in Surrey. Five young ladies visit the castle shortly, to remain some time; among them, Miss Alexander, the intimate of Ginna, reputed a perfect paragon of all that is lovely, etc. We anticipate a good time, and wish that you were here, very much, to make it better.

In the midsummer of 1864 Lanier was sent again to Wilmington, N. C., where he and his brother Clifford served for several months as signal officers on the vessels engaged in the dangerous business of running the blockade. A letter to Mr. Hopson, written from Smithville, N. C., August 24th of this year, presents a picturesque account of the life—military and social—he was then experiencing. Only two brief paragraphs are omitted:

Birthplace of Sidney Lanier, Macon, Georgia.

Ten or twelve Blockade-runners came into Port within a day or two after our arrival here, and were immediately placed in strict Quarantine, it being reported that the Yellow Fever was raging in Bermuda, and even that there were cases on board some of the vessels. This proceeding somewhat damped our hopes at first, as we did not like the prospect of being assigned to duty in the Forts protecting this harbor, and awaiting the coming of Frost before we could proceed on our voyages. But, the vessels having developed no serious cause of alarm after riding out a Quarantine-term of fifteen days, are being released and allowed

to discharge cargo and reload. The "Lilian" went out last night; and tomorrow night two of our party, Richardson and Langhorn, go out as passengers on the "Mary Celeste," to bring in two new steamers now ready at Bermuda. It is reported that there are a number of new blockaders in foreign ports awaiting Signal Operators to bring them in; and it is probable that, in the course of two or three weeks, a large majority of our party will sail from the Port for that purpose.

I had a letter from that blessed Brown-eyed child yesterday, which I verily believe to be more beautiful than anything of the sort I ever saw. The letter was forwarded to me by Benson from Petersburg, she supposing me still there. I transcribe a part of it for your edification: "I am glad that *you* see Mr. Hopson; but I do not forget that the moving of the Signal Corps precludes all hope of *my* soon seeing him again. I do not know how *he* regards it, but it is a very unpleasant fact to me, as you know, Mister Sid. By the way, did you deliver to him the package I sent, together with the *big* bundle of kind messages?" etc., etc. Certainly I did; didn't I, Hoppy?

With my usual good fortune, I have met here several of the kind friends that I made two years ago in Wilmington. They are spending the summer here, and have introduced me to all the nice people in this truly pleasant village. Insomuch that every day since I have been here various servants, bearing white-covered dishes of delicacies, or fruit, or books, with notes of compliments from the ladies, "might have been seen" wending their way toward the Signal Quarters where I reside. I'm keeping up the Troubadour wandering about the world with a sword at my side, and a lute (or flute) slung on my back with the ribbon of my Ladye-love!

These letters, and the succeeding one, sent out from the Marine Signal Office at Wilmington, October 21st, 1864, and which I am able to quote *in toto,* tell their own graphic story:

I wish I knew how to thank you for this good letter that you send me, and which is the best I've ever seen from you. I could not help airing some of its beauties, and so sent copious extracts from it to our friend Ginna Hankins. I've been waiting to hear from her, that I might send you her comments thereon; but the diabolical mails are so slow that I cannot wait any longer, for fear you might think me under the waves.

Cliff sailed last night on the Steam Ship "Talisman" for Nassau. Telegrams from below this morning state that the vessel ran safely through the blockading fleet. She is owned by the "Albion Trading Company," E. Solomon, of New Orleans, partner and resident agent at this place. He was very intimate with our cousin, Major Lanier, of New Orleans, and entrusted to Cliff's care a large amount of bonds, besides giving him letters of introduction sufficient to ensure his being well taken care of while at Nassau.

I do not know what time I shall leave here. The imminent prospect of an attack on this place by the Yankees will probably induce the Blockading-firms to keep their vessels in port on the other side of the water, as far as possible. Were it not for this, I should get out very soon, in a week or so; since large numbers of new vessels are waiting at Nassau, Halifax and Bermuda for Pilots and Signal Officers.

Several of our party are now out. Besides Cliff on the "Talisman," Beach went out on the "Hope," Livesay on the "Helen," Culpepper on the "Will o' the Wisp," Barnes on the "Florie," and Langhorne on the "Stormy Petrel." Nestor Richardson is at Bermuda recovering from the Yellow Fever. Eddie Godwin is Signal Officer on the privateer "Chicamauga," now lying at this Port; and Leroy Godwin, his cousin, has just been ordered to the "Tallahassee." The latter will go out in a few days.

Could you, by any possibility, run down here for a day or so? I have something very particular to consult you about. Oh, Himmel! If you knew! . . . You'd come. Don't make yourself uneasy trying to guess it; you couldn't do it in a million years.

I haven't the remotest idea where you are, and so shall send this to Benson. Write me as soon as you receive it, addressing "care of Lt. Wilmer, Marine Signal Office, Wilmington, N. C." I am staying in the Office, as clerk, with Frank Hyman, being invited to do so by Lt. W., who is a magnificent fellow. I am, Your Own S. C. L.

Only twelve days later the writer, then for the first time on active sea duty, was captured on board the "Lucy," bound for Bermuda, and was carried to Point Lookout. The four months he spent in prison were months of which the memory alone must have served to revolt many a more robust-bodied man than Lanier, but he is described by all who met and knew him in those miserable days, surrounded as he was by the shapes of foul disease and awful despair, as a comrade of almost incredible patience and cheer, and as a spirit of redeeming purity. He emerged at last with a sick and starved body, but with a stainless soul, and from this time dates the beginning of his physical end. His mother and his uncle, William Henry Anderson, his father's law partner, had died of tuberculosis, and, tho prior to his imprisonment he had shown no trace of the disease, he was thereafter to yield more and more surely, if resistingly, to its long siege.

With the close of the war there came many breaks in Lanier's association with Macon and with his old friends, in whose ranks some serious gaps had already been

made. Upon his return to his native town he found his father living in Wesleyan College, where his sister, Gertrude, was now a student, together with his wife-to-be, Mary Day. Lanier's father and Mr. Day, who had boarded in Wesleyan during the vacation, were permitted to remain with their daughters during the school term, and here their sons often visited them, Lanier once gathering his friends, the flutists, by special official warrant to give pleasure to Miss Day. I am informed that the two first met at the open, hospitable house of Mrs. John Lamar, near the Lanier home on High street, in 1863. The marriage took place December 19th, 1867, in Christ Church, Macon, Rev. H. K. Rees officiating. Mr. Campbell procured the license and acted as groomsman. He tells me that Lanier insisted on dropping at this time his middle name, Clopton, which had doubtless been given him in memory of David L. Clopton, a kinsman and a distinguished member of the United States Congress from Alabama. Perhaps Lanier's purpose in omitting it now was not a fully defined one, tho possibly he felt the euphonious virtue of "Sidney Lanier," simply, as happier for him and for his work. For by this time he had a sure sense of his literary and musical powers, and an inward assurance of days of fulfilment, however remote. The ceremony itself was unmarred, but at the ensuing reception, held in the home of Mrs. James Monroe Ogden, a daughter of the Mrs. Lamar mentioned above, the gown of another daughter, one of the bridesmaids, caught fire from an open grate. The flame was almost instantly extinguished, but the newly made Mrs. Lanier, who was drinking wine at the time with the groomsman, dropped her glass in the excitement, and it took the veteran several minutes to pacify and reassure her.

Of the happiness of the after-life of the poet and his bride, despite the shadows of sickness and poverty, any adequate statement of Lanier's career must speak positively. It was a life of energy, that largely realized the promise of the Macon period. Letters already extant, and particularly the husband's simple tribute verse, "My Springs," serve to make explicit in our knowledge a mutual love and tenderness that those who knew the pair personally felt always in their presence. Mr. Campbell tells of the naïve, incredulous joy with which Lanier once showed him his newly-arrived son, expatiating in glowing style upon the delicate beauties of his form and features. Such a life was a life of growing strength in growing weakness—as the last of Lanier's poems must testify. It is the writer's hope that these brief reminiscences and gathered extracts may have served to express in some measure the spirit and direction of that life's seed-time in the self-contained old Macon of "before the war" and the missionary Macon of the Confederacy.

MACON, GA.

An Abandoned Farm

BY EDWARD TALLMADGE ROOT

MAN has wearied of his task
And withdrawn;
Weeds grow rank and wild things bask
On the lawn;
By the orchard, gnarled and gray,
House and barns sink to decay;
No blithe sounds of work or play
Greet the dawn.

Nature takes what man has spurned
To her heart;
Like a conqueror returned,
Routs man's art;
Thru his fields deploys her lines,
Regiments of shrubs and vines;
Takes by storm or undermines
Every part.

How she flaunts her victory
This bright day!
Sets where every eye may see
Banners gay!
Purple joepye, asters blue,
Meadow-sweet of creamy hue,
Golden-rod and primrose, too,
Line my way.

So my soul by Care and Toil
Long oppressed,
Like this farm's exhausted soil,
Cries for rest.
Nature, take again thy child!
Lying fallow, free and wild;
Let me feel thy rigor mild,
Soothed and blessed.

EAST THOMPSON, CONN

The Public Estimate of the Jew

BY ANNETTE KOHN

[Miss Kohn is a representative Jewish writer, highly honored in literary, social and philanthropic circles among the people of her race and religion, and a number of her poems have appeared in THE INDEPENDENT.—EDITOR.]

THE recent published letter of Olive Shreiner, the South African novelist, which has been so widely circulated, originally suggested the title of this article. That suggestion has now been more prominently fortified by the appointment of Mr. Oscar S. Straus to a Cabinet office by President Roosevelt.

The letter of Olive Shreiner, which is a most conspicuous eulogy of the Jew, emphasizes most strongly the dues to which he is justly entitled, by keen contrast with the injustice of the world; the world that calls itself Christian and civilized.

She allows his title as the "ethical leader of the race," and crowns with glory and honor the achievements and contributions of Israel's poets and thinkers, its seers and sages, its philosophers and scientists, its pioneers and leaders in the fields of thought and action.

She admits for all Christendom the debt to the Jew; the debt for his Bible and the moral code upon which rest the foundation of modern states and modern civilization. She pays tribute to Jews individually, men and women, and to the Jew collectively; to the Jew of genius and power, and to the Jew struggling from the depths to the hights of his ideals as soon as oppression is superseded by opportunity.

But Olive Shreiner is not the first to do this justice to the Jew—on paper. But why is it that the theoretic opinion held of the Jew does not develop into action? Why is it only an academic equation instead of a working principle? His Bible, his morals, his philosophies, his literature are accepted, but not he himself.

Nay, more—these things are the current gold of the world, its most precious and priceless treasure; yet he himself is an outcast.

Let us be frank about it. Whether it is socially, whether as a citizen in many lands, in many forms somewhere, in some form everywhere, there is still a ban, a prejudice, at least an exclamation or an interrogation point. Theoretical expressions on paper and practical working of affairs are, as to him, at variance.

Why?

Is it altogether because of that ancient (however false) blame of the crucifixion, and the rejection of one of his own sons as God or as prophet?

In great measure, of course, it is a question largely of ancient prejudice or inherited bigotry, and of despicable teaching. But even with those who have thrown off the trammels of the religious zealot—the bigotry that prevents the senses from performing their normal functions—lack of practical appreciation of the Jew, by accepting him as a comrade upon equal terms, to put it mildly and least offensively, is not to be gainsaid.

Why is this so, always and everywhere?

The exceptions in England, in America, and to some extent in the more liberal European countries, are made for individuals, or for a certain few of the admittedly privileged. The degree of apathy, antipathy or animosity, or complete indifference, varies, of course, in such countries as England, South Africa and America; and exceptions as to individuals do not count at all. In all lands and in all communities, there are always some few who, for special reasons, inherent or circumstantial, are *personæ gratæ*.

Why, and again why, is this?

Is there or is there not, in part even, if only in small part, some contributory cause in the Jew himself? This is a most pregnant question.

It is almost an axiom that a thing universally investigated and universally discarded or condemned, cannot be flawlessly and self-evidently good.

The question is so large that offhand answers cannot be given, only suggestions thrown out.

Perhaps the most plausible are his centuries upon centuries of solidarity; variants of self-consciousness, even if righteous and noble self-consciousness of high ideals, cherished in advance of their conception by surrounding nations; a closer hold upon domestic ties; a different religion, with a different Sabbath; a strange but sacred language; a totally different understanding of life and its meaning, especially in its relation to the hereafter; oppression and cruelties inconceivable; constant uncertainty, not only as to his future, but as to the very present; complete isolation, with a knowledge that it is unmerited, and with a sense of complete understanding of relationship to the world of souls, and an affinity with the everyday world of men; a perpetual longing and hunger of the heart for the sacred native soil which possessed Israel thru the ages; the memories of a great and magnificent past; habitual rebellion against the scorn of others; scorn of himself, too, for it is not palatable to be conscious of a lesser glory; an inherent love of joy and life under constant repression.

All these things contributed, separately and together, to make the Jew, outwardly at least, different from other men, as they have given his face an unalterable expression of sadness.

There is no disguising the fact of a difference, a distinctiveness. The Jew himself may be unconscious of the measure of the difference, yet it may be very apparent to the world, and the world resents differences. From ancient days we have been called "a peculiar people" —and the world, sometimes rightly, often wrongly, dislikes strangeness; dislikes it in any shape, whether in religion, code of ethics, social practices, family life or whatever it may consist in.

Now that the shackles are off, or about to be off, while he still retains much, very much, of his distinctiveness, the Jew, conscious of his ability for adaptation, would claim complete likeness at once, and resents the hesitation that meets him almost everywhere.

It is not so unusual for an inferior multitude to rebel against even a superior minority; if it be true, as is suggested by writers like Olive Shreiner and thinkers the world over, "that the Jew is in any way superior," it is not so unnatural that he should rebel against the inferior majority.

"Rachel is weeping for her children that they are in exile"; she has been weeping thru the ages. But the covenant of God with Israel was made for all time —Israel's sun has been eclipsed many times, but it has never set. It assuredly cannot set now, when the sunrise is strong for all men and sweeps over sea and land.

Olive Shreiner, with shrewdness and sagacity, says:

> "In new countries like Australia, and measurably in America, men having so much to do, with less time to do it in, and being more untrammeled, come closer together, and understand each other sooner and better; and so Jew and Christian, without question of each other's Church relationships, meet on friendliest terms."

Wherever in a country, and especially on a continent, the social state is in the making, this is naturally and inevitably true. Prejudices, under such circumstances, if they begin to assume shape, have no time to harden and crystallize. There are constant upheavals and changes, and therefore there is much interdependence.

But whatever may be the pleasing fact in South Africa, we are more nearly concerned with our own country; concerned because it is our country, and because she is daily becoming more and more the arbiter, the moral standard, the political guide, the financial and commercial example, the beacon light for other lands.

And while prejudices of many kinds, among them the old ones against the Jew, came with the settlers from foreign lands, as did the taste for hanging witches, the American soil is not propitious for that sort of weed-culture: the earth is too rich, the air too rarefied, the sun shines

too brightly, for nature to lend herself to any but the growth of beautiful flowers.

And as to American men and women, they will not, to any great degree, shame their glorious country by unrighteous and inglorious deeds; they will not stultify their laws by misreading them or disobeying them; they will not misuse their opportunity to their own disadvantage or that of posterity.

And so Americans, in large things first —that is their nature; in smaller things afterward—that is their habit, will exercise justice and generosity, as they strive to do in all things and to all people, to the Jew.

And so, as in the beginning of this article, is worth noting the recent instance of Mr. Oscar Straus's appointment to a Cabinet office.

The large things *à l'Americaine* first. Jews as Cabinet officials, Hague Court Arbitrators, foreign Ambassadors, Senators, Congressmen, mayors of cities, Supreme Court judges, college professors, Chamber of Commerce presidents. These things first, and, after all, the great things count most. The minor things will come after, in due course; the smaller social amenities and courtesies, especially if the White House sets the example, as it does.

President Roosevelt has done many good and noble things, but he has done nothing more beneficent, in the true meaning of that word, than his public appreciation of the Jew and his personal exhibition of good will and good fellowship.

As to the Jew himself, he will in time lose his strangeness, his separateness, his subtle differentiation from the rest of his fellow citizens, not by absorption, not by negation of his olden faith, but as the result of friction by constant intercourse with his fellows, and will be like them, an American—only with another faith than that of the majority.

We have already Episcopalians, Presbyterians, Methodists, Roman Catholics, Greek Catholics, Mahommedans—all living together in harmony. Then why should there not be room for one faith more, the mother of them all—the faith of Moses, of Isaiah, of King David, of Jesus Himself?

New York City.

Justin McCarthy at Home

BY M. McD. BODKIN, K. C.

[Mr. Bodkin is a well known Irish novelist and journalist, and among other works is author of "Pat o' Nine Tails," "The Rebels," and "In the Days of Goldsmith." We are very glad to give our readers this intimate sketch from him of Justin McCarthy, whose monthly letters from London during the past few years have been one of the most valued features of The Independent.—Editor.]

I HAD first met Justin McCarthy in the House of Commons when he was chairman of the Irish National Party, of which I was a raw recruit. From the beginning I was strongly attracted by the genial, cultured, kindly-natured man, and coveted his friendship. But he was a famous veteran in literature while I was but a nameless novice, and there is no service in which the reverence of the novice for the master is more profound. So I always addressed him respectfully as "Mr. McCarthy" till he took me to task for it.

"Matt, my boy," he said to me one day in the smoking-room of the House of Commons, "I am always 'Justin' to my friends and I want to be 'Justin' to you."

So from that day out I counted myself happy among his friends and he was 'Justin' to me. In truth he has been from that day

> "The dearest friend to me, the kindest man,
> The best conditioned and unwearied spirit
> In doing courtesies."

For over three whole years, week in, week out, while the House of Commons was in session, it was my privilege to dine at the same table with him, delighted with his humor, light and playful as the dancing sunbeams, and his mellow experience of men and things. Two bonds held our comradeship close—we were engaged in the same cause and in the same profession. Night after night this distinguished veteran of literature, this re-

spected leader of a Parliamentary party, his simple repast over, retired to the upper gallery of the House of Commons, the only place in the House secure from interruption, to devote long hours to monotonous work for the daily press, cheerfully content in spite of his abilities, his services, and his position,

"To give, that he might live—
His daily toil for daily fee."

He had, in common with his colleagues, abandoned by self-denying ordinance all prospects of reward, shut himself out from place, power and emolument. This leader of the "mercenary" Irish party, as they are scornfully styled by placemen present and prospective, was worthy of his colleagues.

Justin McCarthy has at least this reward for his long and hard service that it was under his leadership that the Home Rule bill of Mr. Gladstone was passed through the House of Commons.

But I had resolved to avoid politics in this desultory sketch and with apologies for one brief lapse from my resolution I will come as quickly as may be to my recent visit to Westgate-on-Sea, which I set out to describe.

Justin McCarthy left the House of Commons, as I did, at the close of the session, and I saw him no more till a few weeks ago, when urgent business carried me to London. I received a warm invitation from my dear old friend to visit him at Westgate-on-Sea, to whose bracing air the commands of a doctor have confined him. There, "far from the madding crowd," he lives a life of lettered ease in the genial companionship of his son and daughter. The family triumvirate all combined to make the invitation irresistible.

An incident occurred on the journey from London which illustrated to my special advantage in what universal respect the genial literary veteran is held. I got into talk with a gentleman who was the only other occupant of the railway carriage, on political questions, and discussed Mr. Chamberlain, his views and career and prospects, from standpoints directly opposed and in language as strong as courtesy would allow. In the course of our conversation I chanced to mention that I was going to see Justin McCarthy at Westgate-on-Sea, and my companion was warm in praise of his works.

Now, personally, I happen to be the worst traveler in the world; wherever I go I leave a trail of lost luggage behind me. So it was quite natural that when the train stopped at Westgate-on-Sea, in the midst of an interesting conversation, and I saw Miss McCarthy waiting on the platform, I should at once jump out, leaving my bag behind me on the rack. Some hours later the bag came back by special messenger from four stations away, where my fellow traveler stopped, with a polite note intimating that the fortunate mention of the fact that I was the guest of Justin McCarthy enabled him to restore it.

I found my dear old friend as well and strong as when I parted from him more than a decade ago in the House of Commons. His memory was as vivid, his humor as playful, his conversation as full of freshness and savor. He is delightfully situated at Westgate-on-Sea, in a corner villa in view of the sea, with a smaller villa over the way which serves as a guest house for his week-end visitors from London, and in which I was made most comfortable. Now and again, as he told me, his heart is stirred by an almost irresistible desire to look on Ireland again. But the doctor insists on the bracing air of Westgate-on-Sea, and the health he has enjoyed there confirms the doctor's commands.

The weather during my too brief stay at Westgate-on-Sea was most opportunely inclement, windy and wet, making out-of-door excursions impossible. My kind friends were distressed and I was delighted. They had planned some pleasant excursions. I was to see the spot where King Canute got himself wet to the skin for the sake of rebuking his too flattering courtiers, who I always thought had the best of that experiment. I was to see the spot where Julius Cæsar first landed on the British coast. Indeed Justin assured me that he had always regarded the selection of this particular spot by the famous invader as a delicate anticipatory compliment to himself.

All these things I was to have seen and didn't see and couldn't see, and I much rejoiced thereat. I had come to visit, not Westgate-on-Sea, but Justin Mc-

Carthy, and the weather kindly decreed that I was to have him all to myself during the visit.

We went to mass together in the morning in a covered vehicle, and left the house no more that day, but sat together in his cozy den, book and picture lined, our toes on the fender, and talked the unheeded hours away. Truly such a talk was a rare treat. It was the cream of a busy, useful happy life, stretching back almost to the middle of the nineteenth century, "the abstract and brief chronicle of the time."

There was no taint of personal vanity or personal bitterness in his reminiscences. His mind, to my thinking, is as incapable of harboring an unworthy thought as the soil of Ireland is of harboring a snake. He had in his time, it seemed to me, met every one worth meeting and seen everything worth seeing in the Old World and in the New.

What a list it is of his personal acquaintances and friends! In politics there were Lord John Russell, Cobden, Bright, Gladstone and Disraeli, and Bismarck; in literature Browning, Tennyson, Swinburne, Thackeray, Dickens, George Eliot, John Stuart Mill and a host of others. For this list makes no pretension to be complete. I have merely set out at random the names that cropped up in the course of our conversation. Even now I bethink myself that the category omits the literary giants of America—Lowell, Emerson, Longfellow, Oliver Wendell Holmes, with all of whom he was on terms of familiar friendship.

It was pleasant for one who had read and worshiped afar off to meet those great men almost at first hand; to be introduced by one who knew them so well. But it is a pleasure not to be passed on. It would be quite impossible to convey in written words the savor of our familiar talk. It is the slight touches that tell in the picture. I knew these men better from some passing phrase, some familiar incident told by one who saw and heard, than had I known them in elaborate biography.

Justin McCarthy was naturally full of admiration for Gladstone, with whom he had been brought in specially close relations during the Home Rule Parliament, when they led respectively the allied forces of the composite majority that carried the bill. He admired, as all must admire, the splendid biography of Mr. Morley, but he seemed to feel, as I myself have felt, that it was emphatically Morley's Gladstone—not Boswell's, not another's:

> "A creature far too pure and good
> For human nature's daily food."

For my own poor part I should have liked to see that stately portrait supplemented by a genial, gossipy, eminently human sketch by Justin McCarthy himself.

Of John Bright he had much to tell. He considered him at his best a greater orator even than Gladstone. "He shot his arrow higher," was his phrase. Justin McCarthy's editorship of the *Morning Post* brought him in frequent and friendly communication with John Bright, who held a place on the advisory board. In those days John Bright's sympathy with Ireland was intense. The violence of the Fenians did not in the least affect it. Even the sympathetic Irish editor was not strong enough for this British enthusiast.

"We have to consider the feelings of our readers and the interests of the paper," explained Justin McCarthy.

"You have first of all to consider the interests of truth and justice," retorted John Bright.

John Stuart Mill, of whom he had many charming things to tell, was not less earnest than John Bright in his Irish sympathies. I had a wonderful picture of this shy, retiring scholar and philosopher taking active part in a boisterous Irish demonstration in favor of amnesty for Irish political prisoners.

Tennyson, Justin McCarthy found a little stiff and self-conscious of his own genius:

> "As if the winds
> Blew his own praises in his eyes."

But Browning, whom he knew much more intimately, he described as the most unostentatious and charming of companions, full of human sympathy and sprightly humor. In his everyday talk, I learned, there was no touch of the verbal obscurity which in his poems is such a stumbling block to the unitiated—myself among the number.

I cannot hope to compress within the limits of this most elastic sketch the details of that delightful long day at the fireside. A little trait or incident here and there is possible at best.

speaking in excellent English, bade him talk in that language if he had no objection.

"I am very proud," the great German said, "of the extent and variety of my

Courtesy of Harper & Bros. Justin McCarthy.

Justin McCarthy's first meeting with Bismarck was, he told me, specially memorable to him by reason of the unavailing toil with which he furbished up his German for the ordeal.

To his surprise and delight Bismarck, English. I flatter myself I could interchange slang with a London cabman."

In America Justin McCarthy's experiences were almost as varied and as pleasant as at home.

He told me that on one occasion he

was able to confound a Yankee who was boasting somewhat arrogantly of his knowledge of the States, by the quiet intimation that he, an Irishman, had traveled through and through every State in the Union, and visited almost every town to be found on their maps.

The Yankee guessed that "left him standing."

One American literary experience Justin McCarthy had as delightful as can well be imagined.

On the occasion of his first trip to New York he had, for the first time, submitted "a longish short story" for publication in *Harper's Magazine*, and was gratified, not merely by a notification of the acceptance of the story with a handsome accompanying check, but the further intimation that the editor would be glad if he could make it convenient to call.

Of course he made it his convenience to call. What young author could resist so flattering and so promising an invitation?

The conversation opened with a compliment. The editor was delighted with the story. Did the author think he could let him have some more about the same length on commission?

The author rather thought he could. "About how many would the editor require?"

"Shall we say about a hundred?" replied the editor.

"You may imagine my amazement and delight," said Justin McCarthy, rejoicing in the retrospect of that magnificent piece of good fortune.

It was in truth a splendid commission and it worked itself out magnificently, he told me, to the last word of the hundred stories and the last dollar of the hundred checks.

Outside the Arabian Nights probably there was never such a literary series. A scribbler of fiction myself, in a small way, I declare I can imagine no more fascinating experience for an author.

Justin McCarthy wandered at his own sweet will through the wide variegated regions of the United States, moving where he liked, staying where he liked, idling when he liked, working when he liked, and finding in his wanderings and idlings the local color for the hundred stories that paid the expenses of this unexampled holiday. I had myself a vicarious delight in listening to so delightful an experience.

So it chanced that Justin McCarthy made friends in America as many and as distinguished as at home.

I remember a little incident that occurred when I was in Parliament which, though not directly concerned with this visit, comes in appropriately here. A distinguished American showed me in the strangers' smoking-room a little book containing the rules and the names of the members of a once famous literary club of Boston, to which the Autocrat of the Breakfast Table makes delightful allusion. Every great name in American literature during the nineteenth century was there, as president, vice-president, or ordinary member: Holmes, Emerson, Longfellow, Lowell, Hawthorne, and the rest.

Turning the leaves we came to one page that was almost blank. At the top of this page was the title "Honorary Members." In the center a single name:

Justin McCarthy

Could any man desire a higher compliment?

As our day slid by in desultory delightful gossip, whose even flow never halted nor lagged, the signed photos on the wall, the signed books on the shelves or tables were fertile in reminiscences.

Just one illustration and I have done. In a conspicuous place over the chimney piece I noticed a large photo of an old lady in whose face sweetness and dignity were wonderfully combined. She was, I learned, the wife of Lord John Russell, who was a very special friend of Justin McCarthy's, and had sent him this signed photo, with a warm expression of regard, a little before her death. Our talk naturally switched on from her to Lord John Russell, whom also Justin McCarthy knew well, and so we were carried away back to the days of the great Napoleon, for Lord John Russell knew Napoleon, and as a young man visited him at Elba.

On that occasion, as Lord John afterward told Justin McCarthy, Napoleon bade the English people beware of Wellington.

"A few more victories," he said, "and

Wellington will grow so popular with the army that he will seize the crown."

It was in vain that Lord John strove to explain that the British Constitution rendered such a design impossible.

Napoleon merely smiled and shook his head as one that knew better.

While we talked there came to our ears the faint patter of the typewriter from an adjacent room, where Justin Huntly McCarthy was busy translating into drama one of his charming new novels. At dinner time he told us triumphantly that he had completed an act and a bit over, while we had idled thru the day with our feet on the fender.

Let it not be thought, however, that Justin McCarthy himself habitually dawdles. He lives his life now as vigorous in work and enjoyments as in the days of his youth. He even partakes of the mild dissipations of Westgate-on-Sea, which, by the way, regards itself as a genteel watering-place by no means to be confounded with neighboring Margate.

One story he told me as illustrating the courtesy of the locality; possibly, also, its lack of humor.

A local lady spoke in strong condemnation of society fibs. She was specially hard on her own sex for lack of candor in regard to their age.

Justin McCarthy cordially agreed and gave a personal illustration. To appreciate this personal illustration it must be remembered that he is nearer to five feet in hight than to six.

"I quite concur with you, madam," he said gravely. "I never practice those subterfuges myself. I never deny that I am over forty years of age, and I never pretend to be over five feet eleven and a half in hight."

She looked at him in mild amazement. Politeness forbade further reference to the question of age.

"I would never have thought, Mr. McCarthy," she said meekly, "that you were quite five feet eleven and a half unless you told me so yourself."

But, of course, his chief resource and enjoyment in his enforced retirement are his beloved books. His son and daughter fortunately share his taste. They are a literary triumvirate who in writing and reading find their chief enjoyment. Of Justin Huntly McCarthy's triumphs in fiction and the drama there is no need to speak. His recent play, "If I Were King," and his recent novel, "The Dryad," are his best. Miss McCarthy has made on her own account but one incursion into print—a charming sketch of Parnell. But she may be said in a sense to have collaborated with her father in all his later works.

There has fallen upon him one of the sorest trials to a literary man. His eyesight has grown so weak that both reading and writing are strictly forbidden.

His daughter's unremitting kindness has, he assured me, smoothed away even this misfortune. She reads to him, hunts up his references and corrects his proofs. The father was fervent in her praise. "I could do nothing without her," he said. "She is so quick, so patient, so fertile in helpful suggestions." It is doubtless his daughter's assistance that enables him to turn out even now as much and as good literary work as ever. His very latest book, "The Story of an Irishman," is a charming, gossipy autobiography, full of the essence of the life of his time, and quite free from that self-conscious pose by which autobiography is so commonly marred. At present, under the auspices of the eminent publishers, Chatto & Windus, he is collaborating with Lord Macaulay in the production of a uniform history of England. Justin McCarthy takes the work up where Macaulay has laid it down, and carries the story forward to our own times. It is given to no man to wield the magic wand of Macaulay. But on the whole it may be fairly said there is no living writer to whom the continuation of Macaulay's splendid story could be more appropriately committed.

The Irish exiles in Westgate-on-Sea—all three—are still keenly alive to anything that appertains to Ireland. Justin McCarthy was not more deeply interested in the Home Rule movement, more earnest for its success, when he led the Irish party to victory in the memorable session when Home Rule received the deliberate sanction—not to be forgotten nor recalled—of the House of Commons.

"No reform," he said to me, at parting, "that has once received the sanction of the House of Commons has ultimately failed to become the law of the land"

DUBLIN, IRELAND.

A Letter to Emperor Alexander III.

BY COUNT LEO TOLSTOY

[This unpublished letter, printed now for the first time, was written some days after the assassination of the Russian Emperor, Alexander II, in 1881, to his son and successor. Count Tolstoy planned at first to transmit the letter to the Emperor thru Pobiedonostseff, and he sent it to him by a mutual friend, N. N. Stratoff, accompanying it with a personal entreaty to him and urging him not to lose any time in performing the grave mission. The letter to the Emperor Pobiedonostseff read and handed it back to Stratoff with a refusal to transmit it. To the letter which was addressed to him personally by Count Tolstoy he made no answer until after the execution, when he excused himself for his long silence. He explained his refusal by saying that in such grave cases he considered it his duty to guide himself by his own views, quite different from those of Count Tolstoy, regarding the character of Christ. After the refusal of Pobiedonostseff, Stratoff confided the letter to Prof. Constantin Bestoyeff Rumine, who handed it over to the Grand Duke Serge Alexandrovitch. It was this last who put it into the hands of the Emperor. In a recent letter, which we give below, addressed to one of his friends, Count Tolstoy details the circumstances under which this remarkable document was written. It is of prophetic value as bearing on present conditions in Russia.—EDITOR.]

I CAN say nothing very special or definite regarding the impression which the event of the first of March made upon me, but the trial of the murderers and the preparations for the execution made upon me one of the strongest impressions of my life. I could not divert my thoughts from them nor from those who were preparing to punish them, and especially from Alexander III.

The joy that he might feel in pardoning them was so clear to me that I could not believe in the execution, and at the same time I feared it and I suffered for the hangmen.

I remember that one day, after dinner, with this idea in my head I stretched myself out upon the divan of the ground-floor and fell asleep. In my sleep—or rather half asleep and half awake—I thought of these men and of the punishment which was being prepared, and I felt as keenly as if such were the reality, that it was not they who were being executed; but I, that it was not Alexander III, the hangmen and the judges who were executing them, but I who was killing them. The frightful nightmare woke me, and, at once, I wrote this letter.

To the Emperor Alexander III:

Sire!

I write you, not because I have a high opinion of myself but because, already culpable before all, I should fear to become more so, if I should not do what I can and ought to do. I shall neglect here the flowers of rhetoric which ordinarily adorn the letters addressed to sovereigns; this false and hypocritical eloquence serves only to obscure sentiments and thoughts. I shall write simply as from man to man. My sincere respect for you as man and as Emperor will be more visible without these ornaments.

They have cruelly killed and mutilated your father, the Emperor of Russia, a man aged and kind, who had done much good and who desired only the welfare of his people. Those who killed him were not his personal enemies, but enemies of the existing order of things, and they killed him in the name of some good or other for all humanity. You are reigning in his place, and before you are these enemies, who poisoned the life of your father and caused him to perish. They are your enemies because you occupy the place of your father and for this so-called general good which they pursue they must desire to make you also disappear. Your soul must be filled with desire to take vengeance on the murderers of your father, and with horror before the task which has been imposed upon you.

One cannot imagine a more terrible situation. There cannot be a more terrible situation, since one cannot imagine a greater temptation to evil. Enemies of the fatherland, of the people, miserable creatures, wretches without God, who violate the tranquillity and the life of millions of beings, murderers of my father! What should I do with them but purify the Russian soil of them, but crush them like hideous reptiles! It is not my personal sorrow; it is not a desire to avenge the death of my father

which demands it; it is duty which imposes it on me; all Russia expects it of me!

In this temptation lies all the horror of your situation. Whoever we are, kings or shepherds, we are all men enlightened by the doctrines of Christ. Your situation is terrible, but the teaching of Christ is precisely the thing a man needs to guide him when dangerous temptations assail him. You are a prey to the most terrible of all temptations. But however terrible it is, the teachings of Christ drive it away. All the nets of temptation which entangle you will be reduced to dust if the man in you executes the will of God.

I know how far this world in which we live is from the divine verities which have been expounded in the teachings of Christ and which live in our hearts. But truth is truth; it is in our hearts, and responds with enthusiasm to a desire to be approached.

I confess that I, small and miserable man that I am, a prey to temptations a thousand times weaker than those which assail you, would give myself up, not to truth and good, but to the temptation; indeed, it is audacity and madness on my part to demand of you a force of mind without precedent, to demand of you, Emperor of Russia, urged to a contrary course by all those who surround you—of you, a loving son of whom they have killed the father—to demand of you, I say, that you pardon the murderers and return them good for evil. It is madness on my part, but could I help desiring it, help seeing that each one of your steps toward pardon is a step toward good, and each one of your steps toward punishment a step toward evil? I cannot help seeing it. Just as for myself, in the hours of calm, in the absence of temptations, I desire with all the force of my soul to choose the way of love and goodness, and hope to succeed, so I desire that you aspire to be "perfect as your Father," and I hope that you will succeed. You, Emperor, give to the world the greatest example of obedience to the teachings of Christ; return good for evil!

To pardon murderers who have acted against all divine and human laws, to return them good for evil, will seem to some idealism, madness; to others, baseness. They will say: "The necessary thing is not to pardon, but to destroy this gangrene, to stifle the flame." But if those who talk thus were obliged to prove their opinion the baseness and the folly would be seen to be on their side.

Here is a sick man; he was treated, first with very energetic remedies, then remedies were given up and nature was allowed to take her course; but neither system has succeeded: the patient has only grown worse. There is still another means unknown to the doctors, a strange means. It has the great and indisputable advantage over the other two means that the others have been employed without results, while it has never been experimented with.

An attempt has been made, in the name of the necessity of the state, in the name of the good of the people, to oppress, to deport, to annihilate; an attempt has been made in the name of the same necessity and of the same good, to give liberty; the result has been the same. Why not try then, in the name of God, to execute His law without thinking either of the state or of the good of the people? It is impossible to do evil in the name of God while fulfilling His law.

Another advantage of the new means, also indisputable, is that the two means aforesaid were evil in themselves. The first was violence (however just it appears every one deems it an evil); the second was a conferring, anything but sincere, of liberty—taking away with one hand the liberty conferred by the other.

The application of these two means, however useful it may have appeared, did not constitute a good work for those who were concerned in it.

The new means, on the other hand, is of such a nature that it makes the supreme joy and happiness of the human soul.

To pardon, to return good for evil is good in itself. The application of the two ancient means, contrary to the Christian soul, must leave remorse, while pardon confers supreme joy on him who pardons.

The third advantage of Christian pardon over repression and skilful direction of the dangerous elements is closely connected with the present moment and has a peculiar importance.

Your present situation, and that of

Russia, resemble the state of a sick person during the crisis: a false movement, a useless remedy, harmless in itself, may be the absolute ruin of the patient; in the same way a single act, of one sort or another, revenge for injury by cruel punishments or the assembling of the representatives of the people may influence the whole future.

During the two weeks the trial will last, a step will be taken upon one of the three routes between which you must choose: the repression of evil by evil; the granting of certain liberties—two tried and tested methods which lead to nothing; or the new method, that of the fulfilment by the sovereign, as by a man, of the will of God.

Sire! Fatal and terrible misunderstandings have accumulated in the souls of the revolutionists, an implacable hatred against your father, a hatred which has conducted them to an awful murder. This hatred can be buried with him. The revolutionists, unjustly, perhaps, have been able to reproach him with the loss of tens of their own; but you, you are pure before Russia and before them. Your hands are not stained with blood: you are an innocent victim of your situation. You are pure and innocent before yourself and before God. But you are at a crossroads. And if, in a few days the triumph belongs to those who say and think that the Christian verities are good only in words and that in governmental life blood must flow and death reign, you will lose forever this happy state of purity, of life in communion with God, and you will enter into the way of shadows, of necessities of state which justify everything, even the violation of the divine law.

If you do not pardon, if you execute the murderers, what will you have accomplished? You will have cut off three or four individuals; but evil engenders evil, and in place of these three or four, thirty or forty will appear, and you will have lost irretrievably this moment which, by itself alone, is worth a whole life; the moment in which you can accomplish the will of God; you will leave behind you forever this crossroads, at which you can now choose the good instead of the evil; you will be caught forever in this network of evil which is called the advantage of the State.

Pardon, return good for evil, and tens of malefactors, hundreds, will pass, not to you nor to me (that is of little importance), but from Satan to God; thousands, millions of hearts will tremble with joy and affection at the sight of good dispensed from the throne at a moment so terrible for a son whose father has been murdered.

Sire! If you should pardon, if you should call these men, give them some money to send them to some part of America, and write a manifesto beginning with these words: "And I, I say to you, love your enemies," I do not know what others might feel, but as to me, wretched creature that I am, I would become your dog, your slave; I would weep for love of you as I weep now every time I hear your name. But what am I saying! I do not know what others might feel! But I know with what force these words would spread over Russia goodness and love!

The truths of Christ are living in the heart of man; they alone are living, and we love our fellows only in the name of these truths. Yet, suppose that men have formed the habit of thinking that divine truths belong to the spiritual world and are not applicable to the real world; suppose that the enemies say: "We will not accept your means; it is true that it has not been tried, that of itself it is not harmful, that at the present moment we are in the midst of a crisis, but in such a case it is not applicable and only harm can result from it." They will say: "To pardon, to return good for evil, is good for an individual, not for a state; to apply these truths to the government of the country is to draw it to its ruin."

Sire! This is a cruel and perverse deceit. The fulfillment of the law of God ruin men! No words could be more sacrilegious!

But suppose we ignore the fact that the law of God is superior to all other laws and always applicable. Let us ignore it. Good. The law of God is not applicable; if it is applied the evil becomes greater. If murderers are pardoned, if prisoners are given their liberty, evil will be increased. But why? Who says so? How will you prove it? By your cowardice; you have no other proofs. Besides, you have not the right

to reject any means, because your own, as every one knows, are worth nothing.

They will say. "If all are set at liberty, massacre will result; if some are released, there will be slight disorders; if the liberations are more numerous, there will be great disorders; general amnesty will mean massacre." They reason as if the revolutionists were bandits gathered into a horde, whose destruction would put an end to everything. But that is not the case at all. It is not their number that is important. What are revolutionists? Persons who hate the existing order of things, because they find it bad, and who work to establish a better.

It is not by killing them that they can be struggled against successfully; it is not their number which is important, it is their ideas. To struggle against them successfully it is necessary to struggle spiritually. Their ideal is general well-being, equality, liberty; to combat them successfuly it is necessary to oppose to their ideal another ideal, superior to theirs, embracing theirs.

There is only one ideal which can be opposed to theirs; the ideal upon which they lean without knowing it and even while blaspheming it, the ideal of love and of pardon.

A single word of pardon, of Christian love, spoken from the hight of the throne, the way of the Christian reign into which it is your duty to enter, can alone destroy the evil from which Russia now suffers.

And all the revolutionary struggle will disappear like wax in the flame before the Emperor—the man who obeys the law of Christ.

YASUARA POLIOENA, RUSSIA.

The Socialistic Organization in Belgium

BY EMILE VANDERVELDE

[M. Vandervelde is one of the great Parliamentary Leaders of Belgium, being a member of the Chamber of Deputies and one of the leading "intellectuals" of the International Socialist movement. The subject treated by him in this issue is regarded by all sociologists and economists as one of great significance. The late Henry Demarest Lloyd, who had studied the Belgian working-class movement carefully, and judged it in the light of his observations made in Australia, New Zealand, Switzerland, Germany, France, England and the United States, considered it to be the most hopeful and promising of all working-class movements throughout the world.—EDITOR.]

BELGIUM is one of the smallest European countries. Its area (11,373 square miles) is about equal to that of Massachusetts, Delaware and Rhode Island combined. Its population (6,693,000 in 1900) is hardly larger than that of Greater London. It can therefore pretend to naught but an insignificant part in European politics. But thanks to its very advanced capitalistic development, it constitutes a curious laboratory of social experiments, while the strong organization of its working classes gives it a place of considerable importance in the International Socialist party.

Nowhere, perhaps, except in certain states of the German Empire, does socialism count so large a number of adherents. Notwithstanding the inequity of an electoral system that insures a double or even a triple vote to members of the upper classes, the representatives of the working class in the Chamber of Deputies number 35 out of a total of 166. Well nigh a fourth of the voters support its ticket, and it can safely be said that, with universal suffrage, at least one out of every three Deputies would be a Socialist.

But its numerical power is not the only thing that distinguishes the Belgian Workmen's Party among the Social Democratic parties of the world. Its chief distinction is the close and indissoluble union which exists among the three branches of organization—labor union, co-operative and political. In other countries, and particularly in France and England, the labor unions and co-operative societies usually hold themselves aloof from politics, or at least

stand apart from the organized parties. Only in very recent times has a change toward a closer union been noticeable.

In Belgium, on the other hand, all labor unions and societies of any importance, with the exception of the glass-workers, compositors and a small number of Christian co-operative societies, are affiliated with the Workmen's Party. According to the latest statistics, there were 95,000 labor union Socialists out of a total of 132,000 organized workers. The Socialist strength is thus about 72 per cent. of the total. As for the co-operative societies, the great majority are not only commercial, but also political organizations. Some of them hold to the Clerical party, and to be admitted to any of these one must fulfil his religious duties and pledge himself to the defense of "property, religion and the family." But the other societies, much more powerful in the industrial centers, adhere to the Workmen's Party. It is necessary, on entering any of them, to accept the Socialist program and agree to the deduction from the annual profits of sums, more or less considerable, for use in the party's general propaganda.

The various local federations that compose the party present identical characteristics thruout the country. At the center is the co-operative society, whose home, *la Maison du Peuple*, is the home also of the friendly societies, the labor unions, the political groups, the artistic and educational associations, all of which constitute the federated organization. In Brussels, for instance, the co-operative society—*la Maison du Peuple*—includes about 20,000 families. Its business averages about $1,200,000 annually. It has butcher shops, grocery, dry goods and department stores, a dairy and two large bakeries, which produce annually almost 12,000,000 loaves of bread of 2.2 pounds each. This society devotes annually about $10,000 to the Socialist cause, and, moreover, furnishes free quarters to the seventy groups belonging to the federated organization of that city.

Similar organizations, tho in differing degrees of development, are to be found in all the principal centers. Thus, in the very bosom of capitalist society, is found another society, like a state within a state, the members of which are united, not only by their political convictions, but by economic ties that become more binding as time runs on, and that ensure a stable and enduring organization.

It may be interesting to learn the special conditions that have made possible the growth of such an organization, so different from any that can be found in other nations. First, there are the legal conditions. The twentieth article of the Belgian Constitution proclaims the absolute liberty of association. Furthermore, the law of 1873, regarding commercial companies and particularly co-operative societies, is all the more liberal from the fact that when it was passed the "Socialist peril" did not exist. As it is, there is no obstacle, either legal or constitutional, that should impede the formation and growth of such societies and their affiliation with other societies. In Germany, on the other hand, where the liberty of association is very much more restricted, labor unions and co-operative societies are forbidden to connect themselves with the Social Democratic Party, and to engage, directly or indirectly, in political activities.

But tho the liberality of Belgian legislation explains the possibility of the organization of the Workmen's Party, it does not explain that party's power, nor does it explain the motive which impels the workmen to choose affiliation with a militant political party rather than the neutral position of mere membership in an economic group. The chief reason of the power of the Workmen's Party is unquestionably the economic structure of the country. Belgium leads all the other countries of Europe as an industrial nation. Nowhere else is so large a part of the population given over to purely industrial occupations. The greatest part is employed in coal mines and in manufactures. From the French frontier, on the southwest, to the Prussian frontier, on the east, the coal pits have given birth to an uninterrupted industrial agglomeration. There it is that more than 100,000 miners work and suffer—the men who compose the solid nucleus of the Socialist army. Add to this the great number of cities, with their industrial populations; the persistency, since the Middle Ages, of co-operative tendencies and traditions, the extraordinary facility of railroad

communications, making possible an intensive propaganda, and, finally, the bitterness of class antagonisms in a land which Marx has called the "paradise of capitalism," and the secret of the rapid growth and solid strength of the Workmen's Party will be easily understood.

But to understand fully the close union of the various factors of the Workmen's Party, one must realize the strong influence which partisan feeling always exerts among the Belgian population. All activities, all movements, it may be said, here take on a political complexion, or

Emile Vandervelde.

at least are affected by political considerations. There is not even an art association, or a charity institution, to say nothing of economic groups, that succeeds in keeping aloof from the existing political factions. Even at the time when Belgian politics was confined to the struggle between the two bourgeois parties—the Liberal and the Catholic—the neutral groups were very rare. And today, in many provincial places, there are lawyers, doctors and tradesmen whose clients belong exclusively either to the Liberal or the Catholic party. Naturally, these divisions, already formed, have but deepened and broadened since the advent of a new party representing a class just awakening to political life. When the Socialists of Brussels, of Ghent, of Antwerp, founded their first co-operative societies they but conformed to custom in giving them a partisan character.

At first the co-operators saw in their organization only a means of providing resources while they carried on their propaganda—a war machine, so to speak, to "bombard capitalist society with potatoes and four-pound loaves." Since then this conception has been considerably modified.

By reason of the circumstances attending their formation, the co-operative societies are inevitably fused in the general Socialist movement. The progress of one necessarily involves the progress of the other. Almost all Socialists become co-operators, and, consequently, co-operation gets the benefit of all Socialist propaganda, while reciprocally, by the very fact of their adhesion to the Workmen's Party, all co-operators are Socialists.

This is an essential point that suffices, in a large measure, to explain the varying attitudes taken by Socialists toward co-operation. When co-operation is merely a commercial enterprise, guided and informed by the petty spirit of individual economy, gathering heterogeneous elements in the sole hope of gaining pecuniary advantages, it is naturally and properly condemned by Socialists as futile and of little consequence to the workers as a class. But when, as is the case in Belgium, co-operation is primarily a Socialist movement, composed of persons belonging for the most part to the same class, professing the same opinions, and pursuing the same social aim, the case is altogether different. Co-operation becomes then a sort of embryonic realization of Socialism, a preparation for and a promise of a social order differing from the present capitalist order as day differs from night.[1]

[1] For further details concerning Socialist Co-operation in Belgium and the Belgian working-class movement, see *"Histoire de la Co-operation en Belgique,"* by Louis Bertrand, published by Dechenne, Brussels, 1902; *"Le Socialisme en Belgique,"* by Destrée and Vandervelde, published by Giard et Briere. Paris, 1903.

Brussels, Belgium.

Literature

Japanese Spirit and Matter

To discern the things of the spirit in an alien people, one must have patience to wait for clear vision. To discern aright, not merely feeding one's moods or ministering to one's likes or dislikes, the writer of a book on the Orient must have, besides penetrating insight, almost divine patience. To Dr. Knox, a trained philosopher, was given both the opportunity and the desire to know the Oriental peoples. He spent over a decade in Dai Nippon, which, in a large sense, is the residuum of what is best in Asia, the epitome of Asiatic history and religion. Probably this was his best preparation for understanding and appraising humanity in the culture-lands of China and India. His book[1] comes to us after having passed thru the crucible of his own mind and spread upon the pages of the *Chautauqua Magazine*. Now, thoroly refined and entirely recast, in coarse black print, with red top lines ready for those who delight to ponder great themes, it furnishes a rare feast. The style is clear as crystal, the matter engaging and the whole work thoroly readable.

The opening chapter on America in the East pleads for a completer understanding of the Far East. We are shown the gravity as well as fascination of our task in holding Asiatic possessions. Despite the criticisms of men reared in the school led by Alleyne Ireland and Rudyard Kipling, the author voices the determination of the American people to persevere as they have begun in the Philippines. He then presents in two dramatic chapters the American and the Asiatic point of view, handling each subject with fairness. While showing the discouragements as well as the encouragements in the case, he demonstrates that both Oriental and Occidental do but walk in the ways of their own fathers—their chief reason for procedure—and that their human selfishness and the baser passions, however veiled, are essentially the same. In taking us into India and China and stating their spirit and problems, the author, while laying as much stress as Buckle would upon climate and natural conditions, sees, nevertheless, the higher spirit which overcomes flesh and matter. He challenges the conclusions of the bigoted Occidental. In Dr. Knox's mind there is no necessary East or West, for he believes that the spirit of Asia is capable, thru science and moral freedom, of assimilating the spirit of Europe. He sees a new world to come, with a civilization vastly superior to any history has known. His long familiarity, such as few men have, with the real spirit of Japan—for he has studied well their philosophy and history—enables him to ground both assertion and prophecy on the solid basis of reason. No abler book on the mind of Asia has yet appeared.

Under the solemn groves of Nikko, before the porches of Ise and under the tori-i of the mountain shrines, Mr. Edwards walks reverently. He meditates upon the meaning of the images and legends, seeking to know the reality behind multitudinous symbols. He dedicates his book[2] "To my teachers, the people of Japan." Past the granite and up the lava cone of Fuji Mountain he climbs, noting how this peak stands among the world's sacred mountains, bathed in the same glow of inspiration. On this high place Heaven has come down to man to bless him. Studying the art of the nation, he sees the moral and the uplifting as well as the technical side of the mind-movement. The wet leaves, the castle moat, the slanting rain, the Inland Sea, furnish also texts for his meditations. He finds Japan to be the land of the gods, and enters into the heart of the people by thinking and feeling with them. His is a book of tender meditations, of sympathetic insight. He has made a mosaic out of his many brief chapters which glistens with beauty and has a peculiar charm. Certain Briticisms betray the insular home of the writer, but his heart is that of a citizen of the world who sees in all men the children of one Father. The chapter on "two creeds," which tells how the bodies of

[1] The Spirit of the Orient. *By George William Knox.* New York: T. Y. Crowell & Co. $1.50.

[2] Kakemono: Japanese Sketches. *By A. Herbage Edwards.* Chicago: A. C. McClurg & Co. $1.75.

our own dead sailors, long left in the hulk of the sunken United States steamship "Oneida ("Onega") were borne to burial in a temple yard at Ikegami, near Tokio, by Japanese fisherman, "out of their own hearts, and with the money of their own earning," will awaken in American hearts a cloud of sad memories silver-lined with gratitude. Mr. Edwards is hardly, however, a good Buddhist when he writes "the great God" before Buddha, for the true Buddhist's glory is that Shaka was not god, but man.

To live as a youth in feudal Japan and to gather up the lore about tycoons, ronins, etc., and of gods, men and things which have utterly vanished, and then again, in life's afternoon and as a king's envoy, to enter the same land when panoplied in modern steel and machinery, is a rare privilege. The author of "Tales of Old Japan," whose charming name, redolent of literary associations, is lost in a mob of British lords, has had this unique privilege. As a direct result of the Anglo-Japanese alliance, the Emperor of Japan (no longer called Mikado by his own people) was made a Knight of the Garter. Altho stockings and the apparatus necessary to hold them up were unknown in old Nippon, Mr. Mitford was chosen by King Edward VII to carry afar the decorations so dear to the British heart and leg, and the Japanese Emperor was duly buckled and jeweled. Now we have Lord Redesdale's narrative,[3] and a most delightful one it is, telling us how the Japan of 1905 looks to one who, in many a changed old haunt and historic place, sees vividly what neither the Cook's tourist or even the well-read traveler can discern. Today, besides seeing the ghosts of the Japan of 1860, Mr. Mitford meets the direct descendant of the lord whom the Forty-seven Ronins avenged, who is a courtier in the Mikado's palace, and one of his chief servants is in direct descent from the leading avenger of the band. It is true that Mr. Mitford forgets to state whether the pedigree is a blood line or one but in name, and possibly only thru adoption; for very much of Japan's history is utterly vitiated by the custom of exalting names above persons. As of old, King Baby is paramount in this paradise of children and in the crowd there is no pushing, the place of the children at the front being sacred. The author's pages have a richness of suggestion and interpretation which is absent from those of most writers on Japan, especially the men and women who get drunk or insane thru wild admiration that leads into pitfalls. Being a scholar, Mr. Mitford will not spell Japanese words wrongly, or clip them

A Japanese School. From Knox's "The Spirit of the Orient."

[3] THE GARTER MISSION TO JAPAN. *By Lord Redesdale* [Mr. Mitford]. New York: The Macmillan Co. $1.75.

into senseless shapes, to suit a public fed on the slang of novelists and globe-trotters. For example, he writes jujutsu, instead of the senseless jiu-jitsu. His hosts in Japan, both for sport, travel and high functions, were Admiral Togo and the victorious generals of the late war. Altogether this is a very delightful, suggestive and enriching book.

Another of the older writers on Japan, and one who has had a hand in helping to advance her material civilization, is Mr. J. Morris. A generation ago as an engineer he saw much of the people and country. In 1895, he wrote "Advance Japan: A Nation Thoroly in Earnest," and still later in fiction foretold what Japan would do in war. There is striking contrast between Mr. Mitford's easy diction and polished sentences, and Mr. Morris's somewhat heavily freighted pages, the latter being far from an artist in words. Nevertheless his book[4] is invaluable because it turns from things of the spirit and gives what is virtually a biographical history of the new Japanese Government and nation, laying emphasis upon the concrete and tangible. Rightly does he begin his list of the famous twenty-two "makers" with the Emperor, whose personal attributes he thoroly appreciates, seeing in him a superb exemplar of diligence, frugality, courage, patience and endurance. Rightly also he pays a tribute to the last shogun, Tokugawa Keiki, whom the Emperor has of late years invited to come and live in Tokyo. He tells us of those three men whose names shine as the morning stars of the reformation of 1868, one of whom appeared at Shimoda at midnight on Perry's flagship, begging to be taken to America. When in honor refused by the American commodore, he set up a school at which Ito, now marquis, was pupil. The great leaders of the Restoration, such as Okubo, Goto, Saigo, Kido and others, are then pictured before us, They are shown not indeed in the graphic and vivid style which the subject deserves, but nevertheless with a fullness of description and a sort of official accuracy which, tho dry in statement, furnishes just the trustworthy information which so many are asking for. By means of a good index and a portrait of each of his heroes, Mr. Morris enables us to understand the personalities of the great movement. With most of these leaders he was more or less directly acquainted, and from some of them he heard the story of their own struggles and experiences. Fitly is this sterling collection of biographies closed with a sketch of Baron Shibusawa, financier, promoter and typical man in that first of Asiatic states which is able to borrow money in the world's markets on its credit alone.

Napoleon

IN one brief sentence Emerson marked the gist of Napoleon's character: "The instinct of active, brave, able men, thruout the middle classes everywhere has pointed out Napoleon as the incarnate Democrat." George Meredith, as poet, has called him: "Earth's chosen, crowned, unchallengeable upstart." There lies a whole ocean between these two flashes.

The ninth weighty volume of *The Cambridge Modern History** is devoted to Napoleon. Sixteen historians of note —English, German, Swiss, Russian and French—write the twenty-four long chapters dealing each with a phase of his career or its result to Christendom.

Of avowed character study of Napoleon there is little aside from the last chapter on "St. Helena." That is tersely summed up from De Tocqueville: "He was as great as a man can be without virtue." But the genius and character of the man are so interwoven in the history that more particular account would hardly aid. The recent memoirs and novels having Napoleon at the heart have gossiped and argued over matters that must have been trivial to him, and really affected history but little, and the present work, we gratefully record, gives small note to any such incidents as that of the Countess Walewska. Even in so large a volume as this the attempt to tell the story of the world-changes wrought from the close of the Revolution to the close of Waterloo and St. Helena entails condensation and elimination, yet we find detail and anecdote when needed.

* THE CAMBRIDGE MODERN HISTORY. Vol. IX. Napoleon. New York: The Macmillan Co. $4.00

Professor Pariset, in a compact and admirable account of "France Under the Empire," gives such a picture of the country in its arts, manufactures, education, charities and in its financial and military systems as Professor Green might have given. Napoleon's encouragement of the arts was probably partly taste, partly pretense and partly policy; his favorite composers and painters, not few in number, of course included the best of the time. Literature was a less controllable art, and accordingly Chateaubriand and de Stäel were generally in exile. Professor Pariset's introductory chapter, on the Consulate, is equally just and proportioned, and in its account of the changing form of government and of the secure system of taxation instituted by Napoleon we see at once the opportunity and the multiple man who took it.

We do not know of any better or fuller history in English, of the Napoleonic Codes, than that here contributed by Mr. H. A. L. Fisher. A larger treatment is, we trust, still to come, yet here we see the creative statesman at work. Napoleon himself presided at nearly half of the eighty odd sessions of the council-chosen men, jurists, and he was the brain and the dynamo of the undertaking.

"To Bonaparte's presence we may ascribe the fact that the civil law of France was modified, not only with more scrupulosity than other portions of the French law, but also with a livelier sense of the general interests of the State. What those interests were, Bonaparte knew. They were civil equality, healthy family life, secure bulwarks to property, religious toleration, a government raised about the howls of faction. This was the policy he stamped upon the Civil Code."

Several authors contribute in recounting the intricate foreign relations, diplomatic, military and naval, during the Empire. Professor Oman deals vividly with the Peninsular War, and writes of Waterloo so clearly and swiftly that one feels the whirl of battle and could hardly glance at a map while watching the demoniac fury of Napoleon's last onsets. But Professor Oman needs no tribute. Dr. Holland Rose, too, is known as a master historian, and in the Napoleonic field. After following Dr. Rose's account of the Berlin and Milan decrees, no one can question the cunning and foresight of Napoleon in his long efforts to reach and subdue England. Undoubtedly a world empire was planned, and part of it was to be Louisiana, yet, in the whole volume, five lines tell three times of the sale of the tract, and neither the United States nor any American is in the index. Fortunately, probably, for us. Napoleon saw in our advance a check to England's progress at the time, however closely Saxon blood has since cemented the nations.

But we cannot examine the book in detail and have here simply tried to indicate how large the canvas is and how thoroly it is filled. Very notable chapters for this purpose are those by Dr. Hutton, Prof. Egerton and Mr. Gooch on the "Colonial Expansion of England" and on "England and Ireland." The volume is ample for clear views of Napoleon the man, the soldier, the statesman, and for his effect on the world in government, religion, society and art; and it would demand deference even from the valuable bibliography of works from which its facts and conclusions are drawn—some 3,600 titles representing some 8,000 or more volumes.

The Man in the Case. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co. $1.50.

It is not without intention that Mrs. Ward calls the heroine of her new novel Joan Dare, for she is as brave and tender as her prototype; a New England avatar of Joan of Arc. We confess to rejoicing, after a surfeit of off-color heroines, that we find in Joan a woman really and simply *good*. That she is bravely good makes her not at all less interesting than the complex bundles of nerves, sensibilities and perversities women morally weak are as a rule. Given a nature so fine and purely noble as Joan's, the story is logical, even inevitable, altho it is unusual. Joan could hardly have been placed in a position more favorable to the cruel misunderstanding and censure of a little community; her martyrdom under the slow corrosion of scandal is not unnatural, nor is the note of suffering forced; we have the feeling that it might have happened in any little town. Mrs. Ward is to be congratulated, too, upon drawing

a clergyman of an unconventional type, at least so far as the usual minister of the novel and the play is concerned. Our gorge has often risen at that miserable creature who resembles a real minister about as much as a scarecrow resembles a man, who struts and fawns and whines upon the stage, and we have wondered why an essentially noble profession should be so persistently caricatured. Miss Dare's pastor is a man. The hero is a good sort, too—for a hero. The mystery, for there is one, is cleverly managed to keep the reader guessing whether or not poor Joan had contracted an unhappy marriage before we have the honor of making her acquaintance. She is a distinct acquisition to our list of brave ladies who have moved across our horizon in history or fiction. The book contains a lesson which, perhaps, we all need, as to the cruelty and fatuity of judging man or woman without a full knowledge of the facts in the case. To live under the shadow of a crime is hard enough at best; it easily becomes intolerable if we add ostracism to the inevitable suffering of one who must not or connot explain her position. *The Man in the Case* is a strong story and its heroine a sweet woman, and we only hope repentant Mapleleaf appreciates her as it should and that it has expiated its suspicions.

Handbook of Polar Discoveries. By A. W. Greely. Boston: Little, Brown & Co. $1.50.

Now that America holds the record for "farthest north" this new and revised edition of General Greely's *Handbook* is especially welcome. Within the compass of 300 pages it includes a complete compendium of polar exploration, both north and south, from the earliest times to 1905, with bibliographies of the literature of the topic appended to each chapter. There are twelve maps. Of course a book so closely packed with names, dates and degrees is not light reading, and can contain little of the romance and adventure of the narratives of discovery, but it is a great public service to have these voluminous narratives studied, digested, criticised and reported by the foremost authority on the subject.

Alexander Hamilton: An Essay on American Union. By Frederick Scott Oliver. New York: G. P. Putnam's Sons. $3.75.

The work which Mr. Oliver offers half apologetically is not another life of Hamilton, but rather an appreciation and a commentary. It is written by an Englishman of culture and leisure who ponders deeply upon the great problems now confronting England, and who thinks that Hamilton's life and work teach a lesson to British statesmen. He is frankly a strong admirer of his hero, but is rarely partisan. In political foresight and penetration he thinks it "no extravagance to place him by the side of Burke," and he asserts that Burke "shares with Fox his astounding genius for friendship." Again, "a character less mercenary, and less concerned in any personal advancement, save as a means of rendering better service to the state, has never played a part upon the public stage." Youth, Mr. Oliver thinks, was the distinguishing note of Hamilton's career. "His triumph was the triumph of youth; his failure the failure of youth." It may aid us in understanding the author's view of his subject to note his prefatory remarks on the existing lives of Hamilton. "The only vivid account of 'the man' is to be found in the historical romance by Mrs. Atherton, entitled 'The Conqueror.'" This, he thinks "a most serious and truthful portrait," for Hamilton was not merely a good soldier, a great lawyer, a statesman of rare and exceptional splendor, "but also a figure of deep romantic interest." The explanation of his character, however, is not to be found in the dramatic temperament, for "had he been a better actor, he must assuredly have been a more successful politician," he was incomprehensible to the politicians of his time, who could not believe that he really loved union and order and progress for their own sakes. Enough of Mr. Oliver's estimates of his subject have been submitted to present fairly his attitude toward Hamilton, but there is a moderation in the whole execution of the work which the above quotations do not fairly represent. The plan of the work is novel, and is upon large lines, omitting many minor phases of the life and dwelling long upon Hamilton's part in the War of

Independence, in bringing about the union of the States, organizing the Federalists, fighting the Jeffersonian faction, and making the last desperate struggle with the politicians who were seeking his ruin. The last division of the book discusses the bearing of Hamilton's career and ideas of government upon the present problems of the British state. Tho the book has some marked blemishes, it is so filled with deep and original thinking that it is worthy the careful attention of every student of Hamilton and our early political history. I' is written in an interesting, cultured style, which at times becomes brilliant.

The Apostolic Age in the Light of Modern Criticism. By James Hardy Ropes. New York: Charles Scribner's Sons. $1.50.

A few years ago German biblical students gave enthusiastic praise to a thesis by a young American scholar on the Agrapha, or sayings attributed to Jesus not contained in the canonical gospels. The author became a professor in the New Testament department at Harvard, and in 1904 delivered a course of Lowell Institute Lectures on the Apostolic Age. The publication of those lectures places within reach of those who may be inquiring what New Testament criticism has done with the reputations of Paul and Peter a clear, graphic account of the happenings of the Apostolic days as at present understood by historians. Profesor Ropes is a careful scholar and a fair-minded critic. He refrains from needless offense, is neither dogmatic in manner nor extravagant in statement, but reasonable and gently persuasive, of a spirit calculated to promote the progress of the truth rather than to incite reaction. He is more conservative in critical opinion than many who hold the same general position. For example, he holds the Acts in higher estimation in point of historical trustworthiness than does Professor Bacon. The ecclesiasticism of the early chapters of Acts, the emphasis upon the Apostles and the organized Church, do not dissuade Professor Ropes from holding that Luke, the author of the "we sections," is responsible for the entire book. Of the letters attributed to Paul he rejects only the pastorals as non-Pauline. Literary questions, however, are kept in the background that the history may stand out boldly. The aim is to describe the currents of thought and life which made the Apostolic Age so great, and the success of the endeavor is notable. The sketch of the personality of Paul in the Fourth Lecture is an admirable piece of writing, one of the best examples we have seen of popular presentation of critical studies. Considering the field covered the work is brief, but more than a compensation for inadequacy of space to certain details is offered in the clarity and vividness in which the whole movement is portrayed. The *résumé* of recent criticism bearing on the period is fair and impartial.

Literary Notes

THE "Memoirs of the Late Chancellor Prince von Hohenlohe," the publication of which in Germany has called down the wrath of the Kaiser and overthrown the reputation of several Teutonic idols, will be brought out in this country in translation very soon by the Macmillan Co.

....A book about preaching of decided merit is Prof. Lewis O. Brastow's *The Modern Pulpit.* (New York: The Macmillan Co., $1.50.) The influences in thought and life which have shaped modern preaching are submitted to careful examination, and the work of great pulpit orators of the last century is brought into relation with the tendencies and movements of their times.

....Putnams announce the publication of a History of English Literature as comprehensive in scope as the "Cambridge Modern History." Like the latter, it will be written by a number of competent scholars, under the editorship of Dr. A. W. Ward and A. R. Waller. It will be issued in fourteen royal octavo volumes of about 400 pages each.

....The temptation to quote Byron when traveling in Italy is exceedingly strong. Very few tourists are able to resist it except those whose memory is poor. But to give the right quotation at the psychological moment is an art which all do not have by nature, and to such the collection of the references to Italian scenes and events by Lord Byron, entitled *With Byron in Italy,* will be useful. The selection of extracts from his letters and poems is made by Anna Benneson McMahon, who also edited "Florence in the Poetry of the Brownings" and "With Shelley in Italy." There are over 60 good reproductions from photographs which add greatly to the vividness of the poetical descriptions. (McClurg. Chicage. $1.40.)

Editorials

Professor Burgess's Berlin Lecture

We are utterly unable to understand how Professor Burgess, for many years past a resident of New York, presumably familiar with political events and the current of American public opinion, could have permitted himself to assert in his first Berlin lecture that the Monroe Doctrine was almost obsolete and nearly senseless. There were, he said, in the policy of the United States two doctrines which were regarded "almost as holy doctrines":

> "These are the high protective tariff theory and the Monroe Doctrine. Our politicians do not appear to have the least notion that both of these doctrines are almost obsolete, and that the reconstruction of European states and their constitutions and the acceptance by the United States itself of its position as a world power have made them appear nearly senseless."

The word obsolete has a distinct meaning. Can it be said truthfully that either of these two doctrines has "gone into disuse" in the United States, or is regarded here as old-fashioned or antiquated? The question is one of fact. Professor Burgess was living here at the time of the Venezuela message. He has been a resident of New York since Mr. Roosevelt became President. Surely, he must know that at no period in recent times has the Monroe Doctrine been more widely accepted and supported by the American people than in the last few years. It has been amplified and adapted to present conditions. Respect for it and belief in the importance of it have exercised a powerful influence for the enlargement of our navy. The Professor admits that discussion of it may not even be proposed by a foreign power "without risk of awakening hostility in the United States." This is an indication that it is not obsolete or even obsolescent. Even a rumor that Germany was negotiating for a little island in the Caribbean was enough to give it fresh vigor in the minds of our people. Mr. Roosevelt has given aid to Santo Domingo in order that we might avoid that enforcement of the Doctrine upon which the nation would, we believe, insist if European Powers should take even temporary possession of a part of that island. The Monroe Doctrine is not obsolete in the United States.

Ought it to be? Perhaps the Professor intended to say that it deserved to be obsolete, owing to the laying aside of monarchical government and the adoption of democratic institutions in varying degree by European nations. This is, of course, another question. We believe that the Doctrine, as set forth by our present Government, ought to be maintained. Such, we think, is the belief of a very large majority of the American people.

The spread of democracy in Europe has been for the good of the world, but it has not made every European nation a community of altruists. Hunger for territory, for colonization, for extension of power in the interests of trade, is still there. Even in these days of parliamentary institutions it is sometimes satisfied with a deplorable disregard for the rights and well-being of outlying foreign peoples who have something that is coveted. European Powers are not yet fully qualified for the millennium. Nothing but the attitude of the United States standing firmly upon the Monroe Doctrine, has, in our judgment, prevented the acquisition of territory in South America and in the neighborhood of the Panama Isthmus, in recent years, by certain nations of Europe.

We object to even the temporary possession of American territory by these Powers, when they seek the payment of debts; and it is partly because we cannot clearly foresee the date when, once having taken hold, they will let go. It is better for the debtors and better for us that they should not take hold, but should submit their claims to arbitration. The trade conscience of a European Power is easily molded this way and that. It is not difficult to find reasons in exports. For emigrants, too, places are wanted where they will not be alienated, but will remain subjects of the mother country. The independent peoples south of us are entitled

to retain their independence. We do not desire to take it from them; we are convinced that our interests as well as their own demand that foreign nations shall not be allowed to deprive them of it. We do not undertake to enumerate here all the reasons which warrant a maintenance of the Doctrine, or even to set forth fully any of them. But they seem to us to be sufficient.

The United States is not estopped from insisting upon the Doctrine because it has recently taken a larger interest in world politics. We came into possession of the Philippines by accident, and it seemed to be our duty to hold them. We seek no territory on the other side of the Pacific. Our participation in world councils has been in the interest of peace and arbitration; it was not designed to indicate any desire on our part to adopt the methods of the advocates of colonization and forcible expansion. The Monroe Doctrine is not "nearly senseless." It ought not to be obsolete in the United States. In our opinion it never will be.

The original theory of our high protective tariff has been laid aside, and by some may have been forgotten; but this is not due to "the reconstruction of European States and their Constitutions and the acceptance by the United States itself of its position as a world power." Indeed, this change abroad has been accompanied by a considerable growth of protective tariffs, notably in the German Empire itself. Our high duties are no longer imposed for the creation of manufactures and the protection of infant industries. Nor do we give much thought now to the later but almost forgotten theory that high duties make low prices by stimulating competition in the protected home market. The infants have become giants, and competition under the shelter of the tariff wall is becoming obsolete. The benefits of protection are enjoyed in many instances by monopolies, or by combinations by means of which monopolies are being developed.

High protection is not obsolete here, altho, with respect to many of the tariff schedules, the present degree of it ought to be. It does not appear to be menaced now by popular disapproval. The demand of Governor Cummins and his associates in the Middle West for revision downward is no longer heard. In Massachusetts the desire for cheaper coal and for lower-priced leather in the shoe trade has been obscured by an intense interest in other subjects. A revision of the Dingley duties will be deferred for a considerable time, unless Mr. Roosevelt shall insist upon it.

The theory upon which a majority of the advocates of the present high duties rely is that they are needed for the maintenance of prosperity and the present scale of wages. So far as competition from abroad is concerned, however, it would still be barred out in some industries if duties should be reduced one-half, and in others if the duties should be wholly removed. Extremely high rates have suggested and invited combinations that should make home prices as high as the tariff would permit. At the same time the manufacturers thus combined have sold a part of their product abroad at prices far below those exacted from their fellow citizens. The result of protection at the existing rates has been a highly artificial situation, and one clearly unjust to the majority of consumers. The theory of which we have spoken is by no means a "senseless" one from the protected manufacturer's point of view; it is not one, however, that deserves the support of our people as a whole. The present tariff ought to be revised thoroly and downward.

Undoubtedly, Professor Burgess did not intend that in what he said about the Monroe Doctrine he should be regarded as representing the views of Mr. Roosevelt. But the context shows that his remarks permitted such an inference. He had said that the President had addressed him as an ambassador of peace and civilization. He then expressed the President's opinion of the project for an interchange of professors. Some may have thought that he was still reporting Mr. Roosevelt's words when, immediately thereafter, he said that this interchange made it possible to subject to the most fundamental examination "questions of the highest importance, which can scarcely be touched upon in a diplomatic way." One of these was the Monroe Doctrine, which he straightway declared to be almost obsolete, thereby

compelling a prompt announcement from the White House that the President did not think so. This is unfortunate, but the discussion excited by the incident may do more good than harm.

The Public Will Win Out

POWERFUL as the privileged plutocratic interests are, they are not as powerful as the people. Their present advantage lies in three things: first, their privileges; second, their wealth; third, their class-conscious solidarity and effective organization.

Of these three advantages, the third is chiefly important. The wealth would be dissipated and the privileges would be lost if they were not at every instant safeguarded by the intense class consciousness of their possessors.

It is amusing to hear the gentlemen of "the better element" revile the proletariat agitators for stirring up "class feeling" and setting the poor against the rich. It will take many years to create among the poor a class consciousness that will measure up against the class consciousness of the protected, pampered, privileged owners of American trust-organized, franchise-bottomed industrial capital.

This makes the task of establishing public control and of restoring their republican rights to the people one of great difficulty. "The people" is a heterogeneous compound of races, nationalities, classes, sagacities, stupidities, passions, indifferentisms and everything else that you can find mentioned in the unabridged dictionary. To unify and organize this medley of incongruities and vivify it with a collective consciousness, able to make headway against the class consciousness of a compact minority, seems sometimes like an almost hopeless undertaking. Probably it would be hopeless if the privileged plutocracy, by its bold disregard of justice, did not continuously provoke the multitude to righteous wrath. A keen sense of wrongs endured and a feeling of common interest are the fire that is fusing recalcitrant elements into a true public spirit.

The progress that the public will make toward its rightful supremacy will be marked by some interesting surprises. A few years ago reformers surrendered themselves to an ardent enthusiasm for "good government." By ignoring party lines, choosing good men for office and fostering civil-service reform, they really expected to correct most of the abuses which had crept into our republican scheme of life. It puzzled them not a little that the great political organizations never took them seriously. Least of all did a great popular organization like Tammany, which has always been more than a political machine, see in the "goo goos" anything to be alarmed by. The reason for such unconcern is apparent enough now. Goo-gooism hardly scratched the surface of our real difficulties. Our actual political system has its roots deep in the economic life, in property, in privilege, in the sources and control of income. A reform that does not get down into that economic underworld is without substance or significance.

Just now the pendulum swings to the other extreme of misunderstanding. The socialistic philosophy is in the air. It is as radical as goo-gooism was superficial. It says that nothing can be done until the whole existing social order is swept away and collective ownership of the means of production is substituted for private industrial property.

The fate that will overtake this philosophy will be as disconcerting as that which overwhelmed the dainty good-governmentites. The masses of the people are not ready for wholesale collectivism. They do not understand it. With their present endowment of intelligence and altruism they could not manage it if they had it.

Nevertheless, the rising tide of discontent, the demand for positive and genuine amelioration of conditions, will bring an increasing pressure to bear upon all the mechanisms already in existence for expressing the public will. It will get more and better work out of the means of social control that are at hand. Municipal governments, courts, legislatures, State and national administrative organs are feeling the new power, and they are responding to it in acts that already terrify the privileged and inspire the people with fresh hope.

To mention a concrete instance: The fight which the people of Chicago have waged against the Traction companies of that city has resulted in a complete surrender of the Traction interests to the public will. Face to face with the certainty of public ownership and control unless a real public service is granted to the people, the Traction companies now propose an ordinance granting to the companies no renewal of franchise, but, instead, a mere license to do business during good behavior. They offer to pay a percentage of receipts to the city; to pave, repair, clean and sprinkle all streets occupied by their tracks; to bring their equipment and service up to the highest modern standards; to provide a universal transfer system; to install the underground trolley after five years, and to expend now five million dollars on subways in the most crowded downtown district, in accordance with plans to be approved by the City Board of Engineers.

This proposition, of course, amounts to a frank confession that the policy of the companies hitherto has been one of systematic robbery. But let that pass. The public has shown that it is more powerful than the privileged interests, that it can get what it wants when it knows what it wants, and makes up its conglomerate mind to have it.

We shall see a great many public victories like this one in Chicago. The public can win out, and it will.

The Personal Campaign

THERE have been two principal events preceding the election. One was the surprising pronunciamento of Mr. Croker against Tammany's endorsement of Mr. Hearst; and the other the remarkable speech in Utica of Secretary Root, also against Mr. Hearst. It is a tribute to the personality of Mr. Hearst (whose name the New York *Times* says is a simplified spelling for *Hearsed*) that both of these are an attack on the multiple editor of the yellow press, the man whose money, whose newspapers, whose army of able lieutenants, and, we must add, his own ability, audacity and knowledge of popular unrest, have made him not only the master of the Democratic party in this State, but almost a confessed candidate for the Presidency. Doubtless Mr. Croker was as decent a leader as Tammany's ill succession can count, but even he left his country for his country's good, and whether his distant condemnation of his successor, Mr. Murphy, will have any influence on the rank and file of Tammany will be known to our readers when they read these lines. It is not strange that in his detached position he is amazed at Murphy's alliance with the man who has exhausted the dictionary in lampooning him, and who confesses that he likes Hearst as little as Hearst likes him. But necessity is the mother of strange political bedfellowship.

Mr. Root's speech is easily the ablest of the campaign. It spoke for the President in a way unusual for a President to utter himself in a political campaign. It enumerated the acts performed by the President, Congress and the country in restraint of corporate greed and lawlessness, and not only showed the vulgar and reckless demagogery of Mr. Hearst's career, but voiced frankly the President's absolute condemnation of this ambitious millionaire. Certainly President Roosevelt must have thought that a peculiar exigency and danger existed to have drawn him, President of the whole people, to take part, even in his own State, in this political conflict. But whether Mr. Root's late entrance into the campaign has been of any advantage will be better seen when the votes are counted. The Hearst newspapers have devoted their attacks since then less on Hughes than on Root. They have lampooned him in text and cartoon as the creature and defender of trusts and crime, from his early defense of Boss Tweed to his later service to various rich corporations which can purchase the highest legal talent. And so they have declared that Mr. Hearst is, like Mr. Cleveland, to be loved for the enemies he has made, of whom Mr. Root is the most unscrupulous and the chief counsel of the robber corporations. This brings up to view a very serious old question as to the duty of the bar in its relation to the defense of criminals and of those corporations which seek illegitimate wealth.

Reliability

As we grow older we gradually come to the belief that this is the best kind of ability. When we are young we are fond of Roman candles, but as we get more experienced we prefer ordinary candles on the principle that a light in the hand is worth six in the sky. So, too, as civilization matures reliability becomes of greater importance in the world. The more complicated and delicate the machine the more essential it is that each wheel shall run true and each rod be up to its calculated strength of material. The savage may be erratic. The civilized man cannot, for he is a cog. The savage can lay off and take a vacation any time he wants to, but the man who runs the dynamo has to be around on time every night without fail. If he does not he loses his job, and the next job and so on, until he reforms his habits or gets into some place not yet systematized by civilization where a little wobbling and lost motion is still permissible. England expects every man to do his duty much more positively in 1906 than she did in 1806.

The preacher grows to have a great respect for the man whom he is sure of seeing in his pew every Sunday morning, and for the woman whom he knows will be at the mid-week service. The Bridge Club and the Society for the Abolition of the Devil's Picture Books are equally dependent for their existence on the few who come to the business meeting. There is one thing that every society, club, lodge, caucus and committee must have, and that is a quorum.

Readers sometimes wonder why editors put so much matter of mediocre quality in their magazines. Now there are two reasons for this. One is the same as the answer to the old bucolic conundrums: Why does more corn grow in crooked rows than straight ones, and why do white sheep bear more wool than black ones? The other reason is that when it comes to ordering an article the editor is very apt to write for it to a man who, he knows, will send one on time and of the right length and ready to go down to the printer without having to be rewritten or searched for concealed bombs. He knows of a man who might send him a more brilliant article, but then again he might not, or it might come the day after the magazine went to press. The tortoise still beats the hare in the long run, or, since the simile is antiquated, let us say, that the automobile that goes fifteen miles an hour right along is better than one that goes like sixty and breaks down.

What the employer values most in his employees is reliability. He wants men he can depend upon to do a certain kind of work at a certain time and in a certain way and to keep it up. Such steadiness of work does more than anything else to insure steadiness of employment and promotion. It always brings a little more than the market price. The employee puts a similar high value on reliability in his employer, but he is not so well able to enforce his desires.

It is a favorite subject of speculation with classes graduating from college to test their powers of prophecy by "picking the winners" among themselves. Twenty years later the class roll arranged in the order of success in life is a very different one from that of the class prophet, the chief surprises being that some of the plodders have gone past the runners. The error in the original expectation is usually in underestimating the importance of the factor of reliability. Probably a class list arranged with reference to this alone would be less likely to be upset than one constructed solely on the basis of popularity, wealth athletic achievement, brilliancy of intellect, fluency of words, or any of the other qualities usually considered. It is a great surprise to smart people to see duller people get ahead of them, just as much of a surprise as to see how much faster four per cent. regularly compounded quarterly counts up than ten per cent. speculative investments. Some very prominent men we know are doing a large business with a small mental capital.

But we must not fall into the common error of thinking reliability is an attribute of mediocrity. If geniuses are more erratic than ordinary people it is because they are allowed to be. Their gifts make them privileged characters. They can afford to indulge failings that are too expensive for those less richly endowed by nature. All of us ordinary people are eccentric at heart. If we followed out all our impulses we would

qualify for admission to the volume on "The Eccentricities of Genius" with the worst of them. But many great men have been remarkable for their steadiness of purpose, unflagging industry and continuity of effort, so much so as to give rise to the current definitions: "Genius is an infinite capacity for taking pains," "genius is simply hard work," "genius is not inspiration, but perspiration," and similar semi-truths. It is a question anyway whether the reputation of geniuses for unreliability is not quite undeserved. The artists, authors and orators we know are quite as much to be depended upon as the office boys, the tailors and the plumbers of our acquaintance.

At any rate, it is fortunate that a quality of such great importance for success and usefulness, so highly valued in the commercial and industrial world, is within the reach of all of us. It is free, like air and light and water and the other good things of the world. We cannot all sing or speak in public or paint pictures or grasp complicated business transactions, but then there is no great demand on us to do any or all these things, while we can all be faithful and dependable in whatever we can do, and for this there is always a great demand. The market is always short on reliable people. It is impossible to overstock it. They are wanted in every calling, legitimate and illegitimate. There are situations open for reliable workmen, reliable lawyers, reliable governors, reliable generals, reliable husbands, reliable gamblers and reliable pickpockets. It is one of the stories told of the political boss who sat for the portrait of the "Jethro Bass" of "Coniston," that he often complained that politics were rotten in New Hampshire because there were so few honest voters. When asked what he called an honest voter he answered: "Why, an honest voter is a man who stays bought."

Abolishing the Death Penalty

THERE are intelligent men and women who think that France is the most civilized country in the world. They are not troubled by the common assumption that Parisians are mercurial and immoral. They point to the sane comfortableness of French life, to the remarkable approximation to economic equality, to the high degree of personal liberty, to the gracious courtesy of French manners, to the love and appreciation of beauty, to the perfection of the Frenchman's literary art, to the achievements of the French intellect in science.

These admirers of the French people have much reason in their madness. France is a civilized nation; like every other nation, containing much neither admirable nor commendable, but, nevertheless, offering to her sister nations immeasurably more that is as sound as it is beautiful, as beautiful as it is sound.

And among all the contributions that France has made to human civilization the greatest, curiously enough, is her contribution to the highest ideals of morality. Mr. Kipling once remarked—he happened to be speaking of Englishmen —"We're most of us liars; we're half of us thieves." He might have added—and extended his survey to the Anglo-Saxons of America: We are all of us unnecessarily stupid in our judgment of the Continental Europeans. And this habit that we have fallen into of looking upon the French as pre-eminently immoral is really extraordinary in the light of historical facts.

For it was the French people who, in the days of the Revolution, and afterward, struck out those great principles of workable moral relations among men upon which a true social democracy can be built, principles which the other peoples of the world are only now beginning to understand as the French have understood them for a hundred years. We must not forget that, while the American Revolution established national independence and prepared the way for republican self-government, the French Revolution went far deeper. It was a social as well as a political transformation. It struck at unrighteous privilege. It grappled with the problems of social and economic justice.

And now, when these principles of the Revolution as a great moral lesson have been working in the French population for a century, they bring forth moral fruit that compels other nations to ask themselves where they also stand as creators of the highest humanity in thought and deed. The French people propose now

to deal with the world-old question: "What shall we do with Cain, the murderer?" by other methods than those of savage vengeance, or of the Hebraic law of life for a life? France will attempt to solve this terrible problem by science and human restraint.

What measure of success may attend this experiment no one may venture to predict. But no thoughtful student of social psychology can doubt that the experiment ought to be patiently and systematically tried. Certain it is that the guillotine has been a horrible factor in French criminality. French criminal records abound in evidence that it has been potent in the actual production of cruelty, of degeneracy, and of that strange perversion—criminal egotism. Distinguished French criminologists, like the lamented Gabriel Tarde, have labored earnestly to show their countrymen how large a part is played in criminality by example and suggestion. Familiarity with the gruesome horrors of the guillotine have undoubtedly been a large element in French criminal psychology.

All will depend upon the firmness with which the policy of life imprisonment is maintained in substitution for the death penalty. We have great faith that the French people will bring their remorseless logic to bear upon this, as they have brought it to bear upon other practical questions of civilization. We congratulate them upon having taken a forward step which they are peculiarly well qualified to live up to. It is only a question of time when public sentiment the world over will prohibit the further taking of human life by public authority. We look to the French nation to show how public authority can otherwise protect human life against the murderer.

The Scarcity of Labor

In this country there was never a greater demand for labor. Whoever will can find work; and yet there are thousands who find no work—perhaps because they do not want it at the terms offered, or do not want it at all. And there are other thousands who seek for laborers and complain of the scarcity of labor, perhaps for the same reason, that they do not make the conditions of labor attractive enough.

The complaint comes from many sources. In this country housewives complain that they cannot get servants; farmers complain that they cannot get farm hands, and planters complain that they cannot get hands to pick their cotton. In other lands we occasionally hear the same cry. Mr. Shonts tells us that he cannot get competent men to dig the canal, without going to China for coolies, and then the digging is let out to contractors so that the Government which refuses to admit Chinese into this country may escape the immediate responsibility for importing them to Panama. In South Africa, when the natives failed to accept in sufficient numbers the invitation of the gold and diamond magnates to dig in the Reef and the blue clay, the "scarcity of labor" was the excuse for importing Chinese coolies by the ten thousand to do the work.

There are men, and a good many of them, who would rather steal or beg than work, and they should be treated on the old maxim, 'If a man will not work, neither shall he eat." But leaving out that class, whom society and law can and should eliminate, we believe the cases are very few in which there are not workmen enough if the conditions are made reasonably attractive. And in some cases no great loss will accrue if the work is not done. We fail to sympathize with the poor owners of the Rand and diamond mines, Beit and the rest of them, if their output of gold and precious stones is reduced. If but a few natives will accept the pay offered for very hard and disagreeable work, and few white people, then let Messrs. Beit and his shareholders gather a few barrels less of diamonds. The world will be none the poorer off for it. Let a few million less ounces of gold be extracted. The world's remaining store of gold will be so much the more enhanced in value. The groans and pangs of the millionaire owners, which so roused the sympathy of the late British Government and gained the privilege of importing cheaper labor from Canton and Hong Kong, do not touch us to tears. We should say that if the men will not work at the price offered, and under the

conditions of labor, then make the conditions more attractive and the pay more acceptable, and then be satisfied with a bit less profit. It is not essential that men should get to be multi-millionaires by requiring men to work at scant wages.

It is much so as to the Panama Canal. In this country if we cannot offer a price to attract labor we go without. When we want labor enough we pay the price that will attract it. It is to be expected that in that debilitating climate men will not do the day's work that they will do in this country; and we must be satisfied to get less, and perhaps pay less; but we must make the pay large enough to draw the men who will want it. Very possibly the Jamaican negro does not do as much work as the Chinese—possibly wants to go home oftener, possibly wants more and better food. But we remember that of eight hundred Chinese whom the French took to the Isthmus two or three hundred committed suicide, and less than two hundred were left alive when a few months after they were brought there the remnant were shipped to Jamaica. We fear it will take a cordon of shotguns to keep them at work when they find that they can do better by market gardening at Panama.

On the Southern plantations it is said to be difficult to get negro labor to work for white planters at the wages offered. Doubtless, for more boys and girls are going to school, and their parents prefer to work on their own land. The condition is much like that with the Irish who a generation ago wielded the shovel and pickax on our streets and railroads, but now their children seek higher employment, and the Italians, for a generation, take their place. They can make a better living working for themselves or employed in the towns. Those who want them must pay the price and not complain. If they will not raise the wages they must go without labor; that is all. There is nothing sacred about the old scale of wages, any more than there is about the old scale of prices for food and furniture. And it must be remembered that growing culture brings new wants and requires more wages to satisfy them.

Much the same thing is true as to domestic service. There are those who have no trouble whatever in getting what domestic servants they want, and of fairly satisfactory quality. They pay well, and they make conditions attractive. They keep their servants year after year. Servants have rights, and the chief one is to be treated considerately, as fellow human beings, of the same blood as their employers, who must be well fed, well housed, allowed sympathetic companionship and comfortable wages. If good servants are scarce because they are attracted to the factories, then it is time to increase the attractions of their service—that is all that can be done, and it is of no use to bluster and find fault because men and women will not flock to do the less attractive and humbler tasks. It is fine if they have found pleasanter and more profitable work. Let us meet them by making the humbler tasks more worth their while.

Peary's Approach to the Pole

We acknowledge great satisfaction in the success of Commander Peary in getting a few miles nearer the Pole than any previous explorer. The geography of that most worthless region of ice and waste does not so much concern us as the display of persistent and daring pluck. And we are not sorry that it is an American who again takes the record from his brave Italian predecessor. He means to try it once more. The final achievement of the Pole will not give us another pound of whalebone, nor will it open any new route of navigation; it will simply add useless knowledge. But useless knowledge is worth enormous labor as mere knowledge. The discovery of conditions about the Pole, whether land, or grounded ice, or floating ice, or open water, is of no more practical value than is the discovery what is the nature of the canals of Mars, or the constituents of the rings of Saturn, or the chemical composition of variable stars. And yet astronomy has long been regarded properly as the queen of sciences. The man who at great risk adds to the useless knowledge of the hitherto inaccessible Arctic ice-cap deserves the same kind of honor that we give to the astronomer who wears out his eyes and his nerves in

sleeplessly sweeping the heavens with a telescope or studying stellar photographs. Most knowledge is at first profitless for food or shelter, but it is exhilarating to the soul just the same.

Bondmen and Bondsmen

There is great difference between being a bondman and a bondsman; such is the value of a sibilant. A bondman gets much work and no money; a bondsman gets no work and much money. Our city papers are now telling tales on the municipal magistrates. Some of them have a fancy for certain bondsmen, and give them the preference when misdemeanants are to be released on bonds. The other day a number of raids were made on disorderly houses, and forty-four women had to go to prison or put up bonds of $300 each for good behavior. That is the chance for the professional bondsman. One of them got the privilege of being on the bond for twenty women. That meant that each of them had to pay from $30 to $50 to the bondsman to be let out of bondmen's prison, a pretty profit for a day's work. Just why any magistrate should allow such graft can be only a matter of conjecture, but the Bar Association is going to investigate some serious charges that have been floating about as to certain magistrates. What can we expect of the present system of judges appointed for their political services, and required to pay thousands of dollars for their nomination?

The Castellanes

It is impossible that Anna Gould could ever have married Count Castellane if she could have guessed the character hidden under his pleasing exterior. By the evidence presented by the Countess for the divorce Count Castellane has been a brutal, extravagant man, who has wasted millions of his wife's money, which he forced her unwillingly to put in his power. He is a vulgar brute, untrue to his marital duties, and unfit to associate with decent men, not to say a decent woman. And this is not the only case in which American women of wealth have found they have made a sad mistake in marrying a foreigner with a title which needed to be gilded with a wife's money. We are not of those who assume that every American girl who has married a count or duke has sold herself for a badge to her name, for we believe that in not a few cases they have been deceived by the attractive superficial culture of the man who sought their hand. But of all women the millionairesses need to be suspicious of the purpose of an impecunious, showy admirer. Even Uriel, the sharpest-sighted of all the archangels, was deceived by Satan in the innocent guise of a stripling cherub:

> "For neither man nor angel can discern
> Hypocrisy—the only evil that walks
> Invisible except to God alone."

It is to the credit of the Countess Castellane that she intends to maintain her residence in France, and bring up her sons to be worthy of their mother and to rescue their father's name from shame.

Church Union in Canada

During this month the three committees of the three denominations, Methodist Protestants, United Brethren and Congregationalists, will meet in Pittsburg, Pa., to perfect the terms of the proposed union between the three bodies. These committees will be broken up into subcommittees, one on doctrine, another on polity and another on vested interests, such as benevolent boards, publishing houses, colleges, etc. No serious difficulty is anticipated in coming to an agreement. It is curious that the one point on which a nervous fear has been expressed is on the name, and by common consent this has been left until everything else has been agreed upon. A great deal of sentiment gets entangled even in what was at first a poor name. In Canada the Congregationalists and the United Brethren have agreed on a form of union which, if not quite organic, approaches thereto. The United Brethren are to retain their identity as the United Brethren Association of Congregational Churches. It was also agreed that they retain both their superintendency and itineracy and the right to establish courses of study and standards for the ordination of the ministry, as well as the administration of benevo-

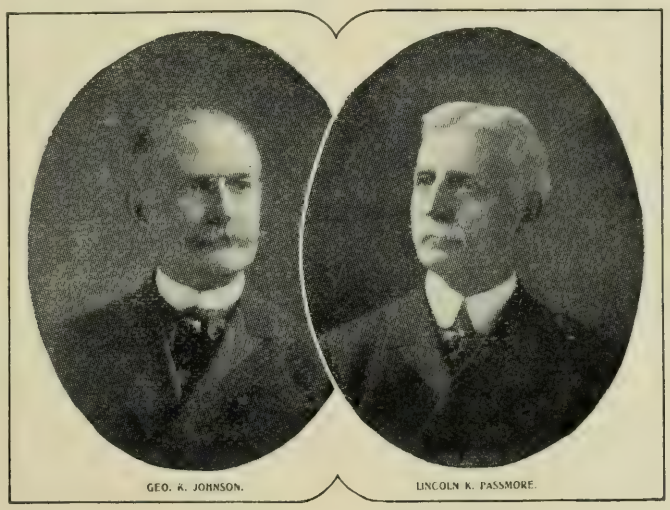
lences. A plébiscite was submitted to the United Brethren Churches, which was almost unanimous, the opposition to the basis being almost entirely in one congregation. The Congregational Union in Embro last June ratified the work of the committee, and the annual conference of the United Brethren at Sherkston in October was prevented from consummating the union by the need of legislation to safeguard their property to the body when the union is effected. Bishop J. S. Mills, D.D., who presided over the Conference, announced a complete and amicable severance from the parent body in the United States in order that union might be accomplished. Not a word was spoken in opposition to union. Legislation will be applied for at the coming session of Parliament, and when this is granted the ministers and churches will be enrolled in the Congregational Union of Canada.

That the Bible should pay toll and taxes is a bit strange. One is offended to learn that when Mr. J. Pierpont Morgan sent to this country lately the fine Cluny manuscript of the Bible, and with it an illuminated copy of the original order of arrest of John Bunyan, the Custom House officials appraised them at $25,000 and made him pay duty of $4,000, on the ground that the illuminated parchment volume is a work of art, and therefore dutiable. The manuscript was completed over six hundred years ago, but our manufacturers must be protected, we suppose. In any revision of the tariff certainly ancient works of art of every sort, and modern as well, should be made free, if only in the interest of education.

Scarcely less than in the contest in this State has this election been based on personalities in many other States, whether we look at Massachusetts or Pennsylvania or Minnesota. Everywhere in this off year, the charges of corruption have been made prominent, as in Pennsylvania, or the rings have been charged with complicity with the exactions of corporations, and an attempt has been made to elect those who will reform the ways of the railroads and other corporations. On the whole the discussions have been on what are moral as well as financial questions, and the result will surely be of advantage to the public conscience and to political purity.

President Roosevelt has done another unusual and excellent act in directing the United States Department of Justice to help the Japanese in their fight in the courts to compel the San Francisco Board of Education to put an end to its discrimination against Japanese children. He sees that fighting children is a sad business. But the board declares that it must obey the California law until forbidden by a Federal court. We fear that the court will be compelled to pronounce that the segregation of Japanese children is no worse an offense than we allow as to our own children.

The Central American republics of Costa Rica, Salvador, Honduras and Guatemala have signed a treaty between them which can hardly be improved, so far as arbitration is concerned. Any and all differences between these four little nations are to be settled absolutely by arbitration, and the United States and Mexico are asked to be arbitrators. And yet the United States has not a single general treaty of arbitration with any nation. How long shall it be thus?



There is a difference of view between the Japanese Exclusion League and the two thousand members of the Interdenominational Missionary Conference, representing a large section of California, who met in Oakland the other day, and who adopted strong resolutions against the policy of the Exclusion League. But somehow the League rules San Francisco, while the religious people do not count. Perhaps they had better unite and try to do something.

It is a suggestive article which we print this week from James Edgar Brown on the Increase of Crime in the United States; but we shall be somewhat slow to accept all his suggestions. And it will require evidence to show that the multitude of murders in this country is due to the influx of foreigners of murderous instincts. Native Americans do their share of killing.

Insurance

New Officials of the Penn Mutual Life Insurance Company

THE vacancy in the presidency of the Penn Mutual Life Insurance Company caused by the death of Harry F. West, who died suddenly at Atlantic City on July 3 last, has been filled by the election of George K. Johnson as president of the company. Mr. Johnson has been a conspicuous figure in the management of the company as vice-president. He is thoroly in touch with its business and is one of the best financiers that have been connected with the Penn Mutual for many years. He was born in Bucks County, Pa., on December 11, 1848. His parents were Quakers. His education was obtained at the Friends' Academy and the Friends' Central School in Philadelphia. His business career began when he obtained a position as entry clerk in a dry goods store in Philadelphia. Fourteen years later he was a partner in the large umbrella manufacturing firm of Belknap, Johnson & Powell, of New York and Philadelphia. He retired from active business in 1897 with a considerable fortune. In 1889 Mr. Johnson became active in the affairs of the Penn Mutual as a member of its board of trustees. He was elected vice-president in April, 1897. President Johnson is a member of the Union League Club of Philadelphia, the City Club, and the Bucks County Country Club. He is president of the Philadelphia & Langhorne Street Railway Company and a director of the Camden (N. J.) National Bank, the I. H. Johnson, Jr., Manufacturing Corporation and the Langhorne Electric Light Company.

GEO. K. JOHNSON. LINCOLN K. PASSMORE.

Lincoln K. Passmore, who now takes the post of vice-president vacated by Mr. Johnson, has been a trustee of the company since 1889. He has served continuously on the agency committee, and has in consequence a wide acquaintance with the company's agents in the field and a keen insight into field work. He has held the office of second vice-president of the Penn Mutual Life since 1903. The new vice-president was born in Maryland of Quaker parentage in September, 1850. He taught school when but eighteen years of age, but turned his attention to commercial life in 1874. He came to Philadelphia and entered the office of Peter Wright & Sons. He subsequently became manager of their export grain department. Eight years later he resigned and established himself in an independent grain business. Later he became a partner in the firm of I. M. Parr & Son, one of the largest seaboard grain exporting houses in this country. He withdrew from this firm in 1903. Mr. Passmore is a member of the Produce Exchange of New York, the Maritime Exchange, Board of Trade, Chamber of Commerce and Commercial Exchange of Philadelphia. He is a director of the Bank of North America. His clubs are the Union League Club of Philadelphia and the Philadelphia and Huntingdon Valley Country Club. He is also a member of the New England Society.

THE Royal Arcanum suffers a great loss in the recent death of Mr. W. O. Robson, for some years Supreme Secretary of that fraternal order. The Royal Arcanum owes much to the keen judgment and foresight of this man, who for twenty years guided the society as its one permanent administrative officer. He was active in the readjustments of rates in the Royal Arcanum. He was over sixty years old when he died.

Financial

Currency Reform Plans

THE excellent report of the Currency Committee of the New York Chamber of Commerce was adopted last week by the Chamber, without opposition, altho the Committee's tentative suggestion of a central bank of issue was subjected to criticism. Some thought at first that the Chamber should formally express the opinion that the establishment of such a bank is impracticable. Undoubtedly, the Committee believed it to be impracticable, but felt that some reference should be made to what the committee regarded as a scientific solution of the problem. The plan thus tentatively put forward, however, would in any case need to be modified, as was pointed out by Mr. Fish. But all that is now to be considered is the remainder of the report—those parts which relate to an emergency issue equal to 35 per cent. of a bank's capital, under a graduated tax; to the establishment of redemption agencies to facilitate prompt retirement; to the repeal of the law restricting retirements to $3,000,000 in any month; and to the deposit in the banks of all the Treasury's receipts above a reasonable working balance. Here are recommended entirely practicable improvements, and the Chamber is united in approval of them. In the elaboration of any plan for emergency issues, the suggestion made by Mr. Schiff should be considered. It is that the issue of such currency by any bank should be subject to the regulation and approval of a Central Issue Association formed by the banks themselves. Such an association should be able, however, to act promptly.

The Currency Commission of the American Bankers' Association has been completed by the selection of the ten gentlemen named below:

A. B. Hepburn, President Chase National Bank, New York, Chairman; James B. Forgan, President First National Bank, Chicago; Myron T. Herrick, Society for Savings, Cleveland; Festus J. Wade, President Mercantile Trust Company, St. Louis; Joseph T. Talbert, Vice President Commercial National Bank, Chicago; James H. Huttig, President Third National Bank, St. Louis; John Perrin, President American National Bank, Indianapolis; Luther Drake, President Merchants' National Bank, Omaha; Solomon Wexler, Vice President Whitney-Central National Bank, New Orleans; Robert Wardrop, President People's National Bank, Pittsburg.

These will be associated with the following members of the present Committee on Legislation:

Arthur Reynolds, President Des Moines National Bank, Des Moines; E. F. Swinney, President First National Bank, Kansas City, Mo.; Joseph A. McCord, Cashier Third National Bank, Atlanta, Ga.; W. V. Cox, President Second National Bank, Washington; John L. Hamilton, Vice President Hamilton & Cunningham, Hoopeston, Ill.

This Commission was directed to confer with the committee of the Chamber of Commerce, and the first conference will take place on the 12th inst. in Washington.

Mexico

MEXICO has been well served by her Minister of Finance, Señor Limantour, who points to the fact that national 4 per cent. bonds are now quoted at 96, altho when he took office, fourteen years ago, national 6 per cents. were selling at only 60. The greatest of his achievements has been the adoption of the gold standard. In a recent statement he remarked that since this change took place, eighteen months ago, both exports and imports have increased, the latter having grown largely, owing to the new stability of exchange. The French have recently invested $20,000,000 in Mexican industries and banks; wages are high; the railroads and the mining industries are prosperous, and the whole country is in a flourishing condition.

....By declaring a semi-annual dividend of 6 per cent., last week, the Fourth Street National Bank, of Philadelphia, placed its annual dividend on a 12 per cent. basis. It had been 10 per cent. The bank also carried $500,000 to surplus. This makes the surplus fund $5,000,000.

....New York City sold $4,500,000 of 50-year 4 per cents. last week at 101.899. There were subscriptions for $44,700,000. The successful bidder was the National City Bank, with which N. W. Harris & Co. were associated. In July last, $11,000,000 were sold with some difficulty at only 100.97.

....Dividends announced:

Alaska Mines & Securities Co., 15 cents per share, payable November 5th.

International Salt Co., 1 per cent. on capital stock, payable December 1st.

American Loco. Co. (common), quarterly, 1¼ per cent., payable November 26th.

The Independent

VOL. LXI NEW YORK, THURSDAY, NOVEMBER 15 No. 3024

Survey of the World

The Elections At the elections on the 6th inst. the Republican party and policies were sustained, altho the majorities of the Presidential election in 1904 were reduced. In the House of Representatives, after March 4th, the Republican majority will be 58; in the present House it is 114. This year's losses were due to various influences. In the Middle West, some of the changes were due to popular disapproval of candidates who opposed revision of the tariff. In Iowa, John F. Lacey, whose plurality two years ago was 9,000, was defeated by a Democrat, whose plurality is 1,200. In Minnesota, James T. McCleary, a member of the Ways and Means Committee, was beaten, altho his majority in 1904 was 9,000. Another well-known member who has lost his seat is Joseph W. Babcock, of Wisconsin, whose defeat was due in part to the active opposition of Senator La Follette. A veteran member from New York, James W. Wadsworth, was defeated on account of his opposition in the House to the Meat Inspection bill. His place is taken by Peter A. Porter, an Independent Republican.——The work of Mr. Gompers and the Federation of Labor had little effect. It does not appear that any member whom Mr. Gompers opposed has lost his seat, altho the pluralities of several were reduced. Speaker Cannon's plurality is less by about 2,000 than in 1904. In Connecticut, Mr. Lilley, Representative at large, appears to have received the full plurality, altho his opponent, Mr. Donahue, is the head of the Federation of Labor in that State. Mr. Mudd's plurality, in Maryland, was cut down from 3,000 to about 1,000. In the next House there will be, from Pennsylvania, two members representing a labor organization, altho they were the regular nominees of the Democratic party. These are William B. Wilson, secretary of the United Mine Workers, and Thomas D. Nichols, district president of the same union in the upper anthracite field. For these candidates President John Mitchell made speeches in their districts. The same union sends six representatives to the Pennsylvania Legislature, but they were elected as Democrats. Several candidates elected to the House had been indorsed by the Federation.——No candidate standing as a Socialist was elected, altho James McCarthy made a good run in one of the Chicago districts, where a Democrat was successful. About 2,000 votes were cast in the Trenton (N. J.) district for Upton Sinclair, author of "The Jungle." In the Ninth district of New York, Hillquit, Socialist, received about 3,700 votes, but Goldfogle, Democrat, had 7,200.——Altho the Republicans lost seats in the House, the complexion of the Legislatures elected shows that they have gained something in the Senate. If all the Senate seats were now occupied there would be 57 Republicans and 33 Democrats. It is probable that after March 4th the figures will 61 and 29. Patterson, of Colorado; Dubois, of Idaho, and Clark, of Montana, are to be displaced by Republicans. At last reports there was a Republican majority of 14 in the Montana Legislature. Oregon will send Jonathan Bourne, who was selected at the primaries. It is now asserted that the Legislature will be required to elect a Governor in New Hampshire, and there is talk of a combination having for its purpose the election of Winston Churchill to the Senate. In New Jersey,

a Republican majority of 7 in the Legislature probably insures the election of a Republican to succeed Senator Dryden, altho he may not be re-elected. Probably another term will be given to Senator Wetmore, of Rhode Island. In the Legislature, 43 votes are pledged to Colonel Goddard, the candidate of the Democrats and Lincoln Republicans, but 56 are needed. Nebraska will send Norris Brown, Republican, selected some time ago at the party convention. Mr. Cullom will be re-elected in Illinois. The new Senator from Kentucky (in 1909) will be Governor Beckham, who is now only thirty-seven years old. He has defeated Senator McCreary at the primaries, and he was credited with the defeat of Senator Blackburn in the interest of Judge Paynter. In Delaware, Addicks appears to have been eliminated. Only three members of the new Legislature are counted for him. There is a large Republican majority, but it is said that a second term will not be given to Senator Allee. It is now expected that the new Republican Senator from Colorado will be Simon Guggenheim, who is associated with his brothers in the control of the American Smelting and Refining Company (sometimes called the Smelting Trust) and other large corporations engaged in the production of silver, lead and other metals. Mr. Guggenheim, whose brothers reside in New York, is only thirty-nine years old. He has commended himself to the people of Colorado by giving a costly building to the School of Mines and in other ways.

Results in the States

Altho the Fusion party (of Democrats and Lincoln Republicans) in Pennsylvania elected a State Treasurer last year by 88,000, it was beaten this year by the Republicans, whose candidate for Governor, Edwin S. Stuart, was elected by a plurality of about 55,000. In Philadelphia, Rotan, Republican candidate for District Attorney, was elected by 12,000 over Gibboney, candidate of the City Reform party. The campaign was one of great bitterness. Much was said about the alleged loss, by waste or theft, of $4,000,000 or $5,000,000 of the $9,000,000 expended in furnishing the new capitol. The Republicans have promised to make an investigation. Gibboney had been known as a tireless foe of the keepers of evil resorts in the city. He was opposed by Mayor Weaver, who, a few days before the election, deserted the City Reform party. The new personal registration law was enforced for the first time, with good results.——In Rhode Island, James H. Higgins, Democrat, "the boy mayor of Pawtucket," was elected Governor by a plurality of 1,200. There is a Republican majority in the Legislature. Ex-Governor Garvin, a candidate for Congress in one of the State's two districts, was defeated.——Further proof of the great personal popularity of Gov. John A. Johnson, Democrat, of Minnesota, was shown in his re-election by a majority of 40,000, while all the other offices were filled by Republicans with majorities ranging, it is reported, from 25,000 to 40,000. Gov. Johnson was elected in 1904 by a majority of 6,000, altho the State gave Mr. Roosevelt a majority of 160,000 on the same day.—— In Massachusetts Gov. Guild has a plurality of 31,500 over John B. Moran, who was regarded by some as representing the Hearst movement in that State. Moran appears to have been beaten by the conservative men of his own party. Lieut.-Gov. Draper's plurality fell below 10,000. ——Altho Mr. Roosevelt carried New Jersey two years ago by 80,000, and there was a Republican majority of 58,000 last year, the vote last week for members of the Legislature showed a Democratic majority of 11,000. This change was due in part to a movement against bosses and against the influence of great corporations in politics. In the Legislature there are 44 Republicans and 37 Democrats. For the re-election of Senator Dryden, president of the Prudential Insurance Company, 41 votes are needed. Two Republicans will not vote for him, and it is expected that at least two more will stand with these.——In New Hampshire, Floyd, Republican candidate for Governor, has a considerable plurality, but (at last reports) lacks 10 votes of a majority over all. As a majority is required, the Legislature (which is Republican) will probably be called upon to elect him Governor.——The Rev. Dr. Buchtel, a prominent Methodist, and for several

years past the Chancellor of Denver University, was elected Governor of Colorado. Dr. Buchtel was a missionary in Bulgaria and has since been the pastor of churches in Indiana, New York, New Jersey and Colorado.——Gov. Gooding, of Idaho, had a plurality of about 10,000. This is regarded by his supporters as a victory for law and order. He has insisted upon the prosecution of the officers of the Western Federation of Miners, who are charged with procuring the assassination of ex-Governor Steunenberg, and has been opposed by those who hold that these men are unjustly accused and were improperly taken from Colorado. ——Gov. Cummins was elected again in Iowa; in California, the election of Gillette, Republican, was accompanied by the defeat of nearly all the judicial candidates believed to have been named by Boss Ruef; in Illinois, the Hearst League cast only 40,000 votes, instead of the 110,000 promised; a Republican Governor and Legislature were elected in Mr. Bryan's State, and Kansas gave the Republican ticket a plurality of about 28,000, Gov. Hoch excepted. His plurality was so small that for some days his election was not admitted.——The independent activity of Senator La Follette caused some disturbance in Wisconsin, where he assisted in defeating Congressman Babcock and the Republican candidate for District Attorney in Milwaukee, the latter, at last reports, having less votes than his opponent, for whom the Senator worked effectively. Lucian H. Palmer, a negro, was elected to the Assembly.——New Mexico gave a majority for joint statehood, but in Arizona the vote was 6 to 1 against it. A large majority of the delegates to Oklahoma's Constitutional Convention are Democrats. Hawaii re-elected Delegate Kalanianaole. In Porto Rico, the Unionists carried all of the seven districts, and it is said the Republicans will not be represented in the next House.——In Detroit, where the street railway franchises are soon to expire, Mayor Codd and the railway company proposed that a new franchise for 15 years should be given, upon condition that the fare should be $2\frac{1}{2}$ cents for 3 hours in the morning and 2 hours in the afternoon, and that in the remaining hours six tickets should be sold for 25 cents. His opponent, Thompson, was supported by those who demand a straight three-cent fare. Thompson was elected, and the franchise proposed by Mayor Codd was disapproved by a vote of 28,800 to 13,300.

The Result in New York

It was known in New York, a few hours after the closing of the polls, that Mr. Hughes had been elected, but not until the following afternoon did the returns indicate the election of all of Mr. Hearst's associates on the Democratic State ticket. Hughes's plurality is about 60,000. At this writing, while the pluralities for all of Hearst's associates except Mr. Chanler appear to be so large that they cannot be overcome in the official count, the election of Mr. Chanler (candidate for Lieutenant Governor) is not established beyond doubt. It is expected, however, that the complete returns will show his election, and that he will preside over the Republican Senate at Albany. It appears that a large majority of the Democrats who bolted the nomination of Hearst voted for Hughes and all the Democratic candidates below the one at the head of the list. This caused Hearst to run about 65,000 behind the remainder of the Democratic ticket. In the city his plurality was less than 74,000, while Chanler's was 135,000, and Skene's 144,000. Skene will be State Engineer. The Murphy-Hearst candidates for judges of the Supreme Court in New York County, six named by the Tammany leader and four by Hearst, were elected. Mr. Chanler, who will probably be Lieutenant Governor, is 37 years old, a man of wealth and philanthropic tendencies, a lawyer by profession, a descendant of the original John Jacob Astor, and a cousin of the present heads of the Astor family in New York and London. Mr. Skene, the new State Engineer, only 32 years old, is employed as an engineer at a modest salary in the office of the Engineer of Highways in the Borough of Queens, on Long Island. The Legislature recently appropriated $101,000,000 for canal improvements, and $50,000,000 for good roads. He will be influential in supervising the expenditure of a considerable part of this money. Mr. Jackson, the new Attorney-

General, 35 years old, as Assistant District Attorney at Buffalo, has vigorously prosecuted corrupt public officers there. He has promised to grant the application of Mr. Hearst for legal proceedings to test the title of Mayor McClellan to his office. The present Attorney-General, Mr. Mayer, refused to do this. It is expected, therefore, that Mr. Hearst will at last get a recount of the votes cast at last year's city election. Mr. Hauser, the new Treasurer, is a baker. These Democratic officers, with the Secretary of State and the Comptroller, will control the State Canal Board, Land Board, and several other important boards which are composed of elective officers. The Attorney-General has large powers with respect to offending corporations. Mr. Hughes says:

"It is a victory for sobriety and decency in the administration of government. But the people will not tolerate indifference to public wrongs. They desire neither exaggeration nor inflammatory appeal on the one hand, nor moral or political obtuseness on the other. The election is a rebuke to demagogical methods, and it is also impressive in its demand for responsible leadership. I shall address myself to the task of squaring the administration of government with the interest of the people, confident that I may rely upon the support of all good citizens, not only those who voted for me, but also those who, in the intensity of their desire to end abuses, voted for my opponent."

Mr. Bryan remarks that the Democratic party won "a signal victory" in New York and that Mr. Hearst has been "vindicated on the position taken." Senator Foraker says that "Bryan has gone down with Hearst," and that the people "will not tolerate their populistic ideas."

National Topics

President Roosevelt, accompanied by Mrs. Roosevelt and Surgeon-General Rixey, sailed for the Panama Isthmus on the morning of the 9th inst. on board the battleship "Louisiana," which was convoyed by the cruisers "Tennessee" and "Washington." Upon leaving Washington the President said: "I am going down to see how the ditch is getting along." When he lands at Colon it will be the first time that a President of the United States has put his foot on foreign soil during his term of office.——Before he left Washington he made known his purpose to nominate, in December, Attorney-General Moody to be an Associate Justice of the Supreme Court. He also announced the approaching voluntary retirement of Mr. Hitchcock, for the last eight years Secretary of the Interior, and the selection, with Mr. Hitchcock's approval, of James R. Garfield, now Commissioner of Corporations, for the seat in the Cabinet thus to be made vacant. Mr. Hitchcock is seventy-one years old, and feels the need of rest. The President urged him to accept the office of Ambassador to France, but he would not consent to take it. Mr. Garfield's successor will be Herbert Knox Smith, now Assistant Commissioner.——Owing to the recent confession of Frank L. Emmett, formerly employed by the Shelby Tube Company, which is a part of the Steel Corporation, Emmett himself, James J. Dunn, and Charles L. Close have been indicted at Pittsburg for conspiring to defraud the Government by supplying defective boiler tubes to be used in warships. Dunn was superintendent at the Shelby Company's works, and Close was his assistant. It is asserted in the indictments that the defective tubes in question were placed in nine ships, which are named. Among these are "Louisiana," which is carrying the President to Colon, and the "Tennessee" and the "Washington," the cruisers accompanying her. Officers of the Navy Department say, however, that inspection by the Government prevented the use of any defective tubes in these ships.

Discharge of a Negro Battalion

After making an investigation concerning the riots at Brownsville, Texas, on August 13th, when one citizen was killed and another wounded by shots fired, it was alleged, by negro soldiers of the 25th Infantry, Brigadier General Garlington, Inspector General, submitted to the Secretary of War, on October 22d, a long report. It had been established, he said, that shots were fired into the houses of citizens, while they were pursuing their peaceful vocations or were sleeping, by enlisted men of the 25th Infantry be-

longing to the battalion stationed at Fort Brown. The men of this battalion, after due opportunity and notice, had failed, he said, "to tell all that it was reasonable to believe that they knew concerning the shooting." In fact, they gave no information that would disclose the identity of the men who took part in the disturbance. "They appear to stand together," he continued, "in a determination to resist the detection of the guilty; therefore they should stand together when the penalty falls." He recommended that orders be issued discharging, without honor, all the men in Companies B, C, and D, of the 25th Infantry who were serving at Fort Brown on the night of August 13th, and forever debarring them from re-enlisting in the army or the navy, as well as from employment in any civil capacity under the Government. He did this, "recognizing the fact that a number of men who have no direct knowledge as to the identity of the men who actually fired the shots on the night of August 13th will incur this extreme penalty." The President, on the 6th, directed "that the recommendations of Gen. Garlington be complied with." On the 9th, the order discharging all the men was formally issued. The negro soldiers in question had been transferred to Fort Reno. Some of them had been in the service many years. Several had escaped the severe penalty by being discharged honorably at the expiration of their terms. It is reported, in dispatches from Fort Reno, that all the men of the battalion had entered into an agreement binding each one never to divulge the names of those who fired the shots, and imposing the penalty of death for violation of the compact. According to other reports, some of the men complain that in his examination Gen. Garlington did not treat them fairly. The extraordinary severity of the President's order has been the subject of much comment in the press.

British Politics

The House of Lords is continuing its amendment of the Education Bill. Each clause of the four so far considered has been so vitally changed that it will be impossible for the Ministers to accept it without stultification. They cannot afford to drop the bill entirely, because they have made it their main issue. If they resign and come before the country for popular approval solely on this issue their majority would certainly be cut down because of the present reaction. It is also a question whether the country would support them in any violent action against the House of Lords, because of the general reverence of the English people for that institution, and the wide and bitter difference of opinion on the propriety of the Education Bill. It is rumored that a bill may be introduced in the House of Lords by one of the peers tending to strengthen that House by making it more clearly an essential part of the machinery of popular government. The proposed bill provides for a referendum in the case of a disagreement between the two houses on any bill, either House having the power to refer to popular vote the two forms of the bill. It is understood that the Government has decided upon its plan for a modified Home Rule in Ireland and that the bill will soon be introduced. There will be an Irish Council, with two-thirds or three-quarters of its members elected on the present parliamentary franchise and the remainder on a restricted franchise or nominated. Clergymen of all denominations are to be eligible for membership in the Council. The Executive Government will consist of a Castle Board, a Department of Education, a Department of Agriculture and a Department of Land Transfers. The present representation of Ireland in Parliament is to be unchanged. The police will be under imperial control, but the force will be reduced. The judiciary will remain unchanged. In the House of Commons a bill has been carried thru a committee for the abolition of plural voting. At present a man who owns property in four or five different counties may vote in any or all of them, since all elections are not held on the same day. The Conservatives in the House are fighting the bill determinedly as an attack upon the sacred rights of property. Austen Chamberlain was leading the opposition against the Plural Voting Bill when Mr. Asquith met him by quoting a speech made by his father, Joseph Chamberlain, in Birming-

ham in 1885, in which he denounced the system of plural voting as emphatically as any radical of the present day.—— Even those most strongly opposed to the clamorous methods of agitation adopted by the suffragists in London have to admit that it has resulted in bringing the question of woman suffrage to the front. It is pointed out that men also have been guilty of hysterical demonstrations and have less reason than the denial of the right of suffrage. Many have recently been led to inquire why it is considered to be more unwomanly to vote for a Member of Parliament than to vote at municipal elections, as is now permitted. George Meredith in a letter to the *Times* says that

"The choicer spirits of men do now see that women have brains, and can be helpful to the hitherto entirely dominant muscular creature who allowed them some degree of influence in return for servile flatteries and the graceful undulations of the snake—admired, yet dreaded. Women must have brains to have emerged from so long a bondage. In the present instance, it is the very excellence of their case that inflames them. The mistake of the women has been to suppose that John Bull will move sensibly for a solitary kick. It makes him the more stubborn, and such a form of remonstrance with him alienates the decorous among the sisterhood, otherwise not adverse to an emancipation of their sex. It cannot be repeated, if the agitating women are to have the backing of their sober sisters. Yet it is only by repetition of this manner of enlivening him that John Bull (a still unburied old gentleman, though not much alive) can be persuaded to move at all. Therefore we see clearly that the course taken by the suffragists was wrong in tactics. It may be argued likewise that the punishment inflicted on them has magnified the incident foolishly."

The French Chamber of Deputies

The French Parliament opened on November 5th, when the new Premier, M. Clemenceau, appeared before the Chamber of Deputies and explained his political program. He stated that the Government intended to pursue actively the work of reform according to the program which had received the support of the people in the last election, and that the change in the Cabinet, which was due solely to the ill health of ex-Premier Sarrien, would not involve any change in domestic or foreign policy. On the latter point M. Clemenceau said:

"Founded upon peace with dignity, we can say with pride that during the thirty-five years of the republic there has not been one minute when we could be accused of threatening the peace of Europe. At the same time, since the peace of the world is based on force of arms, we cannot disarm, for to do so would destroy the guarantee of our independence. Until the arrival of that happy but uncertain day when the *régime* of force will be changed, our first duty is not to weaken our defensive powers, of which our international understandings form an important element, but in cultivating good relations with other Powers. We must carefully maintain the alliances contracted in the interests of peace as well as the friendships whose value has already been proved, and we must not forget at difficult periods that moral authority and upright policy openly practiced can become dominating factors in European opinion without which no Government in future can fail to reckon."

The following projects would be carried out by the Government: The application of the law separating Church and State, the establishment of the system of workmen's old-age pensions, the extension of the law governing labor unions, the reform of the mining laws, the purchase of the Western Railroad, the reduction of the term of service in the army to two years, the abolition of courts martial, a progressive income tax, and measures for the relief of vine growers. The program of the Government, as announced by M. Clemenceau, was supported in the Chamber by a vote of confidence of 395 to 96. M. Briand, Minister of Education and Public Worship, explained the attitude of the Government in regard to the law for the separation of Church and State. He spoke in a conciliatory manner, and stated that the Government was not anti-religious, but would be strictly neutral toward all churches and grant complete liberty of belief and the means for publicly exercising a religious faith to Catholics and to believers in all other dogmas. The Concordat was abolished and the separation of Church and State an accomplished fact. The Pope had virtually accepted the act by appointing bishops without approval of the Government, as required by the Concordat, and these bishops, in their recent meeting, had voted in favor of complying with the law by a majority of ten. At this the Clerical members interrupted the speaker by shouting that the meeting was secret and he could have no knowledge of the proceedings. M. Briand replied that as Min-

ister of Public Worship he did know their decisions. He stated that on December 11th the ownership of the churches would naturally revert to the Government, but that the Government would not take possession of them nor attempt to control them for the ensuing year. At the end of that time the churches could be closed by the Government in case they had not been taken over by local associations for public worship, formed in accordance with the law. M. Viviani, the Socialist who has just been appointed to the new position of Minister of Labor, said that, as men's hopes in a future life became weakened, their desire for the increase of happiness in this world strengthened, and in his opinion the greatest happiness to the greatest number could be accomplished only by the ultimate abolition of private property, which would end the exploitation of one class by another and permit all to share in the wealth produced. An effort will be made to put an end to the practice of dueling in France, and Abbé Lemire has introduced a bill into the Chamber of Deputies increasing the penalty for that effect. Any person who fights a duel shall be punished with imprisonment for not less than one month or more than one year and a fine of $20 to $200. A duelist wounding his adversary shall be imprisoned for three months to three years and fined $40 to $400. The seconds also are liable to imprisonment.

Russia

Desperate efforts are being made by the Government to insure that the next Duma shall be less radical than the last, but the success of these efforts is doubtful. The order that no Government employee can belong to the Constitutional Democratic or any other opposition party has resulted in the resignation from the civil service of a number of prominent officials, who preferred to give up their positions rather than desert the party. A meeting of twenty-four Constitutional Democrats was held without authorization at the residence of the vice-president of the committee in Odessa to discuss the coming elections, but Governor-General Kaulbars imposed a fine of $1,500 upon the vice-president and expelled him from the city. The other attendants at the meeting were fined $500 each. General Kaulbars declares that he will permit no political meetings, legal or illegal, to be held in the city. The Imperial Senate, a bureaucratic body, has disfranchised over half a million voters of the lower classes by its interpretation of the electoral law. It has decided that employees of the Government railroads and shops who live in buildings owned by the Government cannot vote. This applies to about 60 per cent. of the machinists, guards and repair shop men of the railroads, and to the 8,000 men employed in the military and naval factories. A similar reduction of the peasant vote is effected by the ruling that those who have bought their land by means of the Peasants' Bank, a national fund established for assisting peasants to get land, cannot be counted as freeholders, and are therefore not entitled to vote. Leaseholders of land are under the law entitled to vote, but the Senate rules that if land is sublet the holder has no vote. There is no appeal from the decisions of the Imperial Senate, as it acts as a supreme court.——Two other daring robberies by the Terrorists are reported this week. A night train on the Vienna-Warsaw railroad was held up near Rogow, Russian Poland. When the train stopped to change engines a well-disciplined band of a hundred revolutionists came out from the surrounding woods on all sides and fired volleys at the guards of the station and train. The mail car was blown up by three bombs, and, the booty being placed in two wagons, the revolutionists marched off waving the red flag and singing songs. Since the telegraphic wires were cut the Cossacks did not arrive until three hours later. The amount of money obtained is said to be over half a million dollars, altho the official statement is that only 14,000 of Government money was obtained. In St. Petersburg the revolutionists stole a machine gun of the latest pattern, with all its accessories, and a large amount of ammunition from the armory. At Tiflis the police were lured to a vacant house by anonymous information that it was a revolutionary cache. They found some revolutionary proclamations under a bed, and as they were searching the house further a bomb was exploded, killing three of them and wounding four.

The Polish School Strike

The German Reichstag, which meets on November 13th, will have many perplexing difficulties to settle, and conspicuous among them is the failure of the Government's policy of Germanizing the Polish provinces by buying up estates for German settlers and by extending the use of the German language in the schools. Chancellor von Bülow becomes more dependent for support upon the clerical center as the Socialist vote increases, and he cannot afford to offend them by carrying out a policy which takes the form of religious persecution. The tactics of the Polish Nationalists, in pushing the fight on the question of religious instruction in German, are making it take that form. Archbishop Stablewski, of Posen, the head of the Polish Catholics, is pronounced in favor of the use of the Polish, instead of German, because he holds that the religious instruction given is inadequate anyway and its effect would be lessened if given in a semi-foreign tongue. In receiving a large Polish delegation on November 10th, he expressed the hope that God would give the victory to the Polish cause. On the other hand Cardinal Kopp, the head of the German hierarchy, approves of the Prussian policy and has thereby offended the Polish bishops, who are preparing an appeal to the Pope against him. Fifty thousand Polish children are still on a strike against saying the catechism in German and are being kept in after school one or two hours each at other lessons as a punishment. A mass meeting of Polish fathers, presided over by two members of the Reichstag, passed resolutions of protest against the action of the Minister of Public Instruction in thus attempting to force children to disobey their parents who have ordered them not to recite in German.

Protestant Church Problems in Germany

The Church in the land of Luther manages to keep in hot water about all the time, caused almost entirely by the sharp antagonism between the advanced clans and the conservatives, the latter being entrenched behind the legally established confessions of the Church. The latest "case" is that of Pastor César, who had been called to a large congregation in Dortmund, but whose selection the Consistory refused to confirm because in the colloquy he openly acknowledged that he could not accept the fundamentals of traditional Evangelical faith, such as the divinity of Christ, the atonement, the Trinity, and the like. This has called the liberals to arms, and protests against the action of the Consistory appear in large numbers in the official organ of these men, the *Christliche Welt,* of Marburg, on the ground that the unanimous choice of a congregation must be respected under all circumstances by the Church authorities. "Cases" like these, in which the consistories maintain the legal rights of the official standards of the Church, have called forth a movement, known as "Massenaustritt," which has been spread especially in such centers as Berlin, Frankfort-a-M., Wiesbaden and elsewhere, and has caused thousands to sever their connection, not only with the State Church, but with the Protestant Church as such. Fuel has been added to this flame by the new school law of Prussia, according to which the religious instructions in the public schools shall constitute an integral part of the regular curriculum and be practically in the hands of the Church. The advanced men condemn this as treachery to the schools, and insist, not upon a purely secular instruction, but upon confining the religious instructions to the general principles of ethics. The trouble has gotten into the university circles also, the charge being particularly urged that the Government is advancing in undue numbers and with undeserved rapidity the younger docents of the conservative and confessional faculty at Greifswald, while ignoring those of the more liberal theological faculties. This latter discussion has found its way even into the Parliament and brought forth a bitter debate. It is a noteworthy fact that the liberals do not deny or want to refuse to the conservatives their share of representation in church, university and school; but the conservatives declare that the liberals have no legal right to any part or portion in the Church, as the confessions still legally obtain in the different State Churches of the Empire.

To the Daughters of James Forten

An Uncollected Poem

BY JOHN GREENLEAF WHITTIER

[The following poem by Whittier is vouched to us by Mr. S. T. Pickard, editor of the poet's works, as hitherto uncollected. It is sent us by Charlotte Forten Grimke, wife of Francis J. Grimke, D.D., the distinguished colored clergyman of Washington. Mrs. Grimke is a granddaughter of James Forten. She writes us:

"In looking over a very old album which once belonged to an aunt of mine, I found the enclosed poem, written by Whittier, and addressed to my aunts, the daughters of James Forten, of Philadelphia. It has never been published, and was written when he was a young man, but shows so pleasantly the warmth and kindliness of his feeling for the wronged colored people, which manifested itself even in his early youth, that it seems to me worthy of publication."
—EDITOR.]

Sisters!—the proud and vain may pass ye by
With the rude taunt and cold malicious eye;
Point the pale hand deridingly and slow,
In scorn's vile gesture at the darker brow;
Curl the pressed lip with sneers which might befit
Some mocking spirit from the nether pit;
Yet, from a heart whence Truth and Love have borne
The last remains of Prejudice and Scorn,
From a warm heart, which, thanks to God, hath felt
Pride's chain to loosen and its iron melt,
Fervent and pure let this frail tribute bear
A Brother's blessing with a Brother's prayer.

And what, my sisters, though upon your brows
The deeper coloring of your kindred glows
Shall I less love the workmanship of Him
Before whose wisdom all our own is dim?
Shall my heart learn to graduate its thrill?
Beat for the White, and for the Black be still?
Let the thought perish: while that heart can feel
The blessed memory of your grateful zeal,
While it can prize the excellence of mind
The chaste demeanor and the taste refined,
Still are ye all my sisters, meet to share
A Brother's blessing and a Brother's prayer!

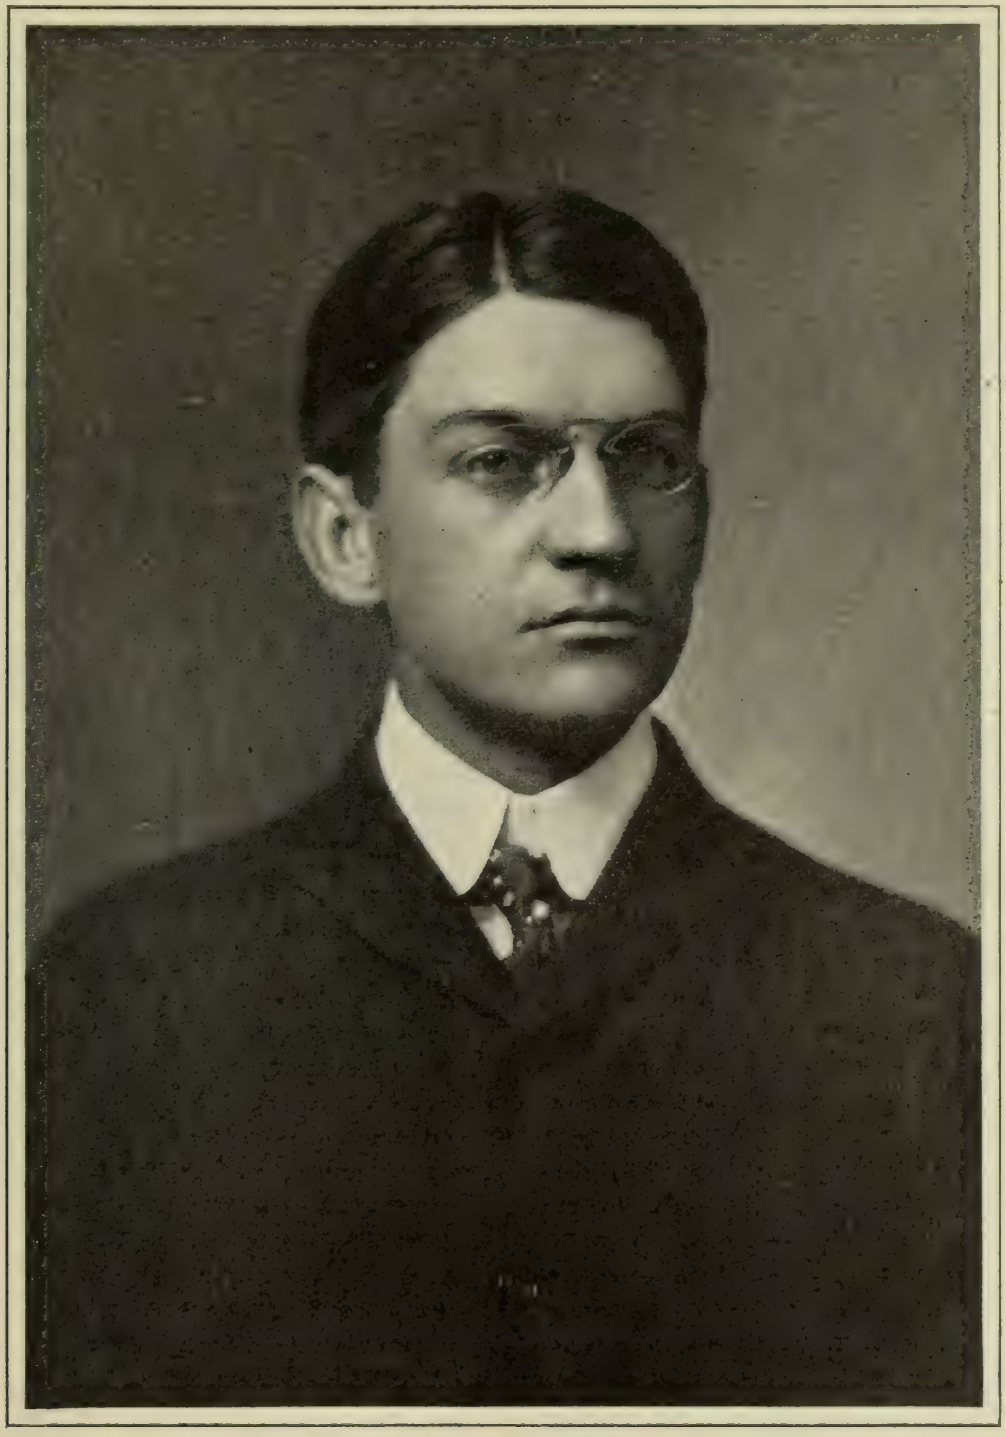
Novels as a University Study

BY WILLIAM LYON PHELPS, Ph.D.

Lampson Professor of English Literature at Yale University.



SOME ten years ago, in the pamphlet of elective courses of study open to the senior and junior classes of Yale College, I announced a new course called "Modern Novels." The course and its teacher immediately became the object of newspaper notoriety, which spells academic damnation. From every State in the Union long newspaper clippings were sent to me, in which my harmless little pedagogical scheme was discussed—often under enormous headlines—as a revolutionary idea. It was praised by some, denounced by others, but thoroly advertised, so that, for many months, I received letters from all parts of the Western Hemisphere, asking for the list of novels read and the method pursued in studying them. During six months these letters averaged three a day, and they came from the north, south, east and west, from Alaska, Hawaii, Central and South America. The dust raised by all this hubbub crossed the Atlantic. The course was gravely condemned in a column editorial in the London *Daily Telegraph,* and finally received the crowning honor of a parody in *Punch.*

Things have changed somewhat in the last ten years, and altho I have never repeated my one year's experiment, I believe that it would be perfectly safe to do so. Not only does the production of new novels continue at constantly accelerating speed, but critical books on the novel have begun to increase and multiply in all directions. At least twenty such works now stand on my shelves, the latest of which (by Selden L. Whitcomb) is frankly called "The Study of a Novel," and boldly begins: "This volume is the result of practical experience in teaching the novel, and its aim is primarily pedagogical."

The objections usually formulated against novels as a university study are about as follows: (a) The study of fiction is unacademic—that is, lacking in dignity; (b) students will read too many novels anyway, and the emphasis should therefore be thrown on other forms of literary art; (c) most recent and contemporary fiction is worthless, and if novels are to be taught at all, the titles selected should be confined entirely to recognized classics; (d) many of the novels of today are immoral, and the reading of them will corrupt rather than develop adolescent minds; (e) they are too "easy," too interesting, and a course confined to them is totally lacking in mental discipline. These objections each and all contain some truth, and demand a serious answer.

That the study of fiction is unacademic is a weighty argument, but its weight is the mass of custom and prejudice rather than solid thought. In old times, the curriculum had little to do with real life, so that the most scholarly professors and the most promising pupils were often plentifully lacking in common sense. Students gifted with real independence of mind, marked with an alert interest in the life and thought about them, chafed irritably under the old-fashioned course of study, and often treated it with neglect or open rebellion. What Thomas Gray said of the Cambridge curriculum constitutes a true indictment against eighteenth-century universities; and it was not until very recent times that such studies as history, European literature, modern languages, political economy, natural sciences and the fine arts were thought to have equal academic dignity with the trinity of Latin, Greek and mathematics. There are indeed many able and conscientious men who still believe that this trinity cannot be successfully rivaled by any other possible group of studies. Now the novel is the most prominent form of modern literary art; and if modern literature is to be studied at all, fiction cannot

be overlooked. The profound change brought about in university curricula, caused largely by the elective system, is simply the bringing of college courses of study into closer contact with human life, and the recognition that what young men need is a general preparation to live a life of active usefulness in modern social relations.

William Lyon Phelps.

That students read too many novels anyway—that is, in proportion to their reading in history and biography—is probably true. But the primary object of a course in novel-reading is not to make the student read more novels, instead of less, nor to substitute the reading of fiction for the reading of other books. The real object is (after a cheerful recognition of the fact that he will read novels anyway) to persuade him to read them intelligently, to observe the difference between good novels and bad,

and so to become impatient and disgusted with cheap, sensational, and counterfeit specimens of the novelist's art.

"The common problem, yours, mine, every one's,
Is—not to fancy what were fair in life
Provided it could be,—but, finding first
What may be, then find how to make it fair
Up to our means: a very different thing!
No abstract intellectual plan of life
Quite irrespective of life's plainest laws,
But one, a man, who is man and nothing more,
May lead within a world which (by your leave)
Is Rome or London, not Fool's Paradise."

That much of contemporary fiction is worthless, and that the novels selected should be classics, is a twofold statement, of which the first phrase is true and the second a *non-sequitur*. Much ancient and medieval literature read in colleges is worthless in itself; it is read because it illustrates the language, or represents some literary form, or because it throws light on the customs and ideas of the time. The fact that a certain obscure work was written in the year 1200 does not necessarily prove that it is more valuable for study than one written in 1900. Now it so happens that the modern novel has become more and more the mirror of modern ideas; and for a student who really wishes to know what people are thinking about all over the world today, the novels of Tolstoy, Björnson, Sudermann and Thomas Hardy cannot wisely be neglected. Why should the study of the contemporary novel and the contemporary drama be tabooed when in other departments of research the aim is to be as contemporary as possible? Courses that deal with political economy, social science, physics and chemistry are constantly brought up to date, and would be ridiculed if they were not; indeed, we have courses in social conditions that actually investigate slums. I am not for a moment pleading that the study of modern novels and modern art should supplant the study of immortal masterpieces; but merely that they should have their rightful place, and not be regarded either with contempt or as unworthy of serious treatment. The two most beneficial ways to study a novel are to regard it, first, as an art form, and, secondly, as a manifestation of intellectual life; from neither point of view should the contemporary novel be wholly neglected.

That many of the novels of today are immoral is true, but it is still more true of the classics. The proportion of really immoral books to the total output is probably less today than it ever was before; in fact, there are an immense number of excellent contemporary novels which are spotless, something that cannot be said of the classics of antiquity or of the great majority of literary works published prior to the nineteenth century. If immorality be the cry, what shall we say about Aristophanes or Ovid? How does the case stand with the comedies of Dryden or with the novels of Henry Fielding? No, it is undoubtedly true that the teacher who handles modern fiction can more easily find a combination of literary excellence and purity of tone than he could in any previous age.

That a course in novels lacks mental discipline and is too easy depends mainly on the teacher and his method. As regards the time consumed in preparation, it is probable that a student would expend three or four times the number of hours on a course in novels than he would in ancient languages, where, unfortunately, the use of a translation is all but universal; and the translation is fatal to mental discipline. But it is not merely a matter of hours; novels can be taught in such a way as to produce the best kind of mental discipline, which consists, first, in compelling a student to do his own thinking, and, secondly, to train him properly in the expression of what ideas he has.

New Haven, Conn.

An Ideal Domestic Library

BY FRANK JEWETT MATHER, JR.

Of the Editorial Staff of the New York "Evening Post."

AS the owner of a cruising schooner speaks modestly of his "boat," so a good bookman rarely admits the possession of a "library," speaking rather of his "books" unless he means the room that contains them. It is in this sense that we are to use the word, discussing not the collection of books, but their arrangement. Coming nearer a definition, any room wholly devoted to the keeping and reading of books may fairly be considered a library, tho it be merely a hall bedroom with a chair, a table and a pair of bracket shelves. As soon as a bed or the family perambulator must also be accommodated it ceases to be a library, and becomes hybrid, subject to its own laws of conflicting interests, hence apart from the simplicity of our subject. For reasons both obvious and common to the two cases, I feel it idle to advise either the very rich or the very poor; both classes, I take it, do what they must in this affair, not what they would. Mr. Croesus gets such a library as the architect will let him have—a reduction usually of such stately types as the Bodleian, the Mazarine, the Laurentian; whereas Mr. Impecunious gets such a library as the domestic flux and reflux permit him. Neither of these unfortunately circumstanced gentlemen is in a favorable position to create a library of a really personal sort, and it is no affair of mine to tell how the architect may be circumvented, nor yet what can be done with the miscellaneous family possessions. The very tentative advice that follows applies to the great and enviable body of book-owners in middling circumstances who can set apart a room for bookish purposes, reserved alike from promiscuous social intrusions and from the more subtle usurpations of the domesticities.

With such a room, large or small, a library becomes immediately possible, but there are so many inconvenient and unsightly ways of arranging a library that it is best to start, not at haphazard, but with a pretty definite set of principles. No one, I believe, can go very wrong who remembers that, since the purpose of a library is to store books and afford facilities for reading them, the books should constitute the chief ornament. From this cardinal principle it follows that all other ornament should be subordinate to the books and in keeping with them. Practically this means low and rich color schemes, simple and rather severe floor covering and furniture, few objects of a merely ornamental or pictorial nature, and these chosen with a view to typographical or literary associations. To some such creed as this every projector of a library should subscribe before the moving van appears. It should be noted that the dogma, while strict as to generals, allows great flexibility of choice as to particulars. A thousand libraries of similar capacity and dimensions might be arranged on this program, and all be personal, different and good.

The proper disposal of the books, then, is the most important question. A library suitably shelved is already seven-eighths done. At this crucial point a bookman's limitations are, as is frequently the case, his best counselors. He has so many books to shelve and so much wall space. This immediately determines whether the books must occupy practically the entire wall, or whether cases of the convenient hight of the hand will suffice. In most cases breast-high shelves will be feasible. Reckoning the books that a reading family will accumulate before the father's fortieth year at something more than a thousand, these can be disposed in about twenty-four running feet of shelving five feet high. Or more practically a room of the ordinary dimensions of twelve feet by sixteen will accommodate about fifteen hundred books on the above basis, providing there are no more than two windows,

a door and one large piece of furniture occupying wall space. Since the books of such a family as we have imagined will increase both by purchase and inheritance before the old age of the owners, this minimum arrangement will have been outgrown. There will be need of carrying the shelving to the ceiling, enlarging the room, or storing little-used books elsewhere in the house. This last, if the consent of the house can be had, is a commendable makeshift, for if it is unthinkable that the workaday department should invade the library, there is no reason why the library should scorn any facilities offered by the rival power. To conclude this matter of dimensions, a room sixteen by twenty-four will accommodate something more than twenty-five hundred books, beyond which number a family library rarely runs. Larger collections, requiring projecting alcoves and the like, are a special problem approaching that of the architect, whereas ours is merely that of the reader and furnisher.

On the capital matter of shelving books there are many opinions, influenced by as many kinds of needs. It seems to me that the main thing is stability and simplicity. Any shelving that is unnoticeable and that looks strong is good; any that obtrudes itself is bad. I happen to be writing in a club library where massive cases, carved and paneled, project more than a foot from the walls, while heavy glass doors reduce the books to so many pale apparitions. It has a horrible look of a museum, and, tho carefully planned and dignified, represents the worst arrangement for an intimate library. On the other hand, I know collections shelved in three-quarter inch white wood, stained, of the cheapest sort, and the effect is admirable. The important thing is that the books should be seen in handsome masses. This rules out glass, tho a bibliophile must have at least one glass case for his fine bindings and high rarities. It rules out also the old-fashioned bookcase, about the most forlorn object of furniture ever invented, as well as those dreadful contrivances for the joint display of books and curios. As for the sectional boxes so widely advertised, they are at best a necessary evil. Only the most migratory occupation and habitat would seem to justify them. They usually have an unpleasing suggestion of office furniture, and even when they are well and simply designed they look unsteady, like the piles of blocks they are. Furthermore, their mathematical exactness of size offends the eye; a chief grace in the arrangement of books is not to have the shelves uniform all round. Slight breaks in the line give variety and life and have a decorative value. Avoid book boxes, then, if you can, is the rule; use them if you are unlucky enough to move frequently. A simple and substantial shelving—with adjustable shelves—once selected, it will, according to the number of the books, be carried to a uniform hight of five feet or a little more, or to the picture rail. In either case the hight of the shelves should be uniform, unless the dimensions of the room (a sloping ceiling making a high and low wall, for example) dictate an exception to the rule. In general, however, an irregular top line is ugly and to be avoided. Once the books are in the shelves the library is pretty well furnished. If one is lucky enough to have some supply of old vellum, calf and morocco bindings, he has a wall covering that both from a bibliophile's and an esthete's viewpoint is wellnigh perfect. There remain to be considered the walls, if the shelves are of the low sort, the floor and the ceiling.

If the shelves are high, the walls are already taken care of. It remains only to find a tint for the frieze and the ceiling, and to deal with the floor. The ceiling must be light, because one needs the light in reading; the frieze is better dark, because, so, it harmonizes with the books and affords an effective background to any large and dignified pieces of porcelain, pottery or pewter—not too many—that one may wish to promote to the top shelves.

Here, also, is the place for pallid busts of Pallas or other portrait statuary the reader may affect, but these also, being oppressive, should be installed in moderation. The books we recall are the ornaments, but if a collector is blessed with literary portraits of a mellow sort, one or two may be hung directly over the books, choosing naturally a relatively covered section. This rather irregular procedure is effectively used in the library

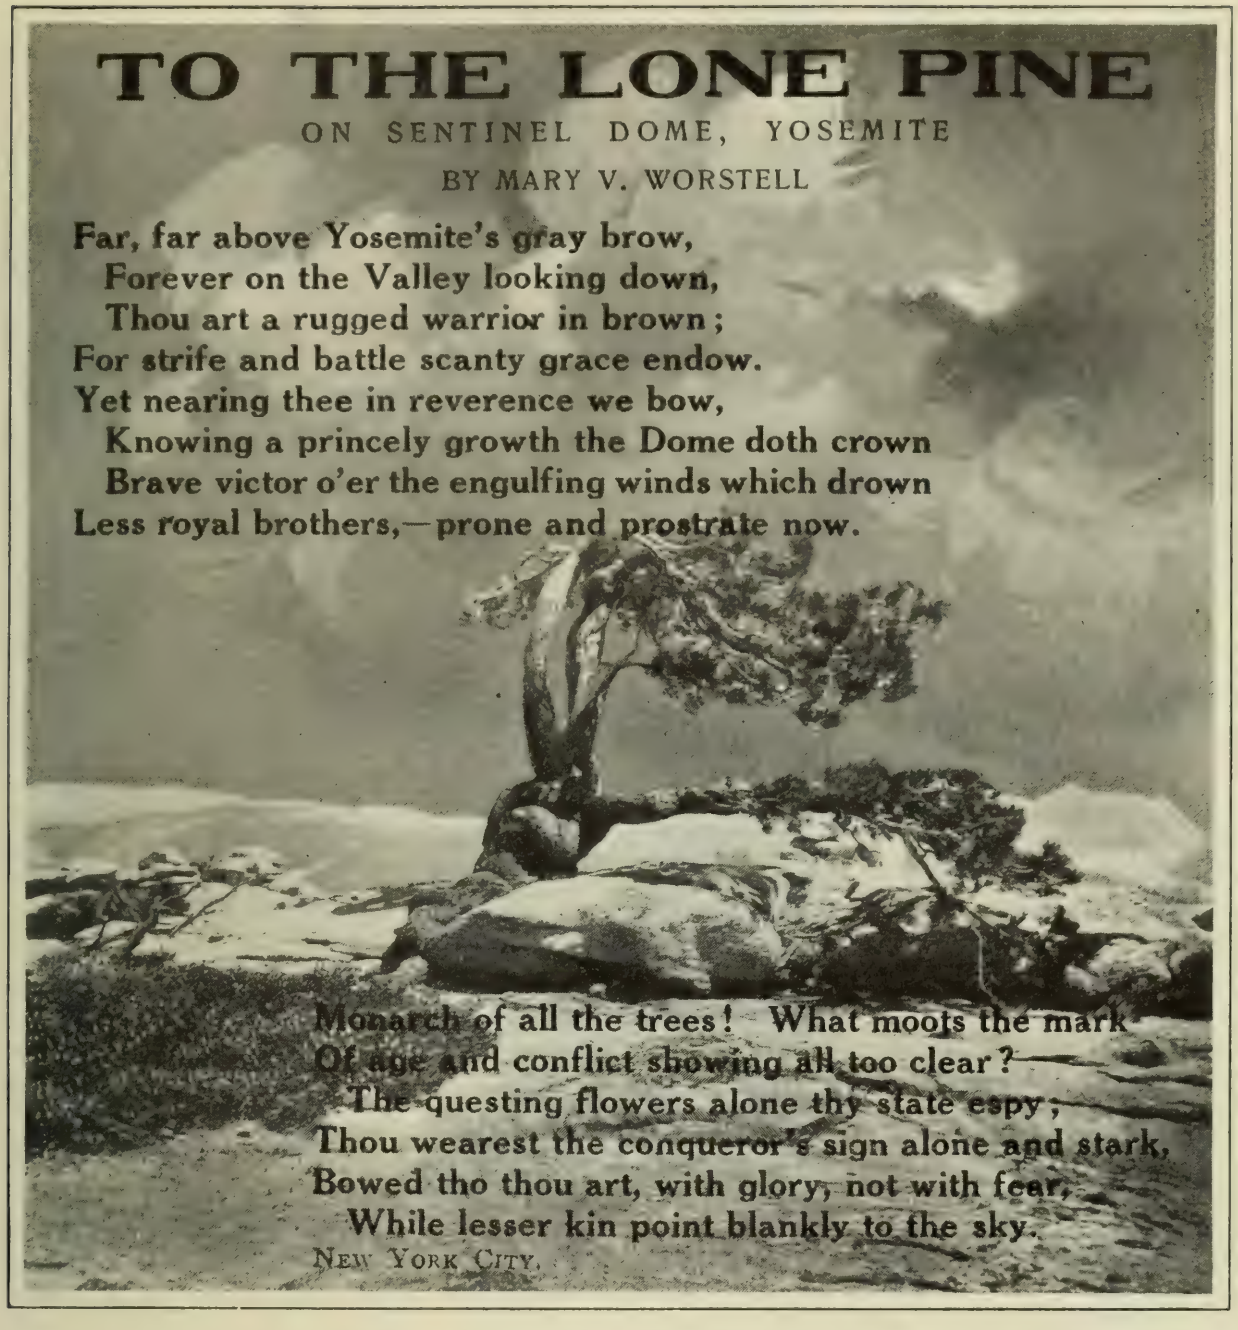
of a famous critic of the Harvard circle. In suggesting such an arrangement I pay the reader the compliment to suppose him not one of the pedants who have read or are about to read instanter every book they own, but one who indulges a hopeful spirit and is willing to harbor good books that are not precisely daily food. Family portraits seem peculiarly unsuitable for a library. One reads chiefly to liberate himself from natural and genealogical prepossessions.

As for the floor, much depends upon whether it is to be covered or mostly displayed. In the latter case any hard wood and marquetry of a simple sort are in order; in the former case the margin around the rug should be stained dark. The rug or rugs should be of a sort to harmonize with the books—simple and severe in design. Monochrome squares of velvet or similar carpeting with, or better without, a border are a safe expedient.

A more imaginative person will hunt up a Tekke carpet, the so-called Royal Bokhara of the dealers. The fineness of the weave, the sharp depiction of the geometrical pattern, the solidity and lustrousness of the texture, the ox-blood color, are all in a sort of pre-established harmony with old tooled calf and morocco. Such rugs have become scarce and dear, but they are so much the ideal floor covering for a small library that a few days and, say, two or three hundred dollars are well spent in a successful quest. The Afghans or Khiva rugs are, however, of similar if cruder merit, and far cheaper. Among the carpets of Turkish, Persian and India weave there will be found examples simple enough for library use. In general the more florid and variegated sort are unsuitable. In choosing a number of little rugs to lie about a library the same general principles hold, but here there is greater latitude for picturesque and elaborate fabrics. Because of their small size they do not compete with the books, as a similar rug of large size would do, while the more strik-

Library corner in small city apartment. The room is about 11 x 15. The shelves a little more than five feet high accommodating 1,400 books.

ing ones may be relegated to shadowy corners.



An open fireplace is a great dust maker and the natural enemy of books. No professional librarian would think of letting one be used for other than ventilating purposes, but it is so comfortable a thing to the eye and mind, so desirable as a focus to a decorative scheme otherwise rather monotonous, that most sensible people will put up with its disadvantages. Being a personal comfort obtained at the expense of the books, it should be used rarely and not as the chief means of heating.

It will seem unpardonable to those natural enemies of libraries, the novel-reading sex, that I have said nothing of color schemes till the last. But the color is, after all, pretty definitely conditioned by the presence of the books, the need of light, and the fact that the entire decorative scheme must be livable for long periods. Thus colors that might freely be used in drawing-rooms are out of place here, as too trivial or too restless in effect. I hardly imagine a pink library, and a blue one seems a cold place to linger in. Red is the usual color, and here is a case where the majority seems right. It is cheerful and does not absorb too much light. If the room is dark, the yellow and buffs are excellent tones. The terra cottas also afford a safe compromise, but they hardly have character enough to go with the lighter tones of the bindings. A uniform tint is the best, especially if there are to be pictures and bric-à-brac. The burlaps are as excellent for this use as they are common. Stamped leather and its various substitutes, which are favored by some, befit only a library on a palatial scale, and even there outshine the books unhappily.

I have preached the doctrine of sobriety in vain if any reader wishes to fill up his library with pictures or miscellaneous objects of curiosity. There is, however, a strong temptation to do just this, in the long array of top shelf. The opportunity should be sparingly utilized. A few good objects in metal or clay are suitable enough; any lavish display of cabinet objects is destructive to the quiet effect of the room. As in the case of the rugs, ornaments of the severer sort are to be preferred. So far as possible these should have a bookish or even a typographical quality. Prints are better than paintings, wood-cuts better than etchings, original pen drawings, framed literary autographs and the like the most desirable of all. The finest designs of Rembrandt, Oliver, and other early engravers are to be had at slight cost in admirable facsimiles. The remarkable architectural etchings of Piranesi and Canaletto can be purchased reasonably. Literary portraits of all times can be had in photographs of paintings, or better in the form of prints. Nothing more thoroly belongs in a library, for example, than the Tennyson and Cardinal Newman, of Legros, or than Mr. Strang's portraits of contemporary writers. Medals of the same sort are very suitable. The splendid portraits of the Renaissance can be had in casts, and at the French mint may be had, at a slight cost, capital bronze portraits of contemporary French writers. Our own medallists have done a few pieces of merit. One who has St. Gaudens's plaquette of "R. L. S." may, for instance, count himself happy. All this is thrown out merely by way of suggestion, for here personal taste must rule supreme, and whatever is not overdone is likely to be well done.

For the same reason I have left the ideal domestic library unprovided with furniture. I assume that anyone who even partially accepts the principles suggested above, will not select tables or chairs in ivory white or Vernis-Martin, nor upholstered in brocades. I give him the credit for sufficient common sense to buy a lectern if he has many infolios, and a couch if he observes the good habit of dozing between chapters. I assume also that he knows the revolving book case to be an almost uniquely ugly piece of furniture, and will not use one unless he is a literary worker and must have certain books literally at hand, or a lavish but unfortunate bookman whose wife will not let him store the superfluous books otherwise. Finally I have tried to suggest the lines for a man's library. I can imagine the library of a literary spinster along these lines, to be sure, but with something of severity abated, lighter in color or furniture than the room we have imagined—and wholly charming. But here, while ready to admire, I feel myself wholly incompetent to advise.

New York City.

A Russian Mystic Novelist

BY EDWIN E. SLOSSON

NIETZSCHE and Tolstoy. The advocate of ruthless egoism and the preacher of limitless submission and altruism. In the eyes of the world these men represent the opposite poles of ethical theory, but their portraits hang together upon the same wall of an author's study in St. Petersburg, and to the eyes of the dreamer who placed them there the two fuse into one and he sees in the composite portrait the misty outlines of the man who is to be, the true Superman, the arch-egoist-altruist, combining in himself whatever is true and permanent in the partial creeds of the past.

The daring projector of this new ideal of the Superman is Dmitri Merejkowski; slight, dark, soft in voice, nervous in manner, vivacious in conversation, emphasizing his remarks with quick gestures of his delicate hands, acutely observant of all that goes on in the modern world, but seeming with his large, black,

tired eyes to look thru the superficial aspects of events and so to see them differently than do other people. In his forty years of life he has been subjected to very diverse influences, and his sensitive nature has received and reflected many phases of thought of the past and present. Whether he has the originality and will power to do more than this, to fuse these conflicting ideas into one firm and consistent ideal, remains to be seen. So far his work does not give us much reason to believe that he has this power. "The philosophic flea" his enemies call him, on account of his rapid changes of position and the difficulty they have in pinning him down in argument.

It is natural that he should have made Peter the Great the culminating figure of his trilogy of historical novels, for in his earliest years he must have heard much of the story and legend of the shipwright-emperor. Merejkowski was born in the little old house near the Winter Palace where Peter lived and worked. But to him Peter is no hero. He adopts the views of the Old Believers and depicts Peter as the Anti-Christ, the foe of the genuine Russian religious and national spirit.

Dmitri Merejkowski.

That he has strayed into heretical ways in political and religious matters is manifestly not the result of his early environment, for this should have made him a loyal adherent of autocracy and orthodoxy. He grew up in close touch with the Imperial Court, of which his father was a high official. He went to the University of St. Petersburg, where he devoted himself chiefly to the study of philology. The ancient classics are regarded by the Russian Government as the safest of all studies, and are encouraged when science is prohibited on account of its revolutionary tendencies. But the dead languages contain very live thoughts, and the history of the French Revolution might have shown the bureaucrats that Greek and Roman literature is a dangerous diet for young men having a predisposition to revolutionism. Young Merejkowski plunged into Greek thought with enthusiasm and translated Sophocles, Eschylus and Plato into Russian verse and prose. But he was not so absorbed in the past as to be unaffected by the latest fad in ideas. It was the time when students all over Europe were symbolists, decadents and pessimists, experimenting with new meters and new emotions, coloring their words and perfuming their poetry. The young men of the day were all telling ghost stories to each other and trying hard to believe them. Most of these "Young Belgians," "Young Scandinavians" and "Young Slavs" have grown up since then. The rest have gone out of sight. Maeterlinck has publicly repudiated his youthful excesses in this line and taken to writing Emersonian essays. Merejkowski writes no more decadent poetry, altho his wife continues to. She, by the way, is said to be the best woman poet in Russia. In personal appearance she is a marked contrast to her husband. She is a tall and stately blonde with strong histrionic impulses.

Merejkowski's love of Greek and Latin literature led him to the countries that produced them, and he spent many years in Greece and Italy and in Asia Minor and Constantinople. Gradually his interest centered about two periods, the last struggle of Paganism and Christianity after Constantine and the revival of Paganism to a renewal of the conflict at the Renaissance. Adding to these the period when these two forces came into sharpest conflict in his own country, he had the groundwork for his great trilogy. He gave personality to his theme by selecting as his central figures the representative men of these periods, the Emperor Julian, Leonardo da Vinci and Peter the Great.[1]

[1] CHRIST AND ANTI-CHRIST. I. The Death of the Gods. The Emperor Julian. II. The Resurrection of the Gods. The Romance of Leonardo da Vinci. III. The Anti-Christ. Peter and Alexis. *By Dmitri Merejkowski.* New York: G. P. Putnam's Sons. $1.50 each.

The Emperor Julian has attracted a great deal more attention than his historical importance justifies, for the scant two years of his reign failed to alter the current of human progress. Yet new books about him in all languages continue to appear, and recently more of them than ever before.[2]

Much of the Julian literature of the day is obviously produced, not with the laudable and disinterested purpose of clearing his motives from the misrepresentations of the Church historians, but to rehabilitate him so that he may serve as a Positivist saint in the "Neo-Pagan revival" supposed to be prevailing, or at least imminent, in Europe. Julian is to be brought back to life to fight the Church now as he did more than fifteen hundred years ago. Voltaire began the movement by his articles in the *"Dictionnaire philosophique,"* and Negri in his last book brings him forward as tho he were an anti-clerical candidate in the next Italian election.

Merejkowski, altho he presents a favorable view of Julian, is no partisan, or rather he is a partisan on both sides in different paragraphs. His interest is in the conflict and in its finish, which will not come thru the triumph of either, because such a triumph is only temporary, but by the union of the opposing forces. Ibsen has used the same characters for the same purpose in a more effective way in his drama, "Emperor and Galilean." His Julian, too, dreams of the Superman, the Messiah of the future, Logos in Pan and Pan in Logos.

Julian—"How is he begotten?"
Maximus—"He is self-begotten in the man who wills."

The first volume of the trilogy, *The Death of the Gods,* closes with a prophetic passage, forming a transition to the next, which deals with the Renaissance. Arsinoë, the Christian girl, who had striven in vain to hold back Julian from his disastrous course, is, after his death, modeling a wax statue of a god, and Anatolius, watching her, is uncertain whether it is Dionysius or Christ, a question that might be asked about many of the early Christian images before the crucifix became almost the only one.

"He will stretch out his hands toward the world. He must be inexorable and terrible as Mithra-Dionysius in all his strength and beauty; yet merciful and humble . . ."

"What do you mean? Is not that an impossible contradiction?"

"Who knows? For us yes; but for the future . . . Let Hellas die! Men shall dig up her relics—unearth her divine fragments of marble, yea, over them shall weep and pray! From our tombs shall the yellowed leaves of the books we love be unsealed, and the ancient stories of Homer, the wisdom of Plato, shall be spelt out slowly anew, as by little children. And with Hellas, you and I shall live again!"

"And with us revives the curse on us!" exclaimed Anatolius. "The struggle between *Olympus and Golgotha will begin over again!* Why? And when shall that struggle end? Answer, sibyl, if thou canst!" Arsinoë was silent. . . .

The prophecy is fulfilled in the second volume, *The Resurrection of the Gods,* which opens in 1494 with the digging up of a statue of Aphrodite, who appears as *la diavolessa bianca* to the chattering and superstitious Florentine shopkeepers. Leonardo da Vinci is called to the spot as the marble is brought out of the earth, and the crowd watches to see whether he is shocked or enraptured. He is neither, but calmly takes out his calipers, and, stooping down, measures the mouth of "the white she-devil" to see how it corresponds with his system of relative proportions of the human form. He represents a new factor in the world movement, the artist-scientist, the man who both knows and feels. A character like his, so full of incongruous qualities, a man who aspired to do all things and really accomplished little, one of the most versatile geniuses who ever lived, a man far in advance of his age, and yet—or therefore—a practical failure, such a character is just suited to Merejkowski, and he makes the most of it. This novel is by far the best of the three. His disconnected and rambling style is well adapted to picturing the chaotic and incongruous age of the Renaissance. It is so different from conventional literature that it is impossible to classify it in the common categories. It is neither history, biography nor romance, but all three

[2] In England, Randall's "The Emperor Julian" (1889), and Gardner's "Julian, Philosopher and Emperor" (1899); in Germany, Kock's "Kaiser Julian" (1900), and Vollert's "Kaiser Julians Religioso und Philosophe Uberzeugung" (1899); in France, Allard's "Julien l'Apostat" (1900); and in Italy, Negri's "Julian the Apostate," of which a translation by the Duchess Litta-Visconti-Arese with an introduction by Professor Villari, was brought out in this country by Scribner's only a few months ago.

in one. It might be described as a series of moving pictures of the Renaissance, wherein we see Machiavelli, Cæsar Borgia, Savonarola and others that we know; but the dominant figure in all is Leonardo, in the background, watching, sketching and taking notes. This notebook we are permitted to read, for the author has skillfully interwoven many of these marvelous fragments of thought, daring guesses at truth and surprising anticipations of the discoveries of modern science which have been found in his cryptic sinistrad manuscripts.

But Leonardo is not the Superman. He is but his forerunner, and in the epilog to this volume the author makes the transition to Russia as the land to which humanity must look for this ideal. In time the leap is to 1715, when Peter set up a statue of Venus in the Summer Garden and held a fête in her honor, thereby giving the devout an added reason for calling him the *Anti-Christ.*

"Things which never happen, happen in Russia" is written in the journal of the German lady-in-waiting. Incredible things happened in the reign of Peter. Gorky gives us a look into the gloom and squalor of Russian low life today—the court of Peter was worse than any "Night Refuge" of tramps and pickpockets whom Russia may now harbor in some vice-infested den. It is a loathsome picture at which we are forced to look—drunken and debauched nobles and church dignitaries in their orgies are no less disgusting than are humbler sots and profligates. Our first impulse is one of sick repulsion; but gradually thru the revolting riot we see the powerful figure of the great Romanoff Czar emerge, fighting the past, however personified, even in the form of his own son, the unhappy Alexis, and the unending struggle between the New and the Old. We see how a father's hate, with autocratic power to back it, resulted in filicide. That Alexis was weak, vacillating and vicious makes his fate only the more horrible, for there is no uplift to the soul as in witnessing the triumphant death of a martyr. No noble martyrs are in this chronicle; the religious sects who eagerly sought the "Red Death" or the "White Death" were mad fanatics, base and immoral as the corrupt Boyars at the court.

It is not without reason that Merejkowski shares the feeling of the *raskolniks* that Peter was the Anti-Christ. For Peter's shadow still darkens Russia. It was he who established the autocracy, not yet to be shaken off. It was he who started the Russian navy now sunk in the Sea of Japan. It was he who made the Church the tool of the State by placing over it a layman and Government official as Procurator of the Holy Synod, thus putting a Pobiedonostseff in power. What would have been the normal evolution of Russia if it had not been thus violently wrenched from its past no one can say, but certainly many of Peter's "reforms" have resulted badly for Russia in the course of the century.

In Alexis we have another extreme type of the Russian character, well intentioned, but irresolute and vacillating. Because some have thought that they recognized in it a portrait of Emperor Nicholas II may be the reason why Merejkowski prefers to live in Paris now instead of in St. Petersburg.

In this last volume of the trilogy the faults of the author's style become intolerably exaggerated. It is formless and incoherent and in places incomprehensible; at least to the reader of another land and language. Passages of mystical aspiration and poetic symbolism, instances of heroic self-sacrifice and of aimless cruelty, scenes of gross license and obscenity such as Zola would have hesitated to describe, are thrown together without apparent order. The grandiose and grotesque are commingled. The descriptive passages, over-elaborated with details, encumber the movements of the characters like heavily embroidered court robes. Like ikons overlaid with jewels, they lose resemblance to the human form.

This lack of symmetry, subordination and clarity seems to be a general fault with Russian literature and doubtless also of their life, for a like confusion and aimlessness appear to characterize their politics. If so we must credit *Peter and Alexis* with being all the more a faithful picture of Russian life. At least it looks much as the Russian revolution does seen from this distance. Then, too, we must consider that the volume dealing with Russia may seem more confused and incomprehensible to us

than those dealing with the Renaissance and Roman Empire, because the details and allusions are less familiar. Even the names are more bothersome to us, especially because we have no uniform method of transliterating them. One would think that in books of the same author, translator and publisher some consistency would be found. But no; we have Tsarevitch in one and Tsarevich in the other. Romadonovski and Merejkowski. The name of the author is the worst with its German *w* and its French *j*. Spelling it Me-rezh-kov-sky, it would be less liable to be mispronounced.

Merejkowski's genius is shown by his mastering three such diverse kinds of life as the Roman, Renaissance and Russian so as to present them with a realism altogether lacking in the ordinary historical novel. But in the wealth of detail the reader, and apparently even the author, loses sight of the thesis of his trilogy.

These novels first appeared in the *Novyj Put,* or "New Road," a magazine devoted to the new religious movement in Russia, and in Merejkowski's literary criticisms contributed to that periodical there can be found somewhat more definite expositions of his religious views. One volume of these has appeared in English,[3] and it is to be hoped that others will be published, for they give an insight into a strong and interesting world of thought. According to Merejkowski, the Russian people, from the highest to the lowest, are more deeply absorbed than any other race in abstract philosophical and religious questions.

"This insatiable religious thirst is the presage that Russia will share, and perhaps lead, the universal civilization of the future.

"In spite of all its unspeakable outward dullness and poorness, in spite of this commonplaceness, the world has never been so ripe for a religion as in our day, and withal for a religion that is final and will complete the world's evolution, partly fulfilled at the first and predicted for the second coming of the Word."

Merejkowski and the other writers who are conducting the *New Road* are combatting the atheistical or agnostic tendencies of the times, and they are also opposed to Tolstoi in his reduction of Christianity to a set of simple ethical rules by the abstraction of all its supernaturalism. It is his antipathy to materialism, and probably also an aristocratic feeling, either native or Nietzschean, that makes him dread the irruption of the lower classes into literature and politics. In one of his books of this year—"The Coming Vulgarian"—he attacks Gorky and Chekhov as leaders in this new and, in his opinion, dangerous movement.

They keep in touch with the national Church by giving mystical interpretation to its creed and ceremonies, and at the same time try to incorporate with it some Neo-Pagan ideas derived from Nietzsche. As shown in the above quotation, this takes the form of Second Adventism, with the Superman as a Messiah. Their hope for the Man-God of the future seems stronger than their faith in the God-Man of the past.

"Man is not the end, the last link of the chain, but only one of the links of cosmic progress: just as man was the outcome of the transmutation of the animal species, so a new creature will result from the transmutation of the civilized human species. This very being, this 'new creature' is the Superman, the Man-god."

There is no space here for the development and criticism of these views, which after all are not so novel as they seem. This promise that "ye shall be as gods knowing good and evil" was made a very long time ago, and by another serpent than Zarathustra's.

NEW YORK CITY.

[3] TOLSTOI AS MAN AND ARTIST, with an Essay on Dostoievski. *By Dmitri Merejkowski.* New York: G. P. Putnam's Sons. $1.50.

Moriz Rosenthal

BY RICHARD SPECHT

[After an absence of eight years, Moriz Rosenthal has again come to our shores. He is the greatest pianist that will tour America this year. The following highly eulogistic appreciation is by the well known musical editor of the Vienna *Zeit*.—EDITOR.]

WHENEVER I hear Moriz Rosenthal play, a name forces itself upon me in peculiar association: Friedrich Nietzsche. Nietzsche especially would have enjoyed Rosenthal's art; and this merely because his requirement — everything beautiful ought to run smoothly—has been complied with. It is true, Rosenthal's playing does not show any trace of heaviness; it shows *limpidezza* and the "calm ocean." It has been completely purged of materialism, and has reached such a sparkling spirituality that to the average critic it seems to exclude the element of sentiment altogether. But this is entirely wrong; it is only that here the soul sentiment has in it nothing unconscious, dull or obscure, and that in its sublimity it is very far from that somewhat obtrusive "soulful playing" which has a fatal smack of the "commonplace" of dressing-gown and slippers, and of cheap sentimentality. Therein also he touches Nietzsche.

Rosenthal's art possesses something fascinatingly proud; it does not insinuate itself with flattery; it conquers by iron and yet flexible energy, and, compelled to choose, it would prefer austere reserve to the usual amiability. Anton Rubinstein felt this, when, after a concert, he said with earnest approval to the young artist whom he thought one of those who advance art and whose technic he valued higher than Tausig's and Liszt's: "You render many things rougher than I, but your strong individuality gives you a right to do so." To express this individuality by a formula is no easy task; for many years it was deceiving. For a long while Rosenthal was regarded as an externally dazzling wizard of the piano, a before unheard and unthought of master of technic. There is no doubt that he was partly to blame for this opinion. In the "storm and stress" period he certainly was possessed by his phenomenal technic. It was a giddiness of supreme power for which every task offered was too small. The intoxication arising from the conquest of material difficulties had come over him with demoniacal force. His accomplishments of that period caused one to gasp. They were intoxicating and deluding, somewhat disquieting and fear-inspiring. He electrified, raised his audience to a frenzy of fascination; but it was not a pure feeling and one too often felt that one's mind had been misused. The more beautiful, then, the spectacle of an incomparable self-control, of all the impulses of the virtuoso, and at the same time a technical completeness growing constantly less comprehensible, but which latter now, instead of dominating, has pressed obediently into the service of high works and of the noble art of recital. A spectacle the more worthy of admiration because of its being a game of chance! Many of his former admirers had not grown up to the earnestness of his new art, while others had first to learn to believe in him. To confirm this belief entirely took his unheard-of energy, which knows no weakening, which always rises again to the loftiest hights, and for which its best is hardly good enough. Whoever wishes to share this belief has only to hear one of the last Beethoven sonatas interpreted by Rosenthal. His rendition solves every riddle which may still slumber for many in these mystic compositions born of solitary pride. The immeasurable possibilities of his touch, capable of rendering even a "fortissimo" soft; a "piano" as hard as steel, which knows how to brighten dark harmonies; his technic, mocking every rhythmical difficulty and every difficulty of double-stop or jumping; these enable him to expound the themes of the passages and the relations of the middle voices and to unite them in that organic whole that altho still not understood by many had hovered before the mind of the master. The most subtle weighing of dynamics, the reverential investigation of the structure and architecture of composition, and splendid success in returning from analysis to synthesis, are here combined for accomplishments of the highest order.

Laying aside the individuality of his talent, the artist has been qualified for such results by an ear so fine as almost to cause apprehension, and by a nearly boundless memory, an ear by which he is able to discern with rapid perception every single note of the most complicated "Kakophonie"; a memory schooled by mathematical, historical, medicinal and philosophical studies as much as by musical ones, which, at times, almost reached the incomprehensible. I, myself, was present at the decision of a bet when Rosenthal pledged himself to recognize every composition of Chopin by any single measure shown to him, the rest of the page being covered. One may easily understand that they did not make it very easy for him. The strangest measures, very often composed of only one chord, and in one case consisting of only a single note, were submitted to him, and almost without hesitation he named the composition to which the measure belonged, and played it from memory.

It is true he has penetrated Chopin like no other, and no one else like Chopin. In his rendering of Beethoven all his serious reverence, his endearing and delighted understanding, is heard, but when he plays Chopin his whole heart resounds. This is not only to be explained by nationality and by the Polish element uniting the composer and his interpreter. To express his most inner self, Rosenthal could not have found music more ade-

quate than Chopin's, with its proud depression, its melancholy splendor and its subtle spirituality, subtle also in the rich boldness of its harmony.

It seems just as if Chopin's conquering mixture on genial logic and apparently wandering fantasy had struck a familiar chord in Rosenthal. His Chopin playing is more than a mere reproduction. It is the announcement of a new creation, almost painful in its delicacy, in its richness of passages and shading, marvelously animated in the breathing of these languid "cantilenes," full of the productive spirit in the representation of this peculiar world of harmonies.

Almost as near to him comes Schumann. The restrained and quiet "note poems" of this admirable dreamer could hardly be rendered more voluptuously, his contagious onslaughts hardly more enthusiastically, than by Rosenthal. He is certainly the master of the climax. When he lashes the Philistines in the "Davidsbundler Marsch" of the "Carneval," when in the symphonic studies he brings the last variation to a climax, or when in the doubled octaves of the finale of Chopin's E-moll Concerto he storms toward the end, reflection is of no avail; the listener is completely overcome, the more irresistibly so from the performer's unwavering control of recital and dynamics. At those moments the infallible technique of the artist, in spite of his exterior calmness, seems doubled. Every jump is precise. The whizzing passages of sixths and octaves rattle down like lightning with faultless purity and fiery vehemence. The modifications of the touch which give to the piano the most varying plenitude of different colorings, seem to increase in the fortissimo instead of growing monotonously hard, as we should expect or as is generally the case. The most peculiar rhythmic complications, instead of persistently hindering him as is the case with others, serve only to increase the climax. It is one of his own peculiar gifts to thus overcome every difficulty in such a way that it is quite unnoticed. This is most splendidly shown in the immense demands made upon the artist by the Paganini variations of Brahms. After a playing of these by Rosenthal, Rubinstein, altho a bitter adversary of the composer, is said to have asserted: "For the first time a composition of Brahms has pleased and impressed me!"

All impressions would be impossible if the artist from whom they emanate had not raised himself to the hight of the finest intellectual life by energetic self-education. He may leave aside the overwhelming technique, which makes him so fascinating with his audience, and, for instance, in one of the smaller compositions of Schubert, can offer the choicest enjoyment by his feeling hightened by spirituality. Naturally it is not the simple feeling of the unsophisticated primitive man, but that of a man of the present age, who has gone thru all stages of culture, a combination causing rare pleasure; the clearness of a genially sharp understanding which tames a subtle, very sensible and susceptible feeling without suppressing it. All this has been subordinated to one high idea of a musical interpreter's vocation. The result is: An art of recital of a great nobility and superiority, which, everything considered, has no equal at the present time, and in which all elements of modern culture blend together. To repeat my words, he is the pianist of the new generation. Nietzsche has played.

* * * * * *

Rosenthal as composer: In his melodies noticeably a graduate of Chopin's school, talented and often astounding in his harmony. He has not published much, and his few compositions that have been printed have this great advantage: Nobody can play them but himself. That is particularly the case with his variations, which change a graceful theme brilliantly and, in details, captivatingly, but the difficulties of which, especially in the finale, hardly another pianist will be able to master. On the whole, he is one of the most interesting phenomena of modern art, if only for the reason that he does not pause, or allow anything to come in his way, because he possesses the rapid "tempo" of our race and the ability to find notes for the most delicate impressions and also always to find new possibilities of expression. He speaks of ourselves when he sits at the piano and speaks of himself and interprets a composition. Therefore not only the day belongs to him, but also the future.

VIENNA, AUSTRIA.

The Need for Specialized Libraries

BY JAMES H. CANFIELD, A.M., LITT.D., LL.D.

Librarian of Columbia University.

LIBRARY administration as a calling or profession is still in the beginning, is still a-making. Collecting books has been practiced with more or less success for many centuries. Classification came later, and only recently has been devoloped the science and art of cataloging. It is quite within bounds to say that intelligent and expert library service, in any large and inclusive use of the term, has been developed almost within a single decade—certainly within twenty years.

This development has gone with even tread, side by side with the appreciation of books, the making of books, and their intelligent use by the many. From the few scholarly and so-called bookish people, this appreciation and use have passed over to the people at large. College or university libraries have almost infinitely gained in this respect during a single generation; while the public library as a ministration to the education, information, recreation and uplift of the entire community has been practically created during the same period.

No better illustration can be given of the causes of growth and increased use than even brief details which have come in the field of higher education. A single generation has seen an advance in all standards, radical changes in methods of instruction, a new liberty in choice of work and therefore a large increase in the interest of students, and the establishment of technical callings upon such sound and detailed preparation as to create a full dozen new professions quite equal to the three or four older callings, in dignity and in general recognition. All this has meant increased mental alertness, a new valuation of original sources, a demand for larger opportunities for research and investigation, and a desire to know the very last and best word which has been spoken on any given subject. This has created a new demand for books and serials, and for the most convenient and immediate use of these.

And all this has its effect in stimulating the making of books, which has increased with hitherto unknown rapidity to an hitherto unknown extent. It is at last entirely true that of the making of many books there is literally no end.

At the very center of all this intellectual stir and strife stands the modern librarian. He must be in constant and appreciative touch with every phase of this movement, he must know accurately every square rod of this field, he must love both books and men, he must wisely balance all interests, he must have within reach exactly the book which each reader may need, and he must be the shortest distance between the reader and the book—a sort of literary straight line. His problems are increasingly administrative, because (fortunately) the larger literary knowledge and experience of the reading world tend to relieve him of the responsibility of selection while increasing the demand for actual and material service. There is a wise and proper demand that everything be preserved and placed within reach, a very natural feeling that everything is or will be of value to somebody, some time, and an unwillingness to trust selection, and especially rejection, to one person or even to a select corps of so-called experts.

The modern librarian, then, finds himself face to face with this problem: how to find the means with which to secure and the room in which to store collections which are already far beyond his ability in either direction, and which are increasing with frightful rapidity. If he looks ahead even a single century, and he ought to have at least this foresight, he finds that the future threatens him with accumulations which cannot possibly be cared for either as to shelf-room or handling or use, in any single building less capacious than that of the Library of Congress or with a staff whose salaries will not aggregate a sum impossible for any ordinary institution or organization to meet. The modern librarian, therefore,

is compelled to consider the desirability of that division of labor which results in a specialization of libraries.

As the sole purpose of this preface is to establish the need of immediate action on this line in this city, it will be sufficient to take up this problem at once and directly—leaving smaller communities to determine the necessary modifications of a scheme suitable to the metropolis, and the Library of Congress, at Washington, to find its true place as a national library, supplementing the libraries of the several States. It will be sufficient to indicate that ultimately we must have a good working scheme which will include and bind closely together the great central library of the nation and the libraries and library commissioners of the various States.

Fortunately for both illustration and precedent an excellent beginning has been made in this city, in library specialization. The carefully selected and admirably administered libraries of the Academy of Medicine and of the Bar Association are excellent illustrations of what ought to be undertaken by and for every profession and important calling in New York. The successful practice of medicine and of law in this municipality owes much to these collections, an indebtedness constantly and gratefully acknowledged. While it is entirely true, and always will be true, that practitioners must and will keep at their elbows, for immediate use, much of the current thought of their respective callings, the complete collection, covering both past and present, is entirely beyond individual reach. With modern methods of transportation and communication, the telephone and the trolley car, the stenographer and the subway, a great collection, well classified and cataloged, conveniently shelved, with plenty of reading tables and good light, with both day and evening hours, in the care of an intelligent staff, is just as convenient as if on the shelves of a library in a private residence—all conditions of use considered, is far more convenient.

Mention may be made also of the specialization in genealogy done by the Lenox Library—a collection the appreciation and use of which are daily increasing; of the fine library on life insurance housed in the Equitable Building, generously opened to all life insurance people and to others interested in this subject and commended to its librarian; of the great libraries which are to be gathered by the engineering societies, in the new building provided thru the generosity of Mr. Carnegie; of the Avery Library of Architecture, Decorative Art and Landscape Gardening at Columbia University, open freely day and night to all those in this city practicing either of these three arts, and to others having more indirect interest, known or properly presented to its custodian; of the collection of the New York Historical Society, rich in early local history; of the beginnings, at least, of a library on Pharmacy, at the College of Pharmacy, on West Sixty-eighth street, open to all pharmacists of Greater New York; of the special libraries of the Metropolitan Museum of Art, of the Museum of Natural History, and of the Botanical Gardens of the Bronx; of the theological and ecclesiastical libraries of the two great seminaries—Union and the General (Episcopal); of the remarkable collection already made by the Hispanic Society, under the guidance of its able president, Mr. Archer Huntington, of material relating to the early history of the Western Hemisphere, housed in the beautiful building just completed on 156th street, between Broadway and the river; of the library and collections of the Numismatic Society, under the same vigorous leadership, about to be shelved in a special building of their own near the Hispanic Museum. It is interesting to know that already there is a very definite agreement between all these libraries, including that of Columbia Unviersity—due to the initiative of Columbia—by which the greatest care is taken to avoid unnecessary duplication and expense, custody and storage room, and under which there is a most liberal policy of inter-library loans.

But this beginning needs to be carried much further, both in method and scope. The library on pharmacy ought to have a building of its own, and revenue sufficient to permit its doing for the pharmacists of New York precisely what the library of the Academy of Medicine is doing for physicians and surgeons. The

great fire insurance companies of the city ought to unite in the creation and maintenance of a library covering every phase of their business, where every question as to origin, development, theory and practice could find an immediate and satisfactory answer. Railways centering here should assemble an equally efficient and complete collection covering all forms of railway construction and operation. Here (not at inland Philadelphia) should be that body of reports, decisions, etc., bearing upon trade and commerce and consular duties and responsibilities. At some accessible point should be housed and wisely administered a complete collection of public documents, past and present, representing not only our own national, State and civic governments, but those of all civilized peoples—including the reports of all public or semi-public charitable, industrial and similar organizations. Under the general administration of the public school authorities should be established a most complete library on general and special education. The bankers ought to bring together at one point everything known to be in print bearing on the rise and progress, the "true inwardness" and the practical outcome of their most ancient and respected profession. There should be gathered also, at a point nearest the students of the fine arts, a collection of texts, authorities, biographies and history covering the entire field within which these students are working.

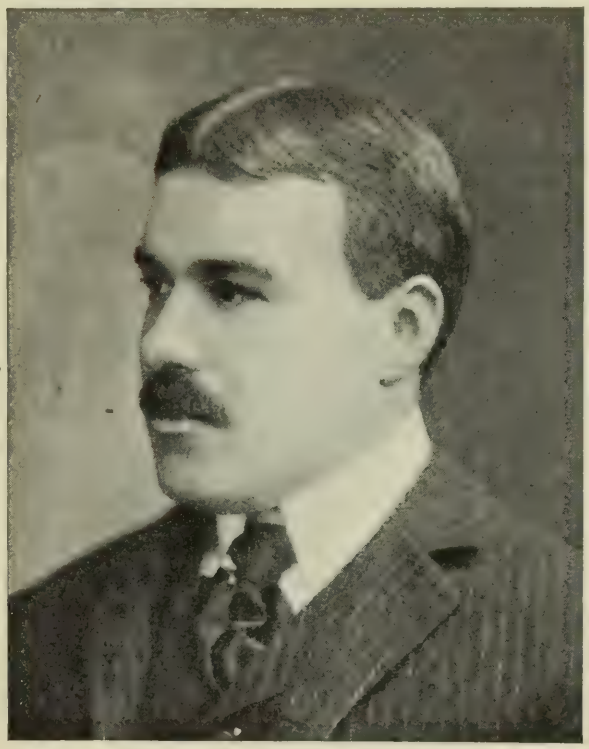
All these, and others which will suggest themselves in time if not immediately, sufficiently protected against abuse of privilege, should be most liberal in management. Their hours should be long and continuous, from 8 or 8:30 a. m. till 11 p. m., at least, each week day of the year, without regard to legal or other holidays. A free use of the current press should keep their accessions and advantages constantly before the people. The staff of each should be most carefully selected, and the members especially prepared for their work. There should be independent and direct telephone communication between them all, with a rapid messenger service, and a system of inter-library, not personal, loans. Ease of access, liberality of management, and convenience of use should keep the circulation of most of these libraries at a minimum, and use in the building at a maximum. At some convenient central point there should be established a correspondence bureau, the fees of which would make it self-sustaining—by which the advantages of these collections might be shared by thoughtful and studious persons in even most remote parts of the Union. It goes without saying that there should be constant conference between the directors of these libraries to prevent not some overlapping, which cannot be avoided because absolutely necessary, but all unnecessary duplication, and to secure the utmost results possible from wise and friendly and constant co-operation.

Some one has said that in New York there are no problems but financial problems. In this matter the financial problems are easily solved. Buildings, grounds and collections would be free from taxation because public. The direct interest of great corporations and capitalized industries and undertakings, as well as of patriotic citizens and of the members of each profession and calling interested, would ensure contributions and endowments. A reasonable annual or life membership fee which most specialists would gladly pay, even tho the libraries were open freely to the general public, in itself would yield no inconsiderable income. In many of these libraries the city would have such a direct interest that a contribution from the public treasury would be entirely proper. Once establish firmly in public opinion the desirability, helpfulness and general power of ministration of these collections, and there will be very little trouble on the financial side.

And what a marvelous ministration would be possible, at these centers of thought and expression, and with these large collections of the highest authorities in every field of human effort! Professional pride would be aroused, *esprit du corps* would be intensified, professional skill would be increased, community of interest would be strengthened, and everywhere would be a wider horizon and a broader angle of vision. The experiment is certainly worth trying.

New York City.

A Review of the Important Books of the Year



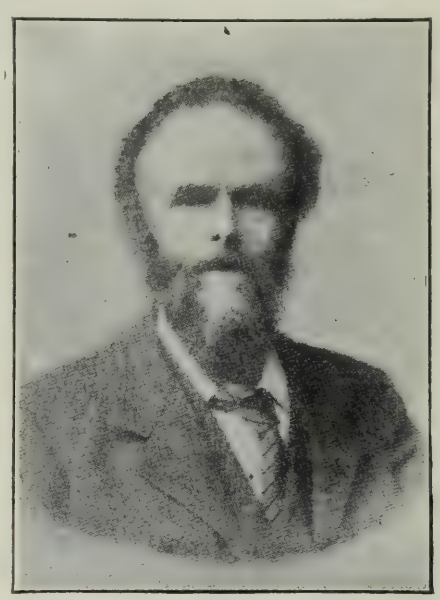
ABOUT 8,000 new books appear in the United States each year. A thousand of these we review in THE INDEPENDENT or at least give them sufficient notice to introduce them to our readers, who may then cultivate the acquaintance of such as interest them. But twenty introductions a week is as confusing to the mind as attending a series of receptions. So three times a year we pick out from the most noteworthy of these books for special mention and group them according to their kind for comparative appraisement. School books we considered in the Educational Number of August 2d. Books for children and special holiday editions we will discuss December 13th. This week we summarize such books of fiction, biography, history, theology, literary criticism, science and sociology published during the past year as seem to us to merit the attention of the thoughtful reader on account of their scholarship, timeliness, originality or interest.

Fiction

The Fighting Chance. By Robert Chambers. Appleton. $1.50.
The Jungle. By Upton Sinclair. Doubleday, Page. $1.50.
The Voice of the Street. By Ernest Poole. Barnes. $1.50.
The Shadow of Life. By Anne Sedgwick. Century Co. $1.50.
The Lake. By George Moore. Aplpeton. $1.50.
Disenchanted. By Pierre Loti. Macmillan. $1.50.
The Saint. By Antonio Fogazarro. Putnam. $1.50.
Folly. By Edith Rickert. Baker-Taylor Co. $1.50.
The Portreeve. By Eden Philpotts. Macmillan. $1.50.
The Spoilers. By Rex E. Beach. Harper. $1.50.
The Spur. By G. B. Lancaster. Doubleday, Page. $1.50.
The Awakening of Helena Richie. By M. Deland. Harper. $1.50.
Lady Baltimore. By Owen Wister. Macmillan. $1.50.
Coniston. By Winston Churchill. Macmillan. $1.50.
The Guarded Flame. By W. B. Maxwell. Appleton. $1.50.
The Debtor. By Mary W. Freeman. Harper. $1.50.
Joseph Vance. By William de Morgan. Holt. $1.50.
Fenwick's Career. By Mrs. Humphry Ward. Harper. $1.50.
Sir John Constantine. By Quiller-Couch. Scribners. $1.50.
The Flower of France. By Justin McCarthy, Jr. Harper. $1.50.
The Field of Glory. By Henryk Sienkiewicz. Little, Brown. $1.50.

As a rule fiction does not represent life, but the tendencies of life. Those who write it discover the mood of the times and found their stories upon that. Not long ago some one changed the romantic vision of this whole country by beginning that series of exposures which has spread from Rockefeller's Standard Oil rebates to every branch of the commercial, industrial, political and social world. At once the popular novelists took their cue. And now fiction is founded for the most part on a choice of scandals. Never before have we been in such a moral muss. Love and marriage usually hinge upon a deal in stocks and bonds, and not a fair deal at that. Authors like Mrs. Wharton and Mr. Chambers are doing a thriving literary business on the 'Change somewhere with a "ticker" and an ink-pot. Nearly all the others have "gone to the bad" to find material for their stories. And this curious thing has happened in consequence—the fiction of the year reflects as it never did before the same savage quality in the two extremes of human life—that is, in the wicked rich and in the wretched poor. In Chambers's story of New York society life, there are drunkenness, licentiousness, theft, but here vice is satin-shod, refined, too delicately dressed and guarded to get a man in jail, as it does in Upton Sinclair's novel of the Chicago Stock Yards. One cannot compare the two stories, but because the manifestations of life in each are so different and to such different ends, but upon examination we see the characters in each are equal to one another in savagery. Ten years ago no one in America would have thought of writing a romance about rancid odors, tainted meat and human squalor, and it cannot be done now without turning the stomach. But that was Mr. Sinclair's literary success; he turned everybody's stomach

and forced an investigation of the Chicago packing-houses. If only he had not mixed bridal wreaths with hog bristles, and true love with bad sausage! Doubtless this is the reason Mr. Chambers's novel will lead to no particular sharpening of public opinion against the polite gambling, drinking and adultery of New York society. He is too much of an artist to make the scenery shocking. As for the poor, we cannot get on without them in literature. They are the mighty skeleton upon which some of its bravest laurels fall. But Sinclair is not the kind of artist they need. Ernest Poole has done something toward restoring them in his novel to that realm of ragged knighthood from which Sinclair dragged them. But Poole is too much influenced by the hysterical manner for his story to endure.



Robert Chambers, author of "The Fighting Chance." Appleton.

The prediction is that in the course of time we shall discard fiction as a means of literary expression—on the theory that we are becoming too sane-minded to be content with representations of life that are usually exaggerated, emotional or incredible. Now we shall always have fiction, of course, and much of it will be mimetic, pictorial and emotional, rather than sincere reproductions of life, because most readers require an element of unreality in a story, just as they require the stimulating quality in wine. But the fiction of the future will differ at least in one particular from the kind we have now. It will be constructive, suggestive of stability rather than instability, of creation rather than chaos. Just now we are passing thru the destructive period. And it also happens that the novels of the year bear singular testimony to this fact. For example, Anne Sedgwick's story. The author has employed a seductive, pseudo-mystical manner of expression and made a deliberate effort to destroy every reason for the hopes and affections which fill life with interest. George Moore has been equally destructive in his late novel and the effect of his reflections is to destroy the spiritual illusion which hangs so mercifully between every man and his own dust. *Disenchantment* is the ruling fashion of the mind just now. Even the imprisoned ladies of the Turkish harem have suffered it. They have read Renan and Nietzsche, and know their real humiliation. The innocency of their consciousness has been destroyed, but they have no hope of bettering their condition. The business of Pierre Loti has been to picture their awakening and their despair. Meanwhile *The Saint* in Italy has got himself disenchanted concerning some Vatican pretensions. The point is that Fogazzaro would never have written about him if he had remained a dutiful purblind saint in the Church. It was not till he butted his head thru a sacred creed that he became a fashionable character in fiction, fashioned to it by his mood.

And the individual character in fiction is not yet constructed. The hero rarely ever is a man, but he is simply the ingredients of a man scattered from page to page. The author is so thoro in his analysis that there is no putting the parts together again, so as to produce the illusion of personality. Doubtless this is to be explained on the theory that the workman must learn to take a clock to pieces before he can make one. Hereafter there will be less exposure of the anatomy of character and a greater effort to preserve the integral mystery of

personality. And not so many writers will be guided by the subconsciousness in their interpretations of human nature. The subconsciousness is the consciousness from which we have escaped into something like sanity. It belongs to the underworld of fearful and lawless sensations which darken the mind. This is the destructive element in novels like Miss Rickert's late neurotic story of *Folly*. Things happen that are irrational and monstrous, because the principal character is a reversion to type, governed by morbid instincts rather than the moral sense.

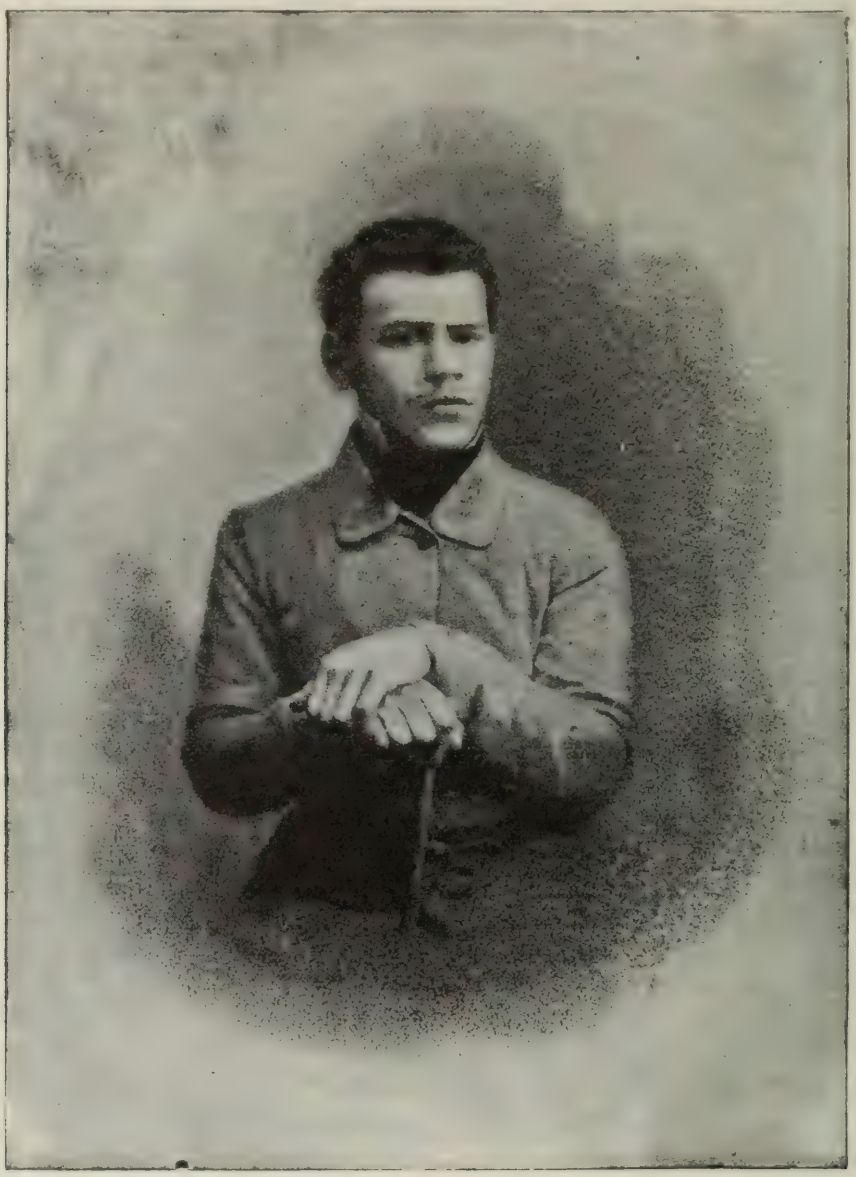
However, we shall do better when things are more stable, when the very times in which we live are less like the shifting quicksands, and more permanently ordered. Then there will be less analysis, less introspection in the literary interpretations of life. There will be more doing and less dying. Did any one ever consider the astonishing death rate in fiction? It is a sort of literary epidemic, the eternal *dénouement*. Look at Philpott's last Dartmoor story — a turgid, dark tale ending in madness and death. The English have a slow, murky sense of tragedy, which makes them offer death vulgarly with their sticks and fists, where other nations would give it more delicately with a sword or a dagger, and Philpotts has well illustrated it in the fury of his *Portreeve*. Alaska reeks with the blood of *The Spoilers*, and Australia is even worse, according to Lancaster. Here is a writer who makes himself an ink-pot for the expressing of every other man's feelings. His literary style is an immature imitation of Kipling's, and, forgiving this, there has not been so brilliant an interpretation of a literary ass in fiction since May Sinclair wrote the "Divine Fire"—but what needless butchery of men to add the charm of blood and battle to the tale! This wholesale killing of inconvenient characters is not justified by life since the middle centuries. We all know that in real life now inconvenient people live longer than any others. The author must learn, therefore, to accommodate the survival of his fittest to the inevitable survival of the unfittest. Besides, the killing method is not necessary. A decent death now and then may be borne, as we bear such things in the natural course of events, but it is primitive to spatter the pages of fiction with so much blood. There is no such violence in the four best novels of the year, every one of which is as distinctly constructive as those already mentioned are destructive. It is true that Sam's Sam did kill himself in Margaret Deland's splendid story, but he was the one inartistic, arbitrary character, shot like a fated arrow thru the quiet scriptures of the lives about him. But Owen Wister laid the scenes of his novel in the very dwelling ground of the Old South, and he has given us the most courteous, intelligent and veracious interpretation of Southern life ever published without losing a single man by violence out of the tale. Churchill was equally successful with his study of Jethro Bass. There is a good deal of wickedness subdued to righteousness in that book; nobody is killed by the process. Some think that Mr. Maxwell has produced the most powerfully written book of the year, because it is literally true to life. Sin, disease and death are not softened by rosy clouds of misty writing. But when all is said, the test of the book is to know whether the effect of it is constructive or disheartening. The chief merit of *The Guarded Flame* is, therefore, not its realism, which is common enough nowadays, but the inspiring picture of the patience, forgiveness and wisdom of the old scientist.

William De Morgan, Author of "Joseph Vance." Holt.

Meanwhile many will think that the awarding of the palm for having written the best novel of American life (not in the national sense, but in the more intimate local significance of that phrase)

during the year lies between Churchill, Wister and Deland. Mrs. Freeman's story is carefully written, a sort of family novel, but it falls short of the old-fashioned vision of piety, courage and romantic love which inspire each of the other three authors with a grace and beauty of expression lofty and winning.

Joseph Vance stands in a class by itself and must pick its own way and find its own friends. They will be warm and devoted friends, worth seeking, for each of them will, after careful consideration, select one or two of his circle of friends and introduce Joe to them, in a casual sort of a way, so as not to rob them of the delight of discovering the charm of the book for themselves. It is not a book that the reviewer can boom, much as he would like to; nor can he give a more definite idea of it than to say that, if the reader likes both "David Copperfield" and "Peter Ibbetson," he can find the two books in this one.



But finally, what would be the result if every novelist deserted modern life and cast the scene of his stories far enough back into the centuries to have the romantic atmosphere already created for him by history? Mrs. Ward's novel is not a fair example, because she has not retreated far enough, and because she has pieced the characters together from other characters, and from the present as well as from the past. The thing has been very deftly done, but it is no more satisfying as an illusion of life than a green cheese would be a satisfactory substitution for the moon. It does not shine. There is no breath in her Adam. It is simply a literary thing-um-bob. But suppose an author takes the past for better or worse, and sticks to it for his material, does it not give him a great advantage over the imagination of the reader? This accounts in part for the charm of Quiller-Couch's last novel. His genius consists in having the right words with which to interpret a high romance of a time long past. And Justin McCarthy is equally fortunate in his story of the maid at arms. It requires great emotions to beget a noble sentimentality. We boast of outgrowing emotions, and our sentimentality wears a prim, ethical, square-toed look which does not lend itself readily to romantic purposes, so it is very well for Sienkiewicz and the rest of them to keep to those fields of glory which lie behind us. We have fields of glory now, but we lack the glorying instinct. There will never be another maid to hear voices and see angels beneath the old fairy tree at Domremy. Not that there are no other angels, but no more maids with spirits sensitized for such visions and voices—which is more of a pity than we think it is.

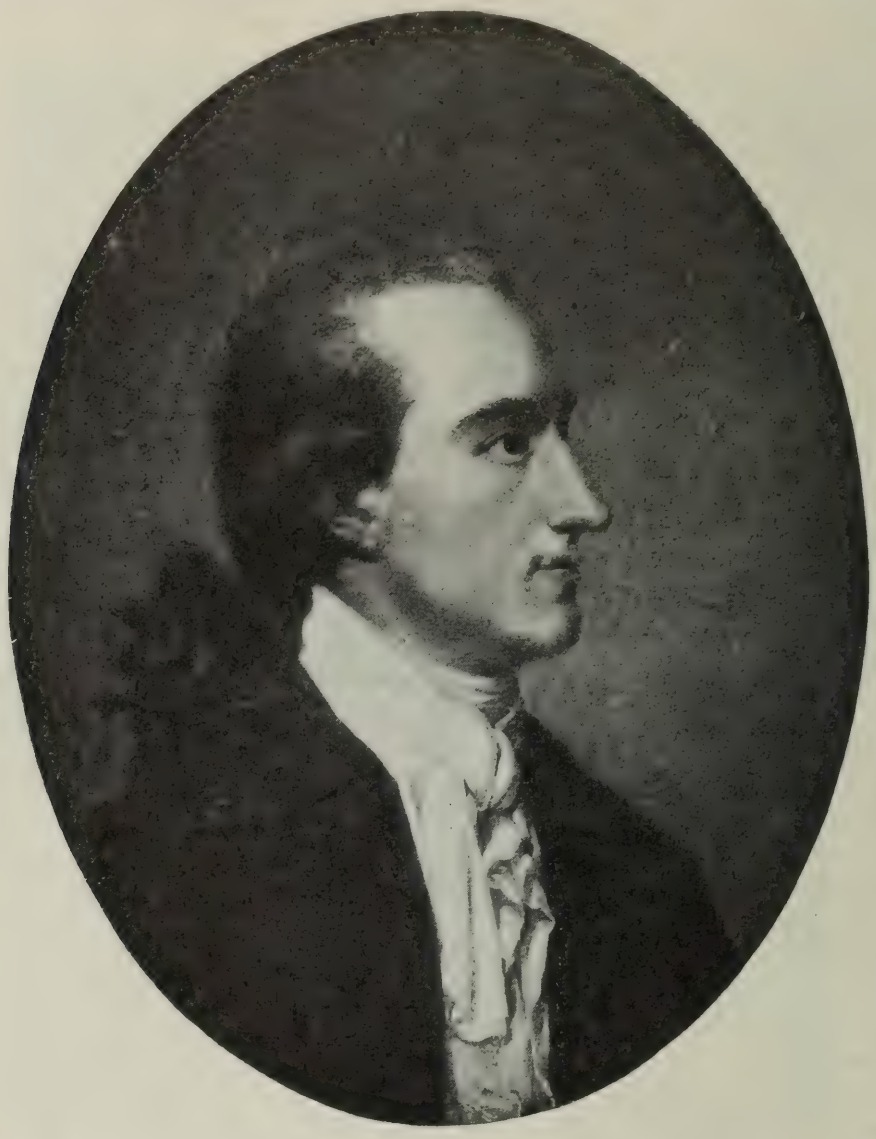
General Literature

From a College Window. By A. C. Benson. Putnam. $1.25.
Main Currents in Nineteenth Century Literature. By George Brandes. Six vols. Macmillan. $10.00.
Makers of Modern English. By W. J. Dawson. Three Vols. Revell. $6.00.
Life of Froude. By Herbert Paul. Scribner. $4.00.
Life of Charles Lamb. By E. V. Lucas. Putnam. Two vols. $6.00.
Life of Goethe. By A. Bielschowsky. In three vols. Vols. I and II. Putnam. $3.80 each.
Sidney Lanier. By Edwin Mims. Houghton, Mifflin. $1.50.
My Life. By Alfred Russell Wallace. Dodd, Mead. Two vols. $6.00.
Letters of Henrik Ibsen. Fox, Duffield. $2.50.
Leo Tolstoy. Vol. I. Childhood and Early Manhood. Compiled by Paul Birukoff. Scribner's. $1.50.
A History of English Prosody. By George Saintsbury. In three vols. Vol. I. Macmillan. $2.50.
English Works of George Herbert. By George Herbert Palmer. Houghton, Mifflin. Three vols. $6.00.
Collected Sonnets. By Lloyd Mifflin. London: Henry Frowde. $2.60.
Selections from the Poetry of John Payne. John Lane. $2.50.
Nero. By Stephen Phillips. Macmillan. $1.25.
The Dynasts. Part II. By Thomas Hardy. Macmillan. $1.50.
The Door of Humility. By Alfred Austin. Macmillan. $1.50.

Whether or not the result is due to the subtle but persistent influence of Sainte-Beuve, it is undoubtedly a fact that criticism nowadays is taking more and more the form of biography. The strictly literary essay of the type of Matthew Arnold's is becoming lamentably rare. The critic who has anything to say of literature prefers to convey it under cover of a life or a "character" of his author. Even the lighter sort of appreciation seems inclined to affect a slightly incidental air and to stow itself unassumingly away in volumes of miscellaneous content, like Mr. Benson's *Upton Letters* or *From a College Window*, which are concerned rather with the disinterested contemplation of life in general, where literature is naturally only one motive among many others, and that a small one. For this reason it happens that there is very little criticism to mention as such. The translation of the later volumes of Dr. Brandes's *Main*

Currents and the publication of the third, together with the revision of the two first volumes of Dr. Dawson's *Makers of Modern English,* afford the only important exceptions. Dr. Brandes's work, tho it has been written thirty years or more in a world proverbially inconstant, gives perhaps the most comprehensive and philosophic survey of the literature of the century available to English readers. Dr. Brandes aspired to write a history of ideas rather than an account of books and authors, and he succeeded in doing so. In spite of his extreme "liberalism"—the European liberalism of half a centry ago, not merely humanitarian and reformatory, but atheistic and revolutionary—his volumes, largely derivative as they are in details, form a valuable commentary upon the history life of the age with particular reference to its political and social affiliations. Dr. Dawson's series, on the other hand, is much more commonplace and popular. Setting out with a conception of the critic as a "middleman," or purveyor of information to "the vast mass of readers" who have no time for literature, he does little more than register the general consensus of critical opinion, as far as he is himself acquainted with it, or hold the balance between conflicting judgments, with an occasional intrusion, perhaps, of his own person.

Tolstoy at the time of his departure for the Caucasus, 1851. From Birukoff's "Leo Tolstoy." Scribner.



Of critical biographies, as they may be called, there is, however, a number so great that a choice must depend very largely upon the direction of the reader's

interests. There is, for instance, Mr. Paul's *Froude,* a work whose biographical and critical sides are, however, very uneven. As a narrative of the historian's career and an account of his intellectual development, together with the origin and growth of those partialities and enthusiasms to whose exploitation so large a part of his writings is devoted, the *Life* is clear and generally satisfactory. On the other hand, as an attempt to justify Froude and his conception of history thru thick and thin, and to throw discredit upon the modern "scientific" school, it must be considered not merely a failure, but from the start a mistaken effort. Mr. Lucas's exhaustive *Life of Lamb,* on the contrary, whatever its failings may be, is open to no similar reproach on the score of scholarship. In his recent edition of the essayist's works Mr. Lucas has already distinguished himself for his inveteracy in running down his author's allusions. And it is largely from this same thoroness that the biography derives its value. Every shred of available material that may throw the faintest light upon the poet or his associates is turned and returned, until there remains apparently little or nothing to be unearthed in future. And yet, as far as the principal character is concerned, it does seem at times as tho his figure were in danger of being blurred or the reader's eyes bedazzled with excess of light. In contrast with the more or less exaggerated emphasis of these two biographies, Bielschowsky's *Goethe* is remarkable for the impartiality with which, as a general thing, it keeps the balance between literature and scholarship. Without detriment to the esthetic or the moral significance of the great prophet of culture it contrives to keep on good terms with the rigid and rectilinear spirit of Germanic philology. In this very article of modernness alone there are so few good portraits of Goethe that it is hardly doing the book justice to allow it—the very least it deserves—a decided preference over its predecessors. Nor in spite of comparatively unassuming proportions is Mr. Mims's *Lanier* by any means undeserving of a place among these personal histories. Not only is it the first complete account of one of the best of our later poets—one also whose connection with THE INDEPENDENT should make him a subject of special interest to the readers of these pages; but it also contains a fair and temperate estimate of his poetical and critical quality. In particular the biography makes a welcome contribution to the knowledge of his youth and *wanderjahre* and the unfolding of his gifts and vocation.

As little will it do in this connection to omit a few autobiographies, which, tho not exactly critical literature themselves, do at least furnish what will probably some time or other constitute its materials. Of these Mr. Wallace's *My Life* is one of the most remarkable, not merely on account of its writer's co-operation with Darwin, but also because of its extraordinary revelation of that intellectual inconsequence and frivolity which, in conjunction with his unusual scientific endowments, have made him one of the most curious psychological puzzles of the time. Singularly enough, Ibsen's *Letters,* too, like so many of these modern confessions and self-disclosures, rather tends, if anything, to the author's prejudice. Unquestionably it requires a fine tact to speak constantly of oneself without offense. And in Ibsen's case the medium is likewise partly responsible. For correspondence he had no great turn. He is engrossed with money matters and small personal concerns of no general interest. Amid the clutter of his pages, however, it is still possible to trace the main outlines of his own character and to some extent the history and spread of his ideas. It is hard to decide whether the life of Tolstoy should be classed as biography or autobiography, for it consists largely of notes and memoirs furnished by Tolstoy and quotations from the published writings in which he tells of himself either directly or thru a fictitious personality. It does not attempt criticism or differentiation of material, but gives an abundance of details which are of assistance in understanding the man and his work.

To turn from this fertile, if rather irregular, province of letters to that of poetry, is a mortifying and dispiriting change. So small, indeed—at least, so insignificant—on the whole, is the annual harvest of verse that it is well nigh neg-

ligible. Even under these circumstances the best of it is hardly of the present at all, but drawn in great part from the stores of the past. The most notable revival of the kind is Professor Palmer's magnificent edition of *Herbert.* Undoubtedly the editor has done an immense service for the scholar in rearranging Herbert's poems in accordance with a general chronological scheme. But at the same time he has run the risk of misleading the general reader by imposing upon the arrangement an interpretation of the poet's character which is peculiarly his own, and unsustained by internal or external evidence. Similarly Mr. Mifflin, the most fertile and workmanlike sonneteer of the day, has reviewed his own verse in a collection of selected sonnets several hundred in number. And Mr. Payne, who has won a *succes d'estime* in England, is fairly represented by a volume of miscellaneous verse. In the way of new and original work Mr. Phillips's *Nero* deserves attention for a number of poetic lines and passages and for its general picturesqueness, tho as a whole it can hardly be said to do more than confirm those suspicions of dramatic incapacity which his earlier efforts had already awakened.

May's Portrait of Goethe in his thirtieth year. From Bielschowsky's "Life of Goethe." Putnam.

Religion and Theology

The Prophet of Nazareth. By Nathaniel Schmidt. Macmillan. $2.50.
Jesus. By W. Bousset. Putnam. $1.25.
St. Paul. By H. Weinel. Putnam. $2.50.
The Apostolic Age in the Light of Modern Criticism. By James Hardy Ropes. Scribner. $1.50.
Christian Origins. By Otto Pfleiderer. Huebsch. $1.75.
The History of Early Christian Literature. By Baron Herman Von Soden. Putnam.
The Hebrew Prophet. By Loring W. Batten. Macmillan. $1.50.

The Origin and Permanent Value of the Old Testament. By Charles Foster Kent. Scribner. $1.00.
The Problem of the Old Testament. By James Orr. Scribner. $1.50.
The Jewish Encyclopedia. Vol. XII. (concluded). Funk & Wagnalls.
The Development of Palestine Explorations. By F. J. Bliss. Scribner. $1.50.
Excavations at Nippur. By the University of Pennsylvania. Philadelphia. $2.00.
Ancient Records of Egypt. By James Henry Breasted. University of Chicago Press. $3.00 per vol.
The Religion of the Ancient Egyptians. By George Steindorff. Putnam. $1.50.
Shinto. By W. G. Aston. Longmans. $2.00.
The Use of the Scriptures in Theology. By William Newton Clarke. Scribner. $1.00.
The Finality of the Christian Religion. By George Burman Foster. The University of Chicago Press. $4.00.
Communion of the Christian with God. By Wilhelm Herrmann. Putnam. $1.50.
The Christian Doctrine of Salvation. By George B. Stevens. Scribner. $2.50.
Talks with the Training Class. By Margaret Slattery. Pilgrim Press. 60 cents.
Philosophy of Religion. By George Trumbull Ladd. Scribners. $7.00.
Origin and Development of Moral Ideas. In two vols. Vol. I. By E. A. Westermarck. Macmillan. $3.50.

If there lingers in any belated mind the superstition that books on religion are as a class commonplace in contents, mediocre in ability, and therefore negligible by persons of serious minds, the examination of a few of the above-mentioned volumes may be recommended in order that the illusion may be dispelled. To be sure, Dr. Dry-as-Dust occasionally yields to the judgment of his dear hearers and issues a volume of sermons, now and then a commentary appears which remarks that " 'therefore' refers to what precedes," and that " 'behold' is used to call special attention to that which follows," and doubtless an occasional volume of mawkish piety rivals a well-advertised novel in the number of its thousands. Such phenomena, however, are but survivals of an age fast becoming geologic, while the books which come to mind when one is asked to review the important books in religion and theology during the past year are products of the severe intellectual effort of gifted men and real contributions to the sum of human knowledge. The effusions which are useful only in suckling childlings in a creed outworn should not blind one to the books having more claim to be called religious, which are an important part of the work of the human spirit of these times, and which add more than their proportion to our knowledge of the thoughts and struggles of the forgotten days.

For example, Professor Schmidt's *Prophet of Nazareth* is classed as a religious book, yet among the historical and biographical monographs of recent years where would one find a more thoroly scientific study of a great epoch and a great character in human history? Sources are submitted to most minute examination, opinions and interpretations by writers in a dozen languages are collated and proved with astounding diligence and fine balance of judgment, and the results of historical research are brought into relation with problems of the present in a manner truly masterful. No American scholar has made a greater contribution to the understanding of the creative days of the Christian religion. Of the same sort in spirit, tho less radical in conclusions, is the smaller work on the same subject by Professor Bousset, of Goettingen. His sketch of the character of *Jesus,* tho brief in compass and designed as a popular hand-book, could not be omitted from any fair list of recent scientific studies in the records of the past.

Books of this sort certainly rank among the scholarly achievements of the present day, but we would not imply that they are devoid of the warmth of true piety and barren of poetic insight. We may quote what Professor Weinel says of historical criticism:

"Those who pretend that the higher task of sympathizing with and revealing the inner life is the poet's function, and that to meddle with such problems is not the student's work, take the very breath out of historic research, and lower the historian to the level of an archivist and antiquary. Whoever does not feel something akin to the poet, the artist, in himself, will never attain the highest aim of the historian."

In that spirit he has made a careful study of the personality of St. Paul, with the result that the true Paul stands before us and we appreciate both his limitations and his marvelous power. Such is the temper also of Professor Ropes's study of *The Apostolic Age,* and the poetical element in the character of the man of Tarsus has rarely found more sympathetic and forceful exposition. Professor Pfleiderer, whose ability and scholarship have given him an international reputation for over twenty years, has also treated the period of the Apostolic Age in his *Christian Origins,* a sketch of the history of Christianity from the preparation for it in Philo and the Greek philosophy to the establish-

ment of the Catholic Church. Interest in history rather than in questions merely literary dominates *The History of Early Christian Literature,* by Professor von Soden, of Berlin. As one follows his pages he finds himself tracing the growth of a spiritual life of great interest and power, and his attention is held to the character and worth of that life rather than to technical questions concerning the literature in which it is embodied.

The most thoro work in the Old Testament field the past year comes from a conservative. We do not forget the excellent study of *The Hebrew Prophet,* by Dr. Batten, nor the popular account of *The Origin and Permanent Value of the Old Testament,* by Professor Kent, but neither of these books covers the entire ground with such painstaking carefulness as does the reactionary essay of Professor James Orr on *The Problem of the Old Testament.* This critical effort of the doughtily orthodox Scotch dogmatician has been hailed as a conservative triumph, but the probabilities are that in what it yields to criticism, *e. g.,* the existence of documents in the Hexateuch, it will be found to mark the position to which conservatives have retreated, and beyond which they will not attempt again to advance, while in its attacks on critical results it has failed to muster sufficient force of facts wherewith to sustain the assaults it has attempted on the positions of the Graf-Wellhausen school. Many important articles on Old Testament subjects are found in the *Jewish Encyclopedia,* a monumental work completed within the past year.

Returning again to the scholarly and scientific character of many books classed under religion and theology, the labors of patient archeologists occur to one. Desire to understand the religion of former times and to secure the information necessary for the tracing of the religious history of the race is a chief incentive in archeological exploration. Any one reading Dr. Bliss's Ely Lectures on *The Development of Palestine Exploration,* which assembles the important facts concerning archeological research in the Holy Land, could not fail to be impressed with the scholarly ability and industry of laborers in this field. Such an impression would be discernibly deepened by examination of the collections of archeological material in such publications as the *Babylonian Temple Archives* and the account of the *Excavations at Nippur,* of the University of Pennsylvania, and Professor Breasted's *Ancient Records of Egypt,* published by the University of Chicago. What such collations of material can be made to yield in the hands of a ripe scholar is shown by Dr. Steindorff's lectures on *The Religion of the Ancient Egyptians.* We must also mention Aston's *Shinto,* a thoroly competent study of Japan's national religion.

Professor Petrie's exploration of the mines and temple of Serabit gives us photographs of the foundations of buildings which, in his opinion, were laid as early as 4757 B. C., and throws light upon the confused narratives in Exodus and Numbers of the sojourn in Sinai.

The past year has seen the publication of a book which marks an epoch in American systematic theology. Critical students for a generation or two have advanced objections to the proof-text method in dealing with the Bible, and preachers and writers sensitive to the demands of the times have cast it off, but it remained for Dr. William Newton Clarke definitely, and in the name of doctrinal theology, to declare that the idea that a system of religious truth can be erected by piecing scriptures together has been destroyed, and that the Church henceforth will need no doctrine of inspiration. Dr. Clarke is at the head of American teachers of doctrine, and is a man whose faith and piety no one can call in question for a moment. Such statements from a man of his caliber may be taken to usher in a new era of freedom from the domination of the proof-text both in the pulpit and in theological instruction.

No religious book of the year created more discussion than Professor Foster's *Finality of the Christian Religion.* The author's thesis that Christianity is the final and perfect faith, the ultimate and consummate religion, has been lost sight of largely in the debate over his attitude toward the miraculous and the supernatural. When controversy over this mat-

ter is exhausted, it may be found that Professor Foster has a real contribution to make in his presentation of the essentials of the Christian religion.

Professor Herrmann's *Communion with God,* one of the most important religious books of recent times, has appeared in a second English edition. The appearance of *The Christian Doctrine of Salvation,* by Dr. George B. Stevens, was followed shortly by the author's death. On examination the book is seen to be one of the best from Professor Stevens's hand, containing an exposition of the various conceptions of salvation found in the Bible, an analysis of the principal historical theories of the atonement and an attempt at a constructive

Ostrich as it Hides from an Enemy. From Beebe's "The Bird." Holt.

statement in harmony with modern belief.

If any one is under the impression that scholarly religious theological books are without influence, and that those that are read are of the "goody-goody" sort, an examination of some of the books prepared for Sunday school teachers would disabuse his mind. One of the best for this purpose would be Miss Slattery's *Talks with the Training Class,* in which the best modern psychology is brought to bear on religious instruction, with as much thoroness, coupled with good sense, as characterizes the best textbooks on pedagogy.

History

A History of All Nations. In 24 volumes. Lea Bros. Philadelphia.
Napoleon. Cambridge Modern History. Vol. IX. Macmillan. $4.00.
The Development of the European Nations. By J. H. Rose. Putnam. $2.50.
A Short History of Italy. By Henry Dwight Sedgwick. Houghton, Mifflin. $2.00.
History of the Inquisition of Spain. By Henry C. Lea. In four vols. Vols. I and II. Macmillan. $2.50 each.
The History of England. Edited by C. W. C. Oman. Vols. II and V. Putnam. $3.00 each.
The Political History of England. Edited by Wm. Hunt and Reginald M. Poole. Vols. I and XI. Longmans, Green. $2.60 each.
A History of Modern England. By Herbert W. Paul. Vols. III, IV, V. Macmillan. $2.50 each.
Lord Randolph Churchill. By Winston Spencer Churchill. Macmillan. $9.00.
The Life of Lord Granville. By Lord Edmond Fitzmaurice. Longmans, Green. $10.00.
Autobiography and Memoirs of the Duke of Argyll. Dutton. $10.00.
History of the People of the United States. By J. B. McMaster. Vol. VI. Appleton. $2.50.
History of the United States from the Compromise of 1850. By J. F. Rhodes. Vols. VI and VII. Macmillan. $2.50 each.
A History of the United States. By Edw. Channing. Vol. II. Macmillan. $2.50.
The American Nation. Edited by Albert Bushnell Hart. Vols. XI-XV. Harper. $2.00 each.
The English Colonies in America. By J. A. Doyle. Vols. III-IV. Holt. $3.50.
The Sea Power in its Relation to the War of 1812. By H. T. Mahan. Little, Brown. $7.00.
The Hayes-Tilden Disputed Presidential Election of 1876. By P. L. Haworth. Burrows Bros.
Electoral System of the United States. By John H. Dougherty. Putnam. $2.00 each.
Development of the Freedom of the Press in Massachusetts. By C. A. Dunniway. Longmans. $1.50.

Lincoln, the Lawyer. By F. T. Hill. Century Co. $2.00.
Alexander Hamilton. By Frederick Scott Oliver. Putnam. $3.75.
Judah P. Benjamin. By Pierce Potter. Jacobs. $1.25.
Frederick Douglass. By Booker T. Washington. Jacobs. $1.25.
Early Western Travels. Edited by Reuben Gold Thwaites. Vols. VIII to XXIII. A. H. Clark Co. Cleveland.
Documentary History of Reconstruction. Edited by W. L. Fleming. Arthur H. Clark Co. $10.00.
The Philippine Islands. By Blair and Robertson. Vols. XXVIII to XXXII. Clark & Co., Cleveland.

Of the making of history books there is still no end, nor, perhaps, will there be even a slump in the production until the present school of historical writers has worked over the old fields with the plow of economic interpretation and the

harrow of critical scholarship. And, in fact, we need not expect it then, for every age will demand new histories which will find in the past the things that interest the current age. The last year has been no less prolific in historical literature than other recent years which seemed to have reached the high mark of production. On the whole the work is as good, too, tho there has been the usual output of shoddy.

In the field of general European history, perhaps the most important work for the reader who is not a specialist is the fine translation from the German original entitled *A History of all Nations from the Earliest Times,* under the general editorship of Prof. J. H. Wright, of Harvard. Tho it is wiser to buy individual histories of distinguished excellence, yet general histories will be bought, and here we have almost the only existing one having scholarly merit. Another work of note is the volume on *Napoleon* in the Cambridge Modern History series. Some excellent work has been done by the several co-operating authors, but it is hard to see who will read the book, for the expert can get little from the disconnected monographs, while the layman is confused by the overlapping divisions, where there is no charm of style and no evolution which holds the attention. A much more readable work is Rose's *Development of the European Nations* (1870-1900), two volumes which try to show how the world of today arose out of the conditions existing fifty years ago. Society is seen passing from an era of political reform to an age of industrial and social reform. Imperialism is shown to be the vital characteristic of the period treated—imperialism which has transferred to other continents the struggles which earlier would have been concentrated in the home nations. A book of similar character, but of higher artistic and less scientific merit, is Sedgwick's *Short History of Italy.* The book of the year which touches the high-water mark of scholarship in the flood of European histories is H. C. Lea's *Inquisition in Spain.* Once again this man, who is the pride of American scholars, outdoes the European historians in their own field.

Turning now to England and her historians we find that they have been unusually active, and besides the new volumes which have appeared, continuing old series like the Oman and the Hunt and Poole, general histories, and Herbert Paul's *History of Modern England* (now concluded)—in addition to these we have had some most valuable contributions to the biographical material for English history. Winston S. Churchill's *Life of Lord Randolph Churchill* is not only a masterly biography of a brilliant and interesting figure, but is an intimate critical history of Tory politics from 1880 to 1886. The *Life of Lord Granville,* by Lord Fitzmaurice, is a work of immense importance in its bearing upon the history of England from 1850 to 1890. For American readers, perhaps the most significant thing in the two volumes is the quietus given the old story about Queen Victoria's interference in behalf of the United States at a time when her Ministers were about to decide upon intervention in the Civil War. The truth is that the Queen was at that time on the Continent in the worst stages of the morbid condition which followed Prince Albert's death, and Granville, who was, at her request, in personal attendance, gives ample proof in his correspondence that the Queen felt no interest in the issue. A third of these important human documents, the *Autobiography of the Duke of Argyll,* has an interest and a value little below Morley's "Life of Gladstone" in the brightness of the light which it throws on the English history of its time.

In the field of American history it is hard to select the most important single contribution of the year when the candidates for the distinction are McMaster, Rhodes, Channing, Turner, Hart, McLaughlin and Captain Mahan. Perhaps the greatest triumph has been achieved by Rhodes, who, in finishing the last two volumes of his *History of the United States* from 1850 to 1876, has completed in seven volumes the greatest historical work that has been written in America—great not in length alone, but in excellence of scholarship, and the magnitude and interest of his theme. McMaster too, with the completion of his sixth volume, is nearing the end of his monumental *History of the People of the United*

States. Two more volumes will be necessary to bring his survey of the many phases of American society up to the Civil War, the bounds which he has set. Channing's work, which sets the highest standard for critical scholarship that American writers have attained, is yet in the stage of laying the foundations of his historical monument, for the second of the eight volumes planned carried his

A photograph of a Mountain Goat, one of the rarest and shyest of Rocky Mountain animals. Taken at eight feet. From Hornaday's "Camp-Fires in the Canadian Rockies." Scribner.

Copyright, 1905, by John M. Phillips.

theme only from 1660 to 1670. He still shows the mastery, the cool, skeptical scholarship, with the occasional gleam of wit and the constant clearness of expression which marked his first volume. Besides these general histories by individual writers there is the great cooperative history of the United States, the *American Nation* series, edited by Professor Hart, which has advanced rapidly to completion during the last year. This series has produced, in addition to some able studies by McLaughlin, Channing, Babcock and McDonald, what we believe to be the most scientific piece of historical work — the history most nearly realizing the ideals of the present generation of history students— that this century has produced, Professor Turner's *Rise of the New West.* Nowhere else do we find such a grasp of all of the forces which determine and direct social and political evolution. No other historian has shown such patience in research, such skill in extracting from a thousand sources the eloquent economic and social facts, and that brilliant imagination which fuses the wide-scattered elements into the true historical narrative. In noting the general histories, the addition of two volumes to Mr. Doyle's scholarly and valuable treatment of our colonial history should not be omitted. Such a work by an English historian, is of great importance in correcting our point of view.

There are a few monographs which deserve special mention, and of these the most noteworthy is Captain Mahan's *The Sea Power in its Relation to the War of 1812.* Here, as in all previous work of the great historian of naval warfare, there is the philosophical grasp which seizes upon the essentials and passes unheeding the details which do not show the meaning of things. There are a number of other important monographs, but they have a value chiefly for the special student. Of this character is P. L. Haworth's *The Disputed Hayes-Tilden Presidential Election of 1876,* a scholarly and detailed study of a political episode which had an unheeded note of warning against our present method of electing our Presidents. The same topic is touched again in Dougherty's thoro and thoughtful study of the American electoral system, wherein the author dwells at length upon the danger lurking in our electoral methods. Dunniway's history of the *Freedom of the Press in Massachusetts* is a real contribution to the study of the evolution of liberty in America. Paullin's *The Navy of the American Revolution* is not another history of sea fights in the Revolutionary War, but a careful study of the administration of the navy both by the States and by Congress. *The Union Cause in Kentucky (1860-65),* by Thomas Speed, is another of those valuable studies in special phases of the Civil War which will in time make possible an accurate general history dealing adequately with the political and social phases of the war.

Another category of importance in our historical literature is the list of biographical books or those containing the materials for biography. Cushing's edition of the *Writings of Samuel Adams* gives for the first time any fair conception of the enormous influence of this "man of the town-meeting" in setting the revolutionary forces in motion. It is true that the economic and political combustibles were all at hand, but it was Adams who fired them. Nicolay and Hay's *Complete Works of Abraham Lincoln* add little to the matter found in the magnificent life of Lincoln already published by the same authors. F. T. Hill's *Lincoln the Lawyer* is, on the whole, something of a contribution to the Lincolniana already so vast. A life of *Alexander Hamilton* by an English gentleman, Mr. Oliver, is admirably done, and furnishes a new point of view. Lives of *Judah P. Benjamin,* by Pierce Butler, and *Frederick Douglass,* by Booker T. Washington, are both welcome biographical contributions.

Finally, there is a field of historical activity which is too often undervalued, but which, at the present stage of American cultural development, needs most to be encouraged. It is the publication of the materials of history, not only the letters, diaries and works of men prominent in our history, but the records of economic processes, like plantation records, the observations of travelers, the journals of legislative bodies, and ecclesiastical and other documents. Mr.

Thwaites's *Early Western Travels* reprints have made available during the last year some travel books, not merely useful to the historian, but filled with tales of such strange and thrilling adventures as to hold the attention of the veriest schoolboy. W. L. Fleming's *Documentary History of Reconstruction* is a most valuable collection of planters' records, Ku Klux and other secret memoirs, political and economic documents of all kinds. Virginia is publishing the *Journals of the Virginia House of Burgesses,* 1773-1776, and the editors, Blair and Robertson, continue their invaluable publication of documents relative to the history of the Philippine Islands. It is from material such as this that we may hope to gain any true ideas of the past, and only thru our understanding of the past can we come to any right understanding of our present institutions and contemporary problems.

Miscellaneous Books

Nelson's Encyclopedia. In 12 vols. Vols. I to VI. Nelson & Sons.
Lippincott's New Gazetteer. Edited by A. and L. Heilprin. Lippincott. $10.00.
The Empire and the Century. Dutton. $5.00.
The United States in the Twentieth Century. By Pierre Leroy-Beaulieu. Funk. $2.00.
Grove's Dictionary of Music and Musicians. Revised edition. Five vols. Macmillan. $5 each.
History of American Painting. By Samuel Isham. Macmillan. $5.00.
The Pre-Raphaelite Brotherhood. By W. Holman Hunt. Macmillan. $10.00.
The Life of Reason. By George Santayana. Five vols. Scribner. $1.25 each.
Principles of Economics. By E. R. A. Seligman. Longmans. $2.25.
Principles of Administrative Law in the United States. By F. J. Goodnow. Putnam. $3.00.
Socialism. By John Spargo. Macmillan. $1.25.
The Economy of Happiness. By James Mackaye. Little, Brown. $2.50.
Geology. By T. C. Chamberlin and R. D. Salisbury. Three vols. Holt. $12.00.
Radio-Activity. By Ernest Rutherford. Revised edition. Macmillan. $4.00.
The Dynamics of Living Matter. By Jacques Loeb. Macmillan. $3.00.
Studies in General Physiology. By Jacques Loeb. Two vols. University of Chicago Press. $7.50.
The Life of Animals. The Mammals. By Ernest Ingersoll. Macmillan. $2.00.
The Frog Book. By Mary C. Dickerson. Doubleday, Page. $3.50.
The Bird. Form and Function. By C. William Beebe. Holt.
Outdoor Pastimes of an American Hunter. By Theodore Roosevelt. Scribner. $3.00.
Flashlights in the Jungle. By C. G. Schillings. Doubleday, Page. $3.80.
Camp-Fires in the Canadian Rockies. By W. T. Hornaday. Scribner. $3.00.

Mention must be made here of some books too diverse to be classified and too important to overlook. They do not require particular description, for, like most of the books in this survey, they have been reviewed at length in THE INDEPENDENT, or will be soon, and to these reviews the interested reader is referred. Two valuable works of reference head the list—a revised and enlarged edition of Lippincott's standard gazetteer, the most authoritative and comprehensive work of the kind we have, and a new encyclopedia published by Nelson & Sons, of which half of the volumes have appeared. It is up to date, reliable and especially convenient for quick reference, because it is built on the dictionary plan of short articles under numerous headings, instead of being a collection of elaborate monographs like the Britannica. *The Empire and the Century* is also to be classed as a reference book, altho its object is a political one, the glorification of the British Empire. It consists of fifty-six different essays on the British colonial possessions by as many different writers, many of them administrative officials of the countries they describe. It contains a great deal of political, geographical and commercial information hard to find elsewhere. When Leroy-Beaulieu's study of the United States first appeared about two years ago we expressed a wish to have it translated, and this has since been done by H. Addington Bruce. It is not written in so interesting a style as Bryce's "American Commonwealth," and is more exclusively devoted to the commercial and industrial development of the United States, but is valuable as a competent and thoro discussion of our progress and problems from the impartial standpoint of a foreign statistician. The completion of the revised edition of *Grove's Dictionary of Music,* and the appearance of a complete *History of American Painting* adds two important works to the reference shelf in the fine arts alcove of the library. About that important phase in the history of art, the *Pre-Raphaelite Brotherhood,* no one living can speak with more authority than Holman Hunt, but he was too closely associated with the movement to be an impartial historian of it.

Professor Santayana's brilliantly written and stimulating exposition of his philosophy of life is completed this year. It is more of a commentary than a

philosophy after all; the critical remarks of an artist and scholar as he surveys the fields of religion, science, art and society from a detached standpoint.

In the social sciences there is such a flood of publications, many of them useful and interesting, that it is difficult to pick out those that are real contributions to the subject. But we can surely class as such Seligman in the field of economics and Goodnow in civics, while in sociology we must mention Spargo's interesting exposition of Marxian Socialism, and an ambitious attempt by James Mackaye to construct a new and complete theory of society from the very foundations.

In natural science there are several new works of the first rank in which the general reader will be interested. Chamberlin's and Salisbury's *Geology* is chiefly interesting because it gives to the public for the first time the planetesimal hypothesis of the origin of the universe which is intended to supersede the nebular theory of Laplace. Rutherford's *Radio-Activity* is the most complete and authoritative account of the recent remarkable discoveries in this field by one who has made many of them. Loeb's experiment on living beings attract the attention of the layman because of their bearing on fundamental problems of life and mind, and even those who are most strongly prejudiced against his philosophy find that they cannot ignore his views, because he has a way of backing them up with experiments.

The striking feature about the new books in zoölogy is their admirable photographic illustration. This saves pages of tedious description, and brings the idea directly to the mind of the reader with a vividness and definiteness which verbal explanation can never accomplish. The three books we mention above, Ingersoll's mammals and the monographs on the frogs and the birds, are strictly scientific, yet attractive and comprehensible to the ordinary reader. They all deal with living animals, not museum specimens, as did the old zoölogy. For the benefit of those who wish to follow the animals into their native wilds we add the titles of three good hunting books of the year, all remarkable for their excellent photographs of animals at home. Of these three, *Pastimes of an American Hunter* derives its chief interest from its authorship; *Flashlights in the Jungle* from the unique series of photographs of rare and dangerous African animals, and *Camp-Fires in the Canadian Rockies* from its description of a country which, tho near to us, is almost as unknown as Africa.

The Belated Rose

BY M. E. N. HATHEWAY

Crushed in the depths of tangled shade
It kept the vision true,
And waited flowerless, undismayed,
All the fair summer thru;

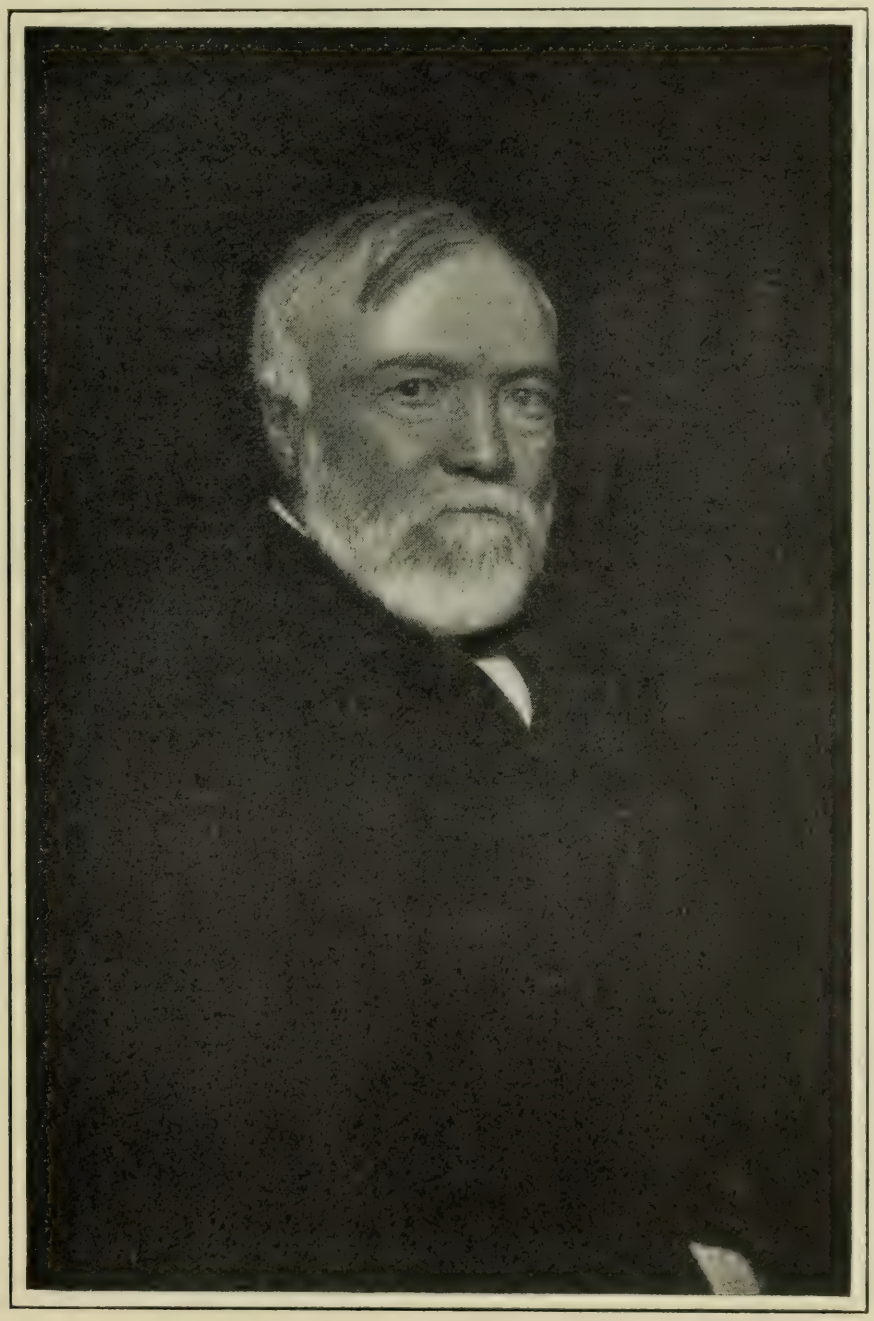
Until with swift, compelling sway,
Autumnal winds swept by,
And rent the leafy screen away
That hid it from the sky.

Then, with the sense that feels and dares—
Thrilled to its inmost source—
It gave its bloom to morning airs
With sweet, courageous force.

And hastens now with victory won
Life's full delights to seize—
Offers its incense to the sun,
And dances with the breeze.

What tho the perfect joy and right
Are reached with long delay?—
What tho the frost may fall tonight?—
The rose has had its day.

Taunton, Mass.

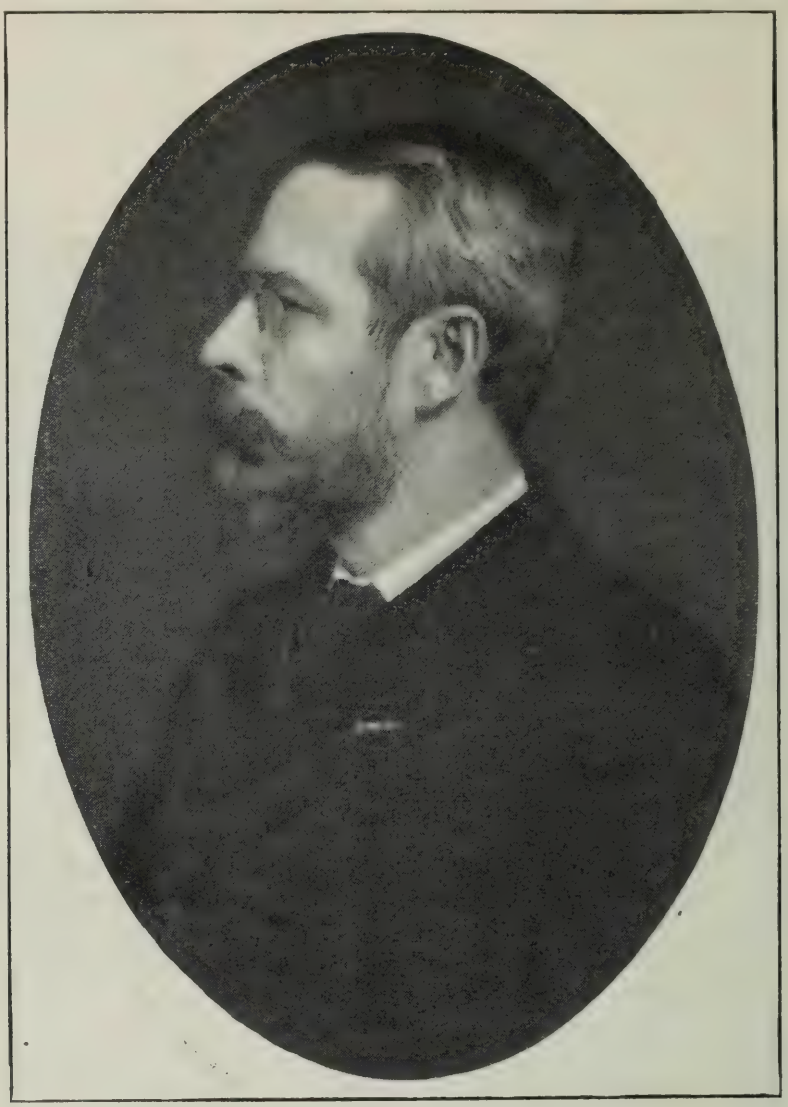


The Spelling Reform

BY ANDREW CARNEGIE, LL.D.

THE INDEPENDENT has many merits which give it value to its readers, and it is to pass into history as a pioneer in improving the spelling of our language, a result which will grow in public estimation with the years as each successive generation looks back and congratulates itself upon what it has escaped, just as we may congratulate ourselves upon being freed from the trammels of Caxton's, Tyndale's, Spenser's and even Shakespeare's and Jonson's spelling.

It is quite true that language is a growth, and that, in spite of all, our own language has improved and will continue to improve. But spelling is not language; and improvement in spelling never came until a few writers at first rejected an old and adopted a new spelling, nor can it come in any other way. There must be pioneers.

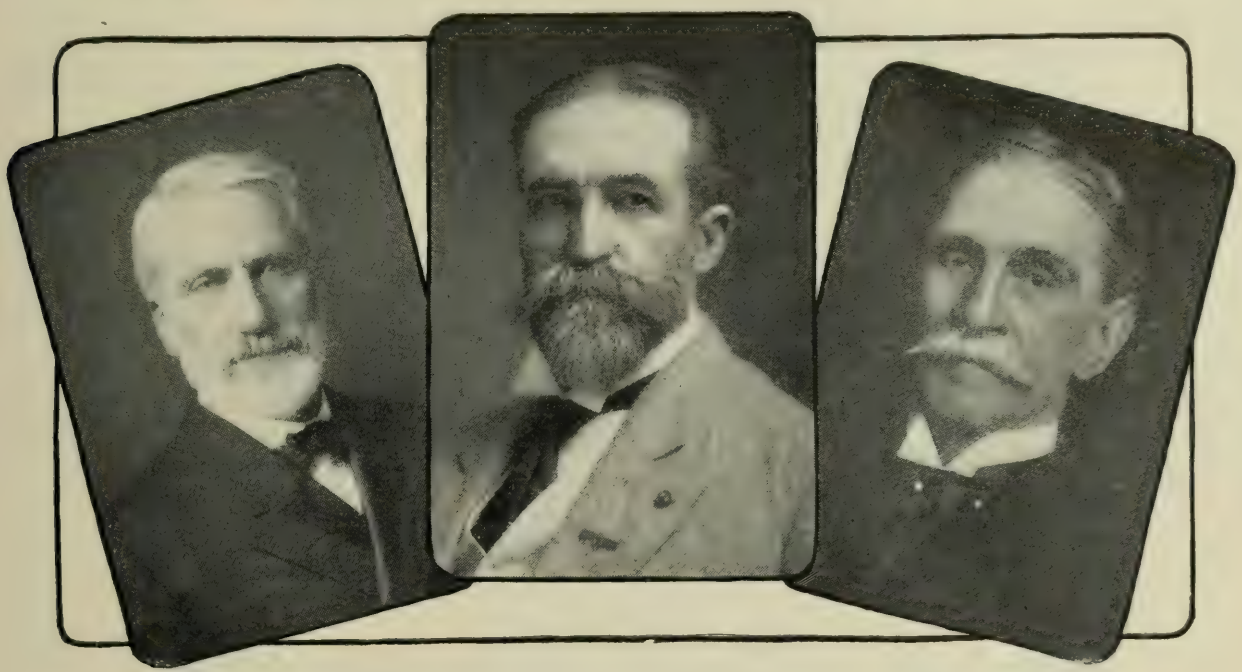


Spelling reform has this peculiarity—reforms in other departments are usually prest by those who are not the highest authorities, but by innovators knowing

Andrew Carnegie.

and caring less for origins, but feeling more the trammels of existing conditions. The contrary is the case with spelling. The great body of philologists are convinced of the necessity of this reform, and are its most ardent advocates. The more a man knows of our language and of its confusion and anomalies of spelling, the greater a reformer he is. When this movement for reform took definite shape, thirty years ago, its leaders were Professors March, Whitney, Lounsbury, Max Müller and others, the highest authorities of their time; men who were soon joined by scholars like Child, Hadley, Barnard, Harris and many others in America, and by Skeat, Murray, Sweet and others in England; while the younger generation of scholars concerned in English philology and lexicography seem to be even more zealous for reform. In fact, in this matter, expert opinion and common sense point in the same direction. Reform must be begun. The class that resists most is that of aged literary recluses, who resent disturbance and wish to continue in the old ways to which they are used.

One of the most prominent men gave as his objection that the new spelling would cause the present books to be destroyed and new ones to be printed. There never was the slightest foundation for this fear. New books and new editions will be printed, of course, as they are now. How else will printers and publishers live? But the present books will continue to be read and used, just as we read and use books printed twenty, fifty or a hundred years ago. In time the old books that are not worn out will retire to the less-frequented alcoves of our libraries, where they will be comfortably read by students interested, and left



Brander Mathews.

alone by the rest of mankind, exactly as is done now.

As for the "radical changes" which are to make the new books difficult to read and the old books no longer intelligible, they are a figment of the imagination. The most radical change possible would be the substitution of an absolutely phonetic spelling; and it is the uniform testimony of competent observers that any phonetic spelling in Roman letters can be read with ease, after a few minutes' attention, by any one familiar with the present spelling. But simplification of the present spelling, which means only the removal of its needless exceptions and anomalies, is not radical, but conservative, and it will make reading more easy and not more difficult. If the whole of the 3,000 amended spellings recommended by the philological societies of Great Britain and America were adopted today the difficulty in reading would be seen to be imaginary, and the language would become infinitely easier for future generations. Meanwhile not one of our present books need go out of use.

Others have objected to the look of the new words or new letters, which they think unsightly. The word *thru* has become a target. An impartial judge might be excused for finding *thru* quite as sightly as *ough;* considered merely as an object to look at, the advantage is decidedly with *thru.* The question that often arises is, how can any person bring himself to write the ugly *ough* when he is quite *thru* with the word *thru* when *thru* is written? What reason can be given for adding three letters that might as well be *phy* as *ough,* so far as the word *thru* is concerned?

In some cases it is claimed that the *ph's* and *ough's* show the derivation of the word. There is no necessity for writing or printing superfluous letters in order to show the derivation of a word. The derivation is a matter of history which cannot be obliterated; it is on record and all who desire to study it can do so. No one spelling, even the worst, conveys the whole history of the word. It is the main purpose of spelling to show what a word is, not what it was.

Dr. Isaac K. Funk. Charles E. Sprague. Henry Holt

MEMBERS OF THE SIMPLIFIED SPELLING BOARD.

A celebrated author has declared "the language of Shakespeare good enough for him." He must have spoken without thinking.

Here are some lines of Shakespeare as spelt in the first edition of his plays:

"My friend Stephen, signifie pray you
Within the house, your Mistresse is at hand,
And bring your musique foorth into the ayre.
How sweet the moone-light sleepes vpon this banke,
Heere will we sit, and let the sounds of musicke
Creepe in our eares soft stilnes, and the night
Become the tutches of sweet harmonie."

—*Merchant of Venice, Act V.*

"*Ham.*—The Ayre bites shrewdly: it is very cold.
"*Hor.*—It is a nipping and an eager ayre.
"*Ham.*—What hower now?
"*Hor.*—I thinke it lacks of twelue.
"*Ham.*—No, it is strooke.
"*Hor.*—Indeed I heard it not; then it drawes neere the season
Wherein the Spirit held his wont to walke."
—*Hamlet.*

In these fourteen lines there are twenty-six variations from the present prevailing spelling, and yet we have not lost the language of Shakespeare.

Simplification of spelling has alwavs been going on. Take the word *fish,* for example. The author of the "Treatyse of Fysshynge wyth an Angle" (1496) spelt the word *fysshe,* and Caxton did the like, and worse. Earlier writers besides *fish,* had used *fishe, fyshe, fisch, fysch, fishshe, fissh, fysshe, fisshe, ffyssh, fiche, fyche, fisse, fiss, fizs, fis, fix,* and a few more varieties. Some one has cited from Coverdale's English version of the Bible (1535), which was printed in Germany, these other varieties: *fiszh, fyszhe, fiszsh,* besides *fysce* and *fish.* Within one generation most of these superabundant spellings were set aside, and only four or five varieties were used, until at length, a generation later, only one prevailed—*fish.* This was simplification. It was effected, not by abstract "growth" or "evolution," but by conscious human effort, guided by common sense. Some persons began the change; others accepted it because it was good.

The reformers who gave us today the simple spelling of *fish* would, if known, be entitled to and would receive the gratitude of the English-speaking race. They seem to be unknown, but in this movement of today, fortunately, the records are being kept, and future generations will hold certain names in grateful remembrance; among those THE INDEPENDENT will occupy a conspicuous position in the front rank as pioneer—with President Roosevelt.

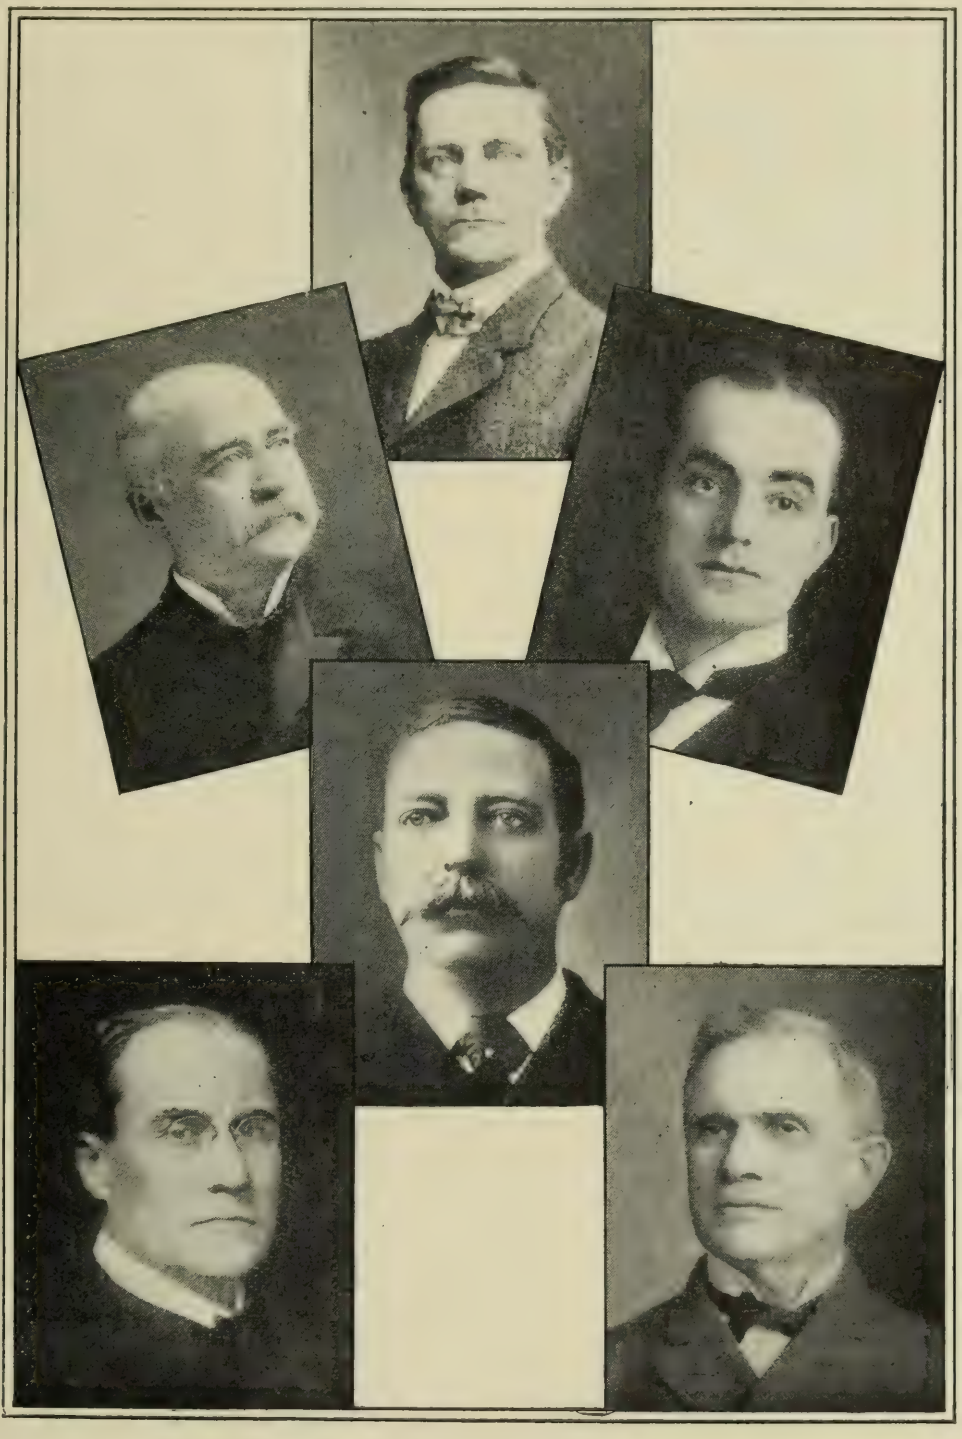
The movement promises well; already more than 10,000 persons, including many of the best known educators, scholars, scientists, professional and business men, agreed to adopt the 300 words. Many newspapers and many business firms have done the same, and the list swells daily. This is sufficient to lead to further steps and ensure ultimate success.

NEW YORK CITY.

Average Americans

BY DENIS A. McCARTHY

Oh, we are but commonplace fellows,
Who lead the most commonplace lives;
Our names never stare from the "yellows";
We never steal other men's wives;
We've ne'er been caught cutting the capers
Of those on Society's list;
We furnish no par.s for the papers—
We're men the reporters have missed.



Oh, rich we are not, or romantic,
Our lot in the open is cast;
We never drive silly maids frantic
To trace our mysterious past;
The Tenderloin doesn't adore us;
We're neither be-curst nor be-kist;
We couldn't tell one in the chorus—
We're men the reporters have missed!

It may be we bow to the fashion
In owning an auto—what then?
We are not possessed of the passion
For running down women and men.
The killing of gentle old ladies
Amuses us not, we insist;
But then we're not headed for Hades—
We're men the reporters have missed!

Yea, we are but commonplace fellows;
A commonplace, average lot;
We live and we die, but the "yellows"
Ne'er give us a column of rot.
And yet, gentle reader, don't blame us,
Far better like this to exist,
Than shine with the foolishly famous—
We're men the reporters have missed!

The Recent Elections

LAST week's elections show continued popular confidence in the Republican party and its policies. The Roosevelt tidal wave of 1904 gave majorities that could not be preserved intact in an "off year." The most sanguine Republican enthusiast could not have expected that his party's great majority in the House would be retained. The new majority of 58 will be sufficient. There was no general movement toward the Democratic party to which the losses can be ascribed. Free from the influences of a Presidential contest, the independent voter was much in evidence. Local dissatisfaction had its full weight. Here and there an unworthy Representative—Mr. Wadsworth, for example—was punished. In two or three instances, members were rejected because of their intolerant advocacy of the present tariff duties in districts where many people long for a downward revision of the rates. Blacklisting of candidates in the interest of organized labor had no effect except in some reduction of pluralities. The Democratic party made but a weak campaign; its Congressmen had supported the Republican President's policy and all the important legislative measures which he had induced Congress to enact.

If in the election of members of the House there was no sign of that "trend in favor of the Democratic party" which Mr. Bryan sees, then surely there was none in the election of Legislatures which are to choose Senators; for the present very large Republican majority in the Senate is to be increased after March 4th. So far as Congress was concerned, Mr. Roosevelt asked for a vote of confidence, and he did not ask in vain.

In the State elections—if we except that of New York, which should be considered by itself—there was no marked revolt against local bossism or corruption. By a small plurality Rhode Island elected a Democratic Governor, but that earnest reformer, ex-Governor Garvin, was defeated in one of the State's two Congressional districts. Owing to a movement against corporation influence in politics, and to the unpopularity of new local laws, there were large Democratic gains in New Jersey, where it will now be difficult to re-elect Senator Dryden. In Pennsylvania, on the other hand, the reform movement that grew out of the memorable uprising in Philadelphia suffered a serious check in the defeat of the Fusion Reform party which so triumphantly elected a State Treasurer last year. This was due mainly to the excellent character of the Republican candidate, and to unfortunate dissension among the reformers in Philadelphia, where, it may be noted, no one of the public officers or contractors or politicians exposed a year and a half ago has been punished under the law.

Both at home and abroad, the election in New York was justly regarded as by far the most important of all the contests that ended on the 6th. We have heretofore pointed out the evidence of Mr. Hearst's insincerity and inconsistency, and have spoken also of the abuses and wrongs which drew to him the support of a great mass of voters, in spite of these proofs of his unworthiness. We remember saying here, before the election, that "if the honest and patriotic opponents of Mr. Hearst are disagreeably surprised by the size of his vote on Election Day, it will not be difficult for them to account for it." The result of the election was that Mr. Hughes had a plurality of about 60,000, and that all the remaining candidates on the Republican State ticket were defeated. At all events, at the present time there appears to be no room for doubt as to the election of all of Mr. Hearst's associates on the Democratic ticket, except the candidate for Lieutenant Governor, Mr. Chanler, and it is probable that he will take office with them.

Mr. Hearst's plurality in the city was less by 57,000 than that of the second candidate on his ticket, Mr. Chanler; it was less by 70,000 than that of the Democratic candidate for State Engineer, Mr. Skene. This shows the weight of the

blow given to Mr. Hearst by Democrats and others who were willing to vote for his associates on the ticket, altho, as a rule, they were unknown to the public. He lost the office which he hoped to win, and by his compact with Murphy he assisted that Boss to elect his unworthy candidates for the Supreme Court and to tighten his grip on the Democratic organization of the State.

It is reasonably plain that only by the nomination of Mr. Hughes was the Republican party saved from complete defeat. Any other Republican whose name had been brought forward would have been beaten, even by Hearst. It is not so clear that some other Democrat would have received more votes than were given to Hearst; for while his name repelled many Democrats, it also drew many men who had been voting with the Republicans. The votes of Democrats who hated Hearst elected Hughes. Owing to the election of Mr. Skene, the Republican party loses control of the expenditure of a large part of the $151,000,000 recently appropriated for canal improvements and good roads. The election of Mr. Jackson places in the Attorney-General's office a man who has promised to authorize a suit to determine whether Mr. Hearst was cheated out of the office of Mayor of New York. These facts enable us to estimate the value of the Republican victory. In our judgment, that victory is not decisive enough to prevent Mr. Hearst from seeking office hereafter, if he shall choose to do so, altho the discrimination against him at the polls has not commended him to future nominating conventions.

The lesson of it all is that to prevent the political success of the Hearsts and the Morans we must suppress the public abuses and wrongs upon which politically they thrive. We must enforce the laws impartially against all offenders, the rich and the poor alike. We must prevent great railway companies and other corporations from practicing wicked and unlawful discrimination. Municipal public service companies must not be allowed to wrong the people. Distributors of "yellow dog funds" for the corruption of legislators should be forced to wear the stripes in which they ought to be clad. By the power of public opinion we should compel the resignation of such Senators as Mr. Depew and Mr. Platt. This is not all, but it would be much.

Can we expect that the warning will be heeded by the powerful offenders themselves, whether these be corporations, or capitalists, or combinations of capitalists, or dishonest public officers in league with them? Signs of repentance and reform on their part are not yet either numerous or impressive. The removal of Stuyvesant Fish from the presidency of the Illinois Central, which has taken place since the election, is an indication of the callous indifference of the interests to which we refer. Reform can be compelled only by the pressure of public opinion, the acts of worthy public officers, and the enforcement of the laws.

Mr. Hughes has a grand opportunity. His power with respect to the State Railroad Commission, the Insurance Department, the Banking Department, and the Tax Department can be so exercised that there shall be no favoritism or neglect or injustice in the administration of these departments' affairs. For this work no new law is needed—only the enforcement of old ones. And it is quite possible that the public interest will be served if Mr. Hughes shall find a vigorous helper, or even a rival, in Mr. Jackson, the Attorney-General elected on the Hearst ticket.

Good Books for a Small Library

In our issue this week a most competent authority on library management tells of the importance of specialized libraries. There are now so many books that no one library can well hold them all. The files of important newspapers would crowd out everything else. Another writer tells how to arrange shelves to hold one or two thousand books in a private house; very good instruction for those who can afford the books.

But most of our readers will not have great use for a specialized library in a metropolis; and they are not as many as we might wish who can cover the sides of a large room with well-filled shelves. And yet probably scarce one of our subscribers would find it impossible to acquire a better library of the world's choicest books than one in a hundred pretentious private libraries contain.

What books should a man first own

and read? Not the ephemeral publications of the day, but the world's best books — the writings of the men who have made literature, the inspiring men of all ages. And yet how few have read what all should read first!

Let the reader count up for himself some of the books that are pinnacles above the rubbish heaps of time, and recall if he has read them. There is the Bible, worth more as literary material than all other books put together—does the reader know the magnificent eloquence of Isaiah or Ezekiel? Is he perfectly familiar with the stories of Genesis and Samuel, and the holy patriotism of Deuteronomy? Does he easily distinguish Jeroboam from Zerubabel, and is he certain whether Sodom and Gomorrah were cities or were husband and wife? If not let him read nothing till he has mastered his Bible. The book can be had for twenty cents.

Has he read—in a translation—Homer's Iliad and Odyssey, the tragedies of Æschylus and four or five of the dialogs of Plato? They can be had very cheap; they each cost less than half the price of a novel. One who has read Homer has gathered something worth while, that will be always a delight. Plato's "Apology" should be read once a year. It is the next thing to the Gospels. One who has not read these books is a literary ignoramus. Are they in your library? You can get them for two or three dollars, and you and your children will read them many times and laugh and cry over them.

Have you read Virgil's Aeneid and Eclogs? If you have not you have mist much. Get a translation, in verse, quick. Have the book at hand, know the story of Aeneas. Take delight in the pastoral dialogs and especially in that wonderful Eclog which was the pattern for Pope's "Rise, crowned with light, imperial Salem, rise." Add Ovid, if you will, and Horace's Odes, and Cicero's orations and essays—these at least. If you do not know Virgil you have not the alphabet of literary culture. Read such books and you will have the culture before you know it.

You have heard much of Dante. Have you ever read his great poem? Probably not. Why not buy one less detective story and get the book and read it in a leisurely way — in English? Then Petrarch and Tasso.

So we might suggest the three or four greatest names in French and German literature, in a translation, if not in the original.

Then in English. Chaucer is well worth reading, and so is Spenser, and in their old spelling. You can read it; there is a glossary—and they are not expensive. It is a disgrace that they are not in your library. You will have to work a bit over them, but it pays. You have Shakespeare, and have read it a little; read it more. Then there are the chief writers from Milton, which you have, but have not read, supreme name tho he is, and Dryden to Tennyson and Carlyle and Ruskin and Browning. This only we say: pick out the best, the world's famous writers; have these in your library before you get anything else, and then have the will, the good will, to read them instead of the trash that floods the markets.

And remember that these old books pay no royalty; they are issued in very cheap editions, and very small incomes can buy them; not in large type, not in grand *editions de luxe,* but for twenty-five cents or fifty or seventy-five a volume. A very few dollars will give you the best of the whole world's best.

The Battle of the Books

We should as soon expect to see St. Paul's Cathedral dancing a jig as the staid and conservative London *Times* effecting a revolution in the book trade and denounced for its sensational business methods. Yet that is what has happened. British publishers, who for a hundred years have sent the titles of their new books to be inserted in the *Times* as invariably as they sent them to be registered at Stationers' Hall, have now boycotted that paper, and will neither send copies for review, sell books to it, nor advertise in it. The advertising space they had contracted for they fill with denunciations of the *Times* and requests to the reader to send for circulars describing the new books that they do not mention. Boycott begets boycott. Authors threaten to cut off the publishers from their sup-

ply of fresh manuscripts if they sell their books to the *Times*, or threaten to sue them for damages if they refuse to sell to the *Times*. Readers buy books for spite or principle, or refrain from buying them for the same reason. They boycott the booksellers who boycott the authors who boycott the publishers who boycott the *Times*. So the merry war goes on, extending its ramifications like the house that Jack built or an endless chain of begging letters.

And all this trouble is laid to "Americanism." This is nowadays the most opprobrious epithet in the European vocabulary of vituperation and naturally would come into use in such a controversy, but to apply it to so British an institution as the *Times* approaches sacrilege. Its appropriateness is not at first sight apparent, for in this country no one, unless it is Mr. Macy, has taken up arms against the associated publishers with the intention of ruining them by selling more of their books and at lower prices than the regular booksellers, and he is not having a happy time of it. But we learn that it was really an American, Mr. Hooper, who got the *Times* into trouble by inducing it to lay aside its dignity and hustle for subscribers.

All Englishmen, whatever their party politics, take a certain pride in the *Times* as a national institution, just as they do in the Tower of London. But they put off going to the Tower of London as long as possible, and are equally delinquent about subscribing to the *Times*. Now a newspaper cannot be supported by national admiration, however deep and widespread this may be. The *Times* is a very expensive paper to publish, since it covers the news of the world more fully and more authentically than any other journal, maintains in all important capitals correspondents having practically the rank of ambassadors, prints each issue from new-cast type set by hand, is proof-read like a Bible, and is distinguished by the heaviness of its paper and editorials. But to do this it had to charge threepence a copy, and the competition of the lighter penny and half-penny papers was too much for it.

So the Book Club was started, a novel and promising scheme that proved altogether too successful. Every subscriber to the *Times* by the year, at the full retail price of £3 18s., was entitled to draw from the *Times* circulating library any books he wanted to read, three volumes at a time. It differed from the ordinary circulating library in that the subscriber could get at once the books he asked for, however new or popular; could keep them as long as he wanted to, and if he decided, after reading or examining, that he wanted to buy any of them, all he had to do was to take out the post card in the back, mail it to the office, and the price was charged against his account. Any one in England could thus read all the new books and stock his library with those worth keeping at reduced prices. For every time a book was reloaned the price marked on it was cut down according to the number of times it had been sent out and the damage it had suffered. In this way the difficulty of the ordinary circulating library, the accumulation of unused books, was obviated, because the books sold off automatically at prices depending on their popularity.

As a result of the introduction of this new method of getting the book and reader together, the *Times* is said to have increased its circulation by fifty per cent. and sold books at the rate of 1,350 per working day for six months. The book publishers, who had been complaining for years that the British public had ceased to buy books, were as pleased with the plan as anybody, until they began to hear from the booksellers, who perceived their craft was in danger and clamored for protection. They claimed that the *Times* was selling new books or as good as new at second-hand prices, and they demanded that the *Times* be prohibited from selling a book below net price for six months after publication. But when the publishers attempted to enforce this the *Times* rebelled and opened war on the publishers, posing as the champion of cheaper books for the people. It claimed that the volumes sold at 21 shillings cost only 2 shillings to produce, that the publishers were selling practically the same edition in the colonies at 12 shillings, that books are higher than they were fifty years are altho the cost of paper and printing had greatly diminished, that in Germany and France books were much

cheaper than in England, and that if books were sold at half or a third of present prices the sale would be greater and the author and publisher get more. In support of this it was pointed out that excellent editions of standard works, such as Everyman's Library, are retailed in England at a shilling; the same editions as are sold in this country at 50 cents, twice the English price.

In reply the publishers argued that the expense of advertising and introducing new books was very great, that the cost of printing, and especially illustrating, them had been underestimated, that they lost money on most of their books and had to make it up on the others, and that the net price must be maintained, because otherwise the booksellers would be driven out of business, and the *Times*, having then a monopoly of book-selling, would crush both authors and publishers beneath its iron heel.

A large part of the population of the British Isles have written letters to the *Times* about it; from six to ten columns of them have appeared every day for a month. Most of the members of the Book Club say that they would not have bought the books they have thru the ordinary trade channels, and that they won't patronize the booksellers anyway, so there. The authors also have plunged into the fray, on both sides, according to their custom. Bernard Shaw says that the author is the only real monopolist, and so far from objecting to the sale of his works at low prices, he wishes that someone would buy them by the thousand and give them away for advertisements or burn them in the town square. Hall Caine says he is willing to put the question to a practical test by publishing his next book at two shillings instead of six. Rudyard Kipling stands up for the net price system; he is afraid of the *Times* monopoly. Mrs. Humphry Ward and Mrs. Steel take the other side. A. C. Benson wants to know why the author who has a monopoly gets less than the bookseller on each copy sold. And so the discussion goes, very interesting, but inconclusive. We can watch the battle safely from this side the water because; no matter how freely the books are flying, none of them can hit us, safely sheltered as we are behind the high-tariff wall, on top of which is the barbed-wire entanglement of the new copyright law.

The Pumpkin

THERE is nothing more cheerful about the farm roads during these November days than the pumpkin. Why did Providence allow such a misnomer, such a plebeian name, for such a royal fruit? Scattered profusely over the corn fields; piled in huge heaps alongside every barn; half-eaten breakfasts in every barnyard and pasture, there is nothing else about the landscape so comforting, so beautiful and so abundant. Punkin! indeed! for that is what the new orthography makes it. There is no punk in it, nor about it. It is the gourd glorified. What color! What good cheer! And just now when all the world is Novemberish. Ah, these chilly days; these damp, mournful, weeping days! But all the while these piles of pumpkins do their best to cheer both man and beast alike.

The golden leaves have all fallen, except a few brown ones that quiver on the tips of the scarlet oak, or hug close the limbs of the purple beech. Apples are in the cellars, or ought to be; or they lie in huge bins waiting their turn at the cider-press. The pumpkin outvies them all, and even challenges the first storms of snow. Farmer Jones with a broom brushes off the sleet before tossing them to his cows. It is a merciful deed, for which the cattle are apparently not grateful, for they roll their dinners in any slush and are shamefully wasteful. Why have we not, with all our animal breeding, created a race of cattle with some sense of economy? Perhaps the Ayrshire has a touch of it, when she climbs the pile of pumpkins in order to glean the apples that still cling to the twigs of the Northern Spy trees.

The pumpkin is one of the noblest of fruits, and yet we must give credit for its production to the despised Indian. It was a brown Burbank who began its evolution, some hundreds of years ago. We white people only found it as we found the squashes, altho we afterward carried

forward their evolution into the Boston Marrow, the Gregory Hubbard, the Mammoth Chili, and the Delicious. The hard work of creating was done in both cases by the red men; white men are only carrying on and completing early achievements in the wilderness.

The pumpkin should be the emblem of New England, for it was one of the first fruits that the pioneers could utilize to ward off starvation. Indeed, if it were harder to produce we would prize it more highly. But that is the glory of it; it is willing to come in as second to the corn crop; and when the golden ears are husked the golden pumpkins for the first time appear. The farmer jams a fork into one after another, and tosses them into his wagons. Once more they are tossed into piles, and the third time, with as little regard, they are flung to the cows. It is only the fact that there are so many of them that they do not demand the reverent care of the land tiller. This is the glory of the pumpkin—its profuseness; enough for all the cattle on a thousand hills.

Yet, mark you, the pumpkin is as delicate in spirit as it is abundant. The flavor that Nature has tucked away in a pumpkin is more charming to the human family than to the bovine. Can you tell how it was that our mothers discovered (or was it evolved) the pumpkin pie? We have studied this subject long and carefully, but in vain. The pumpkin pie of today is a mathematical production. It is done by recipe; so many pinches of spice, so many cups of sugar, so large an allowance of flour; but surely pinches and cups have changed, for the old New England pumpkin pie is a lost art.

Throw back your cap strings once more, little mother! March up to the rolling pin broad-shelf, with that fine confidence that belongs to real art! Pour together the constituents by the instinct of a born home-maker! Shove the pies into an oven heated with hickory wood! And we will stand about you in silent reverence; for what else in all the world is so wonderful, so beautiful, so much to be loved and trusted as a good home-keeper? There may be such nowadays, doubtless there are, at least we do not say there are not; but if so, let us have the proof of it in more pumpkin pies made with brains, and not by a cook-book.

Where do such flavors come from? Certainly any one who has tasted a piece of raw pumpkin is warranted in asking. It was a sublime art that so blended things as to turn a stupid stew of pumpkin into the most delicious compound that ever tickled the palate, or turned a stomach into a volume of poems. So we meditate, *in memoriam,* and we think over again the fine things of that boyhood when the atmosphere was filled with motherhood, when the steam whistle had not yet shrieked thru the valley, and when home meant quiet simplicity and gentle co-operation. What a wonderful thing is memory, that lets us eat over again the old Thanksgiving dinners, and shows us in sweet dreams the dear faces that were wrought by care and by love in quiet homes—learning to look upward always, and forgetting the ills of today in the hopes of tomorrow!

Sitting on a huge pumpkin, from which he has surveyed one of the most perfect landscapes in the world, the country editor sketches his editorial. "Togo," his favorite collie, has brought up the cows from the pasture, and they pass by with a jealous eye at this novel use of their favorite fruit. Really, our mellow-eyed friends! we are all participators together! Verily what is poetry to us is dinner to you! Corn and grass and pumpkins you have no use for but to make into milk, and give it back to us for our labor and care. But you do not know a pumpkin pie, and as for editorials, you cannot write them, nor indeed do you care for them. You do not seem to be at all depressed over the fact. "Togo" hurries them on into the yard, sees that the gate is closed, then comes back and sits up beside us, for a warm hand and words of praise. He looks sidewise at us with an impatient wink, and nudges our arm, till he gets his caress. Ah, well, it all ends in love; and in that we all share, both dog and cow and human beings. The world is a wonderful medley of pumpkins and poetry, animals on the road and animals who think they have reached the end of the road. It is a beautiful thought that evolution works out, on its loom, the cloth of good will on earth and peace to all those who are of the peaceful spirit.

French Church Affairs

WITH the approach of December 11th there seems to be a growing revival of the Church question in France. At the present moment the future shows signs of clearing. The French Government has just decided not to close the churches, but to leave them open. The Papacy is stubborn in refusing any concession. Both play a waiting game. While fully three-quarters of the French people give no thought of any sort to the matter, yet the remaining fraction busy themselves very much. Two strong influences are at work creating *associations cultuelles,* or worship clubs, to hold the Church property. One party, under the presidency of M. Henry de Houx, is organizing these worship clubs. This gentleman lived in Rome during the pontificate of Leo XIII, and was then an ultramontane of the strictest sort. Today he labors to establish worship clubs, urging in his public addresses that he wishes to save Catholicism, which, if the Pope has his way, will go utterly to ruin. Another party, which de Houx also denounces, is also quietly creating worship clubs. It has a weekly organ, *L'Avenement,* which began about October 1st. Several priests are on its staff, of whom one has just brought out a remarkable work, "La Verité d'Hier?"

A curious incident is that of the municipality of Auch. After forming an *association cultuelle* a committee of one was named and sent to confer with the Archbishop of Auch. The prelate was gracious, and discussed the prospective club with his visitor, holding, however, that the action of the municipality went beyond its rights; in a word, he held that without himself the new club was against the law. At the same time in another part of France, another Catholic prelate was laboring to show the superiority of the German worship clubs, established under Bismarck, to the French, because the former positively recognized the position and authority of the bishop, while the latter left everything to the citizen or layman. Again, the whole agitation has been preceded by and is accompanied with a great deal of writing on theological questions. The best comparison we know is to the uproar in England which followed the publication of "Essays and Reviews," to which Jowett, Temple, Pattison and a few more clergymen contributed papers.

As yet the French clergy are timid, and justly so, for the Church is unforgiving. The work, for instance, above referred to, "La Verité d'Hier," was brought out under a pseudonym, as have been many others during the past two years.

We may look for interesting developments during the next decade of years, especially if Pius X continue to live. No one would regret his death more than the liberal clergy of the French Church. Sarto, in fact, is playing into their hands.

Finally, the Loisy case may be ended by his formal excommunication before the close of the year. It appears that the new "Syllabus" is ready, and may be submitted to the hermit scholar, who, the impression goes, will refuse to sign it.

A National Department of Health

THERE has been considerable discussion in recent years among members of the medical profesion as to the advisability of having the general Government establish a national Department of Health. This question will probably come up for consideration at the next session of Congress, and it seems only proper that the reasons in favor of such a department of the general Government should be generally known in order that the public sentiment in favor of legislation to this effect may be aroused. There can be no doubt at all in the mind of any one who has realized the progress of medicine, and especially of sanitary science and preventive medicine, during the last quarter of a century but that the establishment of such a department would add more to the happiness and even the prosperity of our people than many other phases of governmental development. At the present time we are in the anomalous position in this country of having a national bureau for the care of the health of animals, tho not for that of human beings.

As has been pointed out over and over again in publications relating to tuber-

culosis, in the successful crusade against that disease which has deservedly become so popular during the last decade, not only will human suffering and premature death be saved by measures looking to the prevention of this popular scourge, but also immense amounts of money will be spared that must now be spent in caring for tuberculous patients, and an almost untold quantity of time will be saved that is now lost because of illness and patients' early decease. It has been calculated that the money value of the time alone would amount in this country to hundreds of millions of dollars a year which is now hopelessly lost. It would be well worth spending a reasonable percentage of this if a moiety of the whole sum could thus be saved. Measures of health to be effective require to be universally applied or portions of the community, by their neglect, quite undo the efforts of others. This was recognized so clearly with regard to the health of cattle that the Government has now for many years taken in charge all questions relating to cattle diseases, and has regulated them for the whole country in such a way as to prevent one State from ever being a persistent source of danger for another.

An excellent example of how much has been accomplished with regard to one disease and its prevention in recent years can be appreciated from a recent report of the Chicago Board of Health with regard to diphtheria. It is now just ten years since diphtheria serum was so generally introduced as to affect the death rate from that disease. If the ten years, from 1886 to 1895, when diphtheria serum was not used, be compared with the succeeding ten years down to the present time, a very striking difference in mortality is noted. Almost exactly ten thousand deaths from diphtheria were reported during the first ten years. Somewhat less than six thousand five hundred deaths from the same disease were reported during the subsequent ten years. In the meantime Chicago's population had increased very largely, yet the deaths were scarcely more than sixty per cent. as high. When the increase in population is taken into account, the real reduction in the death rate will be better appreciated. During the first ten years the average death rate was nearly ten per ten thousand of population. During the last ten years it was not quite four per ten thousand population. Besides this, not a few deaths during the first period really due to diphtheria were reported as due to croup, and so were not included in the diphtheria mortality, tho croup fatalities have now all been transferred to the diphtheria column, where they properly belong.

The thoro organization of the city Board of Health was largely responsible in bringing about without delay the general use of diphtheria serum which led to this great improvement in mortality. In country places down to the present day the mortality rate from diphtheria is much higher than in the cities, because of the lack of such organization to encourage people in its use, to provide fresh and efficacious serum and to supply it to the poor who have not the means to purchase it. This is only one example of what might be accomplished for the whole country by a national Department of Health. Without it the country places still foster diphtheria to some extent, and occasionally import it into the cities, where it proves the source of epidemics. Every infection, as is now well recognized, must be stamped out as soon as possible in order to avoid contagion, and it is exactly in this matter that a department for the care of the whole country is needed.

As was pointed out at the last meeting of the American Association for the Advancement of Science by Professor Norton, of Yale, such a department would be able to take up at once many problems, the solution of which would be most beneficent for the country. Over five millions of homes, containing nearly twenty-five millions of persons, will be visited by death during the next year. Illness in some form will touch either in their own persons or that of very near friends over one-half our population. Surely anything that promises to accomplish even a slight amelioration of these sad, yet not inevitable, conditions must be the proper function of a government for the people. Eight millions of persons will perish of pneumonia during the next twelve months, and tho in the

past this has been accepted by the American people with resignation, our present stage of medical knowledge dictates some other policy. One might well go on and multiply such figures with regard to other diseases, but this seems enough to make it clear that the next great step in governmental development in this country should come by the acknowledgment of the progress that has been made in preventive medicine and the establishment of a national health department to apply its principles.

Automobile Law

THE experiment of New Jersey in creating a State Commissioner of Motor Vehicles is interesting and suggestive. That the motor vehicle has changed all the previously existing conditions of highway travel is a matter of experience. Its influence has been felt in speed acceleration beyond the power of horses, and immensely beyond the power of pedestrians, to keep up with it. Such a change necessitates a new "law of the road," and this in turn involves a better adjustment of conflicting interests than could be expected if prescribed by those who regard themselves as permanently outside the motor-vehicle-owning class. On the other hand, it would work substantial injustice to the automobile interest if to the enemies of the motor vehicle were left the framing of laws defining the rights of the several classes of travelers on the public highways.

It is unfortunate, of course, that the progress of the mechanic arts places at the disposal of those afflicted with the speed-mania the means of traveling so much faster than the horse can go, especially if pulling a load, so that the highway becomes thruout its entire length as dangerous for the teamster as an unflagged grade crossing. But such is the fact, and since there can be no equalization of conditions it naturally follows that there must be mutual accommodation, and that road regulations shall be established and enforced by a higher authority than that empowered to enact local ordinances. Class conflicts never breed wise legislation. The New Jersey Commissioner of Motor Vehicles seems to have studied the whole subject from a higher standpoint than that occupied either by the farmer or the meteoric tourist. His recommendations commend themselves as sane and reasonable, and probably represent as fair a compromise between the irreconcilable differences of horse-owners and automobile-owners as could be reached at this time. The most important of his recommendations is that the more serious violations of the law, which result in casualties or put life or limb in jeopardy, be made misdemeanors, and that all cases of arrest for causes involving liability to fine or imprisonment be taken out of the jurisdiction of justices of the peace and into that of the Court of Common Pleas. This should meet the approval of all in interest, except, perhaps, the justices of the peace, who have sustained the whims of local constables by Dogberry decisions, and profited thereby in the magnification of their petty functions. As now enforced, local ordinances for speed regulation are futile, even if profitable to the communities which authorize them.

A Step in American Scholarship

Whether the Metropolitan Museum, entering late into the field, shall gather one of the great archeological collections of the world, to rival those of the British Museum, the Louvre and the younger Berlin Museum, is made hopeful by the establishment of a Department of Egyptian Art, of which Mr. Albert M. Lythgoe is the Curator. He goes to Egypt for exploration, with funds supplied by the Museum. Mr. Lythgoe has had experience for several years in excavation in Egypt with Dr. Reisner for the University of California, and has been with Harvard University and in the Boston Museum of Fine Arts. To be sure some of the objects found by him will be retained by the Cairo Museum, but a liberal amount will come to this city. For the more valuable purposes of human knowledge such discoveries as are made in the valleys of the Nile and the Euphrates are very much more important than modern paintings and statues, altho less attractive to the visitor. The single stone from Egypt which records the name of Israel, found several years ago, or the Code of

Hammurabi from Susa, is worth even a dozen Titians. The Metropolitan Museum has made a fair beginning in Egyptology, and we wish that with its antiquities might be incorporated the fine collection, practically unknown, in the New York Historical Society's rooms. There is the beginning of a collection of Babylonian antiquities, tablets and seals which might be developed, and deserves a curator. For, after all, it is the man who makes the collection more than the money. In this connection it is pleasant to learn that an American, Professor Waldstein, altho now in Cambridge University, has obtained from the Italian Government permission for the excavation of Herculaneum by foreign money. While the work is much more difficult than at Pompeii, the fruits are sure to be far more valuable.

Dismissed With Dishonor

The President has dismissed with dishonor a battalion of three companies of the Twenty-fifth Regiment, black, for offenses at Brownsville, Tex. Pleas are made for them in which we much wish we could join, but we cannot. Several of the members of the battalion had been guilty of most serious offenses, offenses for which they would have been shot by court martial if discovered. They had committed murderous attacks on inoffensive citizens of Brownsville. It was known—it must have been known—to the other soldiers of the battalion, at least to many of them, who were the guilty men. When an investigation was ordered not one would confess, and not one would tell. A special inquiry was then made, and the facts were reported to the President, with the recommendation that the whole battalion be dismissed without honor, and its members not allowed to enter again the military or civil service of the Government. We raise no question here of the competency of the President to inflict this punishment, only of its justice—a much more important question. The apologists say that it is too harsh to punish the many innocent with the few guilty. But who were guilty? First, the men who committed the crimes. They had disgraced a most worthy regiment, and had put foul dishonor on their own colors. Every soldier in the battalion ought to have been eager to purge the stain by the removal of the guilty ones. Negroes are charged with standing by their miscreants. In this case they did it to their dishonor. In this they were nothing less than participants after the crime. We know very well the false honor which forbids to inform against an associate. But information is a duty in case of crime. He who will not inform is a partner. Law cannot be executed without such information. For that we put witnesses on oath. It is a sad lesson which the President has been obliged to give in this case; for we doubt not those who refused to testify believed they were displaying a sense of honor, but it is, we must say, the kind of honor that exists among thieves, the "firm concord" of "devil with devil damned." Those men who had displayed the highest courage on the field of battle, had never flinched, who had deserved all praise of their country, had not the higher courage to tell the truth.

The Higher Courage

But another negro regiment, the Twenty-fourth, showed the highest physical courage, the glory of which should never die. The New York *Sun* recalls its almost forgotten glory. It had just lost seven officers and eighty-one men killed or wounded on San Juan Hill when it was ordered to the yellow fever camp at Siboney. There were 15 officers and 456 men left. There were 65 nurses needed, and volunteers from the ranks were abundant. Surgeons, nurses and hospital stewards caught the fever. We did not know about mosquitoes then. In a month, of 16 officers, 10 were dead or in the hospital. Most of the 65 volunteer nurses were sick, but others had taken their place, to succumb in turn. Not a soldier flinched or murmured under strain much worse than that of battle. There was no merriment; the camp was silent, for there was death on every side. When they left for Santiago there were only 9 officers and 198 men who could march to the cars with band playing and colors flying. There was no nobler record in the whole Cuban war. Again we say, what a pity that a false sense of honor should have brought shame on what we doubt not was an equally brave sister regiment.

Is It Heresy? It was a somewhat daring task which the Professor of Systematic Theology in Union Theological Seminary, Dr. William Adams Brown, attempted in an address before the alumni of that institution just published, entitled, "The Trinity in Modern Thought," and which he called "an experiment in theological reconstruction," Professor Brown recognized that the old attempts in the Nicene and Athanasian creeds to analyze the divine essence and separate it into persons is beyond human understanding; and that the later Hegelian explanations of the Trinity, as the self as knower, the self as known, and the union of the two, is, if it involves three separate consciousnesses, near to tritheism; and, equally, the explanation of the Trinity, as God loving, God loved—thus Father and Son—and some uncertain relation between the two to represent the Spirit. This also, says Professor Brown, seems to imply two or three distinct self-consciousnesses, and is so hardly monotheistic. His own explanation of the Trinity is to represent the one God as expressing himself in the world. So he says:

> "The confession of Jesus Christ as Lord is only the highest utterance of an insight which has always been given to men in a greater or less degree, and which is possible only thru such divine indwelling. And so we add to our confession of the Father and the Son the confession of the divine Spirit who spake thru the prophets, and who speaks in us today."

That is a very easy and simple doctrine, but is it what has usually been called the Trinity? It certainly seems very close to, if not identical with, that old condemned heresy of Sabellius to which all efforts to retain the supremacy of Jesus without differentiating the Godhead must approximate. Accordingly Professor Brown very frankly asks for a hand of fellowship with believing Unitarians of the Martineau and Channing type, men who see in Christ the supreme expression in man of the thought and love of God. But we wait to see how silently the old orthodoxy will allow this reconstruction of its creeds.

A very extraordinary event in the history of missions is recorded from Tonkin. According to the *Courier de Haïphong* twelve thousand Catholic Christians in September last signified to the resident or administrator of their province their "dechristianization" and their return to their former religion. This is the more remarkable, as the missions of the orders are supported by the French military and civil authority, so that it cannot have been easy for these twelve thousand Christians to go thru the civil formulas necessary to accomplish their official reversion to paganism. We gather that their trouble was not with the Christian faith, but with the restraints and exactions put upon them.

They tell us from San Francisco, and apparently on the authority of President Jordan, that two men run the Simplified Spelling Board, Prof. Brander Mathews and Prof. Calvin Thomas, and that they put out the 300 selected words. That is all nonsense. Not a single list or circular has been put forth without being submitted to the entire executive committee and revised and approved by them.

That is a curious story brought from Australia of a native woman found there who has feet that are hands like those of monkeys. Perhaps it is true, and a case of reversion to the quadrumanas type. Perhaps it is only a case of deformed feet, just as we have persons with club feet, which are no evidence that their *mères* were mares. We shall hear of that woman yet in a Barnum show.

The Russians will have a Duma, but if it can be made subservient to the Government this will be done—for the privilege of voting will be restricted in every possible way, so as to assure the result. But we are not the ones to find fault, for we do the same thing in Rhode Island and in Mississippi.

The fetish dies hard. Fifty barrels of Jordan water have been shipped to this country, for what reason we cannot conceive, unless it be to sell it for baptismal purposes. Utterly silly, but not improbable.

Insurance

The Mutual Life in Kentucky

INVESTIGATIONS begun by Insurance Commissioner Henry R. Prewitt, of Kentucky, following the Mutual's dismissal of Colonel Biscoe Hindman, of Louisville, as that company's general agent for Tennessee and Kentucky on October 4th, have now culminated in the revocation of the license of the Mutual Life Insurance Company's right to do business in Kentucky. Attorneys representing the Mutual took action looking toward the securance of an injunction to prevent the Commissioner from enforcing his order. Commissioner Prewitt, it will be remembered, summoned President Peabody to Frankfort to account for his action in dismissing Colonel Hindman for refusing to disavow his candidacy on an opposition ticket to the administration ticket. In his ruling the Commissioner makes an exhaustive review of the evidence produced before him in this connection. In his published report he says in part as follows:

"It is my duty to protect the interests of the policy-holders of this State and of the public who may, in the future, become policy-holders. I regard the plan of procedure of Mr. Peabody and his colleagues in the matter under investigation as being destructive of the essential features of mutuality, as tending to prevent a full, fair and free presentation of the policy-holders' rights to them by those who are in position to know who the policy-holders are and what their interests are; that such action is contrary to the spirit of the charter of the company, and, if tolerated, would destroy absolutely the mutual feature.

"The trustees themselves are only agents of the policy-holders. They cannot be in a contest in this matter against the policy-holders. They are in a sense trustees for the policy-holders, and it ought to be permitted to the policyholders to turn them out at any time that the law permits the election to be held, and while they may present reasons to the policy-holders for being retained, any policy-holder or agent of the company ought to be allowed equal opportunity for presenting reasons why they ought not to be retained.

"The evidence taken discloses that a number of letters have been or will be sent to each policy-holder, that the estimate of the cost of sending a single letter to each policy-holder would be $10,000.

"Mr. Peabody testifies that this expense is being paid by him personally and that he expects to be reimbursed by other gentlemen who desire a vindication in this elect[illegible]n

"However, I believe it to be unsafe in any business to permit any trustee or trustees to expend large sums of money to secure their election. Perhaps in this case no harm would come, but if this rule should be permitted to exist in mutual companies I dare say that it would only be a short time until the officers elected would find some way to increase salaries, give additional commissions and in other questionable ways reimburse themselves.

"After a full and careful consideration of the charges made against the management of the Mutual Life Insurance Company of New York, I have reached the conclusion that the company should not be permitted to continue to insure the lives of the citizens of this State.

"The present policy-holders of the company can in no way be affected by my action. A continuation of the authority granted the company would be an indorsement of the acts of the present and past management of this company."

The Insurance Departments of Michigan, Tennessee, Minnesota and Missouri are expected to take action similar to that now taken by Kentucky.

Hazard of Emery Machines

A WRITER in the *Bulletin of the Insurance Society of New York* says that emery machines are almost universally considered harmless, but numerous fires may be traced to them. Their sparks will not ignite waste or paper, but they will ignite the fine, oily, damp steel dust that accumulates around the wheel. If the benches and walls are covered with shavings and dust these could be easily ignited, and thus produce a fire of greater or less extent if other combustible material were within reach of the flames. There is also a possible danger of spontaneous combustion if this steel dust is allowed to accumulate and become saturated with oils, acids or water. It is apparent, therefore, that all woodwork around these machines should be protected by metal and the steel dust should be frequently removed.

. . . . Dividends announced:

Niles-Bemont Pond Co., quarterly (preferred), 1½ per cent., payable November 15th.

Amer. Cotton Oil Co., semi-annual (preferred), 3 per cent (common). 2 per cent., payable December 1st.

Financial

The Removal of Mr. Fish

If, in removing Stuyvesant Fish from the presidency of the Illinois Central, the purpose of Mr. Harriman and of the powerful financial interests supporting him was to advertise their contempt for enlightened public opinion, they have been quite successful. For nearly twenty years Mr. Fish had been president of that company, and no railroad officer in America could point to a more excellent record of management. This, we think, was admitted at home and abroad. His policy was conservative, but at the same time progressive. He was always the guardian of the interests of the stockholders, a great many of whom were persons of moderate means. The company had an unbroken dividend record of fifty years; its shares never appeared in Wall Street at the counters of speculation. Mr. Fish should have been retained in his office. There was no good reason for his removal. All the arguments that could be suggested by the character of his service and the needs of the property demanded that he should remain in the place which he had so admirably filled.

In February last, Mr. Fish withdrew from an investigating committee of the trustees of the Mutual Life Insurance Company, and also retired from the board, because his associates in the committee declined to make a searching inquiry which would involve the acts of the trustees, and because they were supported in this by the new president, Mr. Peabody. It was a matter of common gossip that for this he was to be punished. It was generally expected that within a short time an attempt to remove him from the presidency of the Illinois Central would be made. On the 7th inst. he was removed. At that meeting of the board, thoughtfully deferred until after the political election, but hastily called for a time when it would be difficult for some of Mr. Fish's friends to be present, every motion hostile to Mr. Fish was made by a director who is also a Mutual Life trustee, and who was one of the two members of the investigating committee who opposed Mr. Fish's desire for a searching inquiry in February last. And every one of these motions was seconded by Mr. Peabody, who is an Illinois Central director as well as the president of the Mutual Life. The action of Director Harriman was confined to the casting of his vote. But his was the dominant influence at that meeting, altho some may prefer to look for that influence in other persons whom he represented.

Is it surprising that the public and the press should see in this transaction the satisfaction of a desire for revenge as well as a movement for the virtual consolidation of the Illinois Central with the Union Pacific system? Such consolidation had been opposed by Mr. Fish, who preferred—in the interest of the stockholders, as he believed—that the Illinois Central should remain independent. Can Mr. Harriman and his associates reasonably complain if the history of this affair leads the public to recall those old reports that the most powerful influences operating in the Mutual Life were those of his friends and supporters in the Standard Oil group of capitalists? Those who removed President Fish waited until they knew that Mr. Hearst had been defeated. But there are other elections coming. Mr. Hearst himself, or other radicals not handicapped as he was, may appeal to voters in the near future. Such transactions as this assist them when they reach out for political power, and give force to the demand for that official restraint which Mr. Harriman and his supporters desire to avoid.

The Commercial Trust Company is one of the newest accessions to the ranks of local financial institutions. R. R. Moore. formerly president of the New Amsterdam National Bank, is the head of the newly organized trust company. The secretary of the Commercial Trust is Ames Higgins, who comes out of the Van Norden Trust Company. The directors are as follows:

Kimball C. Atwood, Herman Auerbach, George W. Elkins, A. L. Erlanger, E. H. Fallows, Joseph R. Grismer, J. H. McGraw, I. A. Mekeel, E. E. Moore, R. R. Moore, L. H. Perlman, Charles G. Phillips, W. D. Sargent and L. D. Smith.

The banking house of the new institution is located at Broadway and Thirty-seventh street, New York City.

The Independent

VOL. LXI NEW YORK, THURSDAY, NOVEMBER 22 No. 3025

Survey of the World

Prosecution of the Oil Combination

Attorney - General Moody, by the agency of the resident District Attorney, began proceedings against the Standard Oil Company under the Sherman Anti - Trust law, at St. Louis, on the 15th inst., by filing a petition in equity in the United States Circuit Court against John D. Rockefeller, William Rockefeller, Henry H. Rogers, John D. Archbold, Charles M. Pratt, Henry M. Flagler and Oliver H. Payne, as individuals, the Standard Oil Company, of New Jersey, and seventy other corporations or partnerships which that company controls. The petition is for an injunction to restrain the New Jersey company from exercising any control over the subsidiary corporations, and each of the subsidiary concerns from paying dividends to the New Jersey company or to any person in its behalf. The Government also asks that the defendants be enjoined from entering into any contract or agreement for the restraint of trade. There are 100,000 words in the petition, which is accompanied by eighty-four pages of exhibits. It reviews the history of the Standard from the beginning in Ohio, thirty-five years ago, and points out many unlawful acts alleged to have been committed by it. These include the rebate agreements with railways. It is shown that the defendants are directors in many railway companies, and it is asserted that the influence of these directorships is used wrongfully for the benefit of the oil combination. As an example of the manner in which trade is restrained, an agreement with the Pennsylvania Railroad, made in 1884 and in force until 1906, is cited. Under this compact the Standard has paid the railroad company for carrying a large quantity of oil which has really been transported by its own pipe lines, the money having been paid for the privilege of making the road's rates on crude oil, and of making them so high that independent producers have been unable to ship oil in competition with the Standard, and have been obliged to sell to the Standard's pipe line company. A long explanatory statement from Attorney-General Moody is published. This is partly historical, showing the various changes in the form of the company and the devices by which competition has been suppressed. In the petition it is alleged that the company's monopolistic control has enabled it to make enormous and unreasonable profits, the dividends paid in fourteen years ending with 1895 having been $512,940,084, altho the entire property, by the company's own valuation, was worth only $69,020,798 at the beginning of that period. It is also pointed out that since 1895 the annual dividend has ranged from 33 to 48 per cent., and that a very large surplus has been accumulated in addition. Much of the information upon which the Government's allegations are based was procured by the Bureau of Corporations. The attorneys in charge of the case are Charles B. Morrison, who, as District Attorney, conducted the prosecution of the Beef Trust; Frank B. Kellogg, who represented the Government in the proceedings against the Paper Trust, and Assistant Attorney-General Purdy. It is reported that the defendants have employed John S. Miller, whose plea in the Beef

Trust case suggested the decision of Judge Humphrey concerning the immunity of defendants from whom information has been obtained. It is understood that the Government has not yet decided whether it will proceed against these defendants under the criminal provisions of the law.——At Findlay, O., on the 14th, John D. Rockefeller, M. G. Vilas, H. P. McIntosh and J. M. Robertson, the last three being directors of the Standard Oil Company of Ohio, were indicted for violation of the Anti-Trust law of the State. Mr. Rockefeller will be allowed to plead by his attorney, but his three associates must appear and plead in person, because of their disrespectful treatment of the court in previous cases. The Attorney-General of Ohio has begun suits against the four subsidiary companies of the Standard in that State, asking that they be deprived of all franchises and privileges because of their violation of law.

More Rebate Convictions

In the United States Circuit Court, at New York, last week, the New York Central Railroad Company was tried a second time for granting rebates to the American Sugar Refining Company (the Sugar Trust) and was found guilty. After conviction in the first case, a few weeks ago, Judge Holt imposed a fine of $108,000. In the second case, the charge was that a rebate of 6 cents per hundred pounds (the schedule rate being 21 cents) had been paid on about 70,000,000 pounds of sugar shipped to Cleveland. As in the first case, the evidence was complete. Joseph H. Choate, formerly Ambassador to Great Britain, who had been employed to defend the Sugar Trust in a similar case soon to be tried, made an elaborate argument in support of a motion to dismiss the indictment on the ground that, altho the rebate payments had been made after the enactment of the Elkins law (February 19, 1903), the agreement had been made and the sugar had been transported before that date. Judge Holt denied the motion, and later, in answer to an inquiry from the jury, said that the facts concerning the dates of the several parts of the transaction were not a bar to conviction.——This case having been disposed of, the Sugar Trust was put on trial for accepting the rebates in question. For the defendant corporation there was a formidable array of counsel, including Joseph H. Choate, John E. Parsons (who devised the compact of the original Sugar Trust) and Alton B. Parker, Democratic candidate for the Presidency in 1904. The claim was again made that the Elkins law was not applicable, because the rebate agreement and the shipments preceded the enactment of it. In the course of the trial there was read a letter sent by Lowell M. Palmer, traffic manager of the Sugar Trust, to the secretary of the Trust, a few weeks after the enactment of the Elkins law. In this letter Mr. Palmer said:

> "I do not know whether you have given any attention to the conditions of the new Elkins law, but in case you have not I would like to call your special attention to the inclosed summary of the bill, which will show you what we are going to have to contend with in the future on all special arrangements like those which we have had in the past that were at variance with the published tariff rates. We hope to devise some means to enable us to conduct our freight matters with the transportation companies satisfactorily, even under the new conditions imposed by the Elkins bill, but there may be some cases come up that cannot be taken care of, in the event of which we will, like all other shippers, have to take our medicine and look pleasant."

At this writing the trial is still in progress.——Additional indictments for rebating have been reported by a Federal grand jury at Minneapolis against the Great Northern, the Chicago, St. Paul, Minneapolis & Omaha, the Wisconsin Central, and the Minneapolis & St. Louis railway companies, and several prominent companies and firms engaged in the wheat trade. Among the indicted persons are eleven railway officers. At Kansas City a freight broker named Kresky and a railway agent have been indicted for procuring rebates on flour; and H. S. Hartley, a dealer in cottonseed meal, for taking rebates from the Burlington road. ——It is asserted in Chicago that Mr. Roosevelt in his forthcoming message will recommend an increase in the number of Commissioners from seven to ten, and that existing railway traffic associations be legalized, upon condition that the rates proposed by them shall be submitted to the Commission for confirmation or rejection.——The enactment of a bill re-

stricting passenger rates to 2 cents a mile by the Pennsylvania Legislature appears to be assured, and it is said that similar action will be taken in Indiana, Iowa and Wisconsin.——The Western roads have decided that after January 1st they will issue no passes within State lines, except to railway officers and employees.—— The Government has begun to prosecute coal companies controlled by the Union Pacific and the Gould railways for the fraudulent acquisition of great tracts of coal land in Utah and Wyoming.

Mr. Roosevelt's Visit to Panama

President Roosevelt and Mrs. Roosevelt arrived at Colon in the middle of the day, on the 14th, about ten hours ahead of time. President Amador came over in haste from Panama and called upon his distinguished guests that evening, on board the "Louisiana." During the voyage southward Mr. Roosevelt had been characteristically democratic in his ways. On the 13th he dined with the wardroom mess. At a dinner given to him and Mrs. Roosevelt by the petty officers he responded to a speech by the Chief Gunner's Mate. During his stay on the Isthmus he was very busy. Leaving the warship at 7.30 a. m. on the 15th, he started at once for Panama, traveling slowly, and stopping at several places in the Zone. At these places and at Colon he was welcomed by bands of school children who sang American patriotic songs. On this first day he sailed to various points in Panama Bay, was welcomed officially in the plaza of the city, dined at the palace, and attended a reception in the evening at the Commercial Club. At noon he lunched unexpectedly with the canal employees at their mess table in La Boca, thus becoming familiar with their bill of fare. Responding to President Amador's address in the plaza, he remarked that this was the first time a President of the United States, during his term of office, had set foot on territory over which the flag of his country was not flying. He was glad that the territory thus first touched was that of the Panama Republic. After complimentary references to the young republic, he warned its people against revolutions. Early on the following morning he left the Tivoli Hotel for his tour of inspection. At Culebra, he waded in the mud, climbed a steam shovel, rode on a workmen's train, talked with the employees, inspected the sleeping quarters of the Jamaican negroes and listened to their complaints. All this was done in a heavy rain. In a speech to the employees he urged them to work earnestly and so to identify themselves with the undertaking that in the future the proof of their connection with it would be sufficient to cause "patents of nobility" to be conferred upon them. "I am mighty proud of you," said he, "and you are earning a right to the gratitude of your country." That evening he attended a reception given by the Justices of the Supreme Court of the Zone. On the 17th he returned to Colon, spending the day there and in Cristobal, inspecting the dwellings and the water supply. After a reception at Cristobal in the evening, he went on board the "Louisiana" and sailed for Porto Rico. During the week the rainfall had been exceptionally heavy. On one day, the 16th, it amounted to $4\frac{1}{2}$ inches.

San Francisco's Mayor Indicted

Prosecutor Heney has begun his work in San Francisco by procuring the indictment of Mayor Schmitz and Abraham Ruef (commonly called the Boss of the city), for extorting large sums from the keepers of the French restaurants under the threat that their licenses would be taken away if they did not pay. The restaurant keepers raised a defense fund of $28,000 and employed Ruef as their attorney. It appears that Ruef was in the habit of being employed as attorney by any one who desired municipal privileges or was in danger of losing privileges already acquired. Mr. Heney remarks that these indictments are "only a starter." It is understood that he has investigated every department of the municipal government and has obtained evidence of corruption in nearly all of them. This evidence, it is said, relates to disorderly houses, building permits, the purchase of supplies, and the granting of valuable franchises to tele-

phone and street railway companies. According to report, both Schmitz and Ruef have become millionaires, and several other public officers who were poor a few years ago have accumulated large fortunes. Schmitz is on his way home from Europe; Ruef has given bail in $50,000. When arrested, he remarked that the charges were absurd; "John D. Rockefeller was indicted yesterday, and now I am accused."——It is asserted that under the direction of President Roosevelt, Mr. Heney and several employees of the Secret Service have been making an inquiry as to the disposition of the earthquake and fire relief contributions. It is said that at least $1,000,000 which was contributed did not reach the Relief Committee. Much of the money that was given was sent in care of Mayor Schmitz.

Political Unrest in Cuba

Owing mainly to the demands of the Liberals and the revolutionist leaders for offices, and their failure to obtain them, the situation in Cuba now suggests to American correspondents at Havana gloomy predictions as to the duration of the American occupation. No official reports as to political conditions on the island have been given to the public, but it may fairly be assumed that some of the special dispatches from Havana and Washington have been "inspired" by official authority or are based upon the opinions of public officers. The burden of them is that the Cubans are incapable of self-government, and that, if elections are held, it will be necessary for the American forces to remain in control, because neither party will submit peacefully to defeat at the polls. The Liberals have been holding meetings, sending committees to Governor Magoon to ask for offices, and then denouncing him for refusing to comply with their demands. They have even suggested a demonstration against him by means of a public parade and the passage of resolutions urging the President to recall him. At the same time, the Liberal party is split by dissension, the negroes being disposed to stand by themselves, with a few whites. General Ruis Rivera has abandoned his attempt to form a new party, to take the place of the Moderates. The situation, he says, is "dark, complicated and perilous." There is a growing movement for the maintenance of a protectorate by the United States. It appears to be supported by a large majority of those who are engaged in business or in the production of sugar and tobacco. They believe, it is said, that peace and good government can be secured only by means of such a protectorate, supported by a few regiments of United States troops. Unless some of the American correspondents in Havana are misinformed, there are persons of this class who intend, if the Liberals win at the polls, to prolong the term of American control by attacks upon the property of foreign investors, and even by such methods to compel the establishment of a protectorate. The attitude of the politicians of both or all parties leads many of the conservative class to ask that the American troops now on the island shall remain there for a long time to come.

The Philippine Islands

Secretary Taft intends to visit the islands next spring, in order that he may be present at the organization of the Philippine Assembly. Speaking for the President, he promised that the Filipinos should have a legislative body of their own. In March, Mr. Roosevelt will direct the Commission to order an election of delegates. As provided by Congress, the voter must be at least twenty-three years old, must be able to read and write Spanish or English, and must own a small amount of property or have been an office-holder under Spanish rule. At their recent convention, the provincial governors recommended a wider extension of the suffrage, but with the additional educational qualification that the voter must be able to read and write his own dialect. The present Commission will probably act as an Upper House or Senate. There will be eighty-one members of the new Assembly, and it is expected that the election will take place on July 1st next.——Ex-Governor Ide, who recently returned to this country, says that what the islands need most of all is a square deal on the tariff. Annexation, he adds, deprived them of their Spanish market, and the sugar and tobacco indus-

tries are prostrated, owing to our high duties on these products if they are shipped to our Pacific ports.——A native of Japan, believed to be an engineer officer, was recently found making maps ot the railroad, the rivers and the bridges in the vicinity of Manila. In his possession were elaborate sketches of the country north of that city. This was reported to the Government. It is said that Japanese, disguised as pedlers or artists, have been in the islands making maps since 1898.

British Politics

The opponents of Chinese labor in the Transvaal have practically won their case thru the official confirmation of the most serious charges that have ever been made by religious and Liberal organs against the immoral tendencies of the conditions in the Transvaal mines. Some months ago an inquiry was instituted by the Government, and, in response to these charges, Consul Bucknill examined the mine managers, the bosses of the compounds and Chinese witnesses. The report has been received by the Government, but it will not be published. Mr. Winston Churchill stated to the House of Commons that it was of such a nature as to render coolie labor absolutely impossible in South Africa henceforth. The repatriation of the coolies will soon begin and go on continuously until they are all sent back. It is not expected that the Government will have any difficulty in carrying out the plan this time, for the advocates of Chinese labor will hardly venture to recommend a continuance of the policy which has led to such an abominable state of affairs as exists in the Chinese compounds. The total number of Chinese employed in the Rand mines at the end of October was 53,134. During October 110 died and 1,665 were discharged for repatriation. Colonial Secretary Lyttleton promised some time ago that provision should be made for the Chinese to bring with them their wives, but so far none of the women have come. The predictions of the advocates of Chinese labor that it would result in the employment of white men have proved false. Lord Milner, speaking in May, 1904, said: "I am prepared to stake my reputation that for every 10,000 colored men introduced there will be in three years' time 10,000 more white men in the country." At that time the proportion of colored men to white men was as 5.9 to 1, and now the proportion is 8.4 to 1. There are nearly a thousand fewer white men employed than there were six months ago. The advocates of Chinese labor endeavored to remove the force of this objection by stating that the decrease of white labor was due to the closing of fourteen non-producing mines, owing to the uncertain political and financial prospects, but it is impossible to deny that the introduction of Chinese has decreased instead of increased the demand for white labor. This is the main issue in the elections in the campaign now going on in the Transvaal. The Nationalists demand the publication of detailed labor reports made by the Government. The mining companies protest that the information that they furnished was confidential, like that furnished for the purpose of income tax assessment and census production, but they state that they are willing to submit the question of unskilled labor in the mines to an official investigation committee.——Mr. Augustine Birrell has declared that the Government cannot accept the amendments to the Education bill by the House of Lords. In a popular address he explained that the policy of the Department of Education was to extend the elementary schools. Hygiene and temperance would be taught as well as morals. Medical examinations would be provided, and an effort would be made to extend instruction in regard to hygiene, cleanliness and good food to the parents.——The bill for the abolition of Plural Voting has been temporarily laid aside, owing to the illness of Mr. Harcourt. The Land Tenure bill has taken its place before the House. This is another attack upon the Tory landlordism, as it provides that tenant farmers shall have the right to cultivate and crop their land as they think best, provided they do not injure or deteriorate it, and they are to be entitled to compensation

"where the landlord unreasonably and without good and sufficient cause terminates or refuses to grant a renewal of the tenancy, or requires more onerous conditions as terms of such renewal."

——Mr. Balfour has withdrawn his opposition to the bill removing the funds

of the labor unions from liability for acts done by the members of the union. This will make it difficult for the House of Lords to reject the bill.——King Haakon of Norway and his Queen, who was Princess Maud of Wales, was received with great popular rejoicings on the first official visit to London last Saturday. A brilliant series of state banquets and entertainments has been provided.

Chancellor Von Buelow and the German Empire

The Reichstag assembled on November 13th after the summer recess, and Chancellor von Buelow appeared before it on the following day to respond to interpellations on the foreign policy of the Government. The health of the Chancellor has been so poor and his position so difficult that it was a question whether he would not resign before the Reichstag met rather than attempt to overcome the strong opposition, both personal and political, which awaits him. His last appearance in the Reichstag was seven months ago, when he fainted in the midst of a speech, and during the recess he had been subjected to sharp criticism from all parties. The rise in the price of food, especially of meat, which has caused great distress among the lower and middle classes, is laid to his tariff policy, which has tripled the duty on pork and prohibited the importation of foreign cattle by stringent veterinary rules. The Prussian Minister of Agriculture, General von Podbielski, had already encountered great popular odium in carrying out the policy, and this was increased by the discovery of his complicity with the colonial scandals. It was found out that he was sharing in the profits of the firm of Von Tippleskirch & Co., who had the monopoly of furnishing uniforms and supplies to the German colonies, and were found guilty of extortionate practices. Neither the Emperor nor the Chancellor were inclined to dismiss the Minister of Agriculture, but if this had not been done it would have involved the downfall of Von Buelow. Accordingly, the resignation of General Podbielski on the ground of ill health was accepted just previous to the assembling of the Reichstag, and he was decorated with the order of the Red Eagle, instead of the Black Eagle, which is usually bestowed upon retiring ministers. The Kaiser has been the subject of sharp criticisms by the newspapers on the ground of his alleged unconstitutional activity and unworthy associates. He is charged with having lent a willing ear to spirit messages received thru a medium in a circle of intriguing friends, among whom Prince Philip von Eulenberg, ex-Ambassador to Vienna, and General von Moltke, chief of the General Staff, were most prominent. A book entitled "The Kaiser and the Byzantines," by Count Ernest Reventlow, accuses him of being surrounded by sycophants and retainers, like the Byzantine Emperors. A still more sensational book is "Our Kaiser and His People," written by "A Pessimist," an allusion to the Emperor's recent remark that all pessimists should leave Germany. This author charges the Kaiser with the grave crime of "Americanism," and alleges that at Kiel he allowed J. Ogden Armour to slap him on the back and permitted Cornelius Vanderbilt to call him a good fellow. Mr. Armour denies the incident. In his speech before the Reichstag the Chancellor defended the Emperor against these scurrilous personal attacks, and stated that the Emperor always acted in accordance with his constitutional advisers. We quote part of his exposition of a foreign policy of Germany, and in particular what he says of the United States:

"I wish to note with emphasis that we do not think of pressing in between France and Russia, nor between France and Great Britain. It is unthinkable that a disturbance of the friendship between the Western Powers should be the object of our open or secret exertions. The good relations existing between Germany and have not affected the Franco-Russian alliance, and in the same manner the good relations existing between Germany and Great Britain cannot be opposed to the cordial understanding between France and Great Britain when the purposes of that understanding are peaceful. An understanding between the Western Powers without the maintenance of good relations with Germany would constitute a danger to European peace. A policy whose object would be to encircle Germany by arrangements designed to isolate and disable us would be critical for the peace of Europe. The formation of such a ring is impossible without using a certain degree of pressure and

causing, in turn, a counter pressure, which would be followed shortly by an explosion. Therefore, it is especially pleasing to see in the newspapers, especially of France, that a good understanding between Germany and Great Britain is necessary for peace, and therefore in a line with French interests.

"I wish to take advantage of this opportunity to say that we are grateful for the attitude of the United States at the Algeciras Conference. The United States had only a slight measure of interest at Algeciras, and took a reserved attitude, but thruout it was impartial. The United States's excellent representative, Mr. White, esteemed by all of us, took advantage of every opportunity to harmonize antagonisms and to contribute to an agreement honorable for all the States concerned. That is to be highly appreciated, because the failure of the conference would not only have brought into the relations of Germany and France a disquieting, irritating element, but would also have introduced it into the general situation of the world. That was the second great service of the United States to the peace of the world. The first was assisting in the restoration of peace between Russia and Japan."

Anarchistic Outrages in Italy

Several attempts at miscellaneous or personal assassinations by the Anarchists in Italy during the past week have caused great alarm and indignation among the people. No special cause for this renewal of anarchistic activity is known, unless it is in retaliation for the stringent measures recently adopted by the police. The authorities learned that it was planned to make an attempt upon the lives of the King and Queen of Greece, who are to arrive at Rome on November 23d for a visit of four days with King Emmanuel. To prevent this, many arrests of known Anarchists were made by the police. On November 11th, the nineteenth anniversary of the hanging of the Chicago Anarchists and also the anniversary of the birth of King Victor Emmanuel, a celebration was held in Rome by the Anarchists, which was dispersed by the police. A few days later a bomb was exploded in front of the Café d'Aragno and another in the tramway tunnel underneath the Royal Palace. On November 18th, the anniversary of the dedication of the Basilica of St. Peter in Rome, a bomb was exploded in the midst of a throng of worshipers at the conclusion of a mass before the altar of St. Petronilla at the end of the right aisle. Cardinal Rampolla, ex-Papal Secretary of State, was present, as he had taken part in the service in the choir chapel. The bomb had been placed under scaffolding near the tomb of Clement XIII, by Canova. Fortunately, no one was hurt, nor was the sculpture, which is one of Canova's masterpieces, injured in the slightest degree. The bomb was poorly made, consisting merely of a tin box containing a few pounds of common gunpowder and nails. The chief danger was from the stampeding of the crowd of men, women and children, which the Canon at the altar tried in vain to prevent. But since the church is so large, the crowd was able to scatter rapidly without seriously injuring any one. The Pope, who had heard the distant explosion, was immediately informed of the safety of the worshipers and past into his private chapel to pray for the misguided wretch who had attempted the sacrilegious and murderous act. Prof. Giovanni Rossi, the famous zoölogist of the University of Naples, was stabbed and killed on November 17th by an Anarchist named Lagana, because in a recent lecture he had condemned anarchistic crimes as barbarous. Lagana made no attempt to escape, but boasted of the deed and declared that the same revenge would be taken upon all the enemies of anarchism. They had been sentenced to death and these sentences would be carried out by some one. Lagana came recently from Paterson, N. J., and the bomb thrower of the Café d'Aragno is also believed to be a Paterson anarchist. This leads to the suspicion that the present series of outrages were planned in Paterson, as the former ones have been. Gaetano Bresci, who assassinated King Humbert of Italy July 29th, 1900, went from Paterson for the purpose, and a large mass meeting was held in that city in the following week in honor of the event.

Austro-Hungarian Ministers

On account of the strained relations between Austria and Hungary and the racial dissensions in both halves of the Dual Monarchy, the Emperor-King has a difficult task to fill those cabinet positions which are constitutionally held by a common minister. Therefore the resignation of Count Golu-

chowski, who for nearly twelve years has been Foreign Minister of Austria-Hungary, is an important event in the international relations of Europe. Count Agenor Goluchowski has upheld the Triple Alliance, and recently, in the Conference of Algeciras on Moroccan affairs, was almost alone in backing the German policy against England, France, Italy and Spain. He was the author of the Macedonian reform scheme, by which Austria-Hungary and Russia were made responsible for the maintenance of order in the disturbed provinces of Turkey. But this is not working satisfactorily, and it is becoming increasingly difficult to keep Servia and other semi-detached countries on good terms with Austria. The primary cause of his downfall is, however, the opposition of the Hungarian leaders, who regarded Goluchowski as a member of the "Vienna camarilla," against which their hatred and suspicion are directed, and as responsible for the attitude taken by the foreign press against the Magyars in their recent struggle for power. Emperor Francis Joseph, after consultation with both Austrian and Hungarian leaders, has selected as his successor Baron von Aehrenthal, now Ambassador to St. Petersburg. He is descended from a German Bohemian family and is married to a Hungarian countess, so his personal relations should make him sympathetic to the three leading races. He is now fifty-two years old and has been in diplomatic positions ever since 1877. He spent eleven years in St. Petersburg in a subordinate capacity and has been ambassador there since 1899. On account of his close connection with Russian affairs and his proficiency in Russian language and literature, it is supposed that his policy will be pro-Slavic rather than pro-Germanic. The Austro-Hungarian Minister of War was also changed simultaneously. General von Pitreich, who for four years has filled that position, has resigned, and the Austrian Minister for National Defense, General von Schönaich, takes his place. The reasons for the change are not known, and the new Minister is viewed with suspicion by the Hungarians, so he may have difficulty in persuading them to grant the increase of 20,000 recruits for the howitzer batteries and other demands of the War Department.

The Reorganization of the Chinese Government

The Imperial edicts making fundamental changes in the form of government of the Chinese Empire were published on the night of November 6th. They are not as radical as some have hoped, but they are all in the right direction and if faithfully carried out will do much toward modernizing this ancient empire. Tho the result is manifestly a compromise, it must be regarded as a victory for the Liberals, who by the new appointments gain increased power in the administration. Three of the chief opponents of all progress, Tieh-ling, Yung-ching and Lu Chuan-lin, are removed from the Grand Council, and Lin Shao-nien, Governor of Kwang-si, who was the first to memorialize the Throne to grant a constitutional government to China, has been appointed a member of the Council. No discrimination will hereafter be made in favor of Manchus and against Chinese in appointments to office. Chang Po-hsi, who abolished the old form of examinations, and Tang Shao-yi, a graduate of Columbia, are placed in charge of the new Department of Communications, which is created to control telegraphs, railroads, steamships and postal system. The existing postal system is now in charge of Sir Robert Hart, the head of the maritime customs, who built it up. The Government is to consist of ten boards or ministries, each composed of a president and two vice-presidents. Two of the boards, the Political Council, which is to collect and digest the opinions of the nobles, and the Auditors' Board, which is to control expenditures, are thought by some to be the germs of future upper and lower parliamentary houses. The radical reforms that are rejected or postponed are the abolition of the eunuchs, the curtailment of court extravagance, the suppression of the Manchu pension list, the establishment of local self-government and the calling of a national congress. It is said that the disorders in Russia are the cause of the abandonment of the plans for popular government.

The Philippine Islands

BY HENRY C. IDE

[The following is an interview kindly given by the late Governor General of the Philippines on his return to the United States a few days ago to a representative of THE INDEPENDENT.—EDITOR.]

AFTER a residence in the islands from May, 1900, until a few weeks ago, I can say that the Philippines now are, in my opinion, more peaceful than at any time before, under either Spanish or American rule. I have been thru nearly every province, and am familiar with conditions in every part of the Archipelago, and have a personal acquaintance with nearly all prominent Filipinos. Anything that I can do to make my fellow countrymen understand the Filipino and appreciate his good qualities and his needs will be service gladly rendered.

The task undertaken by the Philippine Commission, in which I had the honor to share from the beginning of the Taft administration, as Commissioner, Secretary of Finance and Justice, Vice-Governor and Governor-General, was neither small nor simple. Not only were we confronted with conditions more or less of chaos, but in the people themselves we were dealing with unknown quantities. As we got to know the natives we tried to win their confidence, and our success in this direction, in the face of disheartening obstacles, has been most gratifying.

Some obstacles were placed in our way by public speakers and editorial writers in the United States. Words thoughtlessly sown in the United States to meet some issue or fit some policy that had past into oblivion or totally changed aspect long before the echo reached the islands, were most misleading to those whose confidence we were trying to win, and who held us personally responsible for every sentiment uttered in our own land.

The administration of justice in the islands is conducted today with all the regularity of our own courts. The judges are able, independent and highly respected, and the forms of procedure have been made simple and inexpensive, but expeditious.

Thru the adoption of the Torrens system the complicated problem of land titles is in a fair way of being settled.

The new system of currency eliminated from circulation in the Philippines some 40,000,000 or 50,000,000 pesos of fluctuating silver currency, and substituted a uniform one based on the gold standard.

Our internal revenue law, which met with much opposition from the manufacturers of tobacco and alcohol, products formerly very lightly taxed, but which now bear much of the public burden. The new system is now appreciated by the people at large as a most beneficent measure. It has raised the burden of taxation from a multitude of small industries and has transferred it to the optional consumers of alcohol and tobacco products.

When the railroads are completed for which franchises have been granted and on which the surveyors are now working, the Philippines will have nearly 900 miles of well-equipped railway, which will mean much for the development of the islands. Not least among the benefits to be derived from this industrial development will be the opportunity it offers the Filipino for labor under skilled supervision, the new markets for local products during the period of construction, and the immense advantage of bringing the rich products of the interior within reach of the markets of the islands and of the world.

The impression that Filipino labor is unjust is in large measure untrue. If properly managed, the Filipino is a fairly good laborer. He cannot be kicked and cuffed and cursed. Treat him roughly and it is only a matter of a few hours when his sister or his cousin or his aunt will be sick and he will have to hurry to her side. And that will be the last that boss sees of that Filipino.

The Filipino laborer needs efficient oversight. He needs more overseeing

probably than most other laborers; but with the right kind of oversight he does much useful work, work good enough to offset the expense of supervision. The Manila harbor works, representing an outlay of $4,000,000, stand largely as a monument to Filipino labor wisely directed. The natives engaged on that work were encouraged to bring their families with them, for the Filipino is a great lover of home and family. They had their brass band, for they greatly enjoy music, and on Sundays they attended their cock-pits, which to the Filipino mean even more than does the baseball diamond to young America.

In Manila we have forty miles of new electric railway, as well equipped as any in the United States. The cost of building was carefully figured and in the item of labor—all Filipino labor under American supervision—the actual expense was 40 per cent. below the estimate, which had been based upon the theory that Filipino labor was most inefficient and expensive, not expensive in the per diem, but supposed to be so in actual results for the money paid.

As regards Chinese labor. Chinese undoubtedly would develop the islands, but their admission would not develop the Filipinos. The Filipinos are opposed to the admission of Chinese, for they realize that the Chinaman is most formidable competition and would soon control the industry and trade of the islands.

The Commission, in its reports, has favored the admission of a limited number of skilled Chinese mechanics, with a condition that each should train a certain number of Filipino apprentices. Congress, however, wills otherwise.

Leyte and Samar are the only islands now where conditions are disturbed. The trouble there is caused mainly by tribes of religious fanatics who have lived for years in the hills, who hate the peaceful husbandmen of the plains and who raid the lowlands at irregular intervals. The police and constabulary force of the islands is, aside from constabulary officers, and outside the city of Manila, now entirely native, and can be trusted to cope with these and any similar disturbances. United States troops are very rarely called upon for aid. The entire policing of the islands, municipal and rural, is in the hands of the natives, and they have proved both reliable and effective constabulary. In the city of Manila the police is one-third American and two-thirds Filipino, an admirable combination.

Conditions in the Philippines, aside from Samar and Leyte, are satisfactory from a peace point of view, but what the islands need and are entitled to for their material benefit is a square deal from this country on the tariff question. It will come, I believe, but meanwhile the situation is serious. By annexation we killed the Spanish market for Philippine sugar and tobacco, and our tariff shuts these products from the United States market, and today both these industries, the most important in the islands, are practically prostrated.

WASHINGTON, D. C.

A Song of November

BY WILLIAM ADAMS SLADE

LEAVES are gayest when they go,
Leaves that are November's:
Hopes departing fade and glow,
Fade and fall like embers:
Fade and fall, fade and fall,
Hopes and embers, leaves and all:
Love is love forever.

Bright the sunlight on the trees,
Trees that are November's:
Bright the magic sesames
That the heart remembers:
Fade and fall, fade and fall,
Love fulfills the golden call;
Love is love forever.

WASHINGTON, D. C.

A Group of Chinese Contract Laborers.

Chinese Labor and the Panama Canal

BY EUGENE S. WATSON

[Mr. Watson is the American representative of Louis Marchand of Paris, the only non-Asiatic regularly engaged in supplying Chinese labor as a business thruout the world. Among other contracts he has furnished the French Government with all of the labor used in its colonies, as well as large shipments of labor to Lower California and South America. If a contract is awarded by our Government for Chinese labor at Panama, it is most probable that M. Marchand will obtain it.—EDITOR.]

"It looks as tho we are about to undertake the accomplishment of the world's greatest engineering problem, the construction of the Panama Canal, and if we are to do it successfully it can only be done thru the employment of Chinese coolie labor. In the Canal problem the labor question represents 80 per cent. of the difficulties to be encountered, and whenever our Government has carefully studied the actual conditions, and has arranged for a suitable supply of properly selected Chinese laborers to do the work, then and only then they will have removed 80 per cent. of their difficulties."

This remark, made to me in 1903 by an American engineer of international reputation, first led me to investigate the labor conditions at Panama and the Chinese coolie as a factor in the world's labor market. The result was both interesting and surprising.

The prime factors in the consideration of the labor question at Panama are its situation relative to the various countries from which an adequate supply of labor could be secured, the adaptability of such labor to the proposed work, the effect of its climatic and sanitary conditions upon the various nationalities, and the relative cost of each class of labor.

In all other of the world's great undertakings the question of labor has been of minor importance. Their situations have been such that an ample supply of suitable labor could be readily and economically secured. With Panama it is different. It has a small population, unaccustomed to and unfitted for continuous manual labor, wholly accustomed by heritage and manner of living to tropical lassitude. The only labor available in its immediate vicinity is that of the West Indian negro (some twenty thousand of whom are at present employed on the Canal), and this labor is admitted by all who are familiar with its efficiency to be the most unsatisfactory on earth. This negro works only from necessity, and his main idea seems to be to do the smallest amount of work in the longest possible time. His wants

are few and simple, and as long as he has sufficient money to supply them he will not work. The result is that he will not average more than two days work in a week, spending the balance of the time in idleness, and in those two working days he will not accomplish as much actual work as an American laborer will in four hours. As an efficient laborer the West Indian negro is impossible.

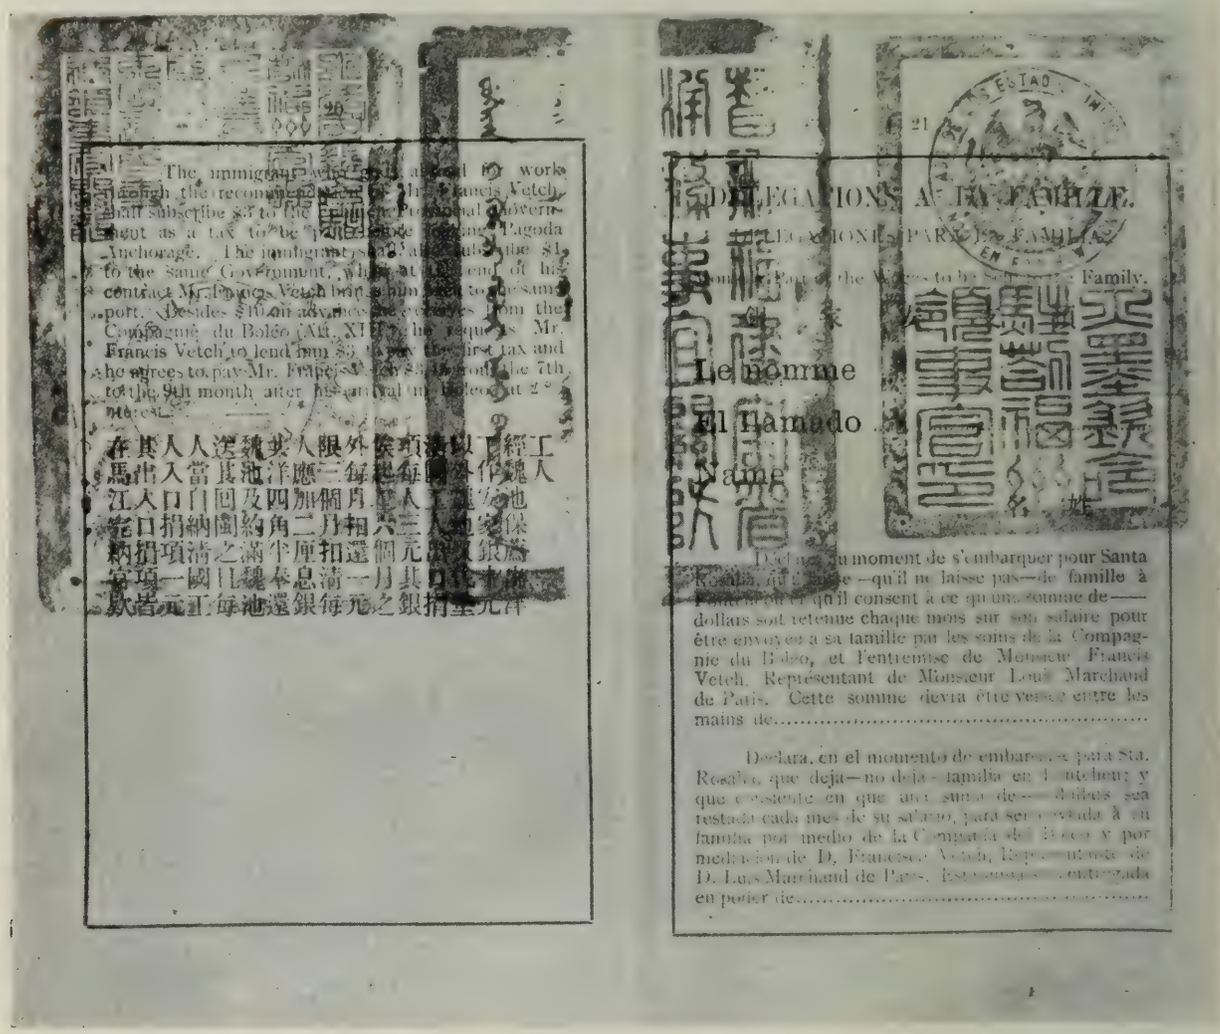
Thruout Central and South America the conditions are very similar. The class of labor to be found is of a very low standard, and there is not sufficient of it to supply the local demand.

In the United States we probably have the best class of unskilled labor to be found in the world, but, eliminating sanitary and climatic questions, it is out of the question for American labor to build the Canal. There is not enough at the present time to do the work at home, and it is exceedingly doubtful if one-half the requisite number of men could be secured in this country at any price. In addition, the employment of American labor in this work would increase its cost by many millions of dollars, and as the bulk of the cost of this great work is taken from the pockets of the American workingman, any measures tending to increase this burden would be sure to meet with universal condemnation.

The labor of Europe would be very suitable for this work, but cannot be obtained. So much has been said and written about the dangerous sanitary conditions which formerly prevailed at Panama that the average European considers that he would take his life in his hands to seek employment there, and many of the European governments have unofficially aided and encouraged this impression. The wages paid are not sufficient to induce them to assume this risk, and outside of wages there are no other reasons why labor should seek Panama. It is not a country where they would care to take permanent residence, and almost every laborer employed will, at the expiration of his term of service, be compelled to seek a livelihood in some other country. Unless enough can be saved by him from his wages during the term

Chinese Contract Laborers Photographed on Shipboard.

Chinese Barber Shop on Board Ship.



of his employment at Panamá, the time spent there would be time wasted and forever lost. It is for these reasons that the laborers of Europe prefer to seek other fields of labor.

As a matter of fact, and I speak from six weeks of recent personal observation on the Isthmus, the sanitary conditions existing upon the Canal Zone today are such as to render it perfectly safe for any nationality to be employed there without sickness in any degree greater than will be found in the ranks of similar numbers of men engaged in similar work in other countries. Through the intelligent and well directed efforts of those in charge of the sanitation of the Canal Zone it has been transformed into a sanitary, well governed community, where the employees of the Government can live with as much comfort and safety as at home. It is true that the tropical climate still remains, and, irrespective of sanitary conditions, the consensus of authoritative opinion is that the white race, of the temperate zone are unfitted for continuous manual labor in the tropics. And for this reason, if for no other, it is necessary to make a choice between black or yellow labor. The available black labor has been tried and found to be sadly inefficient. The coolie remains yet to be tried, with the assurance that he cannot be worse than the black.

The prime factor in the coolie labor problem is that of proper selection, keeping in mind at all times the locality and climatic conditions to be encountered by the laborer and the nature of the work. If these conditions are properly observed in selecting laborers, no better laborer exists on earth today than the coolie, for any climate and under all conditions. By nature they are peaceable, law abiding, cleanly, sanitary and frugal, but withal of muscular, wiry frame. A good laborer who would perform satisfactory work in Canada would prove a failure if sent to Central America, and one who would give entire satisfaction in the low lands of the tropics would be utterly useless in the elevated mountainous regions of the same latitudes. Likewise, laborers for digging should be selected from the agricultural regions and be accustomed to earthwork. If select-

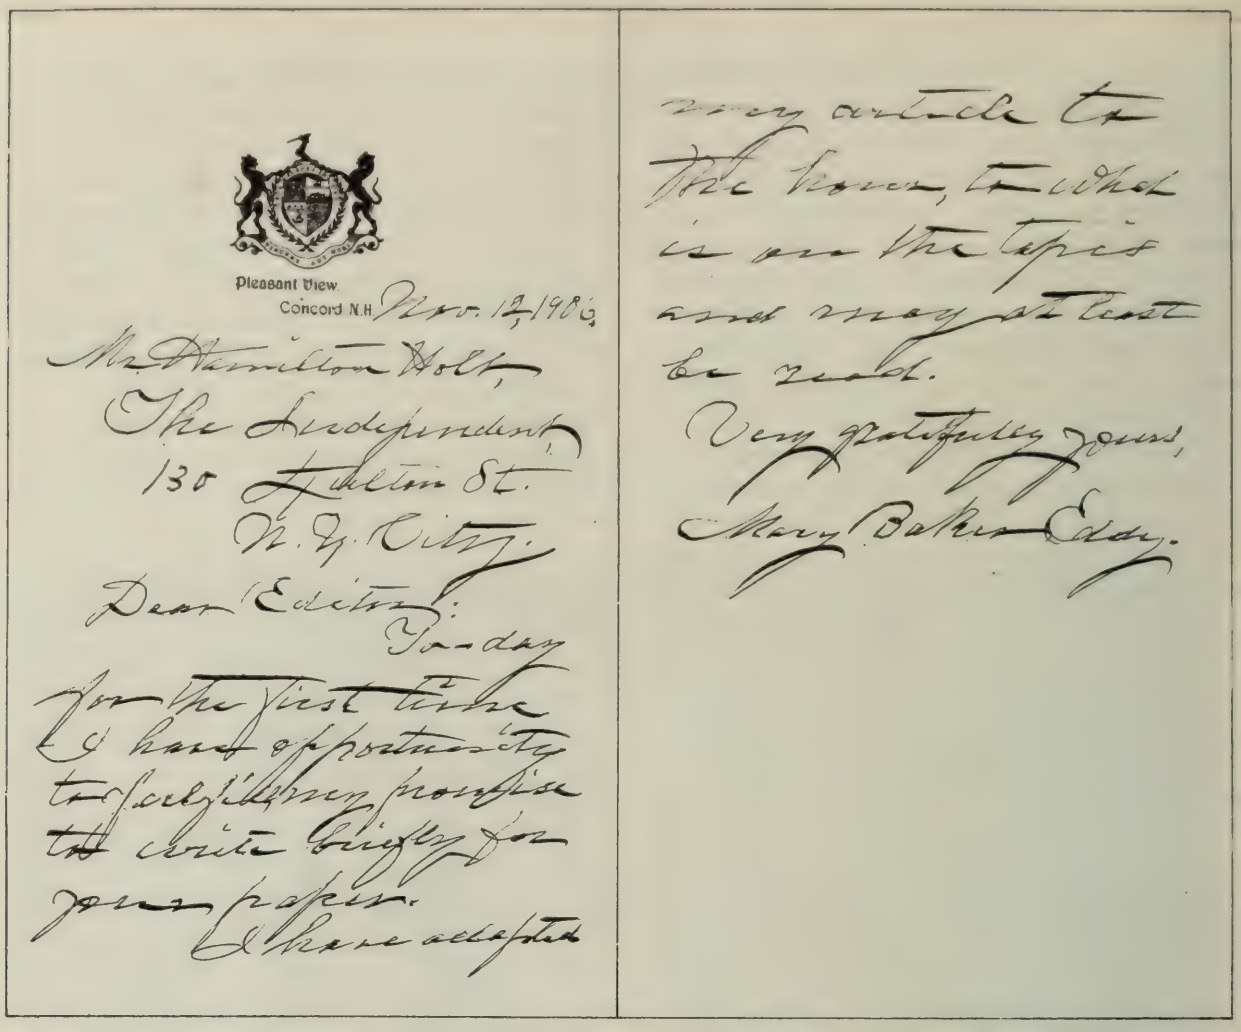
ed from the river population, many millions of whom live on junks on the waterways of China, such laborers would prove an utter failure.

The problem of satisfactorily supplying coolie labor for work in foreign countries has been successfully solved and brought to a high degree of perfection in the Chinese provinces of Fouquien and Che-kiang, under the direct supervision of the Viceroy of these provinces, Tuan Fang, one of the foremost and most enlightened statesmen of China, and number of coolies from his provinces for work in Madagascar. These coolies were to work for a period of two years, and at the expiration of their terms of service were to be returned to their homes in China at the expense of those engaging them. Satisfactory arrangements were made for this to be done, and it is from this start that the present system has developed. The Viceroy was quick to realize the advantages which would accrue to his provinces if he could furnish a considerable number of his

Facsimile of Chinese Laborer's Contract Card.

whose provinces have a population of more than forty millions. This Viceroy has made a careful study of the labor question from an economic standpoint, and in the course of the past eight years has developed a highly perfected system of labor exportation. The subject was first called prominently to his attention about eight years ago, at which time the French Government desired to engage a people with employment in foreign countries for a limited time, enabling them to make stated remittances to their families at home and at the same time to accumulate a fund from their wages sufficient to insure their independence upon their return. And it is an amplification of this idea which furnishes the foundation of the system in vogue in these provinces at present.

A Bureau of Foreign Labor Service, of a semi-official nature, has been established at Fouchou, in the province of Fouquien, thru which all shipments of laborers for foreign countries are recruited and handled. This bureau is in charge of Mr. Francis Vetch, a Frenchman of long experience in coolie labor matters, and an expert on the requirements of the various countries to which they are sent.



Whenever an order is received for coolie labor, the class of labor desired and the climatic conditions from which to recruit them are first determined, and then proclamations of the Viceroy are issued and distributed in that portion of the provinces meeting the climatic requirements, stating the nature and terms of the work, the number of men wanted, the rate of wages and such other information as may be requisite. This usually results in applications from ten times, or more, the number of men required, and a careful selection of the required number is then made. These men are then subjected to a thoro physical and medical examination, usually made by the medical authorities designated by the Government of the country to which they are to be sent, and all unfitted are rejected. When the required number of men have been recruited they are divided into gangs of from fifty to one hundred men, each gang in charge of a foreman, who has absolute charge of his gang and is responsible for the work done by them. An individual contract is then made with each laborer, setting forth the terms and conditions of his employment. This contract is printed in Chinese characters, and also in French, Spanish or English, according to the country to which the laborer is to be sent, and after being thoroly explained to each man, is executed by him, approved by the proper consul, and accepted by the Viceroy, and a copy publicly filed in Fouchou, where it remains open to any interested party.

Under these contracts, the laborer agrees, if he leaves a family, that a certain amount of his wages shall be remitted to them each month by his employer, during the entire term of his employment. He also agrees that a certain percentage of his wages shall be deposited each month in some bank, to be paid to him only upon his return to China at the expiration of his contract.

This last feature is most important when we consider the employment of coolies at Panama, as it is an effectual guarantee that the coolies will return to China when thru, and not attempt migration to some other country or to remain at Panama. However, this is but a remote possibility in any event, as each man usually accepts service only upon the express condition that he will be returned to China, and is bound by his agreement with the Viceroy to do so, and under the Chinese laws, should he break this engagement, his relatives would answer for his offense. Of all the thousands of men that have been sent out from these provinces during the past eight years, the first case of failure to return to China has yet to occur.

These laborers are paid a stated wage per month by the employer, and are furnished in addition with clothing, food, medical attendance and transportation to and from China at the employer's expense. This causes the actual cost of Chinese labor to vary, when brought to the Western Hemisphere, as the item of transportation is a very considerable one and varies greatly in different sections. For example, if a laborer comes over on a one-year contract, working 250 days in the year, and the cost of his transportation both ways is $75, it adds a cost of 30 cents per day to the other expenses. If he is under a two-year contract, the cost would be but 15 cents per day. This makes the actual cost depend upon all the conditions of each particular case. All in all, however, it is safe to assume that the actual cost of this class of labor will vary from $1.25 to $1.50 per day, if employed at Panama, depending upon the number employed, the term of the contract, and the manner in which they are worked. And it is safe to say that if properly selected Chinese labor is engaged for Panama, the result will be a saving of 25 per cent. in the time of the work, and a saving of many millions of dollars in its cost. There is no doubt that 5,000 coolie laborers will accomplish more actual work in a given time than the 23,000 negroes at present employed by the Commission.

New York City.

Pleasant View
Concord N.H. Nov. 12, 1906

Mr. Hamilton Holt,
The Independent,
130 Fulton St.
N. Y. City.

Dear Editor:

To-day for the first time I have opportunity to fulfil my promise to write briefly for your paper.

I have addressed my article to The Home, to what is on the tapis and may at least be read.

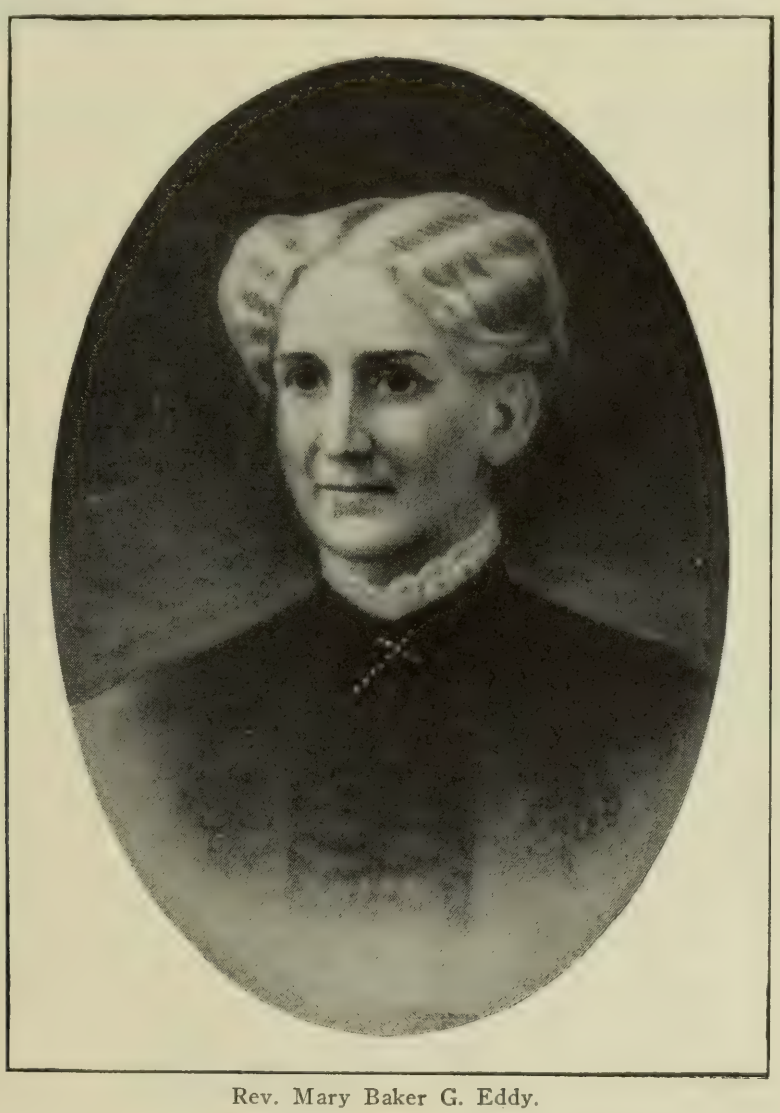
Very gratefully Yours,
Mary Baker Eddy.

Harvest

BY MARY BAKER G. EDDY

[In response to a request by THE INDEPENDENT, following the unfounded statements as to her illness, Mrs. Eddy has been good enough to send us this article, which we have received in her own handwriting, and which shows none of that tremulous unevenness which often appears in the chirography of a person of her age, she being in her eighty-sixth year. We herewith reprint her accompanying letter, reproduced about one-third. This is the first statement which Mrs. Eddy has made as to recent events, and it is probably the only one she will make.—EDITOR.]

GOD hath thrust in the sickle, and He is separating the tares from the wheat. This hour is molten in the furnace of Soul. Its harvest song is world-wide, world-known, world-great. The vine is bringing forth its fruit; the beams of right have healing in their light.



The windows of heaven are sending forth their rays of reality—even Christian Science, pouring out blessing for cursing, and rehearsing: "I will rebuke the devourer for your sakes, and he shall not destroy the fruits of your ground." "Prove me now herewith, saith the Lord of Hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

The lie and the liar are self-destroyed. Truth is immortal. "Rejoice and be exceeding glad; . . . for so persecuted they the prophets which were before you." The cycle of good obliterates the epicycle of evil.

Because of the magnitude of their spiritual import, we repeat the signs of these times. In 1905, the First Congregational Church, my first religious home in this capital city of Concord, N. H., kindly invited me to its one hundred and seventy-fifth anniversary; the leading editors and newspapers of my native State congratulate me; the records of

my ancestry attest honesty and valor. Divine Love, nearer my consciousness than before, saith: I am rewarding your waiting, and "thy people shall be my people."

Let error rage and imagine a vain thing. Mary Baker Eddy is not dead, and the words of those who say that she is are the father of their *wish*. Her life is proven under trial, and evidences, "As thy day is, so shall thy strength be."

Rev. Mary Baker G. Eddy.

Those words of our dear, departing Saviour, breathing love for his enemies, fill my heart: "Father, forgive them; for they know not what they do."

My writings heal the sick, and I thank God that for the past forty years I have returned good for evil, and that I can appeal to Him as my witness to the truth of this statement.

What we love determines what we are. I love the prosperity of Zion, be it promoted by Catholic, by Protestant, or by Christian Science, which anoints with Truth, opening the eyes of the blind and healing the sick. I would no more quarrel with a man because of his religion than I would because of his art. The divine Principle of Christian Science will ultimately be seen to control both religion and art in unity and harmony. God is Spirit, and "they that worship Him must worship Him in spirit and in truth." If, as the Scriptures declare, God, Spirit, is infinite, matter and material sense are null, and there are no vertebrata, mollusca, or radiata.

When I wrote "Science and Health with Key to the Scriptures," I little understood all that I indited; but when I practised its precepts, healing the sick and reforming the sinner, then I learned the truth of what I had written.

It is of comparatively little importance what a man thinks or believes he knows; the good that a man does is the one thing needful and the sole proof of rightness.

CONCORD, N. H., NOVEMBER 12, 1906.

MUSIC
ART AND DRAMA

Gabriel Pierne

In the kaleidiscopic changes of modern music it has sometimes seemed as if oratorio music would be relegated to the shelf, or at least that its devotees would have to be content with the immortal works which have given distinction to that field. Modern composers have found a freer field in orchestral tone poems and in the wider range of the opera. But just as conductors were getting weary and hopeless in the search for something new, Elgar loomed up in the horizon and England was soon too small for his fame. The reception which his works won in Germany and in the United States showed that with the resources of modern orchestra and chorus an international reputation could be achieved in this field by the musician who had the genius to seize the opportunity. And now comes another victor in the same field, this time under the tri-color and fleur-de-lys of France. Gabriel Pierné, who, as a boy of nineteen, captured the Grand Prize of Rome at the Paris Conservatory, has within the last twenty years written music galore for piano, orchestra and voice. After excursions into the field of operatic music he entered the less hopeful field of oratorio, and now his "Children's Crusade" has attained extraordinary popularity in less than two years and is traveling over Europe a great deal faster than the original crusade that furnished the theme. Of all the attempts to recover the Holy Land, made by armed and unarmed mobs, nothing better illustrates the delirium of the age than the Children's Crusade of the thirteenth century. Thirty thousand French children marched to Marseilles to embark for the Holy Land. Two German armies of twenty thousand children each, making in all some seventy thousand children, marched by other routes to the sea. Many perished by the way, others were engulfed in the sea or sold into slavery. Pierné has used for his text a poetic version of this religious tragedy, written by a compatriot, Marcel Schwob. It is divided into four parts: first, the Departure; second, the March; third, the Mediterranean, and fourth, the Saviour in the Tempest.

Each of these parts affords opportunity for distinct and contrasted treatment of which the composer has taken advantage, while preserving, however, the unity of the composition. The most striking effect in the first part is the chorus of mothers, entreating their children not to leave them. In the second part, representing a highway between a broad meadow bright with flowers and a strip of woods, a warm morning in spring, the children are on their joyful march. In addition to the chorus of children on the stage the representation is made more effective by groups of children off the stage, some of them near and some far away. The third part is a poetic idealization of the sea, the Mediterranean, which the young crusaders greeted with rapture. They gather the star fish and think they are true stars of the sky which have been drowned in the sea, and a sailor tells the legend of the star that followed Jesus and watched over him when he was born, and that fell into the sea when he was crucified. The dramatic and effective climax comes in the fourth part in the great storm at sea in which the vessels are engulfed, but a voice from on high says, "Suffer little children to come unto me," and the storm is turned into a hallelujah of joy for the

salvation which comes not on land or water, but in heaven.

Pierné's work was given, for the first time, on January 18th, 1905, in Paris. It has since been given three times in that city, five times in Amsterdam, twice in Rotterdam, twice in Augsburg, once in Brunswick, Brussels and Munich. Ten cities in Europe are giving it this year, and twenty German cities are to give it next year.

In New York, the Oratorio Society, under the lead of Frank Damrosch, is to bring out this work December 4th, assisted by a chorus of school children, 300 of whom are now in training.

The Grand Opera Season

While concerts are far from being neglected, New York is becoming more and more an operatic town. This season there are no fewer than three companies in the field, and as all of them go on the road, too, their doings are not of metropolitan interest exclusively.

Mr. Henry W. Savage is the first to claim attention. He was so fortunate as to secure the rights of performing Puccini's latest opera, "Madam Butterfly," in an English version prior to its production in Italian at the Metropolitan. He had no singers of the rank of Geraldine Farrar, Caruso and Scotti to put into his cast; but with such capable artists as Elsa Szamosy, Harriet Behnee, Joseph Sheehan and Winfred Goff, and Walter Rothwell as conductor of a good orchestra, he gave, at the Garden Theater, on November 12th, an excellent representation of the new opera, which is Japanese not only in its story and its picturesque scenery, but also, to a considerable extent, in its music, the composer having adopted a number of the exotic tunes of that country and worked them up with rare harmonic and orchestral skill. Puccini's own melodic vein is not very rich in this score, and it must be said that in some respects the short play, as arranged by Mr. Belasco, is more effective than the three-act opera; yet there is much in the music that will win new admirers for the composer of "Tosca" and "La Bohême." On the scenic side Mr. Conried will find it difficult to equal Mr. Savage's production. Seldom has anything so beautiful been seen on the stage as his views of the Kamakura Buddha, Mount Fuji and Nagasaki.

The opera season at the Metropolitan begins on November 26th. Partly, no doubt, because of the formidable competition, Mr. Conried has gathered together a galaxy of stars of unprecedended brilliancy. In addition to the favorites of former seasons, such as Eames, Fremstad, Sembrich, Ternina, Homer, Schumann-Heink, Caruso, Burgstaller, Dippel, Reiss, Goritz, Scotti, Van Rooy, Plançon, we are also to hear a number of eminent newcomers, including Lina Cavalièri, Geraldine Farrar (the American girl who has made such a sensation in Berlin and other foreign capitals), Moena, Tetrazzini, Kirkby-Lunn, Burrian, Rousselière and Fleischer-Edel—a list that almost takes one's breath away, when one bears in mind that no foreign opera house has more than three or four artists of the high rank to which nearly twenty of Mr. Conried's belong.

To most opera-goers the singers are of more importance than the works they appear in, for which reason novelties are usually not abundant. Yet Mr. Conried not only promises but actually intends to give a considerable number of novelties and revivals, among them "Fra Diavolo," "I Puritani," "La Damnation de Faust," "Adriana Lecouvreur," "Lakmé," "Andrea Chenier," "Fedora," "Manon Lescaut," "Madam Butterfly," "Samson et Dalila," "Salome" and "The Flying Dutchman." Rehearsals of several of these have been in progress for some weeks.

Mr. Hammerstein has been obliged to postpone the opening of the season at his Manhattan Opera House till December 3d because of the delay in the completion of the building. He will eschew German opera, so far as the language is concerned, and have everything sung in Italian or French, including Wagner's "Lohengrin." Among his novelties and revivals the most interesting will be Gluck's "Armida," Meyerbeer's "Dinorah," Auber's "Massaniello," Halévy's "La Juive" and Berlioz's "La Damnation de Faust," which, oddly enough, is to be staged by two of our managers, altho the production in operatic form of what was intended as a

concert piece is still in its problematic stage. Among Mr. Hammerstein's singers the best known are Melba, Bonci, Ancona, Gilibert, Donalda, Dalmoris. The outcome of the operatic war will be watched with interest, particularly so far as it concerns the duel between the two greatest living Italian tenors, Caruso and Bonci.

Art Notes

The season's opening is rather out of the common, because of a general awakened interest among artists in what it is the fashion to call "The Crafts." The removal of the Nation Arts Club to the remodeled Tilden mansion in Gramercy Park, with its skyscraping studio building adjunct in which artists may live, has been followed by a preoccupation of the club's members with the aims and intentions of the new National Society of Craftsmen. The first exhibition of the new society will be held in December, and the workers in the lesser arts will be given a chance to come collectively before the public. The National Arts Club, always hitherto a little vague in its relation to national art, may thus become of real importance by aiding in the helpful exchange of impressions and ideas — a class of art worker not regularly countenanced by any other art society in New York.

The new season finds many of the dealers installed in new galleries further up town than the old. Mr. Macbeth, the kindly appreciator of all that makes for beauty in the work of American artists, is now at 450 Fifth avenue, and begins his season with a showing of thirty pictures, which include many of the names he helped us to love in his little basement gallery near Twenty-eighth street. Martin, Wyant, Inness, Fuller and Hunt of the earlier great American masters; Blakelock, Ryder, those two living great painters; Murphy, Ranger, Davis and Keith of the younger landscapists; Davies, with his symbolic color arrangements; Jerome Myers, latest comer among colorists, with his East Side interpretations, and even Whistler, are represented.

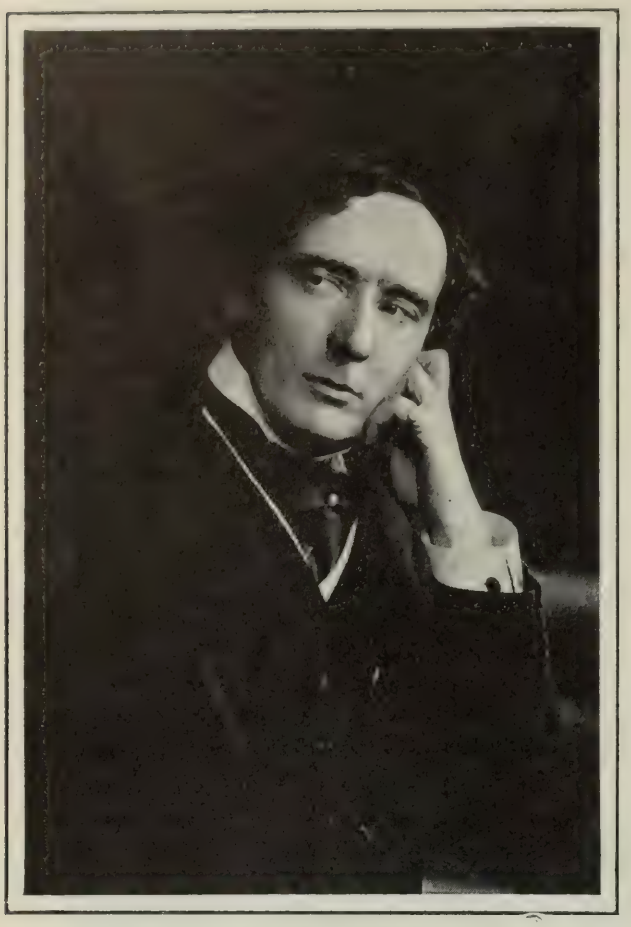
The Ehrich Galleries, dealing only in old masters, have also moved to the region dominated by the new Library.

Group of old fashioned Hingham Wooden Toys exhibited by the Hingham Society of Arts and Crafts, at Hingham, Mass., August 21st, 22d and 23d.

Six of their possessions, including works by Zurbaran, Vasari, Lotto, Pontormo, Francia and Marco Bello, were shown at the Union League's first monthly exhibition, which also contained other old Italian and Spanish masters not of the greatest. Zurbaran's "Santa Ruffina," Ribera's "Man with Mirror" and Bronzino's "Jealousy" being, however, excellent examples of those masters.

The Century Club's November exhibition shows Howard Russel Butler's "Recent Work in California," with a few of his portraits. Mr. Butler is a sincere, if unimaginative, painter. He gets character, if not color, in his heads, and his landscapes are often good in design.

The Gorham Company is casting in bronze all of the works of Nocquet, the



young sculptor whose death in Long Island marshes occurred after a fall from his balloon last spring. It is hard to judge from the things he had done how far he would have gone had he had time to mature. Impressionable and unsure of himself, these "Deadly Struggles" and "Weepers" and "Cursed" ones show him to have been original, but not particularly so. He was facile and enthusiastic, but a little shallow, and if he had been longer away from Rodin's influence there might have been something in his work to warrant perpetuation.

The Woman's Home Companion has offered four extraordinary prizes—$1,500, $1,000, $500 and $250—for the best designs for a cover for that magazine. There are no restrictions as to coloring, medium, style or number of designs submitted by one person. The contest closes January 15th, 1907, and the judges will include Sir Purdon Clarke; Mr. Chapin, of *Scribner's;* Mr. Drake, of *The Century;* Mr. Collier, of *Collier's Weekly,* and Mr. Will H. Low, the painter.

The Water Color Club's exhibition, as usual, shows the work of a few individualists, who happen to be, nearly all, imbued with the decorative spirit. E. Mars has advanced her art of wood-block printing vastly, and now gives us blocks that are delicately beautiful in all ways. "Misty Morning" and "Winter Evening" are of broadest interest among fourteen. A. P. Button has made his arrangements most lovingly, too. His "Seven Children and a Cat" would long continue to give joy to a possessor. Marianna Sloan is doing street motives with increasing power. M. Petersen, who won the Beal prize with "Coppersmiths," and Luis Mora, with his "New Americans" and "Spanish Fair in Goya's Time," handle figures vigorously. Alice Schille attempts ambitious subjects with promising results. Among landscapes Hugh Breckenridge's "Ending of Day" is almost glorious. Woodbury still gives us vital, but not yet great, sea pictures. There are many charming little bits. Feinberg's delicate "Evening in the Park," Barry Faulkner's "Grenstone River," G. A. Reid's "Nocturne," Hasler's "After the Storm," C. E. Heil's "Girl in Gray Jacket," Stange's "Bit of the Palisades," Jackson's "Pittsburg," White's "Break in the Clouds." Helen M. Turner's "Black Brooch" and Constance Curtis's "Hulda" are both in advance of the work these painters did last year. L. W. Ziegler sends a "Knight Errant," which has a thought in it not adequately carried out. The knight follows an ideal cause, but it is most unfortunately personified by a lady earthy, in spite of her billowy cloud envelopment.

The annual exhibit and sale of the Hingham Society of Arts and Crafts, held at Hingham, Mass., in August last, was notable for the showing of basketry, embroideries, metal work, Bayberry Dips, raffia work, picture frames and wooden toys. The Hingham Society has gone farther than any similar body in this country as regards the multiplicity of interests which it promotes and the work which it has accomplished. It started in a very modest fashion about five years ago, with two or three handicrafts represented, but during the interval that has since elapsed many additions to the craft of the hand have been made; new members, fired with an enthusiasm that counts heavily in results obtained, have come in, and the scope of the work done has been very considerably widened. The Hingham Society and its work has attracted favorable attention in every State in the Union as well as from several foreign countries. The modern toys shown in the illustration are so far superior to the ordinary machine-made toys as to go far toward excusing their greater cost.

In the recently executed group by Rolland Hinton Perry, shown at his studio and entitled "Prometheus," we have a figure embodying the classic myth of Prometheus. The figure is in the attitude of despair. On the shoulders of Prometheus stands the exultant vulture, who has for the moment ceased from feeding upon the liver of his victim. The Oceanes in Shelley's poem appear at the right as watching beside Prometheus. The figure shows the plaster model of Prometheus which Mr. Perry began and finished during the summer of 1906. His intention is to execute this group in marble and exhibit the same at the Paris Salon in 1907. The nymphs are to be life size and the Prometheus colossal. Mr.

H. B. IRVING.

Perry's previous work includes "Neptune's Fountain" at the Library of Congress, Washington.

The exhibition of early and modern American, English, Welsh and Continental book plates belonging to the well-known collector, Henry Blackwell, took place last month in one of the Brooklyn department stores. The collection, mounted on individual mounts, about which Mr. Blackwell has repeatedly written in Ex Libris Journals, comprises some 10,000 specimens, many of which Mr. Blackwell has not previously shown. The leading book plate engravers were represented very fully, and the collection attracted wide, popular attention.

The Drama

Altho it cannot be said that we have, in this country at least, a dramatic revival, still it is apparent that the drama is becoming continually a more important factor of intellectual and esthetic life in America. It has not ceased to be regarded by the public merely as an amusement, nor have the plays as a whole become less frivolous and vulgar, but while such plays become more numerous and popular there have been added those of a higher order, appealing to more discriminating auditors. That such plays are not more often presented and better patronized is not so much for lack of a public which would appreciate them as it is because they are lost in the clamorous crowd of trashy plays, even more than the novels worth reading are lost among the trashy ones. It is possible to ascertain pretty definitely from the book reviews in reputable periodicals what books one cares to read, but dramatic criticism in this country is more erratic and unreliable. It is hard to find from the columns of personal gossip, of unceasing facetiousness or of unlimited laudation, just what plays are worth seeing and why. But even those who live where they cannot go to the theater often have an interest in knowing this, just as they have an interest in knowing what is going on in other fields of art. Besides, as we get more mobile there are not so many people who do not spend a few days in some large city during the season, and to them it is of special importance to know how they can make most profitable use of their time. That is why once a month we discuss briefly some of the plays appearing in New York, picking out only those that we regard as worthy of the attention of our readers, because of their excellence, novelty or significance.

For three of the most interesting events of the opening season, one of which at least is also a popular success, we are indebted to Mr. Henry Miller, who has put upon the stage "The Great Divide," "Pippa Passes" and "Hedda Gabler." The first of these, which should have kept its more appropriate title of "The Sabine Woman," is written by William Vaughn Moody, and it is sufficiently distinguished from other American plays by the fact that it is good literature. It should be published so as to reach a wider audience and give those who have seen it a chance to refer to some of its fine lines. Two acts are in Arizona, in an older and wilder day than ours, and the final act, in Milford Cor-

ners, Mass., giving dramatic contrast, if not dramatic unity. We do not know whether it was suggested by "The Virginian" and "The Squaw Man," "The Girl of the Golden West" and other popular Wild West plays, but if so, Mr. Moody has bettered his instruction, as "The Great Divide" is the greatest drama of them all in psychological interest, while not inferior to any in action and characterization. Margaret Anglin retains her place in the first rank of emotional actresses, and Henry Miller presents a finished and careful study of the "unfinished specimen" of manhood. His pain and passion are often inarticulate, but that is strictly in character; and in the last act he atones for his former silence by the burst of speech in which he voices his love and sorrow. This manly, tho belated, wooing of his wife is a remarkable passage in the play and a bit of really distinguished acting.

The play begins as a melodrama and then turns into a problem. Its opening scene is grossly improbable and the resulting situation equally so. Western men, even of the lowest type, are not devoid of chivalry toward women, and New England girls, even of the strictest, are not entirely irrational in regard to keeping promises. But the delicacy and restraint of the acting obliterates these crudities of construction.

The staging of "Pippa Passes" is a noteworthy artistic triumph, because it has usually been held that the poem is unactable, but it seems that all that was needed to make it practicable was a manager and cast with good taste and high aspirations. Whether it is "a stage play" or not, it is something better, and in almost all parts it is improved by being transferred from the book to the boards. Browning's verse is much less difficult to follow when properly spoken than when read. It is really more natural in its form and better adapted to dramatic delivery than Shakespeare's. Pippa's monologs at the beginning and end were given with exquisite simplicity by Miss Mabel Taliaferro, and the contrast is finely marked between the joy and anticipation of the morning of her one holiday of the year and the lassitude and discouragement which come upon the little silk-winder as she goes to bed at night without knowing that she has helped or influenced any one, but with a pathetic faith that the day had not been wasted after all.

"This morning's hymn half promised when I rose!
True in some sense or other, I suppose."

Her clear-voiced song,

"God's in his heaven
All's right with the world!"

throws a beam of pure white light into the darkened room where Sebald and Ottima carouse, shows Jules his duty toward his unwitting bride, and strengthens Monsignor to resist temptation, and by so doing saves herself from the toils closing around her. Mrs. Le Moyne and William Beach took the parts of Monsignor and the Intendant in the last act better than Ottima and Sebald in the first. The only scene which dragged was that in the sculptor's studio, where even the slight action indicated by the poet, such as the smashing of the models, was omitted. But Miss Alice Lewisohn, who made her first appearance as Phene, took the part beautifully.

Bernard Shaw's new play for America this season is "Cæsar and Cleopatra," in which Mr. Forbes-Robertson and Miss

Geraldine Farrar as Juliette.

Gertrude Elliott play the title *rôles*. As this is one of Mr. Shaw's "plays for Puritans," it does not contain certain objectionable features abounding in "Mrs. Warren's Profession" and "Man and Superman." In fact, there is no love motive at all in the play, good, bad or indifferent, except that of the sacred white Egyptian cat for a black desert pussy. Yet "Cæsar and Cleopatra" is thoroly Shawesque, and nobody in the cosmos but Mr. Shaw could have written it. As might be expected, it makes profane all that is sacred in classical history, and turns Roman heroes into matter-of-fact personages who do and say the most unexpected things. It is needless to say that there is plenty of humor in every act and scene; nevertheless it will call forth some surprise when we say that the play abounds in many climaxes of genuine and lofty grandeur. In fine, in "Cæsar and Cleopatra" Mr. Shaw has done both his best and his worst. Mr. Robertson, who is one of our greatest actors in both comedy and tragedy, is marvelously good here, and Miss Elliott is almost his equal. The play is staged beautifully and sumptuously, and it should have a long run in this country. We recommend it to our readers.

William Gillette, the actor-playwright, in his comedy drama entitled "Clarice," gave a carefully finished and sympathetic performance at the Garrick. The play is a pyschological study of the dawning and development of love, in which Mr. Gillette has chosen a vehicle of expression strikingly in contrast with his previous dramatic compositions, but one in which his success is not less pronounced. Mr. Gillette is masterly in his use of expression unaccompanied with words, and moments, which to a less capable artist would be exceedingly trying, if not painful, are with him full of

From "A Midsummer Night's Dream." Characters from left to right: Wilmer Dame, "Snout"; William Gilmore, "Snug"; Annie Russell, "Puck"; John Bunny, "Bottom"; Thomas Coffin Cooke, "Quince."

the eloquence of silence. His sentiment is subtle and very charming; never mawkish. Love making is a very serious business and he makes it so. "Clarice" is interesting, if not great.

"Nurse Marjorie" is the latest of Israel Zangwill's plays to be produced in New York. It is a charming Irish story, full of brogue, puns, kindliness and love-making. A rich young Irish duchess, weary of a life of luxury, takes to the profession of trained nurse, and, incognito, nurses a Member of Parliament—the rising young leader of the people's party—in his convalescence from an operation. He, of course, falls in love with her for herself alone, but it takes him to the very last act to find out what a prize he has won. As in his other plays, Mr. Zangwill cannot help descending to unnecessary buffoonery in the wrong places, but for all that "Nurse Marjorie" is wholesome, witty and worth while. Miss Eleanor Robson, who, with the exception of Maud Adams, is the most winsome American actress, was most charming in her part, and deserves every praise she is receiving. The cast is uneven, but satisfactory.

The latest of the Western plays that are now being produced on the American stage in such numbers is "The Three of Us," by Rachel Crothers. But, strange to say, there are no alkali plains, no cowboys, no prairies and no Indians in this play, tho one log cabin is decorated with Indian baskets and Navajo blankets. "The Three of Us" is a sort of "Old Homestead" planted in a Western mining camp. Perhaps its most noteworthy feature is the unique ending of the third act, wherein Miss Carlotta Nillson, the heroine, when caught in a compromising position with the villain by her lover, gives both her lover and the villain a piece of her mind, instead of marrying the latter. Miss Nillson is excellently supported, especially by a young actor who plays her fool boy brother. "The Three of Us" is to be recommended from every standpoint.

"The Chorus Lady" is not, as its title might imply, a frivolous musical burlesque, but is a highly proper and moral melodrama of stage life despite its background of racing stables, greenrooms and champagne suppers. Rose Stahl as The Chorus Lady, who risks her own reputation to save her sisters, is the very slangy but up-to-date daughter of poor but respectable Irish parents. The play is somewhat hackneyed in theme, but freshly and cleverly worked out, and holds the audience's attention from start to finish. Its genuine American humor and essential goodness will interest all except the ultra-fastidious.

A cordial reception was given to a new play by Channing Pollock and Avery Hopwood entitled "Clothes," which was

WILLIAM VAUGHN MOODY,
Author of "The Great Divide."

put on in September at the Manhattan. The world, with its strife after social recognition, its individual ambitions and, of course, something of its wickedness, has been the inspiration of "Clothes," and the movement flits across the mimic stage in a manner that is technically delightful. Mr. Pollock gathers one additional feather.

During the last two years we have repeatedly called attention to the fact that the best acting of the best plays was to be found not in the fashionable theaters on Broadway, but in a cheap hall on the

East Side rented by a little company of Russian actors. Now the star of this company, Mme. Alla Nasimoff, or Nasimova, as she now gives it, has learned English, and has made her appearance in "Hedda Gabler," under the direction of Mr. Miller. As this is the most familiar —or, rather, the least unfamiliar—of the Ibsen plays, it is regrettable that she did not take her equally great *rôle* of Hilda in "The Master Builder," or even Regina in "Ghosts." But her Hedda is interesting as a novel view of Ibsen's most complex feminine character.

Those who hold that immigrants will supply an artistic element much needed in our national life will find evidence in support of their theory in the history of the drama in New York. Besides Madame Nasimova, we have received from the East Side Bertha Kalich, a Yiddish actress of great talent, who appeared last year in Maeterlinck's "Mona Vanna" and this season in "The Kreutzer Sonata." This is a play of Jewish life in Russia and America by the veteran playwright, Jacob Gordin, sometimes called "the Yiddish Shakespeare." The appellation is not quite so absurd as it sounds, for there is something Shakespearean in the way he mingles farce and tragedy and in the naïve handling of strong emotions. Both these features are, however, toned down in the English version to suit the more sophisticated taste of Broadway audiences. Miss Blanche Walsh essayed the same play, but not with the same success.

In Shakespearean drama we have had Robert Mantell's creditable repertory, of which "King Lear" is the most attractive, because one rarely has a chance to see this play. The new Astor Theater was opened with "Midsummer Night's Dream," in which the ingenious contrivances of the modern stage were employed in a way that would have made the former manager of the Globe Theater, London, regret that he did not live two hundred years later, when the scenes he dreamed of could be more effectively presented to auditors not endowed with his power of imagination. With Puck (Miss Annie Russell) and the other fairies flying thru the air and lighting on boughs, and with a swarm of odd little brownies to fill the wood scenes and with a sufficiently funny Bottom (John Bunny), the play went off very well, the only conspicuous fault being the absurd intrusion of a skirt dance of the vulgarest type.

After an interval of ten years "Cymbeline" is reproduced again in America. Altho affording individual *roles* for good actors, it is deservedly one of the least important of Shakespeare's plays and its theme is such as to appeal more to an Elizabethan than to a Rooseveltian audience. Viola Allen, as Imogen, suggested Julia Marlowe—at a distance. The rest of the cast were colorless. The whole production does not compare, character by character, or cast by cast, with the Marlowe-Sothern troupe. The best thing that can be said of it is that the costumes and scenery are beautiful and costly, even if they may not be true to British archeology.

Mr. H. B. Irving and his London company gave a varied repertory, poetry and prose, melodrama and comedy, historical and modern. Of these the only one of importance was Stephen Phillips's poetical drama, "Paolo and Francesca," which was presented with excellent taste in color, grouping and rhythm. The story of the unfortunate lovers, which for seven hundred years has touched the hearts of men, has not in this latest form lost its power, and Mr. Irving's melancholy face and powerful voice are well suited to the part of the Tyrant of Rimini. It was probably a disadvantage to him that one has constantly in mind a comparison with his distinguished father, whom he strongly resembles, but does not consciously imitate. Mr. Irving has a personality and talent of his own, but in reproducing his father's *rôles* he has not a free chance to develop them. His wife, who plays with him under the name of Dorothea Baird, strikingly resembles Rossetti's Blessed Damozel in face and form. She takes her parts with grace and propriety, if not with distinction. The plays selected were not very well adapted to the American taste. Charles Reade's "The Lyons Mail" is a lurid melodrama some thirty years out of fashion. "King Rene's Daughter," in which Miss Baird took the part of the blind girl who receives her sight, contains some genuine poetry. "Charles the First" is a

lifeless pageant. There is no illusion; the gilding and the paint show thru. "Markheim," adapted from the sketch by R. L. Stevenson, gives him a chance for some very powerful effects when he is confronted by his double in the old curiosity shop after the murder of the dealer. But, really, what took best with his audience was a trivial French play, "Mauricette," in which both Mr. Irving and Miss Baird did some very clever comedy acting.

Both of the leading British writers of society plays, Arthur W. Pinero and Henry Arthur Jones, are represented this season by good specimens of their work. "His House in Order" is not one of Pinero's great plays, but shows his admirable stagecraft, and, with the ever popular John Drew in a prominent, tho not a star, *rôle*, is a decided success. The "sainted Annabel," really the central figure, is present only in spirit, and her unmasking is the theme of the play. Miss Margaret Illington is not temperamentally fitted to the part of Nina, and does not make the most of it.

In "The Hypocrites" Mr. Jones strikes a deeper note than his rival, and the play is the strongest and best he has yet produced. Its theme is much the same as Ibsen's "Pillars of Society," and for once Broadway applauds sound morals and moral heroism as the Bowery does. The company is excellent, and the acting not often exaggerated, but is natural and effective. Miss Doris Keane deserves especial commendation for a difficult part well done. Mr. Richard Bennett has been so long identified with comedy *rôles* that he cannot altogether adapt himself to the very serious part he has to play in this drama. Or perhaps the fault is with the audience, that has been so accustomed to laugh at him that it does it still and in the wrong places.

The only redeeming feature of "The Prince of India," a drama founded on General Lew Wallace's book of the same name, are the elaborate stage pictures and the original music composed especially for it by Professor Parker, of Yale, tho unfortunately it was frequently drowned in the mock heroics, shrieks and howls of the motley players and the higlety-piglety chorus. To one who has not read "The Prince of India," the plot would be almost unintelligible. The play is not well acted, and in no spot from beginning to end stirs the emotions of the discriminating theater-goer. The scenery and costumes, however, are all that money can buy. Despite all this, the "Prince of India" will undoubtedly appeal to a large percentage of the "groundlings."

The City Room. Stage Setting from "The Stolen Story," by Jesse Lynch Williams.

There are some men who possess the ability of doing the most commonplace things in such a manner as to gild them with a humorous veneer. This quality is possessed by Sam Bernard in an extraordinary degree. He manifests his

ability to be humorous in all of the mediums in which he has appeared. He does this again in his present musical farce "The Rich Mr. Hoggenheimer." Another equally if not more amusing musical comedy is "The Red Mill." A more fun-provoking and versatile brace of comedians will be hard to find than David Montgomery and Fred A. Stone, who share the honors in this production. Their songs, dances, acrobatic feats and antics are all *sui generis,* as a crowded house every night attests. Of course, the play as a play does not merit serious consideration, but it will cure any case of "the blues."

"The Stolen Story" is a stage amplification of Jesse Lynch Williams's bit of magazine fiction of the same name. The second and fourth acts, which reveal the true inwardness of the "making up" and the "going to press" of a great daily paper, are worth going far to see. The other acts are commonplace and the plot of the story from beginning to end is amateurish and not sufficiently obvious to the audience. Otherwise "The Stolen Story" gives promise of a new American playwright of considerable ability.

In "The Genius" Mr. Goodwin has an opportunity to show his dry humor and farcical foolery. In serious moments we fancy a falling off in sincerity and dramatic power. Of course the play has few such moments, and our memory of Mr. Goodwin's work of a decade ago may over-emphasize his then earnest and restrained feeling, but we think not. His art may have gained in ease, but it has not in truth. The play is farce-comedy, with the emphasis on the first syllable of the compound. An "Art Syndicate" is an idea not without originality, and the situations are worked out cleverly enough, altho the lines are not particularly witty.

"The Shulamite" is worthy of notice as a strong, tho not an agreeable, play, its sadness lightened by no touch of humor. It is a tragedy of an isolated Boer farm in South Africa, reminding one of Olive Schreiner's "Story of an African Farm," tho it is taken from a different novel. Simeon Krillet, the old Boer farmer, has absorbed from his constant reading of the Old Testament only its cruelty, and ruins the happiness of the household by his determination to be the head of it, using the sambok on the Kaffir girl and even his young and dearly beloved wife until she is driven to rebellion. Mr. Edward Mawson throws himself completely into the character of the Boer patriarch and Miss Lena Ashwell, as the wife, shows great tragic power.

The Season's Promise

Between now and next May there will be in Manhattan Borough alone about two hundred orchestral concerts of the first class, given by local and visiting organizations. The veteran, but sturdy, New York Philharmonic Society will be led to new victories in this, its sixty-fifth, season by Vassili Safonoff, the fiery Russian, who in each of the last three seasons made a deeper impression than any other of the Philharmonic's visiting conductors from oversea. Mr. Safonoff has been engaged for three years, thruout which he will not be heard with any other orchestra. Mr. Sam Franko, who spent the summer in Europe, has returned with a new collection of antique gems of the music of other days of the kind his concerts with his American Symphony Orchestra have made popular here in recent seasons. Besides those of the Boston Symphony Orchestra, there will be visits from the Philadelphia Orchestra under Mr. Fritz Scheel and the Pittsburg Orchestra under Mr. Emil Paur.

The soloists engaged to appear with these orchestras, and who also will be heard in concerts and recitals of their own, present an imposing array. Among the pianists Paderewski is announced, but, alas, for only one concert, with the Boston Symphony Orchestra; Moriz Rosenthal, who comes to make an extensive tour after an absence of eight years, has already begun to astound all hearers by his prodigious feats of technic; Josef Lhévinne, the brilliant young Russian pianist, who was the musical discovery of last year, has returned to spend the greater part of the winter here; Ossip Gabrilowitsch is another Russian pianist who is come to us again, and Rafael Joseffy, Mme. Fannie Bloomfield-Zeisler and others resident in Amer-

ica will be heard in the course of the season. A small army of violinists will be led by César Thomson, the Belgian, who has not visited America since 1895; Alexander Petschnikoff, Hugo Heerman and Miss Maud Powell. There will be other instrumental soloists in plenty, and scores of singers will interpret the songs of the lyric masters.

The Kneisel, Olive Mead, Boston Symphony, Flonzaley, Marum, Kaltenborn, Mannes and Dannreuther string quartets and the Margulies Trio will see to it that chamber music is not neglected. The Musical Art Society will provide its usual excellent concerts of *a capella* music. The Oratorio Society will sing Gabriel Pierne's "The Children's Crusade," Handel's "Messiah" and Sir Edward Elgar's "The Apostles" and "The Kingdom."

Besides the veteran Saint-Saëns several younger composers of more or less eminence in Europe are to visit our shores, among them S. Coleridge Taylor, the only negro who has ever attained to wide fame as a writer of music, who comes from England; Reynaldo Hahn, Leoncavallo and Puccini, the Italian opera writers, and the Russian, Alexander Scriabine, who has written some entrancingly beautiful pianoforte pieces.

All in all, this will be one of the most fruitful seasons of music the city and the country has ever known.

Boston's New Conductor

With its concerts in Carnegie Hall on November 8 and 10 the Boston Symphony Orchestra began its twenty-first season in New York. These concerts were especially noteworthy, because they introduced to this public Dr. Karl Muck, the new conductor of the orchestra, who has come from the Vienna Philharmonic and the Royal Opera at Berlin to lead the Boston music makers for one year.

Dr. Muck is tall, rather thin and angular; is dignified and reserved in manner. His strong, smooth face, almost ascetic in outline, impresses one at first glance with a sense of inexorable sternness. But one who watches him at close range sees presently that he has the saving grace of good humor. He takes keen delight in his work and he is ever ready to encourage the men under him by prompt recognition of their good work. From the moment he takes his stand before the orchestra he is all for the music in hand. The audience, apparently, is forgotten. His appeal is wholly to his players, and that appeal is direct, explicit, compelling. The effect upon the audience comes thru the ear alone. He knows the effect he wants, and he gets it. All that he does is marked by intellectual force and authority. He thinks about his art, and he analyzes every measure he plays; but he is not unmindful of the sensuous charm of music. If there are hidden beauties he is likely to find them. If there be eloquence, emotional fire, martial pomp, he will not be loath to give these things utterance. In place of the cherry-stone-carving niceties of his predecessor, we are likely to get from the unsurpassed Boston Orchestra all the dash and fire and spirit of which its members are capable when their enthusiasm is not too ruthlessly curbed. And the prospect is good.

Dr. Karl Muck was born at Würzburg on October 22d, 1859. He appeared in public as a pianist at the age of eleven, his father, an accomplished amateur musician, having given him his first lessons in violin and pianoforte playing and in counterpoint. He studied at the universities of Heidelberg and Leipsic, and received his degree of Ph. D. from Leipsic in 1880 for special studies in philosophy, classic philology and the history of music. In that year also, having continued his musical studies at the Leipsic Conservatory as a pupil of E. F. Richter and Karl Reinecke, he made his first appearance as a professional pianist. But he was determined to be a conductor, and within the year left Leipsic to be chorus director at the Stadt Theater in Zurich. Since that time he has held posts as conductor of opera and of symphony concerts at Salzburg, Brunn, Graz, Prague, Vienna and Berlin. He has appeared as guest conductor in many other European cities, has been since 1894 the conductor of the Silesian Music Festivals, and has conducted performances of "Parsifal" at Bayreuth since 1901. His absence this year from the Royal Opera at Berlin is thru the special permission of the Emperor William.

Other Orchestras

The season of orchestral concerts in New York was opened on Saturday evening, November 3d, by the first concert of the series of the New York Symphony Orchestra, under Mr. Walter Damrosch, in Carnegie Hall. At this concert Dr. Camille Saint-Saëns, the dean of French composers, made his first appearance in America, and received, as he himself said, "the greatest demonstration of his life." Concerning Dr. Saint-Saëns and his music THE INDEPENDENT will have something more to say later than the present space permits. Mr. Damrosch has enlarged the orchestra's string choir this year, and the result is a gratifying improvement in tonal strength and euphony. He already had in the wind choirs some of the finest instrumentalists in the country, and the band as now constituted possesses splendid qualities. Mr. Damrosch himself is growing in musicianship. Any one who can have the privilege of hearing the New York Symphony Orchestra, either in New York or on its travels, should miss no opportunity of doing so.

The Russian Symphony Society, which has now become a firmly established institution in the musical life of the metropolis, began its fourth season auspiciously with a concert in Carnegie Hall on November 15th, when Mr. Modest Altschuler, its energetic and skillful young conductor, gave a spirited performance of Tchaikowsky's sixth symphony, Ippolitoff-Ivanoff's fascinating "Caucasian Sketches" and an interesting new "Scene de Ballet" by Glazounoff.

Football Safe and Sane

BY ARTHUR B. REEVE

[Mr. Reeve is a recent graduate of Princeton and has always taken a great interest in football and has collected valuable statistics about the game. We are glad to print his article this week, between the two greatest football matches of the season.—EDITOR.]

THE "new football" works—spectacularly and physiologically. It is a game more truly American than the "old football" of 1905. It is "yellow." Every play brings the bleachers to its feet, for the new game is sensational in the extreme, and, unlike the old football, the bleachers see almost every play. Establishing the neutral zone has enabled the spectator to get his eye on the ball at the start before it is snapped. The ten-yard rule, long passes forward or to either end, the "on-side" kick, and frequent punting enable him to keep his eye on it. The day of the old hammer-and-tongs style of close play, which even the officials scarcely could follow until the play was over, is gone, and in its place open play of the most pronounced sort has come.

The first consideration, however, in the eyes of the reformers is whether the game is safer or not. A year ago the anti-football agitation began to assume definite proportions. The argument, then, was that mass play was the cause of most of the evils of the game—both the injuries and the uninteresting style of play. President Roosevelt took up the reform of the game, and, in order to save it, said to those who would have abolished it: "I have no sympathy whatever with the overwrought sentimentality which would keep a young man in cotton wool." On the other hand, there was no reason for sympathy with the overwrought brutality which put a young man in sterilized cotton. "Open the play," said the apologists of football, "and there will be fewer injuries."

How has the new game worked in the matter of injuries? To put it in a sentence, fatal injuries are 80 per cent. fewer and non-fatal injuries are far less serious and one-third less frequent.

At the opening of the season of 1905 I placed an order with a newspaper clipping bureau for all accounts of deaths

and injuries on the football field. The result was appalling. From the opening of the season to November 10 there were fifteen deaths, almost one every other day, and eighty-two injuries. The record for the season was twenty-two deaths and ninety-six serious injuries.

This year I have placed the same order with a clipping bureau. In neither case, of course, can it be supposed that the record obtained is complete. It is, however, the only method of getting at the facts at all. Furthermore, it is entirely reasonable to suppose that the record of 1906 is even more complete than that of 1905, since newspapers must naturally have had a keener nose for football accident news after the long agitation of last winter. At any rate, whatever inaccuracy exists in this source of information ought to tend to disappear when two years are taken merely for purposes of comparison rather than of record.

The tabulation of the returns for 1906 up to November 10 shows three deaths directly due to football in the United States and fifty-four injuries, series as well as trifling. Football is not yet a parlor game, but it is no longer deadly.

First of all, the character of the accidents has changed, and with it their seriousness. There has been a slight increase in accidents due to tackling, a large decrease in the more dangerous accidents of piling of players on top of each other, and of heavy moving masses of men. The broken collar-bone and broken leg has increased slightly in number; the serious internal injuries, concussion of the brain, and dangerous injuries to the spine have almost disappeared.

Take the comparative record for proof. Broken collarbones increased from seven to nine; broken legs from six to eight, altho sprained ankles were reported only twice in 1906 to three times in 1905. Bad face wounds were reported once each year, fractured ankles twice. Wrenched hips were reported once in each year. The only other form of accident that showed an increase in 1906 worth noting over 1905 was seven twisted knees against five.

In the accidents more or less attendant on mass play, however, the comparison is striking. Concussion of the brain decreased from four to two cases, while three men each year were described as "kicked in the head." Three were injured seriously in the spine in 1905, and none in 1906. There were five serious "internal injuries" in 1905 against none in 1906, while the injuries that in 1905 were described merely as "serious" without details, to the number of thirteen, were so described in 1906 in only one case.

Three arms were broken in 1905 against two in 1906; four shoulders dislocated against none. Broken ribs figured three times last year, not once this. Four broken noses against two is another good record of this year. Three broken jaws, two eyes gouged out, one player bitten and another knocked unconscious three times in the same game are proud records of 1905 that 1906 did not duplicate. Two broken fingers this year may be balanced against two broken hands last year.

Three broken shoulder blades, two cases of water on the knee and a case of ruptured intestines occurred in 1905, and none at all in 1906. This year had three leg bruises of a minor character, one injured knee, two backs bruised, one player "dazed," one breastbone fractured, one elbow dislocated, and one player "laid up," specific instances of injuries which last year did not have, most of them being of a not very serious character.

It is still a gruesome list, but the improvement is evident. The apparently irresistible desire to do the opposing team some serious bodily injury, that inspired players last year, has evidently given place to a more sportsmanlike desire to play a clean game for the game's sake. Mayhem on the football field is no longer permissible.

The improvement is even more striking when the fatalities are considered. Last year two players died from "internal injuries" resulting from kicks in the stomach, two died from "fractured skulls," two from "dislocation of the spine," one from an abscess on the brain, one from the bursting of a blood vessel, one died from blood poisoning, one from intercranial hemorrhage, one from cerebral hemorrhage, one from subdural hemorrhage, one from meningitis, and a girl from peritonitis.

This year it seemed at the start as if

the record of 1905 was about to be duplicated. Hardly had the season started when John Powell Kennedy, nineteen years of age, captain of the Lawrenceville team (New Jersey), was killed by the rupture of a blood vessel in the head as the result of striking the ground after a hard tackle. The next fatality, however, did not occur until October 13, nearly a month later, when Charles F. Surdam, nineteen years old, of Morristown, N. J., right halfback on the High School team, broke his neck by missing a tackle. Almost a month later, on November 10, James Curtis, twenty-five years of age, died from internal injuries received in a game at Great Falls, Mon.

These are the only fatalities of the season in the United States. Two occurred in Canada, but as Canadian statistics did not figure at all in last year's record it was not thought fair to include them in the record of the present year, especially as one of the accidents was in a game of Rugby, the game, by the way, that we were asked last year to substitute for football. The deaths were those of Cameron Paulin, twenty-one years old, at Toronto, who fractured his skull in practice, and E. Glinn Ellis, twenty-one, also of Toronto, who was kicked in the head.

Two other deaths occurred on the football field this season, but as both of them were from heart failure and no injury was received it would not be fair to include them. They might just as readily have occurred in tennis or golf—perhaps more readily in some other sports, such as rowing or track events. One was Lewis A. Crisler, of Paulding, O., right end on Ohio Wesleyan, who fell dead while running out on the field to catch a punt, and the other was Leonard Hammerle, of Pittsburg, who also fell dead on the field without having received any injury at all from the play other than of overexhaustion.

These cases serve to call attention to the fact that a man with a weak heart should never indulge in violent exercise. The deaths of two players from overstrain should warn the university and school authorities of the necessity of taking some precautions to prevent young men, physically unfit, from joining in such games. When a young man dies from heart failure, either during or after a game, it is perfectly clear that he was not in a physical condition to get benefit from that particular form of exercise, and it ought to be possible in most cases for a careful medical examination to discover this fact before, not after, the terrible tragedy.

It may be objected, however, that all these cases should be counted in making a comparison between the two years. Granting even that contention the record of 1906 is still at least 50 per cent. better than that of 1905.

As was the case last year, there were no fatal accidents in any of the big universities where football is most highly developed and played hardest. Injuries have been fewer at Harvard than last year, with nothing to speak of at Princeton except one in the West Point game, while there have not been many injuries at Yale and only one that can be looked on as serious—and that rather as injuring the strength of Yale's team than as being a serious matter for the player. In most cases the injured players were back again in the game in a few days.

"The enemies of football," says the Cornell *Sun,* "point each year to the number of deaths attributable to this game as the main point of difference between it and other sports. They do not seem to realize that other sports introduce the element of danger also and probably to as great degree. For instance, the figures collected by the Brooklyn *Citizen* regarding the number of baseball deaths in the East alone this year would seem to indicate that baseball, contrary to the popular belief, is a far more dangerous pastime than football. Twelve baseball players were killed during the last season thru actual participation in the game. Besides this, a dozen spectators were killed. This list is larger than the Eastern football casualties of last year."

Not only that, but it might now be added that it is four times larger than the list of football fatalities for the entire country this season. The foremost opponent of the old game, President Eliot, of Harvard, after witnessing the game between Harvard and the Indians, is reported to have said: "I liked the game. It was an improvement over the

old game, decidedly. But I hope to see the game improved more in the future by additional modifications along the same lines as those made this year." Asked if he thought brutality was decreased, President Eliot was reported to have said: "I think it is less brutal."

There seems to be some doubt whether the new rules are responsible for the decreased number of injuries at Harvard, Coach Reid saying recently that the coaches had learned a few things regarding the causes of injuries thru mistakes made last year, and that they were not making these mistakes this year. "There would have been just as few injuries under the old game," he says.

The majority of football coaches do not agree with this opinion, however, tho they are not all enthusiastic about the strategic features of the new game. "After watching the game closely," said Dr. Huchins, coach at Wisconsin, "I am convinced that the new rules are beneficial to the players for the reason that, tho they tend to increase minor injuries, such as broken bones and strained tendons, the percentage of fatalities will be decreased greatly. I believe most of the injuries will be broken bones and twisted knee joints. The broken bones will come largely from being thrown hard in open field running when the runner is tackled. The knee twists will come more in the end runs and other line plays used this year. By dropping the old style of line plunging the danger of fatalities is greatly decreased. In those plays when a man was called on to smash into the opposing line, almost like butting his head into a stone wall, something had to give way, and the result too often was an injury to the head or neck that was far more serious than broken bones and twisted knees. In piling up of players somebody was almost sure to be hurt and hurt badly."

The football coaches at Lawrenceville attributed the death of Captain Kennedy to the new rules, and indeed that was the case, altho such an accident was quite as possible under the old. But with all the variation in the causes of football accidents, the fatalities from hard tackles have not increased, while the fatalities from other causes have been all but eliminated.

One main criticism that was made last year is still to be made this year. Young, unseasoned and inexperienced players should not be allowed to enter hard, gruelling games. The average age of those who suffered fatal injuries last year was eighteen. This year two of the three fatal cases were of young men nineteen years of age and one was of a man of twenty-five playing on an amateur team. In only two instances were the players who were killed last year past the age of nineteen. Ages of injured players are seldom given in newspaper accounts of non-fatal injuries, but two of the broken legs this year occurred in cases of boys nine and eleven years of age respectively.

Some of the most brutal and dangerous games this season have been preparatory school games, as a few instances will show. At a game between a military academy and a New York preparatory school in New York on November 3d, "the right tackle on the cadets' team had his nose broken and the right half back on the local eleven had his back so badly wrenched that he had to be carried off the field." Both these injuries were due to just the sort of football the new rules try to eliminate; they were survivals of mass play.

Another New York high school has been playing a disgracefully vicious game. In a game on November 3d, one young player had "his left eye gashed open and his head so cut that blood spurted in a stream over his face." Another was "twisted and torn as he fell under the pile of the human avalanche so that his left leg ligaments were torn." The captain of the team suffered most. "His head was pounded into the ground with such force that when he was uncovered he was unconscious. He was partially brought around and was left to take his place on the line. He swayed and tumbled to his knees as the first snap of the ball was made. He reeled and ran like a blind man and then sank to the ground as the whistle blew which ended the game."

A week later the same school played again, the game being described thus:

"Captain ——— went in at left end as ——— was badly hurt. He later was shifted to ———'s place as that cripple was put hors de combat in one of the fierce scrimmages. ——— was laid out semiconscious and replaced. ——— the fast ground gainer, had his leg nearly twisted off, so that his running was over and ——— took his place."

In all these cases it was survival of mass play among young men who were playing to win, not for the game itself. The injuries were disgraceful to both opponents. It is this sort of thing that always has and will discredit football. But what makes it the more discreditable now is that it is absolutely unnecessary, out-of-date, and useless. Last year before the season closed, ten of the best preparatory schools in the country abolished football. This year five have done so, only one because of the unfortunate working of the new rules. In New York a strong effort is being made to substitute "socker" in the nigh schools, while in several Western colleges lacrosse and several other games are being substituted.

If the game is to be saved the reforms of this year must be continued. There must be no reaction to mass play. First of all it must be certain that a player is both physically fit and old enough to enter the game. This is a duty that falls entirely on school authorities.

A second change that must be carried further is in the spirit of the game. Two high school games and one amateur game in the West this year have been followed by riots of spectators and players. This is the spirit of rowdyism that makes football degenerate. Contrast with it the reports that before the Chicago and Perdue game "the two teams attended a banquet with opposing players seated side by side" and the cordial greeting of the Indians at Harvard.

The spirit that applauds slugging and cheers or hisses penalties according as they are for or against one side must go. The determination to win at any cost is responsible for more than the best new rules will eradicate. After all it is only a football game and honor and manliness and fair play are better than a string of victories and a "mucker" reputation.

The critics of the new game point to the alleged fact that there are many penalties still inflicted and "slugging" is unabated. The old style of mass play put a premium on slugging, for it was seldom or never discovered, but open play brings the "mucker" into the limelight and for that reason, if for no other, it has made football a cleaner sport.

Now that the end of the season has come with its big games the new rules are being tried out strategically. There are those who maintain that chance plays an overwhelming part in the new game when teams are evenly matched. Doubtless there is much truth in the criticism, but it is only fair to say that chance has always played a large part in the game. Goals from the field won quite as often under the old as under the new rules.

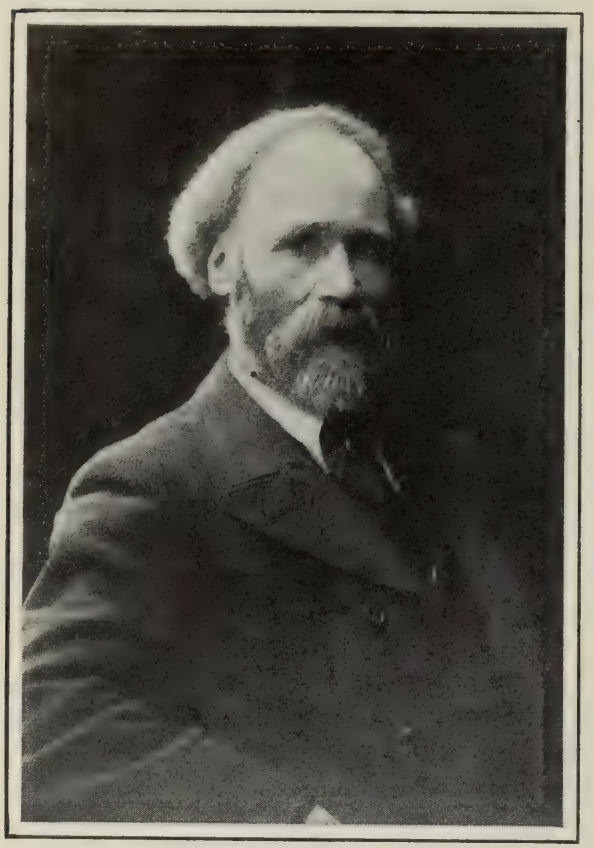
Furthermore nobody has asserted that the game of 1906 is the last word on football reform. The progress of 1907 should be as great as that of 1906. For the present we can be absolutely certain that football is a cleaner, safer, and more interesting game than it has ever been before. To reformers as well as players President Roosevelt's dictum is still applicable: "Don't flinch, don't foul; hit the line hard."

NEW YORK CITY.

On the Eve of the Session

BY JUSTIN McCARTHY

WE are coming close upon the time when the Houses of Parliament are to resume their sittings. It is not too much to say that the adjourned session, which is to renew its work on the 23d of this month, has before it some tasks of the utmost importance, and brings with it the threat or the promise of a most serious struggle between the hereditary and the representative chamber. That struggle will be fought out over the Education measure, which has passed the House of Commons, but has yet to be taken in hand by the House of Lords.



The Education measure has brought with it much controversy, even among the supporters of the Liberal Administration, and therefore invites and encourages hostile action from the House of Lords. Some of its clauses were strongly opposed by sincere churchmen, while others are utterly in opposition to the national sentiments of Ireland and therefore of the Irish National Party. Now if the Peers want an opportunity of showing what they can do in order to punish a Liberal Government, here, one would think, must be their happy chance. In the House of Lords the Tory peers have an overwhelming majority, and whenever they stand together they can reject any measure passed by the House of Commons.

For myself as an outside observer of political affairs, a position which I have held for some years, I must say that I feel rather disposed to hope the Lords will press their antagonism to its uttermost capacity. My reason for this warlike wish is, however, not so much because of my disapproval of some parts of the Education Bill as because of my disapproval of the hereditary chamber. If the Lords reject the Education measure they will bring about a crisis which might have the effect of rendering the English public in general utterly impatient of the constitutional position occupied, the constitutional dictatorship exercised, by the House of Lords. Nothing could be more preposterous than the existence of such a power in the hereditary chamber. No qualification is needed for a seat in that chamber other than to be a peer or to be raised to the rank of a peer by the reigning sovereign. The House of Lords has not lately exercised its absurd powers with great arrogance and seemed, indeed, to be growing into some perception of the fact that the less it invited public attention to its doings the greater would be the chance of its being allowed to retain its position in the State. But such a position as that of the House of Lords must ever be an anomaly in a constitutional and free country, and most of us outside observers might well cherish a hope that the Lords will provoke a struggle and so bring the whole question to a crisis and thence to the formation of a new and a better system. That possibility is in itself enough to invest with a new and keen interest the opening of the adjourned session.

Then there is also another question which has yet far deeper interest for me and for my countrymen all over the world, a question which is certain to come into new development with the reassembling of Parliament. That is, I need hardly say, the question of England's constitutional relations with Ireland—the question of Home Rule. It may be taken for granted that we shall very soon after the reopening of Parliament have some distinct declaration on this subject delivered from the Ministerial benches in the House of Commons. I do not suppose that the Government will announce the resolve to bring in at once a measure for the granting of full Home Rule to Ireland—a measure carrying out the policy which the House of Lords prevented Mr. Gladstone from realizing—but I have the strongest hopes that the Government will declare such a measure to be their ultimate object and will describe the course by which it is to

be reached at the earliest possible moment.

I hear from many sources that the Irish Nationalists and the Irish people have reason to believe in the favorable disposition of King Edward toward Ireland's national claims. The confident impression is that the King is willing to give his full approval to any system of legislation which can bring Ireland into thoro harmony with the other parts of the Empire, just as Canada and the Australasian states are at present. We all know enough concerning the mysterious correspondence between leading members of the late Tory Government and Sir Antony MacDonnell on the subject of what is described as Devolution to feel satisfied that the King distinctly encouraged the claims of Sir Antony to hold a controlling position in the Viceregal administration of Ireland. That mysterious correspondence remains a mystery still, but it will probably have to be presented to the public soon after the meeting of Parliament, and in any case it is quite certain that the position given to Sir Antony was given with the cordial approval of King Edward. All this is full of promise for an early and satisfactory settlement of the relation between Great Britain and Ireland by the restoration—the only way to such a settlement—of their National Parliament to the Irish people.

KEIR HARDIE.

Many rumors are abroad just now to the effect that Sir Henry Campbell-Bannerman has made up his mind to withdraw from active political life by accepting a peerage and retiring to the dull seclusion of the House of Lords. I sincerely hope that these reports are mere imagination, and I cannot believe there is any authority for them. We all know how deeply Sir Henry suffered from the recent death of his most loved and loving wife, but he does not seem to me the man who could abandon himself to mere idleness as a relief from sorrow, and he could hardly find any such relief more readily and more congenially than in the following out of his active and beneficent public career in the House of Commons. The present time would seem to be especially unsuited for the withdrawal of such a man from the representative chamber, where issues of immense importance will so soon have to be fought out. The law-making chamber—the House of Lords is only a law-marring chamber—will have every need of the guidance and the influence of such a man as the present Prime Minister during several sessions to come. Sir Henry has ever proved himself an absolutely unselfish as well as a patriotic man, and I can hardly believe that he is likely to withdraw from the front of the battle when the struggle is only reaching its hight.

The English constituencies are much troubled at present by the action of that small party of Labor members who follow the leadership of Mr. Keir Hardie. I have already told my readers something of the course taken by this party, or section of a party, and it is becoming more and more marked and conspicuous as the days go on. Mr. Keir Hardie and his followers have ceased to be mere advocates of the rights of labor, and are more and more loudly proclaiming themselves the champions of actual Socialism. Now, to begin with, it is not quite easy to understand what the doctrine of Socialism actually professes to teach for the benefit of suffering humanity. That in this rude

world of ours there are many heavy grievances needlessly imposed on the toiling and the suffering workers is only too certain, but it is not by any means so certain that the promotion of the gospel of Socialism would help much to bring about a better state of things. To me it seems clear that the best work a Labor Party could do in the House of Commons would be to form one compact and consistent body, striving always to represent the claims and improve the conditions of the laboring populations in general, and this is just the work which the Keir Hardie party seems to me at present to be obstructing and endangering. As a sincere friend to the claims of the laboring classes I cannot but regret that any of their representatives in Parliament should have identified themselves with the principles of Socialism.

I have seen with much gratification the announcement that the memoirs of Lady Dorothy Nevill, written by herself, are to be given to the public within a few days by Edward Arnold. I think I may without rashness predict for this book a very wide success among the reading public. It is, so far as I know, Lady Dorothy's first attempt at authorship, altho she has always lived much in the society of authors and authoresses. Lady Dorothy Nevill has been for many years one of the leading figures in London society. It would be a disparagement to her to describe her as a leader of "smart society," for the phrase "smart society" seems to carry with it a suggestion of pushful social ambition and of ostentation, while Lady Dorothy Nevill was born of the aristocracy, and felt herself therefore all the more free to find friendship and companionship in any class of life. During a great many years Lady Dorothy's receptions at her house in the West End of London were among the most interesting and brilliant gatherings that the social life of the metropolis could show. As I have heard it expressed, everybody who was anybody was sure to be met at these assemblings. Lady Dorothy was a strong Conservative in her political principles, but she welcomed Liberals and Radicals and even Irish Nationalists to her house, and no habitual visitor would have been surprised to see there at the same reception a prince of a royal household and a Labor representative from the House of Commons. Among her visitors were poets, dramatists, novelists, painters, sculptors, men distinguished in every branch of science, journalists and leaders of fashion. Arthur Balfour, lately the Conservative Prime Minister, was often among her guests, and Lord Randolph Churchill, up to his closing days, was a familiar personage at her receptions. I have had the honor of her acquaintanceship, and I hope I may say of her friendship, for a great many years.

LADY DOROTHY NEVILL.

She is a woman of bright mental capacity, with a quick, observant eye and a most genial temper. Everybody who knows, or wishes to know, anything of London society during our days will be sure to look out for Lady Dorothy's memoirs when these come from the hands of the publishers. I should think the issue of this book will give a new thrill of excitement to the warfare at present going on between the *Times* book club—in other words, the proprietors of the *Times* newspaper—and the British publishers.

That fierce controversy seems to be

growing fiercer with every day. The *Times* apparently is anxious to create a sort of "trust" of its own, a "trust" in your American sense of the word, and to undersell the publishers, and, therefore, as a matter of course, the authors. I have not gone very deeply into the arguments on either side, but my sympathies go naturally with the publishers and the authors, and because of many former experiences I am not much inclined to follow the leadership of the *Times* on any question of public interest.

Among literary works quite recently published there are two at least to which I should like to invite the special attention of my American readers. One of these is "Social Silhouettes," by George W. E. Russell, whose name I have often had occasion to mention in the pages of THE INDEPENDENT. The book is just what its name would indicate, a study of men and women and manners belonging to the English life of today, and its pages show all the humor, the vivacity and the keen, penetrating observation which have already won for their author as much distinction in the literary world as he had acquired in the world of politics, when, all too early, according to my thinking, he seems to have made up his mind to withdraw from the House of Commons and from public life. George Russell belongs to the great Russell family, which has made itself famous during successive generations of English history, and he won for himself a distinguished Parliamentary position when he held office under Gladstone. The book is published by Smith, Elder & Company.

The other book which I desire to recommend to American readers is called "Stray Leaves," and is the work of Herbert Paul, and is published by John Lane. Herbert Paul, like George Russell, was a rising member of the House of Commons until his just and manly disapproval of the policy which brought about and carried on the late South African War drew on him the disfavor of his constituency at a time when the whole country was more or less inflamed with the spirit of Jingoism, and he lost his seat at a General Election. Unlike George Russell, however, he did not make up his mind to withdraw from Parliamentary life, but offered himself as a candidate in the place of Henry Labouchere, who was resigning his seat, and he was immediately, and I think very appropriately, elected as a successor to the brilliant and thoroly independent Labouchere. Herbert Paul has since his election been winning for himself a distinguished position in Parliamentary debate as a ready, humorous and brilliant speaker, and I have little doubt that he may, if such be his desire, soon obtain a place in a Liberal Administration. The volume "Stray Leaves" is a collection of Mr. Paul's essays published in various reviews and magazines, and I think the whole reading public in the United States, as well as in England, will be glad that the stray leaves have been gathered together and formed into this welcome literary bouquet.

LONDON, ENGLAND.

Loving Kindness

BY BOLTON HALL

AUTHOR OF "THINGS AS THEY ARE," ETC.

MY dog tried to bite me. I liked the dog, so I kicked him lovingly in the jaw. He understood that argument.

My grocer tried to cheat me. I liked the grocer; I did not kick him in the jaw, but I told him lovingly that I would not deal with him again. He understood that argument.

My baby tried to slap me. I liked the baby, but I did not kick her in the jaw or even cease to play with her. I kissed her lovingly on her cheek. She understood that argument.

NEW YORK CITY.

Literature

The Call of the Blood

THE remarkable popularity of the "Garden of Allah" did not depend so much upon the splendid literary style in which it is written as upon the startling situation and the morbid astuteness with which Mr. Hichens develops the psychic effects of such a situation upon the human beings involved. But it is just here that he has failed in his new novel.* It is written with that charm and assurance which go with a masterly literary expression, but the whole conception, the very plot upon which the story is founded, is not only artificial, it is lacking in originality.

ROBERT HICHENS,
Author of "The Call of the Blood."
Harpers.

Hermione Lester, a homely but brilliant woman, "whose chief distinction was that she had what Madame de Staël calls "the beautiful soul," is an intellectual affinity of the French novelist, Emile Artois, but she is in love with Monsieur Delarey, a very handsome Englishman, with no soul at all worth mentioning, merely a modest, sincerely stupid gentleman. And Delarey is in love with her. The idea is that they complete and complement one another, and the question is whether this constitutes the basis of a natural and lasting attraction. Artois has his doubts, founded, as he frankly tells Hermione, upon the fact that, altho Delarey is an Englishman who has never seen the Island of Sicily, he is of Sicilian extraction, therefore of uncertain fidelity. And in his own private mind he adds further doubts upon the grounds that she is not only homely but older than Delarey. All this is written out with a minute, delicate tracery of gold-leaf thinking which proves the beauty and chastity of Mr. Hichens's artistic sense, but it is not sufficiently commonplace to identify the story at any point with real life. And this would not be called a literary error if he had sustained it to the end, but he plays too much into his own hands in developing the sequel.

Hermione and Delarey spend their honeymoon in Sicily. She, according to the author's representations, continues in the *rôle* of large, benignant womanliness, which concedes every delight possible to her young husband. And the young husband wastes no time in coming to himself. from being an intellectually restricted, commonplace Englishman he becomes an inspired Sicilian. Hermione does not know it, but the island, cloistered there in the sea, with its vineyards and dance and music and with the sky line dropping down like a diadem upon its brow, is now her rival. Like most of her type, she misses her cue with men in an intimate relationship, because she still regarded her husband in the light of her own spirit rather than according to the realities of his nature. This is why she goes across the Mediterranean into Africa to nurse her friend Artois, who is desperately ill, and leaves Delarey with her rival, Sicily. And it is from this point that the author becomes indefinite and uncertain of where the tragic accent belongs. Soon after the departure of Hermione, Sicily flowers out concretely in the form of a young girl whom Delarey loves and finally ruins. On the very day of Hermione's return he pays the forfeit of his life to the girl's father for this crime. But she never suspects his

* THE CALL OF THE BLOOD. *By Robert Hichens.* New York: Harper Bros. $1.50.

infidelity, and the presumption is that the next time she marries it will be her intellectual affinity, who is close at hand during these lurid details.

But now, exactly what does Mr. Hichens mean in this connection by his title, *The Call of the Blood?* Does it signify simply that an Englishman became a Sicilian, a metamorphosis which he has accomplished with great charm and minuteness? But in that case why let the wife go across the sea to poultice another man's stomach while the change was taking place? That made the whole thing too easy of accomplishment, besides adding a touch of absurdity to an otherwise highly refined story. Or, does this "call of the blood" find its definition in the man's unfaithfulness? If that is the point, it is not well taken. A man does not commit adultery because his grandmother was a Sicilian, but because he is the orphan scamp of his own moral law. Any blood will call the same way, once abandoned to the fever of passion. But even if this is the meaning the author wished to convey, the climax of his conception, why make it so easy for Delarey's blood to call him by sending Hermione to nurse another man who had been her admirer before marriage? One is almost tempted to say that Mr. Hichens was lacking in the energy to work out the deeper tragic significance of the situation had she remained present, if it were not for the pains he has taken to work up an inferior situation. In short, there is not enough power in the story and too much decadent fineness.

Industrial America as Pictured to Germans

It may be truthfully said that we never understand ourselves so well as when we endeavor to make ourselves understood by others. The interchange of university professors between the United States and Germany, in which the German Emperor has taken a kindly interest, is therefore directly beneficial to both countries. During the last academic year, Prof. J. Laurence Laughlin, of the Department of Political Economy in the University of Chicago, delivered a series of lectures on American industrial conditions at Berlin. This year, at Columbia University, Prof. Herman Schumacher, of the University of Bonn, is endeavoring to exhibit German industrial problems to American students. The most important of Professor Laughlin's lectures are now available to American readers in a neat and inexpensive volume.* Tho much contained therein may appear to us as trite and commonplace, the volume, nevertheless, forms a noteworthy addition to our economic literature.

Professor Laughlin did not confine himself to any particular phase of the industrial situation in the United States, but discussed each problem separately, devoting particular attention to protectionism, to trade unionism, and to the trust and banking problems. His introductory topic—the American invasion of European markets—is of peculiar interest to a German audience. How is it, ask our German friends, you are able to maintain a high protective tariff, pay a high rate of wages, and, at the same time, advantageously compete for the sale of your goods in European markets? Professor Laughlin answers this query by referring to the principal factors in American industrial progress. Much is due to the superiority of our general educational system, which, unlike the German system, does not discourage individual initiative. "The man who co-ordinates labor, capital and resources in American industry receives a splendid preparation for practical success." To this educational equipment is added the American inventive genius and the rich natural resources of the land. The high wages of American workingmen are fully offset by superior efficiency. "Nothing is stereotyped in America." Consequently the American laborer readily adjusts himself to new processes. But of far greater importance in promoting industrial progress is superior business management. As the author deftly puts it: "The ablest men in America are not in the army, or navy, or in the public service, but in industry." This is a fact worthy of the consideration of Continental statesmen, who seek

* Industrial America. Berlin Lectures of 1906. *By J. Laurence Laughlin.* Pp. viii+261. New York: Charles Scribner's Sons. $1.25.

industrial progress while increasing the burden of militarism.

Professor Laughlin has no kind words for protectionism even when speaking in a foreign country converted to the protectionist policy. He does not hesitate to say that certain Senators of the United States, in favoring a high-tariff policy, have become the tools of "the large interests." Tho the tariff is admitted to be partially responsible for the success of the trusts, they are discussed by the author in a rather apologetic tone. In one place it is even hinted that much of the outcry against industrial combinations is nothing more than "the squealing from those who can never admit that ill success is due to inferiority." It seems to be the author's opinion that the terrors of trade unionism, with its trend toward Socialism, are much more to be feared than the trusts. This is undoubtedly pleasing to a German audience imbued with the fear and hatred of Social Democracy. Yet the German Government appears to be as desirous of curbing the abuses of the "cartels" as of getting rid of Socialism.

Regarding the status of economic thought in the United States, Professor Laughlin finds much ground for encouragement. The barrenness of early American economic literature was due to the nature of American environment. The best brains of America had been busy conquering a broad and productive land, and it is only during the last quarter-century that intellectual ferment and critical activity have become evident. Much of this is due to German influence, since some of the leading American economists of the present day received their training in German universities. American economic study, however, has a distinctive quality. In common with most things American, it is not stereotyped. There is a wide difference of opinion regarding fundamental economic theories. In the United States, professional economists probably have less influence upon the great body of people than abroad, a fact ascribed to both the wide differences of opinion among economists in this country, and the influence of pseudo-economists, whose emotions are easily turned by descriptions of what is wrong. In the latter class Professor Laughlin places the labor leaders and the Socialist agitators.

Walt Whitman

WALT WHITMAN'S life has been recited so often of late years that it hardly needs to be repeated again—at least in detail. He was born May 31st, 1819, at Huntington, L. I., and brought up in Brooklyn. His schooling ceased at thirteen. By trade he was a typesetter, as far as he was anything; but at a pinch he could turn his hand to farming, carpentry, journalism and what not. He can hardly be said, however, to be representative of the laboring class or the plain people. He was essentially nomadic or vagabond, living from day to day, on whatever happened to turn up, and enjoying himself hugely, in no respect less like the average American than in his carelessness of responsibility and respectability. During the Civil War he devoted himself, greatly to the detriment of his health, to nursing the wounded in the Washington hospitals, a work to which he was always much inclined. From 1865 to 1873, the period of his greatest conventional prosperity, he held a Government clerkship. His last years were spent, in straitened circumstances, at Camden, N. J., where he finally bought himself a shabby and uncomfortable house. There he loitered on a little longer with his habitual nonchalance, receiving visitors and enjoying his tardy celebrity. He died March 20th, 1892.

The first edition of his "Leaves of Grass" appeared in 1855. This original edition was revised, augmented and republished as often as the writer had anything more to print and the means of printing it. In this manner it continued to form the foundation, if not the bulk, of Whitman's poetic work and to reappear successively seven times during the poet's life.

In many respects Mr. Perry's biography* is an excellent one. It is unusually well written. It tells a plain, straightforward story, avoiding warily the innumerable briars with which the subject is infested. This is its great merit—and in this case no small one. It

* WALT WHITMAN: HIS LIFE AND WORK. *By Bliss Perry.* Boston: Houghton, Mifflin & Co. $1.50.

is impartial and discreet. Indeed it is so very discreet as to appear at times actually diffident. It is only occasionally that a whiff of the real Walt Whitman, of that strong and pungent personality, is allowed to reach the reader's nostrils As a general thing it seems like an abstract and bodiless influence.

In something the same way, wherever criticism is required, Mr. Perry appears disposed to retire circumspectly behind other people's opinions. It is hardly fair, perhaps, to expect the biographer to tell us what to think. But it does seem a part of his duty to suggest the principles by which the life and the work of his subject are to be judged, or at least so to account for them as to put the reader in the way of forming sound opinions for himself. But not only does Mr. Perry's critical self-effacement begin to produce a rather unfortunate impression after a while; there is, as well, comparatively little effort to account for the poet. To be sure, something there is of Emerson's influence; something, too, of resemblances with other writers, which are more curious than vital. But on the whole it is difficult to believe that Whitman was, after all, quite so insulated and self-determined a phenomenon as the biography would seem to imply. In short, the materials for anything like a satisfactory estimate are wanting.

If the reader wishes to orientate himself, he must turn to the last few pages. There, after a chapter of addition and subtraction, a kind of critical balance-sheet—the work, it may be added, of an expert literary accountant—Mr. Perry does finally express himself in general terms to the following effect:

"Upon the whole, the most original and suggestive poetic figure since Wordsworth. Whitman, too, . . . is sure . . . to be somewhere among the immortals. He will survive, not so much by the absolute perfection of single lyrical passages, as by the amplitude of his imagination, his magical though intermittent power of phrase, and the majesty with which he confronts the eternal realities."

The Rise of a Free Press in Massachusetts

MUCH less research and infinitely less use of authorities in manuscript have gone into histories three volumes long and bearing well-known names than have have been put into the writing of Dr. Duniway's *History of the Freedom of the Press in Massachusetts.** And notwithstanding the research which has been done in the archives in Boston and in London and the unusually wide range of printed authorities—American and English—which have been drawn upon, Dr. Duniway has covered the period between the establishment of Stephen Day's press at Cambridge in 1638 and the Massachusetts Libel Law of 1827 with much compactness and without any loss of clearness. Clearness, in fact, is one of the characteristics of this work, which extends only to two hundred pages, including those devoted to sources and authorities and to an index which may be taken as a model for indexes of historical works.

At the time of the settlement of Massachusetts the press in England was under a legal code which provided for its stringent regulation by the Stationers' Company, which was established for this purpose in 1556, aided by the Archbishop of Canterbury and the Bishop of London, without whose sanction printers, then confined to the City of London and to the two university cities, could issue no books or pamphlets from their presses. The early settlers in Massasetts Bay consequently brought with them no ideas of the freedom of the press; and for many years subsequent to the establishment of the first two printing-presses at Cambridge — Day's in 1638 and Marmaduke Johnston's in 1665— there were restrictive enactments by the General Court of Massachusetts. One of these enactments restricted printers from setting up their presses except at Cambridge, where the first press had been associated with Harvard College. Others provided for the supervision of the output of the printing-houses. Until about 1730 the governors of the colony when they were leaving London were formally instructed to keep the press under control; and restrictive measures were in force when Postmaster Campbell established the *News Letter* in 1704 and in 1719, when his successor as postmaster began the *Boston Gazette.* There

* THE DEVELOPMENT OF FREEDOM OF THE PRESS IN MASSACHUSETTS. *By Clyde Augustus Duniway,* Associate Professor of History in Leland Stanford University. Harvard Historical Studies, Vol. XIII. New York: Longmans, Green & Co. Pp. xv, 202. $1.50.

is no proof that James Franklin, when he started the *New England Courant,* in 1721, sought the permission of the Government. Franklin's paper never carried the announcement long carried by the *News Letter* and the *Gazette,* that it was published by authority; and altho Franklin was soon in trouble with the General Court, which relegated him to the Stone Prison, he found himself there not for publishing a newspaper without authority, but for assailing the General Court, which in these years, and until as late as 1754, when it ordered the imprisonment of Daniel Fowle, another printer, was as jealous of its privileges and as eager to defend them against printers and newspaper writers as the House of Commons was until 1771, when it was worsted in its conflict with the printers of the *Daily Advertiser* and the *Middlesex Journal* over the reporting of its debates.

There is no such stirring conflict in the history of the press of Massachusetts as that which Wilkes provoked at Westminster. But the story which Dr. Duniway unfolds of the gradual breaking down of restrictions is of especial interest and value from the fact that the development of a free press in the United States has never before been traced so adequately or so authoritatively. Primarily Dr. Duniway's work is confined to Massachusetts. There are, however, footnotes which briefly record parallel developments in the other colonies; so that it is not inaccurate to state that from Dr. Duniway's work it is possible to trace the growth of a free press in the United States.

Der Vorchristliche Jesus, nebst weiteren Vorstudien zur Entstehungsgeschichte des Urchristentums. Von William Benjamin Smith. Mit einen Vorworte von Paul Wilhelm Schmiedel. Gieszen (Germany): Alfred Töpelmann. 4 marks (unbound).

The author of these extremely radical essays in the field of New Testament criticism is an American, Professor of Mathematics in Tulane University, New Orleans. He has had his work translated into German, evidently thinking thereby to secure wider attention to his revolutionary suggestions. His thesis is that such a person as Jesus Christ never lived; that about the beginning of our era a mysterious cult arose among the Jews, especially among the Hellenists, and that "Jesus" was originally not a man who walked this earth, but the divinity worshipped in the mysteries of this cult. Professor Smith holds further that the title the "Nazarene" was not from a village, since in fact no such town as Nazareth then existed, but a word meaning Saviour to Hebrews; that the original sense of resurrection was not a raising from the dead, but the bringing forward of a prophet, or rather a doctrine —*i. e.*, the Jesus-cult; that the parable of the sower originally concerned the birth of the Logos doctrine; and finally,that the Epistle to the Romans is not earlier than 160 A. D. In a preface to these essays Professor Schmiedel commends the critical skill of their author, and says that his views demand serious consideration and scholarly refutation. But when one reads the arguments advanced to support these startling propositions, they would not seem to require very serious attention. They are not based on discoveries of new sources or manuscripts, but on peculiar turns of expression in a few New Testament texts, especially from the Acts of the Apostles. The most important phrase is *τὰ περὶ τοῦ Ἰησοῦ*, which in Luke, 24:9, and Mark, 5:27, is held to refer to doctrines or ideas concerning Jesus, not to facts in relation to his life. Emphasis is laid on the fact that Apollos is said to have preached *τὰ περὶ τοῦ Ἰησοῦ* when as yet he had not heard at all of the historical Jesus, but knew only the baptism of John. (Acts, 18:21ff.) It is impossible in a few sentences to do justice to Professor Smith's skilful reasoning from these few passages, but plausible as he makes his case to appear, it falls to pieces on a little consideration. The Book of Acts is the great stumbling-block in New Testament criticism. It offers more difficulties to the student who is attempting to construct the history of the Apostolic Age than any other of his sources. Now, to take a curious phrase from a few passages in this uncertain book as the principal basis of a theory which would revolutionize the whole history of the Christian religion is altogether too precarious. A theory which resorts to such a method exhibits thereby how slight is its founda-

tion. It may be noted that Professor Smith feels himself continually in opposition as he writes not only to conservative scholars, but also to those commonly accounted radical. Even his sponsor, Professor Schmiedel, takes pains to record his dissent from the conclusions offered, and the name of this Zürich scholar has stood for extreme radicalism. The endeavor of our compatriot is a sort of freak in the higher criticism, interesting but harmless, not at all indicative of the trend with the rank and file of critics, either in method or in results. It will produce no more effect among students than did Kalthoff's similar endeavor to dissolve the life of Jesus into a Roman social movement.

History of the Town of Middleboro. By Thomas Weston, A.M. 8vo. Pp. xvi, 724. Boston: Houghton, Mifflin & Co.

In the preparation of one of the most complete and creditable local histories of an old New England town, Mr. Weston, a member in active business of the Boston bar, has set a notable example to lawyers and other professional men. Middleboro is in old Plymouth County, and offers a fine specimen of old New England life, little perverted by the irruption of foreign customs. Descendants of the first settlers still occupy the old farms, while others have wandered all over the world for their own advantage and that of the countries they have made their home. One of them, President George Washburn, a native of Middleboro, some years ago published in *The Contemporary Review,* a description of the town, its people and its institutions, which interested British readers. This volume not simply gives the dry facts of history and genealogy very fully, but also tells of the social customs of the eighteenth century, and supplies many pictures of and scenes in King Philip's War and the French War, and tells the story of the famous bond girl who donned men's clothes and served thru the Revolutionary War without discovery, altho twice wounded, and had her pension. The first slave in Middleboro was brought by a grandson of John Alden, of the "Mayflower," and she joined the First Church. The pastor, the Rev. Peter Thacher, owned one of the twelve slaves in 1755, but after the Revolution slavery came to an end thru public opinion. This is an unusually interesting history of a class which ought to be very large, for every town should have an official historian. This work was prepared by authority of a town meeting.

Life of Sir Henry Vane. By W. W. Ireland. New York: E. P. Dutton & Co. Price, $3.00

There are movement and intensity to his life from the time he leaves off the commoner's gown of Magdalen College until the fateful June day some thirty years later when he committed his body to the executioner with the words: "Father, glorify thy servant in the sight of men that he may glorify thee in the discharge of his duty to thee and to his country." The story of this remarkable Puritan is told with vigor and effect by Mr. Ireland, who, tho not a "professed" historian and decidedly in sympathy with his hero, writes with good judgment under his frank recognition of the many sides to the Puritan-Royalist controversy. His volume bears evidences of careful and independent research, and tho the style is sometimes pedestrian, interest is readily sustained to the end.

The Pass. By Stewart Edward White. New York: The Outing Publishing Co. $1.50.

When Mr. Stewart Edward White "hits the trail" and kindly invites us to go camping with him, we are remarkably ready to accept. His present invitation, *The Pass,* is to cross a high divide of the Sierras in his company. We are sure of pure air; plenty of hard and wholesome work; wide views across apparently all California; the joys of camp life; sound sleep upon a balsam bed after the day's exhilarating toil. We shall pass into a land of delight, with such fascinating names as Roaring River, Cloudy Cañon, Deadman's Cañon, Milestone Mountains, Kaweah River and Mountains. And always and everywhere the pines, with their breath of healing and whispers of hope; a voice mysteriously sad yet full of assurance that all's well with God's world. Such promises as these Mr. White's previous books of forest and mountain have always kept, and the reader of *The Pass* need fear no failure of the old charm and witchery of life in the open, on new or old trails.

Literary Notes

VOLUMES VIII and IX of the *Writings of Benjamin Franklin*, edited for Macmillans by Albert Henry Smyth, carry the correspondence from January 20, 1780, to December 29, 1788, and represent Franklin more in the light of a conscious littérateur than any of the earlier years. There is no lack of politics in these volumes, for they include the peace negotiations in Paris and the Convention in Philadelphia. Among the papers pertaining to the latter is his "Motion for Prayers in the Convention." It is odd to find the apostle of free thought recommending prayers as the only means by which the members could be brought into harmonious action, and still odder to read Franklin's own note to the paper: "The Convention, except three or four persons, thought prayers unnecessary." These political matters are included in the present volume, but a great proportion of the letters deal with lighter matters and are written in the vein of graceful sprightliness which Franklin learnt at Paris.

....The journals and books of the University of Chicago Press have always been distinguished by their elegant and accurate typography, and we are therefore glad to receive a copy of the *Manual of Style* used in that office. It is especially valuable because it gives instructions for setting up philological and scientific works not to be found in the ordinary style-books. Specimens of English, Greek, Hebrew, Syriac, Arabic and Ethiopic type are included. The rules of punctuation, capitalization, spelling, etc., are carefully considered, and with most of them we are in accord. The spelling of the University of Chicago Press might be classified as "moderate American." For example, "center," "Savior," "color," "criticize," "cyclopedic," "'Eskimo," "fantasy," "maneuver," "skepticism,' "skilful," "traveler," "paleography," "paleontology" and "hemorrhage" are used, but, quite inconsistently, "hæmatoxylin," "archæology" and "æsthetic." But no one can be freed from the charge of inconsistency in spelling. (University of Chicago Press; 56 cents by mail.)

....Progress in the art of bookmaking has been general in the reduction of size. The unwieldy leather bound folios of our ancestors have given way to the more convenient octavos, and these in turn are being displaced by the still more compact, thin paper volumes which can be held in the hand without tiring. It is no longer necessary to combine athletics with good reading. By the use of the very thin and opaque paper, originally manufactured for the Oxford Bibles, many works which formerly occupied a foot or two of shelf room can be carried in the coat pocket without materially disfiguring that garment. Thomas Y. Crowell & Co. are doing service to good literature by publishing a series of such *Thin Paper Classics* in very attractive form. They are books that one would be equally pleased and proud to give and to receive on Christmas Day; and there are very few gifts of which this can be said. The type is clear and sufficiently large, and the binding is in smooth, flexible leather, neatly stamped in gold. The outside measurements are 4½ by 7 inches, and they are sold at $1.25 per volume. The following titles have been issued: "Adam Bede," "Henry Esmond," "Hypatia," "Ivanhoe," "Jane Eyre," "John Halifax," "Kenilworth," "Last Days of Pompeii," "Last of the Mohicans," "Lorna Doone," "Marble Faun," "Notre Dame," "Romola," "Spy," "Tale of Two Cities," "Toilers of the Sea," "Three Musketeers," "Twenty Years After," "Uncle Tom's Cabin," "Vanity Fair," Robert Browning, Robert Burns, John Keats, H. W. Longfellow, Sir Walter Scott, P. B. Shelley, Alfred Tennyson, John G. Whittier, Dumas's "The Count of Monte Cristo" (2 volumes), Cervantes's "Don Quixote" (2 volumes, Hugo's "Les Miserables" (2 volumes), Boswell's "Life of Johnson" (2 volumes), Carlyle's "The French Revolution" (2 volumes).

Pebbles

BRILLIANT Freshman came to Princeton,
Thought he couldn't fail,
"Guess again," said Woodrow Wilson—
Now he's doing well—in Yale.
—*Princeton Tiger.*

THE Sultan received his guest most graciously. After a few moments' conversation the young American said: "I would especially like to see your collection of jades."

"Certainly," responded his majesty. "The harem is the first door to the right."—*Woman's Home Companion.*

WOODYARD KINDLING is an author man and not a coal dealer, as one might infer. Habitat India. He isn't much on speed, but usually gathers in the endurance prize on all the *Ganges Ladies' Home Journal* competitions. Woody is versatile but not versative. In fact, if he didn't have an income people would call him stupid. Being rich, he is only eccentric. Mr. Kindling is encumbered with a few styles, of which the following are samples:

1. Semi-poetic.

When the dippy Irish sinker by the tops'l on the sea
Sends the swell a-howlin' forrard by the gun'le on the lee,
Sing the rippy, chippy sailors, many a song—a jamboree,
In the slimy, briny, creepy, crawlin' twilight.

2. Childish.

Now this is the ninth tale and tells the tale as how the goozoogoo lost his bazozzas.

3. Indio-romantic.

It was night in Pun-Kin. The pajamas stalked up and down the terraced coolie in solemn majesty. The roar of the Punjab castes thundered thru the streets of Pun-Kin. And in the office of the *Pun-Kin Times*, Gerald Claire McGillicuddy smoked his rajah in calm content. The ghastly quiet presaged a awful thing to 'appen.—*Harvard Lampoon.*

Editorials

The Standard Oil Cases

It was known in 1890 that Senator Sherman had especially in mind the Standard Oil Trust when he proposed the law which bears his name and was enacted in July of that year. Now, sixteen years later, the first attempt to enforce that statute against the same combination, existing under a different name, is made by the Federal Government. The proceedings are of exceptional importance, not only on account of the enormous wealth and wide-reaching power of the defendants, but also because a regard for consistency will require the Government to attack, under the same statute, certain other powerful combinations that exist in violation of the law. Evidence concerning two or three of them has already been sought and obtained.

The movement against the Standard Oil Company and its subsidiary organizations proceeds upon two lines. First, for conspiring with railroads to wrong the public and break the law which forbids discrimination, the company is under indictment upon so many counts or separate charges that, if it shall be found guilty with respect to all of them, the statute will permit the imposition of fines exceeding $120,000,000. As to both the justice and the expediency of these rebate prosecutions, we think there is no room for argument. Second, the Government asks the courts to order a dissolution of the combination by means of which a few men control seventy corporations and a great industry, alleging that they have violated the Sherman Anti-Trust law and that they have suppressed competition by violations of other laws, by deceit, and by the various unjust practices which have made the company an object of almost universal detestation.

What will be the effect upon the oil industry, it may be asked, if the Government shall win its case under the Sherman act? Judging from the results of the Northern Securities case, we should say that those who now control the industry would continue to control it. If the securities should be distributed by order of the court, they would go into the hands of the men who now own them. Competition has not been established between the Great Northern and Northern Pacific railroads. The court's restraining order to the New Jersey Standard Company's seventy subsidiary corporations, however, would test the ingenuity of the Standard's counsel.

But the law should be enforced. So long as it is in the statute book, great combinations should not be allowed to violate it with impunity. No one in this country should have warrant for saying that before the law the rich and the poor are not equal. For sixteen years this great combination, commonly regarded as our meanest as well as our greatest, has escaped, so far as prosecution by Federal authority is concerned. It is right that it should be brought into court.

Its offenses have been many, and they have been the cause of injustice and lawbreaking in others. "At every step," now says the company's secretary, "the utmost care has been observed to conduct the business honestly and fairly." Mr. Rockefeller might have said that, a few weeks ago, when he was denouncing those who had attacked and exposed the foul methods of the Beef Trust. But the public only laughs at such assertions. The public is familiar with the record of many an official investigation in the past, the painful experience of such persecuted and ruined men as the late George Rice, the labors of earnest students who have uncovered the iniquity of the oil monopolists, and, now, with the accusations of numerous grand juries and the results of the Government's recent official inquiries.

Never has any other association of business men in the United States so constantly and persistently and callously offended the American preference for fair play, or mixed with its meanness so much hypocrisy. It is for this reason that it is so intensely hated. The railroads, which in many instances sinned against the law and the public interest by what they call compulsion, are now gladly giving to Government officers evidence against the oil combination that coerced them, altho the same evidence may be used against

themselves. This accounts for some of the indictments.

And it was mainly by means of secret and unlawful compacts with these common carriers who should have been true to the American people that the monopolistic power of the Standard group was built up, that it was possible for the Standard to wrong and ruin a host of independent manufacturers, that it was possible for the few men who controlled and who still control the combination to take $512,000,000 in dividends in the fourteen years prior to 1896 upon property valued at less than $70,000,000, and since that year to divide in profits and to accumulate in surplus enough to make the total $1,000,000,000, or even more.

Those compacts with the railways were not "fair" ones; they were unlawful before the enactment of the Interstate Commerce law in 1887; they were unlawful before the Elkins law of 1903; they have been unlawful ever since. Everything was done by advice of counsel, one of the directors is reported to have said. So much the worse for the lawyers who were employed. And no lawyer should have been able to convince honest directors that these secret agreements for discrimination were not unjust, unfair and clearly wrong in a moral sense.

When the receiver of the Cleveland & Marietta road was asked by the court to explain why he charged George Rice 35 cents a barrel and the Standard only 10 cents a barrel and then paid to the Standard 25 cents out of every 35 cents received from Rice, he produced a long opinion from a prominent lawyer of New York, advising him that he could lawfully do this shameful thing. But the judge had other views, and the receiver straightway lost his place.

As we have said, it does not seem probable that a decision for the Government at St. Louis would prevent continued control of the oil industry by those in whose hands the control now rests. But it would have been better for this country if the power of this combination had been broken years ago, and if in some way competition in the oil trade had been preserved. It does not follow that we oppose that concentration or association of producing interests which is an economic tendency of the time. It is one thing, however, to approve such concentration as is accomplished fairly and that gains by the natural economies of combination, and it is another to commend concentration that is the fruit of injustice and wrong, that prevails by means of underhanded violation of law, that is a constant corrupter of transportation agencies and that teaches unfairness by showing the great pecuniary profits of it.

It would have been better for the country, because the vast wealth which a very few persons have accumulated by means of this combination and its unlawful compacts has exerted an unfortunate influence in many directions. It now controls other great industries besides the production of oil; its power in the railway world is great and growing; it is active in the affairs of municipal public service corporations and in the management of our greatest life insurance companies. Its existence and the manner in which it is used give prominence to one of the most difficult problems which confront the American people in these days.

The Making of a Magazine

A FEW weeks ago we invited our readers to write to us suggesting what subjects they would like to see treated in THE INDEPENDENT. We explained that there were two departments exempted from this invitation for opposite reasons —the "Survey of the World," because it is altogether out of our control, for we have to put down there just what happens, whether or not it suits our readers and us, and the editorial department, including book reviews, because that is altogether in our control and we say what we please about men and books, whether it suits our readers or not. But in the ordering and selection of articles from contributors we consider to some extent our readers' needs and tastes, or rather what we surmise to be our readers' needs and tastes. And in order to get a little more light upon this point we invited our readers' suggestions.

Well, we got them. They came from all parts of the country, and from other countries, and whatever other benefit we may have derived from them we certainly

got a realizing sense of the diversity of interests represented by our subscription list. We cannot print all their recommendations, to say nothing of adopting them all, but to give an idea of them we will copy down a few of the articles asked for, taking them as they come without selecting or arranging them, enough to fill three numbers of THE INDEPENDENT if pieced out with a few poems, which, by the way, were not ordered, but which we are willing to throw in. This, then, will be the table of contents for the next three numbers if we resign our editorial function of selection entirely to our letter-writing readers:

November 29.

"Armenian History and Literature."
"Government Postal Savings Banks."
"Are College Students Religious?"
"Sam Jones and His Work."
"Why Mayor Weaver Changed His Party."
"Is the Des Moines Street Railway Co. Guilty of Bribery?"
"The Sanctity of Marriage."

December 6.

"The Truth About the Haywood-Moyer Case."
"The Conservative Side of Theological Discussion."
"Is Municipal Ownership a Success in England?"
"What is the Future State of the Heathen?"
"How to Keep Well."
"The Attractions and Disadvantages of Army Life."
"The Folly of Ritualism."

December 13.

"Esperanto."
"The Failure of Marriage."
"How Much Graft Was There in the Pennsylvania Capitol?"
"The Confessions of a Heretic."
"How Much Is the Canadian Pacific Stock Really Worth?"
"Religious Progress in the United States."
"How to Build and Run a Houseboat."

Whether this would suit our readers better than the list supplied by our own unaided efforts is a question we shall not ask. Nor will we state just how much we propose to take of the advice we have received. We shall probably take as much of it as our readers do when they ask advice of their kind and willing friends. But we will go so far as to admit that it is not our present intention completely to make THE INDEPENDENT an *à la carte* magazine, but will continue to conduct it on the American plan, furnishing fifty-two square meals for $2 in sufficient variety so that any one of ordinary tastes may satisfy his intellectual hunger. As for the above list, it contains some good suggestions, some topics on which we have already published a great deal, and some articles which we would be willing to pay a thousand dollars apiece for if they were true to their titles. They would surpass any other journalistic "beats" of the century. But we do not anticipate being able to gratify the correspondents who suggested them by obtaining the information they desire.

Perhaps this is a good opportunity to correct a misapprehension of the purpose of THE INDEPENDENT, which we detect in many of these letters. It is not the object of THE INDEPENDENT, as it is of many of our most popular magazines, merely to publish a series of more or less interesting, amusing and instructive articles. It is not its object, as it is of many of our most useful periodicals, to convert the public to a certain party, church or reform organization. THE INDEPENDENT is neither a literary miscellany nor an "organ." But between these two classes of periodicals, so abundantly and ably supplied, there seems to us to be a comparatively unoccupied field of usefulness, and this we aim to fill.

THE INDEPENDENT in the first place was not founded for the purpose of making money, and during the fifty-eight years of its existence this has never been the dominant motive with publishers or editors. Every week advertising, subscriptions and popularity are consciously sacrificed that the magazine may keep true to its name and the ideals for which it has always stood. Many of the causes for which THE INDEPENDENT fought a half century or more ago have won to an extent that even the optimistic editors of its early days would not have ventured to predict. They have become so firmly established that the younger generation cannot realize that they ever were in dispute or required courage to advocate—the same courage that is today required to advocate new reforms. When the founder of THE INDEPENDENT took up the cause of the abolition of slavery he had to meet the most bitter and deter-

mined attempts to ruin his business and his reputation. No Socialist who attacks the trusts nowadays has to encounter such unscrupulous and malignant opposition. But now North and South agree that slavery was wrong. The battle-ground has shifted. Today THE INDEPENDENT is disliked in some sections of the country because it advocates equal justice for the negro.

When THE INDEPENDENT first demanded that women have equal opportunities for education, and entrance to the professions for which they are fitted, and fair laws, its ideas were hailed as revolutionary and ridiculous. Now, in most of the States, these novel proposals are commonplace facts, and THE INDEPENDENT'S present advocacy of equal suffrage meets with a respectful hearing instead of a frightened clamor. When we began to recommend the cessation of interdenominational strife and to plead for a wider unity, sectarian feeling ran high, and the peacemaker standing between the combatants got hits from all sides. Nowadays sectarianism is so subdued that THE INDEPENDENT can assist in promoting a new movement for a greater degree of co-operation and combination. Once this magazine was severely criticised by many well-meaning persons as visionary and grasping because it ventured to predict that it is our manifest destiny to absorb some of the tropical islands of the Atlantic and Pacific. Looking backward now we see that our fault lay in the limitation of our vision and the modesty of our claims; we failed to include the Philippines. Several decades ago some of its readers thought us too hasty in spelling "program" and "rime" and "center," just as some of them now take the same view of "tho" and "thru."

But we had no intention, when we began to write this, of indulging in "I told you so" talk, nor of proving the long life of THE INDEPENDENT by the garrulousness of old age. What we meant to show is that the world moves and that we are devoting our best efforts to keeping THE INDEPENDENT a little ahead of it all the time, so it can assist in accelerating its motion by giving it a tug now and then.

Christian Science

WHILE not counted among the disciples of Christian Science, we would not be slow to recognize and admire the earnestness, devotion and Christian spirit of its people. Men may differ as to its underlying philosophy, but none can question the deep faith of its adherents in God, their true discipleship of Jesus Christ, and the religious vitality of their Church.

They are unfaltering believers in the Christian religion. To their science they give the designation *Christian*, because they are first Christians. Like all of us they give their own interpretation to the Bible, more literal than we would allow, and they much value that interpretation and that system of philosophy taught them by Mrs. Eddy, an article by whom we publish this week. Accordingly they have the same right as other Christians to unite in an organization and have their own ministers and churches, while there is no reason why those who hold their faith should not, when they please, remain members of other denominations, just as a Baptist or a Methodist may, when more convenient, retain membership in a Presbyterian or Episcopal church.

It is to their credit that their faith shows itself in their works. We do not refer so much to the generosity of their gifts to build noble places of worship, altho such a temple as that in Boston might well excite admiration. We have in mind rather that fervor of their faith which reaches the roots of life and death, and makes them fully trust God and their doctrine of the nature of disease and health when they are sick. To those of other training their confidence has seemed fantastic and presumptuous; but in multitudes of cases it has seemed justified, so that the only recourse of their critics has been to refer such cures to the effects of imagination, for the cures cannot be denied.

Nor is their philosophy ignorant and thoughtless. It has appealed, ever since philosophy has been studied, to many wise men. It is the full development of a great school of philosophy which makes mind and thought the basis of

fact rather than matter. It finds good and evil wholly in the mind, and so addresses its efforts for physical health, as well as for character, to the mind. Philosophers are divided between Monists and Dualists, giving us three great schools, one those who recognize both mind and matter as substantial; those who recognize matter only as existent, and are so Materialists; and those who hold that the only real existence is mind, and that all matter with its phenomena are forms of thought, and who are therefore Idealists. The votaries of Christian Science approach this form of thought in their philosophy, and at least are quite as legitimate in their doctrine as the popular Materialism which allows the existence only of matter, and so denies both the immortality and the existence of the soul.

Holding these views in philosophy and religion, and representing unblemished moral and Christian character, it is to their credit that, during her lifetime, they honor their teacher, Mrs. Eddy. Just as, after their death, other Christian bodies venerate Loyola and Luther, Calvin and Aquinas, Saint Francis and John Wesley, so the person and writings of Mrs. Eddy are almost, but not quite, sacred in the eyes of her disciples. They honor her while she lives; and it pleases them that, under the system she has taught, her life is lengthened out to an extreme old age. Such respect for their great teacher is a beautiful impulse and deserves honor.

And the faith which they hold appeals to a good class in the community, to those who have a high moral character, and are capable of high ideals, and possess the potential of loyalty. They are of those who wish to look beneath the surface of things, and who can rise above the low levels of coarse matter into the higher spaces of spirituality. There are among them many people of high general intelligence and wealth.

It is natural, with Mrs. Eddy as their leader, that the Christian Scientists should make much of the ministry of women. We judge that a majority of their ministers are women, and such are those who have taken up the work of healing. While Catholics and Episcopalians and Presbyterians exclude from the higher offices of the Church the sex which is most religious and has most communicants, the pulpits of Christian Science are as much womaned as manned, which shows a progressive and reasonable spirit.

The Christian Scientists have been much spoken against because they prefer their own method of healing, and because people sometimes die under their treatment. But the courts have acquitted them; and we do not see how, when every other sort of healing is allowed as legal, that which makes much of the influence of the mind may not be allowed its place for those who believe in it, as well as systems that depend on water or electricity or massage or infinitesimals.

We are not here defending the philosophy or the system of Christian Science. We only defend its liberty of faith and recognize the multitude of its adherents, their moral earnestness, their spiritual fervor and the frequent success of their efforts, thru the mind, to heal the ills of the body.

Our Ten-Year-Old Babies

THE inability of the American people to read books demanding a moderate amount of mental power is commonly attributed to the influence of our daily press, which, for the most part, avoids thoroness and hesitates to print matter calling for intellectual concentration.

Probably the newspaper reading habit does in many instances disintegrate the mind. It creates a comfortable feeling of being informed, when, in fact, no information whatever that will stick in memory for more than twenty-four hours has been acquired. It uses up a certain amount of time and a certain amount of nervous energy, and leaves its victim without appetite for more serious application.

But, making full allowance for the newspapers as a cause of intellectual incapacity, we are convinced that thus to throw all responsibility upon the press is to let a worse offender go unrebuked. The destruction of mental power begins in America before the newspaper habit is acquired. A great debilitator of the American mind is the public school as at

present often conducted. The wonderful product of such up-to-date public school system is some hundreds of thousands of ten-year-old babies.

These ten-year-old babies have substantially completed their education. Very few of them will go on to the higher grades of the grammar school, a still smaller number to the high school, and only one here and there to the college. The large majority is foredoomed to enter upon wage-earning employment at the earliest moment the law permits. And thousands of children, bearing false witness and abetted by untruthful parents, go into the shops and factories unlawfully before they are fourteen years of age.

From five to eleven years of age, however, most American children are in school, and, if properly instructed, they could be lifted out of infancy and trained in habits of real mental application. Two or three generations ago children of this age were so trained in all the district schools thruout the land. There were no "methods" in those days. "Pedagogy" had not been invented. "System" was unknown. Boards of Education, State and county superintendents, teachers' institutes and a text-book trust had not then been thought of. Teachers were permitted and even thought it their duty to require their pupils to learn the multiplication table and to master various texts in geography and grammar with sufficient thoroness to stand on their feet and render an intelligible account of the subject matter studied. Incidentally, it was considered entirely proper for a child to put his mind upon some one book long enough to read it thru.

All that has been changed under the fad of these later days. A child in the public schools is not expected or permitted to learn anything whatever in a simple, direct and natural way. The teacher who should venture to teach the multiplication table and persisted in her offense would be dismissed. The idea that a "normal" child should commit to memory anything that he does not understand is supposed to savor of the dark ages, and the proposition that five times one is five is held to be one that no child can be expected to grasp. He must patiently be led along the path of knowledge until, without intellectual exhaustion, he is brought to see that one and one and one and one and one are five ones.

In like manner the pupil must not be permitted to study a "geography." That would be to permit him quickly to become familiar with maps and to learn in a few days from the text what the maps mean. This would presuppose intelligence. It would be making the unwarrantable assumption that the child brain is capable of drawing an inference that various parts of the earth's surface have shapes like the shapes that represent them on the maps, that their relative distances are like the relative distances on the maps, and that the arrangement of land and water is like the arrangement of the colors that represent land and water on the maps. All this would be to presume that children in some quite elementary fashion are able to think. The modern board of education, curiously presuming that it can think, knows, of course, that children can't.

The subject is a large one, and we cannot pursue it far in one short article. But we can assure any one who will acquaint himself with the actual methods so generally followed today in our public schools that he will not have to push his investigations far before discovering what is the matter with the American mind. For the mental concentration that was demanded in earlier days of children that were being taught the elements of knowledge we are substituting prattle, chatter, smatter and drivel.

The American nation needs many reforms today, but there is none that it needs more than a revival of plain, elementary schooling.

The Backsliding of Heroes and Heroines

For a long time heroes and heroines did not inhabit prose at all. They were next of kin in literature to those divinities on Mount Olympus who bickered with thunderbolts. They were the top-knots of all legends and ballads; their deeds formed what may be called the iridescent neck and tail feathers of all epics, and they sat flower-crowned or helmeted in every poet's imagination. And it is an open question to this day

whether they belong anywhere outside of poetry. To call the pasty creature who takes the leading man's part in the average modern novel a "hero" is to be guilty of an inversion of terms. He is not a hero; he is the dress-coat formula of a man. The author has outraged his personality by dissecting his nature and motives till every worm of thought in his mind wriggles into the reader's shrinking hand before it crawls into an action. Compare him with that splendid, manly, charming noble rascal "Tom Jones" in Fielding's masterpiece, and it will be seen that he is not even a man, much less a hero. Far be it from anybody to defend "Tom's" morals in this light of better days, but with all his immoralities, the fellow held together, produced the illusion of a quick-blooded personality. He had a candor which some condemn, but at least he did not represent these puerile modern heroes who go about without so much as a rag to conceal their mutilated souls and lower natures from the reader's contempt. Besides, no man is a hero except when he is in battle or in love. He may be an excellent character as husband, father or citizen, but the traditional sense of the term almost demands that a hero must have courage and sentiment. And how does the man in fiction show these qualities now? By grappling with a deadly sin in a losing fight on one hand, and by thrusting the lady in the case off with the other. There is no overcoming spirit in any of them. They are prudent, afraid, epicurean, sensitive, thoroly contemptible whether they are for or against righteousness, because they have lost that elemental stamina of manhood, actual courage, not merely the sense of courage. And does any one know of a man in this year's fiction who is naturally recklessly in love? There are a few, of course, but more often it is a case where the man is fascinated by the woman against his better judgment. He yields, indeed, but sullenly, as if he were yielding to temptation. He has not fallen in love; he has been taken, snared in love. Look at Mr. Chambers's late hero, Siward, who is nearer to being a man than almost any other in the year's books. He distrusted himself, and he distrusted Sylvia, the woman he loved, even more profoundly. He could not believe she loved him even when she kist him.

The nearest approach we have to the old-fashioned hero is often found in novels written by young ladies, and he much more resembles a horse than a man. The innocent, girlish young author has confounded the nature of a mettlesome steed with that of a restless lover. Not that there are any restless lovers nowadays, but she imagines one, because she is the author of the tale and has the right to at least conceive of such a thing. But, as a matter of fact, a real man never did dilate his nostrils, champ and shake his back hair, in the manner they represent unless he is sick. If, for example, that Hungarian singer in Miss Bertha Runkle's last novel could have reached out his foot and pawed the ground now and then as he sang and watched his cold, cynical lady love in the box beyond the stage, the description of the horse would have been complete. What a travesty upon the Hotspur lovers of an older day.

And the claim that the fact of increased morality accounts for the lack of warmth in modern heroes will not hold. There never was a time when men did more as they scandalously please in fiction than they do now. Alcibiades could scarcely surpass them in irregularities of conduct. The difference is he acted the part with more spirit and distinction.

And if this is the state of our heroes of romance, what shall we say of the heroines? Formerly a heroine had to be young (usually not over seventeen), beautiful and good. Note the way Fielding introduces his Sophia Western, and Fielding was said to be lacking in poetic sensibility:

> "Awake, therefore, that gentle passion in every swain: for lo! adorned with all the charms in which nature can array her; bedecked with beauty, youth, sprightliness, innocence, modesty, and tenderness, breathing sweetness from her rosy lips, and darting brightness from her sparkling eyes, the lovely Sophia comes!"

If only the lovely Sophia had stayed! Then men would have been better than they are, at least in fiction. They would not go about in the tale courting other men's wives and neglecting the poor-stick girls. No young woman in a story or out of it would lack for lovers if she could

act as the charming Clarissa Harlowe did when she describes herself thus:

"'Impertinence!' I said, 'wert thou bid to come up in this fluttering way?' And I took up my fan and fanned myself. . . . I trembled so I could hardly stand. . . . 'Say "I can't go!"—Say "I'll wait upon"—"I'll attend"—"I'll come presently"—say anything . . . . but hand me my fan, and fetch me a glass of water.' She went and I fanned myself all the time; for I was in a flame; and hemmed and struggled with myself all I could. . . . ."

Of course, every man would laugh at such a woman, but not one could resist her if he stayed where he could watch the absurdity long enough. For that is what charms men about women, their inconsequence, their absurdity. To be sure, they must have other qualities that wear better, but none are better as blandishments. The mistake in virtuous art which the modern novelist so frequently makes comes from the fact that he does not recognize that a man is flattered when he realizes that the woman he loves is a goose in comparison with himself, a lamb, a prettiness with which to bless and adorn life. This resulted in the importation of those formidable women into fiction who, with all their wit and resources, have added nothing to its morality. First, she was the athletic, snaggle-toothed heroine who strided into our novels about ten years ago, slapped the hero on the back with the emancipated air of one who didn't care a cuss whether he proposed or not. All the reviewers called her "breezy," and she made a perfect paddock of fiction till the average reader discovered that she was a fad in books and out of them, a mule-natured obsession of femininity, by no means as characteristic of womanhood as was the deer-eyed lambkin heroine who figured in earlier romances. Even the hero was gnawing his mustache with annovance, and looking disgustedly after the young Diana who borrowed his leggins and cartridge-belt with such a grotesque imitation of the sportsman air. And when we think what frightful perversions of type the hero has had to contend with in the heroine of late years, it is enough to account for some of his unheroic and unloverlike manners to them!

Something had to be done, and it was done. The "good fellow" heroine gave way to that innumerable, sinister, capable company of mature women who have overrun fiction for the past five or six years. Thin-lipped Delilahs who make anonymous confession of their shame, lotus-lipped married women who have been so attractive and so damaging to the opposite sex. No one will deny that they have femininity, but such Machiavellian femininity! It is not good for us. Nobody really likes it, even if we do have to admit its fascinations. What we want is more young, sweet, innocent girls in fiction, and fewer champagne-witted women. The girls make the *right* kind of heroines for love stories. Married women with sons on the battlefield make the most suitable heroines for epics, but the place for such characters as Miss Rickert's "Folly" is the house of correction, not a romance.

The Coolies for the Canal

The article by Mr. Eugene S. Watson in this issue on "Chinese Labor and the Panama Canal" is full of interest and instruction. There is no question that American labor would be very difficult to secure, and the Jamaican negroes, the best of the laborers from the neighboring islands, are not very satisfactory. They have had no incentive to hard labor and are not used to it. But the Chinese are used to persistent work, and can be had in any numbers. On the face of the facts as thus presented it would be a wise policy to get the Chinese.

But there are some other points of no little importance that are to be considered. Let it be remembered that the United States does not get out of responsibility for the conditions of labor by putting the work into the hands of contractors. Probably the form of the contract is about as good as can be, for the ordinary sort of contract would be little less than a gamble on both sides. The contract on which bids are sought provides that the contractors shall receive as their profit a percentage—say 10 or 15 per cent.—on the expense they incur. So all the bills must be referred to the Government and payment made, and then the profit to the contractors comes from the additional percentage. This requires the closest oversight of work done, and all bills properly vouched. Thus our Gov-

ernment keeps pretty close to the items of expense by its approval and payment of them and by its minute supervision.

Now, there are certain items of expense which will seem necessary for the comfort of the coolies which it may not be easy to bring our people to approve, while it will not be easy to keep them out of sight. When women from Martinique were brought to the Canal Zone it immediately became necessary to show that they were legitimately employed as laundresses, cooks, or sisters or wives caring for the laborers.

Yet another very serious problem will come with the Chinese. They depend on opium. They are inured to it and cannot work without it. When the French brought less than a thousand Chinese and the supply of opium was cut off, they committed suicide by the hundred. They could not live without opium. It will be impossible to filter out at Canton or Hongkong the Chinese who are opium smokers. If we employ Chinese it will be absolutely necessary to buy opium in some way for them, and that opium the United States will somehow pay for, in order to keep its Chinese in good working order. Probably some way will have to be found to reduce the duty on opium coming into the Zone. Now, will our people like it? Will they see the necessity? They ought to look this difficulty in the face and settle the moral question involved, and if they buy opium do it with eyes wide open, as a matter both of necessity and mercy.

There are other equally serious conditions that must be considered. For example, the Chinese cannot be kept to their contracts and prevented from escaping to engage in trade or other easier and more profitable pursuits, unless they are confined in compounds, fenced in and guarded, as is done in South Africa. What will our people say to that? Will they not say that we are re-establishing slavery? The coolies may be comfortably provided for, but they will be in a large prison from which they cannot escape. Will there not be a cry of indignant protest that cannot be resisted? The fact is that we Americans do not like anything that looks like slavery, and we have a prejudice against opium, which somehow we think worse than alcohol; because alcohol is our vice, while opium is not. Perhaps the conditions which might make the Jamaican negro a contented and fairly efficient laborer have not been well considered. Certainly under better rules Mr. Stevens is now getting 20 per cent. more work out of these laborers than ever before. Great Britain is sick of its coolie policy in South Africa, and is ending it, because of the abominations of the compound system.

The Initiative and Referendum

In our opinion the initiative and referendum is the most important "next step" in political reform in this country. Its advent ought to do wonders in breaking up corrupt political machines and preventing the passage of vicious legislation, and under it real leaders of the people will find it easy to arise on real issues. The movement has not yet attracted the popular attention it deserves, yet it is quietly being extended all over the United States, especially in the West. In the recent elections, Massachusetts, Maine, Delaware, Montana and Oklahoma, following the previous lead of Oregon, South Dakota, Illinois, Ohio, Utah and Texas, voted for some form of the initiative and referendum, or else elected a majority in their Legislatures pledged to such a system, while it is said that 104 members of the next House of Congress are also pledged. Many of the States, instead of going to the length of on out-and-out initiative and referendum, have adopted what is known as the "advisory initiative and referendum," the only difference being that under the former the vote is legally binding and under the latter it is morally binding. The "advisory" system is naturally much easier to secure than a constitutional amendment, but it ultimately leads to constitutional changes, which is the main thing. The chief factors which have brought the initiative and referendum to its present stage are the American Federation of Labor, sixteen of the various State Granges and the Referendum Leagues. It is hoped that the National Grange will join the movement this fall, also the National Farmers' Union. The cure of the evils of democracy is more democracy.

Offices for Sale Mr. Hearst, who says he is running a twelve to fifteen million dollar a year business, is not going to be prevented from running again on account of the expense, even tho he acknowledges to have paid nearly $200,000 to be elected Governor of New York, besides what the organization of his League cost him before he was nominated; and yet he is reported to say that he will not again be a candidate. It was a tremendous amount to pay for the office he failed to get; and it raises another important question, whether a limit shall not be put on what a man may expend to buy his election. At present there is no limit to what a candidate may expend—he is only required to make a sworn statement of its amount. If Mr. Hearst had been elected it would have been very difficult to persuade the public that the office had not been put up to sale, and the biggest money had bought it. We have that condition in the Senate of the United States in some cases that have been notorious. We have little States that are pocket boroughs, with a population not equal to a second class Eastern city, where a millionaire pays the election bills and takes the Senatorship in exchange; but the people of the Empire State did not wish to choose their Governor on that basis.

The Radium Emanation Professor Rutherford, of McGill University, Montreal, has added another proof to his theory that the emanation given off by radium is a gas. He finds that it is rapidly absorbed by porous charcoal just like ammonia, hydrogen sulfid and other gases. By heating the charcoal the emanation is driven off. There has hitherto been great difficulty in keeping radium solutions in the laboratory. If they are in sealed tubes the production of hydrogen and oxygen from the decomposition of the water creates so much pressure as to burst the vessel. If open, the escaping emanation contaminates the laboratory so that no delicate experiments on radio-activity are possible. But, as he points out, a small open tube containing charcoal attached to the stopper will prevent the emanation from escaping, and what is absorbed by the charcoal can be recovered by heating it.

The Pumpkin Pie What was the secret of the wonderful pumpkin pies of mothers who have past away? A woman who seems to know all about it tells the surprising secret as follows:

> I have just read, with delight, your editorial written while sitting on a "punkin." I am glad you wrote it. I think I may be able to help you to a real pumpkin-pie, such as our mothers knew how to make. The pie was evolved out of the patient continuance in well-doing of the housemother. The secret lies not in "pinches" of this or that good thing, but in the right preparation of the pumpkin before it is ready to be made into pies. It lies in the *stewing* of the pumpkin.
>
> Cut the pumpkin into cubes an inch square. Place in a large kettle with plenty of water. Let it boil from eight in the morning until four or five in the afternoon, adding more water if needed. Then with an old-time pudding stick begin to stir it. Keep on stirring every few minutes until your pumpkin is reduced to a rich brown, dry sauce.
>
> The process of stewing it down requires hours.
>
> The little mother sat in her rocker with her knitting, and did not let the pumpkin burn. Or she flitted about the kitchen attending to other duties, but not once did she forget the pumpkin. When every drop of water was dried out her watch was over. Of this dry, brown sauce, one cupful is enough for a pie. Put an egg in your pie if you like. It is not necessary. Good milk, sugar, if you wish it, sweeter than the pumpkin itself, and spice to your taste, and you will not be obliged to eat over in memory that portion of your Thanksgiving dinner.

Ah, there is the trouble; what housekeeper in these strenuous days has time to watch her pumpkin stew nine hours? We fear the art has past away.

The Disappointment of the "Squaw-Man" It has long been known that the best place in the world to hunt for heiresses is the Indian Territory. European counts have mostly confined their attention to the Atlantic coast, rarely venturing west of Chicago and St. Louis in search of countesses who had something to count. This is unfortunate, for Indian girls would certainly be better adapted to endure dutifully the kind of treatment American girls receive from titled husbands. But American Bassanios in large numbers have sought the Portias of the Cherokee nation, who, in this case, manifested no prejudice against their complexion. Our much denounced policy toward the Indians, which consists repeatedly of buying up their lands and

giving them new, has resulted in their acquiring a higher degree of wealth per capita than any other people in the world. But the Supreme Court has now decided that in dividing up these millions of acres of rich lands and millions of dollars of funds among the Cherokees the white men who have married Indian wives are not entitled to share. Consequently there are two or three thousand "squaw men" who are out of a job and must remain totally dependent on "wife's folks" or seek a more or less formal divorce.

When we spoke of the discharge of the negro battalion as a "dishonorable" discharge we were speaking generally and not technically. For the good of the service the President can discharge soldiers, giving them either a discharge "with honor" or "without honor"; or there can be a dishonorable discharge following a court martial. In the latter case there is punishment, in the former case the discharge "without honor" is not technically a punishment, and does not forfeit the right of travel pay to the place of enlistment. It is a question that will have to be opened on the President's return whether he had the legal right to follow General Garlington's recommendation that they be debarred from future military or civil service of the Government.

Of the 427 Deputies that were members of the Russian Duma, one died a natural death, one was killed, one has become insane, two were beaten and wounded, ten have gone into concealment in order to escape prison, five have been interned in Siberia, 33 have been searched, 24 are in prison and under legal process, 122 are signers of the Viborg manifesto, free, but under process, and in the meanwhile have been deprived of all offices and deprived of all civil rights; and Muromzeff, ex-president of the Duma, has been canceled from the roll of the nobility of Moscow by a vote of the assembly of the nobles. And there is to be a new election to a new Duma.

It is interesting that Professor Phelps, the teacher of English literature at Yale, who provided for a year a course in modern novels, should express his opinion that no conditions in literature should be required of students entering college, except a knowledge of the English Bible. He believes that to the intelligent man no other series of writings is so important as those included in what we call the Bible. This contention is supported by the fact that in almost any public address, by statesman or lawyer, there will be more allusions to the Bible than to all other books put together. One who has a good acquainance with the Bible has the basis of good literary culture, and has added something else of value besides.

A German expert, for the purpose of creating sentiment in favor of an enlarged navy, adds up the tonnage of the several national navies, and he finds that Germany stands fourth, and behind the United States. First comes England, with 56 battleships built since 1882, and 67 large cruisers; then France, with 26 and 20 severally; then the United States, with 18 and 12; then Germany, with 19 and 12, but with a considerably smaller aggregate tonnage; and after these four come Japan and Italy. To our view the fact that the three largest navies belong to the three nations that are most closely allied gives the assurance of peace to the world.

It is almost a criminal neglect that our Congress has not yet connected a savings bank system with our post office, so that everybody in any town can be encouraged to save his money. In fifteen years the depositors in the British post office savings banks have increased from less than 5,000,000 to 10,000,000, and their deposits have increased from $269,000,000 to $740,000,000, and there are 15,000 post office banks. This system would immensely encourage thrift if introduced here.

There is a Mexican Carnegie, who believes he ought not to die a millionaire. He is Pedro Alvarado, a young mine-owner, who has just given $10,000,000 to give homes to the poor and schools to their children. He also proposes to pay the national debt. May the example of these two men spread!

Insurance

Jerome on the Mutual

District-Attorney Jerome has sent to Governor Higgins a belated report of his investigation regarding the Mutual Life Insurance Company. The investigation was undertaken to ascertain if the criminal law had been violated. Two former officers of the Mutual are under indictment as a result of the inquiry. They are Dr. Walter R. Gillette, some time a vice-president of the company, and Robert A. Granniss, who held a similar position. Regarding the large salary of $150,000 annually paid to Richard A. McCurdy, the District Attorney sets forth that the Superintendent of Insurance had power to learn about this, and that the suggestion of remedial legislation along this line should have come from him, if he considered the salary excessive. The Superintendent of Insurance, according to the Jerome report, should also have known of the favors extended to C. H. Raymond & Co., general agents of the Mutual, because of the relationship which existed between a member of that firm and Mr. McCurdy.

Andrew C. Fields, in his management of the so-called "yellow dog" fund, was a lobbyist who escaped indictment because it was needful to promise immunity to him as the price of his evidence against Gillette.

The Perkins case is cited, and reference is made to the fact of Mr. Perkins's arrest, charged with larceny for having given the company's funds to a political party. This case is now on appeal before the Court of Appeals—"a case well adapted to finally settle the bald question whether or not the contributions of the funds of such a corporation as that of the Mutual Life Insurance Company for political purposes constitute the crime of larceny." The Jerome report calls attention to other misdeeds, but the lack of legal evidence, which is emphasized, seems to show that more indictments will not be made.

A New Life Insurance Company?

The insurance war goes merrily on. The usual bulletins emanate from the International Policy-holders' Committee and their various protests go forward in due course to Superintendent Otto Kelsey, of the State Insurance Department. On this account and in spite of very skilful electioneering on the part of the present office-holders in the giant companies there is always the possibility of the defeat of the administration tickets. The "pony ballots" may, after all, ride in vain.

In anticipation of defeat, the leading agents of the New York Life, thru their agents' association, have taken steps looking toward the organization of a new company on a stock basis should the International Committee ticket be elected. A statement to this effect was authorized and published last week by W. O. B. Clifford, an agent for the New York Life, who is also the chairman of the Executive Committee and General Organizer of the Agents' Association. According to Mr. Clifford, it is planned to capitalize the new company at $2,000,000 or thereabouts, toward which subscriptions aggregating $1,000,000 have already been obtained. Something of this kind, it will be recalled, was in contemplation some months ago, when it was reported that George W. Perkins, once vice-president of the New York Life, was to form a new company to take over the excess of business above the $150,000,000 a year, to which sum the Armstrong Committee's bill limits the business of the largest companies.

The present movement seems to have considerable vitality, and Thomas H. Buckner, now second vice-president of the New York Life, has been slated for the head of the new organization. It is proposed to incorporate the new company in New Jersey, which would free it from many of the restrictions of the New York insurance laws. No difficulty is apprehended in securing agents for it in case of the triumph of the administration ticket.

A special report of the Continental Insurance Company, of which Henry Evans is president, made to the Insurance Department of the State of New York, showing its condition at the close of business, October 31, 1906, contains the following figures, viz.:

Total ledger assets	$15,957,200
Surplus over all liabilities	7,626,412
Surplus to policyholders	8,626,412

Financial

Currency Reform Plan

At the conference in Washington, last week, of the Currency Committees of the American Bankers' Association and the New York Chamber of Commerce, after four days of earnest discussion a plan of legislation for imparting elasticity to the currency was unanimously adopted. It is signed by the fifteen representatives of the Association, by the two members of the Chamber's committee who attended, and by Congressman Fowler, chairman of the House Committee on Banking and Currency. Messrs A. B. Hepburn, of the Chase National Bank, New York; James B. Forgan, of the First National Bank, Chicago, and John L. Hamilton, of Hoopestown, Ill., were appointed a committee to draft a bill.

The Bankers' Committee laid aside its project for the creation of a permanent Government Commission, empowered to decide all questions relating to additional or emergency issues, and accepted in principle, and, in some instances, in detail, the recommendations of the Chamber of Commerce. This was in a certain sense a tribute both to the ability of the Chamber's Committee and to the arguments of that committee's representatives, Mr. Vanderlip, of the National City Bank, and Mr. Conant, of the Morton Trust Company. It may be recalled that both were journalists before they became bankers. The report recommends that any national bank which has been in active business for one year and whose surplus is equal to 20 per cent. of its capital shall be authorized to issue credit notes for an amount equal to 40 per cent. of its bond-secured circulation, these to be subject to a tax of $2\frac{1}{2}$ per cent. per annum; also for a further amount equal to $12\frac{1}{2}$ per cent. of the bank's capital, these to be taxed at the rate of 5 per cent. But the total of credit notes and bond-secured notes shall not exceed the capital. Reserves such as are now carried against deposits must be carried against the credit notes. The tax, paid in gold, is to be a guarantee fund for the redemption of the notes of broken banks and for expenses. Numerous redemption agencies are to be provided for the active daily redemption of credit notes. It is also recommended that the law limiting the retirement of bond-secured notes to $3,000,000 in any month be repealed, and that all public moneys, above a reasonable working balance, from whatever source derived, be currently deposited from day to day in national banks without the requirement of collateral security or special guarantee therefor. But the banks must pay interest thereon at 2 per cent., and in no instance shall the deposit exceed 50 per cent. of the bank's capital.

These provisions—for the automatic issue of notes when more currency is needed, under a tax which will be ample for safety and sufficient for restraint; for frequent, prompt and easy redemption, free from the restrictions of the present monthly limit; and for the daily deposit of customs revenue and other public moneys which the Treasury does not need, in order that they may go into the channels of business—are improvements of the present system which ought to be adopted, possibly with some modifications in detail. Congress should act upon the lines of the conference report.

....The Union Trust Company of New York, of which Edward King is president, has opened a branch office at 425 Fifth avenue, corner of Thirty-eighth street. Safe deposit and storage vaults are in course of construction. The Union Trust Company was chartered in 1864. It has a capital of $1,000,000 and a surplus of $7,900,000.

....George T. Boggs, who has been secretary and treasurer of the Rock Island Company, has been elected vice-president. J. J. Quinlan has been made vice-president and assistant secretary and assistant treasurer. Mr. Boggs has also been made secretary and assistant treasurer of the Chicago & Alton Railway Company.

....Dividends announced:

American Graphophone Co., quarterly (No. 36), 1¼ per cent. on common stock, payable Dec. 15th.

Buffalo & Susq. R. R., quarterly (No. 18), preferred 1 per cent., payable Dec. 1st.

American Express Co., $3.00 per share, payable Jan. 2d, 1907.

The Independent

VOL LXI NEW YORK, THURSDAY, NOVEMBER 29 No. 3026

The Commercial Congress

The opening session of the Trans-Mississippi Commercial Congress, at Kansas City, was preceded, on the evening of the 19th, by a banquet, at which Secretary Root and E. H. Harriman were the leading speakers. The Secretary's address was a plea for world-wide justice and peace, to be procured by the new diplomacy, which requires that the self-control, self-restraint and respect for judicial authority which characterizes the intercourse of men of the best type should also characterize the intercourse of nations. Concerning our interest in foreign affairs he said that we had entered, by the necessities of our development, into the field of intimate relations with all the nations of the earth, a field in which "Friendship for all, entangling alliances with none" was as wise a rule of conduct now as it had been in Washington's time:

"It is as true now as it was then that Europe has certain primary interests in which we are not concerned, and into which we should not permit ourselves to be drawn; yet, it is a field in which we care no longer to be indifferent or to be ignorant, for in it the interests of our vast production and trade are vitally concerned; and in it we have responsibilities and duties, duties to civilization and to humanity, which we cannot escape if we would and which the conscience of America will not permit us to escape if we could."

Mr. Harriman, referring to President Roosevelt's speech at Harrisburg, said he hoped that more power would be given to the corporations, rather than to the Government. It was not easy to carry on the business of a railway "if you always have to turn to the Legal Department and find whether you may or may not." Mr. Root replied that while the best regulation could be brought about by the railroads themselves, "if they would only do it," yet their power should be supplemented by governmental control strong enough to prevent them from doing wrong. Railroads had abused their privileges. It was their common tendency to crush the weak for the benefit of the wealthy and powerful. The slight advantage that they would gain by the additional power for which Mr. Harriman asked "would be so greatly offset by the evil that such a proposition should not be considered for a moment." On the following day, in the Congress, Mr. Harriman spoke again about railroads. An impression prevailed, he said, that he controlled more miles of railroad than any other man and was a dictator. This was not true. He did not control one mile of road; 15,000 stockholders and several boards of directors took part in conducting the affairs of the roads with which he was connected. As for the Commission, no more power should be given to it until the country could see how its present power is to be used. He feared that rates would be controlled by political opportunity. In the evening, Secretary Root delivered a long address in favor of promoting trade with South America by ship subsidies. We refer to it elsewhere in this issue. In the course of this address he expressed a hope that many more German immigrants would settle in Brazil, and spoke as follows of the Monroe Doctrine:

"Other occasions for the application of the principle have arisen since [the declaration of the Doctrine by Monroe]; it needs no prophetic vision to see that other occasions for its application may arise hereafter. The principle declared by Monroe is as wise an expression of sound political judgment today, as truthful a representation of the sentiments and instincts of the American people today, as living in its force as an effective rule of conduct whenever occasion shall arise, as it was on the 2d of December, 1823."

In another address he said that his recent journey had been made with a view of removing an impression prevailing in

many parts of South America that the United States, in asserting the Monroe Doctrine, was bent on conquest. Secretary Shaw urged that export trade should be stimulated by building up the merchant marine. Mr. Bryan opposed subsidies. The resolutions committee rejected two resolutions offered by him, one expressing opposition to private monopoly and Trusts, and the other indorsing the resolution of the Interparliamentary Union for the settlement of international differences by resorting to a court: or a committee of investigation before declaring war. But the Congress accepted both of them.

Mr. Roosevelt in Porto Rico

The President arrived at Ponce on the morning of the 21st, and was at once escorted to the City Hall. In Ponce, as also in all the other places which he visited in Porto Rico, he was greeted with much enthusiasm and every possible expression of admiration and affectionate regard. Replying at the City Hall to an address of welcome, he said:

"I shall continue to use every effort to secure citizenship for the Porto Ricans. I am confident this will come in the end, and all that I can personally do to hasten that day I will do. My efforts will be unceasing to help you along the path of true self-government, which must have for its basis a union of order, liberty, justice and honor. I salute you from my heart as fellow citizens."

At the Roosevelt High School building, the cornerstone of which was laid by Miss Alice Roosevelt in 1903, he addressed several hundred children. At 10.30 a. m., in an automobile, he began his journey of eighty miles across the island, on the famous military road, and he arrived at San Juan six and one-half hours later, having stopped on the way at Cayey (where he lunched with the officers of the island's regiment), Caguas and several other places. The people had come from distant parts of the island to see him. Many banners were displayed, all bearing the words: "We ask for self-government; we want to be American citizens." San Juan was gaily decorated, as Ponce had been. The reception given to the President and Mrs. Roosevelt that evening at the Palace by Governor Winthrop and Mrs. Winthrop was the grandest social affair of its kind in the history of Porto Rico. On the following morning, the President went to Arecibo, forty miles west, by special train, and then returned to Ponce and the battleship "Louisiana" in an automobile.——Before the President sailed from Colon he signed an order making radical changes in the organization of the forces of the canal government. This order eliminates the office of Governor of the Zone (recently held by Judge Magoon) and makes Chairman Shonts the supreme authority, placing the canal work and the Zone government under his direction. The executive committee of three commissioners is abolished, and there are created seven departments, the heads of which will report to Mr. Shonts. Three of these heads are Chief Engineer Stevens, General Counsel Rodgers and Colonel Gorgas, the chief sanitary officer; the others are Messrs. Ross, Benson, Williams and Smith, now holding subordinate executive places. It is reported that the Commission will be reorganized, and that three of these heads of departments will be substituted for Commissioners Endicott, Hains and Harrod.

More Indictments in San Francisco

Under the direction of Prosecutor Heney, the Grand Jury at San Francisco has indicted Supervisor Frederick Nicholas for taking bribes in connection with the purchase of furniture for the city, and two comparatively obscure men for swearing falsely during the present investigation. It is pursuing its inquiry as to charges relating to the granting of valuable franchises, and to the payments said to have been made to Abraham Ruef and certain representatives of the Mayor by the keepers of disorderly houses. Mayor Schmitz, who was recently indicted, arrived in New York from Europe on the 23d, and at once started for San Francisco. No attempt to arrest him was made, but he was closely watched by detectives. Answering the questions of reporters, he denied that he had ever received any money corruptly. He also defended Ruef, and said that he had never known of any "graft" in San Francisco. "An indictment," he continued, "sounds very

bad to you Easterners, but on the Pacific Coast it means nothing at all. It is a political expedient there, and is used as often for political purposes as it is used legitimately." This movement of the District Attorney, he asserted, was nothing but "low politics." Thus far, no evidence has been shown in support of the published report that a considerable part of the earthquake relief fund has been stolen. Edward T. Devine, of New York, the Red Cross Commissioner at San Francisco, and a well known practical philanthropist, says he does not believe that Schmitz has wrongfully taken a penny from the fund, or that there has been any "graft" in the management of it. A similar statement is made by one of the committees, which asserts that only two contributions, amounting to less than $1,300, went astray, and that one of them, $1,085, has been recovered.

Rebate Prosecutions

The American Sugar Refining Company (or Sugar Trust) was found guilty in the United States Circuit Court at New York, last week, of receiving rebates from the New York Central Railroad Company. Elaborate arguments upon technical points were made for the defendant corporation by Joseph H. Choate, recently Ambassador to Great Britain, and Alton B. Parker, formerly chief judge of New York's highest court and Democratic candidate for the Presidency in 1904. It was not denied that the rebates were paid, or that they were paid after the enactment of the Elkins law, but it was claimed that this law was not broken, because the sugar in question had been shipped before the enactment of it. Judge Holt held that the payment of the rebates was the essential act.——Two days later Judge Holt imposed a fine of $18,000 upon the New York Central, recently found guilty of paying rebates on sugar. Some weeks ago the same company was fined $108,000 (or $18,000 on each of six counts) for a similar violation of the law. Mr. Choate complained that this fine of $108,000 had been enormous and unprecedented. The law permitted a fine of $120,000. Just before this second fine was imposed, Mr. Fox, counsel for the company, speaking in support of a petition for arrest of judgment, referred to the Atchison Railroad rebate case, saying that that road had not been punished severely, altho the offending officer (meaning Mr. Paul Morton) had admitted that the rebates were paid. He added that in that case the Chief Executive had even interfered with further judicial proceedings.——At a hearing before the Commission in Milwaukee concerning rebates on grain, J. Ogden Armour testified that he owned from 30,000 to 50,000 shares of St. Paul Railroad stock, and had large holdings of Union Pacific and Pennsylvania, as well as a controlling interest in the Armour Grain Company, which owns two elevator companies. But he denied that he had enjoyed any concessions in rates because of his railway interests. It was alleged in the testimony of others that rebates had been paid to the Armour Grain Company. It was shown that a director of the Great Northern road was largely interested in the Northern Grain Company, which has paid large dividends. At the hearing in Minneapolis, James J. Hill, president of the Great Northern (which was recently indicted for rebating), said that neither he nor any member of his family owned any grain elevator stock, and added that no one employed by the Great Northern could own stock in concerns doing business with the road and remain in the service of the company.——There are many indications that the railroads are preparing to take over for themselves the business of the sleeping car, refrigerator car and express companies on their lines. The Harriman lines have ordered thousands of fruit cars, which will take the places of the Armour Company's cars. The Rock Island has formed an express company, capitalized at $25,000,000, and the St. Paul has incorporated one with a capital of $30,000,000.

General Increase of Wages

Since the beginning of the month there has been a notable increase of wages by railroad companies, mining companies and great manufacturing corporations. The sum thus added to the

annual payrolls of the country exceeds $50,000,000 and is by some estimated to be $100,000,000. In several cases the addition has been made without solicitation; in others it has been given in response to request or demand. The Pennsylvania Railroad Company, in granting an increase amounting to $12,000,000 a year, says to the public that its action is due to the increased cost of living. Three weeks ago we mentioned the increase of 10 per cent. granted by the Reading road. The similar increase since ordered by the Pennsylvania for December 1st affects 187,500 employees, and amounts to $8,435,000 per year east of Pittsburg, to which should be added a little more than $3,500,000 for lines west of that city. On the 24th, it was announced by the Steel Corporation that an increase of 10 cents a day would be given to all common labor after January 1st, and that wages for day and turn labor would soon be adjusted accordingly. There are 68,000 common laborers and 190,000 in all, the company's payroll being nearly $130,000,000. The Standard Oil Company has begun, at several points, an increase of from 5 to 10 per cent., which will eventually affect 35,000 men. At Fall River, the cotton mill workers demanded an advance of 10 per cent. Five per cent. having been offered and rejected, a strike was ordered. M. C. D. Borden, on the 23d, granted 10 per cent. to his 5,000 employees, and then the other mills followed suit. Here 25,000 employees are affected, and a similar increase will be made in other New England cotton mills. Beginning with the Amalgamated Copper Company, all the mining companies at Butte, Mont., have granted an increase of about 25 cents a day; a similar advance is reported at the large mines in Bisbee and Tombstone, Ariz., and the great Calumet and Hecla copper mine, in Michigan, gives 10 per cent. to 5,000 men. Employees of the American and the National Express companies, about 15,000 in number, get 10 per cent. Twenty-three railroads in the West have added 4 cents an hour to the wages of their switchmen. Among the railroad companies which have increased the pay of all their men, or of certain classes of them, are the Union Pacific, New York Central (ten-hour day and increase for 2,400 engineers), the Alton, the St. Paul, the Northwestern, the Lackawanna (ten hours, instead of twelve, for engineers), and the New Jersey Central. The Philadelphia, Boston and Baltimore street railway companies have granted increases to about 15,000 men. In the iron industry, Jones & Laughlin follow the example of the Steel Corporation. The United States Rubber Company grants a work day of nine hours, with the wages heretofore paid for ten hours.

Aglipay Defeated in the Courts

By unanimous vote the Supreme Court at Manila has decided that the parish church property seized and held by the followers of Aglipay, the priest who withdrew from the Roman Catholic Church and became the head of an independent religious organization, belongs to the Roman Catholic Church and must be given up by those who are now in possession. This is the most important decision the Court has made. It relates directly to the parish church edifices at Lagoney, but it really is effective with respect to pending suits of the same kind in which is involved the title to about fifty church edifices and convents seized by Aglipay's followers. Our Government declined to use force for the eviction of those alleged by the Catholic Church to be holding the property unlawfully, and advised that application to the courts be made.——Secretary Taft's visit to the islands will be deferred until September. It now appears that the elections, under the law which fixes the boundaries of the districts, cannot be held until after July 1st, and that the new Assembly will not be convened until the beginning of October.

The Japanese in California

Secretary Metcalf, who has returned to Washington, has made no public statement as to the result of his inquiries at San Francisco concerning the exclusion of Japanese from the general public schools. It is reported by the press, however, that he said to friends on the Pacific Coast that he found the people of the city opposed to the admis-

sion of either Japanese or Chinese to these schools; that probably the existing law would be made more severe; and that, in his opinion, the treaty guaranteed to Japanese the right to be educated in the schools without any discrimination. Reports from San Francisco indicate that the people will insist upon the segregation of Japanese pupils. It is asserted that a majority of the Japanese applying for admission to the schools are between twenty and thirty years old, and that they desire to enter the primary grades. The people of the city object to the association of their young children in these grades with persons so much older.——Official notice has been given that a Japanese naval squadron, composed of one battleship and two armored cruisers, under the command of Vice-Admiral Kataoka, who commanded a squadron at the battle of Tsu Shima Straits, is about to make a voyage around the world, and will call at San Francisco next spring. On its way to Europe and the Suez Canal it will make a brief visit in the harbor of New York.

The Tri-Church Union

The committees of the Congregational, United Brethren and Methodist Protestant Churches on Polity and Vested Interests met on Wednesday and Thursday of last week in Pittsburg to advance plans for union. The vested interests include all matters in which property is involved, such as publishing houses, benevolent societies and educational institutions. A report on legal matters was adopted which recommended that in case of union the present incorporations remain under their present names, and continue a formal existence, but transfer their operations, so far as may be, to the corresponding organizations of the united body. The educational institutions would remain as they are. There can be much consolidation of publishing work and syndication of material. The benevolent societies would unite their work, but not dissolve their present corporate bodies. The Committee on Polity presented the plan, which provides for district associations, annual conferences and a National Council. We quote in part:

"The district conferences shall include the churches and ministers of such limited and convenient territory as the annual conference shall determine. Each district association shall be left free to provide in its own way for mutual care and common work within its hands.

"The annual conference shall be composed of the churches, pastoral charges and ministers of a larger territory. In all conference meetings, which shall be held regularly once a year, all ministers in good standing within the bounds of the conference shall have full membership; and each church, or pastoral charge shall have direct representation thru an elected lay delegate. . . .

"The National Council, the highest fellowship form of the united denominations, shall be composed of all their churches, and shall have power to make rules and regulations for all departments of general Church work."

The meetings are quadrennial, and one minister and one layman are to be chosen for every 5,000 members.

"At its regular meeting each annual conference shall elect a pastoral supply committee to aid in keeping the churches supplied with pastors and the ministers with churches. . . . Each annual conference shall determine for itself the mode of supplying the churches with pastors; however, no method shall be adopted by an annual conference that shall interfere with the right of a local church to determine who shall be its pastor."

Each annual conference is to choose a superintendent, who shall give his whole time to the care of the churches, and be chairman of the pastoral supply committee. The National Council will elect a president, whose time shall be at the service of the Council, as it may direct. The separate denominations entering into union retain the right of veto over any action until complete fusion is achieved.

British Affairs

The Suffragettes, as those women are called who are using public demonstrations as a means to attract attention to their cause, are still continuing their tactics, and are gaining the sympathy and support even of the old-fashioned advocates of Woman Suffrage, who at first publicly declared their disapproval of these new and more violent methods. A large number of women, headed by Mrs. Despard, attempted a second invasion of the House of Commons, but were repulsed by the police, with some arrests. The eight prominent women who were sentenced to jail for two months because they refused to give bonds for good behavior, were released at the expiration of one month of their

sentence. The Government has incurred much odium for subjecting these cultured and delicate ladies to the hard treatment accorded in prison to criminal offenders.——An attempt to organize the British soap manufacturers into a trust has been defeated by an outburst of public indignation. Lever Brothers were promoters of the organization, which was to have a capital of $60,000,000, and to include the makers of the best and most popular brands of soap. The British press made a concerted attack upon the combination, advertising gratuitously products of makers outside of the trust, and urged the boycott against the trust soaps. Retail dealers followed their example, and the public entered so heartily into the movement that the sale of trust products diminished rapidly. The soap makers met in Liverpool and made the following announcement:

"The working arrangement entered into between the leading soapmakers of the United Kingdom has been received with such disfavor by the trade and public as to make it unworkable, and it has been decided to terminate the arrangement from November 23."

It is proposed to use the same methods against other manufacturing trusts.

The Inventories of the French Churches

Premier Clémenceau has again given proof of his executive ability in successfully carrying out the law providing that inventories be made of all the Church property before the complete separation of Church and State. A few months ago and under the former Premier Sarrien, the attempt to inventory the contents of the churches was met by such opposition on the part of devout Catholics who considered it a sacrilege that the Government was obliged to abandon the effort. There remained 3,605 churches to be inventoried before December 11th, the date on which the Separation Law takes effect. All of these have been inventoried within the last week by the use of force in a diplomatic way on the part of the Government. No warning was given of the day when the church would be inventoried, so the faithful had no chance to assemble and barricade it as they had done before. The army was used freely. In many cases two or three hundred soldiers were assigned as a guard to the officers of the law in fulfilling this duty, and little opposition was attempted. Usually the priest entered a formal protest against the invasion of the sacred edifice and the doors were locked, so that it was necessary for the officers to break them in. The act was a mere formality, as most of the movable property of the churches had been sequestrated. At Pignan, in the Department of Herault, a new form of resistance was used. Burning sulfur was shoveled into the church from the vestry and the roof, repeatedly driving the soldiers out of the building into the street, where they were attacked by stones and flower pots thrown by the men and women from the neighboring houses. Finally the church was set on fire by the burning sulfur, and when the firemen attempted to put it out it was found that the water mains were plugged to prevent the use of the hose in dispersing the crowd. In various parts of Brittany mobs of peasants attempted to defend the churches and had to be dispersed by charges of cavalry, but as a whole disorder was very slight compared with that of a few months ago. Less than twenty persons were arrested altogether, and of these only a few sentenced. Two clergymen were imprisoned for three days and a month, respectively, for resisting the officers of the law. Prefects who showed a disinclination to carry out the work of inventorying were removed from office. Captain Magniez, of the Eighth Infantry, who refused to obey orders to carry out inventories, was replaced by a lieutenant, and ordered to appear before the Council of War for disobedience. Formerly when attempt was made to carry out the law Catholic officers who had conscientious scruples against obeying these orders were acquitted by the courts-marshal of their fellow officers. M. Briand has given as his interpretation of the Separation Law that after December 11th of 1906 church property *could* be handed over to the local authorities, but according to the law *must* be given them after December 11th, 1907. The Socialists and Radicals on the Left of the Chamber have announced

strong opposition to the Government for this postponement of the strict enforcement of the law. In many places cultural associations have been formed by Catholic priests and laymen in accordance with the law, and these may receive the church buildings in next month. The bishops have issued warnings that any persons concerned in the formation of these associations contrary to the will of the Pope shall be excommunicated and excluded from the sacraments and in the event of death from burial in holy ground. Cardinal Lecot, Archbishop of Bordeaux, has been forming diocesan associations, as he claims, under the law of 1901, but M. Briand, Minister of Public Worship, declares they are legal cultural associations in the meaning of the law, and, therefore, under the ban of the Pope.

The Russian Government and the People

The bureaucracy understands as well as the revolutionists that the future of Russia depends largely upon the attitude of the peasants. It has anticipated the action of the Duma by an attempt to settle the land question by direct autocratic action in advance of the assembling of the new national congress. A ukase has been issued by the Czar for the purpose of breaking up the common ownership of land. Any peasant may now abandon his share of the communal land of the village and become an individual landholder. This will relieve him from the taxes which are now levied upon the commune as a whole, and naturally are paid by the industrious peasants alone. It has been thought by some Socialists that Russia, being a country in which the middle class have not yet become numerous and powerful, might escape the capitalistic stage of evolution and pass directly from the primitive commune into a socialistic order, but it seems that the communes must soon become extinct under the pressure of industrial conditions and governmental action. A certain degree of tranquility has certainly been brought about in Russia by the stringent and effective Government measures. Two more revolutionary arsenals in the slums of St. Petersburg have been captured by the police. Kronstadt has been declared in a "state of war," which places still greater arbitrary power in the hands of the authorities than the "stage of siege," which has hitherto prevailed. Hundreds of men are sent to Siberia without trial every week from various cities in Russia for minor political offenses. Officials who refuse to support the governmental candidates for the Duma are being summarily removed from office. No political posters, speeches or public meetings are permitted to be held for electioneering purposes in the city of Odessa, and the committees of a Constitutional Democratic party are prohibited from meeting. It is expected that a ukase will soon be issued removing some of the disabilities of the Jews, altho the reactionaries openly avow that Jewish massacres will be the result if this is done. The Central Council of the League of the Russian People, which claims to have 200 branches and 30,000,000 members, has issued a protest against the enlargement of Jewish rights and disclaiming the responsibility for the outrages that may result from the just indignation of the people aroused by this action:

> "It is dangerous to further test the gentleness and patience of the peaceful Russian population, which may be forced in its defense against the Jews to overstep the limits of law and order and resort to violence."

Count Witte has returned to St. Petersburg, from Germany, where he has been residing ever since the peace of Portsmouth, and there are numerous and varied rumors as to what part he will take in Russian affairs. The Reactionaries attack him on the ground that he betrayed the interests of Russia at Portsmouth and brought the chain of disorders upon Russia, by inducing Emperor Nicholas to issue the Reform Manifesto of October 30th, 1905. He is threatened with assassination by the Reactionaries, who are adopting this policy to get rid of prominent Constitutional Democrats and others who favor modern reform. He is equally in danger from the attacks of the Revolutionists. The Senate of Finland has agreed to co-operate with the Russian Government in the arrest of the Revolutionists who have taken refuge in Finland.

Anarchy in Morocco

The impotence of the Moroccan Government to put a stop to the lawlessness and disorder prevalent in that country have compelled France and Spain to exercise the rights accorded to them by the Algeciras Convention without waiting for the formal ratification of that agreement by the Powers taking part in the conference. Both these Governments will maintain warships at Tangier and troops sufficient to land 3,000 men in an emergency. The other ports will not be policed at present. No foreign flag will be raised on Moroccan territory and the troops will be used solely for the protection of property and the re-establishment of the authority of the Basha of Tangier as against Raisuli. The power of this bandit and kidnaper has recently been demonstrated by his capture of Arzila, from which he expelled the tribesmen who had seized the city after the Moroccan authorities had showed themselves powerless to save it. He expected to be made governor of Arzila as a reward for his rescue of the city, but when he found this was not done he retired to his stronghold at Zinat and left Arzila to its fate. The French bank of Morocco, authorized by the Algeciras Conference, cannot yet be legally organized, but an advance loan of $400,000 will be made without delay to relieve the Moroccan Government from its financial difficulties. United States Minister Gummere is still at Fez and apparently making no progress in securing satisfaction for the American claims, as the good will of the Sultan seems to have exhausted itself in the splendid reception given to our Minister and his caravan of 300 men. The Germans are taking the side of Raisuli and urge giving him official authority, as he is the only man strong enough to restore order in Morocco.

Foreign Notes

The Karageorgevitch dynasty is not yet safely established on the Servian throne. A plot has been discovered among prominent politicians and military men in Belgrade to depose King Peter and choose as his successor a prince from some European royal family. Rumors are industriously circulated that Crown Prince George of Servia is insane, and that confinement in a sanitarium will be necessary. The Prince is nineteen years old, and has long been notorious for his flagrant outrages of conventionality and decency. He is reported to be a degenerate, and his accession to the throne of Servia would be a calamity. Prince Alexander, the second son of King Peter, may be chosen as heir to the crown.——For the second time within ten days an attempt has been made to assassinate Fehmi Pasha, chief of the palace police, by the explosion of a bomb as he was passing in his carriage thru the Pera quarter of Constantinople. It is suspected by some that these attacks are instigated by Fehmi Pasha himself, as a means of securing favor at court.——The police of Rome have not yet discovered the anarchists who exploded the bomb in St. Peter's, altho numerous arrests have been made among all classes. The bomb was placed in the chapel and the fuse lit by a woman kneeling in prayer. The Pope has received letters threatening his assassination. Saverio Lagana, who killed Professor Rossi, of the University of Naples, has been arrested. He had disguised himself by shaving off his hair, mustache and eyebrows.——The regulations for carrying out the Imperial Edict against the use of opium in China are exceedingly stringent. One-tenth of the ground now used for the cultivation of the poppy must be used for other purposes each year, under penalty of confiscation, so that no more opium is to be produced at the end of ten years. Every person using opium must be registered and a record kept of the amount he consumes. Only a registered person can buy opium. Persons over sixty years old will be permitted to continue the use of the drug. Those under sixty must decrease the use of it at the rate of 20 per cent. annually. All high officials under sixty must set a date at which they will give up the habit. All teachers, scholars, soldiers and sailors must abstain after three months. Opium dens are to be closed in six months, and the drug will only be sold by Government officials on physicians' prescriptions or to authorized persons.

A Patriot's Prayer

BY ALFRED AUSTIN

POET LAUREATE OF ENGLAND.

[Il manque toujours quelque chose à la belle vie, qui ne finit pas sur le champ de bataille, sur l'echafaud, ou en prison.—LAMENNAIS.]

THO we must die, let me not die
  In ignominious strife,
With fate invincible, and sigh
  To linger out my life;
With powers decayed, enfeebled mind
  And slowly slackening breath,
Burden of pity to my kind,
  And dead before my death.

No, let me perish, sword in hand,
  At Honor's sudden call,
Guarding my menaced Motherland
  And for her safety fall.
Or mount the scaffold with firm gaze,
  Martyr to some great cause,
And end my not inglorious days
  For Freedom's outraged Laws.

What is this life except a trust
  For nobleness and right,
The torch which, while we may, we must
  Still bear and keep alight;
And when, from our exhausted will
  It flickers, hand it on,
That it may burn and beckon still,
  Till Time itself be gone.

But if, in unheroic days,
  No great deed may be done,
Let me at least deserve this praise:
  "He lived and died as one
Who looked on Life with fearless eyes,
  And with intrepid mind;
So leaves, where now he silent lies,
  An honored name behind."

SWINBURNE OLD MANOR, KENT, ENGLAND.

Thanksgiving Dinner

A Modern Farce

BY TUDOR JENKS

Author of "Imaginations, or Truthless Tales," Etc.

SCENE: *A modern house in New York; at first, the sitting-room, afterward, the lining-room.*

COSTUMES: *Painfully modern.*

CHARACTERS: THE FAMILY, *including the Father, the Mother and the offspring. The Father, a gentleman of the Old School; the Sons, gentlemen of the New Universities; the Ladies, graceful compromises.*

SCENE I. *The Sitting-Room.*

The Father is discovered reading a newspaper of voluminous proportions, evidently impatient, but gallantly controlling himself, except for intermittent consultations of his watch. He soliloquizes.

FATHER: It would be a pity to begin dinner before the young people have returned, but it is certainly getting very late; the soup will be spoiled; and really there is no telling when——

(*A latch-key is heard rattling in the outer door; and then, after a brief interval: Enter the younger members of the family in silence during the Father's next speech.*)

FATHER: Ah, here they are at last, and not so very late after all! Well, that is another reason for giving thanks, as for a most unusual blessing! Now, we can sit down to dinner together in the real old New England fashion!

Enter the MOTHER, *with a kindly, but evidently forced, smile.*

MOTHER: I'm so glad you are home in time for dinner, my dears! I hope none of you have taken cold. It is a cold day, isn't it?

ELDEST SON (*bitterly*): You're right there, Mother. It *is* a *very* cold day!

HIS CHUM (*shaking his head solemnly*): Well, I should smile!

(*Nothing indicates any inclination toward smiling.*)

THE ELDEST DAUGHTER (*to her sister*):—Trimmed with beaver, you know, Fan; and that's gone out an age ago. Why, even astrachan, they say——

THE SON: Dinner ready, Pop?

FATHER: Yes, my son. It has been ready for some time. I'm glad you were no later. The football game did not last so long as last year, I take it?

SON: No. Oh—they just weren't in it! That's all!

FATHER: Who were not in it?

SON: Our fellows. Not from start to finish!

FATHER: Not in it?

THE CHUM: Not the littlest bit. Not a smell.

THE MOTHER (*politely*): That must have been a disappointment, dear.

THE SON: You can just bet your sweet life on that!

(*Dinner is announced, and exeunt omnes.*)

SCENE II. *The Dinner Table.*

The Scene opens just after the removal of the soup, which has been consumed in silence. Then, to confer a sense of geniality the Father feels it incumbent upon him to say a few words.

THE FATHER (*with a kindly air*): An excellent old custom this—the keeping of Thanksgiving Day! It seems a peculiarly gracious act, whether due to Pilgrims or Puritans,—the setting aside of a day upon which to recognize in due form the bounties and blessings that brighten and beautify our lives. Poor, indeed, is the heart that cannot find reason for rejoicing today. And I, for one, am not too old to sympathize with the young in their sports and pastimes; for the strength of youth also is, in a sense, a blessing. I wish I could have witnessed the football game. How did it result?

THE SON (*in settled gloom*): Don't know.

THE MOTHER (*to the Father*): You

don't understand, Daniel. He said his side were not in the game. They didn't play.

THE SISTER (*impatiently*): There was a game, all right; only our side was knocked clean out.

THE MOTHER (*anxiously*): Knocked out? I hope none of them were permanently injured?

THE CHUM: None killed, I guess. One or two ribs, maybe, and a collar-bone will about size it up.

THE FATHER: How shocking! Then your side was beaten?

THE SON (*scornfully*): 'Way out of sight. We were eaten up—buried.

THE CHUM (*brightening up*): But I tell you, Pete, that was a jim-dandy run of Sam's! Did you see how he slid around Shorty Mason on the fifteen-yard line?

THE SON (*wakening a little*): Say—did I? Well, I just did! Sam was all right all right; but did you ever see such rotten team-play? The signals got twisted all over the shop! Did you get on to that break of Duffer Johnson's?—I always said he was a stiff. Why, I told the Captain so at the beginning of the term. "Cap," says I, "Duffer's a cigar-store Indian, that's what he is."

THE CHUM (*admiringly*): You didn't!

THE SON: That's what. Now Duffer chucked the game. Here, let me show you. (*Marking with his knife on the table-cloth.*) Here's the twenty-five yard, and here's the goal. Tackle was there, and on the third down after the second kick-off, Shorty Mason had the ball——

THE FATHER: Excuse me, my boy, but will you pass the olives?

THE SON: —And just then up comes Zollicoffer——

THE MOTHER: May I trouble you for another small piece of the turkey?

THE FATHER: What shall I give you?

THE MOTHER: I'm sure I don't care.

THE FATHER: And I'm sure *I* don't.

THE SON: Shorty Mason had the ball, and up comes Zollicoffer like a blue streak——

THE MOTHER: Well, you may give me the second joint, then, a piece of the white meat, with a little more stuffing.

THE SON:—came thru the interference——

THE SISTER (*to the other Sister*): No. I sha'n't have mine made that way. I think those lace wraps are just the daisiest——

THE CHUM: Well, p'r'aps you're right. I should have got it to the quarterback.

THE SON (*scornfully*): Quarter? What's the use? He couldn't get thru. No, sir. One of the guards. Perkins, for choice.

THE CHUM: No use holding post-mortem on it. I'm clean busted, and it's a frosty lookout for next year, tho Burt's coming back.

THE SISTER (*her first sign of interest*): Oh, Burt Wallace? He's that swell junior with black, curly hair who came up to speak to the disagreeable-looking blonde in the tailor-made suit, isn't he?

THE CHUM: Yes, that's Burt. He was going into business, but now we've lost this game the captain says Wallace must come back and go thru the Theological School.

THE OTHER SISTER: Well, Maud's a Harvard girl, you know, but Violet's gone plumb crazy since her brother struck the 'varsity.

THE FATHER: Gone crazy, dear?

THE OTHER SISTER: I mean she's gone on Yale.

THE CHUM: Blodgett's a regular terror. He held two of ours every line-up.

THE SON: Two? Ah, g'wan! You don't call Birdie Evans a man, do you?

THE CHUM: He ain't like the Infant, you know. Say, do you remember how the Infant downed the Princeton rushers in 1903, when we made the Tigers look so sick?

THE SON: If we'd only had him in Johnson's place today!

THE FATHER (*dashing in*): The crops are said to have been exceedingly plentiful this year, and there is a wholesome steadiness about the iron market that is most promising. It is a strange fact that the iron market should, in a sense, be the business barometer. It indicates with considerable regularity——

THE SON (*butting in*): Oh, dad, you ought to have been at the game. It wasn't any kind of a game, but I'd like to have had you see it.

THE CHUM: I say, you made a steam

calliope look like thirty cents when we made that touchdown.

THE SON: That was before they got rattled—I thought——

THE FATHER (*desperately*): All other trades necessarily depend to some extent upon the production of iron. It is——

THE MOTHER: Yes, dear. Be kind enough to hand me the celery.

THE FATHER: It is near you. As I was about to remark——

THE SON: The trouble is, the team didn't *work*. You can't play football by instinct, but when——

THE SISTER: Oh, mamma, you ought to have heard them yell. Why, they just *howled* like all possessed!

THE MOTHER: Did they, dear? Did you find your coat too warm?

THE SON: I wonder if they made a score after we skipped it?

THE FATHER (*surrendering unconditionally*): You seem greatly interested in the game. I can't say I understand it entirely. Come, tell me, is it like the old game of rounders, or does each side try to get the ball past a certain line?

THE SON (*in scorn*): Here, let me show you. Now, this is the gridiron (*proceeds to draw a diagram on the cloth*).

THE MOTHER (*seeing her chance*): Come, dears, let us leave the gentlemen to their cigars!

(*All rise and the family reunion comes to an end*).

CURTAIN.

BRONXVILLE, N. Y.

The Japanese in California

BY K. K. KAWAKAMI

[Mr. Kawakami, after graduating from the Tokio College of Law, became a contributor to the leading periodicals, and, for a short time, was an associate editor of the *Yorodzu*, a daily paper published in the capital. He also published several books in Japanese, among which are "A History of Germany," "Labor Legislation," "Modern Socialism" and "Industrial Education." He was a member of the Imperial Japanese Commission to the St. Louis World's Fair, and prepared the official report on that exposition. He was appointed a Fellow in Political Science in the University of Iowa, and wrote a book entitled "The Political Ideas of Modern Japan," which was published by the Iowa University and later by a Tokio publishing house. For some time he took a course in the University of Wisconsin in political economy and colonial politics.—EDITOR.]

IT is a matter of profound regret that the echo of the anti-Japanese crusade is continually heard from the Pacific slope, stirring the minds of 70,000 Japanese thruout the United States. The exclusion of Japanese children from the San Francisco public schools, which actuated the Mikado's representative at Washington to resort to diplomatic means, has grieved the Japanese subjects in this country far more deeply than usual, for never before did their compatriots at home express, so openly as on the present occasion, a sense of resentment against the Republic, which cannot but affect more or less unfavorably the traditional friendship existing between the two nations. The Japanese resent the discriminative measure adopted by the educational authorities of San Francisco all the more keenly, for once such an example is established it is likely to be repeated in many more municipalities thruout the entire State of California, which always bristles with anti-Japanese spirit. In order to grasp the full meaning of the issue before us, it is necessary to remember that the total Japanese population in California amounts to 40,844, of which the city of San Francisco claims but 10,000. Even if other cities and towns may not follow the example of San Francisco, indignities to which Japanese children in that city are being subjected cannot fail to affect the moral interests of the Japanese population outside the city. It is, then, the interests and welfare of these 40,000 souls, and not those

of the 10,000 Japanese in San Francisco only, that the Japanese nation is, on this occasion, striving to protect.

Within a comparatively brief period, the Japanese population in California has grown into a remarkable size. But twenty-six years ago, the Japanese immigrants in that State scarcely numbered a hundred. By 1890, however, their number grew into 1,147; in the succeeding decade it reached 10,151; and at present it is estimated at 40,844. A considerable portion of this population is, perhaps, liable to shift frequently, as it consists of those who seek employment as domestic laborers. But by far the greatest and most important element consists of those who are engaged in agricultural pursuits, either as independent farmers or as tenants. The latest statistics prepared by the Japanese Consul in San Francisco estimate the number of these farmers at 1,268, employing a large force of Japanese farm-hands. Taking into account these farm laborers as well as those employed by American farmers, it is safe to say that the aggregate number of the Japanese farming population in California exceeds the mark of ten thousand by several hundreds. Classifying the farms cultivated by Japanese according to their size, we obtain 8 farms of over 400 acres each, 14 of over 300 acres each, 75 of over 200 acres each, 204 of over 100 acres each, 134 of over 50 acres each, 235 of over 20 acres each, and 341 of under 20 acres each, totalling 989 farms, with an aggregate acreage of 61,858. The discrepancy between the number of the farms and that of the farmers is due to the fact that some of these farms are owned or rented by a company of several farmers.

A Japanese Farmer in California.

When I visited several of these farms, I was struck with their general prosperity and the feeling of cheeriness and contentment prevailing among those who live on them. Particularly interesting were small truck farms seldom exceeding twenty acres, raising sundry vegetables or strawberries for the market, for here it was that the characteristics of the Japanese farmer were in evidence most conspicuously. Living in a country where

the area of arable land is exceedingly limited, the islanders of Nippon have been taught to get the maximum yield out of the minimum land. Thus impelled by necessity, the Mikado's subjects have been made uncommonly skillful gardeners, cultivating small farms with a dexterity and fastidiousness not dreamed of in a country where extensive cultivation is the predominating feature of agriculture. And it is this characteristic skill and fastidiousness that the Japanese farmers in California bring to bear upon the cultivation of their truck farms. Walking along the winding paths on these farms, bright with the emerald green of the luxuriant young crops, I was deeply impressed with the singular absence of a rustic and unkempt appearance which marks more or less conspicuously the surrounding lands belonging to "white" farmers. There are, however, not a few Japanese who quickly take up with the get-rich-quick idea of the new country and take to farming on a large scale. A Japanese, Kinjiro Ushijima by name, cultivates 4,000 acres of potato field, and is known among his compatriots in California as the "Potato King." The next largest farm cultivated by Japanese comprises some 1,300 acres. In such large farming, Japanese farmers seem equally successful—at any event, as successful as any of their American neighbors.

A peep into the daily life of these Japanese farmers is likewise interesting. With comparatively few exceptions they are thrifty, steady and industrious. As tenants they are honest and reliable, seldom neglecting their duties to their landlords. Tho living very simple and economical, these Japanese abhor the somewhat mean mode of living of their Chinese neighbors. It incidentally shows their characteristic trait that as soon as they are in a position to lay aside some little money they build, before anything else, a crude but roomy bath-house, installing therein a huge, square, wooden bathtub, an epitome, so to speak, of the enormous "bathbox" in the public bath-house common in their native land. This bathtub, some four feet in depth, is a primitive yet ingenious device, with a piece of iron plate in a corner of the bottom, under which fire is kindled to warm the water in the box, while a sort of crate is fixed over the iron to protect the bathers from touching it. What picturesque scenes these bath-houses are! There, in the evening, those sturdy tillers of soil wash away the day's fatigue, jauntily singing the while the songs and ballads of their fatherland across the Pacific.

The United States Census for 1900 shows that of 10,151 Japanese in California, 4,503 are unable to speak English. On the face of it, this fact appears to indicate that nearly a half of the Japanese immigrants are illiterate and ignorant. Nevertheless, the truth is that most of them are not only intelligent, but fairly well educated in the schools of their native country, not a few of them being graduates of college. To Japanese of ordinary education, however, it is a baffling task to speak the English language, for it has nothing whatever in common with their own tongue. Yet those Japanese immigrants on the Pacific Coast are exceedingly eager to acquaint themselves with English. I can hardly recall a single Japanese family there which does not subscribe to an American newspaper or two, altho its members may rely more on Japanese papers published in San Francisco or elsewhere on the Coast.

Here it may be well to remark that the Japanese, whether at home or abroad, are eager readers of newspapers. Before the earthquake the Japanese colony of San Francisco had two dailies of eight pages each, and three weeklies, all printed in Japanese. These two daily papers, the *Shin-Sekai* (*New World*) and the *Nichi-bei* (*Japan and America*), with a circulation amounting to nearly 10,000 each, faithfully translated into Japanese all the important news items appearing in their American contemporaries. In the city of Los Angeles, whose Japanese colony has grown into a considerable size, there is also a Japanese daily consisting of eight pages. In Sacramento and Oakland the Japanese publish two monthlies — one devoted to the propagation of Buddhism among the Japanese communities in America, the other aimed at the presentation of facts relating to agriculture and industries in California. Besides

these leading journals and magazines, there are perhaps a few minor weeklies or monthlies, serving as the medium of mutual communication among the members of small local colonies. These Japanese newspapers and periodicals must all the more be appreciated when it is remarked that to publish a daily like the *Nichi-bei* or the *Shin-Sekai* it requires nearly a hundred thousand types, all imported from Japan, paying heavy duty at the port of entry. In the face of such enormous odds, it certainly adds to the credit of the Japanese colonies in California that they possess three dailies and two monthlies of no meager size, together with several weekly papers.

A Japanese Colony in California.

Thru the medium of these publications public opinion is easily formed among the Japanese colonies whenever some grave event happens affecting their interests. Furthermore, there exists a strong organization known as the Japanese Association of America, whose object is to protect and promote the rights and interests of the Japanese residents in California. With its headquarters in San Francisco, this powerful body has its members all over the State. At its annual meeting, held in Fresno last year, the following resolutions were adopted: (1) That every possible means be provided to maintain the rights of the Japanese residents in California against the ignorant masses of the whites; (2) that the Washington administration and the judicious-minded Americans be appealed to in regard to grave wrongs to which the Japanese in California are constantly subjected; (3) that every effort be made to draw the attention of the Japanese at home to the gross indignity with which the Japanese subjects in California are treated by the Americans, in order thereby to rouse a strong voice in the political circles in Tokio; (4) that a petition be sent to the Government at Tokio, requesting it to open diplomatic negotiations with the American authorities with the aim of securing for Jap-

anese subjects the right to become American citizens. These resolutions, together with other movements of the Japanese Association of America, are no doubt mainly responsible for the strong protest launched by the Japanese Government and people against the recent decision of the San Francisco Board of Education.

It is interesting to note that, while American missionaries are going to Japan to herald the tidings of Christ, the Buddhist administration at Kioto is sending to this side of the water a number of priests to spread among the Japanese immigrants the gospel of Buddha. These Buddhist "missionaries," with their headquarters in Sacramento, are doing commendable work, organizing a young men's Buddhist association in several important cities on the Pacific coast, and diffusing the moral teachings of Buddha among the farming population. By the side of this movement, the Japanese Christians in California are not neglecting their part. Every Sunday the spacious hall of the Japanese Methodist Church in San Francisco is filled to overflowing with prayerful souls from the Mikado's land. Thru the combined efforts of these Christians and Buddhists, as well as the newspapers mentioned above, many a pernicious attempt on the part of unscrupulous Japanese has been checkmated. It was they that caused the arrest of a certain Yokoda, who, for many years, had conducted the smuggling of Japanese women for immoral purposes.

Despite continual anti-Japanese campaigns, carried on by trade unions and politicians, it cannot be denied that Japanese laborers, and especially Japanese farm laborers, are in great demand in California. In certain kinds of farm work, such as the picking of strawberries and grapes, Japanese labor is generally considered far more efficient than white labor. Every harvest season there is a rush for Japanese labor, and the land owners in California are always complaining of its scarcity. Besides the land owners, railway companies are likewise anxious to secure Japanese laborers, not because they are particularly efficient in this kind of work, but because they are more steady and more patient than white laborers. I have heard of many Japanese who worked in the same "gang" of railroad laborers for seven or eight years —a record which is without parallel among white laborers. It is this endur-

A Japanese Truck Farm in California.

ing quality that recommended Japanese labor to the railroad companies in the West. Today there are almost 2,000 Japanese workingmen who are engaged in the repairing of roads along the leading Western railway lines, and especially those of the Southern Pacific, and it is the desire of these railway companies to increase this number by many thousands.

From these data it will be seen what part the Japanese immigrants are playing in the material development of California and what sort of people constitutes the Japanese colonies in that State. It is the writer's hope that the statement herein set forth may prove not altogether useless in a consideration of not only the anti-Japanese measure adopted by the San Francisco Board of Education, but the broader question of whether or not the Japanese in general are not good enough to mix with the Americans.

CHICAGO, ILL.

The National Congress on Uniform Divorce Laws

BY ERNEST W. HUFFCUT

[Professor Huffcut is Dean of the Cornell University College of Law, and the author of several well-known law books. He was a delegate from the State of New York to the Uniform Divorce Congress, whose session has just ended.—EDITOR.]

UPON the invitation of the Commonwealth of Pennsylvania, extended by Governor Pennypacker, the governors of over forty States sent delegates to a National Congress on Uniform Divorce Laws at Washington last February. The congress adopted a series of resolutions embodying the principles upon which a uniform divorce law should be based, and instructed its committee on resolutions to draft such a statute. The committee met in St. Paul last August to consider the work of its sub-committee, and again in Philadelphia this month. When the congress reconvened, on November 13th, a proposed uniform divorce statute had been drafted and, with slight changes, was adopted. It will now be sent to the legislatures of the American States with the recommendation that it be passed. In the somewhat improbable event of its being enacted by all of them, and also in the Territories and the District of Columbia, there would be but one law of divorce procedure in the United States.

The proposed statute does not attempt to secure uniformity of causes. It was from the outset recognized that such an attempt would fail, and thereby imperil the passage of the jurisdictional and procedural portions of the statute; and these, after all, are of the first importance. Accordingly the congress, while enumerating the causes which are generally recognized, adopted a resolution as follows:

"This Congress, desiring to see the number of causes reduced rather than increased, recommends that no additional causes should be recognized in any State; and in those States where causes are restricted, no change is called for."

The main features of the proposed statute are:

(1) A careful provision as to the methods by which jurisdiction in divorce proceedings may be acquired.

(2) A provision that in cases where a party, whose residence gives jurisdiction, has moved into the State since the cause for divorce arose, no jurisdiction shall be taken unless the cause alleged for the divorce was a cause in the State in which such party resided at the time the cause of action arose.

(3) A provision (following the present Massachusetts statute) that if a person leaves a State in order to procure a divorce for a cause which occurred while the parties resided in that State, or for a cause which is not a ground of divorce in that State, a decree so obtained shall be of no effect in that State.

(4) A provision to the effect that if jurisdiction is taken in any State in substantial conformity with the conditions prescribed in this statute, full faith and credit shall be given to the decree in this State (that is, any State enacting this statute).

(5) A provision for public hearings.

(6) A provision that in uncontested cases the court may assign an attorney to defend the action.

(7) A provision that a final decree shall not be entered until after the expiration of one year from the entry of a decree *nisi*.

(8) A provision for a legal separation, instead of an absolute divorce, at the option of the innocent party.

What would be accomplished in case this proposed uniform statute were adopted by all American jurisdictions?

First of all migratory divorce would be rendered unprofitable because no State would take jurisdiction unless the party seeking the divorce could have obtained it in the State from which he comes. Moreover a migratory divorce would be dangerous, because if it were shown that the party left his former domicil in order to obtain a divorce, the decree would be of no effect in the State from which he came.

On the other hand the statute would protect all decrees obtained in conformity with its provisions under the "full faith and credit" clause. This clause is an attempt to escape the result of the decision of the Supreme Court of the United States, in Haddock v. Haddock (201 U. S. 562). That case held that New York was not bound, under the Federal constitution, to give full faith and credit to a decree obtained in Connecticut, by publication of summons without personal service, when the last matrimonial domicil of the parties had been in New York. But, of course, New York may, by its own statutes, require its courts to give full faith and credit to such a decree. It would certainly be justified in doing so in all cases where the Connecticut court took jurisdiction in substantially the same way, and under substantially the same restrictions as prevail in the practice of the New York courts. If, therefore, all States agree as to the terms upon which jurisdiction shall be taken in divorce, then all States should give full faith and credit to a decree obtained upon such terms in any State. Next to the evils of the migratory divorce are the evils, often affecting innocent persons, of regarding parties as divorced in some States and still husband and wife in other States.

The provisions for public hearings, and for the defense of uncontested cases, are intended to prevent collusion and to apply the corrective of public opinion.

The provision for deferring for one year the final decree serves a like purpose, and also gives an opportunity to one who has been only constructively served to learn of the proceedings and to move to reopen them.

The provision for legal separation may prove chiefly useful in those States which admit absolute divorce for only one cause, or in cases where parties, for reasons of conscience, do not believe in absolute divorce. The causes for legal separation are, of course, numerous, and include all causes which render continued cohabitation either dangerous or distressing.

No one entertains the expectation that this proposed statute, if uniformly adopted, would cure all the evils and scandals of divorce. It is merely a sincere attempt, by men and women of very diverse views, ranging from those who believe in no divorce at all to those who believe in divorce for many causes, to establish some uniform procedure whereby, on the one hand, collusive and migratory divorces may be prevented and, on the other, a divorce properly granted shall be as valid in one State as in another.

ITHACA, N. Y.

A Son of Ishmael

BY JAMES H. WILLIAMS

[Our readers need no introduction to James H. Williams, Able Seaman. He says this yarn, in which he shows what caused him to devote his life to breaking up the crimping system, is true, every word of it.—EDITOR.]

BEHOLD: I am an Ishmaelite, a lineal descendent of the despised House of Bondage.

I was born under protest, but have continued to "dwell in the presence of my brethren. Many hands have been turned against me," but most of them have been turned back. "And none can remove me from my place."

My paternal grandmother's name *was* Hagar; and for aught I know that may have been the only lawful name she ever had.

She was born in slavery in North Carolina, and lived, by actual record, one hundred and four years.

In her youth she was bought for $900 and brought to New York State.

My father was her eldest son. Her daughter, Elizabeth, married a sea captain and lived in New Jersey; her remaining son, good, generous, jovial Uncle John, died in the old Tombs prison, while awaiting trial for killing a man on board a steamboat, in valiant self-defense.

The white branch of my family belonged in Massachusetts, my mother being the eldest of a family of twenty-one children.

She was a woman of no education, and was more remarkable for her native intelligence and physical strength than for her beauty. There was not a dealer in our town who would dare to offer her a barrel of flour for taking it home.

She was a splendid mother and a good woman, who wrought unceasingly with her hands and nursed her own children at her ample breasts, while the puny brats of her more wealthy but effete neighbors fared sumptuously at the same generous font.

So much for my pedigree.

Those who maintain the all vice and no virtue doctrine so indiscriminately applied to people of mixed origin, seem blindly to ignore the fact that nearly all such are the unfortunate children of Lust, and not the blessed offspring of holiness and *Love*.

Well, in the course of chronological events, I happened, early one May morning, in a little brown painted frame house locally known as the "bandbox," and situated somewhere in Eastern Massachusetts.

I have it on the indubitable authority of my mother and "Mother" Murray, the midwife, that I was a healthy, husky youngster, born without blemish and above the average weight of children of my age.

Such was my only inheritance. Shortly after my advent our family removed to a seaport town in Rhode Island, where my early infancy was spent, and where my father died when I was in my seventh year.

My father had been a sailor all his life and at the time of which I write was a pilot on Long Island Sound. He was fifty-five years of age when I arrived, my mother being his second wife.

His first wife was a negress and by her he had no issue.

He was a large, stern, powerful man, with a light brown skin, good features and a rather reserved tho kindly manner.

He was familiarly and affectionately known the coast around as "Uncle Jim," and highly respected by all who knew him.

My father's one ambition in life was to send me to college, but he did not live to carry out this cherished plan. When I was four years old he taught me to read and write, and by the time I was seven I was remarkably proficient in the fundamental studies, and could read with fluency and intelligence.

Few children born to this world have ever been more fortunately situated than I was in all that combines for moral, spiritual training and material welfare.

In both the selection of my parents and

home environments I was exceptionally fortunate, and I believe they were selected for me in heaven.

Our humble home on the Waterfront Meadows was a little sanctuary of love, contentment and simple piety, and far removed from all corrupting influences.

I thank God for my splendid parents!

I have dwelt thus long on my early life and surroundings because of its direct bearing on what I am about to write, and because I love to cherish it as the one brief, happy recollection in the whole course of a long, dreary, miserable career.

It was as natural that I should become a sailor as that an unmanned boat should drift with the tide. Descended from maritime stock and born in a maritime district, all my earliest impressions were of the sea. All my early acquaintances and associates were seafaring people, and my playground was among the shipping.

I can never forget the exquisite sensation which thrilled me when I first saw a small boat. I had toddled down to the wharf unattended, and there I saw a small white boat bobbing about jauntily on the choppy water of the tier. The feeling that went through me was simply indescribable. It was like the first thrill of a lover's kiss, only more delightful.

Like the Pear's soap baby, "I could not be satisfied until I got it." So I climbed unobserved into the little shell and rocked and played in infantile bliss until I fell asleep. Finally I was rescued by a fisherman and carried home, kicking and squalling a lusty protest all the way.

After my father's death I attended the public schools about three years, after which I was bound out to a shipmaster. My guardian died two years later at Barbadoes, and thus I found myself adrift in a foreign port while scarcely fourteen years.

So I was engaged as a boy on a fine American clipper and began my career in a voluntary—or, is it *in*voluntary?—slavery.

I shall not attempt to harrow the feelings of my readers, nor test their credulity with a bald recital of all I saw and endured during the next ten years. I can only say that in my opinion a Yankee ship was a floating synonym for Purgatory, if there is such a place, and that some of my officers must have graduated with diabolical honors at a place still further down the road.

In spite of all our national mourning over the departed glory of the seas, and the affecting wail of the ship owners and subsidy agents over unfair competition, I cannot help regarding the astounding decline and practical annihilation of our once proud merchant marine as a Divine judgment visited against an institution whose enormities were past forgiveness.

So I grew up to manhood. I started out so young that I never found time to grow very tall. But what I lacked in stature I made up in sturdiness, like "Jerry the Miller."

I was thoroly seasoned and inured to the sea and a veritable glutton for hard tack. Many of my hardened shipmates marveled at my strength and endurance. For my own part I gloried in my own powers, for I had acquired nothing else in the course of my strenuous career to be proud of.

As a fortune hunter I had been anything but a success. The "common" sailor usually gets "more kicks than coppers." His wages were, as a rule, sifted through a ladder. The crimps and ship owner took what fell through, while Jack's portion was what stuck to the rungs. And the rungs were set devilishly wide apart.

I had seen my mother but twice since leaving home. I had often plotted and planned to go and make her a nice visit and take a nice present along. But all my plotting came to naught, because somehow the fugitive present would not materialize, do what I would.

I made the same grave mistake which most other wandering boys have done, of allowing my false pride to deprive my mother of her supremest happiness—the joy of seeing me again. I did not realize, as I should have done, that a mother's love is as boundless as the ocean, and that a son's pride is as narrow as the space between his own eyes. I did not pause to reflect that the dear soul would give more for a glimpse of my face than for the sight of my dunnage bag full of rubies.

So I kept myself stubbornly aloof from my old home, and mother had to console herself as best she might with such stray missives as she could get from me from

time to time from various parts of the world.

On the 6th day of January, 1888, I signed articles in a full-rigged ship bound from Philadelphia to Calcutta.

We signed at about eleven o'clock in the forenoon and were to go on board the next morning, or, otherwise, as we were specifically and solemnly cautioned by the functionary before whom we had been sold, we would have to submit to all the pains and penalties, imprisonments or other beneficent calamities inflicted under the salutary provisions of the "Laws of the United States of America" as amended by the Act of 1790, being an "Act for the protection of seamen and other purposes."

And these matters we must strictly and faithfully observe, or otherwise we might be forcibly seized without writ or warrant or other process by the master or other officer, or by any other person, and haled and punished and imprisoned and impounded, and otherwise pounded and deprived of all our earthly belongings—and other longings, and, at the option of the master, we might be either thrown into a dungeon without trial or ceremony or else banished to the ship, there to be held until all costs and expenses incident to our capture and incarceration had been worked up under the shadow of a bloody belaying pin, or as much longer as the master thought fit, or as long as we might survive.

Such, in substance, was the Fugitive Sailor law, in force in this great republic thirty-five years after the Fugitive Slave law had been abrogated. And in a modified form its cardinal provisions are there yet.

Do you doubt it, fellow citizens? Then go examine your statutes, or, what may be more convincing still, try to protest against its enforcement and the same treatment is in store for you.

A few days previous to signing, I had written to my mother, informing her that I was about to sail for the East.

Upon returning to my lodging for dinner, immediately after having sold myself, I was handed a letter surrounded with a deep mourning border and bearing the home postmark.

I also recognized the superscription and surmised the truth. *My mother was dead!* The letter was from a kind-hearted old clergyman, in whose house my mother had long been a servant. Her death had occurred two days before, he said, and he earnestly hoped that I might have time to come home and attend the funeral before sailing.

He also kindly mentioned that my presence would be necessary in settling up my mother's personal affairs, and that if I was in need of funds for my traveling expenses he would see that a sufficient sum was promptly forwarded to me.

I could not see to read the letter, only in a vague, indistinct way I grasped its sad import.

Dear reader, I must stop here and crave your indulgence. I cannot dwell on this topic, but leave you to your own reflections.

I took the letter and ran, half blindly with a bursting heart, down to Robber Dan, the chief crimp, and blurted out incoherently what had happened. I sobbed out a heartrending request to be released from the articles, and brokenly offered to find a suitable man as a substitute to go in my place. Such an appeal would have moved a kedge anchor, but it made no impression on that iniquity-hardened old villain of an arch-crimp.

"That letter's a fake," he blurted doggedly, an' yur a fraud. You signed in that there ship an' there you goes, or else you goes to jail ter wait for her in double irons."

I was clearly beside myself now and I tried to leap over the high railing behind which the old villain always barricaded himself. But a brace of ever ready jackals leapt upon me from behind and dragged me back. I was furious now and fought like a madman. Robber Dan snatched a gun from a pocket in his desk and shouted police! The room was not a large one, rather long but narrow, and I could not get room to get myself in full play; but we wrecked nearly everything in the place before the vampires got me fast.

Thus they held me, still struggling, until two policemen mounted the stairs with drawn clubs.

"What's up here?" said one.

"Drunken feller," wheezed Dan, "signed this forenoon fer forty dollars advance an' now he's tryin' to crawl out."

"Listen a moment, for the love of Heaven, listen!" I cried. "Look at this, officer," as I tried to draw the letter from my pocket. "My mother's dead and I *must* go home!"

"He's drunk," shouted Robber Dan again. "Take him out. The cuss never had no mother. Go ahead—take him!"

I made another spring for my tormentor's throat, but was seized and dragged down stairs.

"If you ever had a mother," I yelled back as a parting shot, "she must have been a snake!"

So I was taken, battered and bleeding, thru the streets to the magistrates' office and duly charged with the heinous crime of attempted *desertion.*

"Are you willing to go on board your ship now?" asked the magistrate, with ironical indifference, regarding my appearance rather than my presence.

"Yes, sir," I answered. "I should like to go down and see the captain and ask him to release me."

"He can't cut that game with me, your Honor," put in Robber Dan; "he ain't wanted aboard till tomorrow. He kin see the captain then. Guess the captain 'll be wantin' ter see *him* by that time."

"Better put him back for safekeeping till then," he continued, wagging his head significantly in the direction of the cells.

Now, like most young sailors, I entertained a holy horror of jails and courts.

The sights I had seen and the fo'c's'le yarns I had heard were not calculated to inspire my unsophisticated mind with pleasant impressions of them.

So when the magistrate offered me my choice between being locked in a cell for the night or paroled until morning on my solemn promise not to attempt to leave the town, I quickly chose the latter alternative, because I felt horrified at the thought of my mother lying in her coffin on the same night.

That night I slept in a small room in a deep-water boarding-house, with the door locked against me and two burly runners mounted on guard to prevent me from breaking my oath of parole.

The precautions were entirely unnecessary, had they but known it.

I was not the kind of a boy to break my oath; but I would have been delighted with an opportunity to have broken their precious pair of heads.

So I sailed away with a heavy heart, but with time and the excitement of the voyage the soreness gradually wore off.

Just two months out our "dead horse" or price per head was worked up.

We had finished working for the crimps, and on the following day the ship, barring those indebted for "slops," etc., would be indebted to the extent of fifty cents to each of us—one day's pay.

So we celebrated the day by repeating the "dead horse" to the yard arm to the strains of the good old chantie:

"Oh, poor Old Man, your horse must die!
And I think so; and I hope so!
Oh, poor Old Man, your horse must die!
O poor Old Man!"

Then we cut the gantline and let the old "dead horse" drop into the sea and went on our way to create a new one.

That same night we had a reefing match in the first watch. And after it was over I got below at midnight. I slept in a bottom bunk on the port side of the forecastle.

Sailors are seldom slow about turning in, however slow they may be about turning out. For we are always sure of our watch on deck, but seldom sure of our watch below.

In less than ten minutes all were settled in their berths, the lights were out and all was quiet.

As I lay awake in my berth I was suddenly aware of a mysterious presence near me, a feeling so strong that I could not shake it off.

As I turned slightly I suddenly saw my mother's face and form kneeling by my chest and smiling at me.

Somehow I was not startled or in any way disconcerted by the sudden apparition, if such it was. I did not attempt to stir or move or speak. I simply lay still and looked at her. I could clearly and distinctly discern every lineament and detail and expression of that dear face just as I had seen it when a boy. For some time the vision remained before me. Then it smiled that dear old loving smile again and faded away.

I am not superstitious, but I believe we are at times admonished by a higher

power. I could not help regarding the vision as a reminder of some duty to be performed and wondered what it could be.

I had not been a dutiful son, but neither had I been a very bad one. I had loved my mother well enough to keep her teachings before my mind and try to practice to the best of my feeble ability in the stress of a trying existence. Then, as I thought of her, my mind wandered back to that awful experience in Philadelphia, while she lay dead many miles away.

And a great thought suddenly leaped into my heart and took possession of my whole soul and being. At last I had a mission. I would avenge the wrong. I would become a terror to the crimps and wipe out their hellish system of iniquity for good and all, and also remove the degrading stigma of contractual slavery from the free born men of the sea.

Such is my story, the genesis of my life's work. How I conquered and how I failed would require subsequent articles.

A thousand times I have been asked the question why I was so bitterly and uncompromisingly opposed to the crimps and the crimping system and to all that it implies. Now you know.

With equal frequency I have been asked another question:

"Why doesn't the American boy go to sea?"

I think this story also goes a great way toward answering that.

I am, as I have explained, a composite edition of the human race—a smoked Yankee, if you will; but I am nevertheless an American boy, and loyal to my country and my country's flag.

I honor her institutions and revere her traditions, and, while I entertain no superstitious reverence for them, I respect her courts. I am willing to abide by the dictum of just and necessary laws, but *I have —— little respect for any law that can be invoked to prevent a man from attending his mother's funeral!* I would defy such a law even at the point of a gun!

And, as for any chicken-headed fossil of a perverted judge, who could meekly sit on a tufted couch, like a puppet on a string, and meekly sanction its enforcement, and ransack history for precedents to justify his course, while feeling repugnance in his own conscience, I have nothing but the most unutterable, unalterable and most supreme contempt. I would not appoint such a man to referee a dog fight; he would steal acorns from a blind sow. If you call that anarchy, make the most of it. I can only cry out of my heart and speak what I feel. Those are my sentiments, and I am here to maintain them.

I am not a stranger in this region; I live wherever I'm found, and I keep my office in my hat.

Men, we too are men, and we love our liberty better than our lives; matrons, we had mothers, and they loved us as you love your children; sisters, we are brothers, half-brothers to all the world!

Let all those who hold their own liberties sacred help secure equal justice and liberty for others. For the shackles on the sailor's arms are a standing menace and a jingling threat to the contractual freedom of every man who lives by toil.

New York City.

The Inauguration of the Persian National Assembly

BY OUR PERSIAN CORRESPONDENT

[Altho the Persian Assembly has been in session only a month and a half and this is the first account of its inauguration received in America, yet it is reported by telegraph that the Reform party are already dissatisfied with the new institution they have secured and that they have resorted to their former methods of agitation to obtain a more progressive body. Our correspondent, whose name is withheld for obvious reasons, occupies an important position in Teheran and is well qualified to judge of the revolutionary changes now taking place in Persia.—EDITOR.]

AT noon on October 7th, at Teheran, the new National Assembly was inaugurated. The week before thruout the various provinces of the kingdom the first election in Persia had been held, but in a land where railroads are unknown only those delegates chosen from the districts in and about Teheran were present. The diplomatic corps was invited, and most of them were present. There was not a little complaint, however, because they were "stored" in a room overlooking the garden, where there was little to see and where they were not much in evidence. It was Persia's day, and the Reform party wanted it understood that the *Iranee* and not the *Frangee* was in charge of affairs. The ceremonies took place in the Palace grounds amid the roar of artillery, the noise of a half-dozen brass bands and the usual amount of display. Every one seemed happy, save one—the Shah. The latter seemed to care little what happened, as he sat at an upper window of the Palace in a

The delegates to the Persian National Assembly, elected from Teheran. It is surprising to see how few young men are in the group. Those on front row, with white and black turbans are from the ecclesiastical party. The remainder are merchants, doctors and artisans.

large armchair. As he looked out on the crowd below, his anxious, anemic face told of the physical suffering he had endured from the disease that is slowly taking his life. His hands, more like wax than flesh, had signed the decree that was to change the whole system of government. Doubtless he shared the feeling of the court as expressed to the writer by one of the leading generals in the Guards when he said: "The glory of the empire founded by Cyrus, son of Cambyses, is departed." On Friday before there had been held a consultation of physicians to determine whether he had strength enough to endure the strain of the opening day of the Assembly.

Crown Prince of Persia, now Governor of Tabriz.

No one could find fault with the so-called Speech from the Throne, which was read in a monotonous tone by an old man with a big turban and a cracked voice. Afterward, the speech was pho-

tographed (no one is trusted in Persia), and later lithographed and sold in the streets.

The speech was in part as follows:

"Praise be to the Almighty. That which we have had in mind for years has, by the aid of God, come to pass, and we rejoice that our efforts are about to bear fruition by the inauguration of this National Assembly. To-day is indeed an auspicious occasion, for this event will unite more closely the Government with the people (*Millett*). The inauguration of this Assembly is a public necessity, its purposes being to assist in executing the duties which until now have had to be carried by the King. The various Ministers of State, heads of departments, gentry and nobility, tradesmen and the general public are united by the events of today in the responsibilities of the execution of righteous laws and the introduction of reforms. With these purposes in view, it is evident that there will be no place for selfish interests, especially covetousness. . . . It is evident that none of you were elected except for your talents and good characters, which are supposed to exceed those of the general public, and so let me admonish you to add to these qualities wisdom and disinterestedness. Put your feet in the path of duty and continue therein to the end, remembering that, as the conduct of the child reflects the training given by the parent, so our Nation's prosperity or adversity will reflect your prudence and wisdom. Until now your interests were personal, but now they are those of the Nation. So labor that you will not be answerable for wrongdoing unto God or be ashamed in our presence. God is the keen observer of our efforts and every ready to defend you in welldoing. . . . God be with you. Go and perform faithfully your duties, for which you will be answerable."

Since last spring, when the Shah had a stroke of paralysis, he has been confined most of the time to his room, and knew very little of what was going on outside of the Palace grounds. Not so, however, with the young Crown Prince, Governor in Tabriz, who has done everything that he could to discourage the Reform party in their efforts. In this he had the encouragement of many high officials and the Court party. But the hand of the leaders of the reform movement was on the pulse of the people and they knew when to strike, as shown by the following interview with one of the leading delegates of the Assembly, who

The Palace Grounds Where the Assembly was Inaugurated. The Shah Sat at Window Marked With a Cross.

is one of the richest merchants in Teheran, which I had a few days ago.

1. What is the present status of the reform movement in Persia? Progress has been made, but not more than we expected when the agitation was begun by us. The Military School has been offered to us as a place of meeting, whereas a few months ago all our meetings had to be held in secret. An election has been held, and the Assembly will convene as a national body as soon as the delegates can reach Teheran from the provinces.

2. How was the order for the election sent to the provinces? First by telegraph, but we insisted, and later they were sent in writing, properly sealed.

Mochir-ed Dowlen, present Prime Minister, a man who has the confidence of everybody. He is the real ruler during the Shah's illness.

3. How many delegates will the Assembly have? A few less than two hundred, sixty of whom will be from Teheran. The larger provinces will have twelve representatives and the smaller ones six. Then there will be some few others from the different departments of the Government.

4. In the organization of the Assembly what European governments will be most closely followed? Germany and Austria.

5. Will you continue to meet in the hall at the Military School? No, it is too small and it is too near the Palace. We are determined that the Assembly shall not be under the influence of the Executive too largely.

6. How does the Shah look upon these great changes in his Government? He has not objected very much, for he is confronted with the great question of finding money to carry forward the ordinary affairs of government. Besides, he is a very amiable man.

7. Would such a movement have been possible twelve years ago during the reign of his father, Nasr-ed-Deen? No, we should not have been able to carry out any of our plans looking toward reform. No one would have dared to attempt such a move.

8. Is it not a little strange that the Mohammedan priesthood should be taking an active part in these reforms? Yes, but the truth is they are just getting their ears open to the progress the world has made.

9. It being certain that the Mohammedans will have the majority in the Assembly, what effect will this have upon other religious sects in Persia? All will have equal rights, Christians, Parsees and even Jews. An exception will have to be made in the case of the Babees, as no special rights can be given them. But religious liberty will be enlarged and not hindered, but this must come as public opinion demands. We shall make a beginning and see what happens.

10. Will the president of the Assembly be from the Ecclesiastical party? No. I think that it would be impossible for one of them to be elected.

11. May a foreigner be elected? No, but we intend securing foreign aid in establishing a just system of taxation and in other departments of the work before us.

12. What European Government will, in your judgment, have the most influence in Persia hereafter? I cannot answer that question, for we are told that Britain has an agreement concerning Persian affairs with Russia. The latter is not trusted by any one here, but it may be diplomatically wise to consult

her on certain questions. If it should turn out that England is free from Russia in Persian affairs, then her aid will be largely sought.

The leaders of the reform movement have so skilfully managed their affairs that they now have the full confidence of all classes. They have succeeded not only in removing the Ain-ed-Dowleh, son-in-law of the Shah, the powerful and cruel Prime Minister, but they have had him exiled to Khorassan. They have had the Mochir-ed-Dowleh, an excellent man in many ways, appointed to the post of Prime Minister. But the greatest victory has been the way in which they forced the hand of the English Legation here, and caused them to take up their fight with the Persian authorities. At first about five thousand priests, artisans, merchants and doctors took refuge in the Legation, camping on the beautiful lawn. This number was daily increased until there were more than fourteen thousand refugees on the grounds, who positively refused to leave until their difficulties were settled and a parliament, if it may be so called, was granted. The sanitary condition became so bad that there was nothing left for the Legation to do but take up their cause. Typhoid and even cholera was feared. When the Shah granted their demands they, Arab-like, quietly folded their tents and stole away. Great damage was done to the beautiful grounds, and it will take years to get the grass and shrubbery back where it was. The plague has appeared in the province of Sistan, but that is less feared by the Legation people than another visitation from their Persian friends. The leaders of the people have found a powerful weapon which they will not be slow to use again in case of need.

TEHERAN, PERSIA.

Woman Suffrage Militant: the New Movement in England

BY EDITH ABBOTT, Ph.D.

THE past year has seen the woman suffrage movement in England enter upon a new and militant phase of its career—and a phase that bids fair to become as triumphant as it has been misrepresented and misunderstood. The temptation of the journalist to furnish sensational and readable stories at the expense of the cause has undoubtedly been extreme; but the truth will out, and the English public has awakened to a consciousness of the fact that a serious campaign is being carried on by serious women—women who are so tremendously in earnest, so full of courage, so full of faith, so ready to sacrifice themselves for their cause that they have changed the amused indignation with which they were first regarded into a hearty, if an unwilling, admiration. After all, one must respect earnestness, more especially earnestness that braves ridicule in support of an idea.

It is now pretty generally understood in London that newspaper stories of shrieking hysteria and behavior too absurd to chronicle were only newspaper stories; that such disorder as occurred a few weeks ago was caused much more by the metropolitan police than by the women; that the leaders of the new movement are not women of the notoriety-seeking sort, but women of cultivation and refinement—university women, philanthropists, women well known and long respected for work in a hundred good causes. Among the women now imprisoned in Holloway Jail, for example, is Mrs. Cobden-Sanderson, one of Richard Cobden's daughters, whom Mr. Bernard Shaw in a pungent letter of protest to the *Times* described as "long known to every one worth knowing in London as among the most charming and interesting women of our day."

It must, of course, be clearly under-

stood that this new movement is disavowed by the old-line suffragists and that the secretary of the national association has publicly disclaimed for her organization any connection with it. But it would be difficult indeed to say now, whatever may have been the case before the last Westminster pilgrimage, whether a majority of the men and women here who believe in the cause are with the old suffragists or the new. An unprejudiced observer would be inclined to say with the new—certainly not against them.

The new campaign is distinctly an agitation, persistent, aggressive and at times dramatic, even spectacular; a relentless urging of the cause as a question of practical politics, as an immediate reform, instead of a nebulous theory of right and justice. Its keynote is persistence, a compelling of the go-easy public to consider the question even tho it would rather not. Four hundred and twenty members of the present House of Commons went in pledged to support "votes for women," the Prime Minister had expressed his sympathy with the demands of the suffragists, and there was every reason to hope that the new Parliament would "do something." But instead of a woman suffrage bill, the women were offered only the "silent sympathy" of the Premier and the pledged members. Now "silent sympathy" is precisely what the cause has been suffering from for a quarter of a century, and it is the purpose of the leaders of the new movement to reject it boldly and instead to demand of the four hundred and twenty that they redeem their pledges, and if they refuse to defeat them, if possible, when they come up for re-election. No doubt this is somewhat uncomfortable for the Government and the recalcitrants. They much prefer women who will accept "silent sympathy" as a crumb to be grateful for. But the question to be asked in all fairness before these women and their methods are condemned is not whether they have made life a little less serene for a group of politicians who have broken their promises, but whether they have injured or promoted their cause. To this last question there can now be but one answer, and that is given best in the words of Mrs. Henry Fawcett, well known as a leader of the old movement and still identified with it. In a recent letter to the *Times*, with reference to the women now in prison, she wrote: "I hope the more old-fashioned suffragists will stand by them; and I take this opportunity of saying that, in my opinion, far from having injured the movement, they have done more during the last twelve months to bring it within the region of practical politics than we have been able to accomplish in the same number of years."

And how have they done this? They have done this because they have made woman suffrage a subject of discussion everywhere in the kingdom—and among all classes. They have forced men who have votes, in Parliament and out, to commit themselves. They have obtained the united support of the Labor party in the House and with it a promise that a "votes for women" bill shall be one of its foremost demands next session. Moreover, they have, as an important Liberal paper pointed out in an editorial "leader," made it forever impossible for men to say that when women care seriously enough for the suffrage, they will get it. Earnestness has conquered ridicule, for it would be a callous public indeed that could refuse a respectful hearing to Mrs. Cobden-Sanderson's quiet and dignified statement before the court which sentenced her. "If any one is guilty," she said calmly, "it is I, but I do not acknowledge my guilt. I do not acknowledge the authority of this court or any other court so long as I have no word nor any power in the making of the laws which I am supposed to obey. I will only quote the words of the president of the Local Government Board: 'I am a rebel because I am an outlaw.'"

After having seen on one day of the past week a crowd numbering hundreds standing in Hyde Park for more than two hours in a drizzling rain to listen to the "agitators'" presentation of their case, on another day a great demonstration in Trafalgar Square by the women workers from the textile mills of Lancashire and Cheshire and other industrial centers, and after having heard on an evening of the same week the enthu-

siastic approval which greeted Keir Hardie's statement at his jubilee meeting in Farringdon Hall that the English workingman would not soon forget the spectacle of "Cobden's daughter in prison under a Cobden Government for demanding an extension of the franchise," it is easy enough to understand that there is method in what was at first called "the madness of the agitators."

The attitude of the men of the working classes has been one of the most interesting features of the situation. An eminent Socialist long ago pointed out that woman and the laboring man had alike had from the beginning for their common lot oppression. Perhaps it is the memory of this ancient community of interest that is responsible for the present tie between England's voteless women and England's workingmen. Perhaps it is the answer to the appeal sent from Holloway Jail by the daughter of the man who gave them bread. Perhaps it is because of the organized efforts made by the working women, especially the trade-union women, in support of the cause and their claim that it is suffrage alone that can rescue them from their present degradation — a degradation of life as well as of work. At any rate, the sympathy has come, first voiced by a man at work in the street, who stopped as the women went by under police guard from Westminster and shouted: "Keep on coming and don't give up the fight. It's the only way we ever got anything, and it's the only way you ever will."

This statement regarding what the women have done does not need to be followed by a statement of what the English Government has done to these women. That is already recorded to England's shame. The public indignation over their treatment in prison has done much to strengthen their cause, for, as Mr. Shaw tersely put it, in an attempt to ridicule the Home Secretary into doing his duty, "nobody in the world really wishes to see one of the nicest women in England suffering from the coarsest indignity and the most injurious form of ill treatment that the law could inflict on a pickpocket."

It may not be out of place to say in conclusion that to one born and bred a believer in woman's suffrage, but long accustomed to regard it apathetically as something which would come only in that long future which holds so much of truth and justice, the past week in London has been one of inspiration and new hope. And in default of the personal possession of the moral courage to serve in a campaign of this sort, it is a pleasure to acknowledge, humbly and gratefully, a deep obligation to those whose service has been great.

LONDON, ENGLAND.

Wireless

BY CHARLES L. THOMPSON

SAID Marconi: "I will fling my word
Over the silent sea and the land;
And he who is in tune with me,
He only shall understand."

Said the poet: "From my heart a throb
Beats down the world to its farthest strand;
And he whose soul with my soul is one,
He only shall understand."

NEW YORK CITY.

Hawaii

BY GEORGE ROBERT CARTER

Governor of the Hawaiian Islands.

THERE is an impression sometimes created by sensational reports that the Hawaiian people are not reconciled to American supremacy in Hawaii, and that their opposition is shown by their political and legislative tactics.

To understand partially the situation one must remember that shortly before annexation there occurred the downfall of the monarchy, the establishment of a provisional government, followed by the Republic of Hawaii, the avowed purpose of which was "Union with the United States." During this period of change and friction passions ran high, and when it finally culminated in annexation, it was but natural that some were disappointed, others embittered.

Some conception of the situation may be obtained by imagining for a moment a complete change in the conditions that now exist in America. Presume, if you can, that the leaders of our great Republic, supported by constantly increasing numbers, maintained that the destiny of the United States was the surrender of our autonomy in a greater union of all the republics in the Western Hemisphere. Suppose such a result accomplished. Would there not be found many, while admitting that such a situation presented a grander and nobler future, whose hearts would be filled with sorrow to see the flag under which their forefathers had lived give way to another symbol; to see their autonomy lost forever?

With these thoughts in mind can we blame the Hawaiians if, temporarily, they yielded to the influence of self-seeking and ambitious leaders, who played on their feelings and urged the formation of a political party composed purely of Hawaiians, thru which, with the preponderance of Hawaiian voters, they could secure control and bring about conditions similar to those which had existed in the past?

There were, of course, many among the Hawaiians with a wider range of vision and greater wisdom, who argued that a political party which appealed to race prejudice would not be a credit to the Hawaiian people; that even tho in control of the legislative functions of the Government, they would need to rely, as they had in the past, on those whom they had found by experience to be equally interested with them in the welfare of these islands.

At a meeting of prominent Hawaiian leaders just prior to annexation, those who held out the flattering future of "Hawaii for the Hawaiians" exclusively were asked: "To whom do we turn for help when in difficulty? To whom do we Hawaiians look for assistance? Each and every one of us know men whose skins are not like ours, but who have lived among us many years—perhaps born here—to whom, in time of trouble, we have not turned in vain, and who we know are equally interested with us, not only in these islands, but in our own race, and we should not exclude them from our councils or from our political parties."

Notwithstanding this division of opinion, a native or "Home Rule" party was formed, and it swept the Territory in the first election after annexation, securing a majority in both Houses. But, lacking unselfish, intelligent and reliable leadership, it accomplished little.

A reaction followed. The Hawaiian people were too sagacious and too well educated not to recognize the impossibility of a return to the old *régime*. They recognized that the race hatred engendered and fostered by their irresponsible political leaders, would eventually bring them nothing but contempt, and, as their numbers were diminishing, their only hope for retaining permanently the privileges that had been granted them was by their proper and dignified use. They perhaps have not yet valued as fully as we might wish the privilege of universal suffrage, but they are exceedingly

anxious to demonstrate their capacity for self-government, and they take great pride in the fact that they have always been the most intelligent and progressive portion of the Polynesian race.

There is no evidence, therefore, of any record of deep-seated hostility or opposition on their part to American control.

G. R. Carter.

The history of these islands clearly shows that the subject of annexation was not new to them; it had been agitated and discussed from early days.

That they have accepted the situation and are in full accord with it cannot be better illustrated than by the fact that, while the last Legislature was composed largely of Hawaiians, yet an act introduced by one of them, and passed without opposition, provided that the American flag should float from every school and court house within the Territory, weather permitting, on every day that these public buildings are in use. Thus a just and fair interpretation of their political and legislative tactics cannot be considered as in opposition to American institutions.

Hawaii's progress is hampered both from within and from without. Time and energy must be employed in counteracting the results that constantly appear in Hawaii from a lack of knowledge in regard to conditions on the mainland, and also in counteracting results that

constantly appear on the mainland from lack of knowledge concerning the actual conditions in Hawaii. An ever-present problem is to decide in which direction can Hawaii's chief executive accomplish the greatest good.

To illustrate: The annexation of the Hawaiian Islands took place prior to the battle of Manila and before it had been decided that the flag could precede the constitution. These later events were of greater moment and absorbed the public mind so completely that now, in looking back to that time, Hawaii is associated with Porto Rico and the Philippines as a possession or dependency of our great Republic. And those who represent Hawaii find the greatest difficulty in persuading the people of the United States that Hawaii is an integral part of the Union. It is thru ignorance or error that the Federal Departments issue official maps of the United States from which Hawaii is omitted.

This misconception of Hawaii's relation to the United States of America is not confined to the common people; it is found among those who should know better. For example: Following annexation, our people patiently continued locally to bear the burden of protecting the commerce of the world from the dangers of our sea coast, believing that it would only be a short time before the Federal authorities would assume this duty, knowing full well that no other American community paid by direct taxation for this service.

Appeals to the Lighthouse Board were answered with the intimation that Hawaii's representative in Congress must secure a special appropriation for Hawaiian lighthouses, as the Board was not authorized to expend any portion of its appropriation in Hawaii. Congress, occupied with its great problems, either did not hear Hawaii's appeal or concluded that it was unnecessary. It was difficult in Hawaii to ascertain the cause of failure, but finally thru the more enlightened and better work of our present delegate, it was ascertained that Congress considered it was unnecessary to make a special appropriation; that the appropriations already under the Lighthouse Board were ample and could be as readily expended in Hawaii as in Maine or Florida. Thus at the end of three years no relief had been found. However, the Hawaiian Legislature in session at that time had concluded, with temerity, that perhaps the matter would reach an adjustment if they failed to make appropriations beyond that current year, and this course they adopted. The matter drifted on until the fall of 1903, when the attention of President Roosevelt was called to the subject by a request as to how Hawaii could best escape condemnation of an enraged public opinion that was bound to arise on the first loss of life and property (perhaps American) that would occur on the Hawaiian coast after the lights were allowed to go out. As usual, this inquiry was sufficient. A cablegram, sent by the Lighthouse Board, reached Honolulu on the 29th day of December, 1903, asking if temporary arrangements could be made from and after January 1st, 1904, whereby the lights, such as they were, could be continued at Federal expense, and this without any specific mention of Hawaii in their appropriations.

But it is not only public officials who seem to consider Hawaii a possession separate, apart and distinct from the Union. The Republican party, thru its properly authorized representatives and prior to its last National Convention, instructed the Republicans in Hawaii to hold a local convention and select six regular and six alternate delegates to represent the Territory at the National Convention, to be held at Chicago. Volunteers were found who were willing, at their own expense, to make the 5,000 mile trip and show their loyalty to this political party. These delegates attended the convention only to find that, thru the ignorance of the Rules Committee, over the objection of Hawaii's member, a report was to be presented classifying Hawaii as a possession allowing but two delegates to sit and vote—while by the same report every other Territory was granted six delegates. Remonstrance with the chairman of the Committee on Rules was without effect. He insisted that Hawaii, Porto Rico and the Philippines were possessions and that they should consider themselves fortunate to be allowed representation at all; that two delegates were ample.

Notwithstanding the efforts of the delegates to ascertain the standard by which such questions were to be decided, they could get no satisfactory information. Was it population? If so, Hawaii had a greater population than the State of Nevada. Was it by the form of government actually in existence? Then Hawaii had a Legislature and made its own laws—a responsibility as yet denied Alaska. The so-called "Indian Territory" was to be allowed six delegates—a Territory in name only, for it was directly under the control of the Secretary of the Interior.

Despite all efforts, the great Republican party compromised the matter by voting that in that instance those delegates who had appeared from Hawaii should be seated, but hereafter it would allow Hawaii only two delegates.

If the objection had been that the Western Territories have too great a vote in comparison with the larger subdivisions of our Union, Hawaii could have offered no opposition; all she asked was to be granted the same treatment accorded other Territories. But no; the Republican party, under whose banner annexation was consummated, in convention assembled, classified Hawaii as a possession with Porto Rico and the Philippines. Thus there is plenty of work to be done on the mainland.

It must be admitted that among the many advantages gained by annexation, few are of more importance than the assistance in development of these islands that will be rendered by the scientific departments of the Federal Government. Already our community has gained much from the Department of Agriculture. Within the year a Federal representative of the Bureau of Animal Industry has probably ascertained why range cattle and sheep in these islands deteriorate or revert so rapidly. His work may revolutionize this whole industry and turn Hawaii, with its ideal climate, into a model stock farm, where the best examples of different breeds can be produced for export. And the interest created and work done in forestry since annexation are a remarkable record. But we have a right to expect more, for in all these departments the amount spent by the Federal Government in Hawaii has been less than in any other State or Territory.

For years, water has limited the extent of Hawaii's productiveness. It was thought that the limit of production in sugar had been reached when the area where suitable rainfall was found had all been devoted to its culture. Then came irrigating ditches, carrying the water by gravity to unoccupied and waste areas. Capital and ingenuity furnished pumps which raised water 200 feet, at a cost which still left a margin of profit. Economies of various kinds and efficiency in pumps have raised this limit to 400 feet, with a corresponding increase in production. Now, the trend of private enterprise is toward the storage of storm waters, but the additional area that can be occupied under this method of irrigation is limited.

What is of more importance in intelligently developing these islands to their fullest capacity and providing for the largest population is the scientific study of the available water, both above and below the surface. Our mountain streams should be measured and a careful geological and hydrographic survey made. To legislate intelligently for Hawaii's future, we must know the margin of waste water now existing. Is the supply constantly diminishing? If so, then it must be conserved. We cannot build for the future of these islands better than by insuring a constant water supply. With this object in view many thousand acres of forest reservations have been established since annexation.

This question of a hydro-geological survey, as well as other questions, has not as yet been brought to the attention of Congress, for it has been the policy of this administration to refrain from inundating Congress with a large number of requests, but rather to concentrate on that which is of the greatest importance. With this in view, its efforts are centered on what is called the "Funding Bill," to support which a delegation of business men voluntarily gave the time necessary for a trip to Washington, whereby it was hoped that Hawaii could secure greater financial assistance in maintaining American institutions out here in the middle of the Pacific, where they come in contact with those of other civilizations.

The idea did not originate in Hawaii, but was suggested by a leading statesman in Congress, whose position gave him particular opportunities for a study of the Hawaiian situation. He remarked:

"We are taking out of Hawaii for the Federal Treasury, a million dollars a year—money that we do not need and do not want, and which should be applied in those islands to the greater development of our institutions. To accomplish this is the real problem of Hawaii."

With this end in view Hawaii's representative in Congress secured the introduction of a bill by which it is proposed to set aside 75 per cent. of the internal revenues and customs receipts as a separate fund in the Treasury, to be applied, as Congress in its wisdom saw fit, toward the military and naval defenses of the islands, harbor improvements, and public and educational buildings. Such a measure, with a few minor changes, was readily passed by the Senate, but, notwithstanding a favorable report by the Committee on Territories, it failed to secure consideration in the House.

In support of the measure, the delegation of business men pointed out that the only price America paid for the annexation of these islands and the securing of such a strategic point in the middle of the Pacific Ocean was the assuming of $4,000,000 of debt of the Republic of Hawaii; that since that date the customs and internal revenues, wholly contributed by the people isolated on these islands, had not only paid back the $4,000,000, but had contributed nearly $2,000,000 in excess—an amount greater than all the appropriations and current expenditures of the Federal Government within the Territory since annexation; that the world's history shows that no country has successfully maintained dependencies from which revenues have been extracted to any material degree. Our delegation also pointed out that for local tax purposes the total contribution per capita, which varied each year, had been in one year a little over $22, and that the contribution of Hawaii to the Federal Treasury had been as high as $7.20 per capita in a single year.

Hawaii did not ask that the whole amount of Federal revenue collected here be devoted toward her development, because she did not believe it would be right to secure all the privileges and advantages conferred on her as an integral part of the Union without giving anything in return.

After the adjournment of Congress it was ascertained that there were those who had successfully opposed the measure thru fear that it would establish a bad precedent and possibly inaugurate similar action on the part of other Territories. It is unfortunate that we could not have had an opportunity to answer this, for if America at any time in the future should be fortunate enough to possess a Territory similar geographically, socially and commercially to the Hawaiian Islands, no better precedent could be followed than one which would stimulate its development rather than deprive it of its own resources.

Perhaps few people recognize the fact that there are responsibilities placed on the American people in Hawaii that are as great, if not greater, than those borne by any other American community. The vast Pacific, to which two-thirds of the world's population is tributary, has not yet begun its period of great progress and commercial development. Divergent lines of commerce from various ports, many of which are filthy with disease and contagion, center in Honolulu. Efficient as are the Federal officials in preventing diseases from entering, yet there is a duty imposed on us, which we will not shirk, of keeping this semi-tropical port, with its large proportion of alien Oriental population, in such a sanitary condition that disease can find no foothold.

American occupation of Hawaii should be a guarantee to the world that it will never be a point for the distribution of disease.

Isolated in the manner these islands are, it is incumbent upon the people of this community to maintain a standard of education that will offset the disadvantages of isolation. Two thousand miles of ocean make it impossible for the rank and file of citizens in this Territory to secure the benefits that are afforded by travel, observation and a free exchange of thought and speech, which are enjoyed by contiguous communities that are divided from each other only by imaginary lines. Thus if we are to build

a community here homogeneous in all respects with those on the mainland, every energy and every resource should be applied to this end.

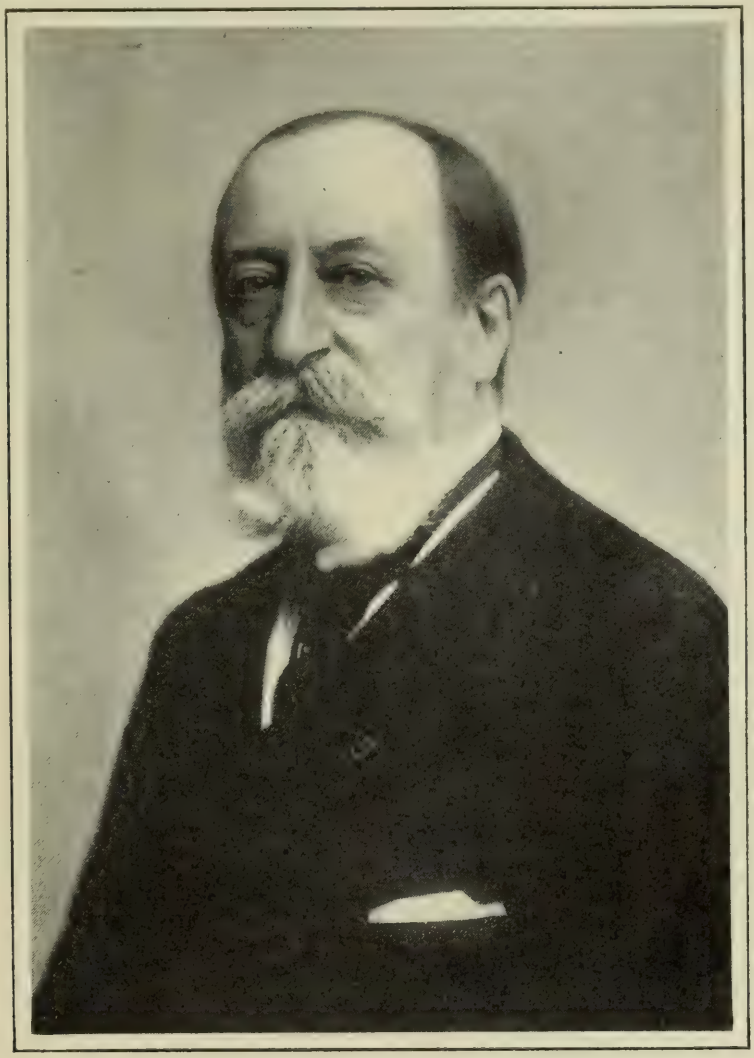
Among other aims of the administration in Hawaii is that of applying the remnants of public lands, wherever practicable, to furnish the basis for the upbuilding of a middle class of citizens; to increase Hawaii's population with those who can take an active part and interest in civic affairs; to bring about conditions which will permit of these islands being filled with small homes, the occupiers of which will be contented and happy for the reason that each year they spend a little less than they receive. This is the end which is now kept in view in disposing of the remnants of our Government's lands.

Undoubtedly there are many difficulties to be overcome in reaching such a goal. But when greed shall yield a little to patriotism; when permanency and stability shall be accepted by those who control our main industries as the equal of any asset on their balance sheet; and when they earnestly join their forces with those who are seeking these ends, then all obstacles will disappear and a way be found to reach, without chaos, those conditions which may at times seem impossible.

HONOLULU, HAWAIIAN ISLANDS.

Camille Saint-Saëns

BY G. W. HARRIS



[American musical centers will be visited this winter by the usual number of concertizing soloists and by several composers from the younger ranks of Europe who have attained to some eminence. But the largest figure in contemporary musical art to visit us this year is the veteran Camille Saint-Saëns, who a full generation ago came to be recognized almost universally as the foremost French musician of his time. He is to appear with the symphony orchestras of New York, Boston, Philadelphia, Cincinnati, Chicago, and in other cities; and his coming will bring a great deal of his music to a new hearing and thereby afford opportunity to contrast his work with that of Vincent d'Indy, the French music master who visited us last year and whose "Impressions of Musical America" appeared in THE INDEPENDENT for October 11th, last. The following sketch of M. Saint-Saëns's career by Mr. Harris is therefore of timely interest.—EDITOR.]

CAMILLE SAINT-SAENS, the veteran French composer, has come at last to America and will take part in twenty or more concerts in the chief cities of the land, appearing as conductor or organist or pianist, and always as composer. His coming would have meant more for his music and his fame twenty years ago, but he has brought with him several new compositions of his fashioning, which will have their first interpretation here at his hands, and the fact that he is still doing all these things with vigor and skill, despite his seventy-one years, should serve to show at once that his presence will be among the most interesting and important events of the musical season in each of the cities he visits.

Saint-Saëns has been called, and not inaptly, a paradox among musicians. Ambitious youth is forever admonished that it is impossible for any individual to master both the pianoforte and the organ. Saint-Saëns ranks among the world's greatest organists, and he was famed thruout Europe as a virtuoso pianist before Paderewski was born. It is an old saying that no composer can hope to excel in both operatic and symphonic music. Saint-Saëns has won notable successes in both. Not only has he distinguished himself in both vocal and instrumental music, but he has achieved equal success in "abstract" music in the classical forms and in program music of the "romantic" style. Gounod once said of him: "Saint-Saëns could write at will a work in the style of Rossini, of Verdi, of Schumann or of Wagner."

Charles Camille Saint-Saëns was born in Paris on October 9th, 1835. He began piano lessons with a great-aunt when three years old, and composed little waltzes when five. In his seventh year he began to study the piano under a professional teacher, M. Stambati. Soon

after he took up the organ, his master being M. Benoit. In 1846 he appeared as a prodigy pianist in Paris, winning unstinted praise for his playing of Handel, Bach, Beethoven and Mozart. He took a second prize at the Paris Conservatory in 1849 and a first prize in 1851 for organ playing. At seventeen he had won a wide reputation as a pianist and had written a symphony and other works of large mold. In 1853 he

Camille Saint-Saëns.

was appointed organist at the Church of St. Méry in Paris, and in 1858 secured the same position at the Madeleine, which he held for nineteen years, resigning then in favor of Theodore Dubois. In the period of his service Saint-Saëns composed an immense amount of music for the organ, especially for the church festivals. But, unfortunately for other organists, all these compositions, which are said to include some of his most inspired work, lie buried in the library of the Madeleine. They belong to the church, according to the organist's contract, and will be published only after Saint-Saëns's death.

In those years he worked indefatigably for the improvement of French taste in music and to better the opportunities of young native composers. He was one of the founders of the National Society of Music. In a series of concerts in 1864 he played all the concertos of Mozart. In 1878 he organized another series of concerts to produce the symphonic poems of Liszt. Meanwhile he was gaining steadily in power as a composer, and his fame was spreading to all musical shores. His operatic career began about 1872 with "The Young Princess." "The Silver Cup" followed in 1877, "Samson and Delilah" in the same year, "Etienne Marcel" in 1879, and since then "Henry VIII," "Phryne" and "The Barbarians," the last named having been produced in 1901. Of these operas "Henry VIII" and "Samson and Delilah" have been the

most popular, and the last named has been sung frequently in America as an oratorio.

Saint-Saëns has written five symphonies, of which the fifth, in C minor, for organ, piano and orchestra, is the most important. This is a work of marked originality in form as well as in material. He was one of the first composers to follow Liszt into the domain of the symphonic poem, and his four works in that class, "Omphale's Spinning Wheel," "The Youth of Hercules," "Phaeton" and "The Dance of Death," have long been popular with American concert-goers. "Omphale's Spinning Wheel" is, perhaps, the most popular, and justly so, of all the composer's orchestral works. It was composed in 1871, originally as a rondo for the pianoforte, and was orchestrated a few years later. His five piano concertos are well known, as are also his 'cello and violin sonatas; and his beautiful and effective *Rondo capriccioso* for violin and orchestra has been a favorite stalking horse with virtuoso violinists for a generation. Among Saint-Saëns's choral works, besides the operas already mentioned, are a Christmas oratorio, a requiem, a Biblical poem, "The Deluge," "The Lyre and the Harp," "The Soldiers of Gideon" and other cantatas. This list, which is far from complete, gives only an inkling of the composer's industry and versatility. He has produced excellent editions of the works of Gluck, Rameau and others; has published two volumes of brilliant and witty critical essays, "Harmony and Melody" and "Portraits and Souvenirs," and he is the author also of a book of verse, "Familiar Rimes"; of a one-act comedy, "Writer's Cramp" (which was produced successfully in Paris); of a volume of philosophical studies, "Problems and Mysteries," and of writings on still other subjects.

Somebody has said of Saint-Saëns that he is, perhaps, the only living composer who would still have been just what he is if Wagner had never lived. Yet in some of his music the traces of Wagner's influence are unmistakable. His idols and his models, however, have been Bach, Chopin and Liszt. Not that he has copied those masters slavishly—when he has written music like theirs that music has yet possessed individuality of its own and always the added distinction of being characteristically French. This French quality is the thing in Saint-Saëns's music that first impresses the hearer. It is typical of the Gallic mind—energetic, learned, clever, concise, lucid, polished, displaying variety and brilliance of color, wrought out with masterly artistry—yet a bit superficial.

Saint-Saëns began as a writer of pseudo-classic compositions in the conventional symphonic form, and therein achieved distinction for great intellectual skill, for clarity, for symmetry of form and solidity, for good workmanship. At first sight it seemed an almost incomprehensible step when he turned from "absolute" music to the production of such story-telling works as the shimmering iridescent "Omphale's Spinning Wheel," with its fascinating rhythmic buzzing, the diabolically clever "Danse Macabre," the picturesque and brilliant "Phaeton" madly coursing in the chariot of the sun. In these symphonic poems he made some innovations, tried some new experiments, showed a rare sagacity in contrasting sonorities, while still assigning to every instrument something to do which it could do pleasurably and creditably. His originality was attested abundantly. But even these things now, as compared with the music of the younger French school, the music of Vincent d'Indy, Gabriel Fauré, Claude Debussy and Paul Dukas, display almost the naïve simplicity of the archaic. Saint-Saëns's music is old-fashioned. The reason for this is not far to seek. His great limitation is his lack of emotion. And emotion is the soul of music; music is the language of emotion.

By this supreme test all of Saint-Saëns's music, whether "absolute," operatic or programatic, falls finally into the same category. It is the work of an alert intelligence and a logical mind, but an objective mind—bent on the depiction of external things, not the revelation of internal mysteries. Technically impeccable, this music arrests attention, compels admiration, pleasurably stimulates the rhythmic sense. It does not stir the feelings nor warm the heart.

Nevertheless, for the good qualities he possesses and the excellent work he has done, Camille Saint-Saëns deserves richly the cordial welcome, the respectful attention and all the honors he is receiving from the music lovers of this land.

New York City.

Literature

Foster's Practice of Diplomacy

SINCE the retirement of Mr. John W. Foster from the Department of State he has devoted much of his time to the writing of books that record his studies and experiences in the field of diplomacy. His works, "A Century of American Diplomacy" and "American Diplomacy in the Orient," have attracted wide and favorable comment, and have secured permanent places in every library that reserves even so much as a corner for useful and valuable treatises on International Law and Diplomacy. In Mr. Foster's latest book, *The Practice of Diplomacy as Illustrated in the Foreign Relations of the United States,** he describes the methods and duties of American diplomats, and records many of their achievements and mistakes. His style is so simple and his chapters are so enlivened with interesting incidents and sensible criticisms that even readers entirely unfamiliar with diplomatic work will have no difficulty in understanding and enjoying him. To readers who have been in diplomatic life, or who contemplate entering it, Mr. Foster's book will be a very valuable friend, recalling delightful reminiscences to the former, and providing the latter with extraordinarily useful information; while to those who now occupy diplomatic positions or who legislate concerning them his views on the utility of the diplomatic service will be regarded as sound and sage, and his argument regarding the desirability of government ownership of embassies and legations will seem absolutely devoid of prejudice, and likely to produce a favorable effect on Congress.

Altho all of Mr. Foster's ideas are pleasingly American, he seems almost unduly democratic in his plea for making all diplomatic officers of the same rank, instead of retaining the four established classes of Ambassadors, Envoys, Ministers-Resident and Charges-d'Affaires. Moreover he seems to regard high rank with something akin to aversion; at all events he is plainly opposed to the change that was made recently in heading our diplomatic list with Ambassadors. Just why the titles "Ambassador," "Admiral" and "General" should enrage a good American while those of Envoy, Rear-Admiral and Major-General should delight him is a mystery. Certainly there is no good reason for not according to our diplomats, soldiers and sailors at the present time whatever rank may be necessary for them to hold in order that they may meet their equals on terms of equality and perform their duties with greater expedition and efficiency. In the future, when the world becomes more democratic, high rank may be abolished by universal consent; but until it is no one would seem to be more entitled to enjoy it than an intelligent American. Mr. Foster's descriptions of men of high rank, and of court dress, and the various formalities of receiving diplomats, terminating missions, negotiating treaties, and establishing arbitration tribunals are all excellent, and his facts have been collected with the greatest pains and accuracy.

In one particular case, however, he is in error, and that is in his assertion that in the Venezuelan controversy an agreement was reached "thru the influence of the President of the United States" to submit it to arbitration. As a matter of fact the President of the United States had absolutely nothing to do with the agreement to refer the controversy to The Hague. The plenipotentiaries of the Allied Powers, Great Britain, Germany and Italy on the one hand, and the plenipotentiary of Venezuela on the other hand, met in Washington and came to an agreement in regard to all questions in dispute save that of preferential treatment. The representatives of the Allied Powers wished to submit that question for decision to the President of the United States, but the plenipotentiary of Venezuela objected and insisted that it should be left to the Tribunal at The Hague. Finally the Allied Powers yielded, and a protocol was thereupon drawn up and signed by the four pleni-

* THE PRACTICE OF DIPLOMACY, as Illustrated in the Foreign Relations of the United States. *By John W. Foster.* Boston: Houghton, Mifflin & Co. $3.00.

potentiaries. The other nations were then invited to adhere, and the United States and the six other creditor nations accepted the invitation. Strictly speaking, therefore, the credit for assembling the nations at The Hague in the Venezuelan case belongs exclusively to Venezuela; but while Mr. Foster is in error in this particular case, he is undoubtedly the greatest living American authority on the subject of arbitration, and on all matters pertaining to American diplomacy.

Prisoners

Prisoners,* by Mary Cholmondeley, is the story of a beautiful English girl who marries an elderly Italian duke, because she wished to be married to a duke rather than because she loved him. Later she meets an Englishman who had been her lover years before. And she attaches herself to him once more, a pretty barnacle fastened upon the heart of a man, not because she is in love, but it is the substance upon which she subsists, naturally and weakly as a silkworm feeds upon white mulberry leaves. Presently she allows her lover to be cast into prison, and to languish there for years, when, by confessing a truth damaging to her reputation, she could have saved him.

From Peixotto's "By Italian Seas." Scribners.

From this point the significance of the story and of the title is revealed. The author portrays the character of the woman so as to prove that such a person lacking the courage, rather than the desire to act honorably, may suffer all the pangs of a dreadful remorse, may become the dungeon prisoner of her own horror-haunted heart, and yet act consistently with weakness rather than strength whenever another opportunity is offered. Thus this woman, whose husband has died, becomes engaged to the brother of the man who is dying in prison to save her good name. At last circumstances force a confession from her, the first courageous act of her life, but she is frightened into it by the desire to escape remorse rather than the wish to save her victim. This scene is meant to be the dramatic climax of the book, and it is well executed; but, after all, such scenes are common in fiction, and they are often well done. That which really distinguishes this novel from a thousand others is the rendering of a love affair between two other characters. This is a mere side issue to the main story, but it is a distinct contribution to the psychology of love, and offers a new combination of hearts as beautiful as it is sane and elevating. In addition to this, the author makes herself the peer for a page or two with the writers of the best literature in the following tribute to a certain class of dull, enduring Englishmen:

"The 'last legion' is made up of them. The unburied bones of the pioneers of new colonies

* Prisoners. *By Mary Cholmondeley.* New York: Dodd, Mead & Co. $1.50.

are mostly theirs. They die of thirst in 'the never, never country,' under a tree, leaving their initials cut in the trunk; they fall by hundreds in our wars. They are born leaders where acumen and craft are not needed. Large game was made for them, and they for it. They are the vermin-destroyers of the universe. They throw life from them with both hands; they play the game of life with a levity which they never showed in the business of cricket and football. . . . No profession knows them but the army. They have no opinions worth hearing. . . . They are sometimes squeezed into Parliament and are borne with there like children. . . . They make adorable country squires, and picturesque simple-minded, painstaking men of rank. They know by a sort of hereditary instinct how to deal with a laboring man, and a horse, and how to break in a dog. They give themselves no airs. . . . And it is doubtful whether the nation finds much use for them, except at coronations, where they look beautiful; or in country councils, where they can hold an opinion without the preliminary fatigue of forming it; and on the blood-stained fringes of our empire, where they serenely meet their dreadful deaths."

Nothing better than this has been written descriptive of Englishmen since Kipling used to follow them out of Simla, and since Nearison wrote his more recent South African sketches.

The Art of the Greeks

One would hardly have supposed that the author of "Ancient Pottery," who put the world of art lovers under a lasting obligation, would or could repeat in a measure the benefaction within a year. There is, it is true, a great difference in the two services. Greek pottery, with which the former book was mainly concerned, is an important branch of Greek art, not only in itself, but because it helps us to surmise what the lost paintings of the great masters were like, and shows us Greek life and mythology. With infinite pains Mr. Walters made, out of countless monographs, a great book, *μέγα Βιβλίον*, but not *μέγα κακόν*. He put on the shelf the antiquated works of Birch, Dumont, and Rayet and Collignon.

But one might ask, What call is there *now* for a work on the *Art of the Greeks*, a more than thrice-told tale? But the tale is well told, and loaded with additions that recent years have brought.

The preface of a single page, and the bibliography of the same compass, shows that we are to have only essentials. There is a good index of eleven pages. The author sweeps over the 266 pages of matter with admirable restraint and tact in his selection. We see at once, in his four periods of Greek art, that we are dealing with a really modern book, divided into periods with natural boundaries: (1) Origins 2500 B. C. to the fall of Mycenaean Culture, 1000 B. C.; (2) Archaic Period, to the close of Persian War, 460 B. C.; (3) Best Period, 460 to 320 B. C., the death of Alexander the Great; (4) Period of Decline, 320 to 146 B. C., the fall of Corinth.

The scheme of Greek Art (p. 10) in seven parallel columns, headed Period, History, Art Characteristics, Sculpture, Architecture, Painting, Other Arts, is a good feature. The author's knowledge is in general accurate and "up to date." He gives the newly established date of the Nike Temple at 450 B. C.; but his statement that "the sculptured decoration was not added till a later date" seems venturesome. He accepts the new name, "Aphaia," for the temple of Aegina, and, with some unnecessary hesitation, "Poseidon" for the temple of Sunion. He has utilized the recent discoveries at Thermon and Delphi and in the sea, near Antikythera, and the new light on Lysippos that comes from the Agias statue. The excellent form and the well-nigh perfect and abundant illustrations will make the book extremely popular.

In a work covering such a wide field it is natural that some errors should creep in. The venerable Temple of Apollo at Corinth, which is correctly dated, is not given its name, ascertained by the excavations of the American School at Athens in 1896-98, which settled the topography of Corinth. It is surprising to read of Mykenae (p. 17): "Within the gate is the Agora, or place of the Council, with its circular stone benches, on which the Achaean chiefs sat to deliberate, just as Homer describes them." Is it possible that Schliemann's picture of the elders seated on the top of the circular wall nearly five feet high still has power to mislead the very elect! For thirty years it has been

* The Art of the Greeks. *By H. B. Walters.* 112 plates, 18 illustrations in the text. Frontispiece, Venus of Milo. Pp. xvi, 217. New York: The Macmillan Co.

known that this wall enclosed the graves of rulers of Mykenae. What is meant by the statement (p. 18) "The walls of the dromos (of the Treasury of Atreus) were of colored marble," etc? "Pelasgian and Cyclopean" are synonymous on p. 32, but (p. 29) denote quite different kinds of wall. Spata, in Attica, should not (p. 18) be credited with a beehive tomb. The columns of the temple of Aegina are called marble (p. 42), but on p. 39 they had been correctly called limestone.

It is astonishing that one who has visited the Akropolis Museum could say that the Athena, "supposed to have come from one of the pediments of the old temple of Athena," was "equally highly colored" with the Typhon and Triton groups (p. 81). In the older groups the paint is "laid on with a trowel," to cover the base material, while the marble Athena had details only, like borders of her garment, painted. The statement (p. 82) that the *right* hand of the marble maidens in the Akropolis Museum "in all cases held the offering or attribute," is incorrect. In a few cases it is held in the left. P. 106, for oxen read "heifers," on the Nike balustrade. The Argive sculptor's name should be not Ageladas, but Ageláidas or Hageláidas.

The Selinus metopes of temple C can hardly be earlier than the oldest gable group on the Athenian Akropolis, and probably not earlier than the large poros groups. To say that these "come from old buildings on the Akropolis which cannot be identified" is strange. Some three years ago Theodor Wiegand, in his monumental work on the Poros Architecture of the Akropolis, showed that the Triton and Typhon groups belonged to the Oldest Athena temple, which was subsequently enlarged, probably by Peisistratos.

Scant justice is done to Skopas, who only came to his rights in the eighties of the last century. No mention is made in the two pages devoted to him of a series of youthful heads crowned with poplar wreaths, which Botho Graef traced back to a famous original in the gymnasium at Sikyon. This series, compared with the heads discovered at Tegea nine years before, laid the cornerstone of Skopasian art.

The author is to be praised for writing Greek proper names somewhat in the Greeks' own way; instead of turning them into Latin forms, as most English writers do; but even he writes Chalcis (pronounced Kalsis), instead of Chalkis.

He has pared down remorselessly, with the spirit of Brutus, the chapter on vases, but there is nothing more admirable in the whole encyclopedic volume than this section packed with valuable instruction.

To the very end interest does not for a moment flag. Greek painting, of which little or nothing has survived, is made luminous. Terra cottas, the pet of amateurs, receive just and interesting treatment. The last three chapters treat of Gem Engraving, Coins and Metal Work, in which jewelry and so-called Etruscan mirrors are included. Of these three chapters, that to which we must give the palm is the one on Greek Coins, in which, on six exquisitely beautiful plates, are presented sixty-seven coins, nearly all of them shown from both sides. In this most important chapter a brevity most extraordinary is maintained. One rises from a reading of the book with wonder that so much has been put into such little space. One might almost say: "Infinite riches in a little room."

By Italian Seas. By Ernest C. Peixotto. Illustrated by the author. New York: Charles Scribner's Sons. $2.50.

The interest of the book lies, of course, in the pictures rather than the text, altho the latter satisfactorily fills its function of supplying a running descriptive commentary, enlivened by picturesque anecdotes and observations of peasant life on all sides of the Mediterranean. For the author fortunately interprets his title liberally, and includes not only the over-written Riviera, but Dalmatia, Malta and Tunis, which are still pervaded by Italian influences. The sketches of the Austrian coast of the Adriatic are especially interesting, for, strangely enough, it is rarely visited by the tourist. The author passed from Fiume, which some of us knew nothing about until the recent riots forced it upon our attention, to Cattaro, which, still being well behaved, few of us know anything about yet. But the numerous

pen drawings and half-tones of this handsomely printed book will do something toward removing this ignorance, for after we have read it and looked at the pictures we shall know more about it than many who have been there.

Last Words on Evolution. A Popular Retrospect and Summary. By Ernst Haeckel. New York: Peter Eckler. $1.00.

Haeckel finds it as difficult to make his "last appearance before the public" as any prima donna. Again and again, in the last few years, he has announced his intention to retire from controversy and seek a well-earned repose from his arduous labors of over fifty years of scientific investigation; but he scents the battle from afar, and again plunges into the fray with all his old energy. What called him forth this time to give these three lectures in Berlin is the growing power of "Jesuitism" in the educational and political life of Germany, and the misleading reports circulated thru the press, which he lays to the same source, to the effect that he had abandoned Darwinism. He is particularly irritated to find the Catholic leaders accepting a modified form of evolution and holding that it is in accord with the historic teachings of the Church. In these lectures he fights foes on either hand; his former teacher, Professor Virchow, because in the later years of his life he opposed evolution, and Father Erich Wasmann, of Luxemburg, because he accepts it. The Jesuit Father was led by his excellent studies on insects to believe that the 4,000 species of ants have a common origin, but holds that man, on account of his spiritual nature, did not come from the lower animals, and he also repudiates spontaneous generation. It is naturally exasperating to Professor Haeckel to see his clerical opponents calmly appropriate ideas which he has done so much to establish and for which he has been so bitterly attacked during the last forty years. He can see in it only another Jesuitical scheme to overthrow free thought. The present reactionary tendency in Germany, showing itself in many forms, from the increase of ritualism in the Protestant churches to "the Canossa journey," he attributes in part to the emigration to the United States of the more progressive and enterprising part of the population. To combat these tendencies and to reaffirm his faith in evolution he gives in these lectures an outline of his theory of the origin of man, ending with the following definition of his monistic philosophy:

> "Our monistic God, the all-embracing essence of the world, the Nature-god of Spinoza and Goethe, is identical with the eternal, all-inspiring energy, and is one, in eternal and infinite substance, with space-filling matter. It 'lives and moves in all things,' as the Gospel says. And as we see that the law of substance is universal, that the conservation of matter and of energy is inseparably connected, and that the ceaseless development of this substance follows the same 'eternal iron laws,' we find God in natural law itself. The will of God is at work in every falling drop of rain and every growing crystal, in the scent of the rose and the spirit of man."

An Introduction to the English Historians. By Charles A. Beard, Ph. D. New York: Macmillan & Co. $1.60.

Dr. Beard's *Introduction to the English Historians* is an admirable experiment in the right direction. Every teacher of history, as of the kindred branches, literature, economics and sociology, knows how entirely dependent he is upon a library for his success in giving his students a comprehensive and yet unsuperficial acquaintance with his subject. It has become customary to devote a considerable portion of every course of lectures to the presentation of a bibliography. In a long list of books there are always many that are of importance only in so far as they serve the instructor as a commentary upon the general argument of the course, and it is of high consequence as a measure of economy both to the instructor and the student that the bibliography should be supplemented with exact references to the passages in an elaborate work which contain the gist of the author's discussion. The presentation of these references, in addition to an increasingly extended bibliography, absorbs a great part of the time of both the instructor and student, and there is the additional difficulty that the student imperfectly acquainted with his subject, or inexperienced in the methods of library research, may find the task either too ar-

duous to perform at all, or too difficult to accomplish before the references have lost their right context in the course. In the present volume Dr. Beard has not only supplied an excellent bibliography upon English history, but he has also reprinted, from the best authorities upon each period, the passages which contain the kernel of their arguments. Moreover, he has bridged these selections, which in similar volumes are too frequently left unrelated, with succinct, intelligent and delightfully lucid summaries of all the available evidence, so that the book has an entirely unexpected continuity. Both from the pedagogical and the research points of view the volume deserves unqualified commendation. It is intelligently discriminating in its selections, liberal and mature in its comment, and in its arrangement it shows the results of thoro scholarship and fruitful class-room experience. It should save both teachers and students of English history a vast amount of labor and time.

Literary Notes.

....A course in the critical study of editorials has been instituted by Dr. Ella Adelaide Knapp, of the Woman's College, Baltimore. Among the publications recommended for special study are the Baltimore *Sun*, the Washington *Post*, the *Nation*, THE INDEPENDENT and the *Outlook*. After a period of analysis the students will be required to write editorials on current topics in the fields of politics, literature, science and sociology.—*Editor and Publisher.*

....The Nobel Prize for the greatest work in idealistic literature is awarded this year to Giosuè Carducci. He is now seventy years old and his greatest claim to recognition is the inspiration his poetry gave to his countrymen in their struggle for Italian unity and freedom. The Nobel Committee evidently are fixed in their determination to disregard entirely the founder's will, that the prizes should be given for work done during the preceding year.

....The University of Chicago has taken the lead in directing popular interest in Russia into solid and durable channels. It has brought over first-rate authorities like Professor Maxime Kovalevsky and Paul Miloukov to give in its halls courses of lectures, which have since been published in book form and are numbered among the best productions of its press. To these is now added Boyar and Speranski's *Russian Reader*. The *Reader* proceeds on the principle that a language is learned by reading it and having each difficulty explained as it arises. Accordingly the *Reader* presupposes only so much knowledge of Russian grammar as may be acquired by any one within a few days. The selections are made up exclusively from the writings of the greatest living Russian writer, Count Leo Tolstoy, copious notes and a full vocabulary help in their elucidation, and the study of the language is thús made as easy and attractive as it possibly can be. It should be added that the book is not a mere translation, but an English edition of the French work, and has enjoyed thruout the advice of the authors of the original. The English editor is a son of the late President Harper, and is an instructor in Russian language and literature in the University of Chicago. [*A Russian Reader*. by Paul Boyer and N. Speranski. Adapted for English speaking students by Samuel Northrup Harper. The University of Chicago Press, Chicago. $3.00.]

....At a large and representative assembly in Carnegie Hall, New York City, November 21st, in honor of the late Carl Schurz, Richard Watson Gilder, editor of the *Century Magazine*, read the following poem:

CARL SCHURZ.

In youth he braved a monarch's ire
To set the people's poet free;
Then gave his life, his fame, his fire,
To the long praise of liberty.

His life, his fame, his all he gave
That not on earth should live one slave;
True freedom of the soul he sought
And in that battle well he fought.

He fought, and yet he loved not war,
But looked and labored for the day
When the loud cannon silent are
And holy peace alone hath sway.

Ah, what a life! From youth to age
Keeping the faith, in noble rage.
Ah, what a life! From knightly youth
Servant and champion of the truth.

Not once, in all his length of days
That falchion flashed for paltry ends;
So wise, so pure, his words and ways,
Even those he conquered rose his friends.

For went no rancor with the blow;
The wrong, and not the man, his foe.
He smote not meanly, not in wrath;
That truth might speed he cleaved a path

The lure of place he well could scorn
Who knew a mightier joy and fate;
The passion of the hope forlorn,
The luxury of being great.

The deep content of souls serene
Who gain or lose with equal mien;
Defeat his spirit not subdued,
Nor victory marred his noble mood.

Pebbles.

EVERY once in a while the world has a piece of luck. For instance: It is said that letter writing is a lost art.—*Atchison Globe.*

INCORPORATED.

THE manager once of a big "Three Ring"
Sought a chief from the cannibal isles to bring;
But alas! his project came to grief,
For now he's manager-in-chief!

—*Princeton Tiger.*

By Mother Goose:

THE King was in his counting house
Counting out his money;
The Queen was in the parlor
Eating bread and honey;
The maid was in the garden
Hanging up the clothes;
Down came a blackbird
And pecked off her nose!

By Chaucer:

A King ther was, and that right miserlye,
He counteden his guilders greedilye,
And Eke his queen that wered a gipoun,
Dit eten honey for digesteoun,
Whylom the mayde in the yard nearbye,
Don hangen up the clothes sickerlye;
Down cam a black bird right upon hir face,
And left a verray parfit emptye place!

By Whittier:

Maud Muller on a summer's day
Hung clothes in a garden—so they say;
While the judge in his office in Wall Street sat,
And his lady ate jam in a third floor flat.
As Maud tangled herself in the clothesline, fate
Decreed—what is much too sad to relate,
But of all sad faces I've ever seen,
The saddest of all is Maud's, I ween.

By Bliss Carman:

Once there was a maiden
Long ago,
Household duties laden
Better so!
Sheets and shirts a-wringing
Dirt dispells,
Blackbird—horrid creature—
Came with joyous singing,
Pecked upon her feature
Where she smells!

By Poe:

Once within a garden dreary, strolled a maiden worn and weary,
Hanging brother's, sister's, mother's washing near the kitchen door;
Suddenly there came a flapping, as of some one loudly clapping,
And it caught the maiden napping, napping with a gurgling snore.
Then a Black Bird huge and vicious, dripping with his victim's gore,
Took her nose and—nothing more

By Tennyson:

Pearline and soapy clothes,
The starchy swish and swash.
And may there be no black bird take my nose
When I hang out the wash!

By Austin Dobson:

He picked at her nose,
But he thought 'twas a cherry.
She blushed like a rose,
He picked at her nose,
'Twas the first of her woes,
But it made him quite merry,
He picked at her nose,
But he thought 'twas a cherry.

By Whitman:

I am the King, I am myself,
I am part of all I behold:
Money, rotund, glistering; honey, translucid mellifluous;
Scent of the wash tub, bars of soap, clothes pins, stretch of the clothes line, shirts on the line,
The swooping whirr of a bird, ominous, black, portentous,
The robust, bare-armed, lusty, soap-suddy Bridget, minus a nostril—
Would it were the queen's!

By Longfellow:

In the wigwam by the water,
By the shining big-sea water,
Sat the big chief, Umskihaha,
Counting o'er his beads of Wampum,
And the red squaw in the Tepee
Ate the honey, whiskey woo woo—
Honey sweeter than the fragrance
Of the yellow rose in autumn,
While the beauteous Minnehaha
Strolled among the deepening shadows,
Came the Black Bird, Hiawatha,
Gummed his lips upon her features.

By Kipling:

In the office by his check book
Sits the governor tonight,
And the madam's in the parlor
Putting honey out of sight.
But the maiden in the garden
Hangs the clothes up on the line,
Singing: "Back, you naughty black bird,
Bring you back that nose of mine.
Bring you back that aquiline,
Place it where it used to shine.
Stick it on with porous plaster,
That's quite good enough for mine."

By Swinburne:

And you were, my dear, queen,
If I were King, my darling,
We'd count our dough together,
In sad or singing weather,
'Mid daffodil and starling,
And eat our jam between,
If I were King, my darling,
And you, my dear, were queen
If you were what the nose is,
And I were like the bird,
We'd fly afar together,
On light and lithesome feather,
O'er fields and flowerful closes,
'Twould really be absurd
If you were what the nose is,
And I were like the bird.

Editorials

A Broader Thanksgiving

How to make November a bright and cheerful month is a problem hard to be solved. All the flowers have given up the struggle with frost except a few chrysanthemums and the christmas rose. A list of hardy chrysanthemums can be got, and the little christmas rose, which is only a hellebore, holds itself close to the ground and blossoms in the snow. Then there is one shrub that blossoms just now, which we call the hazel—a curious out-of-time affair, that, losing its hold on the spring, somehow tumbled into adjustment with the autumn. The euonymus, the viburnum and the barberry defy the surly days and carry all the brightness of midsummer. But in spite of these struggling efforts to be cheerful, nature has a sad way about it. The installation of Thanksgiving in New England was largely to cheer up the poor fellows who had worked so hard for comparatively small results. Governor Bradford sent out his men to shoot wild fowls, in order that the colony might have "a week's frolic and jollification." Their sports included religious exercises, but these were really social gatherings, and praying and preaching had a decidedly cheering aspect not so palpable in these later days. The hunters brought in a large supply, and the people unbent themselves for a full week of pleasure and rest. They feasted and they played; shooting at marks, welcoming their Indian guests as well, and singing when tired of sport. A day of thanksgiving was not altogether a novelty, for it was inaugurated at Leyden before they came to this country. In New England thanksgiving was, however, modified largely by conditions—giving free reign to frolic.

In these days, so widely has life widened out that we are living in eras rather than in years. What we have to be thankful for is not so much an annual crop of wheat and pumpkins, but that turn of the wheel of Providence that sends us nearer and nearer to a time when the Golden Rule will be workable. The very oldest among us began life almost identically with the opening of the steam age. Before that were political dreamers and social enthusiasts, who expected the world to move staidly on at the same pace that it had held in the eighteenth century. These men wrote the Golden Rule into the Declaration of Independence. They begat a Constitution containing the principles of federalism and fraternity. The steam age began the building of huge cities, while social life underwent a total economic change. Rural homes lost their characteristics, while their petted industries went over into factories. Capital had to be massed, in order that dreamers might work out their dreams into railroads, that should bind together the future peoples, carving a wilderness into a republic. Whatever the incidental evils, we can have only gratitude and joy as we sum up an age in which material forces were compelled to bring out moral victory. Patriotism lapsed into philanthropy and nationalism into internationalism. We were being hurried forward to a knowledge of all the world as a neighborhood, and every man everywhere as a brother.

During this steam age we abolished dueling and slavery and established the law of temperance. While we were arguing that human bondage could not persist more than a century longer Providence wiped it out inside a decade. Lincoln wrote his name under that of the Almighty, and became the one man of a hundred years. We can scarcely realize today that nearly all of our leading statesmen of the earlier part of the last century were duelists, including Clay, Randolph, Jackson and Benton, while Hamilton fell at the hands of a Vice-President.

Among the magnificent achievements of the age that opened into our electrical age was the discovery of the spectroscope, the instrument whereby we were able to determine the unity of the universe. It was not until 1853 that it became demonstrable that all the worlds are of the same material; stars and

suns and planets and even the cosmical dust of the comets. But we still lacked the demonstration that all life on the earth, in all its unfoldings, is one life. The hypothesis of evolution gave us this magnificent conclusion, that not only is all matter one, but that there is one Purpose in all, over all and thru all. God became the term whereby we should express the fact that life and will and purpose are primal facts of the universe. Evolution, entrusting to us the work of all past ages, charges on us to add our increment to heredity, and make our lives sublime.

Commercial expansion and the commercial spirit, so far from being something to be reprehended, are to be counted among the grandest achievements of the preceding age. Notwithstanding the frequent lapses into selfishness, the growth of commercial conscience thru the nineteenth century was a steady victory of morals. To commercial expansion we owe that remarkable growth of human fraternity which has enabled us very nearly to realize the conception of Jesus that all men are neighbors.

Perhaps the three greatest social changes of these past years have been the emancipation of woman, the emancipation of the school and the emancipation of the Church. It is difficult today to realize that half a century ago everything beyond the common schools of America was closed to women except a few private institutions, whose privileges were extended to a very limited circle. It was in 1835 that Asa Mahan threw open the doors of Oberlin, without regard to sex or color. Meanwhile the Church has been able to slough off a large share of its medievalism and become the home of faith and hope and love.

We have been inclined, not so much to count up the gains and losses of a single year, but to consider that magnificent gift which we inherit from a full century of generations. Not only in our barns and cellars have we a storage of divine love, suggesting thanksgiving, but in our home life, in our social life and in our political life we have an evolution superbly encouraging. It is in us and it is for us, this harvest of ethical achievement. We hold it in trust, not altogether as our private property, but as that with which we may lead on to nobler evolution and a finer humanity. We are bound to see to it that there is no life-waste and no moral energy misapplied. For whether it be wind-power, or animal-power, or steam-power, or electricity with which we work in our factories and on our farms, there can be but little forward movement without power of manhood. Have we not sufficient cause for retaining this day of thanksgiving? We are entering on a new era. It shall be greater than the past. What great revelation from God is to be spoken? Who shall speak it? Not *that* man, be sure, who is the most self-confident; not even that man who is most learned; but that man who stands most open to the clear light of heaven—nearest to the Divine Principle—and who in all sincerity is willing to be illumined, not by the light of old theories and outlived faiths, but by that of the Infinite Father of today.

Dr. Crapsey's Case

THE final court, acting in review of the regularity of the procedings of the ecclesiastical court of the Protestant Episcopal Church which condemned Dr. Crapsey for heresy, finds the proceedings regular, and the decision therefore sustained. This will permanently suspend him from exercising the functions of a minister in that Church until he shall satisfy the ecclesiastical authority of his diocese that his belief and teaching have become conformed to those of the Apostles' Creed and the Nicene Creed, as the Church understands them —which he says he will not try to do. The court says that his belief is excluded. We do not see but the court properly interpreted these ancient documents, and in a different and more natural sense than Dr. Crapsey does. He tries to put a sort of spiritual sense on the virgin birth and the resurrection of our Lord, which is not found in the Gospels nor in the two Creeds. They expressed it all historically and literally. It appears to us to be a more intellectually honest sort of interpretation and conduct, if one believes there is something mythical about these accounts, and that they have,

one or the other, no sufficient historical proof, to say so plainly, and end it there, and then hold to the teachings of our Lord as firmly as he pleases, and try to claim and prove his right to a place in the Christian Church. These "spiritualizing" dealings with what on the face of it is plain language approach equivocation, to the ordinary mind. We do not doubt that there are many excellent men, who believe they hold all the essentials of the Christian faith, and who are members of our Christian denominations, but who frankly admit that legend has entered into the outside framework of both the Old and the New Testament.

And now Dr. Crapsey accepts the verdict, and in a very manly and Christian communication to his bishop asks to be deposed from the priesthood of his Church. He admits the regularity of the proceedings and accepts the verdict, but cannot honestly change his intellectual convictions. His study of the Bible does not convince him of the historic character of the Gospel of the Infancy, with the virgin birth, which he believes to be a later addition to the two Gospels to which it is prefixed. Equally he does not believe that Jesus visibly ascended into Heaven in his physical body. He has tried, he says, to "spiritualize" these statements so as to agree with the Creeds, an interpretation which the ecclesiastical court will not allow.

But he further tells his bishop that there are hundreds of ministers and thousands of laymen in the Episcopal Church who agree with him, and he asks them not to conceal their views and not to withdraw. If they are right they will win within the Church; if they are wrong he will rejoice to have them fail. This brings up another question of honesty, and there we are inclined to agree with the rector about to be deposed. We do not believe that those who regard themselves as in general agreement with their Church should leave it for what they regard as minor differences of view. If others think such are major differences, let those others put them out, as in Dr. Crapsey's case. Doubtless these other hundreds of priests and thousands of laymen who agree with Dr. Crapsey believe that they hold Jesus Christ as Master and Lord, and his teachings as the true basis of the Church as truly as do the members of the court which by a majority condemned him. Then let it be fought out within the Church itself. By such conflict of argument will the truth be reached and in no other way; and it is the truth and that only that we want, the truth which each generation must find for itself.

The Taxation of Fortunes

It is confidently expected that the President in his message to Congress will renew his recommendations on the taxing of great fortunes. It is known that he has this subject much at heart, and that he regards a practical measure providing for a limitation of wealth by the taxing power as equally important with rate legislation and the licensing of corporations as parts of his general scheme to bring the "money power" under subjection to public authority.

Fortune limitation will be listened to more calmly when it is brought forward again than it was when Mr. Roosevelt first proposed it. It was then "socialism," "anarchism," "demagogy," or whatever else the philistine mind thought most objectionable. It is safe to say that whatever the country at present thinks of Mr. Roosevelt as a personality, it will now take his propositions more seriously than it did awhile ago. Mr. Hearst frightened people in "comfortable circumstances" more than they like to admit, and they are willing to go a little farther with Mr. Roosevelt than they thought they ever could. So long as they believed that the deluge would come after them, they didn't mind. The mere possibility that rain might begin this winter gave them a chill.

There are no accurate statistics of either fortunes or incomes in the United States, and therefore no data from which to estimate the revenue that might be drawn from these sources by taxation at any given rate, or according to any given sliding scale. It is fair to presume that Mr. Roosevelt is less interested in this financial aspect of the problem than he is in the broad question of public policy, whether great fortunes as such should be limited for the public good. The contention that neither Con-

gress nor the President can constitutionally act upon this latter proposition is purely academic, as is the contention that the Government cannot legally create a tariff for other than fiscal reasons. So long as taxation must be levied for fiscal reasons, it will in practice be made to accomplish incidentally a redistribution of wealth not specifically mentioned in the title line of enacted bills.

Great fortunes in America long since became "multi-millionaire" fortunes, and it is literally true, and not a grim joke, that in "well-to-do" circles no man is counted a millionaire unless his income, rather than his mere "pile," is measured by six or more figures. The *World Almanac* of 1906 prints the names of the individuals constituting eighteen multi-millionaire family groups. These are, namely: The Vanderbilt group, in which there are now twenty-two great-great-grandchildren, besides great-grandchildren and grandchildren; the Gould group, in which there are thirteen grandchildren and six children; the Astor group, in which the names of great-great-grandchildren already number fifty-two; the Carnegie group, consisting of the founder of the family and one child so far; the Rockefeller group, in which to date have been born eight grandchildren and six great-grandchildren; the Morgan group, in which the great-grandchildren number thirteen; the Goelet group, including four grandchildren; the W. F. Havemeyer group, in which have been born twenty-four grandchildren and five great-grandchildren; the F. C. Havemeyer group, in which have been born thirty-three great-grandchildren; the Marshall Field group, in which have been born four grandchildren; the Belmont group, including four grandchildren; the Whitney group, in which have been born seven grandchildren; the Leiter group, including three grandchildren; the Mackay group, with five grandchildren; the Fish group, in which have been born twenty-one great-great-grandchildren; the Lorillard group, including twenty-five great-grandchildren; the Armour group, including four grandchildren, and the Mills group, with five grandchildren.

These figures sufficiently demonstrate the absurdity of a widely held notion that millionaire families tend to extinction, and great family fortunes to dissipation. There never has been a time in any country on earth where the exactly opposite notion was more conspicuously and perilously true. Should present tendencies continue unchecked for half a century, 90 per cent. of the wealth of the United States will be owned by not more than one hundred compactly organized and intermarried family groups.

People who carry their individualism to the extent of maintaining that society, by legislation and the opportunities that it creates, contributes nothing toward the amassing of private fortunes, and therefore cannot rightly control or limit them, may inveigh against the "iniquity" and the "madness" of the President's plan. Their number is not large. The great majority of sane-minded citizens, reflecting soberly upon the way things are now going, will soon admit, if they do not admit already, that the limitation of great fortunes by taxation is an eminently conservative measure, which may happily save us from the more drastic program of an extensive collective ownership and management of the means of wealth production.

The Nobel Prize in Medicine

It has just been announced that the Nobel prize in medicine for the present year, amounting in value to about $40,000, is to be divided between Camillo Golgi, of Italy, and Santiago Ramon y Cajal, of Spain. It may be somewhat of a surprise to the public to hear of this choice, for these names are not popularly known, and indeed it is doubtful if they have been heard at all outside of medical and psychological circles. Their work was strictly scientific. Physicians generally, however, and especially those who are interested in neurology, will be sure to appreciate the propriety of the selection, and applaud the committee for conferring the prizes so worthily. Both of these men have done scientific work of the highest grade on rather meager salaries and without any thought of pecuniary reward. They are indeed excellent examples of the scientist who works for the sake of the work and not of its returns. What they accomplished

deserves to be widely known, because it represents a revolution in an extremely important subject—our knowledge of the central nervous system and especially of the composition of the brain.

It will be interesting to note that this great advance in knowledge was accomplished not by means of some specially refined method of investigation, nor by the use of a higher power of the microscope, but simply by a new method of staining nervous tissues that brought out very clearly certain nerve elements. This staining method was the invention of Golgi, who hit upon it when he was less than thirty years of age, and demonstrated brain cells as they had never before been seen. He showed that not only did the nerve cells have axis cylinders, but also a number of shorter prolongations, and that these ended freely, that is, were not continuous with any other cell processes. His method consisted of hardening the tissues in a solution of bichromate of potash or of corrosive sublimate and then exposing them for many hours to the action of nitrate of silver. Golgi's work received considerable attention at first, but then was allowed to fall into obscurity, where it remained until the Spanish observer took it up and showed its power to furnish new ideas with regard to the constitution of the nervous system.

Ramon y Cajal says himself that Golgi traced practically all the elements of the nerve cell except the axis cylinder. The working out of the proper idea of this remained for him. It had been thought that the axis cylinders were continuous one with another. Nerve cells were considered to be different from other cells in that respect that instead of being merely contiguous they were actually continuous with at least certain neighboring cells. The conduction of nerve impulses seemed to require such a continuity. Ramon y Cajal showed, however, that the minute terminal filaments of the ends of the axis cylinders only touched, but did not join, corresponding filaments from neighboring cells. This idea of a discontinuity in the nervous system was so startling and novel that men at first refused to accept it. Ramon y Cajal was doing his work down in Spain, and scientific work of any value in medicine or in the biological sciences generally had not come from Spain during the nineteenth century. His publications then were viewed with suspicion and especially by the German investigators in neurology.

When the International Medical Congress held its sessions at Berlin, in 1891, Ramon y Cajal attended and demonstrated his specimens. His work had been done with Golgi's stain, but he had applied it more particularly to embryonic nervous tissue. In this it gives most delicate results and he had brought with him some beautiful examples. After seeing them there could no longer be any doubt that he had made a great discovery, and it was realized that a new conception of the nervous system must be accepted. It is interesting to note that the part of the proceedings of this congress which was most widely announced and which attracted most popular attention was Koch's tuberculin cure for consumption. This proved to be an utter failure. Ramon y Cajal's demonstrations were utterly unheard of, yet proved to be revolutionary in their effect upon nervous anatomy and upon medical ideas generally with regard to nervous diseases. There are some who consider that the public attitude toward these two discoveries is symbolic of what usually occurs with regard to supposed and real advances in medicine.

After Ramon y Cajal's discoveries and demonstrations the neuron theory of the constitution of the nervous system came into vogue. It was realized that each nerve cell was an independent entity which might be diseased without the next one in the chain of nerve cells being necessarily affected. The supposed felt work of tissue in the central nervous system was proved not to be a reticulum independent of the cells, but really only a series of cellular processes lying close together. Applications of these ideas to mental processes became popular. Sleep was considered to be a pulling apart from one another of the ends of axis cylinders thru which impulses usually pass, with consequent unconsciousness. Narcosis was explained in the same way. Unconsciousness after injury to the brain was suggested as being the result of such a shock to the nerve cells that they no longer maintained their communication

with one another, but pulled apart and thus precluded all further intellectual processes. As time went on, however, this method of explanation, tho popular, lost credit with neurologists because of its crudeness.

Besides the nerve cells Ramon y Cajal also studied the connective tissue cells, which lie between the brain cells and act as supports for them. His investigation of these led him to the thought that possibly they were the active agents in permitting, directing and also preventing the passage of nervous impulses. The terminations of these cells are found lying between the nerve cells in such ways as to suggest the idea that they act as insulators. If this be the case, when we wish to go on with certain intellectual processes, our will exerts itself upon these neuroglia, or connective tissue cells, and their contraction permits the true nerve cells to enter into communication with one another. This would lift the burden of voluntary movement from the nerve cells, whose function would be expected to be much higher than this, and places it very properly upon the connective tissue cells of lower rank and function. Ramon y Cajal also pointed out that some of the terminations of the neuroglia cells were to be found in the walls of the little blood vessels of the brain; and that, as attention probably depends upon blood supply, these might very well be the instruments by which such an increased blood supply was obtained whenever desired in a particular part of the brain.

All this is, of course, theoretic, tho it has for its observation some extremely acute observations upon the minute anatomy of the neuroglia cells. The theory is very taking and has naturally received a great deal of attention. Ramon y Cajal has not urged it, but has been content to suggest it as possibly throwing light upon the intricate problem of the physical mechanism of intellectual processes. His work and that of his great Italian colleague have been done in the spirit of supreme devotion to science, and without any effort to secure that popular advertising which is sometimes —apparently, at least—supposed to be the right of the medical discoverer. They are to be congratulated on the fact that their modesty has now won a rich reward, which will give them their due prominence before the world under circumstances in which there can be no suspicion of their motives or of any personal element of self-seeking in the matter.

Subsidies for Trade With South America

Secretary Root's address before the Trans-Mississippi Commercial Congress, at Kansas City, was an elaborate argument for an enlargement of our export trade with South America by ship subsidies or subventions. Our own people, he said, have now accumulated a surplus capital beyond the requirements of internal development, and are looking for investment opportunities abroad. South America has passed from the stage of militarism into the stage of industrialism, and now desires foreign capital for the development of natural resources. But we are selling to the South American people only 12½ per cent. of the goods they import, altho we buy 20½ per cent. of the goods they sell abroad; and our purchases from them are two and a half times as great as their purchases from us.

What should our people do to increase this export trade? They should find out what the South Americans want, Mr. Root said, and conform the offered product to their customs and demands. They should have, in South America, agents who can speak Spanish or Portuguese; they should accept the credit system which prevails there, and which has been accepted by European exporters; they should establish an American bank in each of the principal cities. Our merchants should acquire that respect for the South American to which he is entitled. The investment of American capital in South American countries should be promoted. And "it is absolutely essential that the means of communication" (the mail, passenger and freight services), "should be improved and increased." This, Mr. Root says, "underlies all other considerations."

By ship subsidies, he argued, the desired increase of trade is to be obtained: not by free ships, not by reducing duties on goods which American ships bring to

our ports. The builders and the owners of American ships labor under two disadvantages; one imposed by our protective tariff, in that it compels them to pay high wages to officers and crews and thus makes the cost of operation much higher than it is in the competing foreign ships; the other, due to the subsidies paid by the maritime nations of Europe. In his opinion, we can and should "neutralize these disadvantages" by governmental action. "We cannot repeal the protective tariff; we do not wish to lower the American standard of wages; we should give back to the ship-owner what we take away from him for the purpose of maintaining that standard." The subsidies would be "compensation for injuries inflicted upon American shipping by American laws." This is the substance of his plea.

Why is it that Mr. Root, in this long address, said nothing about the cost and the selling price of the American goods? These are absolutely essential factors. Some reference to them might have been suggested by his remarks about the effect of the tariff upon the pay-rolls of the ship-owner and the ship-builder. But concerning these factors he was silent. And yet, as we have said, they are absolutely essential in a consideration of the question, and of the highest importance. If American goods of quality equal to that of the foreign goods cannot be sold in South America at the price of the foreign products or at lower figures, it will be useless for subsidized ships to carry them to South American ports.

Everybody knows that, as a rule, our manufactured goods cannot be sold there under the prices of competing foreign goods, if they are offered at the prices obtained here at home, with reasonable freight charges added, or even with the freight charges cut off. The tariff that has raised the cost of operating the American ship has, with the help of combinations and with other influences, made the price of American goods high—too high, as a rule, for successful competition with similar European goods in the South American market.

Does anybody need to be told that the average of the prices of manufactured goods in the United States is high at the present time? The "index numbers" of our leading trade journals show how great has been the rise in the price of commodities during the past few years. They show that the average is still rising. Increases of wages granted since November 1st, and amounting to not less than $50,000,000 a year, will cause an additional advance in the cost of production and the selling price. The increased cost of living, due to these higher prices, has for a long time been a prominent topic for economists and the daily press.

It is true, as Mr. Root says, that our manufacturers and exporters have not diligently sought to satisfy the tastes and wants of these consumers south of us, that they have not been willing to accept the South American credit system, have not set up banks down there, and have neglected other methods of commending themselves to buyers. A majority of them have not thought it worth while to do these things; they were satisfied with the protected home market, or they knew that their prices would not suit our friends south of the Isthmus. But if they had done all these things, and if they now had the services of a subsidized fleet of freighters, they could not sell their goods there, except at a large discount from the prices they receive at home.

American protected goods have been sold abroad, and are sold abroad now, at such a discount, but it is a practice that is not approved by the American public. The American people will not tax themselves for subsidies to support such discrimination against themselves and in favor of foreigners. Nor do they forget that our manufacturers not long ago were selling to foreign shipbuilders on the Clyde the steel ship plates for freight steamers at prices much lower than those which our own shipbuilders were required to pay for them, and that one of the directors of the great selling company was a prominent advocate of subsidies, who was accustomed to point out that the cost of our shipbuilders' material was much higher than the cost of similar material bought by their competitors abroad.

A reasonable mail pay allowance, out of the profits of the ocean mail service, for lines to South America, should not be opposed. Additional subsidies for the

maintenance of trade lines would not sell goods upon the basis of prices now prevailing in our own market, unless the Government should subsidize the exporters or give buyers a rebate. Some eminent authorities have thought that the sale of our goods in South America could be promoted by treaties of commercial reciprocity. Such was the opinion of Mr. McKinley and his Commissioner, Mr. Kasson. This method should not be ignored by those who long to increase our export trade. At all events, they ought to consider and to discuss the relation of prices in the United States to the profitable shipment to South America of goods to be sold there in competition with similar goods imported from Europe.

The Ethics of Tale-Bearing

We observe that not a few people are inclined to defend the three companies of negro soldiers who refused to tell on those of their number who were guilty of shooting and killing some innocent persons in Brownsville, Texas. Their courage and self-sacrifice we commended, in that they would suffer the shame of dismission from the army rather than give the information which would lead to the discovery and punishment of their guilty companions. It was a squad of several soldiers that went thru the streets at night shooting into houses, and it is incredible that a great many of the soldiers do not know who they were. Probably all of them, close companions that they are, know who they were; and yet by a common agreement, a sort of "honor," they refuse to tell. They think it would be dishonorable, more dishonorable than to be discharged "without honor," and there are not a few white soldiers and citizens who applaud their reticence. We think otherwise.

To begin with, the crime was an unsoldierly and dastardly one. We don't care what the provocation and insults may have been, it was vicious murder. There was no excuse for it. We do not suppose that even our negro journals and speakers defend that. They only say that it was unjust to punish the innocent with the guilty; and that the great majority of the soldiers, with their good record of gallantry, were innocent. Certainly they were innocent of the murder, but they did agree to shield the murderers, and this is a very serious offense.

For murderers must not be shielded in any civilized community. Whatever may be thought of "honor" requiring concealment of minor peccadillos, there can be no question in the case of major crimes which are condemned by the conscience of all. To lynch a criminal, against the law, is a great offense; to conceal a criminal from the just execution of law is only a less offense. Both have the common gravamen that they are meant to overturn law. One does it by illegally punishing the criminal, and the other by illegally saving him from punishment; and which is really the worse it is not easy to say. Both flout and insult law. Both are enemies to the peace of the community.

The sentiment which stands by a companion guilty of an offense against law is essentially a barbarous one. It belongs to a barbarous state of society in which one considers the interests solely of the little phratry or tribe to which he belongs. All others are enemies without rights. The murder of a member of another, and therefore hostile, tribe would be thought no offense, and the little, narrow altruism of the tribe must be maintained. But of all men soldiers who serve a whole nation, or policemen who serve a great city, ought to have reached beyond this state of barbarism. If they stand by each other as they too often do, it is because they have forgotten their duties to the community they serve, and are thinking only of their own selves, which is of the essence of barbarism. These black soldiers forgot their soldierly duty to protect society, even against the offenders of their own number. Their "honor" was the honor of barbarians.

But we speak not only of these most unfortunate and misguided men, whose fault has given a lesson to the whole army and to the whole country. We would have the parallel seen with the very common examples of the same error elsewhere. We are very sorry that a black regiment, which had served with so much distinction, should have given the lesson. But it is needed wherever classes of men or youth are set apart by them-

selves, and especially by students in academies and colleges.

Their offenses are generally minor ones—they do not commit murder, altho such cases are known. But the same rule and duty apply even in minor cases of breach of law, whether of the country or of the institution. Its laws must be maintained. He who is guilty of breaking them is a foe to be exposed and punished. To conceal his offense is to be a partaker of it. Every citizen, every student, should always be on the side of the public as against the offender. The only exception is when the law is unjust and wrong.

Why, then, is there so general a sentiment against tale-bearing? For the very good reason that tale-bearing is so often a mean and selfish act. The tale-bearer reports the fault of his companion usually not because he cares for the interests of the body of which he is a part, but to curry favor with his teacher or superior. He wishes to down his companion so that he may lift himself. Such a spirit is quite as contemptible as it is usually regarded as being, and "a tale bearer separateth very friends." But that does not affect the duty to inform against offenses when required to, in the interests of law, by those who have the right to demand information. ourts put witnesses on oath and require information whether the witnesses are willing or not, and such is their duty, for the safety of the community, and equally it is the duty of witnesses to respond.

The Best Woman in Chicago

A Chicago daily has attempted to settle the delicate question of "Who is the best woman in Chicago?" by a telephone vote of 400—not necessarily *the* 400—prominent women in that city. From the results it appears that the social settlement is generally regarded as the most useful form of philanthropy, for settlement workers are named more often than any others. The best known of these, Miss Jane Addams, the founder of Hull House, received the most votes. She doubtless would have retained her place at the head of the list if the number of voters had been indefinitely extended or if they had been confined to almost any quarter of the city, for she is pre-eminent in her ability to gain and retain the respect and affection of people of all classes, conditions and opinions. She has shown that it is possible to advocate radical views without having one's sanity suspected, and to use tact without sacrificing one's principles. Just now, however, her popularity is under a severe strain, for she occupies a position in which several prominent men have lost their reputations; she is a member of the Chicago School Board. The fight on the pay and promotion of teachers is hot now, and her independence in voting has already lost her friends on both sides. Next to Miss Addams, the greatest number of votes were given to Miss Mary McDowell, the head of the settlement maintained in "Packingtown" by the University of Chicago; she who was described by a pessimistic writer about the stockyards as "an angel standing on the brink of hell and throwing in snowballs to cool it down." Next on the list is Mrs. Harriet van der Vaart, head of Neighborhood House, and an advocate of the new child labor law; Miss Julia C. Lathrop, of the State Board of Charities; Mrs. Charles Henrotin, a leader of the club-women of the city, who has done much to secure shorter hours and better conditions for working girls; Mrs. Herman Falkenstein, who turned her own home into a settlement; Miss Anna Nicholas and Miss Mary Bartelme, who have done a great work among the poor and orphaned children of Chicago; and Mrs. Joseph T. Bowen, who secured the establishment of the Juvenile Court. Evidently the ideal of womanhood has changed since Thucydides said that the best woman is she who is never heard of either for good or evil.

As Others See Us

It is commonly believed that no one can judge correctly of the value of his achievements and ability in comparison with his fellows, but it seems that this does not apply to scientific men. Professor Cattell, in preparing for the Carnegie Institution a list of Americans who have contributed to the advance of science, asked ten of the leading representatives in each of twelve branches of science to arrange in

the order of merit the ten most eminent men in their respective sciences. From the tabulated data of this inquiry the probable error of each man's judgment in comparison with the consensus of the whole has been calculated. It might be thought that there would be difficulty about assigning to oneself the proper rank in the list, but this proved to be the easiest task of all. The men of science showed themselves just about as apt to underestimate as to overestimate themselves, and the results show that on the whole a man's estimate of his own eminence is more accurate than the estimate of any one of his colleagues. This confirms statistically the impression one gets from conversing with scientists and hearing them lecture, that they possess to an unusual degree the power of regarding their work objectively and impersonally. The true man of science, in reviewing the recent progress of research in his field, neither avoids the mention of his own contributions nor obtrudes them. In spite of personal jealousies and antipathies, of inequalities in opportunities and advantages, credit for work done anywhere in the world, is assigned with remarkable accuracy and impartiality by other workers in the same field. It would be interesting to see if artists, musicians, statesmen and authors would judge as justly of themselves and of each other. In the republic of science there are no artificial ranks and orders to impede or falsify. The only official selection approaching to Professor Cattell's list is the National Academy of Science, which is supposed to include the hundred most eminent men of science in the United States. Against this as against every similar body the world over, charges of favoritism are often brought, but it stands the test of comparison with this more accurately selected list very well. Out of the first hundred men on the list 61 are included among the 97 members of the National Academy, and of the first 30 men on the list 28 are in the academy. The four thousand scientific men of the United States are distributed as follows among the sciences: Chemistry, 677; physics, 672; geology, 444; zoology, 441; botany, 401; pathology, 357; mathematics, 340; psychology, 194; astronomy, 160; anatomy, 118; physiology, 105; anthropology, 91. The representation in the National Academy is very closely proportioned to these numbers.

A Grand Prize for Women

A new variant of "*Cherchez la femme*" moves the nobler minds of Italy. Patriotic Italians, concerned at the undermining of the *morale* of the people, due to many causes, notably the general revolt against the Church machine and the lavish use of money by foreign tourists, are maturing a strong conviction that the important thing to be done is to provide for women independent means to secure the primary necessities of food, clothing and shelter, lacking which they are easy prey. This idea of the uplift of women as a means of social regeneration seizes them with a novelty and force which we can hardly conceive, and accounts for the enthusiasm with which the jury at the exposition at Milan acclaimed the combined religious, social and educational work of the Young Women's Christian Association, New York, especially the educational work, so complete in its adaptation to all grades and capacities of mind at minimum cost. Indeed, it barely escaped the *Grand Prix* on the ground that it had never been heard of before by most of the jurors, receiving the next award, the diploma of honor with gold medal, and gold and silver medals for its president and secretary. An interesting bit of history of this school, lodged in an outgrown building in what is becoming the wholesale woolen section of New York, where 2,600 girls receive instruction, is that it was begun thirty-five years ago by one still its forceful and progressive head, who could not sleep for thinking what must be the fate of the industrially defenseless of her own age and sex—a dominant idea which has controlled the work during its full development to a standard which impresses the sociologists of Europe.

Conviction of the Mormon President

The President of the Mormon Church, Joseph F. Smith, sixty-nine years old, pleaded guilty last week to the charge of unlawful cohabitation, and was fined $300. He pleaded

that he had contracted no plural marriage for twenty-two years, but had simply retained the wives previously married. The old cases of polygamy, he understood, were to be left undisturbed, as the parties would soon die off. The doctrine of monogamy is one that has had to be developed by the growth of the moral principles. There have always been nations, as there still are, which see no wrong in polygamy, simply because their moral standards are not yet developed, and when such pagans or Mohammedans accept our Christian faith and rules, there often has to be allowance made and patience exercised to avoid a wrong to their innocent wives. Doubtless there was such polygamy condoned in the early Christian Church, altho polygamists were excluded from official positions. But the case is somewhat different with the Mormons of Utah. They had been born in Christian lands: they knew well enough what was the current standard of social life. If they adopted and practiced polygamy, it was as a voluntary protest against the monogamous system. They have a far less claim to tolerance than have Mohammedan converts, to whom the question had never arisen. And those who had entered plural marriage before it was made illegal were under no moral obligation to continue in marital relations with all their wives. They could at least support and provide for other wives apart, while living with a single one. And yet the wrong of those who expected tacit permission to retain their former wives allows of much more mercy than in the case of those who have wilfully married since the legislation.

The Tri-Church Union

The Committee on Polity and Vested Interests of the three denominations seeking to unite, the Congregationalists, the United Brethren and the Methodist Protestants, made substantial progress in Pittsburg last week, so that the outlook is still very hopeful. There are twenty-one members in each of these two committees, equally divided between the three churches, and they found no essential differences of view. A principal point which had been under careful consideration by the lawyers was that of the legal difficulties involved, and it was agreed that, in order not to invalidate property interests, it would be necessary to keep up for a time the existing corporations, while they would work thru the new missionary and other organizations that would act for the united church. The discussions since the previous meeting of the committees at Dayton, O., have led to some not very important modifications of the plan of polity then agreed upon, generally in the direction of more flexibility, but retaining the separate right of veto of each body in their National Council until the complete consolidation is effected. Thus far everything looks hopeful, altho it will yet take several years to reach the final result.

They say they don't want "offskins" in California, which means yellow men, and the mildest proposal for exclusion is that credited to President Jordan and others, to seek a treaty with Japan by which Japanese coolies should be shut out. But by coolies we understand is meant men that work with their hands, that handle a spade, or do garden or housework. We need not expect Japan easily to consent to such a treaty. Of course it would have to be reciprocal, so that American coolies, hand-workers, should be excluded from Japan.

There are other ways to heal an oppressive trust than by legal enactment. In England a soap trust was organized less than two months ago, and the public, by the newspapers, attacked it so effectively as against public policy, that the sixty million trust voluntarily dissolved, and each firm will keep its business separate. The managers had to submit, for the people would not buy of the combine. Popular indignation did it. Thus soap once more is the measure of civilization.

Mr. Peary says he will try again to reach the Pole. We hope he will, and that Mr. Jesup and his associates will provide the needful funds. The task must be achieved, and let Mr. Peary try it.

Insurance

The General Agent in Life Insurance

By Forbes Lindsay.

[In the light of the action taken by George R. Scrugham, manager of the International Policy Holders' Committee, last week, in writing the Governor of every State in the Union regarding the alleged campaign abuses and calling for the cancellation of the licenses of the several interested companies to write insurance, the following article defining the status of the general agent is particularly timely and informing. Editor.]

The influence of life insurance general agents in the affairs of the companies they represent is much more potent than is generally realized. This is especially true with regard to the three great New York companies, and has been strikingly evident on several critical occasions. Thirteen years ago, at the time of the Banta-Beers *exposé*, Mr. George W. Perkins contrived, by the support of the Western general agents of the New York Life, the election of Mr. John A. McCall to the presidency of that company, and, incidentally, his own elevation to the vice-presidency.

In the recent imbroglio, the general agency associations frequently displayed their power to direct and control movements of vital importance to the policy-holders, and a recent development in the election campaign of the New York Life exhibits its general agents again to the fore in a concerted plan to place an officer who graduated from their ranks at the head of the company. In the event of their failure to consummate this design—that is to say, in case a majority of the policy-holders by their votes indicate disapproval of it—these general agents threaten to start a new company. This would entail, of course, the "switching"—to use a technical term for which "filching" would be an expressive substitute—of as much of the business now upon their books as possible.

The proper relationship of the general agent to his company has been too long lost sight of in the giant concerns. Under the old *régime* it was to the general agent that the administration looked for the collection of friendly proxies, and his blind support of the executive head of the company was an invariable condition of continuance in its service. In more than one instance the present managements have indicated their intention to maintain the former status of the relationship, and renitent, or not readily amenable general agents have been disciplined, and, in a few cases, summarily discharged.

At first flush, seeking analogy in the familiar illustrations afforded by commercial concerns, this may appear to be a right and proper condition, but the parallel fails under examination. The general agents of a *mutual* life insurance company, such as the New York Life, for instance, are the paid servants, not of the president, or any other officer, but of the policy-holders who constitute the whole company. This is not an academic distinction, but a practical condition which has the most important bearing upon the interests of the policy-holders.

The first duty of a general agent should be to promote and safeguard the interests of the policy-holders carried upon his books, and indirectly of the entire body comprising the company. The policy-holders of the companies which were recently investigated might have been, and should have been, protected by the general agents against the occurrence of the abuses that were brought to light; but under the existing conditions they were necessarily active participators in the evil practices. The condition to which attention is drawn is remediable. In many of the smaller companies it is obviated by the simple method of placing the agency affairs in the hands of a committee of the directors. This committee makes all contracts, frames all regulations and transacts all important business relating to the agencies. It does these things, be it understood, effectively—not perfunctorily. Thus the general agent is removed from the undue influence and control of any one man and is maintained in a desirable degree of independence.

Philadelphia, Pa.

Dividends announced:

City & Suburban Homes, semi-annual, 2¼ per cent., payable Dec. 4th.

Niles-Bement-Pond Co., special 40 per cent. on common stock, payable Jan. 2d, 1907.

Financial

Mr. Ryan's Interests

THOMAS F. RYAN'S withdrawal from the boards of all the railway or industrial corporations with which he has been connected was announced last week on the day of the issue, in Belgium, of a royal decree granting very large concessions to him and his associates for the exploitation of the mineral and rubber resources of the Congo Free State. It does not appear, however, that Mr. Ryan ceases to be a director in about twenty-five corporations because of the new responsibilities imposed by his interest in these concessions. His own explanation is that while it is impossible for him to attend so many board meetings and discharge properly his obligations to the stockholders concerned, he is also convinced that he can "best serve the financial and fiduciary institutions" with which he is associated by severing his "official connection with the railroad and industrial corporations with which they necessarily have constant business relations." He withdraws from the boards of the New York street railway companies, the Consolidated Gas Company, the Tobacco Trust, and a score of other corporations, but remains on the boards of the Morton Trust Company, National Bank of Commerce and Washington Life. It will be recalled that stock control of the Equitable Life was purchased by him.

At the last session of the Legislature a law was enacted making it a misdemeanor for a trustee or director of a life insurance company, trust company, or similar financial institution to be a director of another corporation having business with such a company or institution in the way of loans or syndicate underwritings. Mr. Ryan is probably familiar with this law. Probably the new Attorney-General will desire to see it enforced. It is understood that Mr. Ryan will retain his stock interests in the companies which he will no longer serve as a director, and that in several boards his sons will succeed him.

In the Congo venture, Mr. Ryan, himself a man of great wealth, is associated with other Americans who command the support of very large accumulations of capital. Among them are the Messrs. Guggenheim, who control our smelting industry; John D. Rockefeller, Jr., and Edward B. Aldrich, who is Mr. Rockefeller's brother-in-law and a son of the Senator from Rhode Island. One of their companies has a New York charter. The people of New York and of the United States expect, of course, that the exploitation in which these men will be directly engaged will not be characterized by such cruelty as King Leopold has approved or permitted, and that their influence will be exerted to prevent, in the Congo Free State, inhuman treatment of the natives by others.

*

....By declaring a cash dividend of 400 per cent. the directors of the Chase National Bank have provided the means for an increase of the bank's capital from $1,000,000 to $5,000,000. This dividend of $4,000,000 will be paid on December 12th to the stockholders, who will use it in taking up $4,000,000 of new stock issued at par. The bank will then have a surplus of $4,000,000. The capital stock is thus increased in order that the bank may lend a larger amount to a single customer. A law passed at the last session of Congress permits a bank to loan to one applicant a sum not exceeding 10 per cent. of capital and surplus combined, but also limits such a loan to 30 per cent. of the capital stock, which is an inconvenient restriction for a bank having a large surplus and a comparatively small capital.

....According to advance sheets of the forthcoming number of *Poor's Manual,* the length of the steam railroads of the United States at the end of 1905 was 217,341 miles, and the capitalization of the companies, in stock and bonds, was $14,563,199,931.

....During the ten months ending with October, according to the *Mining World,* American companies in the mining industries paid $77,193,336 in dividends. Copper companies are at the head of the list, with a total of $48,517,000.

The Independent

VOL. LXI NEW YORK, THURSDAY, DECEMBER 6, 1906 No. 3027

Survey of the World

National Topics

Congress assembled at noon on the 3d. The proceedings of the first day were not of an important character. It was known that the President's message would not be sent to the capitol until the 4th. The Santo Domingo treaty, it is reported, will be withdrawn for some modifications suggested by the Republic's recent agreement with its foreign creditors, who have consented to a considerable reduction of the principal of the debt and to a refunding of the whole of it in new bonds. When the treaty is returned to the Senate, its provisions will impose upon the United States no responsibility for the distribution of the revenue among the creditors, nor will they require this country to ascertain whether the amounts heretofore claimed by the creditors were excessive. In this amended form it may be ratified at the present session.——The appointment of John A. McIlhenny, of Louisiana, to the place in the Civil Service Commission recently held by Mr. Cooley gives the Commission a Democratic majority. Mr. McIlhenny is a manufacturer, and was an officer of Colonel Roosevelt's regiment of Rough Riders.——Governor Jefferson Davis, the newly elected Senator from Arkansas, remarks in a published interview that in the Senate "harmony is not so much needed as an old-fashioned row":

> "With gentle, kind-spirited 'Bob' Taylor, of Tennessee; 'Pitchfork' Tillman, of South Carolina, and the fearless Vardaman, of Mississippi, there will be a first class row. When I get to the Senate there will be something doing in town."

——Canada gives notice that six months hence she will abrogate that part of her postal agreement with this country which relates to second-class matter. It is understood that Canada is tired of carrying certain publications originating here which would not be entitled to a rate of one cent a pound if they were published on the northern side of the boundary.——The new tariff, introduced by the Canadian Government in the House of Commons on the 30th ult., has three grades of rates. The general tariff does not differ much from the tariff heretofore in force. In the British preference tariff the preference of one-third is substantially retained, but the reduction is now applied to articles separately, being a little less than one-third in some cases and more than that in others. The new intermediate tariff has rates about 10 per cent. lower than those of the general tariff. This is to be used in reciprocal negotiations with other countries, and may be put in force for short terms by order in council or for long ones by treaty.

Coal Land Frauds in the West

Extraordinary testimony has recently been given at Salt Lake City before Interstate Commissioner Clark concerning the acquisition of coal lands by the Harriman and Gould railroads in Utah, Wyoming and elsewhere, and the alleged complicity of the General Land Office and certain Senators in land frauds. A grand jury in session at the same place has found several indictments, but these have not yet been reported. The witnesses are special agents of the Government, officers of the railroad companies' subsidiary coal cor-

porations, and persons who sought to mine coal or produce oil in competition with the railway interests. One of these witnesses is Special Agent Meyendorff, whose work was done under the instructions of Secretary Hitchcock. He asserts that after he had unearthed land frauds in Wyoming, Senator Warren urged him to discontinue his investigation and leave the State, saying that he was incurring the enmity of the Union Pacific and that his inquiries might prevent the re-election of Senator Clark, whose brother was superintendent of the Union Pacific's main subsidiary coal company. As he did not yield, he was suspended from duty and afterward transferred to California. He asserts also that George F. Pollock, the officer in charge of the special agents, instructed him to destroy affidavits against the Union Pacific, that the Land Office (under Commissioner Richards, of Wyoming) suppressed evidence which he had obtained, and that in many ways those who controlled the Land Office exerted influence against him and in favor of the railroad companies. The charges affect Binger Hermann, formerly Commissioner, who has been indicted. Other special agents have given similar testimony. One of them, P. S. Sowers, says that he sent evidence to Washington and recommended the prosecution of certain persons in Utah, and that his reward was suspension. It has been shown that great tracts of coal land were fraudulently acquired by the companies; that persons endeavoring to work upon independent claims were driven away by armed men; that the operation of independent oil wells was prevented by the use of dynamite. Officers of the subsidiary coal companies have testified that the coal of these companies was carried on the railroads at only one-third of the published rates. The testimony, of which we can print only a brief summary, is to the effect that by fraud and collusion, and with the aid of public officers, Senators and the local courts, the Harriman and Gould roads have established a monopoly of the coal trade in Utah, Wyoming, Idaho and several other States. The Federal Government has sued to recover a part of the coal land. Senator Warren and Mr. Pollock publish statements saying that the charges, so far as these affect themselves, are not true. It is said that the evidence will be used against the railroad companies on three lines of prosecution—for land frauds, for violation of the rate law, and for combination in restraint of trade.

The Government's Coal Lands

It is understood, altho no official statement has been given to the public, that in a special report to President Roosevelt, the Interstate Commerce Commission has recommended the permanent withdrawal of all public coal lands from entry, with a view to the ultimate development of them under the control and direction of the Government. The Commission's investigation of the coal land frauds committed in the interest of great railroad companies has led it to make this recommendation, which is accompanied by an elaborate statement of facts and is said to have the hearty support of the Interior Department and the Department of Justice. Owing to a similar recommendation last spring from Special Assistant Attorney-General Burch, it is said the President was induced to order a temporary withdrawal of such lands, and to direct the Geological Survey to make a thoro inquiry as to the lands in question. The Commission believes that from 50,000,000 to 60,000,000 acres of coal land are still held by the Government, and that 5,000,000 acres of this area will yield fine bituminous coal. Much of the coal land held by railroad companies has been acquired by them at a cost of from $1.50 to $20 an acre. According to published reports, it is the opinion of Mr. Burch that the Government can obtain $1,000 per acre in revenue, and that the receipts, on a royalty basis, may even be sufficient to pay all the Government's current expenses. It is the plan of those who support this recommendation that the lands shall be leased, or shall be worked on a royalty basis. In this way, they say, the existing coal monopoly west of the Missouri, maintained by the great railroad companies, would be broken. This monopoly, they assert, has made high prices, and by restriction of output has occasion-

ally caused such a scarcity of coal famine as that from which the Far West and Southwest are suffering today. Even the lands which contain lignite and other low grades of coal, it is pointed out, have much value, because such material can easily be made into merchantable fuel or may be used for the production of fuel gas.

Labor Questions

Senator Beveridge will introduce at the present session of Congress a bill to prevent the employment of child labor in factories, mines, etc., by forbidding common carriers engaged in interstate commerce to transport the products of any factory, mine, or other manufacturing concern in which children under the age of fourteen are employed. The bill will require employers to make affidavits once in six months as to the age of their employees, and detection of violations of the law is left to interested private persons.——In Chicago, the trial of Cornelius P. Shea, president of the International Union of Teamsters, and sixteen other labor leaders, for conspiracy to ruin the business of Montgomery Ward & Co., by the great strike of last year, is in progress. Two months and a half were consumed in obtaining a jury, nearly 5,000 talesmen having been examined. At the opening of the trial, on the 30th ult., a majority of the defendants were surprised by the action of four of their associates, who entered pleas of guilty and gave notice that they would testify for the prosecution. These men are Albert Young, formerly president of the union; William Kelly, business agent of one branch of the union; Michael Murphy, said to have been a member of the strikers' "wrecking crew," and Joseph Schultz, a member of Mr. Shea's bodyguard. There had been a strike of a few of Montgomery Ward & Co.'s garment workers. Young testified that he attended a meeting in a saloon, at which Shea and four other labor leaders were present; that one Noren brought to them $1,500, which the Garment Workers' Union had appropriated to buy a teamsters' strike; that each of the five leaders received $300; that each gave Noren $20 for his share, and that in return for the money thus paid a strike of the teamsters was ordered on the following day. He remonstrated with Shea, he said, asserting that the strike was not justified, and that it had been ordered in violation of the rules of the union.——Additional increases of wages are reported in various parts of the country. Other cotton mills in the East are following the example of those at Fall River. The increase granted to railroad switchmen alone amounts to $6,000,000 a year.——Twenty-eight girls imported from English factories under contract to be employed in Southern cotton factories are to be deported, and E. A. Smith, owner of a mill in Charlotte, N. C., has been indicted for violating the immigration laws.

The San Francisco Frauds

Additional indictments against Abraham Ruef, in San Francisco, have been reported, and Chief of Police Dinan has been indicted. It is again asserted that one of the supervisors has made a complete confession as to the street railway franchise. It is alleged in press dispatches that in procuring this franchise $750,000 was expended. Upon the application of Prosecutor Heney, the Governor has pardoned Adolph Steffens and Charles Wyman, recently sent to the penitentiary for ballot-box frauds at the primaries preceding the second election of Mayor Schmitz. These men will go before the grand jury. It is reported in San Francisco that their testimony, with that of Frank Maestretti, formerly Commissioner of Public Works, will connect Schmitz and Ruef with the crimes of which they were found guilty. The allegation is made that their frauds gave control of the Republican convention to Ruef in the interest of Schmitz. A grand reception was given to the indicted Mayor when he returned, on the night of the 28th ult. Addressing a mass meeting he said: "This attack upon me is an attack upon union labor. They hope to disrupt and crush the labor organizations." In a long and sensational speech the Rev. Peter F. Yorke made a

similar explanation, denouncing the grand jury, the local newspapers and the capitalists as enemies of the organized workingmen.

Railroads and the Law

James J. Hill, president of the Great Northern Railroad Company, while testifying on the 27th ult. before the Minnesota Railroad Commission, said that at one time he could have accepted the management of "all the railroad lines in the West between the Canadian boundary and Mexico," but he refused it in order that he might continue in charge of his interests in the Northwest. It is supposed that the offer was made in 1902, when Mr. Hill and Mr. Harriman were at peace, and when certain capitalists planned a combination of all the important roads between the Mississippi and the Pacific. The Northern Securities Company was to be the nucleus of this combination, and the roads of the Southeast were to be merged by means of a Southern Securities Company. The Government's suit against the Northern Securities Company put an end to these projects.——In the United States Circuit Court, at New York, Judge Holt has imposed a fine of $18,000 upon the American Sugar Refining Company (the Sugar Trust), recently found guilty of accepting rebates from the New York Central road. Testimony given before the Commission in Chicago shows that the fine recently imposed upon the vice-president of the Burlington road was paid out of the company's treasury. It is said that the Commission may ask for legislation forbidding companies to pay in this way the fines imposed upon their officers for violations of the law.——At St. Louis, the Waters-Pierce Oil Company, a subsidiary corporation of the Standard Oil Company, has been indicted on seventy-two counts for accepting rebates from the Southern Pacific and Missouri Pacific roads on shipments of oil to Louisiana.——One effect of the new Rate law is seen in a reduction of freight charges. Since August 28th there have been filed with the Commission 133,000 new rate schedules. A reduction is shown in 80 per cent. of these.

Cuba and Porto Rico

In answer to an invitation from Governor Magoon, twenty-five of the members of Congress who were elected in December last went to the palace on the 2d and were informed that, under the authority of President Roosevelt, a decree would soon be issued declaring all the seats vacant now held by members elected at that time. The vacancies, he said, would be filled at a new election, the date of which he could not fix. The first series of Senators, elected four years ago, and the Representatives elected in 1904, will retain their seats. The removal of the 43 men elected in 1905 is deplored by Gen. Ruis Rivera, who says the effect will be disastrous. In his opinion, an entire new Congress should be elected. Governor Aleman, of Santa Clara province, a Moderate, has resigned, because, he says, he cannot continue to enforce the policy of reinstating Liberal mayors and Councils who were ousted by the Moderates in 1905.——The President has summarily removed from office Noah K. Pettingill, United States Attorney for Porto Rico, mainly for the reason that in his private professional capacity he accepted the management of suits against several of his colleagues in office, these suits involving charges affecting their integrity.

The Philippine Islands

Recent movements against the Pulajanes in Samar have been quite successful. On the 26th, near Albalate, Pedro La Cruz, one of the leaders of these outlaws, was killed, and his followers were dispersed. Two days later eleven Pulajanes were slain, and the wife and daughter of Pablo, the chief commander, were captured.——Ten native prisoners in the Bilibid jail at Manila have been killed by injections of anti-cholera serum. Twenty-four had been subjected to the treatment by Dr. R. R. Strong, chief of the Government laboratories in the Bureau of Health. It is reported that the deaths were due to an accidental introduction of plague germs into the serum while it was being prepared in the laboratory. The Government will assist the families of the victims. Loud complaint is made by the na-

tive press, which asserts that the laboratory officers are careless and incompetent. Governor-General Smith has appointed a committee of investigation and has revoked the authorization given by the Commission for experimental inoculations.——For the construction of railways there has been formed in London a syndicate composed of Speyer & Co., of New York; Speyer Brothers, of London, and the Hongkong and Shanghai Banking Corporation, of London. It will expend $25,000,000 in readjusting the finances of the existing road from Manila to Dagupan, and in the construction of 425 miles of road in addition by the Manila Railroad Company, an American corporation. About 150 miles of the new road will be in Southern Luzon.—— It is asserted in special dispatches from Washington that Secretary Taft declined a seat in the Supreme Court in order that he might continue to use his influence in behalf of the Filipinos, and especially in support of the pending bill reducing the tariff duties on Philippine imports into the States. In the same dispatches it is said that he will not be a candidate for the Presidential nomination before the Republican convention of 1908.

The French Separation Law

The date when the law for the separation of Church and State comes into effect, December 11th, is close at hand, and both parties to the controversy, the Government and the Roman Catholic Church, have issued their instructions as to what is to be done in each parish at that time. Cardinal Richard, Archbishop of Paris, has received from the Pope his final wishes, and has given directions accordingly to the parish priests. Different action will probably be taken in different cases, but in no case will the law be recognized. Church services are to be continued after December 11th as tho nothing had happened. M. Briand, Minister of Education and Public Worship, in his circular of instructions to the prefects lays stress upon the point that Catholics may meet to worship as individuals even where they are unwilling to form the public worship associations required by the law. Wherever such associations are formed during the ensuing year the churches and other buildings will be turned over to them. At the end of the year the State may assume them. The officials must be notified of the intention to hold services by the Bureau, which is a local body responsible for the good order and intent of the meetings. Representatives of the Government are to be present at all meetings, but only to dissolve them if the Bureau fails to preserve order. Collections taken by the priests at such meetings may be kept and disposed of by them. Other contributions and incomes belong to the State. The Minister of Justice has prepared a law abolishing the judicial oath and appeal to God now required by jurymen in the French courts. In the town of Canourgne the Vicar and Mayor have come into conflict in regard to the management of funerals. The Municipal Council bought a hearse, which was to be furnished free to the people as soon as it was paid for. Since the hearse was not consecrated and did not carry a cross, the Vicar refused to allow it to enter the church grounds. The Mayor then refused to permit to the church hearse the use of the streets. So now the municipal hearse is used to the gate of the church grounds whence the coffin is transferred to the church hearse and back again for transportation to the cemetery. The guillotine is to be abolished in France, for the Parliamentary Commission and the Chamber of Deputies have both voted the abolition of the death penalty. The Senate and Chamber of Deputies took advantage of an early morning session to vote unanimously without roll call in favor of raising their salaries from 9,000 to 15,000 francs. It is still a question as to whether the increase will be provided for in the Appropriation Bill.

Russian Famine Frauds

Very severe and extensive suffering from starvation is reported from many parts of Russia, and it is feared that the famine conditions will become as bad as in 1891. Thousands of peasants are without food and living on pig weed and hay. They are so completely discouraged and physically weak that most of their time is spent sleeping in their houses. The epidemics of scurvy are devastating many villages. Prince

Livoff is distributing food thru the distrest regions in behalf of the National Union of Zemstvos, but great difficulty is experienced in reaching villages remote from the railroads, because the horses of the peasants are too few and weak from hunger to reach the wheat depots on the railroads. Independent organizations attempting to distribute relief to the sufferers are suppress by the Government, because they are suspected of revolutionary propaganda. The Government relief measures, which were authorized by the only legislative act passed by the late Duma, are painfully inadequate and extensive frauds have been divulged in their administration. Prices above the market have been paid for food which, after reaching the famine districts, has been found unfit for use. Assistant Minister of the Interior Gurko contracted for the delivery of 36,000,000 pounds of wheat from a Swede, Lidval, and he has been paid in advance more than $400,000. Only about one-half of the grain has been shipped, altho the contract calls for the whole before the Russian New Year. January 14th. Lidval was formerly a member of an American firm of plumbers. It is believed that Gurko, Lidval and others are guilty of conspiracy to rob the Relief Fund, and the Czar has appointed a committee to investigate the charges. This scandal has produced a strong reaction against the Government and will have a decided influence on the election for the Duma. The Government is supported by various reactionary groups, of which the Octobrists are the chief. They declare all other political parties revolutionary, and regard themselves as the only constitutional and monarchical political party. Next to them is the party of Peaceful Regeneration, which has in its platform fiercely denounced the Stolypin Ministry. Some of the wealthiest Moscow merchants belong to this party, but it is numerically weak. Following them in the order of increasing radicalism are the Democratic Reform party, the Constitutional Democrats, the Group of Toil, the National Socialists and the Social Democrats. None of these are recognized by the Government and Government officials of all grades are prohibited from belonging to them. Another step toward breaking up the peculiar status of the peasants is the law just signed by the Emperor permitting the peasants to mortgage their lands for the purpose of obtaining money for improvements or buying more land. In order to prevent peasants from falling into the hands of grasping money-lenders, it is required that the money be borrowed from the Government or the Agrarian banks. The Minister of Justice has just decided that persons accused of political crimes must in the future be tried by the ordinary civil tribunals and by the regular methods. If this is carried out it will do away with the chief abuse of Russian administration—that is, punishment and exile by secret administrative process. A Sunday Closing Law has been promulgated by the Emperor, providing that all factories and stores be closed on Sundays and on the twelve great holidays of the Russian Church, except in industries which cannot be stopped without public injury. Groceries and meat markets may be opened for a few hours on Sunday. A ten-hour day is established for employees in stores, offices, etc., and a fifteen-hour day for restaurants and saloons. Employees under seventeen years of age are entitled to two hours' rest at noon and three hours a day for attendance at school.

The New Spanish Cabinet

The Spanish Government continues to shift its personnel with dizzying rapidity. King Alfonso, on signing the draft of the proposed legislation regulating religious associations, spoke of these changes in the following words:

"Since May 17, 1902, the date of my coronation, although it is only a little over four years ago, we have had nothing but Cabinet crises, and 112 Ministers have taken the oath before me. There is an old custom that the Premier should give a banquet to his colleagues in the Ministry at the end of each year they have been in continuous office. It is a long time since that custom was observed, but I hope Gen. Lopez Dominguez will be able to reintroduce so pleasant a usage."

This modest wish was not destined to be fulfilled, for Premier Captain-General Lopez J. Dominguez and his entire Cabinet resigned on November 28th, after having been in office less than five

months. Several reasons are given for the change, but the most important is probably that the majority of the Cortes would not stand for the radical measures intended to check the power of the Church. There have been numerous disorderly demonstrations against the Associations Bill, and a Carlist insurrection is a constant danger. Besides this, the Morocco situation is growing more difficult. Spain has been forced to send battleships to Tangier and to undertake with France the joint task of restoring order in Morocco assigned to them by the Algeciras Conference even before the time assigned by the convention for the assumption of that control, which was March. It was generally felt that this is extremely likely to bring about complications with foreign powers, especially with Germany. Spain and Germany are now in conflict in regard to tariff revision, and the commercial negotiations between these countries have come to a deadlock on the question of the German wine duties. The King called Señor Moret y Prendergast to form a new Cabinet, which was done on the following day. Count Romanones remains as Minister of Justice, but the most difficult position of all, that of Minister of Worship and Education, is left vacant. Señor Moret is a moderate Liberal, a leader of the majority party in the Cortes, and was head of the Cabinet immediately preceding the one which has just resigned. His policy is that of "Europeanizing Spain," but it is expected that the measures of the new Cabinet will be less decidedly anti-clerical. The Vatican, accordingly, has great hopes from the change of Cabinet. Count Romanones admitted to the Cortes that the Papal Nuncio to Spain had formally demanded the prosecution of municipal judges who celebrated civil marriages under the new secular marriage law, but this demand was flatly refused.

University Problems in Germany

The authorities of the University of Berlin have decided for the present not to immatriculate any more students from Russia, as the Cultus Minister has announced that the Government proposes to issue restrictions on the admission of foreign students to German universities and technological institutes, which will practically exclude Russian students because of insufficient preparation. Still stronger will be the limitations put upon permitting Russian women to take part in the university work as "hospitants," largely on account of the poor work done at the Russian female colleges. Another matter that is bothering the university men is the surplus of academic graduates far beyond the demands of professional life, the production of a "learned proletariat." Professor Conrad, of Halle, has published a detailed discussion on this subject, suggesting ways and means for cutting down the attendance at the universities. Chief among these is to increase the entrance fee, which in the case of students from abroad is to be doubled; and, then, the withdrawal of financial support from all except the most gifted. The medical profession particularly is overcrowded, and repeatedly medical congresses and conventions have published appeals to the graduates of the secondary schools *not* to enter the medical faculties. Conrad declares that full data as to the miserable pay of professional men should be published as a warning to the host who enter upon academic careers. Only one profession has a lack of sufficient candidates, and that is Protestant theology. In 1890 there were fully 4,400 Protestant students of theology in the German universities; last semester there were only 2,329, and a year ago the low water mark of 2,186 was reached. Altho the Catholic Church is only about one-half as strong as the Protestant in the Fatherland, its enrollment of theological students is somewhat over 3,000. Conservative papers declare the small Protestant contingent is owing to radical tendencies of the faculties, while advanced men declare it is attributable to the poor salaries paid the ministers.

The Kongo Free State

It looks as tho the arbitrary and tyrannous rule of the Kongo had nearly reached its limit and as tho the Government of the Free State were aware of the fact, for the reports indicate feverish haste to reap the greatest possi-

ble immediate profits from the region, even tho this involves the destruction of the natives and the rubber trees. A number of extensive concessions have just been made, and the Belgian papers are questioning the right of the Kongo authorities to dispose in advance of so much of the National Domain which King Leopold has promised shall revert to Belgium on his death. The most important concessions are the following: (1) Union Minière du Haut Katanga, capital $2,000,000, half being subscribed by British investors, for exploiting the mineral wealth of Katanga; (2) Chemin de Fer du Bas Congo, capital $400,000, for constructing a direct line from Leopoldville to Katanga, half being subscribed by the Société Générale of Brussels and half by a French bank, the Union Parisienne, together with mining rights over an area eleven times larger than Belgium; (3) the American Kongo Company, which secures for fifty years the right of gathering rubber and other vegetable products over an area of about a million hectares of land on the river Kasai and in the neighborhood of Stanley Pool; and (4) the Société Internationale Forestière et Minière du Congo, capital $700,000, with mining rights over a further extensive area, of which particulars are not made public. Of the 7,000 shares of this company, 2,500 are assigned gratuitously to the Kongo State and 1,000 to the Domaine de la Couronne, half of the remaining shares being held by Mr. Thomas Ryan, of New York. A delegation headed by Lord Monkswell, of the Kongo Reform Association, and representing various political parties, Churches, chambers of commerce and other organizations, was received by Sir Edward Grey, Secretary of State for Foreign Affairs, on November 20th. The Secretary, in his reply to their inquiry as to what the Government intends to do in regard to the Kongo, showed very clearly that Great Britain will not hesitate to intervene if the abuses are not stopped soon in some other way. He said that British subjects were few in the Kongo and British trade small, so whatever is done will be to improve the conditions of the natives and the whole country. Belgium, he said, was the country whose interests were directly concerned and whose title to intervene was more full and comprehensive than Great Britain's.

"But if the deliberations which are now proceeding in Belgium are to be inconclusive and we are to find overselves again face to face with the prospect of the continuance of the present *régime* in the Congo for an indefinite time, then I think it will be our duty to sound the other Powers as to what their view in the matter is. It is quite true that the Powers concerned were sounded some three years ago, and that their response was not favorable to a conference or to action, but since that time a good deal has happened. Among other things there has been the report of the Commission of Inquiry, which must have removed all possible doubt from the minds of other Powers as to what the condition of affairs in the Congo was. It may not be necessary to take that step if Belgium exercises the choice which rests with her, but if it has to be done, though I do not know what the response of the other Powers is likely to be, all I need say is this, That should all or any of them desire to show an interest in the matter they would find in us the most cordial co-operation without any intention whatever to secure political advantage for ourselves. And in any case, whatever the view of others Powers may be, it will be impossible for us to continue to recognize indefinitely the present state of things without a very close examination of our treaty rights and the treaty obligations of the Congo State. If this question is not to be solved by Belgium I should indefinitely prefer that we should be associated with other Governments, whose opinions I would fain believe cannot have remained unmoved by the painful state of things which has been disclosed to the whole world since last they were invited to express an opinion on this question."

It is reported two months will be allowed to Belgium to take action, and if nothing is done at the end of that time Great Britain and France will jointly summon a European conference to consider the matter. Sir Edward Grey's statements have formed the subject of an interpellation of the Belgian Government by the Socialist leader, Emile Vandervelde. The Belgium Minister of Foreign Affairs, Baron de Favereau, stated on November 27th, to the Chamber of Deputies, that no communication had been received from the British Government in the regard to the Kongo, adding that Belgium was aware of her rights and would pursue her course in entire freedom. The seventy Italian officers who took service in the Kongo have all been withdrawn so that Italy cannot be held responsible for the mismanagement of the Kongo Government.

Aladdyn. Jhilkine. Anikine.
The Fearless Peasant Leaders in the Duma

Will the Peasants Act?

BY WILLIAM ENGLISH WALLING

[This is the second of Mr. Walling's three articles on "The Peasants' Revolution in Russia." The first, entitled "The Peasant Gives His Orders," appeared in our issue of October 18th. The third, "The Peasants Organize," will appear shortly. Mr. Walling, as we have previously said, has been in Russia for over a year studying the situation, and hardly any other American could be better qualified, both by sympathy and previous training, for interpreting the Peasants' Movement.—EDITOR.]

"THERE was a time when we considered the Czar the God of the earth and the greatest of all benefactors. Now, the newspapers have opened the eyes of us common people. We see that he is only the richest of landlords and the first of all vampires! The blood that he has drunk will flow from him again."

This is how the peasants are talking since the Czar closed the Duma and destroyed the faith of his people. The remark is typical. I have heard others as strong. It was spoken in a Volga village in my presence before a chance gathering of peasants. I was requested to write it down and send it to America to show what the common people are thinking about their Czar. The Russian State is resting on a sleeping volcano of the people's hate. The real revolution—that of the hundred million peasants—is yet to come. If it does come the French Revolution will be paralleled and eclipsed. For the forces to be overthrown by the Russian people are richer, wiser and incomparably better organized than was the rotten feudalism of France. What are the chances of an event of this inconceivable magnitude? At first glance the outlook is dark enough.

Thruout all Russia the townspeople have abandoned themselves to depres-

sion or despair. The middle classes first staked everything on the Duma. Their last cards were passive resistance as to taxes and recruits and the denunciation of foreign loans. The Duma dissolved, the Government is profiting by its experience, and arbitrarily enacted a network of administrative measures to prevent the election of such another as the last. The "liberal" Prime Minister has just declared that the new Duma when elected will have no power, that Russia will never permit its Government to depend on the people's will. Passive resistance, too, proving impracticable against active despotism, has been definitely abandoned by the very party by which it was proposed. The denunciation of foreign loans is accountable at the most for a fall of not more than a point or two in the Russian funds. The Constitutional Democrats, partisans of these measures, have managed to prevent the general disintegration of their party, but they have not been able to prevent a wholesale desertion from the ranks. In the provincial capitals and country towns, where, like a low thunder, the voice of the gagged and beaten peasants is beginning to be heard, there is a restless seeking for new parties and new means of combat to correspond with the expected magnitude and profundity of the growing revolt.

The workingmen are hardly in a better case. The brilliantly successful general strike of last October brought the manifesto, but it seems to have succeeded only because the Czar was unprepared. The workingmen's organizations were the first to recognize the fact. The next general strike must also be an insurrection, the St. Petersburg council of labor deputies decided, within a few days after the first strike had been brought to a close. Under a despotism, said one of the speakers, all general strikes are insurrections. The expected insurrection-strike took place long before the councils were ready for it. The barricades of Moscow were reproduced at a dozen other important industrial centers. But the Government was ready this time for both strike and insurrection. Within a few weeks the last of the barricades had been swept away, the leaders imprisoned or shot, and the railroad men put to work under martial law and the penalty of instant death for leaving their posts.

This was the last spasmodic effort of the rebellious workingmen—until the time comes when they can count on the peasants' aid. Since the barricades the masses of the towns have been vainly dreaming or sometimes vainly planning another insurrection. This time no barricades perhaps, no "insurrection of things," but an insurrection of workmen and soldiers, a mutiny-strike. There were two insurmountable obstacles to the new plan. The workmen-soldiers of the artillery and sappers and miners were ready to die for the cause, and did die by hundreds at Sveaborg and Kronstadt, but the peasant soldiers remained loyal to the Czar. The railroad union was ready to strike, but they were not ready to face the military courts unless the strike had some chances of success. For success, their congress unanimously decided, there must not only be a cessation of labor, but a tearing up of the rails, blowing up of bridges and destruction of the lines. The Government has declared a railway strike rebellion, the strikers to be instantly executed for high treason. Against this official "state of war" the union proposed also to declare war. But for this purpose the railway workers are not enough; they must have the support of the population along the lines. That population must be inflamed to the point not only of protecting and hiding the scattered and otherwise helpless railway men, but of aiding in the work of cutting and keeping cut the Government's communications — an object eminently worth while in one case, but one only, when the peasants themselves are in revolt. Last summer the peasants were not in revolt. The railway union decided to wait.

Every path, then, that the "legal" opposition or the illegal revolution has trod has led finally to the peasants. Refusal of taxes, refusal of recruits, refusal to shoot on the revolted workmen, destruction of the railway lines—all depend on the peasants. And what has been their reply? We know what they did in the last Duma elections — they sent the most radical and fearless deputies the Duma contained — men at the same

time wise enough to lead the Duma even to the very end, and after that to the manifesto of "passive" revolt. We know how they supported their members with hundreds of delegations and some twenty thousand instructions as to what their servants, the deputies, were to demand. What do they intend now that their Duma is closed, now that they have lost the only chance for a free discussion of their lot on a national scale that they have had for the thousand years since they left the pastoral stage of man—now that all other classes in the nation have cried out to them to act?

The father, illiterate, ignorant and loyal.

The son, well read and well informed—a revolutionist.

What did the peasants say when their Duma was closed? The papers of the capital were not allowed to discuss the subject, the peasants no longer had Duma delegates with whom to lodge their grievances. But the provincial papers, caught in the irresistible current of free expression that prevailed during the Duma, were harder to suppress, and from them we see that in thousands of villages peasant opinion had so gained the upper hand over the village clergy and police that public discussion, even in official village meetings, went on much as before the Duma was dissolved. I went to the provincial capitals and smaller towns, and I visited a number of villages to make sure that my impression was correct. I found the peasants invariably familiar with all the larger aspects of the revolution. I found that trained by centuries of oppression and defeat and having put little hope in the late Duma, they were neither surprised nor despondent at its close. Their feeling is this—having long hated the Government they are now beginning to hate the Czar. Having long lost respect for the Government Church they are now turning actively against it. Having put their case in the Duma and seeing it despised and their elected deputies thrown into prison, they now fully realize that they will get from the Government only what they can take.

"When Gapon came with the working-

men and a petition to the Czar the Ministers called them rebels," continued the peasant speaker quoted above. "Then we believed it. When the Duma was meeting, the Ministers stood against the people, and we knew that they were our enemies. But now that the Duma is dissolved we see that the Czar and the Ministers are the same. Now we know that the Czar is our enemy, too, and we must upset the whole Government. And the peasants are ready to do it."

This analysis of the peasant is true. The massacre of the 9th of January of last year removed the last traces of loyalty from the masses of the workmen and the citizens. The brutal dissolution of the Duma took away the last illusion and the last hope from the people of the soil. On the evening of the 9th of January a friend visiting Count Witte found him prostrate on his couch. With tears in his eyes he said the last hope of the nation had been destroyed, the faith of the people in the Czar. That was true only of the cities then. It is true of the country and the nation today.

Listen now to another peasant in another village several hundreds of miles away from the last. It was evening. We had gone to visit a former member of the Duma, L——. He had enrolled himself as a member of the Labor group, but we were told he had done so only at the request of the Constitutional Democratic party to which he belonged, and that his function among the peasants' deputies was to "watch the leader, Alladin," whom the Constitutional Democrats for some reason did not trust. With an unerring instinct the uninformed peasants of L——'s village had scented the truth. They not only knew a good deal about the Duma, they knew their representative and they knew that he was not one of their own. L—— was not at home, and the whole village, old men and young, as they came home one by one from the fields, women and children, joined the little group that was explaining the village opinion. Many talked at the same time, but the peasants know how to talk together—as they have learned to do in their village meetings for centuries past. Out of the whole came clearly this common speech:

"We did hope the Duma would help us. But now we see that it was made for the rich and not for the poor. How could it be made for us when the elections past thru ten hands after it left ours? We elected a man we know. But we don't even know who the people were that chose L——. We don't like him. When he was needed to sign the Viborg manifesto, he skipped. But we were told from the first that the Duma was a fraud made to lead us off by the nose, and that's just what occurred.

"We heard about the closing of the Duma a few days after it happened, but we did not hear them read the Czar's manifesto about it in church. We do not go to church any more because, when we hear the pope pray for the Government and the Czar, it is just as if some one turned a knife in our stomachs.

"We believed the October manifesto, too, and in three days the Czar took it back. We began to be 'conscious' about ten years ago ['conscious' of their position as a social class at the bottom of the economic and political scale, a phrase borrowed from the revolutionary agitation]. The other villages around here are not so advanced. But since the war with the Japanese we all see we have nothing to expect. There's no way out."

"We've had enough of carrying the landlords on our backs. It's better to die for the right. If the other villages do anything we won't be behind."

"Do you believe in the Czar?" I asked.

"We believed in him once," they answered, without a protesting voice, "as in God, but our eyes are open now. Now we know that it isn't the Ministers, but the Czar himself who is to blame." A feeble protest made by a young Manchurian soldier against this last remark found not a supporting voice. These peasants were frankly disloyal before strangers they had never seen before. Their disloyalty was once due in part to "enlightenment" from the propaganda in years past. Now it is all their own. They complained bitterly that they had not seen a friendly "agitator" for a year or more.

The villages I have mentioned were on the middle and lower Volga. Up toward the source of the river, by the northern woods that stretch up to the Arctic tundra and reindeer land, I visited another

little town. There the older peasants—splendid, erect, regular-featured men—were gathered together in the tea-house to make a business deal concerning the village hay with their friend, the agricultural expert of the Zemstvo, who had brought us with him. They, too, were unanimous in their opinions. They would gladly boycott the taxes and refuse recruits if this were possible. But a village can't resist a squadron of Cossacks, and the taxes, they understood clearly, were for the most part indirect. They knew all about the customs duties on cotton and tea and the excise duties on petroleum, alcohol, sugar and vodka that make them pay two or three prices for all they buy. They had not decided what form of action they would pursue. They, too, were waiting for the others to begin. (As we shall see later not all the villages intend to wait. There have been and will be many to lead the way.) But they were clear as to what they thought about the Duma. They would not bother about another such as the last. They would turn the next into a constituent assembly, and for that they would lay down their lives. They knew well enough what a constituent was. It is a body, they said, that appoints all the Ministers and officials. It must have all the power, and *nobody* (not the Czar) is to have a right to interfere with its acts. In the meantime the younger peasants outside were singing as accompaniment the fiery, revolutionary words of the peasants' "Marseillaise."

The last hope of the Czar, the ignorance and disunion of his people, is giving way. In Russia the tendency of all despotism to keep the people in darkness and to exploit their divided state has been exalted into a perfectly conscious principle of State, freely expressed by Ministers, bureaucrats and heads of the Church. First, they say, do not let the individual know what the Government is about, and, second, if individuals do manage to learn they must not be allowed any expression of what they think or want. The peasants were not only not taught to read by the Government, they were not allowed to read. If they had learned what the Government is about and wanted to hold meetings to discuss what they had learned, the village police sat by, closed the meeting when they saw fit, and arrested those whose speeches they did not like. As to meetings of several villages, they were tolerated under no form.

Since the war the new pressure in this system of compulsory ignorance has all but broken it down. The police are still on duty. Meetings of more than one village at a time must be held in the woods. Unnumbered tons of pamphlets and newspapers are confiscated and destroyed. But all the villages have now read more or less of the new deluge of newspapers, pamphlets, books and peasants' weeklies.

The revolutionists and opposition parties have made good the lack which the Government failed to provide. The peasants' intellectual appetite has grown incredibly; they are famishing for reading as much as they are for bread. They beg newspapers from travelers, they send delegates to towns to get the students' aid. They spend the nights in barns or woods listening to readings of the French Revolution or the history of Russia as it is not taught in the schools. They invariably begged reading matter from our party, but we were often astonished by what they had already read. They pulled the most revolutionary proclamations out of their pockets, told us of their readings of Russian history, and asked intelligent questions about the conditions in the United States. Nearly all the peasants we met during our 2,000-mile journey down the Volga had read an excellent peasants' weekly, published in Kasan. As a type of several others issued by the Socialist revolutionary party or the peasant group in the Duma, and scattered in nearly every village in the land, a summary of its contents during the Duma and since will show the character of the peasants' new intellectual diet—which I have found them amply able to assimilate.

The *Kasan Peasants' News* has seemingly neglected nothing of all that the peasants most need to understand. Beginning with the late war the whole ruinous policy of the Government is exposed and effectually damned. War in general and standing armies are discussed, and a militia system recommended. The weapons by which the Government maintains itself are sketched historically—Cossacks,

A peasant working man. The type that brings light to the villages.

"black hundreds" and the league of "True Russian Men." It is pointed out that the village police and the new type of soldier ruffian called rural guards are paid twice as much as the village schoolmaster, who gets $100 *a year*. The Government's proposed reforms are laid bare —emigration to isolated districts of Siberia, purchase of land at the landlord's prices thru the Government bank. There is a *résumé* showing how little the Government has done for the peasants in the forty-five years that have followed since the emancipation from serfdom in 1861. A whole series of articles lays bare the way in which Russia is dominated by "gentlemen landlords" and "gentlemen bureaucrats," and lately by the same gentlemen in the disguise of reformers.

The possibility of change is suggested by outlines of foreign forms of government, foreign election laws and foreign agrarian movements, from slavic Servia, Italy and Ireland to New Zealand and Manitoba. There is a full account given of the now illegal peasants' union, of the thousands of nakases sent by the peasant to the Duma, of the agrarian disorders, of the brutal expeditions of revenge sent out by the Government at the demand and often under the personal direction of the injured landlord; of the killing and maiming of the peasants; of the retaliation of the latter in the Baltic provinces and the Caucasus. The Government tries to turn the popular excitement against the Jews, Poles, Armenians, Letts, Lithuanians; this peasants' paper makes an effort in every number to familiarize the peasants with the virtues and friendliness of these "conquered peoples."

The "black" papers sustained by Government subsidies or by the liberal subscriptions of high-place bureaucrats, generals and landlords, carefully exclude any mention of these wholesome truths. But their influence is slight. Only in one village did we find copies of any of the reactionary organs sent gratis all over the land. For they are not only incredibly brutal and false, but they are incredibly stupid in their judgment of the peasants. Starving countrymen, for instance, are told that the reports of the famine are grossly exaggerated. I myself saw, several weeks ago, villages in which the last bushel of grain had been consumed and where the peasants are looking forward to a long winter, with no means of subsistence other than a miserable horse or cow. By selling these the sole means of support for the next year, they would be able to keep alive a few weeks more. The Local Government Board reports that 13,000,000 people will have to receive Government aid before the winter is passed. Yet these peasants are told that the reports of the famine are exaggerated, and if they suffer that it is from their own drunkenness and laziness.

"Without the country officials and police and other benefactors," says one of these extraordinary articles, "the peasants would perish like a flock without shepherds." Now the hatred of the peasants for these same officials and police is too bitter and deep for words. Innumerable cases are now documented in which these "shepherds" are shown to have beaten their sheep to death with clubs, or to have crippled them for life.

I discovered a case in Tambor, brought to light by the chance indignation of an honest judge. Some half-hundred peasant rioters were captured last fall while engaged in openly hauling off the landlords' grain, as happened in thousands of other villages at the time. The police "shepherd" had them bound and gagged and kept in the barn where they were found; they were made to lie on one side for several weeks and beaten when they turned. From this position they were taken out one at a time, "examined" and tortured within hearing of their comrades. Many were there thus slowly beaten to death, while the others were waiting their turn. So sixteen were executed, not for murder, violence or attack on the public officials, but for taking, in broad daylight, or stealing, if you like, what they considered should always in law and justice have been their own. Every village has seen or known of cases of the kind. What influence can a press be expected to have that sees in these brutes the shepherds of the peasant flock?

If it were not for the assiduity of a part of the village priests the peasants would long ago have lost all credence in the official system of falsehood. One priest and patriotic agitator travels about calling the peasants' deputies in the Duma Anti-Christs who had been bought by the Jews. Others satisfy themselves with preaching the like in their native churches; all are tools of the Czar, must read his ukases and manifestoes from the pulpit. Not all the priests, however, are still "black" in their hearts; thousands are openly liberal and some are secretly revolutionists. Those who are still loyal are being reduced by the population to a narrow strait. Only a dozen families of the hundreds in the village, the money lenders and shopkeepers, are contented. The discontented are incredulous when not rebels at heart; in many places they have deserted the churches; in others they are beginning to boycott the services of the priests, and in some cases the villagers are taking away from them the grants of village lands upon which they live. The village popes were never much respected, depending as they do upon occasional fees of the peasants' chickens or produce. This lack of respect is turning into open hate. Their sermons, threats and advice will not long form a serious barrier to the new flood of literature and public discussion.

For in the last two years the dramatic events thru which Russia has passed, the promises and pretensions of big changes on the part of the Government itself, the fever of agitation in the towns, have caused more reading and discussion in the villages than took place in the forty-five years that went before. The old men are often still conservative; the sons, in overwhelming majority, are openly or secretly with the revolution. In a certain village we met a typical case of a young man and his father. The father, formerly village elder, was a true "black," who confessed readily that he knew little and cared less for the questions of the hour. The son had been reading and studying thru the long winter evenings for several years, under the guidance of a genial revolutionist librarian, who spent his summers near

A typical peasant delegate who walked from his village to St. Petersburg to report what the Duma was doing.

by. A year ago the young man found the villagers so little interested that even in the dull isolation of the northern night, they did not care to hear him read. Last winter all was suddenly changed; they eagerly followed and fairly consumed every scrap of printed matter he could offer; they were specially delighted with a little history of Russia, already circulated among the villages to the number of half a million copies. Picture the excitement of the peasants of a village that has slumbered from immemorial times when suddenly awakened to the dramatic story of their own wrongs, as freshly written by a Socialist, a revolutionist and a writer with something of the simple style and the emotional genius of a Tolstoi!

The peasants are painfully conscious of the great wrong that is done them by a Government that punishes cruelly whenever it has the power every attempt they make to discover and spread the truth. With adequate information, free discussion and the freedom to organize they feel they could soon take possession of the Government and the land. They are not so simple, then, as to suppose that the Government is going to grant them these things of its own accord. They are already taking them as best they can.

"Now we know we must upset the whole Government and we peasants are ready to do it," were the words of the first peasant I have already quoted.

'But we have not the power to do it," he went on to explain. "Because we can't communicate with the peasants of the other villages, because all the newspapers are closed and nobody is allowed to tell us the truth; if anybody begins to speak the truth to us he is immediately bound.

"The peasants of the Government of S—— had village meetings everywhere and wanted to send delegates to meet together in the towns. But the delegates are afraid to go, for fear their heads will be knocked off when they arrive."

The first action of the assembled representatives of the two million peasants' Government of S——, if it had been carried out, was to have been intelligent enough, and quite suffices to explain why the peasants are not allowed to meet.

"These delegates were to send telegrams to the foreign countries that when the Russian Government comes to them and offers them our land for a mortgage and wants to get money on it, we peasants know that the time will come when we must pay. But we peasants declare we do not wish the loan. We ask the foreign countries to help the common Russian people, we appeal to their conscience not to make the loan. For if we are alone our position is very hard."

In the village of Deputy L—— the peasants complained as bitterly. "The Government takes pains to send around such news as the lying report about the January massacre. As to other news, it says it will be too much for us.

"We have read several numbers of the *Kasan Peasants' News,* but now we get no newspapers. We only know what we can read in proclamations and little books (pamphlets—and they are legion). We want very much to read the papers. The Government knows that when we have no books and papers we are cut off from all Russia." We emptied our pockets of all we had, and the peasants were as grateful as their children, to whom our white bread was delicious cake.

The peasants, then, are truly wise. They know the great facts of the situation, but they know also what they have yet to learn. They have discussed everything in their village meetings, and often several villages have met together in the woods. They have held frequent secret congresses at which dozens, hundreds and even thousands of villages have been represented. They have gone further in some governments, where, with the aid of the revolutionists, the whole countryside is organized in a system of secret committees—village, volost (township), district (county) and government (state). All this reading and discussion and organization, however hampered and incomplete, is duly bearing fruit.

First, the idea of a peasants' union and a peasants' party, of the absolute necessity of a common organization for all Russia, has taken permanent root. Also the idea that the people's Duma is opposed and thwarted by the Government of the Czar. Also the demand for a Duma with all the power of a constituent assembly, and, finally, the belief that the people should have all the land and

that there should be no more landlords, either now or at any future time.

The great majority of the villages hold in common the same ideas as to the means by which the people are to get the power and the land. They and their representatives, who had long ago proposed passive resistance, the refusal of taxes and recruits, and the denunciation of the foreign loans, measures that the Constitutional Democrats adopted only when the Duma was dissolved, were also the first to discover, what they had suspected from the outset, that these measures alone would never bring the Government to terms.

"You possess in passive resistance the means of acquiring popular representation," said the Constitutional Democrats at Viborg, "But we see now the administration of the election law and conditions of election for the new Duma are even less democratic than they were before."

"Before the Duma met we predicted it would do nothing," said the peasant delegates at the conference. I had talked with Constitutional Democrats and peasant leaders before the Duma. "We expect everything from it," were the very words of one of the Constitutional Democrats.

"None of us believe the Duma will be able to do anything," said the peasants' representatives. "The Government will not be honorable toward it, and the Duma will be so revolutionary the Government will have to fight it down."

But the peasant deputies, unfortunately, went further than their peasant constituents were able to go. They not only declared the Government illegal and at war with the people, but they declared all peaceful relations at an end. They left the accepted Fabian tactics of revolution of the Peasants' Union and joined with the Socialist parties in the proclamation of mutiny and armed insurrection before the army was ready to mutiny or the peasants ready to rise.

Now, what has happened in the tens of thousands of disaffected villages that cover the land? They read the proclamation of the peasants' group and they agreed heartily that the Government was illegal and was to be overturned. As to the proposal of insurrection, they served it as they did the call to passive resistance of the Constitutional Democrats: they labeled it as impractical and past to the order of the day—the tried and developed tactics of the Peasants' Union, which are these:

The Government evidently is not yet to be voted out, starved out or suddenly overthrown. But it can be worried to death, the army can be gradually honeycombed with disaffection, the Government can be gradually cut off from its sources of supply, the elections can serve as an excuse for agitation and disorders; the landlords, the only economic class supporting the Government, can be starved out, their houses and crops burned at night, and themselves literally driven from the land; the life of the village authorities, officials, clergymen and police can be made unbearable—their property and lives forfeited if need be. Government property can be pillaged and Government officials killed. In cases of successful guerrilla war, as in the Caucasus and the Baltic provinces, the guerrilla bands can be provided with food and money, and at the proper moment bridges and railroads can be destroyed. And the forced activity of the peasant soldiers, their dispersion, their service against their relatives and friends, can lead rapidly to the spread of mutiny, till finally the larger part of the army gets out of Government control. That all this can be is proven by the fact that most of it has already been. A general, simultaneous, armed insurrection may never occur. But there are many degrees of rebellion between this and the tame submission to such "legal" reforms as may be granted by a Government whose hands are red with the people's blood.

Revolution by secret and guerrilla war may be long and costly—it may be proportionately thoro and profound. Russia may pay a price such as Germany paid in the thirty years' war—she has not yet made a tithe of the sacrifices we suffered for an alien race during our War of the Rebellion. But the facts are already here to show that, unfrightened by the Czar's access to all the gold of earth, Russia is treading with increasing rapidity the road of decentralized, general and revolutionary violence against her Government, and that she will follow it to the end.

ST. PETERSBURG, RUSSIA.

The Garden

BY MAY PRESTON SLOSSON

They had drawn very near each other, altho twenty years lay between them. Both were tall and strong and beautiful, tho in the eyes of one Hope smiled and in the eyes of the other Memory brooded. The woman spoke softly to the girl: "Will you walk in my garden?" And the girl knew she had received the highest honor.

They entered the garden thru a low gate about which morning-glories twined. And the girl smiled at the flowers all about her, for they were the frank favorites of childhood. They grew in her own garden.

As they passed on they reached paths flecked with doubtful sunshine, wandering among tall lilies like white dreams, and the girl looked at her companion sisterwise, for it was all like her own garden.

But they strayed on into a band of rose-hued light athwart the path. Red roses were all around them, climbing over sweet arbors, flinging sprays of vivid color to the very top of the garden wall, which had suddenly grown high, shutting them into a secret place of glowing crimson and rich fragrance, as tho they had paused in the very heart of a rose. Red petals fluttered about their feet. The girl blushed, for she knew the meaning of the riot of roses. Still, she did not speak, for the spell of silence lay upon them in the ruby close.

Then came they into a sweeter place still, where the flower beds were little and low and fringed with the feathery plant known as "Baby's Breath," and the girl spoke not for reverence of the place. At last they stood by such a little bed covered with white violets, and their breath was faint and sweet. The girl spoke at last: "How could you bear it?" And again, in a sort of passion: "How *can* one *ever* bear it?"

The woman said: "It *must* be borne!"

But the girl's tears dropped fast upon the bed of violets and rebellion filled her heart for a grief she had not known.

"How came the violets here?"

"They did not grow at first. The ground was raw and red, like a wound—but they came—at last—one by one—dear little memories and tender thoughts, until the bed was covered, as you see."

Peace filled the troubled heart of the girl. She lifted her head and both faced the western wall of the garden. Against it flamed the rich colors of autumn foliage, asters and goldenrod gleamed among the purpling grass, their faces glowed in the sunset light. The woman spoke softly:

"The garden is not quite finished. There are new flowers to be planted at the end, rue and rosemary and heartsease. I have shown you all that Innocence, Love and Grief have planted, but there are more beds to be made by hands unseen. But I do not fear them."

And the garden was very sweet as the twilight fell.

President Roosevelt's Trip to Panama Told in Pictures

PRESIDENT ROOSEVELT ON ONE OF THE BIG STEAM SHOVELS AT THE PEDRO MIGUEL END OF THE CULEBRA CUT.

[This photograph is copyrighted, 1906, by Underwood & Underwood, New York, and the following by H. C. White Co., New York.]

The Presidential Train Passing Thru the Culebra Cut and Receiving a Salute of Twenty-one Blasts.

The President and Mrs. Roosevelt on the rear platform of a Panama railroad train. Behind them are Chief Stevens, Chairman Shonts and General Rixey.

The Reception of the President in the Cathedral Plaza in the City of Panama.

President Roosevelt delivering an address from the steps of the Cathedral. On the right is President Amador of the Republic of Panama.

The President, instead of going thru to the city of Panama, as was expected, switched off to La Boca and took a meal at the men's mess.

How the Bucket of the Steam Shovel Loads the Cars with the Sticky Mud of the Canal Cut.

Changing Conditions of Marriage

BY IDA HUSTED HARPER

A GENERATION ago there was but little discussion of the marriage and home relations; their status was looked upon as practically settled and not in need or capable of any improvement. Today they divide attention with the most important current questions. Their foundations have been undermined by the increasing laxity of the divorce laws and the large number who take advantage of them; by the vast change in the industrial and social position of woman; by the lessening influence of the church; by the modern upheaval of all aconomic and sociological conditions. The accepted idea used to be that of the old "story books"—they married and lived happily forever after. Silence gives consent, and as the married people for the most part kept still, it was taken for granted that, in a general way, all was well. Tradition and custom were sitting on the lid. "What is the matter with the wives of today?" exclaim the critics. "Why aren't they contented as their grandmothers were?" Contented! Just have a heart-to-heart talk with such of those dear old ladies as managed to survive and see whether it was contentment or resignation to something which couldn't be helped. When the divorce laws took away from a woman her property, her home and her children; when the labor market closed against her every avenue of employment, and the social world placed upon her a stigma only a little less vivid than the "scarlet letter," she would far rather endure the worst that marriage could impose than what she would have to face outside of it.

Give unrestricted liberty to any class that have long been in servitude and they will abuse it. This is the situation at the present day as regards husbands and wives. From there being no door of escape, the point has been reached where every door stands wide open, and, while the actual proportion of divorces to marriages is still small, it is increasing so rapidly as to indicate a stampede. The situation has reached an acute phase at the present moment by the appearance of a book—"The Family"—dealing with this problem and gravely suggesting that a solution may be found in "trial or temporary marriages." This idea is not original or new, but it has aroused special criticism and protest because it appears in a scholarly and scientific work by a woman prominent in the educational, philanthropic and social world, Mrs. Elsie Clews Parsons. After an argument that a wiser selection is likely to be made after maturity and a better parenthood to be the result, and yet that a late marriage is apt to be accompanied by a lack of chastity, she says:

> "It would, therefore, seem well, from this point of view, to encourage early *trial* marriage, the relation to be entered into with a view to permanency, but with the privilege of breaking it if it proved unsuccessful and in the *absence of offspring* without suffering any great degree of public condemnation."

As a matter of fact, this is the very condition into which we seem to be rapidly passing. There is no open admission that marriage nowadays is only a "trial," but the parties directly concerned and also the onlookers have no doubts about it. This is the most serious feature in the situation today, that both the young and the mature enter into the marriage contract with the absolute consciousness that if it is not satisfactory they can break it. The courts will allow it and society will sanction it. The divorce congresses, the decision of the ministers of a few denominations not to marry divorced persons, the sermons and editorials of protest have practically no effect. Public opinion, reacting against the injustice of the past, is unquestionably in favor of liberal divorce laws. That but a single State continues to recognize only one cause shows the advanced ideas on the subject. Any especial virtue which New York might claim because of this law is nullified by the fact that this State has furnished more divorce scandals in high life than any other—one might almost say than all others. There is very little support for the contention that adultery should be the sole cause. A nearly universal

sentiment exists that a wife should be freed from a habitual drunkard or "drug fiend" and from a husband who beats and maltreats her. The effect of these crimes upon the children of the household are far worse than that of infidelity. No woman should be legally tied for life to a man who has deserted his family and left on her the burden of their support. A husband, too, is clearly entitled to release from a wife who by intemperance or various forms of cruelty makes existence unbearable. Mere separation is not sufficient, for it leaves the innocent party in an anomalous position—neither married nor single, with no fixed place in society, and if of a domestic disposition unable to found a home or rear children. The clergyman who declines to remarry divorced persons leaves them in the same condition. In both cases there is the danger of contributing toward immorality. This is also true where the court forbids the remarriage of the guilty party.

But when all the above causes of divorce are admitted as just to the injured party and for the real good of society, then immediately the privileges begin to be abused. There is collusion between husband and wife where both want to be free, or one sins in order to compel the other to seek a release, and very frequently in order to marry some one else. The unmarried, seeing how easy it is to dissolve the relation, rush heedlessly into it without any regard for its responsibilities. Thus, as the result of an honest desire to apply to marriage the liberal and humane spirit which is characteristic of the present age, we have the chaos that reigns today.

We are very far from a satisfactory solution of this vital problem when we propose that this most important of all relations shall be entered as a temporary experiment. We are just as far away when we expect to solve it by dealing with its effects as they are manifest in the divorce court. Marriage itself must be placed on a different basis, and its relations must be adjusted to harmonize with the changed status of men, women, law and society. Wherever there is human life some form of marriage exists.

Monogamy, as we know it today, is the result of evolution thru different periods of civilization. It is by no means of divine origin. Polygamy is unquestionably sanctioned thruout the Old Testament, and in some cases commanded by Jehovah. The Mormons based their practices on the exact letter of divine authority. Monogamy is not the direct result of Christianity. Paul's admonition to have but one wife was given only to the Bishops and Deacons. The Jews, for many generations, have been distinguished for their fidelity to wife, family and home. Monogamy is simply a survival of the fittest form of marriage as demonstrated by the experiments of the ages. It affords the greatest protection and security for the wife, the best opportunity for the proper rearing of children, and the strongest safeguard for morality and stability of character in the husband, while the founding of a home on this basis is a direct advantage to society. Whatever tends to destroy the monogamous marriage is a retrogression, whether it be the "trial marriage" or the lax application of the divorce laws. Both, while compelling obedience to the letter of the law requiring but one husband and one wife, evade the spirit of it by permitting frequent changes. In some cases, however, it seems absolutely necessary to afford a release from youthful or hasty marriages or from such as have become intolerable for reasons already mentioned; and instances are numerous where the persons thus set free have made a happy marriage, established a permanent home and become useful members of the community.

Fifty years ago marriage was looked upon as a religious sacrament, and this in itself made it binding. Today it is very largely regarded as a civil contract and so considered by the law. When the religious feature was discarded it should have been replaced by the highest of ethics, but the masses of people are not equal to this. Monogamous marriage is like our republican form of government —its foundation principle is correct, but there are many faults in its construction, and both demand a higher general average of humanity than exists at present. Neither is established upon absolute justice. In the whole, long history of marriage its requirements, rewards and punishments never have been the same for

husband and wife, but have been grossly unfair to the wife. There is not space here to go into details. Mrs. Parsons, in her valuable book, has made a large collection of the marriage laws and customs of ancient and present races which forcibly prove this statement. We need not go further back than the records of our own country, which had the light of all the ages to guide it, and yet adopted a code of laws that made the lawful status of a wife not much above that of a slave. This code had the authority of the greatest legal talent of England, and back of this the sanction of the powerful Catholic Church, whose canon law was more cruel to women than the Roman law of the pagans. Wives were as much an article of property in the United States at the beginning of the nineteenth century as they were in the patriarchate days so graphically pictured in the Old Testament. Husbands were not allowed to dispose of them in the arbitrary ways described in that ancient book, but their possession and control were absolute. These have been gradually modified, but in not one State today are the rights of husband and wife exactly the same. In this subjection the wife could only be happy and contented if the husband did not take undue advantage of his power.

In the great change which has taken place in the status of woman during the last half century, two factors have been especially conspicuous—education and industrial opportunity. Thru these she has been rendered independent of the actual necessity for marriage, and if she does marry it is with the consciousness that, should it prove to be a tragedy, she can escape and take care of herself. The changing of the statutes so that a wife can own and control property; the lightening of household tasks so that she is not broken down physically before she reaches her prime; the lessening of the large number of children who used to render the mother so helpless; the liberalizing of the laws and public opinion in case of divorce—all of these contribute toward the independence of the wives of today. Perhaps these very conditions prevent their making the strongest effort possible toward adjusting themselves to the demands of married life, but, even so, this is not as serious an evil as those it has superseded.

With men also the necessity for marriage is by no means so strong as it used to be. All their material comforts are provided at a less cost than they could get the same in their own households; clubs, theaters, automobiles, week-end visits occupy the Sundays, evenings and spare hours so completely that there may be no desire for the companionship of a wife or the pleasures of domestic life; the price of living has become so high that in the large cities an individual home is almost an impossibility, while in the smaller places the average man can only secure one and have something for investment and old age thru much toil and self-sacrifice. If he does not find in marriage the fulfilment of his romantic dreams, these things increase his dissatisfaction and his desire to return to the freedom of bachelor days.

All the conditions of modern life are such as to discourage men and women from marrying, and if they do so to make them discontented. Divorce has rushed from the extreme of being considered a disgrace which never should be mentioned to that of being regarded as a standard joke in the comic papers, a fit subject to be worked up into stage comedy and hilariously received by large audiences. The present situation continued and intensified for a few generations will affect most disastrously the character of our nation. Any remedies proposed must necessarily be crude, for this subject demands the concentrated thought of the best, the wisest, the most practical and the most conscientious of our men and women. It cannot be settled by sentimentalists, reactionaries, religious fanatics or radical socialists. Boys and girls must be trained for marriage as one of life's vocations—boys even more than girls, as they will take the initiative. Both must be taught to cultivate the qualities essential to a perfect marriage and each to insist on these qualities in the other. Marriage must be dignified and exalted thru every possible agency, and its responsibilities impressed upon those who enter into it. Purity of life before and during marriage must be required of the man as well as the woman. Financial independence must be secured for unmarried women as far as possible in order that they may be able to have freedom of choice in a husband.

The rights of the wife in marriage must be equal to those of the husband. There must be no cessation of effort to bring about such economic conditions as will enable all men and women to marry, secure a home and rear a family. Every divorce must be a matter of careful inquiry and deliberation on the part of the court, an attempt made to reconcile the parties if this seems advisable, and another marriage of either prohibited for as long a time as seems compatible with justice and morality. Society must regard the divorce as a serious matter whose necessity is deeply to be regretted, and while showing the innocent party a kindly consideration, must taboo the one whose conduct made the divorce necessary.

There can be no adequate superficial treatment of this question, which lies at the very root of life itself. A true marriage is the fulfilment of the noblest ideal, a realization of the most nearly perfect happiness. No laws, customs, religion or public sentiment can bring about such marriages. They are dependent wholly on the men and women who enter into this most intimate, sacred and important relationship, and it is only thru their education and evolution that its permanency can be secured or its highest standard maintained.

NEW YORK CITY.

Heresy Trials: Net Results

BY HENRY PRESERVED SMITH, D. D.

[Professor Smith is one of the ablest biblical scholars in this country. He was Professor of Old Testament in Lane Theological Seminary, but defended Professor Briggs in his controversy, and was, with him, suspended from the Presbyterian ministry, and joined the Congregational Church and became Professor of Biblical Interpretation in Amherst College. He is the author of important books, of which the latest is "Old Testament History," in the International Theological Library.—EDITOR.]

THE Crapsey case has been finally issued. An interested observer, comparing this with other heresy trials, will find himself confirmed in some general conclusions which may be briefly stated here.

In the first place, if an accusation of heresy is actually brought to trial it is almost certain to result in a conviction. It is of the nature of a court that it is bound to give judgment according to statute law. But the statute law of every church includes creeds framed a long time ago. It is easy to show that the thinking of almost any intelligent man of today does not at all points square with these documents. When the divergence is brought to the attention of a conscientious juror he is bound to take note of the fact and to give judgment accordingly. He may be aware that at some point his own divergence is just as great, and that on strict enforcement of the rule of faith almost every minister of the church would suffer the fate of the accused. But this can make no difference as to his opinion on the specific charge before him. On the other side, the accused can only plead that he is within the allowable liberty of a Christian minister. But this liberty, from the nature of the case, is undefined by any power that has authority with the court. If the object of trial is to silence the accused, then every heresy trial is a success.

Secondly, a heresy trial succeeds to a certain extent in suppressing discussion within the church. Few of us like to make ourselves prominent by new and strange views; most of us prefer to do our work peaceably; all of us would like to remain in the communion in which we have taken up our life work. The natural temptation of the minister is to walk in the safe and well-worn path in which the fathers walked. This temptation is strongly reinforced by the object lesson given in a heresy trial. To this extent a heresy trial attains the end of suppressing discussion, and may be said to contribute to the peace of the church.

But whether this result is not attained at too great cost is a question that will occur at once. A large body of intelligent laymen suspect that ministers (as a body) lack courage. They believe that we are unwilling to face the real problems of today, and also that we are unwilling to say what we really think. The consequent loss of influence on the part of the ministry and the church is too evident to call for comment.

A third result is, for the time being, to call attention to the views of the accused. This does not contradict what has just been said; discussion within the church may be suppressed, but discussion outside the church is made more emphatic. Take the case of Dr. Crapsey: The real point at issue is whether a certain event took place in a certain way nineteen hundred years ago. Many laymen never had their attention called to the question until the trial brought it to the front. They now know that many scholars and some ministers do not believe the evidence sufficient to enable us to affirm what the church affirms. It would be too much to expect that all to whose attention the matter is brought will maintain the church position. The spread of the alleged error must follow.

Again, one result of such trials is to increase the confusion, already too common, respecting the nature of saving faith. The Church knows and affirms that faith in the Gospel sense is the turning of the soul to God, a resting upon Him for salvation thru Jesus Christ. But the heresy trial tends to show that the important thing is not this faith, but a belief that certain allegations of fact are correct. It therefore diverts attention from the root of the matter. The purpose of the Apostles' Creed was to define *what Christ it is* in whom we trust—not the imaginary Christ of some Gnostic philosopher, but the Jesus of the Gospels is our Lord and Saviour. Now there is a vast difference between these two statements:

I trust in the Christ who was born of the Virgin.

I assert that Christ was born of a Virgin.

The Church by its legal process makes the second proposition the important thing, and thus changes the nature of Christian faith. The difference between the two positions will be clear if we remember that the Apostle Paul, who devoted his whole life to the exposition of trust in Christ, never mentions the virgin birth, so that we are in doubt to this day whether he knew of it at all. A dignitary of the Church is reported to have said that the Church "must protect her children from being robbed of their faith." The question what kind of faith it is which is so precious seems not to have occurred to him.

Finally, a heresy trial does *not* have one result which is perhaps in the mind of the promoters—it does not rid the Church of those who hold the obnoxious views. In no case has a conviction for heresy been followed by an exodus of heretics. It may be said that this shows that there were no sympathizers with the accused, but those who are in a position to know will never make such an affirmation. Of some hundreds of Episcopalian ministers and some thousands of Episcopalian laymen who believe as Dr. Crapsey does, none will withdraw from the Church on account of his conviction. They pray to be delivered from schism, as well as from false doctrine, and of the two they think schism the greater evil. In a Church which claims to be Catholic, but does not claim to be infallible, who shall say them nay?

Tortugas Laboratory, Aquarium, Dining Room.

The Tortugas Laboratory of the Carnegie Institution

BY ALFRED G. MAYER

DIRECTOR OF THE LABORATORY.

A GENERATION ago Agassiz succeeded in establishing our first marine laboratory on the then remote island of Penekese. To-day the grass grows over its site on the lonely island, now the home of unhappy exiles, but the spirit of the great naturalist lives on, and steadily ever since his day there have been growing into greater and fuller usefulness a number of laboratories for the study of the marine life of our coasts.

Greatest among them, and nearest to old Penekese, is Woods Holl, a name which has become inseparably associated with the best achievements of most of our leading zoölogists.

A glance at the conditions of our Atlantic seaboard will reveal the reason for the important position in science now enjoyed by Woods Holl.

Along the rocky shores of Maine the cold arctic current creeps down to Cape Cod, while up along the Florida coast comes the warmest water of the Atlantic; and thus it is that at Woods Holl during winter and early spring we find a host of Arctic creatures which the stern northeasters have driven down from their homes in icy Labrador. Then as summer wanes into August the influence of southerly breezes begins to be felt, and animals from the warm West Indies come drifting into the harbor at Woods Holl.

But it is only recently that we have awakened to the fact that we alone among the nations have a coast arctic in its northern and tropical in its southern range. The marine animals of Florida resemble those of Ceylon more nearly than they do the creatures of the cold coast of Maine.

Thus it is that co-ordinate with the

growth of the great central station at Woods Holl, other more specialized laboratories have arisen; and now we find one at South Harpswell, Me.; at Cold Spring Harbor, L. I.; at Beaufort, N. C., and last of all to be established is the laboratory of the Carnegie Institution at Tortugas, Florida.

All who have sailed down the Florida coast from Miami will rejoice to bring back the memory of the keys — island after island, with palm groves whispering in the tropic breeze, and coral beaches spangled in the eternal summer's sun. In a long, graceful bow the islands curve majestically southward, then westward, into the entrance to the Gulf of Mexico. Around them the rip-

The Vegetation of the Tortugas, Florida.

ples flash in turquoise and emerald, over shallow reef and sand flat where the sharks are wont to lash. Seaward arises now and again the snowy gleam of a breaker on the reef, and beyond is the deep purple-blue of the Gulf Stream forever rushing onward.

Track Made By a Loggerhead Turtle in Crawling Up the Beach in Order to Lay Its Eggs.

The seven small islands of the Tortugas are the westernmost members of this chain of keys.

Geologically speaking, they are the most recent of all of the Florida keys, and every grain of their sands was once part of the shell or skeleton of some mollusk, coral or sea urchin of the reefs, which, after being pounded into fragments by the surf, has at last been blown upward by the wind to take its share in building up the island.

The Tortugas lie far out in the Gulf of Mexico, with the nearest keys forty miles away, and on their southern and eastern flanks flows the rushing Gulf Stream as it pours out through the narrow Straits of Florida to wander and be lost over the broad Atlantic.

But the charm of the Tortugas is not alone that of remoteness, for around them ripple the bluest waves of the Atlantic. Down thru the limpid depths one sees gorgeous tropical fishes drift listlessly in and out among the shadows of coral caves. Half buried among the dead branches of the coral forest are great sea-anemones, with scarlet bodies and turquoise tentacles violet tipped. One likens them to passion flowers of the sea. The purple sea fans swing languidly to and fro to the will of the surging wave, and, clustering among the crevices, are great, velvety, black sea urchins, with their sharp spines waving viciously. An octupus glides ghostlike out of the shadows of a cavern, its color changing constantly as it moves shadow-like along, to be lost one knows not where. But one sound breaks the silence of the coral world below. This is an incessant crackling, as of myriads of minute torpedoes, and is due to the snapping of the claws of little lobster-shaped shrimps that infest the sponges of the reef.

The Carnegie Institution Laboratory at the Tortugas consists of seven buildings upon Loggerhead Key, and is designed to afford the best possible facilities for the study of the life of the Gulf Stream and the coral reefs. The labora-

tory is provided with a sea-going yacht and three good launches for visiting the neighboring reefs and for cruises over the Gulf Stream. The yacht is 60 feet long, and can remain at sea for weeks at a time, being provided with a powerful engine and sails.

The Tortugas are probably the most healthful place in Florida in summer, and this is one of the chief reasons for founding a laboratory upon these remote islands. No mosquitoes breed upon Loggerhead Key, and the few that occasionally appear are blown from a distance of at least forty miles; nevertheless, every possible precaution is taken to isolate the laboratory from tropical infections.

In the days when Agassiz began his work at Penekese, biology was being advanced mainly by the study of morphology, altho the theory of evolution was beginning to absorb great attention. In those days laboratories had but few instruments and fewer chemicals. Today science is progressing mainly thru observations of the most minute details of structure, such as those upon the early stages of the egg; and studies in physiology, heredity and of habits from a modern standpoint are beginning to yield results of great import.

Such studies demand a whole array of delicate apparatus and complex chemicals, and almost everything is now done in an elaborate way, rendered necessary by the refinement of observation to which science has attained. The equipment of the Carnegie Institution laboratory at Tortugas meets these modern demands in the fullest possible manner, and a number of our leading zoölogists, distinguished for their achievement in research, have accepted invitations to pursue studies at the station.

Noddies Nesting on Bird Key, Tortugas.

These researches have, however, been conducted only during the past two summers, and thus too short a time has elapsed since the opening of the labora-

tory to permit me to speak personally of the investigators, or in detail of their results; especially as many of the researches are of an elaborate nature and are not yet completed for publication. The following brief statement will, however, give a fair idea of some of the best established results achieved by investigators working at the laboratory.

One investigator studied the habits of the reef fishes, and found that the most abundant predatory fish of the Tortugas reefs was the gray snapper, which commonly feeds upon a little silvery sardine. If some of these sardines be dyed bright red and then thrown into the sea together with some normal silvery sardines, the silvery ones are at first eaten more readily than the red, but the gray snappers soon learn that bright red sardines are good to eat, and will then devour them fully as eagerly as if they were normal in color. The investigator then dyed some sardines bright blue, and threw them in together with red and silvery ones. At first the blue were relatively avoided, but soon the gray snappers learned that they too were palatable. Small portions of jellyfishes were now attached to the blue sardines, and the gray snappers seized them greedily, but were stung by the pieces of jellyfish. In a few minutes they learned to avoid the blue, but still ate red and silvery sardines. The next day, however, the gray snappers had forgotten this experience, and the patient investigator was obliged to teach them anew.

The Laboratory Yacht "Physalia."

Another investigator demonstrated that even such lowly creatures as sea anemones and corals pursue the method of trial and error in their behavior, and that they recognize things injurious and avoid them. Moreover, they at first avoid each sort of injurious stimulus in a fixed and constant way, but if this fails they adopt new methods.

The associative memory of caterpil-

lars may endure about half a minute, but they cannot retain the memory of an experience for so long a time as a minute and a half. Results such as the above may appear trivial to the lay reader, but their import increases when we consider that in these simple forms we are dealing with the beginnings of mind.

One of our most distinguished zoölogists working at the Tortugas found that the substance of the eggs of jellyfishes is differentiated into three concentric layers, one of which forms the outer skin, one the muscular or supporting mechanism and one the digestive system. Previously he had discovered that the eggs of higher animals were organized in the same manner. He thus strikingly demonstrated the intimacy of relationship which pertains between the highest and the lowest of animals. The difference between a jellyfish and a vertebrate is mainly one of degree, not of kind.

Another investigator has carried out a very carefully planned series of observations upon regeneration which show that the animal with the greater number of removed parts regenerates each and every part more rapidly than the animal with the lesser number of removed parts.

Studies upon mollusks, tunicates, fishes, fish parasites and protozoa are being pursued, and a series of elaborate observations will soon be published upon the reactions of crabs and starfishes, and upon the development of jellyfishes discovered at Tortugas.

One student finds that the pulsation of jellyfishes and of the hearts of various animals is strongly stimulated by the sodium potassium and calcium chlorides of the sea water, or of the fluids permeating the heart; but magnesium inhibits this stimulus, thus causing the pulsating organ to be merely upon the threshold of stimulation and allowing slight internal stimuli to produce rhythmical contractions. Organs can pulsate only when a stimulus is counterbalanced by an inhibitor, thus allowing one or the other to alternately control the reaction.

A method of reviving pulsation in paralyzed jellyfishes was also discovered, and it was found that the pulsation stimulus is transmitted by the skin or by a diffuse sub-cutaneous nervous network, not directly by the muscles themselves.

But the Tortugas laboratory is only the youngest member of a series of laboratories along our Atlantic seaboard, to say nothing of the vigorous young growth upon our Pacific coast. All strive in a common cause to advance the confines of human knowledge. "What is life?" is the burning question of biology today, and altho this deepest of nature's secrets may never be revealed to us, yet light is being thrown upon it year by year, and we hope for we know not what.

TORTUGAS, FLA.

A Woman

BY CHESTER FIRKINS

OUR cities glisten in the sun,
With castled dome and minaret,
Where swift the crowded lifestreams run
The meshes of the money-net.
We pay—but still the sacred debt
God gave the race for cherishing,
How swiftly our poor hearts forget!—
A woman is a holy thing.

When, forest-bold, our fathers won
Rome's thousand-cornered coronet,
The trophies of the struggle done,
They made their lovers' amulet.
But sturdy broad-ax, battle-whet,
Was proudest token there to bring—
She prized what goodly blades could get,
That held her as a holy thing.

And when high Freya's Saxon son
In regal court his standards set,
And knights the quest had well begun
For gentle maid who chance might let
One wear her riband, tear-drop wet—
Alike the lackey and the king—
She ruled whome'er her journey met—
A woman was a holy thing.

My brothers, look you, where the fret
Of Gold's red goddess hurls the sting
Of shame upon us, who forget
A woman is a holy thing.

NEW YORK CITY.

The Visiting British Teachers

BY ALFRED MOSELY, C. M. G.

[Mr. Mosely's Industrial and Educational Commissions to examine and report upon conditions in their respective fields in the United States, with the view to aiding his British countrymen to adopt anything superior that they might find here, have fixed the attention of the entire world and set an example which other nations may follow.—EDITOR.]

IT will be remembered that in 1903 I brought to the United States about thirty experts in education from the English universities — Oxford, Cambridge and other important educational centers—in order that they might investigate all that was being done on this side of the Atlantic.

My present effort to allow five hundred of the rank and file of the teachers of Great Britain to see for themselves all that is taking place educationally on the North American Continent is the sequel of the first movement.

These teachers who are now pouring into America from all parts of Great Britain are of both sexes and all classes. They come to investigate everything, from kindergarten to university, training colleges, manual training schools, technical schools, and, in fact, all sides. The object is to allow these ladies and gentlemen to judge for themselves how far it is possible to incorporate into the English system any strong points they may find prevailing in the American.

The visiting teachers will stay in this country from three weeks to three months, according to the terms of the leaves of absence individually obtained from their local authorities. Some will go as far west as Chicago and Minneapolis—in fact, some may go to the Pacific Coast—and they will examine Canada.

The germ of the idea which has set Great Britain to investigating American schools and their methods entered my mind when I was in South Africa nearly twenty years ago. I was for years associated with the diamond diggers at Kimberley, and, like our neighbors, we could not make it pay, when along came some American engineers and showed us how. I allude especially to Gardner Williams, of California, who took the management of the DeBeers Company for Cecil Rhodes. Williams brought in Louis Seymour, another American, and to them belongs in large measure the honor of being the first to put mining in South Africa on a sound basis, and to begin the building up of what is now one of the most important industries in the world, and certainly one of the richest heritages possessed by Great Britain.

Seymour also greatly distinguished himself by his engineering work in Natal in the early stages of the late Boer War. He repaired bridges as fast as the enemy destroyed them, and so enabled us to keep open our lines of communication until he lost his life at Zand River. Williams and Seymour were followed by other American engineers, including Perkins, Jennings and Hammond. The success which they made turned my attention to the United States, and I paid my first visit over here for the purpose of seeing the country that was responsible for sending so many level-headed men to the Cape. I spent months investigating and was astounded at what I discovered, especially what I discerned of the future. So far as I was able to ascertain, the form of education given in the United States is responsible for much of its success, and I returned home determined, if possible, to get together a party of experts to visit the country and test the soundness of my conclusion. I felt that not only must we investigate the educational system in vogue, but that the workmen through their trades unions should also be given an opportunity of seeing at first hand what is being done on the other side of the Atlantic. Holding these opinions, I organized my two commissions, the work of which is now too well known to require any long description from myself.

The attitude of American educators toward our project has been most generous, their hospitality almost overwhelm-

ing in its volume. All doors have been opened to us, and no pains spared to assist our investigations. President Nicholas Murray Butler, of Columbia University; Dr. Maxwell, New York's City Superintendent of Education, and President Roosevelt have been especially kind.

I was greatly struck by the large sums of money which all through the United States are devoted to educational purposes. The buildings are often magnificent and the equipment lavish. Teachers seem fired with enthusiasm, and there is a thirst for knowledge shown by pupils of all ages which is largely lacking in our own country. Another difference between the schools of Britain and those of America is that education in the British schools is largely "classical," while in America "practical" subjects are principally taught. Another difference is that American boys remain at school much longer than is the case in Great Britain, often, in addition, passing through to the secondary schools and colleges at little or no expense to their parents or themselves. I am disposed to think that our own boys leave school much too soon. My observation leads me to believe that the average American boy, when he leaves school, is infinitely better fitted for his vocation and struggle in life than the English boy.

Another surprising thing that I observed was the type of men that the educational methods of America have developed. President Butler, for instance, besides being a man of great learning and high academic attainment, also possesses the initiative and organizing capacity that are required in a railroad president. President Eliot, of Harvard University, not only presides at his institution, but also steps out into the arena of public affairs and gives the people the advantage of his great learning and experience, while President Harper, of the University of Chicago, was a man of enormous resources and organizing capability, as well as a high authority in Hebrew and the Semitic tongues.

Everywhere I found intense belief of the Americans in the education of the masses. In the words of President Roosevelt, addressing the Commission at Washington, "Education may not make a nation, but a nation would certainly be ruined without it." It is probably this feeling which causes the great difference observable in the acts of the rich in America and in Great Britain. The British rich man spends large sums of money upon sports of various kinds, while the Americans pour their millions into the various educational institutions.

NEW YORK CITY.

A Flirt in Feathers

BY HENRY HOLCOMB BENNETT

IN one of Mr. John Burroughs's bird papers he remarks:

"Among all the birds the choice, the selection, seems to belong to the female. The males court promiscuously; the females choose discreetly."

This is true as a general rule, altho I have observed cases where the females seemed to be adopting advanced notions of feminine privilege and to be conducting at least a part of the courting to suit themselves. This happens frequently among cardinal grosbeaks, and I have often watched two and three females devoting themselves to one handsome male, hovering about him with outspread, quivering wings and soft calls, while he puffed his brilliant breast, looked this way and that, or flew away with an air which seemed to say that the whole proceeding bored him, and that he disapproved of such forward tactics.

It is true, also, that the female is by no means content to accept the first male that approaches her with soft persuasion. She likes an opportunity of picking and choosing, of listening to the flatteries and tender speeches of the opposite sex, of seeing them strut and flutter, displaying themselves for her ben-

elit. One is inclined to wonder if she laughs in her wing at the absurd positions and antics of her suitors, as her higher sister sometimes smiles at the amusing rivalries of the men who are displaying themselves, their possessions and their accomplishments before her.

Like a woman, the female bird is not content with one admirer; she must have several, and if, at first, there is no rush of the desired number, she is quite capable of exercising a few artful wiles to attract them to her and away from others of her sex; with true feminine skill she varies the wile to suit the individual whom she wishes to attract. The pose which proved successful with one she changes for the next; the twittering which drew one young and giddy fellow she alters to a soft and pleading note for one more staid, and her air of forward confidence is put off for the benefit of a reluctant suitor, who, seemingly, is an advocate of the theory of the clinging vine.

One of the most remarkable exhibitions of feminine coquetry on the part of a bird that I have seen occurred on a day in January. It was in the Ohio Valley, and the day was one of those spring-like ones which usually come, in that region, in this month, when the weather tries to beguile nature into thinking that winter is past and spring at hand. The sun was bright and warm, the air was soft and mild, and a gentle breeze came over the hills with a hint of the south in its blowing. A mourning dove cooed from the top of a great beech; two males of the golden-winged woodpecker walked about each other, on the ground, in interlocking circles; a flock of goldfinches chattered on the weed-tops and the bright tinkle of a song-sparrow came from a clump of bushes.

In a little stream at the foot of a scrubby hill a Carolina wren was taking a bath, splashing vigorously where the clear water came with a rush over shining pebbles and dancing on one foot in a comical endeavor to keep his balance in the edge of the swift current. Flying to an overhanging limb he finished making his toilet, fluffing his feathers until the usually concealed downy white spots were distinctly visible, and then carefully smoothing his plumage, passing each wing feather thru his beak, until all were arranged to his liking.

Satisfied with his appearance and filled with the soft warmth of the day, he was in the humor for feminine conquest. Perching on a higher branch he began uttering soft calls, pausing after each, with head cocked on one side and bright eyes glistening, to listen for an answer. Presently the answer came from the hillside above him, evidently an encouraging reply, for he fluttered on the twig and called again with increased energy. Again came the answering call and he flew to the next tree, a little farther up the hill, nearer to the spot whence the answer came.

By shifting my position and with the aid of a good glass I soon found the bird that replied to the call of the first. She was sitting on the low branch of a haw tree, some twenty yards up the hillside, and I could watch both birds easily.

Again the male called, and again, the female answering, he flew a little nearer, as tho fearing to frighten her by precipitancy or wishing to pique her into attention by his seeming reluctance. This little performance was repeated several times, the male moving only a few feet after each call.

Suddenly a new element entered upon the action of the piece, a new actor came into the little comedy. From near the top of the hill there came a third voice, a bold, confident call, which at once attracted the attention of the female. She shifted about on the branch, fluttered here and there on it, and turned toward the unseen actor. The first male took up the challenge, and his next call was louder and more imperative than any before. The female turned her head to him and replied as before. Then the second male called again and she answered him.

It was her reply that I found remarkable, for she uttered a call entirely different from the one with which she had been answering the first male. Not only did she give a different call in her first answer to male number two, but she kept it up, varying her answers to the calls of the two males. To male number one she replied as she had at first; to male number two she gave a different call, never mixing her replies, but piping one set of

notes to one of her admirers and another set to the other.

At first I doubted the testimony of my ears, and was inclined to think that there must be a fourth bird which I had not seen or heard, but my doubts were dispelled by a close watch of the female. With my glass I could see distinctly the movement of her throat when she called, and I found that it was indeed one bird that gave the different notes. Whether or not she reasoned that the same answer to both males might prove discouraging to one of them, as a woman sometimes reasons that impartial favors discourage nearer individual approach, while a varying attitude incites, was impossible to tell; but, reasoning by analogy, it seemed amusingly probable that the same reasons, or the same feminine instinct, impelled her course of action. Be that as it may, it was certain that the flirt in feathers knew what she was doing, and that she carefully differentiated between the two males, giving one answer to the first and another to the second, the calls and answers alternating curiously, almost as tho it were a set performance.

This continued until she had replied five or six times to each male. By this time the first male was close to the tree in which the female perched, but I had not been able to catch a glimpse of male number two, altho I had guessed, from the increasing vivacity of the female, that he was coming nearer.

Finally male number one flew from his tree to that of the female, but before he reached it he was met by male number two, who flew from a low clump of bushes a few feet up the hill. The two met in mid-air and tumbled to the ground, scolding and chattering. Up in the air they went again, breast to breast, shrieking defiance at each other, only to flutter to the ground once more, a whirling bunch of brown feathers.

Up and down they went, while the coquet on the branch looked on complacently. But she soon tired of seeing her admirers devote all their attention to each other, even in combat, and, with a scolding note or two, flew down the hill into a weed patch. The combatants seemed not to discover her absence for a moment, but when they did they ceased fighting, paused an instant to settle their ruffled feathers, and then flew away in opposite directions, neither of them following the little flirt whose feminine instinct brought them into conflict, but letting her remain alone, as sometimes happens under similar circumstances in other than bird society.

CHILLICOTHE, OHIO.

Old Pagan Customs in Mexico Today

BY THE REV. FRANK BORTON

IN the month of July I took a trip on horseback thru that part of Mexico lying between Mexico City and the Gulf port of Tuxpam. From Mexico City we traveled half a day in a northeasterly direction on the cars to the beautiful little town of Tulancingo.

Here we had to arrange for getting our mules, guides and supplies for the journey, and while waiting for this I took the opportunity of visiting the old parochial church, and was permitted to examine the musty old archives, where I found records of baptisms, marriages, deaths, etc., running back to the year 1598, all written in the Mexican or ancient Aztec tongue, and a number of them signed by the famous Juan de Zumanaga, the first bishop of Mexico, and sadly famous as the destroyer of many precious manuscripts and records of the now unknown history of the ancient people of Mexico.

At the little town of Nicaxa, on our third day's journey beyond all wagon roads, I saw one of the now almost extinct forms of sport once so popular in old Mexico. I doubt if a dozen Americans have ever witnessed it.

It is what was known as the *"Juego*

de los Voladores," or "The Flyers' Game," and is pictured and described in Prescott's and Clavigero's histories of Mexico.

In the center of the little plaza the Indians had erected a pine tree about sixty feet high, having first smoothed and polished it. Upon the top was fixed horizontally a revolving cap of about fourteen inches in diameter, from the outer edge of which depended several rawhide ropes of twenty feet in length, each one having a hook at the end.

When all was ready for the performance five Huasteca Indians climbed to the top, and while four hung by straps about the pole, the fifth got upon the cap and stood up and began singing and dancing in a most peculiar fashion, accompanied by a weird drum music from below, the drum being called a *"teponaxtle."* After the dancer had made many flings and capers to terrify the audience below with a sort of delicious horror and expectancy of seeing him tumble headlong, he slipped down one of the rawhide ropes before mentioned, and fastened the hook in the back part of his grass belt.

One after another his companions repeated the same performance, and when there were four of them swinging thus face down, and forty feet above the ground, the fifth one, still standing erect on the cap, called out something in the guttural dialect of the Huasteca Indians, and immediately the four others began to circle about the pole, pushing with hands and feet in such a way that they were soon swimming or flying thru the air in large circles about the pole, while the *"teponaxtle's"* monotonous droning rose to a louder and weirder key.

It was going back five hundred years in history to watch them, for long before Cortez doubly conquered the land with sword and cross this was the favorite pastime among the Indians of Mexico. All these tribes are very superstitious and as far removed from Christianity as they were at the time of the conquest.

They still worship the evil spirit in the form of an owl, and in the mural decorations uncovered at San Juan Teotihuacan, the site of the famous pyramids of the sun and moon, the entrance to the infernal regions was pictured as the open beak of a gigantic owl.

A priest told me that he had once noticed that an unusually large number of Indians were accustomed to pause before a certain large wayside cross, with which the roads of interior Mexico are lined, to burn their candles and repeat their prayers. Curiosity to know the reason for their preference for that especial cross revealed the fact that the cross was hollow and contained within it a *stuffed owl,* and it was *this* that the Indians worshipped while apparently doing homage to the sacred symbol.

All who have read of the witchcraft craze in New England will recall what an important part was played by the manikins in the hands of witches who may have wished to inflict injury upon their enemies.

Well, the very same superstition exists here today, with far more force than was ever known in New England.

The men or women who practice the art here are called *brujas,* and are greatly feared. They are visited by Indians who wish to injure an enemy, and upon being paid a certain price, make a doll to represent the victim, and then stab the doll or tear its heart or eyes out, according to the wishes of the avenger. This same priest to whom I have made reference assured me that, upon his having at one time offended an Indian, he was threatened with the *bruja,* and strangely enough, he fell sick of a fever soon after, and nothing could persuade the Indians that it was not the result of the witch's charm. To this day, in their burial services, they are accustomed to do as the Chinese, and throw food into the grave; and in the more remote districts women who have lost an infant put some of their milk into the grave—a touching custom, and one that the priests have been unable to wholly root out.

Idol worship is still secretly practiced in the mountains and forests, and a friend of mine, a civil engineer, while running a line thru a deep forest near Tuxpam, came upon a small hill, on the top of which was a hideous stone idol, surrounded by a large number of men and women engaged in worship. The idol was decorated with flowers, for this simple people are passionately fond of

flowers, and at its feet was a vast amount of food, fruit and odoriferous shrubs. They were very angry at the intrusion, and the surveyor was for a time in great danger of his life.

Three centuries and a half of Roman Catholic vigilance and tyranny have failed to eradicate idolatry, and to this day they have their idols, charms, spells and incantations, and their own old Indian speech, of which latter fifty-two different dialects are used in Mexico today.

PUEBLO, MEXICO.

To War-Makers

Dedicated to the Peace Congress

BY HARRY H. KEMP

WHY strive to climb the dizzy hights by means of others' fall?
The world, the broad and spacious earth, has room enough for all.

Not now, as in the ancient days, your battle-flags unfurl
For the cattle of a chieftain or the rose-lips of a girl;
Not yours the tedious leaguer of the epic Trojan years,
The arrows feathering the wind, the clumsy-brattled spears;
You've packt a thousand battles in a brief-contested fight,
You take and raze a city in the process of a night,
And, when the sullen clouds detain the moon in dim eclipse,
You overwhelm fair harbors with a storm of battleships.

You say your wars are merciful compared to old, and then
You hurl a single shell which slays a regiment of men.
But sick are we of sophistry, unawed by throne or crown,
The time has come when we refuse to shoot our brethren down.
So blow your fifes and beat your drums and wear your things of gold,
Yes, even name the name of God as did your sires of old—
But do not think to cheat us with a fair and outward show;
Beneath the specious mask of Pomp lurks Death, the common foe:
Your victims blight the meadows where the daisies used to grow.
In the silence after battle, when the sad moon, wan and fair,
Shudders light across white faces, tell me, is your glory there?
Bides it in the plundered village? in the lone, neglected mart?
In the war-sick silent city? in the newly widowed heart?
In the shame to harmless women? in the ruin? in the flame?
In the name of truth and honor, where's your glory? where's your fame?
We know the meretricious lure of glory to the field;
We know the awful harvests which your gory acres yield;
The pestilence which stalks the land and withers with a curse;
The doubts of God which creep like fogs across the universe.

'Twas sung that war is for the best; we say that bards have lied;
Begotten 'tis in ignorance and carried out in pride.
Death waters it, the dreadful rose, with tears of orphans shed,
Its perfume is the stench of tombs, it blooms a vampire-red,
It battens on the stricken forms which God for men had planned,
It saps and sucks the plenty from the bosom of the land.
And, therefore, in the name of God, by every sacred name
Which lights the darkened world of man with glory as a flame—
O Kings and Lords and Rulers, shepherds of the common life,
Let us make an end of battle, let us have no more of strife.

UNIVERSITY OF KANSAS, TOPEKA.

Literature

Moliere a la Mode

QUITE in keeping with the accustomed course of literary things is the sudden and renewed interest shown in Molière (most popular and, on the whole, perhaps greatest of French dramatists) by various writers in this country and in England.

Two stout volumes, both handsomely prepared for the book mart, and both distinguished by unusual diligence and honesty in compilation, have been published here within a comparatively short time of each other. The first of these two really useful guides, *The Life of Molière,* by Henry M. Trollope,[1] may lack the profundity of the other, by Mr. H. C. Chatfield-Taylor,[2] entitled *Molière,* which followed it. But it has merits, among them clearness, directness and a certain flow, which makes it easier reading than the more labored and learned work of Mr. Chatfield-Taylor. Either Mr. Trollope consulted fewer authorities than his successor did, or he omitted to boast of his thoroness. Students in a hurry to get a general impression of the character, the writings and the environment of the great Jean (or Jean-Baptiste) Poquelin, who, for reasons of his own, assumed the name by which all Frenchmen were to honor him, would probably be satisfied with the earlier book. Those, on the other hand, who delight in documents and literary affidavits, would unquestionably give the preference to the later compilation.

In his Introduction to Mr. Chatfield-Taylor's work, Professor Crane, of Cornell, once more echoes the familiar Anglo-Saxon objections to the "artificiality" of Molière's admirable contemporaries, Corneille and Racine. That, however, is only fresh evidence of the abiding difficulty which English-speaking persons have for ages experienced in judging the literature (and, consequently, in fathoming the morals, manners and ideals) of the Latins. With much of the eulogy which Professor Crane bestows on this most recent effort to explain Molière and his times to twentieth century readers it is pleasant to be able to agree. This book most certainly comes nearer to absolute accuracy than many volumes of the kind; and hostile criticism of the book will be aimed less at the matter which it contains than at the style, the form and way in which it is presented. As an example of the points to which exception might be taken, a passing reference may be permitted to Mr. Chatfield-Taylor's somewhat pedantic habit of translating (and occasionally mistranslating) the titles of the dramatist's plays. It is puzzling rather than helpful to be confronted at every turn with references to "The Blunderer" ("L'Etourdi"); "The Love Tiff" ("Le Dépit Amoureaux"); "The Club-Women" ("Les Femmes Savantes"); or—heaven save the mark!—"The Nouveau Riche" ("Le Bourgeois Gentilhomme"). Quite as puzzling as to read, in execrable Americanizations of French novels, of "Exchange Bridge" ("Le Pont au Change"), or "Peace Street" ("la rue de la Paix"). But once the reader has grown accustomed to such oddities, and to the slightly too documentary form affected by the author, the facts set forth in this elaborate story of Molière will compel interest.

We can follow him, without even for a moment feeling our interest flag, from the time when he threw over the more humdrum career of an upholsterer to become a comedian and to plan those plays which were later to entitle him to a place among the immortals. We can pity, tho we need not approve him when he accompanies that attractive baggage, Madeleine Béjart, on her vagabondages thru France. And we can rejoice with him when, after his pitiful experiences with those strolling players of his own country, who, like the mountebank actors of the Italian Commedia dell' Arte, used largely to improvise their dialog to fit skeleton plays sketched out for them, he at length found himself, on the memorable 24th of October, 1658, commanded to perform before the Roi-Soleil

[1] THE LIFE OF MOLIERE. *By Henry M. Trollope.* New York: E. P. Dutton & Co. $3.50.
[2] MOLIERE. *By H. C. Chatfield-Taylor.* New York: Duffield & Co. $3.00.

and the royal family (to say nothing of Mazarin), on a temporary stage in the guardroom of the Louvre.

The play (as Mr. Chatfield-Taylor reminds us) was Corneille's "Nicomède." As a result of the performance, and, possibly, of an opportune tribute which Molière paid to Louis, the performers became "The Troupe of Monsieur, Only Brother of the King." The significance of this episode, of course, lies in the important fact that, but for the favor with which Louis the Fourteenth showed to Molière and his comrades on this occasion, there might never to this day have been a Théâtre-Français.

Much of *Molière* is devoted to sketches—sometimes graphic, sometimes less graphic—of the courtiers, actors and playgoers of the period. More space is given over to the analysis of Molière's plays. But, as was proper, most of the book deals with the satirical dramatist and his immediate environment. His marriage to Armande Béjart, long after his first youth had gone, is carefully chronicled. It seems only too certain that she played fast and loose not only with her great husband's peace of mind, but also with his honor. Therein lies the true explanation of much that is sad, bitter and ironical in his works. A rupture between the ill-mated pair was from the first inevitable. When it came Molière was not half so hard on his light-minded wife as less kindly or less philosophical husbands would have been. He is said to have written to a friend as follows:

"I am the most wretched of men, yet I deserve my fate. Not seeing that I was too austere for a domestic life, I felt that my wife should subject her behavior to her virtue and my wishes; yet, had she done so, I fully realize that she would have been far more miserable than I. She is sprightly and witty, and keen for the pleasure of making herself appreciated; yet, in spite of myself, this makes me gloomy."

Marriage, alas! was a failure with many poet-dramatists besides Molière and Shakespeare. The jibes which, in his comedies, he flung so pitilessly at betrayed husbands had reasons for their existence. So had his dislike of doctors, who in his eyes were for the most part quacks. He had an instinctive horror of trickery, whether it took the form of hypocrisy, which he lashed in "Tartuffe," or of charlatanism, which he ridiculed in "Le Malade Imaginaire."

Strangely enough, it was while playing the title part in "Le Malade Imaginaire" that he was seized with the illness which resulted in his death.

John Oliver Hobbes's Last Book

Mrs. Craigie, better known as "John Oliver Hobbes," passed away just as *The Dream and the Business** was going to press in America. She was herself an American, who had lived since early childhood on the Continent or in England. She began to write at nineteen, and Mr. Choate, in his admirable appreciation of Mrs. Craigie which is the preface to this book, characterizes these early efforts as "full of sparkling wit, satire and striking phrase and manifesting a ready knowledge of social ways and usage." This criticism is no less applicable to her later books, altho the serious side of her nature is more in evidence, particularly after she was received into the Roman Catholic Church.

The manner in which she has portrayed scenes and characters in her last novel reminds us that "her knowledge of social ways and usage" was more intimate and easy than that of the average writer who attempts a story of London society life. But the interest does not depend so much upon the incidents upon which the story turns as upon the study of life from the various points of view held by different persons who move thru it. Lessard is a pagan, without even the dogmatism of a pagan. And by her presentation of the ardent, happy selfishness and naïve charm of such a nature, the author has clearly defined a class of men who really live and have their being in loves and operas, born to intoxication as others are born to society. Formalden, as a Nonconformist minister, is a sort of spiritual pioneer, girded up in a brave and curiously temperate personality. There is something of the author herself in both of the heroines. Sophy has her grace for making epigrams, over and above her staid

* The Dream and the Business. *By John Oliver Hobbes.* New York: D. Appleton & Co. $1.50.

and serious mind. Tessa, the Roman Catholic lady, bears a more ethereal resemblance, an exquisite soul, highly sensitized to all intellectual impressions, yet doomed by temperament to reduce every idea to its consequent emotion. Such people do themselves to death, delicate mediums destroyed by the very experiences they crave.

But with all this introspection, she has escaped that under-world of horrid suggestion which fascinates so many writers of this school. There was an aloofness of spirit in her as if she belonged by nature to the upper and clearer world. And there is in all her writings a fine austerity in the use of her own faculties, very rare now among people who have any literary use of their faculties at all. She was scrupulous, never abandoned in her thinking, tho probably no one knew better than she where the region of intellectual license lay. And, finally, we are made aware of moral dignity in some writers by its heavy, churlish step in the tale, but with Mrs. Craigie it was a grace, a chaste loveliness of the mind. She had an intelligence which touched the deepest mysteries of life with the lightness of a wand, and which revealed them as marvelous elements in the fashioning of character and personality. And she was mistress of a literary style which enabled her to express much that would have been inexpressible to a less gifted writer.

John Oliver Hobbes.
Author of "The Dream and the Business." Appleton.

The Family

Mrs. Herbert Parsons's new book on *The Family** has had a *succés de scandale* before its publication thru the exploiting by press and pulpit of the paragraph in which the author suggests that it might be advisable "to encourage early trial marriage," a plan that is neither new nor untried. The premature leaking out of this paragraph by some mysterious mischance has resulted in an immense advance demand for the book by the prurient-minded, who, fortunately, will be much disappointed in it, for it is not at all novel or sensational as a whole, and quite too drily scientific in style to

* The Family. An Ethnological and Historical Outline, with Descriptive Notes, Planned as a Text-book for the Use of College Lecturers and Directors of Home Reading Clubs. *By Elsie Clews Parsons, Ph.D.*, Lecturer in Sociology, Barnard College, 1899-1905. New York: G. P. Putnam's Sons. $3.00.

interest readers of that class. It is intended as a college text-book, and the author's aim is to substitute systematic and inductive research by the student for the prevailing custom of listening lazily to lectures and taking desultory notes. For that purpose she has added to each chapter four series of notes, queries, references and lines of investigation, by which the student may dig out his own data from the narratives of travelers, statistical reports and personal observation. These outline notes constitute the greater portion and the chief value of the work, for the field has been thoroly cultivated of late years, and the author has been content to collate and compile without throwing any new light upon the many obscure points and without adding another to the already too numerous theories of marriage. The fact that the author is not obsessed by a novel theory of her own, like some of her more original predecessors, makes the book more useful to the elementary student.

But we do not anticipate that the book will be extensively adopted as a text-book in colleges for young women and men, as Mrs. Parsons intended it to be. We hope it will not. It is true that it is more important for young people to know about marriage and the family than about Saturn and radium. It is possible that more could be done than we now do in colleges toward training them for the important duties of life. But this does not seem to us the best way to do it. We agree with Mrs. Parsons in thinking that much harm, vice and unhappiness is caused by our strict taboo of the discussion of all sex questions, and that their frank and scientific explanation to the youth of both sexes is essential for a higher civilization. It is eminently desirable that they should know something of the history of the family and of the varied forms it has taken, enough to realize the changeableness of moral standards and what they are really based upon, but we do not believe that it is wholesome for adolescents of either sex to devote months to the study of barbarous matrimonial rites and customs, and to acquire a detailed knowledge of the obscene and perverted forms that sexual matters have taken since the world began. Too much pathology should not enter into a course of elementary hygiene.

Public attention will be chiefly and unduly directed to the last lecture of the book, in which the author, after completing her study of marriage as it has existed in different ages and countries, discusses what marriage should be. The object of the family is to insure that children are well-born and supported, protected and trained during a prolonged period of infancy, and she finds that the verdict of history is that these objects are best attained by permanent monogamous marriage.

Practically we are of course very far from having attained this ideal, and to secure a closer approach to it she relies upon various forces and measures, of which the chief are the higher education and economic independence of women, the abolition of the double standard of morals by holding men equally guilty with women for offenses against decency, the raising of the age of consent, the restriction of parentage to those who are physically and morally fit, and the repeal of laws forbidding divorced persons to remarry. This is not the place for the criticism of her views, especially as some of them are discussed by Mrs. Harper on another page of this issue, and we published two articles by Mrs. Parsons on the subject this year, January 18th and August 16th.

Some of her numerous suggestions seem to us good ones, some objectionable, and some visionary and impracticable, but the questions she raises are important and worthy of calm consideration. Anathematizing the author for having raised them is not a satisfactory way of refuting the errors of her opinions.

The Papacy in the Nineteenth Century

THE Danish bishop Fredrik Nielsen's work on the Papacy of the nineteenth century,* will take an honorable place in historical writings of the second rank. It brings to light no new documents, and

* THE HISTORY OF THE PAPACY IN THE NINETEENTH CENTURY. *By Dr. Fredrik Nielsen,* Bishop of Aalborg and formerly Professor of the University of Copenhagen. Translated under the direction of *Arthur James Mason, D.D.* New York: E. P. Dutton & Co.

refers to no sources that were not already in some way or other accessible; but nevertheless, by its extensive and conscientious canvassing of the published material bearing on its subject, it puts together the best account of the Papacy that we have in English, between the accession of Pius VII and the death of Pius IX. The incidents that fall within this period are among the most momentous in the entire history of the Roman See. The Liberal Catholic movement which arose to new life under Gregory XVI, and persisted thruout the reign of Pius IX; the rise of the restored Jesuit Order to as great an influence as it had ever possessed before its suppression; the loss of the temporal power which the Popes had enjoyed for eleven hundred years; the proclamation of the dogmas of the Immaculate Conception and Papal Infallibility; the Syllabus of 1864, and the Vatican Council of 1870, make the last hundred years of Papal history of absorbing interest to every cultivated man who both wishes to know his own times and to understand one of the mightiest institutions that has ever existed among men.

It is too early, without doubt, to write a final history of these events. Some of them are still stirring before our eyes, and will reach their term only after a great part of the present century shall have run its course. Liberal Catholicism, for example, and the agitation of intellectual problems raised anew by the Abbé Loisy and Father Tyrrell, are burying themselves in the very heart of Catholicism, and are leading to results which no man can perfectly foresee. In the same way we are still a long distance from the end of that chapter in Papal history which opens with the *Mirari vos* of Gregory XVI, and the *Quanta cura* of Pius IX. But, of course, one need not wait until a period has ceased to raise any further ripples on the stream of time before writing of it; and Bishop Nielsen has given us a praiseworthy book which will serve us well until the time when larger development and fuller knowledge shall supply us with a better.

In the execution of his task Nielsen chiefly falls short, in our judgment, by a deficient sense of proportion. The introductory portion, which occupies one-half of the first volume, carries us thru the eighteenth century and well into the seventeenth; a needless prolixity, we think, especially as the space thus taken up could well be filled with matter which belongs to the author's chosen period of the nineteenth century, and which is now omitted. To the same purpose we would object to the scant attention paid to the Liberal Catholic movement, associated with the names of Lamennais and Montalembert. Certainly this is one of the most significant features in recent Catholic history, and the attitude adopted toward it by Gregory XVI and Pius IX marks a new epoch, and a disastrous one, for the modern Papacy.

To come to one or two points of detail, we saw no mention of Montalembert's first condemnation as the author of the introduction to *"Les Pélerins Polonais,"* which stirred up so much dust in 1833. Neither have we observed any reference to Gregory XVI's attitude to Poland, nor the least mention of his encyclical in which he orders the struggling Poles to lay down their arms raised against the Russian oppressor. Surely this was too important to omit. Again, Bishop Nielsen fancies that a cordial friendship exists between the Jesuits and the Redemptorists. He is very much mistaken. One of the bitterest controversies in the Catholic theology of the last century was between these orders on the question whether Alphonsus Liguori was a probabilist or an equi-probabilist. And speaking of probabilism reminds us of another inaccuracy. It is hard for one who is not an expert in Catholic theology to catch the fine distinctions that occur thruout the entire tract on Probabilism; and doubtless our author is not to be severely censured when he says that the probabilists hold that a law may be evaded even when only a very slender probability (*opinio tenuiter probabilis*) supports the evasion. This is not the case. There is, in fact, an explicit Papal condemnation of so lax a view as this. Finally let us remark that altho Nielsen substantially keeps clear of expressions which would reveal his own prepossessions and antipathies, still he is not impeccable in this respect; and he here and there lets fall a phrase which offends against the dignity of impartial

history. We are pleased to read that we may look for two other volumes from the same pen, one on the pontificate of Leo XIII, the other on the inner life of Catholicity in the last hundred years. Let us hope that when they appear they will contain the text of the more important Roman documents on their respective subjects. The lack of any such documents is a marked defect in the present work.

The Works of Thomas Nelson Page. Plantation Edition. [Subscription Set.] 12 vols. New York: Charles Scribner's Sons. $18.00.

As a distinctive delineator of Southern life, Thomas Nelson Page stands pre-eminent among the writers of the day. It is not so very long ago that he first began his dialect stories, the most prominent of which are "Meh Lady" and "Marse Chan'," and we doubt whether any of his later tales equal these in freshness of narration or quaintness of idea. The sum total of what Mr. Page has done makes a worthy array, and in this new—what one might almost call definitive—edition, there is a conscious arrangement in the order of volumes so as to impress the reader with a certain progress in that local civilization by which the South was represented before, during and just after the war. There will be many to agree with Mr. Page that representatives of such a civilization are fast disappearing. We should welcome, therefore, any literature which represents the features of those days. To our mind, such a story as "The Burial of the Guns" is far better art than "Red Rock": the latter unfortunately deals with a period which needs no fostering to be remembered. Historically it may be vivid, but is there need to keep such events always in evidence, lest we forget? Sweetness, tenderness, and a subtle atmosphere pervade the boys' volume of "Two Little Confederates," which belongs to a far more original group of writings than the later volume, "Santa Claus's Partner." So we might enter more thoroly into these twelve volumes, and yet our conclusions would be the same. The collection shows the variety of Mr. Page's art. As a poet he is pleasing, tho not extraordinary; as an essayist he is graphic and genial, without being particularly virile. We are pleased to find that he has omitted from this edition his investigations regarding the negro, a work which, tho probably sincere in its object, was not very illuminating in its results. There is no doubt that Mr. Page, in this new edition, has succeeded in his desire; one does obtain a distinct picture of the Old South, whether from his book of essays gathered under that title, or in the earlier stories of a dialect nature. Mr. Page is still an active literary worker. This is fortunate for America; it is likewise fortunate for Southern letters. Therefore, this edition of his works will be added to. But facts are facts, to the end of

THOMAS NELSON PAGE,
A complete subscription edition of whose works has just been issued by Charles Scribner's Sons.

time, and the contents of "In Ole Virginia" will always be far ahead of any story in such a collection as "Bred in the Bone." The twelve volumes, which the publishers have brought out under the head of Plantation Edition, are an imposing set. Bound in pleasing green cloth, with a typographical display clear and soft, each book is illustrated either with portrait or tinted picture. Altogether, we have here a welcome addition to any library.

The Memoirs of the Lord of Joinville. A new English version by Ethel Wedgwood. New York: E. P. Dutton & Co. $3,00.

This book, written about the year 1300 by the aged seneschal of Champagne, records the holy words and good deeds of Saint Louis, builder of the French nation. As history it is crude, merely the old soldier's recollections of the master whom he had loved, written for the pleasure and inspiration of younger princes; but it is one of the sources of French history. The works of Villehardouin and of some of the chroniclers are older and more comprehensive, but all together they are meager. De Joinville wrote especially about the personality of the great king and about the events of the Seventh Crusade. As a story, in the way of human interest, his book has a quaint charm of its own. The edition of the book ordinarily used by scholars is that of De Wailly, in French (1874). There are several ancient texts and there is some little confusion of readings among them. An English translation was made by Thomas Johnes early in the last century, and in reviewing it the Edinburgh critic wondered why such a book should be put upon the English market. The answer came in the fact that this Johnes version, incorporated in the Bohn series, has become one of the common books in our libraries. But this version is rather a paraphrase, the statements being filled up largely according to the nineteenth century erudition of the editor. The new edition now presented in English by Ethel Wedgwood follows closely the statements of the French version, and uses a somewhat archaic English phraseology which permits a more precise rendering. Some omissions in the text have been made. One is apt to think that if the book is worth publishing at all, for the student's use at least, it would have been better not to omit these parts of the text and to add some bibliographical notes.

The Wooing of Folly. By James L. Ford. New York: D. Appleton & Co. $1.50.

Folly is the daughter of a miner, who, having "struck it rich," comes to New York with the money and the ambition to "move" among the Four Hundred. It is not a pleasant story, altho the heroine escapes into the arms of the right man. The purpose of the book is to expose the methods by which the social sharks of New York live at the expense of their victims. And as one reads the reflection comes that the author's venom surpasses their avarice. There are some people who stick to the flanks of humanity as if they were gadflies. Stinging and biting it is the only evidence they show of genius. Mr. Ford appears to belong to this class. He writes well and venomously. But if we take his books as seriously as he means them, we should understand that it is more dangerous to go to New York with money in the pocket than to go alone into the African jungles. And it really cannot be that dangerous, even if one is not sufficiently sophisticated to know café sharks and Wall Street jellyfish from the innocent, flaccid social whales of the "first water."

Egyptian Antiquities in the Pier Collection. Part I. Garrett Chatfield Pier. 4to, pp. 27. Plates, xxii. The University of Chicago Press. $4.00.

This is a thin quarto, in which the owner of the collection described gives figures and brief description, in catalog style, of this section of his Egyptian antiquities. As he is still gathering them he promises other parts to follow. He is engaged in a most worthy pursuit, and it is a great pleasure to know that we have in this country a few specialists in antiquarian study. Mr. Pier's objects include pottery, scarabs and other seals, and an unusually fine collection of flint knives, scrapers, celts, arrow and javelin heads and other objects. We notice especially one that may be called a totem, with figures of an ibex or oryx. These objects have been gathered in Egypt, Paris and New York, mainly thru dealers. Often the name of the dealer is given, not always accurately, as "Livad-

jan" of Paris, for *Sivadjian*, and "Kilekian" for *Kelekian*. For the translation of the hieroglyphics on the scarabs, etc., the author would seem to have depended on Mr. Newberry, author of "Scarabs," where several of these scarabs and one fine cylinder are figured. The appointment of Mr. A. M. Lythgoe at the head of a new department of Egyptology in the Metropolitan Museum, just announced, gives interest to the simultaneous publication of this creditable volume, which announces the acquisition of a private collection of value.

Literary Notes

LAIRD & LEE, Chicago, publish the list of 300 words recommended by the Simplified Spelling Board and adopted by President Roosevelt, in a convenient pocket volume, for 25 cents.

....The *Atlantic Monthly* celebrates its fiftieth birthday this month by publishing articles by its three surviving ex-editors, Thomas Bailey Aldrich, William Dean Howells and Walter H. Page. The *Atlantic* is the one periodical which can be relied upon never to lower its high literary standards under any stress of commercialism or opportunism.

....Of the popular booklets which are so convenient for Christmas gifts, the following have recently been issued by Crowell & Co., New York: *The Challenge of the Spirit*, by E. A. Ford; *Christmas Making*, by J. R. Miller; *Does God Comfort? The Power of Personality*, by O. S. Marden; *The Personality of God*, by Lyman Abbott (30 cents each). *The Beauty of Kindness*, by J. R. Miller; *Friendship*, by H. D. Thoreau; *Longfellow Calendar, Saint Thomas of Assisi*, by Oscar Kuhns; *The Man Without Country*, by E. E. Hale (50 cents each.)

....Mr. F. A. Richardson, who, by publishing for two years, that magnificent magazine, *The International Quarterly*, demonstrated that the American people would not support a single periodical of the same scholarly character that England supports six of, has started a new magazine in a lighter vein, but still with high ideals. The first number of *The Times Magazine* presents an attractive appearance and has a notable list of contributors, Professor Giddings, Jack London, Ellen Terry, Gustav Kobbé, Upton Sinclair, Alfred Henry Lewis, Brand Whitlock, and others. Ten pages are devoted to bright progressive editorials, disfigured by colored illustrations, that in other periodicals are confined to the comic supplement. [The Times Magazine Company, New York. $1.50 a year.]

....Now that Gelett Burgess has put his bromide theory in book form it can receive the attention it deserves from anthropologists. According to him the human race can be divided into two classes, the "bromides" and the "sulphites," the former being composed of those who can always be replied upon to make a certain remark under any given circumstances. He enumerates forty-eight of these "bromidioms," by the use of which a person of that type of mind may be infallibly detected. Among them are "I don't know much about art, but I know what I like"; "of course, if you leave your umbrella at home it's sure to rain"; "the price of autos is bound to come down sooner or later and then you won't see horses except in menageries"; "you can live twenty years in New York and never know who your next-door neighbor is." Mr. Burgess is less explicit in defining a "sulphite," but makes it evident that some spark of originality and unexpectedness is necessary to qualify one for that category. [*Are You a Bromide?* B. W. Huebsch, New York. 50 cents.]

Pebbles

How well I remember
That day in September
When I got close to her complexion:
What a charming recollection!
—*Harvard Lampoon.*

OUR NATIONAL GAME.

YESTERDAY, Alfalfa Centre picked the final game of the series and put it on ice. It was a bury; the Rubes getting the jump on the Bingville cubs from the gong and never being headed. The whitewash brush was tastily applied to the sluggers from the tall grass. About six hundred of the faithful held down the bleachers, and they got the goods served to them, at that.

The fireworks started in the second. Mugsey stepped to the platter and with a "mamma, pin a rose on me" expression, leaned upon Scrappy Joe's first offering to the tune of three bags. Casey walked, stealing second on the next ball, and the procession started. Whatever the lean south paw served was eaten in bunches by Pete's artists of the willow. His drops looked big as a house, and his speedy inshoots looked like a package of hops does to a thirsty fan. When the dust cleared away, four tallies were chalked on the score board and the invincible champs had the game in cold storage. After this spasm, the cubs settled down, but the game had gone to the nixie-nix for the tailenders. One ray of sunshine beamed for the flag chasers in the sixth when Doc bingled and pilfered second, but the clouds formed again when Murphy gathered in a sizzling grass-cutter, catching Mac at the initial station. The next two stickers cooled the air in a vain effort to find the little round pill, and Doc died at third. There was nothing to it after this inning. Several of the drives were good for bases, but sharp fielding tied a tag to any chance to cross the cushion, and the game ended with Pete's family of salary grabbers four lengths to the good. The Mud Hens open here today, and as they are playing a gilt edged variety of ball, a fast game is on the dope sheets.—*Cornell The Widow.*

Editorials

Railway Coal Lands in the West

Even more interesting than the official inquiry as to the connection between railways and the coal trade in the East has been the investigation, now in progress before grand juries and the Interstate Commerce Commission, concerning the railway monopoly of the coal industry in the far West. There was no public land in the East to be acquired by the railways fraudulently or otherwise. But there was plenty of it in the mountain States, and a part of it contained coal. Those tracts of this land in which mines have been opened are now the property of great railway systems.

The testimony given before the Commission at Salt Lake City has been of an extraordinary character. It has already become the basis of indictments (not yet officially made public) and the warrant for suits in which the Government seeks to recover great areas of land that were stolen. Unless it shall be successfully contradicted, it will compel the prosecution of some of our most powerful corporations, together with inquiries affecting many persons prominent in public office.

It is not surprising to find that public land in Utah and Wyoming and other mountain States has been acquired fraudulently by corporations thru the agency of men who were willing to perjure themselves and rob the Government for three or four dollars. Frauds of this kind have been committed on the public domain for many years past. They have been the foundation of large private fortunes. Recently, owing to the honesty and vigor of Secretary Hitchcock, a few of the guilty have been punished. The indictment of the late Senator Mitchell and of the Oregon Congressmen is evidence of this. In the cases of which we are now speaking, however, the stealing of the land was accompanied by the corruption of prominent public officers and the exercise of great political influence, and followed by the persecution of honest special agents of the Government, by the violent intimidation of those who desired to improve land claims honestly held, by the systematic use of gross discrimination in freight rates and by the maintenance of a virtual monopoly established by such practices.

Unless the witnesses (employees of the Government) have sworn falsely in their long and circumstantial statements, they were opposed in their investigations by Senators of the United States, mysterious influence transferred them to remote parts of the country when they were about to complete their proofs of crime, the affidavits and other evidence which they sent to Washington were destroyed or suppressed there, and in many ways they were taught that they were offending interests which controlled their superior officers. Unless these men have lied, the great corporations whose offenses they sought to expose were defended by a combination which included Senators, land officers at Washington, bureau officers there, local judges, and local political leaders. As for the systematic rebating in the interest of monopoly, the evidence appears to be conclusive.

The hearing is not finished. Several of the public officers and others affected by the testimony have declared that the charges against them have no foundation in fact. They should be fairly heard in their own defense. But the charges are of such a character, and are so related to frauds and other unlawful acts for which prosecutions are to be undertaken, that there should be a searching investigation of the conduct of all who are thus accused.

It is recommended by the Commission that all the coal lands in the public domain be withdrawn permanently from entry, in order that the coal deposits may be worked under the control of the Government in competition with the combined subsidiary corporations of the railway companies. The strongest argument thus far brought forward in support of such a policy is seen in the testimony given last week in Salt Lake City.

The Beatification of a Briber

THE exhumation of the remains of James Wilson from an obscure grave in North Carolina, their removal to Philadelphia on the United States warship "Dubuque," and, after lying in state in the Independence Hall, their reinterment in the historic graveyard of Christ Church, calls the attention of our nation to his distinguished career. He was a Signer of the Declaration of Independence from the State of Pennsylvania, a patriot soldier of the Revolution, member of the Constitutional Convention of 1788 which adopted our Federal Constitution, and, finally, an Associate Justice of the Supreme Court of the United States of America. He was a native of Scotland and died in 1798. Truly a most worthy man—true patriot and well deserving of the country.

The ceremonies in Independence Hall were highly impressive. The president sent a wreath. Governor Pennypacker accepted the custody of the remains. The First City Troop acted as an escort. Coadjutor Bishop Mackay-Smith conducted the services. The Justices of the Supreme Court were in attendance. Addresses of eulogy were delivered by Attorney-General Moody, Justice White, Judge Parker, Andrew Carnegie, Professor Lewis, Samuel Dickson, and Dr. S. Weir Mitchell. The argus-eyed daily press remarked upon the failure of those eloquent orators to explain why his memory has so long been lost to the nation—such a shining light forgotten. "He," the Attorney-General declared, "exercised a predominating influence in the formation of our Federal Government."

Turn back the scroll of history and behold James Wilson, the corruptionist and bribe-giver, the leader of the "land sharks" of 1795.

The independent State of Georgia, as recognized by Great Britain in 1783, extended over its present State limits, and also over all Alabama and Mississippi. Georgia held on to her vast "Western Reserve," while other States ceded theirs to the Federal Government. Led by Patrick Henry, certain avaricious Virginians formed the "Virginia Yazoo Company" in 1789, and secured by various underhand means a sale of all the lands we now know as Alabama and Mississippi to themselves for about $80,000. President Washington observed their effort to create a vast landed oligarchy, and crushed their ambitious plans with a message to Congress, saying: "Unless this is checked, it will endanger the very Republic itself." Federal opposition, together with their inability to raise enough money which the Treasurer of Georgia would accept, ruined the Virginians.

But the vast wealth in 52,000,000 acres of rich land attracted other speculators. In 1794 five new companies were formed, and the control was placed in the hands of James Wilson, James Gunn, United States Senator from Georgia; Wade Hampton, of South Carolina, and Zachariah Cox, of Tennessee. Boldly entering the State of Georgia, this piratical crew threatened, intimidated, cajoled and bribed the members of the Legislature into passing, on January 7th, 1795, an act selling to the five companies this vast domain for the sum of $500,000. The Governor, brave, ignorant old George Mathews, "the hero of Kanawha," was persuaded by its lying caption to sign what he believed to be an act to pay old soldiers their arrears and to strengthen the frontiers. No stigma ever attached to his name.

In this vile conspiracy, James Wilson played the most important part. He came from the Supreme Bench, and arrived in Georgia with $25,000 in his saddle bags, with which he proceeded to bribe the members of the Georgia Legislature. The act was now a law; the purchase money paid over, and success seemed assured. Hurrying northward, Wilson and Cox proceeded to sell to innocent purchasers $5,000,000 worth of rich lands. As Louisiana cost Americans only $15,000,000 some years later, the relative magnitude of this sum will be readily perceived.

Then the storm broke. General James Jackson, Senator from Georgia, became the champion of the people. Wilson's party, in terror, offered him "any number of acres up to 1,000,000 if he ceased to oppose the sale," which he indignantly refused. Resigning his seat in the Senate, this patriot hurried home and was elected to the Georgia House of

Representatives, where he bravely charged the crime of robbing his people of their battle-won lands to Wilson and his associates. The times were indeed rough. Coming into a corridor of the Capitol, Jackson was attacked by a hired assassin, of whom he wrote: "I had no weapon, but I frapped him finely with my little cane until it broke; . . . thrice I threw him, . . . and a friend gave me a pistol. . . . I cried: 'No meeting tomorrow; stand back; I will settle with an assassin only on the spot!'" The people of Georgia were enraged. Miles Jennings, an old leather-stocking, waved a rope amid a meeting of protesting Georgians and yelled: "Neighors, let's hang Musgrove (a legislator), for he sold our lands for a bribe!" Only a fleet horse saved the knave. Two legislators were actually shot by their furious constituents. Under Governor Jared Irwin, a purified Legislature, early in 1796, not only repealed the odious "Yazoo Act," as it was called, but decreed that every vestige of its existence be expunged from the State records. Accordingly, in the presence of the Governor, the Legislature, and a vast concourse of people, the books were brought out and many pages burned amid the shouts of the happy people. To this day the scarred volumes attest the truth of this story.

The thieves were not inactive. They soon secured a favorable legal opinion from Alexander Hamilton. They raised a storm in Congress, where John Randolph, of Roanoke, stood against them. Federalist and Whig clashed in debate while armed Georgians drove honest purchasers away from the disputed territory. Georgia defied everybody and the "Yazooists" were equally firm. Civil war seemed imminent, as Georgia was the very hotbed of "States Rights." Finally, it was agreed in 1802 that Georgia should cede the "Yazoo Lands" to the Federal Government, which, in turn, agreed to remove all the Indians from within the limits of modern Georgia; and that Congress should, after indemnifying the honest purchasers, lay out two new States. The cession was duly accomplished. To old John Randolph, of Roanoke, came then an opportunity for making one of his shortest of speeches. Hordes of claimants clamored in Congress, but carefully concealed their names; for among the innocent sufferers were also many of the Yazooists who still held hopes of gain. Old John cried out: "Mr. President, give us their names!"

So came and went the great "Yazoo Fraud," and from it the young nation suffered and learned much. Two great States were raised out of the wilderness. Men's reputations were ruined—like Wilson's, and men were acclaimed and honored—like Jackson.

Wilson, conspirator and briber, sank into an obscure grave; and now his dust is given great honor! Jackson, patriot and statesman, sleeps in an unmarked grave in Arlington, across the Potomac, but his name is honored and his fame is safe.

Thus we find the good and sufficient reasons for the oblivion into which the name of James Wilson was allowed to sink.

As to Sybarites

After Dr. Crapsey's admirable letter of resignation was published, his distinguished counsel, Mr. Edward M. Shepard, published a statement on the case. He had advised his client not to submit, but to press his rights, even to the civil courts, as in the case of the deposition of the Rev. Mr. Jennings by Bishop Scarborough a few years ago; but Dr. Crapsey preferred to yield rather than fight. Mr. Shepard expresses himself very freely as to the unwisdom of the ecclesiastical court, and of Bishop Walker, whose sincerity he respects; but he uses quite other language of Bishop Potter:

"While the cause was under judicial consideration, and while every consideration of fairness made it proper for one in his responsible place to be silent upon it, he told his clergy in unmistakable fashion, tho resorting to the device of not mentioning a name, that Dr. Crapsey's motive had been a sordid desire to hold onto the money revenues of the place.

"This false and indecent imputation comes from a man who has, for many years, been conspicuously indifferent to preaching in his own diocese more heretical than Dr. Crapsey's was deemed to be. . . . Dr. Crapsey has not, ever since he entered the ministry, lived with the rich; he is not served today by a

butler and a second man and a footman and a coachman; he is not one of the chief figures at the dinner tables of the private palaces of his city; he is neither used to, nor fond of, sybaritic elegance."

Probably Mr. Shepard forgot the characterization of Bishop Potter some years ago by George William Curtis, as one "who lived in Sybaris without being a sybarite." Whatever the temptation to retaliate, the effort to hold the senior Bishop of New York up to contempt is not one that would be likely to have the approval of Mr. Shepard's client. If the Bishop holds, or controls, large wealth, and lives as other wealthy men do in a large establishment, and as English bishops do, it does not follow that his own heart may not be as simple as Mr. Curtis described it. The charge that Bishop Potter was inconsistent in that he allowed greater heresies in his own diocese—and we think of Dr. Newton—is more pertinent.

But we have here a definition of "sybaritic luxury" which may be considered. It is described as consisting in living in a large city house and keeping four man-servants, and in freely accepting invitations to the dinner parties of rich men. All that may easily be done elsewhere than in Sybaris. The sybarite is not a hard-working man. He is a gourmand. He is devoted to the pleasures of the table. His weak energy is expended on surrounding himself with elegancies and luxuries. His books are for ornament and show and not for study. The sybarite is an utterly selfish dilletante of beauty and of taste, whether of the palate or the eye. He can have no rough exercise, no absorbing business. Probably Mr. J. Pierpont Morgan has more man-servants than Bishop Potter, but he is an intense worker, traveling the world in his business, and he is no sybarite. Money is nothing to him; he buys what he wants, but his energy in unbounded. Bishop Potter is no longer a young man. He has been obliged to find an associate to take on the burden of a very heavy diocese. He can no longer live as actively as can his distinguished and wealthy fellow churchman. But his has not been a life of indolent luxury. He has kept his mental powers busy for the service of his Church and of his country. He is in his seventy-second year, and has the right to rest somewhat from what have been absorbing labors and responsibilities. Whatever his tastes, and whatever may have been said of his choice of wealthy company, or of his supercilious ness, or of his indifference to the wanderings of his clergy from the strait and narrow way of the creeds, George William Curtis's description of him would seem to be more nearly correct than that of Mr. Shepard.

But there are sybarites enough in this city and in any one of our large cities. They are not active bishops or clergymen; they are not busy business men. They are not concerned for the public good, building our bridges and tunnels, directing our great railways or factories, masters of commerce and trade — such men possess immense fortunes, which they may have acquired legitimately or illegitimately, and they live in great houses. But our sybarites have inherited the wealth their fathers or grandfathers gained by hard work, and they are simply enjoying their own miserable, degenerate selves in a miserable way, by the pleasures of the palate, in physical luxuries or debaucheries, flitting from flower to blossom, from race course to yacht, grosser maggots or decorated butterflies. They are not one whit better than the ragged or painted retinue that haunt the saloon or the brothel. They are those who make wealth contemptible as well as dangerous.

Superstitions of Spelling

The Simplified Spelling movement has accomplished one thing. It has shown how common and powerful is a superstitious attachment to the forms of words. The philologist, because he knows the history of words, is willing or desirous to have their spelling changed. He understands how mutable are the forms of words and how much the present fashion misrepresents their derivation. The common man, because he knows nothing of the history of words, does not object to a change in spelling. Words are to him merely the tools of language and valued according their convenience.

But between these two extremes there is a class of men, mostly authors, to whom words are too sacred to be touched. They are unmoved by either etymological or utilitarian arguments. They care nothing for the lessons of the past or the convenience of the future because they are so completely absorbed in the present. They are worshipers of the God of Things As They Are, undeniably the most powerful deity that man has ever devised for his adoration and imitation. They show the same awe for an etymological blunder embalmed in a book that an ancient Egyptian showed for a mummified cat. If a Dutch printer of the fifteenth century made a mistake in spelling that mistake must be perpetuated to the end of time because it was made so long ago. The decision of an ignorant compositor has an infallibility and a permanency greater than that of the Medes and Persians and the Popes.

Anthropologists say that they have difficulty in obtaining information from barbarous tribes as to the meaning of their customs because they do not understand the word "why." They ask the native "why do you make your houses so?" and he answers "because we make our houses so," and he regards that as a complete and conclusive reply. The believers in static spelling answer the reformers in substantially the same way. "Why do you spell *sulphur* and *through?*" we ask, and they answer in a chorus, "Because we spell them so." They rarely attempt to give any reason for their irrational spelling. They rarely attempt to discriminate between proposed changes. They are opposed to all changes, those that destroy the traces of the lineage of a word as well as those that restore its true derivation, those that are a part of a consistent scheme of progress as well as those that are merely temporary expedients. They want to "preserve the language of Shakespeare," yet they object to going back to the language of Shakespeare just as vehemently as they do to going forward to a still better form.

Their attitude is the same as that of the Russians of the time of Peter the Great, who suffered martyrdom by the thousands and ever since have endured political and social disability because they would not change the spelling of the church service from the ancient Slavonic to the vernacular. Their attitude is just the same as that of the University students of Athens, who two years ago were rioting and murdering because it was proposed to print the New Testament in modern Greek. They could not deny that if Paul should preach on Mars Hill today he would speak to the Athenians in modern Greek, for he did not use the classic Greek when he did speak there, but that made no difference to the students. They did not want to go ahead themselves and they would not let others go ahead. The same spirit is shown in this country by many who hold that the Authorized Version of 1611, the old St. James Bible, is inspired of God in every word and point, and that to modernize its language is sacrilege. The old deacon stated the position of the people of this class in a way that cannot be bettered: "I don't want to hear of your Hebrew and your Greek, the language that Moses and Paul spoke is good enough for me."

This superstitious reverence for words is easy to comprehend, even by one who does not share in the feeling. It is one of the evil results of materialism and, like all other superstitions, flourishes most in a materialistic age, because superstition generally consists in mistaking the material and sensible symbol for the invisible reality signified. This forms the chief difference between the scientific and the literary types of mind. The true scientist cares nothing about words as such, tho he is very careful to see that they convey his exact meaning. For that very reason he prefers new coined words to those that long usage have worn smooth and slippery. He will change his nomenclature or his hypothesis in the midst of an article, sometimes without due warning to the reader. He has such a firm grasp upon the reality that he is not afraid that he will lose it when he shifts symbols.

The *litterateur* pays so much attention to words that he is apt to forget the ideas they are designed to convey. The more superficial the writer, the more he is attached to the mere forms; so in extreme cases we have alleged poetry which is

more properly classed as an inferior kind of music than a superior kind of literature. Such authors are lacking in imagination, which is the instrument by which man pierces thru appearances to the reality behind them, and so they remain blinded by material and sensuous impressions.

To such a man, for example, *love* is not an idea, a sentiment or an emotion. It is not even a sound. It is merely a collocation of type. If spelt *luv* or *lov* it would be to him another thing entirely. Now, a man who could not *luv* his wife just as much as he *loves* her is the sort of a man who would desert her if her hair turned gray. She might look prettier with gray hair, it might be more suited to her age, but she would be changed in appearance, and since appearance is all he knows and cares for, his affection would vanish. General Grant always refused to have his wife's eyes straightened because she was crosseyed when he fell in love with her. The fact that she herself was inconvenienced and other people annoyed apparently had no weight with him. Similarly our lovers of languages cling to their cross-eyed words with a devotion that would be touching if it were not ridiculous.

To the man of ordinary common sense I love you, *ich liebe dich* and *je t'aime* mean exactly the same thing. It is a matter of indifference to him which he uses. It depends merely upon the nationality of the girl he happens to be talking to at the time. If she did not understand any other language that he spoke, he would try her with Esperanto, and put just as much passion and sentiment into *Mi amas vin* as when he used his native tongue. If that failed he would resort to sign language. That any of these methods will work if circumstances are favorable has been repeatedly demonstrated. The verb *amo* can be conjugated equally well in any language. But the man who has cultivated literary superstition does not realize this. He would make love to a Dutch girl in Italian because it is more melodious. He will not write a love letter on the typewriter because his grandfather never did. He is more likely to use a gray goose quill. Yet he would not dare to send a valentine to his sweetheart containing the lines:

> "Oh, my luve's like a red, red rose
> That's newly sprung in June.
> Oh, my luve's like the melodie
> That's sweetly played in tune."

for fear she should think him a simple speller like Burns.

The fetishism of words, the belief that words have some mysterious power and meaning dependent on their form, has prevailed from the earliest times and is not yet extinct. That words spoken or written in a certain way will summon spirits or avert danger is the most common and persistent form of magic. The words themselves were regarded as having a significance and power dependent upon their form and quite apart from their meaning. Even today we see people shudder at the thought of cutting off a few superfluous letters on the end of a word, as tho one had proposed to cut off the leg of a child. Words are real live things to them, not mere symbols or tools, just as the ikon is alive to the Russian peasant, because he cannot see beyond or thru it. It is the same feeling that has filled churches with the bones of saints and miraculously multiplied the wood of the true cross. It is the same spirit that leads our patriotic relic-worshipers to search out and enshrine the bones of heroes. There are those who would not believe themselves properly baptized unless the water has been sent from the River Jordan; who would think that their college degree was not worth much unless it was written in Latin on sheepskin and given to them by a man sitting in a carved oaken chair and dressed in a silk gown; who would live all their lives in the house where they were born, because no other place could seem like home to them, and who would hesitate to die unless they knew that they would be buried in a particular spot and with a certain form of words.

All such foibles, which often are so strongly held as to be properly classed as superstitions, are the result of a materialistic tendency which shows itself in a fondness for formalism and an attachment for familiar and established things. No one can read the controversial literature that the proposal to simplify spelling

has called out without perceiving that at the root of the opposition to any changes, wise or unwise, tactfully or untactfully made, is this superstitious reverence for the established forms. Superstition is the chief foe of all kinds of progress, and it has prevented the adoption of many more important reforms than that of spelling.

Questions Before Congress

WITH not more than ten weeks of working time, Congress can do little in the present session beyond the preparation and passage of the annual appropriation bills, and final action upon other bills which have already been carried nearly to enactment.

This session is too short for all the work that ought to be done before March 4. In the Senate the Philippine Tariff bill, which the House passed, should be taken out of committee and enacted. Failure to do this would be disgraceful. American citizenship should be given to the Porto Ricans. Very little time is needed for this act of justice, which has been shamefully delayed. The interests of our foreign commerce demand a prompt adjustment of our tariff relations with Germany. Action on this subject cannot safely or fairly be deferred beyond March 4.

The reasonable and conservative modifications of the currency laws recommended by the New York Chamber of Commerce and the American Bankers' Association, and designed to impart a little needed elasticity to the volume of currency in circulation, ought to be accepted. They are for the good of the public. At least, the present restriction upon the retirement of note circulation should be removed, and the Treasury should be permitted and directed to deposit in the banks, for the uses of trade, at a fair rate of interest, that part of its current revenue receipts which it does not need to retain.

Bills, already considered, for the publication of contributions to campaign funds, and to prevent corporations from making such contributions, should be enacted. The Isle of Pines treaty should have been ratified long ago; the present condition of Cuba furnishes a new argument, and possibly a reasonable one, for deferring action upon this question. The treaty with Santo Domingo, with such modifications as may be suggested by the pending readjustment of the Republic's foreign debt, ought to be accepted. If acceptance of it be prevented now, a clear two-thirds Republican majority in the Senate after March 4 will probably facilitate ratification then. The provisions recommended by the President concerning the use of injunctions in labor controversies ought not to be opposed by the representatives of organized labor. They are in the direction of what these representatives have sought. Ship subsidy legislation should be restricted to fair allowances of mail pay for postal service.

Coal lands and oil lands now in the public domain should be retained by the Government. There should be legislation to this effect. We do not know, at this writing, what the recommendations of the President's message will be as to this subject, or with respect to the further supervision and restraint of corporations, or concerning inheritance taxes. Such recommendations as are expected will furnish important topics for discussion in and out of Congress. This discussion will be useful. In a short session, crowded with routine work that cannot be postponed, it may not bear fruit in the form of new laws, but it may clear the way for legislation in the first session of the Sixtieth Congress.

The Scarcity of Labor

FROM every part of the country comes the complaint that agriculture, mining, industrial production and transportation are suffering from scarcity of labor. The unprecedented prosperity which we are enjoying is limited, apparently, by the impossibility of doing all the work that the country is eager to have done, with the labor force at command.

One of the greatest railroad systems of the West announces that it cannot properly handle its freight business because it is unable to obtain an adequate number of locomotives. Mr. E. H. Harriman says that the freight traffic of the entire country is disorganized, because the builders of cars are unable to supply them as fast as they are wanted.

Street railway companies, including the New York company, excuse themselves for failure to handle their passenger traffic properly because they cannot obtain motormen and conductors. Mr. Vreeland admits that he has three or four hundred idle cars in his barns, while passengers are indecently crowded in the cars on the road, and he professes his willingness to run the entire stock if anybody will tell him where to find motormen to handle them.

Various implications of such a state of affairs might be pointed out. Among them one or two are of more than mere economic, or business, interest.

When the labor force of a community is short the existing supply finds its way unfailingly into those occupations that offer the largest inducements. If Mr. Vreeland is unable to get men enough to run his street cars it is because his company does not offer such wages and conditions as are offered by other labor-employing enterprises. If the car and locomotive builders are unable to meet the demands of an increasing freight traffic, it is because they also are paying lower wages, relatively to muscle and intelligence demanded, than other undertakings are offering.

The moving of human beings to and fro between their homes and their places of employment in a great city is one of the most vitally necessary operations of modern life. So also is the prompt and uninterrupted transportation of freight. It seems, then, that it is in the great practical necessary domains of industry and commerce that the scarcity of labor is submitted to. Other domains are, for some reason or other, permitted to obtain a share of the working force that is imperatively needed in the fundamental employments. Somewhere or other, outside of the most necessary industries, men are paid sufficiently large wages to command their services. Where and in what employment is this more effective demand?

The answer to this question is easily found. Prosperity has come to us under peculiar conditions. Thru law-made privilege great corporate organizations have combined into systems and trusts, controlled by a steadily diminishing proportion of the business class. Thru this centralized mechanism fabulous profits have been concentrated more and more in relatively few hands. Gigantic fortunes have accumulated with unprecedented rapidity, and smaller fortunes have followed. Prosperity has brought with it an increasing inequality in the distribution of wealth.

The demand of a small class of very rich families for the necessaries of life is not large. A vast demand for such goods must come necessarily from a great population, which is in the enjoyment of good, if not large, incomes. The big expenditures of the very rich are for luxuries of ever increasing extravagance, absurdity and wantonness. The men and the women who can minister to luxurious tastes, by personal service, or by making things that have no other end than lavish display or capricious indulgence, command wages that the great utilitarian industries feel unable to meet. The scarcity of labor in the domains where it is most needed today is due in large part to the retaining of that labor in employments that serve only the vanities and the vices of luxury, instead of serving as productive labor in useful occupations.

Flunkies and chauffeurs; skippers, engineers and seamen on the fleet of private yachts; horse trainers and chefs; the makers of perfumes and laces, the cutters of diamonds and rubies, the hunters of aigrettes and the fashioners of marvelous gowns; these are some of the men and women who cannot be obtained today to do the useful work of the world. The many must suffer vexation and deprivation that wealth may blazon forth the glorious magnificence of our miraculous prosperity.

December Eleventh in France

On December 11th the Catholic Church officially drops out of cognizance of French law. It becomes a legal nonentity. Thus the great republic of Europe follows in the footsteps of its sister in America. It was generally thought that the eventful day came in this year of grace, 1906; but M. Briand, Minister of Public Instruction, declared recently from the tribune of the Chamber of Deputies that the year embraced the whole period

from December 11th, 1906, to the same date, 1907—a very benign handling of the law, which breeds much discussion. Socialists like the Deputy Jaures wish the affair settled and done with this year, in order to give the Parliament and the country a chance to devote their attention to other, and to them more pressing, matters. Others, like M. Pelletan, a former Cabinet Minister, regard the extension of time as a dangerous playing with Rome. For the watchdogs of the Vatican know well how to play a waiting game. Procrastination has often witnessed the surging waters of the Tiber recede from the Leonine City. On their part, French Catholics seem to look upon the Government's longsuffering as symptomatic of surrender.

In the same speech, M. Briand threw a thunderbolt into the clerical camp in declaring that the worship club established in the Gironde, under Cardinal Lecot, Archbishop of Bordeaux, was an *association cultuelle* in conformity with the law of 1905. His Eminence of Bordeaux denied this, and claimed that his Gironde worship club was created under the law of 1901. As the later law may truly be regarded as a development of the earlier, the Cardinal's stand seems to mean little. He holds that the *associations cultuelles* framed under the law of 1905 are to maintain churches and church work, whereas his association is for the support of the clergy.

"Strange all this difference should be
'Twixt tweedledum and tweedledee."

This frail shift, however, fell to the ground when it was discovered that the secretary (*le délegué du comité de direction*) not only had applied to the proper officials, as named in the law of 1905, but had amended certain points in the club's bylaws when required by those officials. Again, when attacked as an illegal body by *La Revue d'organization et de defense religieuse*, a Clerical organ, the secretary defended the legality of the Gironde club as conforming to the laws of both 1901 and 1905. All this, however, before the encyclical of Pius X.

When brought face to face with such facts, His Eminence of Bordeaux answered that he could not be expected to know all the doings and details of the worship club. The secretary's action, however, has not been repudiated, nor has his name been shelved. As the matter now stands, the Government accepts the Gironde worship club as legal under the law of 1905, while its founder regards it as framed under that of 1901. Will it consent to receive the annuities guaranteed under the law of 1905?

It may, however, prove the open sesame out of the imbroglio. Technically speaking, it violates not the Papal condemnation; practically, the French Government recognizes it. Are the Vatican authorities behind the stand of Cardinal Lecot? The secret dispatches alone could answer. A few days ago the European press announced that the Vatican couriers had made Strassburg their headquarters. It is not a long journey over the Vosges, thru Mediterranean France to the Bay of Biscay. At any rate, we may not be surprised if the authorities on the Tiber tolerate the Gironde club. Indeed, the *Matin* of November 22d declares positively that a dispatch had just been received from Rome approving Mgr. Lecot's scheme of association.

To an outsider the shifty stand of His Eminence of Bordeaux is but a trifle less curious than that of Pius X in his recent encyclical condemning the law of 1905. In this Papal document the world is told that behind the Pope is arrayed a unanimous French episcopate. Now, before the encyclical was promulgated, it had leaked out that the majority of the bishops favored the acceptance of the law and the creation of worship clubs in conformity therewith. Today, in despite of the encyclical, the same declarations are made and the divided episcopate proven. Hence writers are not lacking who observe the discrepancy with fact. Now, as an encyclical stands at least upon the threshold of Infallibility's temple, there is little wonder at the amazement of the French public.

Ship Subsidies

It appears that the Secretary of the Navy is, like Secretary Root, a convert to ship subsidies. Mr. Bonaparte admits, in a speech last week, that he was wrong in his last report in saying that we do not need to enlarge our navy beyond its present size. He now says that the fact

that our commercial fleet is so very small is a reason why our navy should be strengthened. We quote:

"In my last annual report I expressed the opinion that if, on the whole, the navy maintained the strength it then had actually or in prospect, or that I understood it to have, it ought to be sufficient for all contingencies that might arise in the future as far as I could foresee, but in the report I expect to make I will take it back. I think that a reasonable increase in material strength is indispensable for safeguarding the interests committed to its care. . . . Unless our navy is sustained by the resources of an adequate merchant marine the navy must be unavoidably and greatly increased. I am not dealing now with the economic aspect, but from a naval standpoint, and I believe that it is a wise economy for our Government to promote that form of our naval strength involved in the enlargement of our merchant marine which will enable us to second duly the navy in time of exigency and take the place of certain elements of naval strength which must otherwise be provided for in the navy itself.

"This is a cheap way of adding certain elements of naval strength. In the absence of such merchant marine which it is desirable we should have we must submit to greater sacrifice in the navy than would otherwise be necessary."

This is a new point of view. It is evident that Secretary Bonaparte proposes ship subsidies as a way to escape creating an extravagant navy. Secretary Root's argument is the old one that we must give subsidies to keep up with other nations, just as we enlarge our navy to keep abreast of theirs. When will the time come when, just as an international congress agreed that subsidies for the manufacture of sugar should cease, so subsidies shall cease for commercial trade, and the rivalry in ships of war shall some to an end?

Japanese Citizenship

The other day a naturalized American citizen, of Japanese birth, brought a fellow Japanese to the proper officer in Jersey City to secure the first papers for naturalization. The privilege of becoming an American citizen was refused him, under a ruling of the Department of Commerce and Labor, which reads as follows:

"Clerks of courts shall not receive declarations of intention (Form 2203) to become citizens from other aliens than white persons and persons of African nativity or of African descent."

Under this ruling any white man, any negro, any mulatto can be naturalized, but not any Hindu or Malay or brown Filipino or Canadian Indian or Japanese. On what is such an extraordinary ruling based? On the following law, Revised Statutes, Sec. 2169 as amended, 1875:

"The provisions of this title shall apply to aliens being free white persons, and to aliens of African nativity, and to persons of African descent."

There is no provision that others than white persons and Africans are excluded, but this may fairly be implied. Or it might be if there were not a separate law excluding Chinese, as follows (22d Statutes at Large, p. 58):

"Sec. 14. That hereafter no State court or court of the United States shall admit Chinese to citizenship; and all laws in conflict with this act are hereby repealed."

This implies that previously Chinese—and so other yellow aliens—might be admitted, as indeed they were. The exclusion was directed solely to the Chinese. It is not clear to us that the rule of the Department is properly based on law. If it is, then the law is bad. There is no reason why civilized and competent Japanese or Chinese should not be admitted to citizenship as well as Cuban and South African negroes. We are heartily glad that President Roosevelt will urge the admission of the Porto Ricans, so many of whom are of African descent.

A Japanese Compromise

When we warned the Californian hot heads that their course was of the sort that might be dangerous, and that the result of war with Japan would be the immediate seizure of Hawaii and the Philippines, and the safe bombardment of every city on the Pacific coast, we did not anticipate that the thought of war could be generally and seriously considered. But the Japanese journals talk of it, and it is the chief matter of discussion in Paris, in view of the supposed coveting eye of Japan cast on the French Indo-Chinese possessions. There is not a more serious subject before our Cabinet than this so

rudely thrust upon us by San Francisco. It is said that the President has a plan to persuade the Californians to admit Japanese children to the public schools, but to exclude men over eighteen years of age. If San Francisco's little rulers can accept this as a compromise it ought to be satisfactory to Japan, for we are under no obligation to educate her adults or ours in schools made for children. But of all things our long friendship with Japan ought not to be sacrificed.

Those Negro Soldiers

There is sure to be a full investigation of the facts as to the offense and the dismissal without honor of the negro troops stationed at Brownsville, Texas, probably by Congress. We learn that the defense now offered by their friends is a most radical one, and one which, if justified by the facts, will compel their reinstatement with honor. It is declared that there was no such raid of negroes thru the streets as was asserted in the charge. They say that when the negro soldiers were Jim Crowed at the saloons they got up a saloon of their own outside of the barracks, and that the white saloonkeepers were so angry that they attacked it, and that this was all the disturbance there was. They declare that it was all a plot gotten up to discredit these soldiers, and that the denial that they knew of any raid on the streets and firing on the houses is true. We had no knowledge beyond what the public press and the report of General Garlington provided, and on the face of that report there was nothing to be done but to dismiss the men who were in league to save their comrades from just punishment. We sincerely hope that the coming investigation will show that the published reports were founded on error, in which case we are sure that President Roosevelt will be most happy to reinstate the men whom one of their officers called the best body of soldiers in the United States Army.

What G. Bernard Shaw wants is notoriety. It helps his business as a playwright. His last public effort is to get rid of the Bible, a task that will tax his powers. That is absurd, but he is amusing when he proceeds to compare his own cleverness with the general British stupidity. He says:

> "I have a remarkable faculty which few Englishmen possess, the faculty of analysis The ordinary Englishman has no faculty of analysis. He takes religion, philosophy and morals in a lump. This mass of prejudice, when it passes thru my remarkable brain, is divided. Rubbish and superstition are divided and the religion is brought out. My mission on earth is to put my analysis before the pub lic, to show the rubbish which is checking religion and making it impossible."

England ought to be very grateful to the kind Providence which has given it such a guide and such a remarkable brain.

We lately mentioned that in any political speech there will be more allusions to the Bible than to all others writings combined. A correspondent writes that Speaker Cannon, in a late campaign speech in Sullivan, Ind., made fifteen biblical allusions, such as "in the sweat of thy face," "by their fruits shall ye know them," "shibboleth," and quoted no other author except President Roosevelt; and yet, in a large Bible class of church members, not one knew what was referred to by "shibboleth."

It is an idyllic, ideal idea suggested, and they say seriously considered, to make President Woodrow Wilson, of Princeton University, the next Democratic candidate for President. We can hardly conceive the proposal as put forward in good faith, for we do not usually seek the wisest or the most learned man for high office, but the man who makes courting the public his profession. Let that movement grow.

The General Education Board announces that from the $10,000,000 fund given it by Mr. Rockefeller, it has distributed $677,000 during the past six months. Most of this money has properly gone to Southern colleges, where the need of endowment is greatest. We observe three Northern institutions in the list of sixteen institutions, the rest all being white Southern colleges.

Insurance

The Mutual Life Loses the Last of the McCurdy Family. The I. P. C.

THE Mutual Life Insurance Company is now entirely divorced from the McCurdy family. The last link was severed last week, when P. S. Pillot resigned as inspector of risks, and thus sacrificed a stipend of $10,000 a year. The position lately held by Mr. Pillot was to pass, in connection with two others, on all policies of $30,000 or more. He investigated the moral worth of "prospects" after their physical condition had been held to be satisfactory. The International Policy-holders' Committee continues to assert that it has evidence of wholesale fraud on the part of the agents of the New York Life in obtaining ballots for the administration ticket. The I. P. C., in its circular dated December 1, makes an appeal for aid in bringing out the policy-holders' vote for directors of the New York Life and the Mutual Life in the elections now in progress. The committee authorizes the statement that only about 40 per cent. of the policy-holders have thus far availed themselves of the voting privilege. The result of the election will, it is claimed, rest with the uncast vote. The I. P. C. in its last appeal emphasizes the fact that such men as Richard Olney, Judge George Gray, Dr. Conwell, Judge Parker, Charles Emory Smith, Gen. Benjamin F. Tracy and others of equal standing could not be influenced by unworthy or mercenary motives in their association with this committee. THE INDEPENDENT concurs in thinking that policy-holders ought to take a decided stand in the elections and to cast a vote according to their light.

THE Commissioner of Corporations has been directed by Secretary Metcalf, of the Department of Commerce and Labor, to make an investigation of the action of the fire insurance companies in the settlement of the claims arising because of losses due to the earthquake and fire in San Francisco and other places in California. George E. Butler, of Ross, Cal., who has had thirty-eight years of experience in the fire insurance business on the Pacific Coast, has been appointed as a special agent to conduct this investigation. Information has been received at Washington to the effect that the property loss in California, both from earthquake and fire, is estimated at $500,000,000. This was covered by about $234,000,000 worth of insurance. Of this amount only about $125,000,000 has been liquidated.

JAPAN is interested in the matter of fire insurance, and to increase her knowledge of this important subject the Government has sent two Japanese insurance officials to this country to study our methods in this field. They are Taro Suzuki, assistant secretary of the Imperial Life Insurance Company, and Kaitaro Ebihara, actuary of the Meiji Life Assurance Company, both of Tokio. The first named gentleman will remain in this country about a year, during which time he will visit all the leading life companies in the United States and remain some time at each of the offices visited studying their methods, which Japan considers superior to those now in vogue in that country.

SOME matches were carelessly left in the pocket of a shirt recently sent to the William Penn Laundry at Philadelphia. The result was a fire attributed to this fact as a cause which brought about a damage of $50,000 on November 13th. The fire spread rapidly thru the big laundry building and destroyed 15,000 collars, 5,000 shirts and 5,000 pairs of cuffs. The loss was augmented because the rapid spread of the flames led to the destruction of some $7,000 in cash laid out for the payroll, a portion of which had been placed in envelopes for this purpose. The amount named constituted a portion of the fire loss.

SOME of the casualty companies are fearful that the flat caps recently adopted by the New York Police Department in the place of the old-time helmets will tend to increase the hazard on policemen, who are insurers to a considerable extent with such companies. There is some force in the contention that the discarded stiff helmets offer much more resistance to chance blows, falling bricks, etc., than do the newer and more picturesque caps now in use under the regulations.

Financial

Farm Wealth

We take from Secretary Wilson's tenth annual report for the Department of Agriculture the following estimate of the values of farm products in 1906:

Corn	$1,100,000,000
Cotton	640,000,000
Hay	600,000,000
Wheat	450,000,000
Oats	300,000,000
Potatoes	150,000,000
Barley	65,000,000
Tobacco	55,000,000
Sugar, syrup and molasses	75,000,000
Flaxseed	25,000,000
Rice	18,000,000
Rye	17,000,000
Hops	7,000,000
Unenumerated	3,292,000,000
	$6,794,000,000

Those which are unenumerated include many, such as farm animals, milk, eggs, etc., for the production of which a considerable part of the vegetable yield is consumed. The total exceeds that of 1905 by $485,000,000, and that of 1899 by $2,077,000,000, or 44 per cent. Our farm property has a value now of about $28,000,000,000. The present extraordinary prosperity of this country rests upon and is due mainly to the gains of its inhabitants who till the soil and who have harvested a succession of bountiful crops.

The Nipissing Affair

Speculation in mining shares, which had become extraordinarily active, was disturbed on Saturday last by a sharp decline in the price of the stock of the Nipissing Mines Company, owing to the refusal of the Messrs. Guggenheim to proceed further in the exercise of their option. This withdrawal involves the forfeiture of 60,000 shares and a loss which probably exceeds $1,500,000. As a result of an examination of the company's mines in the new mining district of Cobalt, Ont., by John Hays Hammond, the well-known expert, the Guggenheims, on October 30th, took an option to purchase 400,000 shares, a one-third interest, at $25 per share, payable in four monthly instalments. They paid $2,500,000 and received 40,000 shares, the vendors retaining 60,000 subject to forfeiture. Owing to rumors that the company's title was to be attacked, the buyers asked for an extension of time for the second payment. This was refused and they withdrew, forfeiting the 60,000 shares. In the latter part of October the shares sold up to $33⅜ (par $5), but the price has recently been declining, and on Saturday it fell to $19⅝. The value of the mines does not appear to have been questioned, and the company asserts that its title is perfectly clear and cannot be successfully attacked.

There has been much favorable comment upon the honorable conduct of the Messrs. Guggenheim, who voluntarily undertook to make good the losses of about 150 persons or corporations to whom they had sold a considerable part of the 40,000 shares at the price paid for them. These buyers were virtually associated with them in a syndicate transaction. The action thus taken is certainly praiseworthy. The Guggenheims lose heavily by reason of it. They have done as much as the most exacting code of business morals could demand. It could not be reasonably expected that they would also make good the losses of other investors or speculators who bought on account of the Guggenheim examination and purchase, even if the investments so made could be ascertained. Still, we suspect that these outside buyers and losers will harbor a grudge against the Guggenheims and their expert.

....According to the *Financial Chronicle*, the increase of railway earnings for the nine months ending with September was $138,000,000 in gross and $55,000,000 in net.

....The world's output of gold, in 1905, according to the recent estimate of the Director of the Mint, was $376,289,200, the increase over the output of 1904 having been nearly $20,000,000.

....Recent reports of the Census Bureau show that the value of the property contained in the State of New York is $14,769,000,000, or nearly one-seventh of the wealth of the entire nation, which is a little more than $107,000,000,000.

Dividends announced:

United States Leather Co., preferred, $1.50 per share, payable Jan. 2, 1907.

Central Leather Co., preferred, $1.75 per share, payable Jan. 2, 1907.

American Chicle Co., monthly, 1 per cent. on common stock, payable Dec. 20.

The Independent

VOL. LXI NEW YORK, THURSDAY, DECEMBER 13, 1906 No. 3028

Survey of the World

Inheritance and Income Taxes

The annual message sent to Congress by the President last week is a very long one. It begins with a brief recommendation that the pending bill which forbids all corporations to contribute to the campaign expenses of any party be enacted. Especially interesting are the President's propositions concerning an inheritance tax and an income tax. "There is every reason why," he says, "when next our system of taxation is revised, the National Government should impose a graduated inheritance tax, and, if possible, a graduated income tax." The man of great wealth, Mr. Roosevelt continues, owes a peculiar obligation to the State, because he derives special advantages from the mere existence of Government. He should recognize this obligation in the way he leads his daily life, and in the way he earns and spends his money, and also by the way in which he pays for the protection which the State gives him. He should assume his full and proper share of the burden of taxation. But the new tax should be inaugurated in a spirit of justice and moderation. We should make it clear that "our aim is to distribute the burden of supporting the Government more equitably than at present," and should avoid injustice to either the rich or the poor.

"I feel that in the near future our National legislators should enact a law providing for a graduated inheritance tax by which a steadily increasing rate of duty should be put upon all moneys or other valuables coming by gift, bequest, or devise to any individual or corporation. It may be well to make the tax heavy in proportion as the individual benefited is remote of kin. In any event, in my judgment the pro rata of the tax should increase very heavily with the increase of the amount left to any one individual after a certain point has been reached. It is most desirable to encourage thrift and ambition, and a potent source of thrift and ambition is the desire on the part of the breadwinner to leave his children well off. This object can be attained by making the tax very small on moderate amounts of property left, because the prime object should be to put a constantly increasing burden on the inheritance of those swollen fortunes which it is certainly of no benefit to this country to perpetuate."

There can be, he says, no question of the ethical propriety of such action. Progress in the direction of limiting the transmission of enormous fortunes should be gradual; the tax as at first imposed "need not approximate, either in amount or in the extent of the increase by graduation, what such a tax ultimately should be." Such taxes have been imposed temporarily by the National Government, and the constitutionality of them has been established. An income tax "involves no question of the perpetuation of fortunes swollen to an unhealthy size."

"As the law now stands, it is undoubtedly difficult to devise a National income tax which shall be constitutional. But whether it is absolutely impossible is another question; and if possible it is most certainly desirable."

Recalling the decision of the Supreme Court that the law of 1894 was unconstitutional, he remarks that this decision was reached by a majority of only one:

"The hesitation evidently felt by the court as a whole in coming to a conclusion, when considered together with the previous decisions on the subject, may perhaps indicate the possibility of devising a constitutional income tax law which shall substantially accomplish the results aimed at. The difficulty of amending the Constitution is so great that only real necessity can justify a resort thereto. Every effort should be made in dealing with this sub-

ject, as with the subject of the proper control by the National Government over the use of corporate wealth in interstate business, to devise legislation which without such action shall attain the desired end; but if this fails, there will ultimately be no alternative to a constitutional amendment."

Corporations and Combinations

In the passages relating to corporations and combinations, the President speaks, at first, of the new Railway Rate, Pure Food and Meat Inspection laws as marking an important advance in the right direction. It may be best to see them tested "before endeavoring to increase their scope," but he thinks it will be advisable in the end so to amend the Meat Inspection law that it will "provide for putting a date on the label, and for charging the cost of inspection to the packers." He points out that the railroads have not been ruined, but are showing increased earnings and larger dividends, while the number of recent voluntary reductions in freights and fares has been unprecedented. But it "must not be supposed that with the passage of these laws it will be possible to stop progress along the line of increasing the power of the National Government over the use of capital in interstate commerce." There will ultimately be need of enlarging the Commission's powers "along several different lines." Great corporations which do not operate exclusively within the limits of any one State cannot be dealt with effectively by State Legislatures:

"In some method, whether by a National license law or in other fashion, we must exercise, and that at an early date, a far more complete control than at present over these great corporations—a control that will, among other things, prevent the evils of excessive overcapitalization and that will compel the disclosure by each big corporation of its stockholders and of its properties and business, whether owned directly or through subsidiary or affiliated corporations. This will tend to put a stop to the securing of inordinate profits by favored individuals at the expense whether of the general public, the stockholders or the wageworkers. Our efforts should be not so much to prevent consolidation as such, but so to supervise and control it as to see that it results in no harm to the people."

The effort to secure such control is not, as "the reactionary or ultra-conservative apologists for the misuse of wealth" assert, a step toward Socialism. They themselves, he says, are most potent in increasing socialistic feeling. The best way to "avert the very undesirable move for governmental ownership of railways is to secure by the Government, on behalf of the people as a whole, such adequate control and regulation of the common carriers as will do away with the evils which give rise to the agitation against them." Legislation should also secure the abolition of the grave abuses which actually do obtain in connection with the business use of wealth. All this would not do away with the freedom of individual initiative or dwarf individual effort. But the deadening and degrading effect of pure Socialism is in part achieved by unregulated competition, which enables one man or corporation to rise at the expense of all others in the same field. "We hold that the Government should not conduct the business of the Nation, but that it should exercise such supervision as will insure its being conducted in the interest of the Nation." The effort to prohibit all combination, good or bad, is noxious where it is not ineffective. Combination of capital is a necessary element of our present industrial system. It should not and cannot be prevented, but should be subjected to rigorous control and supervision:

"It is unfortunate that our present laws should forbid all combinations, instead of sharply discriminating between those combinations which do good and those combinations which do evil. Rebates, for instance, are as often due to the pressure of big shippers (as was shown in the investigation of the Standard Oil Company and as has been shown since by the investigation of the Tobacco and Sugar Trusts) as to the initiative of big railroads. Often railroads would like to combine for the purpose of preventing a big shipper from maintaining improper advantages at the expense of small shippers and of the general public. Such a combination, instead of being forbidden by law, should be favored. In other words, it should be permitted to railroads to make agreements, provided these agreements were sanctioned by the Interstate Commerce Commission and were published."

It is a public evil, Mr. Roosevelt says, to have on the statute books a law incapable of full enforcement because both judges and juries realize that its full enforcement would destroy the business of the country; for it makes decent railroad men violators of the law against their

will. Railway joint traffic associations, altho condemned by the courts, still exist, and the Commission says it is difficult to see how the railways could be operated with due regard to the interest of both shipper and carrier without such concerted action. The President asks Congress to amend the Sherman act if it shall find that the Commission's opinion is justified.——The Nation, he says, should not alienate its remaining coal lands. Congress should provide for the withdrawal of them from sale or entry. The Government should not, however, attempt to work them, but should permit them to be worked by private individuals under a royalty system, exercising control to prevent the exaction of excessive prices from consumers, and to regulate fairly the rates and conduct of the railways carrying the product.——Arguing for the enactment of the pending bill which gives the Government the right to appeal in criminal cases on questions of law, the President refers to the recent conflicting decisions upon rebate indictments under the old conspiracy law, and says that a failure to pass this bill would seriously "hamper the Government in its efforts to obtain justice, especially against wealthy individuals or corporations who do wrong." The right of appeal is especially needed now, because in Trust and rebate cases the Government "has now definitely begun a policy of resorting to the criminal law." Having spoken of the deterrent effect of penalties imposed under the criminal provisions of the laws, the President quotes—as an "admirable statement of the need for treating offenders of this kind with just severity"—a large part of the recent opinion of Judge Holt, in the United States Circuit Court at New York, when he imposed upon the New York Central Railroad Company and its traffic manager heavy fines for granting rebates to the Sugar Trust.

Concerning Labor Legislation

Labor legislation is the subject of a considerable part of the message. The President says that the employers' liability law passed at the last session does not go far enough; the entire "risk of a trade" should be placed upon the employer. A drastic law concerning child labor should at once be enacted for the District of Columbia and the Territories, and Congress should provide for a thoro investigation of the condition of child labor and the labor of women thruout the United States. This would awaken the public conscience and promote needed legislation in the States. "The horrors incident to the employment of young children in factories or at work anywhere are a blot on our civilization." The recommendation of the Anthracite Strike Commission that machinery be provided for the compulsory investigation of labor controversies is recalled and approved. Pointing to the statistical record of strikes in the last twenty years, the President says that many of these disputes would have been prevented if the parties had been required to face each other before a Federal Commission of Conciliation or Arbitration. He argues at length in favor of technical industrial education for the elevation of workingmen, and for enabling us to meet the trade competition of other countries. Commending the bill to limit the hours of railroad employees, he says "it should be our aim steadily to reduce the hours of labor, with as a goal the general introduction of an eight-hour day." There is no analogy, however, between the needs of the people of the tropics and our own in this matter:

> "On the Isthmus of Panama, for instance, the conditions are in every way so different from what they are here that an eight-hour day would be absurd; just as it is absurd so far as the Isthmus is concerned, where white labor cannot be employed, to bother as to whether the necessary work is done by alien black men or by alien yellow men."

In a long passage relating to the use of injunctions in labor disputes, the President says this use should not be forbidden, because the power of the courts to deal in the most summary and effective way with men who seek to destroy life or property by mob violence should not be impaired. But this power should not be used unjustly against workingmen, or to aid "some big corporation." Undoubtedly, he says, "flagrant wrongs have been committed by judges in connection with labor disputes." He renews his recommendation concerning hearings. In another passage on "capital and labor" he attacks "sinister demagogs and foolish

visionaries," and speaks of "the infinite harm done by preachers of mere discontent and purveyors of sensational slander in newspaper and magazine." The people, he says, should not follow "the base creature who, to accumulate or add to an already huge fortune, seeks to exploit his fellow Americans, with callous disregard to their welfare of soul and body." He denounces "the man who debauches others in order to obtain a high office," and remarks that "the most damaging blow that can be given to popular government is to elect an unworthy and sinister agitator on a platform of violence and hypocrisy."

The Japanese School Children

Under the head of "international morality," treatment of Japanese school children in San Francisco is the main subject of a passage of nearly 2,000 words. "It is the sure mark of a low civilization, a low morality," Mr. Roosevelt says, "to abuse or discriminate against or in any way humiliate a stranger who has come here lawfully and is conducting himself properly." Hostility to the Japanese, which is limited to a very few places, "is most discreditable to us as a people, and may be fraught with the gravest consequences to the nation." To exclude them from the common schools is "a wicked absurdity." He gives to Japan the highest praise. "Nothing in the history of civilized mankind approaches her astounding growth in the last fifty years. She now stands as one of the greatest of civilized nations." All the arguments, ethical and commercial, for kind treatment of Japanese immigrants are set forth. Mr. Roosevelt asks Congress to provide specifically for the naturalization of Japanese, and so to amend the criminal and civil laws, now entirely inadequate for the purpose, that the President shall be empowered to enforce the rights of aliens under treaties:

> "Even as the law now is, something can be done by the Federal Government toward this end; and in the matter now before me affecting the Japanese everything that is in my power will be done, and all of the forces, military and civil, in the United States which I may lawfully employ, will be so employed."

It is unthinkable, he says, that we should continue a policy under which some locality is allowed to commit a crime against a friendly nation, while our Government is limited, not to preventing the commission of the crime, but to defending the people who have committed it against the consequences of their own wrongdoing.

The Lynching of Negroes

In the President's 2,000 words about lynching there is much that he has said in public addresses. The greatest existing cause of lynching, he remarks, "is the perpetration, especially by black men, of the hideous crime of rape, the most abominable in all the category of crimes, even worse than murder." Lynching mobs by torture avenge in bestial fashion a bestial deed, thus reducing themselves to the level of the criminal. Lawlessness grows by what it feeds upon; two-thirds of the lynchings now are not for rape, and many of the victims are innocent. The lynching of blacks exasperates race feeling, white men who take part in lynchings are thereby morally debased. It is an offense against the whole country, and against his own race, for a negro to fail to help the officers of the law in hunting down a negro guilty of rape:

> "In my judgment, the crime of rape should always be punished with death, as is the case with murder; assault with intent to commit rape should be made a capital crime, at least in the discretion of the court; and provision should be made by which the punishment may follow immediately upon the heels of the offence; while the trial should be so conducted that the victim need not be wantonly shamed while giving testimony, and that the least possible publicity shall be given to the details. Let justice be both sure and swift; but let it be justice under the law, and not the wild and crooked savagery of a mob."

It is short-sighted for whites to prevent or restrict the education of negroes. The best type of education for the colored man, he says, is such as is given in schools like Tuskegee and Hampton.

Other Topics in the Message

The President says that the whole question of marriage and divorce should be relegated to the authority of Congress. Incidentally he denounces "wilful sterility" as the one sin for which

there is no atonement and for which the penalty is national death. He commends the pending subsidy bill, and says Congress should at least provide for better mail communication with South America. Pointing out the need of elasticity in our currency, he directs attention to the recommendations of the Bankers' Association, saying also that the Treasury should be empowered to deposit customs revenue in the banks, and that the restriction upon retirement of circulation should be removed. He earnestly argues for the passage of the Philippine Tariff bill, and says that American citizenship should be conferred upon the citizens of Porto Rico. A long account of Secretary Root's journey is given, with a statement of its purpose and a copy of the Secretary's address at the Rio conference. The passage relating to Cuba is a report of recent events, with a solemn warning to the Cuban people. The navy, Mr. Roosevelt says, should be maintained at its present size, in the interests of peace and international righteousness. In the army there should be established a principle of selection which will eliminate men after a certain age if they are not fit to be promoted.

Washington Notes

In a special message to Congress, the President asks for legislation authorizing him to dismiss, on his own initiative and responsibility, any officer of the army or the navy whom he believes to be unworthy to remain in the service.——A comprehensive bill for the imposition of inheritance taxes has been introduced in the House by Mr. Perkins, of New York.——The Senate has adopted the resolutions of Mr. Penrose and Mr. Foraker, calling for all the facts in the case of the negro battalion dismissed from the army by the President. Secretary Taft, reviewing the history of the affair, says that the President's action was the "only means of ridding the military service of a band of would-be murderers of women and children, and actual murderers of one man."——In the first of the large appropriation bills, the House Committee on Appropriations provides that the simplified spelling approved and used by the President shall not be used in the printing of documents authorized by law or ordered by Congress.——Bellamy Storer, who was removed from the office of Ambassador at Vienna, has sent to the President a defense of the course of his wife and himself. It has been published and it fills fifteen newspaper columns. The President has replied in a letter of five columns to Secretary Root. Both statements contain several personal letters. The main subject is the efforts of the Storers at Rome to make Archbishop Ireland a Cardinal, and the alleged interest of Mr. Roosevelt in the undertaking. The President asserts that Mr. Storer is guilty of misrepresentation, perfidy and falsehood.

Great Railways Indicted

As a result of the investigation at Salt Lake City, companies and officers of the Harriman and Gould railway systems have been indicted, among the defendants being the Union Pacific Railroad Company, the Oregon Short Line, the Union Pacific Coal Company, the Utah Fuel Company, and several persons employed by them in positions of responsibility. They are charged with rebating and with acquiring large tracts of coal land by fraud. The rebates to subsidiary coal companies were about 50 per cent., and they amounted to millions of dollars annually.——An investigation of the Harriman railway system in all its parts has been ordered by the Interstate Commerce Commission. Attorneys have been retained, and there will be hearings in a dozen cities. Evidence indicating violation of the Sherman act or the laws against rebating, if any be found, will be turned over to the Department of Justice.

Labor Questions

In the Supreme Court of the United States, the appeal in the case of Moyer, Haywood and Pettibone, officers of the Western Federation of Miners, now in prison in Idaho and awaiting trial for alleged complicity in the assassination of ex-Governor Steunenberg, has been decided against the prisoners. The main point of controversy was the method by which the authorities of Idaho took the defendants into custody. It was alleged that,

altho extradited with the approval of the Governor of Colorado, they were virtually kidnapped. The Supreme Court holds that the Governor was not required to give them a hearing, and that their rights under the Constitution and the laws were not infringed by his failure to do so. Justice McKenna dissents. The trial will probably take place in January. ——Many additional increases of wages are announced. The Consolidated Gas Company, of New York, voluntarily grants 10 per cent. to 6,500 employees, its officers explaining that this is done because of the increased cost of living. The increase given by the Calumet and Hecla Company has been followed by an advance to 5,000 employees of other copper mining companies in Michigan. In addition to the 25,000 employees at Fall River, about 25,000 more who work in cotton mills of Rhode Island and Connecticut which are controlled in Providence, are to have an increase of 10 per cent. Owners of the mills in New Bedford offer 7½, but their employees insist upon 10 per cent.——At the trial of President Shea and other officers of the Teamsters' Union, in Chicago, the testimony of Young, Schultz and Kelly (defendants who became witnesses for the State), last week related chiefly to the attacks upon non-union men during the great strike of 1905. Schultz said that Shea hired him for such work and instructed him to break the legs or arms of the negro drivers. He and his companions were supplied with eggs full of powerful acid, which they threw at the horses. Kelly, formerly treasurer of the Coal Teamsters' Union, said he was hired as a member of one of the "wrecking gangs," and that he put twenty men "out of business." Young asserted that Shea at first demanded $5,000 for ordering the strike, but finally accepted $1,500. Young had already testified that his share of this sum was $300.

Peace Prize for the President

The Norwegian Parliament on Monday last awarded to President Roosevelt the Nobel peace prize. Thanks were given in an eloquent speech by the American Minister, Mr. Pierce. He read a message from Mr. Roosevelt, who said that there was no gift which he could value more highly, and added the following announcement of his intention to use the money (about $40,000) for the establishment of a permanent industrial peace committee at Washington:

"After much thought I have concluded that the best and most fitting way to apply the amount of the prize is by using it as a foundation to establish at Washington a permanent industrial peace committee. The object will be to strive for better and more equitable relations among my countrymen who are engaged, whether as capitalists or wage workers, in industrial and agricultural pursuits. This will carry out the purpose of the founder of the prize, for in modern life it is as important to work for the cause of just and righteous peace in the industrial world as in the world of nations."

The Philippine Islands

The Pulajanes of Leyte have not been subdued. On the 5th, 44 soldiers of the Eighth Infantry, commanded by Captain Ham, and a smaller force of constabulary, under Lieut. Ralph P. Yates, Jr., were attacked by about 200 of these fanatical outlaws near La Paz. Five of the soldiers were killed and ten were wounded, Lieutenant Yates being one of those who may not recover. Thirty Pulajanes were killed.——It appears that the liquid with which 24 prisoners in the Bilibid jail at Manila were inoculated by the health authorities was not cholera antitoxin or serum, but a culture of the germs of bubonic plague. Tubes of serum and others containing plague germs had been standing on racks in the laboratory. It is said that a visiting scientist inspected both, and that, in the temporary absence of Dr. Strong, he placed plague tubes on the rack reserved for tubes of cholera serum. Twelve of the 24 prisoners are dead. The serum has been used successfully in a great many cases. It is said that 800 prisoners were inoculated with it last year. Before using it upon other persons, Dr. Strong tested it upon himself and his assistants.

The Debate on the Kongo

The criticisms in the Belgian Chamber of the management of the Kongo and of the relations existing between the Free State Government and that of Belgium, while they have ap-

parently led to no immediate practical result, have shown that there is increasing dissatisfaction with the state of affairs, which must ultimately result in a change. The debate was opened by an interpellation of M. Paul Hyman in regard to the recent concessions of extensive territorial right to exploiting syndicates and the reservation by Leopold of a large personal Crown Domain. In 1890, when King Leopold was in financial difficulties, he applied to Belgium for the loan of $5,000,000, and at the same time made public his will bequeathing the Kongo Free State to Belgium. At the time it was pointed out by the Opposition that such a will could be revoked at any time, and their apprehensions have been in a measure justified by the action of King Leopold in adding codicils to his will and making concessions and reservations in perpetuity without consulting his legatee, Belgium. In his reply, M. Van den Heuvel, Minister of Justice, insisted upon the fact that the Kongo Free State was possessed of an independent sovereignty distinct from Belgium and all other nations, and that it was to the interests of Belgium, which would succeed that sovereignty, to see that it was preserved inviolate. Premier Woeste insisted that Belgium knew her own rights, and was able to look out for them without the interested advice of other nations. He also stated that the Government of Belgium was in favor of the annexation of the Free State at the earliest expedient moment. Before this could be carried out two preliminary measures were necessary. A law must be passed by the Chamber regulating the administration of the Kongo when that State should become a Belgian colony, then negotiations could begin between the Belgian Government and that of the Free State. M. Vandervelde, the Socialist leader, denounced King Leopold in the most vigorous language. He had disregarded all moral and intellectual claims and acted only upon the maxim "Business is business." He had imposed serfdom upon the natives by his absolutism and exploited the Kongo for his personal benefit. It was now a choice between severance and annexation. Belgium could no longer be held responsible for such misdeeds, but he hoped that some day Belgium's administration of the colony would cause the world to forget the shame, misery and crimes of the Kongo of Leopold III.

The Crisis in France

The conflict between Church and State in France reached an acute stage at the time when the Separation law went into effect December 11th. The Government, while refusing to compromise in the application of the law requiring that all church property be vested in local cultual associations, suggested a way by which the Church could avoid actual conflict with the law. This was compliance with the requirements of the law of 1881, which requires that no public meeting shall be held without authorization from the police. In the case of the regular services of the churches this would have been a mere formality, for a single application once a year would have been sufficient. The prelates of France differed as to whether they could properly accept this arrangement. Cardinal Lecot, Archbishop of Bordeaux; Archbishop Germain and others instructed their parish priests that they should make application to the local authorities for permission to hold services, while other members of the hierarchy instructed them to refuse altogether to make such application. But three days before the Separation law went into effect the Pope sent orders that no such recognition of the authority of the State was permissible, and, accordingly, Cardinal Lecot and others who advised complying with the law of 1881 changed their policy, and all priests and church wardens were instructed to continue the services in the churches as usual, but to abstain from any declaration or application to the authorities. According to the decision of the Vatican parish priests and custodians of church property must remain entirely passive and not co-operate in any sequestration of church property by the Government, but if the Bishop considers that the refusal of the treasurers to surrender the keys may cause grave consequences he can permit them to do so. M. Caillaux, Minister of Finance, has instructed the Treasury officials to sequester all Church property which

is not claimed under the law, and to administer it according to the law governing property whose owners are absent from France. They are also instructed to force the doors of the church safes if the wardens decline to surrender the keys. M. Guyot-Dessaigne, Minister of Justice, has instructed the Public Prosecutors to be prepared to prosecute those who hold services without making the application necessary under the law of 1881. Further conflict between Church and State arises in the management of funerals. The draperies and other decorations for funeral services held in the church are supplied by a special syndicate, under the direct control of the local authorities. In order, therefore, to celebrate such an occasion with the usual pomp, application has to be made to the Mayor, and this involves a recognition of the authority of the State, which the Pope refuses to permit. M. Briand issued the following statement in regard to the action of the Pope:

"The encyclical is very grave. While condemning the law of 1905, it advised recourse to the common law. Although the refusal to form cultual associations was, in my opinion, an error and to the detriment of the Church, it was the Church's legal right so to refuse. In a spirit of conciliation, out of respect to the consciences of the French Catholics, and in order to do nothing to disturb peace and tranquillity, the Government thereupon prescribed this easy means of continuing worship by a simple declaration, in accordance with the law of 1881.

"The Pope's brutal order to the clergy to reject this offer practically incites them to violate the laws of the country. He no longer acts as the spiritual head of the Church, as the canonical objections against the law of 1905 cannot be invoked against that of 1881. The Pope now assumes a political leadership, and the vital question is whether the Catholics of France will consent to follow him or not. If they do the Government will act with even greater energy because of the tolerance it has manifested heretofore. Every violation of the law will be prosecuted, and, furthermore, special measures, legislative and otherwise, may be taken."

Foreign Notes

Another quick change has been made in the Spanish Government. Señor Moret, who forced the resignation of the Dominguez Ministry, and thus secured for himself the position of Premier, was able to hold that office only four days. The refusal of Señor Montero-Rios, President of the Senate, to give him the support of the Liberals in the Cortes was the cause of his failure. King Alfonso asked Montero-Rios to form another Cabinet, but he was unable to get together the factions of the Liberal party. Accordingly a Moderate Ministry was formed under the Premiership of the Marquis de Armijo. Count Romanones as Minister of the Interior and a few other Liberals are retained. General Weyler, of Cuban fame, resumes his old post of Minister of War.——The Moroccan situation becomes increasingly difficult. Raisuli has the city of Tangier practically at his mercy. He administers justice in the market place, and his orders are obeyed in preference to those of the Sultan's officers or the foreign consuls. The presence of the French and Spanish squadrons in the harbor of Tangier has had no effect. The Moroccan Minister of War and Kaid Sir Harry MacLean, the British army officer who has charge of the Sultan's bodyguard, have been ordered to proceed to Tangier from Fez with 5,000 troops for the protection of the city. It is also reported that the Sultan will go to Tangier to meet Admiral Touchard, commander-in-chief of the Franco-Spanish squadron, for the purpose of showing the Moors that he approves of the action of these Powers in their effort to restore order. He was induced to make this decision by the advice of the Italian Minister, Chevalier Malmasi, and the American Minister, Mr. Gummere. The Algeciras Convention providing for the policing of Morocco by France and Spain is passing without opposition thru the German Reichstag, and it is expected that the American Senate will approve it this week.——European newspapers, in discussing the San Francisco difficulty, usually comment unfavorably on our Federal system which interferes with the fulfillment of our treaty obligations with foreign nations and many of them express their expectation that a war is inevitable between Japan and the United States.——M. Ferdinand Brunetière, the foremost critic of French literature and director of the *Revue des Deux Mondes,* died December 10th, aged fifty-seven years.

By the Grave of Shelley

BY GIOSUÈ CARDUCCI

TRANSLATED BY CURTIS HIDDEN PAGE.

[It is fitting that the Nöbel Prize should have been given this year to Carducci, who has just passed his seventieth birthday, and also the thirty-fifth anniversary of his appointment to the professorship of belles lettres in the University of Bologna, which he still holds. He stands unquestionably as the chief living poet of Italy, and among the three chief living poets of Europe perhaps the first. His many volumes of verse include *"L'Inno a Satana"* (1863), *"Giambi ed Epodi"* (1873) and *"Odi Barbare,"* (1871 and 1882). He is also the author of some fifteen volumes of criticism, and the editor of many anthologies and critical editions of the classics. His most characteristic and original work is to be found in the *"Odi Barbare,"* so called because, while in them he attempts to reproduce exactly the classical meters and stanza-forms, they would seem "barbarous" to the ancients, being written in modern languages to which these forms are not native. Carducci is a classic of the classics, both by his saturation with classic myth and literature, and by this attempt to reproduce in Italian the unrhymed meters of the ancients, especially the Horatian. The following poem is one of the best instances of his attempt to reproduce the elegiac couplet, and also of his fine artistic sense and his union of tenderness and strength.—EDITOR.]

VAIN is the present hour; it strikes, and is gone in the striking:
Only the Past is fair, only in Death is Truth.

Radiant Clio touches the peaks of the ages, fleet-footed,
Stops but to sing, then flies, opening heavenward wings.

Under her flight spreads wide, dim-lighted, the vast world-graveyard!
Shining full on her face, see! the new century's sun!

Songs! O songs of my youth, O thoughts and dreams of my boyhood,
Fly in your freedom forth, seeking the ancient loves;

Fly thru resplendent skies, till you find the radiant island
Shining afar in the seas—Island of Fancy's dream.

Fair-haired, tall, with their spears in their hands, Achilles and Siegfried
Singing wander beside shores of resounding seas;

Thither Ophelia, fled from her lover, brings flowers to Siegfried;
Saved from the sacrifice, Iphegeneia comes.

Under a greening oak stand Hector and Roland together;
Durandal by their side, gleaming with gems and gold,

Shines in the sun; Fair Aude unstirring watches her hero,
While Andromache calls, back to her breast, her child.

Lear of the lion locks, and Œdipus, wandering dim-eyed,
Kings and exiles both, tell of their destined fates;

Pious Cordelia calls: "Ah, sweet Antigone, hither!
Come, my sister of Thebes,—sing we peace to our sires."—

Helen, Isolde, together go dreaming in shade of the myrtles,
Softly their locks of gold shine in the sunset glow;

Helen watches the sea-waves still; King Mark to Isolde
Opens his arms—her head falls on his flowing beard.

Clytemnestra is standing, by waves that gleam in the moonbeams,
Close to the Scottish Queen; swiftly their white arms plunge

Deep in the sea, and the sea shrinks back in a shuddering horror,
Swollen and crimsoned with blood; echoes of weeping resound.

Island afar from the ways of our mortal duress and labor,
Isle of fair women dead, isle of the heroes of old,

Isle of the Poets! The sea foams white with its breakers about thee,
Unknown birds fly past, cutting a violet sky.

Thither no poet ever of moderns came o'er the dim seas,
Save it were Shelley, thou—spirit of Titan power

Shrined in a girl-like form! from the close embraces of Thetys
Sophocles snatched thee perchance, to join the heroical choir.

Heart of hearts, *cor cordium,* over this grave that enfolds thee
Full-blown Springtime sheds fragrance and warmth and light.

Heart of hearts, the sun, our sacred father, enwraps thee
Close in his radiant love, poor dumb heart of our hearts.

Winds of imperial Rome are astir in the cypresses round thee:
Where art thou, our bard—bard of a world made free?

Where art thou?—Dost hear me?—I look thru gathering tear-drops
Past the Aurelian Wall, over the darkening plain.

The Romance of Lost Heirs

BY ANDREW LANG

ROMANCES, in the cheap form of novels, are the great consolation of the unadventurous. Most of us — from the milliner's girl and the grocer's apprentice, to the bishop and the judge—most of us who have never done or suffered anything out of the common way, are fond of romance. We fancy ourselves in the heroic situations which we read about, and I confess that I am now thrilling over the adventures of Hector, in the central books of the "Iliad." On three or four occasions he rallies his fugitive host, compels them to form again, and leads them on with successful daring, tho twice at least he is "knocked out of time," in the language of the ring. So the milliner reads of poor, but noble and virtuous, girls, who become marchionesses or leading actresses. So the grocer's boy fancies himself Dick Turpin, and the judge casts himself for the part of Sherlock Holmes, and the bishop is absorbed in leading a desperate charge of cavalry.

Love of romance inspires those born in respectable, but undistinguished, stations with interest in their own genealogies. If they have done nothing but commonplace, they try to find ancestors who have committed magnanimous offenses against the peace of the community. Thus Mr. R. L. Stevenson was anxious to prove that he had Macgregor ancestors, who did divers and disgusting things as outlaws, or, at least, who are said to have done them, in old legends. He failed with the Macgregors, and fell back on a line of Covenanting farmers and another of Borderers who stole cattle with the best. I, too, like to think of the strange places of history in which my very remote forefathers (in the female line) did and suffered on a large and lordly scale, and got into queer scrapes; were murdered, for example.

In America and Australia a certain form of romance is perhaps more common than in these islands. Many happy persons believe that if they had their rights they would be dukes and belted earls and barons so bold. Many think that their ancestors were royal. The usual formula of the legend is that some son of a noble line went abroad, usually because he had committed a homicide, or was banished for his religion, or for his politics. While he lived obscure and unknown in Wales, or Ireland, or America, or Barbadoes, the heirs of his famous house died out. He thus became the true heir; tho he never knew it, his descendants do.

If I rightly understand a set of conjectures laid before me, and if these conjectures are true (which they are far indeed from being), the rightful heir of the British throne is at present an un-

assuming citizen of the United States. Certainly I met, lately, a person in a kilt, who asked me to procure for him the post of a gamekeeper, and who said that he was of the blood of the Bourbons and the Sobieskis. When I last heard of him he was being detained somewhere in England by the police.

An interesting *soi disant* heir "kept out of his own" is Mr. G. H. Druce. This gentleman has long resided in the Bush, Australia, but I gather from a published statement of his history, by himself, that he is now in this country, and is endeavoring to demonstrate that he is the rightful Duke of Portland. He may be, for anything that I can prove to the contrary, but I would not invest my savings in backing his claim. Mr. Druce's statements in proof of his ducal claim, run thus: In 1816, the then Duke of Portland, fourth of that title, had an eldest son, the Marquis of Titchfield; a younger son, called Lord John Bentinck, born in 1800; and a son, Lord George, born in 1802, to mention no others. About Lord John's school and college life Mr. Druce discovers no record, which he thinks odd, but in the same way the "Dictionary of National Biography" can find no proof that Lord George was either at Eton or Oxford, as it has been asserted that he was. Mr. Druce states that Lord John past his early days mainly at Newmarket "amongst the horses there." He would ride one of the horses to an unknown distance, and bring it back exhausted. Race horses are trained at Newmarket, and Lord John's escapades cannot have improved their condition. He was, Mr. Druce thinks, often galloping forty miles to court a Miss Crickmer "at Bury St. Edmunds," but Miss Crickmer, according to her marriage certificate, was of St. James's parish in Bungay, a good deal more remote from Newmarket than Bury.

On October 16th, 1816, one Thomas Druce, linen draper, of Bury St. Edmunds, with Martin Colk, chemist there, as surety, took out a license for Druce to marry Elizabeth Crickmer, spinster, of Bungay. Druce swears that he and Elizabeth are over twenty-one years of age. They were married at Bury on October 19th, 1816; I read the witnesses's names as William Crickmer, Sarah Hurst, and Mary Crickmer Hurst, but the last name is rather obscure, it might be J. Hurst. Mr. Druce explains that Thomas Druce was no other than Lord John Bentinck; that he and Miss Crickmer were each aged sixteen—not over twenty-one—that the signatories were "a sister of the bride and a young married couple, personal friends of hers" (then who is William Crickmer?), that the parent Crickmers refused their assent, and that the marriage followed an elopement. Miss Crickmer had £15,000, which would enable Lord John "to indulge his passion for gambling on the turf." The pair lived "in luxury," the rental of their house was £18 yearly, and their portraits, which represent persons well over sixteen, must have cost £100 each. Judging from the photographs they were overcharged if they paid £200. Mr. Druce states that Lord John, as Druce, was his grandfather. In 1820, Druce deserted his wife, leaving her and four children "in destitution." The date of desertion is also given as 1821, and, in a later statement appended, as 1819.

Lord John, tho a rural linen draper, was, as we learn, gazetted to a cavalry regiment in 1818. Mr. Druce's solicitor is quoted as saying that "the appointment was a purely honorary one," but Lord John "received a fee for taking part in a march of his troop" in April, 1819.

Lord John became Marquis of Titchfield in 1824, by the death of his elder brother, and made so much money on the turf that, according to Mr. Druce, in 1835 he could afford to send his son, Mr. Druce's father, to school for eighteen months, preparatory to his becoming a railway porter, and later a mariner; finally he went as an emigrant to Australia. The Marquis, as T. C. Druce, could also afford to behave munificently to his daughter Frances, and to open the Baker Street Bazaar on a scale of then unparalleled magnificence. A love of retail trade competed in the heart of this Marquis with a passion for horse racing. The Marquis, as Lord John, had been afflicted with a disfiguring cutaneous disease, says Mr. Druce. A chemist named Colk, as we saw, signed T. C. Druce's application for a marriage license in 1816: "Probably he had prescribed for the skin disease with which

we know Lord John was afflicted." Perhaps the chemist was merely a shop-keeping ally of the linen draper? But, despite his skin disease, the Marquis was what good King James calls "a great gil-ravager among the lassies," and in a quarrel about a lady, in 1848, he fought his brother, Lord George (the patricians fought with their fists), and gave Lord George a blow over the heart which closed his earthly account. At least the brothers "are said to have met" with these fatal consequences, which the survivor much regretted. The anecdote is not universally accepted; far from it! In 1851 Druce—that is the Marquis—married the lady and had a new family.

As Mr. T. C. Druce died (nominally) in 1864, at the age of seventy, and as the Duke still haunted the Baker Street Bazaar, "several employees" are said to "have seen the ghost of their late master." Either they saw the Duke in the flesh or they were hallucinated. In one case at least, when "the percipient" of Mr. Druce's ghost was on her deathbed, her supernormal experience of Druce's ghost is not said to have been shared by other persons present. They would have seen the Duke had he been in the room, so that either the phantasm was the phantasm of the deceased Druce, or that of the living Duke, or a creation of fancy, the percipient having become insane after her first view of the specter.

So far was the Duke from concealing his double existence that a lady of his acquaintance used to ask him whether, on this occasion or that, he was "Druce or Duke," tho Druce wore a beard and the Duke did not.

In later life the eccentricities of the Duke were wild; whether he was so eccentric, at sixteen, as to marry and set up as a linen draper in a country town, and accept a commission in the army, is another question. Tho both he and Mr. Druce, as far as the story goes, suffered from a disfiguring disease, both were fond of being photographed. Their photographs do not appear, to myself, to resemble each other either in face or figure; the Duke is hollow-faced and lean, Mr. Druce is in all respects "a substantial tradesman." Mr. Druce, whether he died in 1864, or not, is described on his tombstone of that date as aged seventy. If he was sixteen in 1800 he was only sixty-four in 1864; if he was, as he declared, twenty-one in 1816, he was seventy or thereabouts.

If the lead was stripped off Mr. Druce's house to fill up his otherwise empty coffin, as is suggested, is it consistent to say that the roof "is covered with a thin layer of copper"? Or is the copper over or under the lead? If the Duke was "a misogynist," who would know nothing "of women's likes and dislikes," why did he keep a tan track for a lady to drive Shetland ponies upon? If a Mr. Batt made clothes for the Duke, who made Mr. Druce's clothes, which, judging by the photographs, are all unlike those worn by the peer?

The most innocent and pleasing feature in the eventful history is that of Lord John's early days, "spent for the most part among the horses" at Newmarket. Hence he would "gallop off and remain away for the greater part of the day. . . . These wild rides enabled him to carry on his clandestine courtship of Miss Crickmer at Bury St. Edmunds." But the lady, we saw, was of St. James's parish, in Bungay, which is a good deal further away from Newmarket. Her parents cannot but have been surprised when a boy of sixteen, a linen draper, kept galloping into Bungay on a foaming thorobred, to sit at the feet of their daughter, and even if the lady lived at Bury St. Edmunds, the arrivals of a local linen draper of tender years, on a racer, must have caused excitement.

On the whole, the Duke, like the Baron von Bunker, seems to have "had fun for his money." One thing is certain, if "the church records of Bury St. Edmunds show them" (Mr. and Mrs. Druce) "living together to some date a little later than 1820" ("The Druce-Portland Case," p. 15), then we ask how Mr. Druce "disappears from Bury St. Edmunds" in 1819? (p. 53). In 1819 Lord John Bentinck "appears on 'Army Pay Sheets,'" and this "coincides exactly with the probable date of his disappearance from Bury St. Edmunds" (p. 46), where the church records "show that they" (Mr. Druce and his wife) "were living together to some date a little later than 1820" (p. 15). Mr. Druce, like many of the saints, seems to have suffered from "bilocation." Perhaps he has been buried in as many graves as Saint Cuthbert.

But my song I troll out, for Christmas stout,
The hearty, the true, and the bold;
A bumper I drain, and with might and main
Give three cheers for this Christmas old.
We'll usher him in with a merry din
That shall gladden his joyous heart,
And we'll keep him up while there's bite or sup,
And in fellowship good, we'll part.

The Heart of England. Edward Thomas. Rubricated title page. With numerous colored illustrations by H. L. Richardson. Gilt top. Dutton. $6.00.

Surrey. Painted by Sutton Palmer. Described by A. R. Hope. Numerous illustrations in full color. Rubricated title page. Gilt top. Macmillan. $6.00.

Certain Delightful English Towns. William Dean Howells. With frontispiece by Ernest Haskell. Gilt top. Harper. $2.00.

In Constable's Country. With many reproductions in color from his paintings. Herbert W. Tompkins. Title page in two tints. Gilt top. Dutton. $4.00.

The Stones of Paris. In History and Letters. Benjamin Ellis Martin and Charlotte M. Martin. Gilt top. Illustrated. Scribner. $2.00.

Touraine and Its Story. Annie MacDonell. With many colored illustrations by A. B. Atkinson. Title page in sepia and malachite tints. Gilt top. Dutton. $6.00.

The Chateaux of Touraine. Maria Horner Lansdale. Illustrated with pictures by Jules Guérin and by photographs. Rubricated running heads, pagination and title page. Gilt top. Century. $6.00.

The Land of Pardons. Anatole Le Braz. With 12 illustrations in color by T. C. Gotch, and 40 other illustrations. Macmillan. $2.00.

Picturesque Brittany. Mrs. Arthur G. Bell. With illustrations in color by Arthur G. Bell. Gilt top. Dutton. $3.50.

Northern Spain, Painted and Described. Edgar T. A. Wigram. With 75 beautiful color plates. The device on the title page is taken from a wrought iron knocker of the Cathedral at Toledo. Gilt top. Macmillan. $6.00.

The Cities of Spain. Edward Hutton. With 24 illustrations in color by A. Wallace Rimington, and 20 other illustrations. Macmillan. $2.00.

Persia, Past and Present. A book of travel and research. With more than 200 illustrations and a map. A. V. Williams Jackson. Gilt top. Macmillan. $4.00. Reviewed in our issue of October 18th.

Santa Claus' Sweetheart. Imogen Clark. Illustrated. Frontispiece in color. Gilt top. Dutton. $1.25.

The Altogether New Cynic's Calendar of Revised Wisdom for 1907. Ethel Watts-Mumford Grant, Oliver Herford and Addison Mizner. Frontispiece in black and red. Rubricated title page with jester as a fitting decoration. Red ink used freely thruout the volume. Paul Elder. 75 cents.

Cozy Corner Confidences. Walter Pulitzer. Rubricated borders. Dodge. 75 cents.

Misrepresentative Women. Harry Graham. Illustrated by Dan Sayre Groesbeck. Duffield. $1.00.

At the Sign of the Sphinx. Carolyn Wells. A book of verses. Duffield. $1.00.

Chinatown Ballads. Wallace Irwin. Rubricated title page. Illustrations from drawings by E. C. Peixotto and others. Duffield. $1.25.

Songs of Schooldays. James W. Foley. Illustrated with silhouettes by Katherine G. Buffum. Doubleday, Page. $1.25.

The Diverting History of John Gilpin. Showing how he went further than he intended, and came safe home again. Embellished with woodcuts (after the antique). Drawn and engraved by Robert Seaver. Houghton, Mifflin. 75 cents.

Beastly Rhymes. Burges Johnson. With pictures to correspond by E. Warde Blaisdell. Frontispiece in three colors. Specially designed end papers. T. Y. Crowell. $1.00.

Thrills of a Bell Boy. Samuel Ellsworth Kiser. Illustrated by John T. McCutcheon. Forbes & Co., Chicago. 50 cents.

Lyrics and Legends of Christmas-Tide. Verses by Clinton Scollard. Delicately rubricated title page. New edition. George William Browning, Clinton, N. Y. $1.00. 20 copies on genuine Japanese vellum, autographed. $3.50.

The Song of Our Syrian Guest. William Allen Knight. Frontispiece and decorations by Harold Sichel. Colored frontispiece. Rubricated thruout. The Pilgrim Press, Boston. 50 cents.

The Log of the Sun. A Chronicle of Nature's Year. C. William Beebe. With 52 full page illustrations by Walter King Stone, and numerous vignettes and photographs from life. Rubricated title page. Holt. $6.00.

A Japanese Blossom. Onoto Watanna. Illustrated by L. W. Ziegler with full page drawings in color and with Japanesque marginalia in mauve tint. Harper. $2.00.

Moonshine Strategy and Other Stories. Wells Hawks. With frontispiece by Harrison Fisher. Illustrated. I. & M. Ottenheimer, Baltimore, Md. $1.25

The Face in the Girandole. A romance of old furniture. William Frederick Dix. Illustrations and marginalia in tint. Moffat, Yard. $2.00.

Lyrists of the Restoration. From Sir Edward Sherburne to William Congreve. Selected and edited by John and Constance Masefield. The Chapbooks. Bound in vellum with classic leather thong fastenings. Gilt top. Stokes. $1.00.

The Jessamy Bride. F. Frankfort Moore. With pictures in color by C. Allan Gilbert. Duffield. $2.00.

The Queen's Museum and Other Fanciful Tales. Frank R. Stockton. With illustrations in color and in black and white by Frederick Richardson. Scribner. $2.50.

Our Old Home. A series of English sketches. Nathaniel Hawthorne. With an introduction by Katharine Lee Bates. Illustrations from photographs. Frontispiece in photogravure and etched portrait of Hawthorne. Luxemburg edition. Crowell. $1.50.

Romola. George Eliot. Holiday edition. Frontispiece of Romola in halftone. Limp leather binding. Thomas Nelson. $1.00.

Old Creole Days. Rubricated title page. With 8 full page and many smaller illustrations in photogravure, by Albert Herter. Gilt top. Scribner. $2.50.

The Last Ride Together. Robert Browning. Holiday edition. Illustrations in color by Frederick Simpson Coburn. Gilt top. Putnam. $1.75.

Snow-Bound. A Winter Idyl. John Greenleaf Whittier. Holiday edition containing frontispiece in color, and drawings by Howard Pyle, John J. Enneking and Edmund H. Garrett. Decorations in tint by Adrian J. Iorio. Houghton, Mifflin. $2.50

Memories. A Story of German Love. New illustrated edition. With pictures, decorations and marginalia in pale green tint by Margaret and Helen Maitland Armstrong. Max Müller. McClurg. $2.50.

While the Heart Beats Young. James Whitcomb Riley. Holiday edition. With finely colored pictures, head and tail pieces by Ethel Franklin Betts. Bobbs-Merrill. $2.50.

The World's Christmas Tree. Charles E. Jefferson. Ecclesiastical title page in rubrication. Rubricated initial. Crowell. 75 cents.

Fighting the Polar Ice. Anthony Fiala. Rubricated title page. Illustrations from photographs and sketches by the author. Also nine from paintings in color by Russell W. Porter and J. Knowles Hare. Gilt top. Doubleday, Page. $3.80.

Where Shakespeare Set His Stage. By Elsie Lathrop. Decorations in color by G. W. Wood. Pott. $2.00.

Mr. Pickwick's Christmas. As written in the Pickwick Papers. Charles Dickens. With 10 illustrations in color and line. Baker & Taylor. $2.00.

English Coloured Books. Martin Hardie. The Connoisseur's Library. Numerous colored illustrations. Putnam. $6.75.

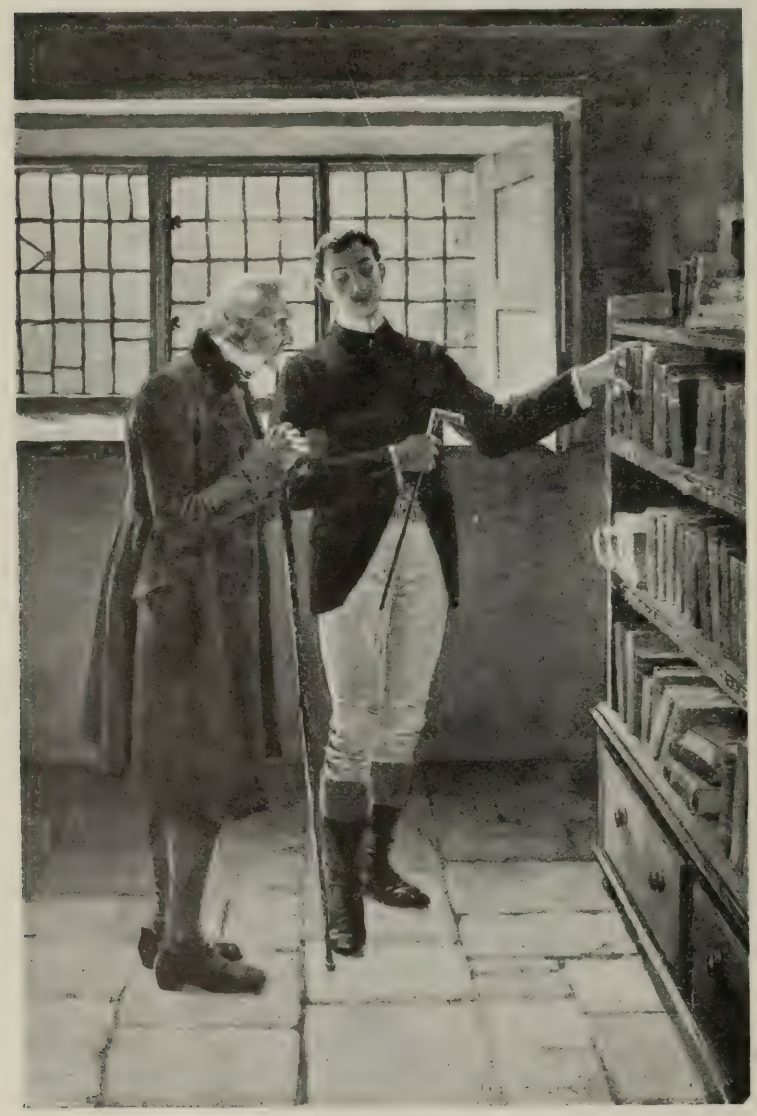
Rembrandt Harmensz Van Rijn. A Memorial of His Tercentenary. By Emile Michel of the Institute of France. With 70 photogravure and color plates. Title page and title decorations in malachite tint. John Lane Co. $10.00.

Whistler. Elizabeth Luther Cary. Elaborately illustrated with reproductions of etchings, lithographs, pastels and paintings, representative of Whistler's entire range. Beautifully bound. Moffat, Yard. $3.50.

The Adventures of Joujou. Edith Macvane. With 15 illustrations in color by Frank Ver Beck, and decorations by Edward Stratton Holloway. Marginalia and half-tones in crimson lake. Gilt top Fancy end papers. Lippincott. $2.00.

Molière. A Biography. H. C. Chatfield-Taylor. With an introduction by Thomas Frederick Crane. Illustrations by Job. Rubricated title page. Gilt top. Duffield. $3.00.

The Bird. Its Form and Function. C. William Beebe. With over 375 illustrations, chiefly photographed from life by the author. Colored frontispiece. Gilt top. Holt. $3.50.



Recreations of a Naturalist. James Edmund Harting. With 81 illustrations. Frontispiece in photogravure. Gilt top. Wessels Co. $4.50.

Historic Buildings of America. As seen and described by famous writers. Collected and edited by Esther Singleton. With numerous illustrations from photographs. Dodd, Mead. $1.60.

Cache la Poudre. The Romance of a Tenderfoot in the Days of Custer. Herbert Myrick. Illustrated from paintings by Charles Schreyvogel, Edward W. Deming and Henry Fangel. Also by many photographs and numerous human documents. Edition limited to 500 copies and bound in Indian smoke-tanned buckskin. Orange Judd. $6.00.

American Country Homes and Their Gardens. Containing superb reproductions of beautiful and some well-known estates. Edited by John Cordis Baker. Introduction by Donn Barber. Winston. $5.00.

The American Girl. As Seen and Portrayed by Howard Chandler Christy. Introducing 16 full page color plates and numerous illustrations in tint. Colored border. Moffat, Yard. $2.50.

FRED VINCY AND PETER FEATHERSTON.

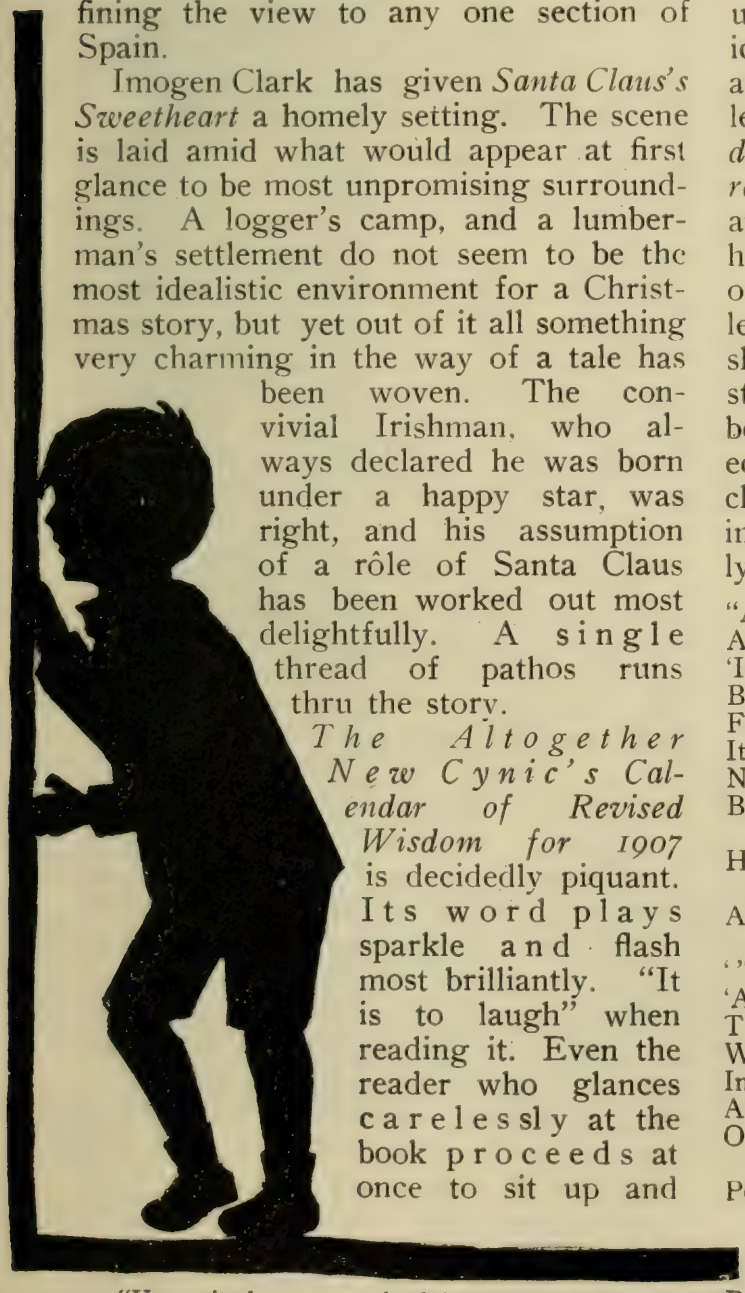
From New Century Library Edition of George Eliot's Works. Thomas Nelson & Sons.

The literary deluge shows no sign of abatement this season. On the contrary, the stream of books seems more swollen this year than ever before. There is perhaps less of a showing of the more elaborate and very sumptuous books this year than last, altho the average of the books published seem to have been well kept up. Never before has the *format* and decoration had more attention than these features now receive. Edition binding also claims much more that is artistic now than has ever before been the case.

Poetic touch characterizes *The Heart of England.* With the very opening words of the volume we catch glimpses of England boldly painted in simple words. The reader feels the Sunday afternoon with which the first chapter opens. The empty street, the houses in unbroken rows and arranged in pairs, of which one had a bay window on the ground floor and one had not, stand forth as clear cut as a cameo. The joys of the walking tour, the sights and sounds of town and country come and go and

FROM IRWIN'S CHINATOWN BALLADS.
Duffield & Co.

imperceptibly the reader is impressed by the writer, who carries him here and there in and about England and shows him new and old things with equal charm. The combination of painter and author in *Surrey* is very pleasing. The genial Izaak Walton fished in some of the Surrey streams, and doubtless drew a portion of his enthusiasm from the charm that characterizes the country thru which they flowed then as now. Pepys mentions some of its features in his famous diary. Mrs. Humphry Ward at one time lived near Haslemere, and any one familiar with its environs can make a good guess at the locality of Robert Elsmere's Surrey parish. In *Certain Delightful English Towns* Mr. Howells is more comprehensive in his survey. He writes in his charteristic style of Plymouth, Exeter, Bath, Wells, Bristol, Folkstone, with its esplanaded cliffs called the Leas, Canterbury, Oxford, quaint Chester and other delightful English towns, as well as of the country between and something of the people who dwell there. Mr. Howells travels with open eyes and after seing describes the thing seen with a keen regard for the value of an incident and with full appreciation of the humorous. With Howells for a traveling companion the journey can never be dull. The author of *In Constable's Country* has rambled in the Valley of the Stour and its immediate neighborhood, where John Constable passed much of his life, and where he painted so many of his best known landscapes. Many changes have of necessity come in since Constable worked and painted, but his name still casts a spell upon his home country and the book reflects this. The reproductions of Constable's pictures are very satisfactory and even those of us who are not artists can see in them something of his art. *The Stones of Paris* is a book written for those who seek in Paris something more than a city of shows or a huge bazaar. Every one who knows Paris at all knows somewhat of its art side, but in the present book there has been made a serious attempt to write of French history and letters as manifested in its buildings. In the execution of this scheme explorations have been made into the libraries, bureaus and museums with which Paris is crowded. The streets of Paris have also been carefully scanned and a most entertaining story has been created out of the assembled material that has been skillfully synthesized. Another book belonging in this group is *Touraine and Its Story*. Touraine is presented as a land of chateaux. Thick they lie, or hang, or tower, on scarp and down and dale. History, romance and architecture all cluster around and about them. But the chateaux are not the only charms of Touraine. It is "the land of a thousand valleys." In Touraine one may study the village life of France as opposed to the city life. A cottage door with a peasant sitting therein, engaged in an ordinary and everyday occupation, becomes a delightful subject for the painter's brush when seen with the right eyes. There are many pictures of this kind, as well as landscapes, that are very appealing scattered thru *Touraine and Its Story*. Bits of legend and history also find therein many a nook and corner. Balzac was one of the sons of Touraine. He loved the soil, the sky, the landscape of his native province better than any other. He loved the people too, and an interesting task awaits whosoever



will trace the Touraine material in the "Comedie Humaine." The same subject is continued in *The Chateaux of Touraine* and it really seems that between the two books the last word regarding chateaux had now been spoken. In the Lansdale volume twelve chateaux are described and pictured. Nine of these are actually in Touraine and the remaining three—Blois, Chambord and Cheverney—are in the adjoining province of Orléannais; so near that few will object to the inclusion of them with those actually in Touraine. These French chateaux have a marvelous charm. It draws pilgrims from all parts of the world to see their wondrous architectural features and to admire even those upon which the hand of time has heavily fallen. A part of their charm lies, however, in the historic association that clusters around them, and this feature, it would seem, has been more carefully considered and digested by Lansdale than by Macdonell. Mere pigment as an element in the color plates is more in evidence in the first named book than in the second, for Jules Guerin loves the softer tints rather than those of more garish tone. Feudal times and those who stand out in them as figures flit before us as we read in both books. And various Kings of France appear with and without achievement. Brittany as seen thru Breton eyes, rather than the eyes of the ordinary English tourist, who too often passes quickly thru this beautiful country and then tries to write about it, is the theme considered in *The Land of Pardons*. The Pardon of the Poor, The Pardon of the Singers, The Pardon of Fire, The Pardon of the Mountain, and The Pardon of the Sea are successively treated. It is impossible to travel for a week in Brittany during the summer without falling into the midst of one of these local festivals. Seen thus casually by the passer-by these gatherings are not very interesting, but interpreted by the author they are full of interest. They are usually held near some old chapel, scarcely to be distinguished from the cottages around save for its little bell-tower. Sometimes it nestles in the hollow of a wooded ravine, sometimes stands on the summit of a barren, wind-swept moor, and there you will find a crowd of people, in their Sunday clothes, coming and going in a quiet, monotonous fashion, arms hanging or crossed on their breasts without a gleam of enthusiasm or a smile of pleasure. Some seated in the little inn will be singing and making a great deal of noise, but evidently actuated rather by conscientious motives than lightness of heart. Beggars are swarming everywhere, sordid, covered with vermin and ulcers, pitiable, repulsive. In the graveyard, humped with mossy hillocks, true field of death, a blind man twisted and bent as the trunk of a yew tree shrieks forth a mournful dirge in an unknown tongue. The young couples who ought to be chattering of love wander about, scarcely exchanging a word, only teasing one another awkwardly and shyly. Some one has said that the Bretons are much to be preferred when they are not amusing themselves; they are so much more lively. The great charm of *Picturesque Brittany*, as compared with the preceding volume, lies in the color plates with which it is embellished. The book is a record of a trip in Brittany in 1905. It, too, touches upon the curious manners and customs of the Breton people, their pardons and other features of their life, social and otherwise. The picturesque recurs in the book's pages again and again. He is a bold man who sets out to glean, under the title of *Northern Spain*, where Ford and Borrow have preceded him in the field. This is, however, what Edgar T. A. Wigram has done in his holiday book. He has entered upon his task with boldness and with enthusiasm. The reader catches his first glimpse of Spain in the Bilbao coastline. Thereafter the atmosphere is Spanish. It is when reading a book of travel, however, we realize how many times it must needs be

ILLUSTRATION FROM JOHN GILPIN.
Houghton, Mifflin & Co.

that one has to eat and sleep. The author of *Northern Spain* made his tour as a bicyclist. He journeyed with observing eyes, and very little in Spain that was really worth while escaped him. As we read what he has written we see Spanish types with a new significance, and we lay down the volume with a better and a clearer understanding of Spain and the Spaniards. The same subject is continued and possibly made a little more comprehensive in *The Cities of Spain,* which describes the principal and some of the minor Spanish cities, and says something about the galleries, the schools and other features of the Castillian cities, without confining the view to any one section of Spain.

Imogen Clark has given *Santa Claus's Sweetheart* a homely setting. The scene is laid amid what would appear at first glance to be most unpromising surroundings. A logger's camp, and a lumberman's settlement do not seem to be the most idealistic environment for a Christmas story, but yet out of it all something very charming in the way of a tale has been woven. The convivial Irishman, who always declared he was born under a happy star, was right, and his assumption of a rôle of Santa Claus has been worked out most delightfully. A single thread of pathos runs thru the story.

"U sea it throo a not hoal in the fense."
FROM FOLEY'S SONGS OF SCHOOL DAYS.
Doubleday, Page & Co.

The Altogether New Cynic's Calendar of Revised Wisdom for 1907 is decidedly piquant. Its word plays sparkle and flash most brilliantly. "It is to laugh" when reading it. Even the reader who glances carelessly at the book proceeds at once to sit up and take notice. He ends by reading it all and then feels sorrowful to find there is not more of it. The book's injunction to "keep the wolf behind the door—so the neighbors can't see him," is well worth heeding. So is the contained suggestions "Sow your wild oats in a peach orchard" and "There are enough serious things in life without considering yourself one of them." There are also others. "In Cupid's geography," according to *Cozy Corner Confidences,* "a kiss is the isthmus joining two main bodies together." This is perhaps a fair sample of the epigrams with which the book is crowded. The author has gathered the units from the best of the comic periodicals in which they originally appeared, and the collection makes a readable booklet after the style of the *Cynic's Calendar.* In the same group belongs *Misrepresentative Women,* altho its style is variant, being cast in verse that the author himself classes as abominable. The point of view as well as the lines are nevertheless clever enough to cover a multitude of shortcomings in technique and mere construction. *At the Sign of the Sphinx,* a book of verse by Carolyn Wells, is marked by the same cleverness that is always characteristic of this writer. The following versified charade on Shirtwaist is fairly characteristic:

"An artist stepped into an office one day,
And held up my first for the clerk to survey;
'It's a good black and white,
But it isn't quite right,
For I just drew it off in a hurry last night.
It's not very fine,
Nor of novel design,
But I hope 'twill be taken and hung on the line.'
He had scarcely gone out when a lady came by,
And she stopped in to ask if my second was dry.
''Twas a canvas,' she said.
'And it fills me with dread
To think that the colors have faded or spread.'
Well, I sat there all day,
In that very same way,
Amazed at the endless and changing array
Of my whole, that appeared in a motley display;
Percale and piqué,
Some green and some gray,
Worn in all colors and worn in all shades,
Worn by the ladies and worn by the maids,
By large and by small,
By short and by tall,
Till I ran away home to get out of it all."

Chinese life and character, as a rule, do not lend themselves particularly well to versification, but Wallace Irvin, under the title of *Chinatown Ballads,* has produced a small book of verse that has at least the Chinese atmosphere. James W. Foley, about whose spelling there has been considerable newspaper controversy, has collected a number of his poems in the book which bears the title *Songs of School Days,* in well known and quite inimitable style. The silhouet illustrations have admirably caught the spirit of the verses.

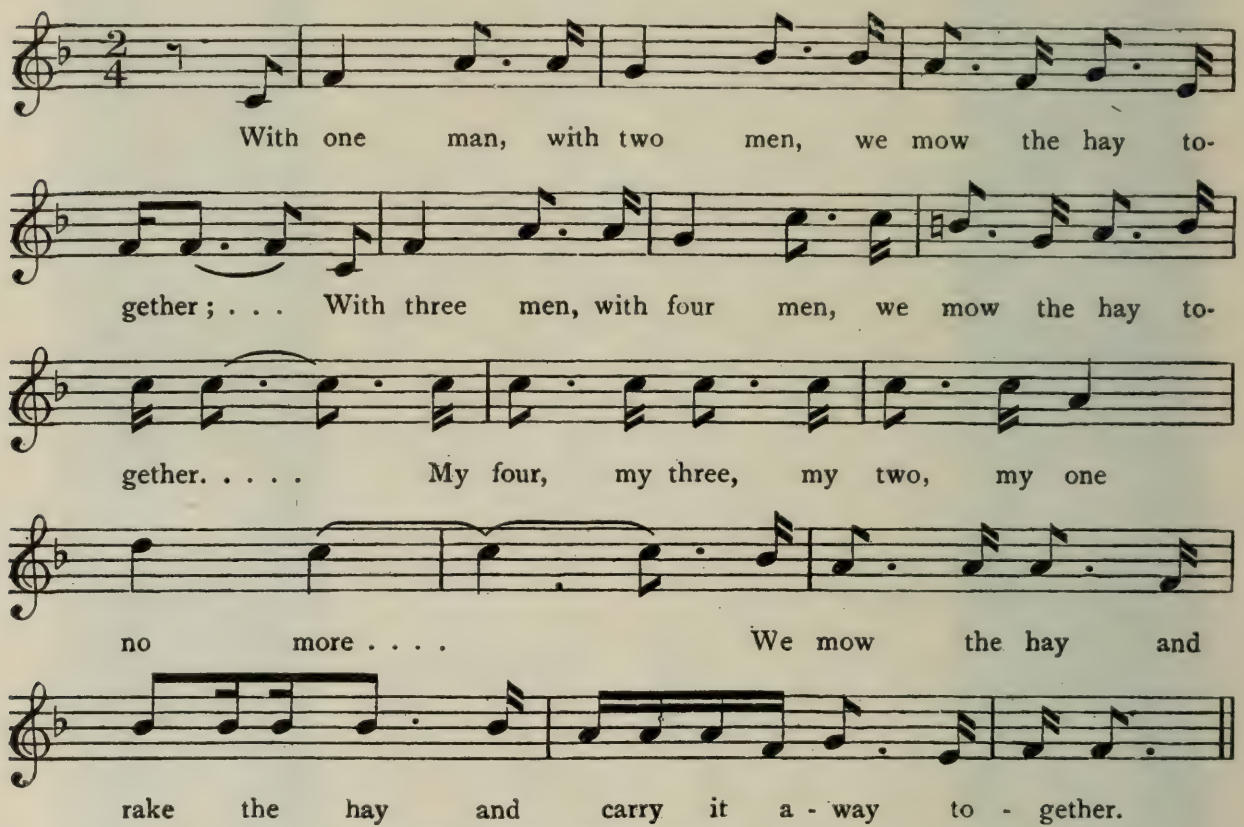
In Houghton, Mifflin's unusually quaint reprint of *The Diverting History of John Gilpin,* Robert Seaver has used the old Chap-book style of illustrations most delightfully.

When an author names his own rhymes *Beastly Rhymes* it is pretty certain that his caption has pertinence. It is so in the present instance, and the pictures truly correspond. No doubt these verses will appeal to some, because there are many gradations in humor, and appreciation also varies. To those who like this sort of thing, this will be just the sort of thing that they will like, and that is all there is about it. *Thrills of a Bell Boy* are in lighter vein. S. E. Kiser, under this title, writes in his well known style. His bell boy is a close observer and sees many things in the hotel where he works in an humble capacity, hiding a philosopher under his careless exterior. John T. McCutcheon has happily illustrated the text. There are forty-four poems in Scollard's *Lyrics and Legends of Christmas Tide.* They are all characterized by careful finish, and the range of sentiment is remarkably wide when it is considered that the subject is of necessity circumscribed. *The Song of Our Syrian Guest,* a commentary on the Twenty-third Psalm, which has run thru such an astonishing number of editions in two years, appears now in still finer form. The book is embellished with a color plate frontispiece and certain rubrications thruout that might, perhaps, have been better in a somewhat brighter red.

In *The Log of the Sun* Mr. C. William Beebe has marshaled a considerable array of material in the line of nature study under the sub-title of A Chronicle of Nature's Year. He first presents us with the birds of January and something of insect life that is characteristic of the month. Then he gives interesting bits of fish life in February and briefly outlines the ways of the meadow mice during March, following with the progress of bird and insect life during the succeeding months. We catch glimpses of polywogs, turtles, starfishes, muskrats, woodchucks, grebes, frogs and skunks, and he has a word to say in regard to the language of animals and insect music as well as the personality of trees. In this age of nature study *The Log of the Sun* will be found to be a most useful handbook. Onoto Watanna's contribution to the literary festivities of the season is this year entitled *A Japanese Blossom.* The book's marginalia gives to it a setting that is quite Japanesque.

Under the somewhat unsatisfactory title of *Moonshine Strategy and Other Stories* Wells Hawks, famous in theatrical circles, has written some exceedingly clever short stories. Into these stories he has contrived to crowd romance, pathos and a human touch that makes them very good reading. Many of the stories in the collection have theatrical backgrounds. They show that the men and women of the stage are like other men and women in their hopes and fears, their loves and hates, their joys and sorrows. Mr. Hawks proves that the chorus girl and the understudy have hearts, which some have heretofore doubted. The technique of the stories is above the average and sheds a sidelight on the great success that the author has achieved as a press agent. The stories deserved a better dressing and a more careful editing than they have received at the publisher's hands. William Frederick Dix, sometime editor of *Town and Country,* has varied from the usual experience of the collector. He was drawn into the collection of old furniture some time back, but instead of this being a considerable source of expense to him he has had his fling of collecting, nay, he confesses to being still under the spell, but he has made out of his hobby a source of income in the place of outgo. He has written a romance about his joy and solace. *The Face in the Girandole* sets forth something of the joys, some-

thing of the sorrows of an old furniture collector. Into it he has incidentally but skilfully woven just a dash of romance as a foil, and this added touch will make it appeal to others besides those who collect furniture.



Lyrists of the Restoration, from Sir Edward Sherburne to William Congreve, as selected by John and Constance Masefield, constitute one of a series of "Chapbooks." The book is daintily bound in vellum, with leather thongs with which to tie the covers together, much after the fashion of the old classics. Books of this kind appeal mightily to bookish people, and may well be selected as gifts to friends having what Burton calls "book madness." *The Jessamy Bride* is a holiday contribution to current fiction. Its wide margins and pictures in color by C. Allan Gilbert make it attractive to the eye, and the reader of the romance will have the added inspiration of a pretty book to encourage him to read it, if encouragement is needed.

A number of new editions of old books are among the holiday offerings, among which the following are the most interesting: A new edition of Hawthorne's *Our Old Home.* The title page in red contains a beautiful vignet of the genial Hawthorne. The volume contains Consular Experiences, Near Oxford, Some of the Haunts of Burns, A London Suburb, Up the Thames and Civic Banquets. Eliot's *Romola* also appears in a new holiday binding of limp leather that is in convenient form and size. One of the book's illustrations appears in THE INDEPENDENT for this week. Cable's *Old Creole Days* has Herter's illustrations in photogravure as one of its attractions, and a much more vivid impression is produced than in the case of the ordinary kind of

BORDER SHOWING BENTLEY'S SNOW CRYSTALS.
From Beebe's The Log of the Sun. Holt.

illustration, where the pictures present antagonistic conceptions of the characters. Browning's *The Last Ride Together,* from which we print one illustration, is daintily dressed and belongs in the gift book class. The present edition of Whittier's *Snowbound* contains illustrations by Howard Pyle and others. The portraiture of scenes in a New England winter that have been included in the book will appeal to every one who has ever lived a winter in New England. Another old favorite that has redressing is Max Müller's *Memories.* The translator has reproduced the simple German original in equally simple English, and if he has at times transferred German idioms into the English text the reader will be very much inclined to forgive this. The story lacks plot, incidents or situations truly, but it abounds in beauty, grace and pathos that strongly appeal to those influenced by ideality and the love of nature. Christmas would not seem to be Christmas without the Dickens conception of the holiday, and so *Mr. Pickwick's Christmas* fills a long-felt want, as the phrase runs, in the new Baker & Taylor edition that has a place among the new books of the season. It presents the anomaly of being old and yet new. One of this book's illustrations appears in this number. Still another volume, now reprinted with new and very pleasing decorations, is Riley's *While the Heart Beats Young.* The full-page pictures in color that have been included in the present book are exceedingly well done by Ethel Franklin Betts. The reproduction in black and white which we print in this issue suggests, but by no means adequately represents, the beauty of the color plate from which it is derived. Riley still makes the same heartfelt appeal to the people that he did more than a quarter of a century ago.

MOWING SONG

ENGLISH FOLK LORE SONG.

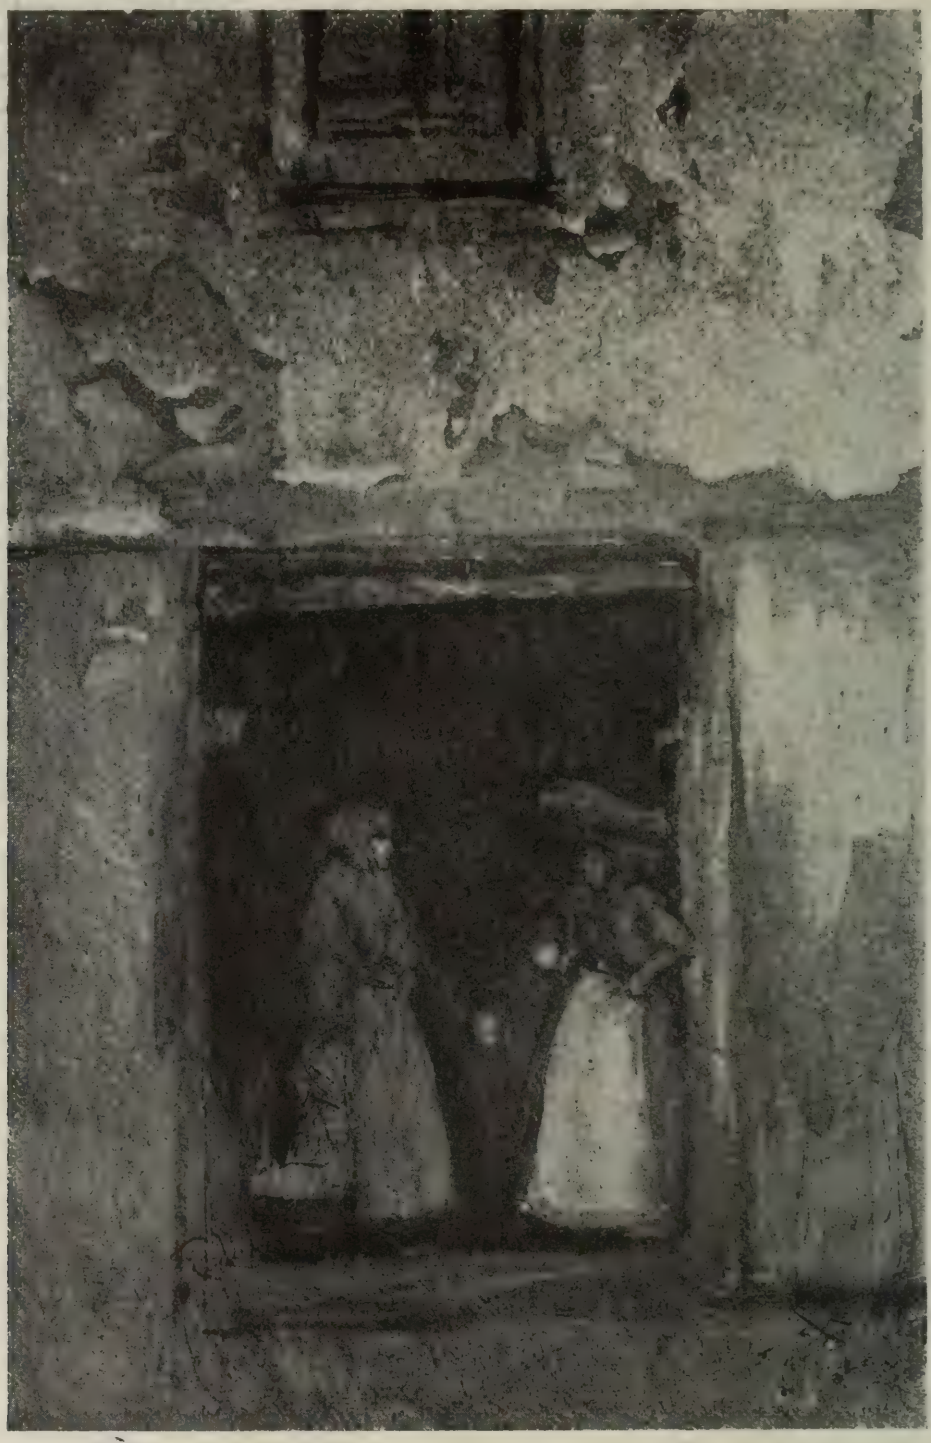
From Thomas's "The Heart of England." Dutton.

The universality of the Christmas idea in many lands and among many peoples is well brought out in the book bearing the title of *The World's Christmas Tree.* It contains a strong plea for the true spirit of Christmas and for getting away from the narrow and very restricted

methods of regarding Christmas that obtains among so many of us.

Those who doubt the value of polar expeditions should read Fiala's *Fighting the Polar Ice,* the latest contribution to literature on the subject of polar expeditions. Mr. Fiala is the most recent of a long line of explorers who have sought to wrest from the frozen north the secret of the pole, and the photographs taken by the author are extraordinarily good, as our readers may see from the one we reproduce. This narrative of the Ziegler Expedition will be reviewed later in THE INDEPENDENT. Elsie Lathrop, in *Where Shakespeare Set His Stage,* has made an interesting study of the exact periods at which the action of twelve selected plays have taken place. When it has been found impossible to absolutely verify this the anachronisms which prevent it have been set forth and considered. The localities, in widely scattered countries, in which the Bard of Avon set his stage have, most of them, been visited, described and sometimes illustrated. The dates of the various plays have been carefully investigated and made as reliable as possible, altho in cases where authorities are not agreed the author has felt justified in allowing some latitude, with which but few readers will be inclined to contend. Lovers of Shakespeare will be particularly interested in the Lathrop volume. An illustration from the book is printed on another page.

To their previously issued volumes the Connoisseur's Library has now added one on *English Coloured Books*—that is to say, books with colored illustrations. Books of this kind are printed from wood, from stone, or from metal. The earliest example in a book of printing in two or more colors by means of engraved wood-blocks is to be found in the Psalter, printed by Faust and Schoeffer at Mainz in 1547, where the capital letters are in blue and red. One of the earliest books printed in England contains an isolated example of color printing. Some reference to this book is made in *English Coloured Books.* It is known from the town in which it was compiled and printed as "The Book of St. Albans." This volume was quickly



TO YONDER GIRL THAT FORDS THE BURN.
From Browning's "The Last Ride Together."
Putnam.

followed by many heraldic books, the charges upon which were constantly illuminated. It is interesting to read what the author says of the rise and progress of the art with which the present book is concerned and to encounter by the way the work of Holbein, William Blake, Thomas Rowlandson, George and Robert Cruikshank, John Leech, Thackeray, Phiz, Walter Crane, the joyous Kate Greenaway and George Leighton. Those with the love of bookish things will find a deal of interest in the old drawing-books, the early wall-papers, with their quaint colorings, the costume plates, various caricatures, the ever popular tours of Dr. Syntax, the children's books, and the Greenaway volumes, in regard to all of which the present book is crowded with description and in many cases with illustration.

A deserved tribute to a great painter's genius is paid in *Rembrandt, A Memorial,* published in celebration of his ter-

centenary, 1606-1906. The volume is sumptuously illustrated with reproductions of Rembrandt's most famous paintings, etchings, studies and drawings. The book also contains an excellent study of the distinguished Dutch painter's work. The reproductions of the Rembrandt paintings are beautifully executed, and the book as a whole is one of the best of the art books of the present season. In *Whistler*, Miss Cary, whose previous work in artistic fields is well known, and who is now editor of *Scrip*, has made a notable contribution to the literature of art as concerned with that most unique figure, James A. McNeill Whistler. Miss Cary, in carrying out her scheme in her Whistler book, has personally visited all the available collections in the Eastern United States, and has studied his paintings, lithographs and etchings at first hand. The

THE GOSSIPS—AJACCIO.

Reproduced from Cary's "Whistler" for the first time by kind permission of R. A. Canfield. Moffat, Yard & Co.

result has been a book which comprehensively covers the field of Whistler"s accomplishments and embodies a perspicuous account of his methods. The illustrations which the book contains have been chosen with rare discrimination, and include many never before reproduced. One of these illustrations appears in connection with this article.

The Adventures of Joujou is a very pretty little romance that will make delightful holiday reading. Joujou is a little French girl with a naïveté that only a French girl can possibly have. She lives in an atmosphere that is altogether French. She breathes French air and eats French food. She thinks French thoughts, and the whole setting of the story is French. The romance runs quietly along with smoothness and charm. The author has a way of making the reader sympathize with the heroine. When the story ends with the certainty that Joujou will have the man of her choice the reader rejoices almost as much as Joujou herself, altho that is a very strong statement. An extensive review of Chatfield-Taylor's *Molière* appeared in our issue of last week. The book's frontispiece is reproduced in this number.

The Bird, which found a place in our list of "The Most Important Books of the Year" published November 15th, is a valuable contribution to nature study, for it is both scientific and popular. We are unable to resist the temptation to reproduce this week two more of its admirable illustrations. Something is said in praise of hawking in the *Recreations of a Naturalist* that is among the season's holiday offerings. The writer of the *Recreations* gets much that is stimulating to himself and to his readers out of a marsh walk in May. With notebook in hand he sees and records things that might otherwise easily be overlooked or forgotten. When the enthusiast thus writes down the things that appeal to him because he writes unred the spell of enthusiasm he makes the story read with all the greater zest.

Following her former production of *Turrets, Towers and Temples,* Miss Singleton has now given us *Historic Buildings of America.* By the methods used by Miss Singleton whereby she selects from the best available writers accounts of the things she wishes to include in her book, or failing this now and then writes a chapter herself, it is possible to get a good description of the thing wanted if one is persistent enough in search. The romance of a tenderfoot in the days of Custer is told in *Cache la Poudre.* The text has been newly illustrated so that with the present pictures added it is possible to gather from the book's pages a more comprehensive idea of the boundless prairie, the life of the plains, the Indians, the cow punchers, the bronchos, rounding up, the process of branding and a host of other things that enter into the life of the plainsman than it were otherwise possible. Charles Schreyvogel's spirited frontispiece, which we print elsewhere, is undoubtedly the best thing in the book. Every one loves to think about some day owning a country home and a garden, but those of us who cannot indulge in things about which we dream can at least revel in looking at the reproductions of famous country homes and the gardens that belong to them that appear in *American Country Homes and their Gardens.* Vanderbilt's "Biltmore" is figured in the volume, as is also the estate of the late Stanford White, that of Abram S. Hewitt and many others not so well known. From them may be obtained many suggestions that may be utilized in preparing a country home that shall be less elaborate than some of those in the book. The residence of Devereux Emmet, Esq., at St. James, Long Island, pictured in the book, is printed elsewhere in this issue. *The American Girl as Seen and Portrayed by Howard Chandler Christy* appeals to every man and some women. The book has now been reduced to a more convenient size and contains some new drawings and other novel features.

E. P. Dutton & Co., of this city; Hugh and Margaret Eaton, of Brooklyn, N. Y., Alfred Bartlett, of Boston, and the Canterbury Company, of Chicago, all have a line of calendars, Christmas cards, booklets and other printed matter that is particularly appropriate for the holiday season. The Valhall Initial Leaflets and place cards executed by the Eatons, some of which are hand illumined, merit especial mention for attractiveness.

The Juvenile Books of the Year

BY MONTROSE J. MOSES

It is always a pleasant, but somewhat difficult, task to puzzle over the juvenile publications of the Yuletide. Their classification must needs be arbitrary, yet books conveniently fall into groups, and for a bird's-eye view it is the most intelligent manner of reaching satisfactory results. To attempt an arrangement according to the age limit is artificial in the extreme; the *character* of the story is the essential point to be considered.

Handbooks

Things Worth Doing. Lina and Adelia B. Beard. Scribner. $2.00.
The Field and Forest Handy Book. Dan Beard. Scribner. $2.00.
Young People's Story of Art. Ida P. Whitcomb. Dodd, Mead. $2.00.
The Wild Flower Book for Young People. Alice Lounsberry. Stokes. $1.50.
The Games Book for Boys and Girls. Dutton. $2.50.
The Bible for Young People. Ed. Mrs. Joseph Gilder. Century. $1.50.

We have heard before from the practical co-authors of *Things Worth Doing.* There is much, in this new book, of clever suggestion, and when entertainments are to be given or gifts for various occasions to be concocted, a girl will bless the graphic directions, accompanied by the pen drawings. On the other side, boys will welcome Dan Beard's minute indications in his *Field and Forest Handy Book.* For there is nothing, from airships to flying birds, from boating to camping, from loghouse to snowhouse, that has escaped this born sportsman of our time. With Mr. Beard's directions we could easily burn all our bridges behind us, and before us too. A delightful supplement to a museum lecture is Ida Whitcomb's *Story of Art.* High-school teachers and young readers are appealed to in the different divisions, which trace the art impulse from Grecian and Egyptian to modern times. The accounts are full, biographically, historically and in a literary way, while the illustrations are in themselves of distinct value. This matter of instructive illustrating is well indicated in Mrs. Joseph Gilder's arrangement of the *Bible for Young People.* Every few pages finds an insertion of some world-famous picture, thus forming a guide to religious art. The present edition is in more popular form than when it first appeared. Many wild-flower books have met with deserved success, perhaps the best of the kind being Neltje Blanchan's. In most of them, technical terms and scientific theories are given, a fact which made Miss Lounsberry depart from the accepted form. Her wild-flower volume is written as a story—a sugar-coated way, but doubtless effective. The information is plentiful, and the plates, unfortunately without color and therefore less graphic, are used in large numbers. The common range of observation is thruout the Northeastern States. Homes and schools will assuredly welcome a handbook of games; it is a thick volume with every imaginable amusement—for indoors, outdoors and fireside. There are slate games, card games, tricks and puzzles—in fact, here, between covers, is a perfect anthology of pleasure.

Initial from Booth's "Twilight Fairy Tales." Putnam.

Fairy Tales

Fairy Gold. Ed. Ernest Rhys. Dutton. $2.50.
Fairy Ring. Ed. Kate Douglas Wiggin and Nora Archibald Smith. McClure, Phillips. $1.50.
Forgotten Tales of Long Ago. Ed. E. V. Lucas. Stokes. $1.50.
The Enchanted Land. Chisholm. Putnam. $3.00.
The Orange Fairy Book. Ed. Andrew Lang. Longmans. $1.60.
A Book of Ballad Stories. Mary MacLeod. Stokes. $1.50.
Stories from Famous Ballads. Ed. Caroline Burnite. Ginn. 50 cents.
Robin Hood. Ed. and Illus. Lucy Fitch Perkins. Stokes. $1.50.
Long Ago in Greece. E. J. Carpenter. Little, Brown. $1.50.
The Birch-Tree Fairy Book. Clifton Johnson. Little, Brown. $1.75.
The Russian Grandmother's Wonder Tales. Louise Seymour Houghton. Scribner. $1.50.
Racketty-Packetty House. Frances Hodgson Burnett. Century. 60 cents.
Queen Silver-Bell. Frances Hodgson Burnett. Century. 60 cents.
Twilight Fairy Tales. Maud Ballington Booth. Putnam. $1.25.
The Wonder Children. Charles J. Bellamy. Macmillan. $1.50.
The Larky Furnace. Hildegard Brooks. Holt. $1.25.
Indian Fairy Tales. Mary Hazelton Wade. Wilde. $1.00.

In the realm of fairy tales, the season has brought forth several volumes in the nature of carefully grouped "immortals." Such is the book of old English fairy stories chosen by Ernest Rhys and printed in a sumptuous edition. Here, old favorites are reproduced, and short fables which might be forgotten, and stories in rhyme by no less poets than Keats, Wordsworth and Browning. With its decorations from the hand of Herbert Cole, this is a book to find welcome. Following the same plan as in their "Posy Ring," Mrs. Wiggin and Miss Smith now edit the *Fairy Ring,* a collection of stories less hackneyed than those of the Cinderella kind. For that reason they will read strangely, yet entertainingly, to modern ears. E. V. Lucas's *Forgotten Tales of Long Ago* is similar in purpose and more ornate in form. So, too, instead of preserving the fairy element, these stories are mostly domestic, and their moral is so evident that the editor, in his introductory word, calls attention to one heroine who dared to ask a question of her own frail will. Louey Chisholm retells, in *The Enchanted Land,* a number of tales which are pictured in color and are of interest. Then there is the eagerly looked for rainbow book, which is as unfailing as *Chatterbox* — garnered by an editor whom one imagines always hunting for some stray folklore from lowland or highland, from any country that can claim a legend. There is often some doubt in mind as to whether these stories are always as desirable, as bright, as childlike, as they should be; but it is an undeniable fact that Mr. Lang's *Orange Fairy Book* will not have to look far for eager hands. Mary Macleod has, in her *Book of Ballad Stories* (for which Prof. Edward Dowden has written an excellent historical introduction), adopted a method of turning old spirited verses into new dress; of telling the incidents of the ballad in the form of prose; of turning the swinging rhythm into something else without weighing carefully the taste for poetry which young people largely possess. A compact volume, of like character, and perhaps more direct, is the Grace Greenwood book of stories from famous ballads, which has been edited by Caroline Burnite, director of children's work in the Cleveland Public Library. Yet Sir Patrick Spens could hardly be improved upon. It is for that reason that we welcome a new edition of Robin Hood, wherein the original form is retained and based upon authoritative versions. The verses ring pleasant to the ear, and the author-artist, Lucy Fitch Perkins, has not only shown judgment in her selections, but accuracy of costume in her attractive drawings. Other originals will appear in time, belonging to this series of "Dandelion Classics."

So fearful are we, now that Greek is no longer compulsory in school or college, of losing our hold on the ancient story-tellers, that Dr. Carpenter has declared himself in favor of simplifying some of the classic tales from Homer, Aristophanes, Ovid and others, and of gathering them all into one book, *Long Ago in Greece.* This is to be encouraged, but sparingly. Clifton Johnson follows his *Oak-Tree Fairy Book* of last year with a companion volume of a new variety, called the Birch. The same principle of editing is adhered to, so that timid parents need not fear to place these stories in the hands of the most sensitive child. Savagery, excessive pathos, undue thrills are all glossed over or dispensed with. The selections comprise all ages and all countries, and there is a promise of more for next year.

Louise Seymour Houghton openly

confesses to having been prompted by "Uncle Remus" in her mode of treating *The Russian Grandmother's Wonder Tales,* a collection revealing the simple life of the Slavonians; at the same time, in a short preface, the author indicates analogies which reveal how close in contact legends of different lands often are. The book is excellently printed and effectively illustrated by W. T. Benda. Very young readers will find special enjoyment in Mrs. Frances Hodgson Burnett's delightful history of the jolly *Racketty-Packetty House,* whose inmates—a discarded set of dolls—rush cheerily thru life and meet reward. There are sarcastic touches which grown-ups will appreciate. With tinted pictures, similar to this booklet, is its companion, *Queen Silver-Bell,* by the same author. Do you believe in fairies? asks Peter Pan. People certainly do not believe as they used to, is the substance of Silver-Bell's distress. The little story will be warmly received. In Maud Ballington Booth's *Twilight Fairy Tales,* palaces, princes and kings float thru a land of impossible realities, and in like fashion Charles J. Bellamy's *Wonder Children* deals with enchantment and goblins thruout its pages. And, finally, one will be attracted by Peter Newell's drawings for Hildegard Brooks's *The Larky Furnace,* in which there are queer doings, pirates, and other impossible things. A book which might be taken as a link to the historical section is *Indian Fairy Tales,* which Mary Hazelton Wade has done. Folklore is here civilized, so that white children will understand. This is the third book of like character by the same writer.

From Burnett's "Racketty-Packetty House." Century.

History and Biography

Heroes of American History—Columbus, Balboa Pizarro, Cortez, De Soto. Frederick A. Ober. Harper. $1.00 each.

Old Colony Days. Mary Hazelton Wade. Wilde. 90 cents.

Sir Walter Raleigh. Margaret D. Kelly. *Joan of Arc.* Andrew Lang. *Captain Cook.* John Lang. *David Livingston.* Vautier Golding. Dutton. 50 cents. each.

The War of 1812. E. T. Tomlinson. Silver, Burdett. 55 cents.

Boys' Life of Abraham Lincoln. Helen Nicolay. Century. $1.50.

Poems for Young Americans. Will Carleton. Harper. $1.25.

An Island Story. H. E. Marshall. Stokes. $2.50.

There are some lives which have all the romance of a story, and which likewise form mileposts along the range of history. With these it is not difficult, provided the author's pen is facile, to hold a child's attention. We may be assured that Frederick A. Ober need have no fear in this respect. His *Columbus, Balboa, Cortez, Pizarro* and *De Soto* leave a very distinct impression, since they combine history with the passion, conflict, mystery and bravery distinguishing those men who blazed a trail over sea and land.

Mary Hazelton Wade has attempted before to tell history in conversational style, and the method has proven anything but attractive. *Old Colony Days* would have been much more effective had the first settlers and the country's growth been followed in a direct manner. A simple biography in which the essentials of *Sir Walter Raleigh's* career are narrated is the work of Margaret D. Kelly. The book belongs to a small series, wherein agreeable black type, pictures and direct

purpose combine to make the volumes appealing. Others of like character worthy of attention are *Joan of Arc, Captain Cook* and *Livingston.*

In *The War of 1812,* Everett T. Tomlinson has treated the subject for educational purposes, gathering together, in fragmentary descriptions, a collection of incidents which will be useful as supplementary reading. From out the countless lives of *Abraham Lincoln* Miss Helen Nicolay's new biography, which ran as a serial in *St. Nicholas,* will assuredly claim distinction, not only because the author is the daughter of the co-worker with John Hay in the larger field, but because of the manner in which she handles the characters and events for young folks. Miss Nicolay has succeeded in presenting a thoroly human character of a wonderfully human man. Historical in spirit, we will include here Will Carleton's attempt to write *Poems for Young Americans.* It is a collection with swing and some enthusiasm, but largely artificial. Perhaps the poems are suitable for recitation; they have the trick of rime, but somewhere there is the false ring of patriotism, that comes whenever one tries hard to write patriotically.

What with the illustrations by A. S. Forrest and the excellent text by H. E. Marshall, who is an Australian, *An Island Story* will satisfy many a reader from eleven to sixteen. It is not a history, if by that we mean facts and dates alone, but if we want motives as well, and the personality of the chief actors, then this thick ornamental book accomplishes its aim admirably.

Cover Medallion on Sangster's Fairest Girlhood. Revell Co.

Pure Literature

In the Days of Scott. Tudor Jenks. Barnes. $1.00.
The Odyssey for Boys and Girls. A. J. Church. Macmillan. $1.50.
The Faery Queen. (Selections.) Calvin D. Wilson. McClurg. $1.00.
Canterbury Tales. (Selections.) Calvin D. Wilson. McClurg. $1.00.
Stories from Scottish History. M. L. Edgar. T. Y. Crowell. 60 cents.
Tales from Herodotus. H. A. Havell. T. Y. Crowell. 60 cents.
Stories from Dickens. J. Walker McSpadden. T. Y. Crowell. 60 cents.
Boys and Girls from George Eliot. Kate D. Sweetzer. Duffield. $2.00.
Legends Every Child Should Know. Ed. H. W. Mabie. Doubleday. 90 cents.
Songs Every Child Should Know. Ed. Dolores M. Bacon. Doubleday. 90 cents.

This section may well be introduced by such a biography as Mr. Tudor Jenks has written in his *In the Days of Scott.* The whole purpose in his series of the *Lives of Great Authors* is worthy, and the boy or girl who reads this new volume will have something to remember of the literary spirit and the social environment which helped to produce one of our greatest of romancers.

There has always been a question in our minds as to how much flavor is lost in the re-telling of classics—whether, for instance, despite all that the Rev. A. J. Church has done to give children pleasure from the store of classical wealth, he could not have adopted some other way than that shown in his recent volume of Homer's *Odyssey.* The story is intact, and the characters are there, but there is not much of that bigness for which Homer was noted. Do we not let slip something of the Greek in our effort to reach absolute understanding? The re-told book is an educational phase in our juvenile literature. Undoubtedly there is need for it, provided it is used merely as an incentive, and not as a permanent substitute. Take, for example, the two new volumes of *The Faery Queen* and *The Canterbury Tales.* Both, by Calvin D. Wilson, are worthy of close consideration, for they represent a faithful attempt to simplify, yet to remain as near as possible to the original. So similar have been the purposes of Mr. Dill and Mr. Percy MacKaye, who both have treated Chaucer, that the wording of the several texts is, on comparison, startlingly alike. There is a series, called *Children's Favorite Classics,* which we have had occasion to commend before, because of a certain charm in this re-creating of literature. The list, already a long one, has had three new volumes added to it: *Tales from Herodotus, Stories from Scottish History,* and *Stories from*

Dickens. Comprehensive introductions outline the purpose and historical value of the text; the type is excellent. Mr. McSpadden's volume on Dickens follows the general idea that isolated features in a long story, when standing alone, will serve to interest a modern reader and capture his taste for the larger novel. Certain incidents are thus used alone, adhering as much as possible to the wording of the author. There will be opposing views taken of such a principle, but the author's literary judgment is sound—far sounder in many respects than Kate Dickinson Sweetser, who has issued a volume similar to her Dickens studies, called *Boys and Girls from George Eliot.* The book instantly attracts the eye because of its format, the color drawings and those in black and white, done by Mr. G. A. Williams. We question the advisability of such a volume, however; it gives a wrong impression of George Eliot, and adds a somber tone that will come later in life. *Legends Every Child Should Know* is a book judiciously supervised by Mr. Mabie. The selections figure so dominantly in a literary way that they belong quite as much to this division as to fairy tales. The range is wide, comprising Beowulf and Rip Van Winkle. Miss Ostertag's impressionistic inner covers are effective here as they are in *Songs That Every Child Should Know.* The editor of this collection, Mrs. Bacon, has not been overstrict in her exclusion, or in her grading. Many an older person should know what children ought not to know. The book reproduces the airs only.

Large Books for Youngsters

Peter Pan. J. M. Barrie. Pictures by Arthur Rackham. Scribner. $5.00.
Mother Goose: Her Book. Harry L. Smith. Duffield. 75 cents.
Punch and Judy Book. Helen Hay Whitney. Duffield. $1.25.
The Roosevelt Bears. Seymour Eaton. Stokes. $1.50.
Verbeck's Book of Bears. Lippincott. $1.50.
The Good Fairy and the Bunnies. Allen A. Green. McClurg. $1.50.
Indian Boys and Girls. Mar—Deming—Haines. Stokes. $1.50.
Peter Poodle. Will Bradley. Dodd, Mead. $1.50 net.
Lady Hollyhock. Margaret C. Walker. Baker & Taylor. $1.25.
Candle Light. Georgia R. Durston. Saalfield. $1.25.
The Babies Hymnal. Marion H. P. McFadden. McClurg. $1.25.
Our Army for Our Boys. Ogden—Jenks. Moffat, Yard. $2.00.

Peter Pan heads the list of attractive editions for the Yuletide. The story, fantastic as it is, affords an artist scope for wild flights of imagination. There are many who will be disappointed when they do not find the text of the play, or at least one picture of Miss Adams, who typifies our conception of the boy who just wouldn't grow up. There are brilliant

HALF-TONE REDUCTION OF A FULL-PAGE ILLUSTRATION IN COLOR BY ARTHUR RACKHAM FROM THE STORY OF "PETER PAN."
Published by Charles Scribner's Sons.

pages, filled with pictures done by Harry L. Smith, to accompany the time-honored jingles in a holiday edition of *Mother Goose.* Similar in make-up is the *Punch and Judy Book,* jingled by Helen Hay Whitney, and sketched in bright colors by Charlotte Harding. Beside larger and clumsier volumes, these little books are a welcome contrast, for they have none of the coarseness and less of the glaring color that marks the newspaper substitute. *The Roosevelt Bears* make their bow between covers—those persistent individuals who appeared on Sunday mornings as punctually as Foxy Grandpa or Buster Brown. Seymour Eaton's jingles remind us of the rather tiresome metrical ups and downs of the Brownie Books. But so popular have these volumes been that we question our own age. Are we, after all, really grown up, even tho we enjoy reading juvenile literature? Children will be delighted with the pictures in Verbeck's *Book of Bears.* But the verses, a joint product of Haydon Carruth and Hanna Rion, are fairly dull, even to older heads, for whom we believe they are intended. Allen A. Green carries us, in his *The Good Fairies and the Bunnies,* accompanied by Frederick Richardson with brush, thru candy land and the realm of Santa Claus. A much more probable land is that wherein *Indian Boys and Girls* become heroes and heroines in stories and verses by Alice C. Haines. The ideal pictures by Alice Mar are far less Indian-like than those from the brush of Edwin Willard Deming, who thoroly comprehends the life of the red man. There is also Will Bradley's *Peter Poodle,* deserving of mention, for it describes many adventures among toys and has many attractive pictures.

FROM SMITH'S "MOTHER GOOSE: HER BOOK."
Duffield & Co.

Two books to appeal to very young folks are Margaret C. Walker's *Lady Hollyhock,* which suggests how to make nature dolls from radishes, peanuts, cucumbers, pansies and the like; and Georgia R. Durston's *Candle Light,* a series of child verse with agreeable qualities, but whether lasting remains to be seen. For final consideration, there are two publications with undoubted appeal. *The Babies' Hymnal,* designed by A. Poole and selected by Marion H. P. McFadden, gives simple music for young voices, and Sunday schools as well as the home will welcome a collection of this kind, so tastily conceived.

Mr. Ogden and Mr. Jenks together have worked out a very useful manual, treating of the evolution of our army. Uniforms are pictured in telling designs, and the text contains facts that will find ready readers. Historically the book is distinctive and should be popular.

Fiction

When we come to the field of fiction the plethora of material fairly staggers us. And it would not be so distressingly overabundant were there more current literature to deserve the appellation of excellent. The best we can do is to indi-

cate in a few words the character of some that must be mentioned:

HISTORICAL FICTION.

In Clive's Command. Herbert Strang. Bobbs-Merrill. $1.50. A closely printed tale of the fight for India, suggesting Henty.

Two Cadets with Washington. W. O. Stoddard. Lothrop. $1.25. Some titles are self-evident. Historical characters are "fictionized" in the Revolutionary Series.

The Young Rangers. Everett T. Tomlinson Wilde. $1.50. The author is surprisingly active. This concluding volume of the Colonial Series tells of the conquest of Canada.

Marching Against the Iroquois. Everett T. Tomlinson. Houghton. $1.50. History and fiction are combined to depict General Sullivan's conflict with the Indians during 1779. Dr. Tomlinson's yearly output is discouragingly great.

Trail and Trading Post. Edward Stratemeyer. Lothrop. $1.25. This is volume six of the Colonial Series; the incidents are pre-Revolutionary, and center around the Ohio River.

Under Togo for Japan. Edward Stratemeyer. Lothrop. $1.25. The boy reading this will probably gain a clear impression of the recent war, from both sides—land and sea.

STRANGE LANDS AT HOME AND ABROAD IN FICTION.

Two Little Friends in Norway. Margaret Sidney. Lothrop. $1.50. The heroines of which are drawn close together.

A Hunt in Snowshoes. Edward S. Ellis. Winston. 75 cents. A succession of dangers and escapes, of doubts and discoveries, with a French Canadian trapper.

Chunda. Horatio O. Ladd. Eaton. $1.25. This is a story of the Navajos Indians; the descriptive interest is its chief attraction.

With Tommy Tompkins in Korea. L. H. Underwood. Revell. $1.25. A missionary story, with descriptions of strange scenes and customs.

In Eastern Wonderlands. Charlotte C. Gibson. Little, Brown. $1.50. A book of travel with three children in the Far East.

Lost in the Forbidden Land. Edward Ellis. Winston. $1.00. In a queerly built boat two men try to penetrate into the wilds of South America.

Janet: Her Winter in Quebec. Anna Chapin Ray. Little, Brown. $1.50. A cheerful story-mixture of English and American character, combined with description to hold the interest.

Young People in Old Places. Cornelia Baker. Bobbs-Merrill. $1.25. Such a conglomeration of useful information, conversation and story detracts from any impression, any glimmer of England, France, Spain or whatever other country the characters in this book are unfortunate enough to visit. The style is dull.

The Young Prospector. Edwin J. Houston. Wilde. $1.50. The search for a gold mine is the means of holding a boy's interest and of giving him valuable hints as to how things should be done.

Dave Porter in the South Seas. Edward Stratemeyer. Lothrop. $1.25. A mixture of school sport and strange adventure. The hero figures in a series of such books.

Jack Shelby. George Cary Eggleston. Lothrop. $1.50. Indiana in the early '40's is a comparatively new field for juvenile readers. Pioneer scenes have endless novelty.

Four Boys in the Yellowstone. E. T. Tomlinson. Lothrop. $1.50. Four boys from the North, South, East and West, are taken in a private car on a tour thru our National Park.

FICTION—GENERAL.

Ready, The Reliable. Lily F. Wesselhoeft. Little, Brown. $1.50. Another dog story by the author of *Jack the Fire Dog.*

Five Little Peppers—and How They Grew. Margaret Sidney. Lothrop. $2.00. A holiday edition of a story of long-standing popularity.

Brenda's Ward. Helen Leah Reed. Little, Brown. $1.50. Frank T. Merrill has pictured many incidents connected with a Western girl and Brenda, now married. In these days of series, one may watch a favorite heroine grow.

The Cruise of the Firefly. Edward S. Ellis. Winston. 75 cents. The prolific pen of this author describes school rivalry among oarsmen. For the state of Mr. Ellis's health, we are glad to announce that this book has a collaborator attached.

ILLUSTRATION FROM LANG'S "ORANGE FAIRY BOOK."

Longmans, Green.

Signal Lights. Louise M. Hopkins. Clark. $1.50. The usual account of prairie life, with Indian adventures and sudden encounters.

The Camp on Letter K. Clarence B. Burleigh. Lothrop. $1.50. The author being a Maine man, his book is centered in that State. The boy reader will here meet with log cabins, prowling animals and smuggling.

Dale and Fraser. Sidford F. Hamp. Wilde. $1.50. Colorado sheep raising is not an idyllic pastoral matter, and these herders meet with many obstacles.

Ester Ried's Namesake. Pansy. Lothrop. $1.50. The Pansy Books are perennial. This one is only a step removed from the land of novels.

Kristy's Rainy Day Picnic. Olive Thorne Miller. Houghton. $1.25. Kristy is a lucky mortal. Her lot, to judge by this and previous books, is cast with excellent story tellers who help her allay the *ennui* of a rainy day and other exigencies.

The Second Violin. Grace S. Richmond. Doubleday. $1.50. The second fiddle may not always be an inferior fiddle, but only one waiting an opportunity. In this excellent story, the heroine, occupying second place in the life around her, rises to the occasion.

Brothers and Sisters. Abbie Farwell Brown. Houghton. $1.00. There are all sorts of mildly entertaining stories in this book. They are simple enough for the youngest readers, but are not as ingenious as one might expect from Miss Brown.

Nancy Rutledge. Katharine Pyle. Little, Brown. $1.25. A country girl goes to the city and has some very weakly entertaining times with a neighbor.

Meg and Others. Harriet T. Comstock. Crowell. 75 cents. A conventional series of stories about a grandmother's girlhood, told in a very skillful way to her grandchildren. Written in very pleasing style.

DISTINCTIVE LIST.

Daddy's Daughters. Marion Ames Taggart. Holt. $1.50.

Six Girls and Bob. Marion Ames Taggart. Wilde. $1.50.

Dorrance Doings. Carolyn Wells. Wilde. $1.50.

Patty's Summer Days. Carolyn Wells. Dodd, Mead. $1.25.

A Little Son of Sunshine. Ellen Douglas Deland. Harper. $1.25.

The Girls of Gardenville. Carroll Watson Rankin. Holt. $1.50.

Harding of St. Timothy's. Arthur Stanwood Pier. Houghton. $1.50.

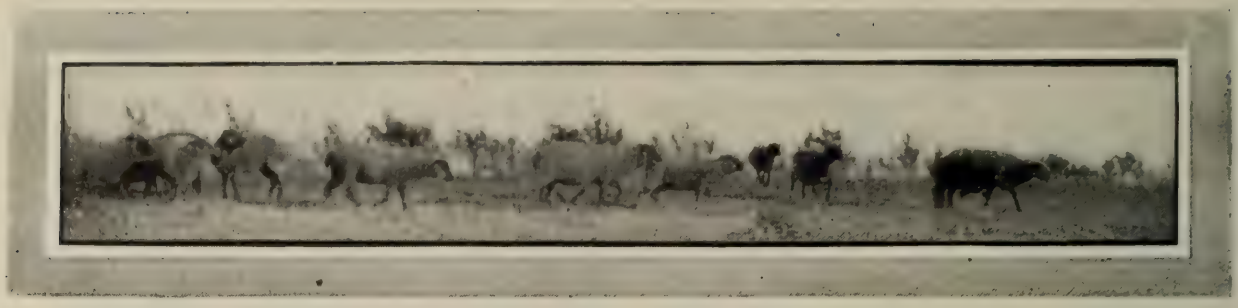
The Crimson Sweater. R. H. Barbour. Century. $1.50.

With Mask and Mitt. A. T. Dudley. Lothrop. $1.25.

Dearlove. Frances Campbell. Dutton. $1.50.

The previous list could have run on indefinitely were there space to enumerate the countless other stories that still confront us. Marion Ames Taggart is the author of a pleasant story, *Daddy's Daughters,* in which four girls, surely modeled after Miss Alcott, cheer the life of an impecunious "literary" father, who

meets success in the end. It is unfortunate that the author should have almost repeated herself in another tale, *Six Girls and Bob,* wherein an old house plays a figure similar in many ways to that in Carolyn Wells's *Dorrance Doings,* where there is a large mansion and a mysterious panel, which leads the way to a small fortune. As this book is a sequel to last year's volume, so Miss Wells carries her heroine, Patty, into *Summer Days,* having already dealt with her in other stories. Ellen Douglas Deland's *A Little Son of Sunshine* contains much atmosphere, and we are made to take an interest in the little "orphan" one-legged violinist, who turns out to be the Colonel's grandson. *The Girls of Gardenville* are a bevy of heroines gracefully handled by Carroll Watson Rankin. Many of the stories are excellent and full of humor, and natural as well as wholesome. Arthur Stanwood Pier's *Harding of St. Timothy's* and Ralph H. Barbour's *The Crimson Sweater* are so closely related in spirit and description as almost to duplicate. Their heroes are martyrs and self-sacrificing, while the school atmosphere is faithfully depicted. In football, a great deal of minute detail is cleverly handled. *With Mask and Mitt* reveals A. T. Dudley, belonging to the same group of writers. *Dearlove* is "the history of a summer's make-believe," charmingly written, and will make grown-ups young again, if any book can.



MISCELLANEOUS.

Wee Winkles and Snowball. Gabrielle E. Jackson. Harper. $1.25.
Polly and the Aunt. By M. E. Houghton. $0.75. Very dainty binding.
A Borrowed Sister. Eliza Orne White. Houghton. $1.00.
Fairest Girlhood. Margaret E. Sangster. Revell. $1.50 net.
Katrina. Roy Rolfe Gilson. Baker & Taylor. $1.50.
The Stained Glass Lady. Blanche Elizabeth Wade. McClurg. $2.50.
Concerning Paul and Fiametta. L. Allen Harker. Scribner. $1.25.
Puck of Pook's Hill. Rudyard Kipling. Doubleday. $1.50.
Adventures of Billy Topsail. Norman Duncan. Revell. $1.50.

This enumeration must be brought to a close. There are many volumes equally as deserving as some we have mentioned, but so like them as to be a mere repetition. There are books, too, to suit young tastes; to enumerate three—Gabrielle E. Jackson's *Wee Winkles and Snowball; Polly and the Aunt,* a record of observation; and *A Borrowed Sister,* by Eliza Orne White. What year does not bring forth the book of advice and healthy counsel? This time it is Mrs. Margaret E. Sangster, with her popular manner of lecturing *Fairest Girlhood.* The cover is most dainty in its cream and gilt, with the medallion head. Then, are we not always sure of meeting with the book of appeal, for grownups as well as "sweet sixteen"? Such is Roy Rolfe Gilson's poetic treatment of *Katrina,* a maid who becomes a woman and doesn't marry the delightfully human reporter who is the real hero. Then, do we not assuredly find the story written from the ideal viewpoint of childhood? We will not be disappointed in the conception of Blanche E. Wade's *The Stained Glass Lady,* a beautiful, slender lady, who passes before the dreamy eyes of a boy in church. The romance has heart interest, but is too long drawn out, and Miss Ostertag's drawings, tho rich in color, just fall short of being satisfactory. And so we end with the inevitable question confronting us—What giants are in our path—what really lasting piece of juvenile literature Other than *Peter Pan,* there are three that stand out from the mass before us—that charming depiction of English life in Mrs. L. Allen Harker's *Concerning Paul and Fiametta,* with the quaint hero and the sprite of a heroine—that odd conglomeration of history, legend and fancy in Rudyard Kipling's *Puck of Pook's Hill,* already reviewed in THE INDEPENDENT—and that distinct impression of Labrador and Newfoundland which one obtains from Norman Duncan's excellently written *Adventures of Billy Topsail.* These are the tall corn-tassels which wave above the sea of colored bindings and varied plots. They are not the highest, but they are emphatically worth while. For they are sincere in treatment, consistent in characterization, and rich in color. The greatest giant to be met with is the book collection—unwinnowed, yet waiting to be bought.

* THE GOOD FAIRY AND THE BUNNIES. By Allen Ayrauet Green. A. C. McClurg & Co.

The Illustration of Books by Artistic Photographs

BY ELLA M. BOULT

ILLUSTRATED FROM PHOTOGRAPHS BY THE AUTHOR AND MISS BEATRICE STEVENS.

PHOTOGRAPHY is revolutionizing illustration. Not only has it become a process of reproduction, but it even competes with the artist's brush in the making of pictures. The arts, the trades, the crafts and all scientific works, are exemplified more accurately, more vividly and more easily by photography than in any other way. The broader aspects of life also—sports, travel, traffic, municipal sociology, the stage, current events, etc.—these have become material for the photographer rather than the painter or draftsman.

Conversely, it has been believed that these very traits of precision and brutal truth in portrayal that make the camera supreme in these fields disqualify it for excelling in those realms of "pure art," where the most insistent dictum is "Truth is beauty." But the "new photography" makes bold to assert that this very principle is *its* foundation stone, and to claim a place in the pictorial field side by side with painting and drawing. Indeed there are prophets at the present moment who proclaim that the lens, the prepared plate, the sensitized paper, may be made to subserve the will of the artist in the same degree, if not in the same manner, as brush, pigment and canvas compass his ends.

Considering the great difficulties involved, the illustrations of our splendid nature books are remarkable in art quality. For example, in the accompanying picture of uncurling ferns, the anatomy of the plant, its texture, habit, environment are all depicted with scientific accuracy, while at the same time every requisite of art is observed. The subject predominates; the setting, tho graphic, is subordinate; the lighting is all that it should be; the grouping, the drawing, the very expression of the plant could not have been better if done by an able artist. One has but to consider the labor and the technical knowledge involved in this picture to realize how much we owe to the camera. Occasionally a naturalist of wide experience is also an artist. Then there is less difficulty about illustration. But seldom, if ever, does the draftsman unite the requisite scientific and artistic qualities to anything like the same extent that the photographer does.

On the other hand, the photography of nature at close range presents such difficulties that it is often an impracticable method of illustrating, and, still oftener, the photographer must sacrifice every other consideration and concentrate his energies on securing an accurate and informing picture.

For books dealing with agriculture, horticulture, travel, biography and the like, photography has more scope, and the artist behind it larger opportunity. This is the borderland between science and art, and here illustrations may often be pictures in the art sense, and seldom need to lack the artistic quality. The most utilitarian processes of farming, for example, are often compounded of

the very elements that the artist seeks. I have seen an ancient Hibernian cutting potatoes for seed, the subtle affinity of murphy and man, the map of Ireland face, the comfortable pipe, the toil-wrenched hands, the potatoes below, eloquent of next year's plenty, providing ample motive for the artist, tho the matter in hand was no more than to exhibit the true method of preparing the seed for planting.

Live stock, the activities of seed time and harvest, etc., are familiar material for the painter. Why not photograph these

CHILDREN ARE THE BEST MODELS

subjects, then, when necessary for technical illustration, as the painter would paint them, even tho the object is nothing more than illustrating a patent po-

illustration may be artistic without sacrificing its usefulness.

But, of course, it is chiefly in pictorial fields that art in photography invites

A SIMPLE GENRE ILLUSTRATION.

tato planter, corn cutter, reaper, plow or some special breed of cattle. Thus instances might be multiplied to show that in technical, as well as pictorial fields,

comparison with that in painting. A comparison between painting and photography here is both difficult and dangerous; dangerous because the "new

photography" is as yet *very* new, and is little understood by the laity, the profession, or even by the amateurs; and dangerous because, as has been suggested, the scope of the two arts, while it may be equal, is certainly not identical.

Pictorial illustration, roughly speaking, is divided into two classes—landscape and figure composition. The latter involves portraiture, and portraiture, being nearest to common ground for painter and photographer, forms the best point of departure for such a comparison. Fortunately current criticism has provided us with a phrase that contains the kernel of the whole matter. "It is too photographic," is a verdict often passed on a brush portrait. Now the artist photographer never makes a photograph "too photographic." There is a pen portrait not so well known as it deserves to be to the effect that:

"Within my earthly temple, there's a crowd;
There's one that's humble, one that's proud;
There's one that is heart-broken for his sins,
And one that, unrepentent, sits and grins:
From much corroding care I should be free
If once I could determine which is me."

This ungrammatical state of mind is what oppresses him who would portray the human countenance. Neither fleeting expression nor permanent line is essentially characteristic. Humble or proud, heartbroken or grinning, we are not any of these, but all. Copying the outward and visible signs can never be counted on to reveal the inward and spiritual grace. It is supposed that the painter paints his subject from within out; that, behind the expression, he sees the thought, the emotion, that speaks in it; behind the flesh, he feels the nerves that model it; that he paints, not the face alone, but the heart. Such is the painter's portrayal. But the few photographers who have proved themselves artists have produced likenesses no less subtle and vital—pictures no less artistic. This is not compassed by idealizing, on the one hand (the vulgar name of which is "retouching"), nor, on the other, by that exaggeration of characteristics, good or bad, in which the superficial extremist sees delineation of character. It is not the result of any tricks. It is compassed by means of the

AN OCTOBER TWILGHT.

THE ILLUSTRATIONS OF OUR NATURE BOOKS ARE REMARKABLE IN ART QUALITY.

artist's powers commanding the photographer's technique. The relics of barbarism which many of our best professionals are exhibiting show the modeling of an inflated kid glove and the vitality of a wax figure. These have nothing to do with portraiture, as understood by the artist. The point is that the great few already referred to have proved that the implements of photography can be made to compass all the essentials of true portrayal.

Two great advantages everywhere accrue to the painter: one is paint, and the other the power of selection and rejection. The importance of color, to say nothing of its beauty, cannot be overestimated. Nevertheless, I have compared photography with painting rather than with wash drawings (drawings in one color) in order to establish the point that the color values which the photographer may reproduce are comparable to the painter's values. Monochrome has all the gradations of multichrome, and correct mechanism can record values more precisely than the painter attempts to do. However, approximate or even incorrect values, in actual color, are inevitably more expressive to the eye than perfection in monochrome, and until color photography becomes a fact, this constitutes the photographer's most serious limitation. For illustration, however, the delicate gradations of values in a photograph often reproduce better than the values of a painting or wash drawing.

All that has been said of portraiture applies to landscape, which is, in fact, nothing but portraiture in the field of nature. Of all classes of pictorial illustration, landscape is best suited to photography, notwithstanding the fact that nothing else makes such high demands upon the artist. It is easy to photograph a tree, a hill, a valley, a brook, a clouded sky—easier than to draw or paint them; but to interpret these subjects, to reproduce the spirit of them, to portray their significance, is quite a different matter, and this alone will weld them into a picture. If this subtle essence eludes the painter who expresses himself by his own obedient hand, how much more must it elude the

photographer, who must render pliant to his purpose a rigid mechanism. The advantage of pigment here is offset more than in any other sort of picture by the exquisite gradations of values attainable. The exhaustless possibilities of focus-control material values, while the devices for differentiating color complete an equipment that, controlled by a master, can cope with the subtleties involved.

Moreover, the camera's inability to ignore is of little importance here, where all nature's aspects, whether beautiful, ugly or simply interesting, are perfect. If the photographer may omit nothing, neither can the painter include all without endangering the simplicity of his composition, whereas the photographer may so modify and subordinate the inessential as to reproduce the exact relative values of the scene before him, wherein detail is never obtrusive. In portraiture, whether of a person or of nature, all that the painter can compass in composition, in drawing and modeling, in lighting, in quality and texture and value and atmosphere, the photographer also can compass.

The camera's trait of "taking" what it sees—nothing more nor less—does materially affect the making of *genre* illustrations, to call in another overburdened word. Whereas the painter makes his story-telling picture from a conception in his mind, any portion of which he may materialize at will, the photographer must pose everything to the minutest detail, must dramatize his action absolutely as it is to appear. This involves a wealth of material, animate and inanimate. The models must be perfect actors as well as perfect types of the characters to be illustrated. The whole difficulty is suggested in pointing out that, while the painter paints his conception direct, the photographer must make his picture from a conception more or less clumsily embodied. Simple illustrations of this class, involving no intricacy of setting or action, are easily made by the camera, tho even here the human element constitutes a serious difficulty. Compositions of children are the easiest of all genre illustrations to make. The models have that artlessness which is the last extreme of art, and can be made to play any *rôle* without self-consciousness.

A hackneyed but very good type of

THE COMING SNOW SQUALL.
An Example of Composition in Landscape.

genre photograph is that done in the manner of some great painter. An old countrywoman in homespun, charmingly capped, bending at twilight over upturned furrows, is an example that comes to mind. This has beauty, but it suggests imitation, to the disadvantage of the imitator. Why not a copy of Millet? is the natural question. However, notwithstanding that much beautiful picture-making along these lines is well within the power of the photographer, this is the type of illustration that belongs to the painter's province.

If we are to have art in photography, toward which there is so strong a modern tendency, of which the most careless observer must be aware, it is obvious that we must have an artist behind the camera—an artist in every meaning of the word as it describes the painter. He must see and comprehend just as the painter does; he must be master of his technique as the painter is master of his; he must possess that infinite capacity for taking pains that has been called genius. It is not enough for him merely to see. He must see with an eye that is unerringly quick to grasp photographic possibilities and to keep well within its limitations; but if the difference is one of technique and of implement, might not the possessor of these qualities as well strive for the painter's somewhat freer powers? This consideration, more than any other, perhaps, will set a boundary to the artistic in photographic illustration; and if illustration is to fail of this art quality it fails less miserably by drawing than by photography. The old-time photography is fast passing, and the new, with its great possibilities, has now reached a point where it may safely be said to be no longer experimental. The new photography lends itself far better to the illustration of books than was ever possible with the old school, because modern workers in the art have a better understanding of its technique and can make its results conform more sympathetically to the author's text than the old-time photographer ever dreamed was possible.

A LITTLE FIELD MOUSE.

NEW YORK CITY.

Simplified Spelling

From a Publisher's Point of View

BY HENRY HOLT, LL.D.

[Mr. Holt is the senior member of the publishing house of Henry Holt & Co., and has for a long time been an advocate of reformed spelling. He is the author of two novels of distinction and has contributed many articles to the magazines on social topics.—EDITOR.]

FROM a publisher's point of view the most natural question regarding the simplified spelling is: What will be saved by it? There are so many conflicting statements regarding this that I have risked adding another by making an estimate myself.

From various authors I have taken some sixteen or eighteen passages of two hundred letters each, and counted the letters that were superfluous. More could be rendered superfluous by restoring the old single letters for *th* (and for *dh* if we don't want *th* to serve for both, as now), making new letters for *ch, sh, ng,* and the vowel sounds in *how* and *oil;* and agreeing on one vowel where we now write *goose, rheum, true, fruit,* etc. But I counted only with reference to our present alphabet.

The percentages of superfluities varied from three to seven and a half, and obviously depended upon circumstances too complex to analyze—among them, the topics treated, the tense — past or present, and possibly (tho I cannot see how) the style of the author: for two passages by Sir Henry Maine showed the two lowest percentages of superfluous letters. But that can hardly have had anything to do with the absence of superfluous *words* apt to characterize great thinkers. Well, whatever the variations and their causes, it seems reasonable to set the average percentage of superfluous letters in English words as now written at about five.

Now for the year 1900 the United States Census gives the value of

Printed product as	$347,055,000
Stereotyping and electrotyping are given in the Census report separately as	3,722,000
And typefounding	2,842,000
Total	$353,619,000

The five per cent. of this wasted was, then, $17,680,000.

This does not appear to include the machinery, but I don't know if it includes the binding, and that is at least given in the Census report as a separate item. Let the two possibilities offset each other:

There are also.

Engraving	$5,069,000
Hand stamps	1,938,000
Lithographing	22,241,000
Photo-lithograhphing and photo-engraving	4,226,000
Stencils and bands	673,000
Total	$34,147,000

What proportion of all this was for words as distinct from pictures, it would be impossible to say. If half of it was, that would give us nearly another million of waste. But we will disregard that to offset pictures and other features illegitimately included in the $17,680,000 we have so far reached.

Now all those wasted letters had to be written, and, even allowing for duplicates, would it not be reasonable to assume that the various sorts of talent which wrote or dictated them, cost twice

as much as the wages of the men who printed them. Those wages were $84,250,000, ten per cent. of which is $8,425,000, which brings our waste so far up to $26,105,000.

This rough estimate concerns only what is put on paper. Now consider the letters put on signs—electric and painted and carved; and stamped and prest on stone, glass, bread, clay, butter, rugs, cloth, celluloid, leather, wood; on all kinds of machinery, carriages, cars; on bells, hose, soap, candles. Would it be unreasonable to let all this bring the sum up to $30,000,000?

Now for writing machinery and material. In 1900 the typewriters cost $7,299,000. Such portion of them as go abroad may, perhaps, be offset by the lead pencils we import. We manufacture $2,222,000 worth, and $2,000,000 worth of pens. Our total paper and wood pulp bill is $127,000,000. There is no guide as to what portion of this goes to writing paper, but as that is far the most expensive kind, it may, despite the masses of wrapping and printing paper, not be unreasonable to place it at nearly a fifth, or say $25,000,000. Our ink bill is $4,373,000. Fifty-nine establishments made printing ink (already included) and forty-five made writing ink. Dividing the bill in this ratio, we spent $1,892,000 in writing ink. All these items foot up $38,413,000, of which the 5 per cent. waste is $1,921,000, which may as well bring our previous $30,000,000 to a round $32,000,000.

But we have so far allowed only for printing, paper and writing material, and the writing done for print. What of the writing not done for print? Any conjecture will be wild, but we may as well amuse ourselves with some sort of one, trying to keep inside of a reasonable estimate. Statistics are scant. We don't know how many writers on machines there are, but there were considerably over $7,000,000 worth of the machines turned out in 1900. If they cost $70 apiece, it took over one hundred thousand people to run them. Their wages are not far from five hundred dollars a year (allowing that much for the value of the time of the man who runs his own) and so amount to over $50,000,000. Probably not one per cent. of the matter they turn out ever sees print, but allow $500,000 for it, we then have over $49,500,000 not yet allowed for typewriting (we might as well keep to the $50,000,000, but let us fight it out on this line), of which five per cent. or $2,475,000 is wasted on useless letters.

How much of all our writing, not for print, is done on typewriters? Of the three persons at this moment sitting in my library, and guessing without knowing each others' opinions, one guessed two-thirds, and each of the others a half. Call it a half. The total waste then on typewriting and handwriting useless letters would be over $4,950,000. This, added to the $32,000,000 waste previously indicated, would amount to $36,950,000. We may as well say $40,000,000 or $35,000,000: the element of guesswork is large, but it does not seem altogether absurd to suspect that the figure for 1900 (and despite the Simplified Spelling Board, it has been increasing enormously since) was between those amounts, or not far enough outside of them to neutralize their significance.

A publisher's point of view, of course, covers the five per cent. of eye-strain, and five per cent. of time, now wasted in reading the superfluous letters; and it embraces also a much more serious waste —the time of teachers and pupils.

There are 455,000 common-school teachers in the United States. Allow them $300 apiece, which is probably too low, and yet their pay amounts to $136,500,000. It is generally estimated that the absurdities of our present spelling cost a third of the average child's school time. Say that one-half of its absurdities is in the superfluous letters, then one-sixth of $136,500,000, namely $22,750,000, represents the yearly waste in primary education. Leave out the waste of children's eyes and brains (the teachers are paid for theirs) and call our total financial waste on superfluous letters from $55,000,000 to $60,000,000 instead of from $35,000,000 to $40,000,000, as previously figured.

Counting all residents of the British Isles, Canada, Australasia and the Cape Colony as English speaking (and offseting those not really speaking English, by omitting those speaking it in India and elsewhere in Asia, in Africa, and in outlying regions) there are 50,000,000. Al-

lowing them to print and write and teach as much in proportion as we do (there are over four-fifths of them in Great Britain and Ireland), their waste would be ten-seventeenths as great as ours, in round numbers $34,000,000. Total for both nations, say $89,000,000 to $95,000,000

In the foregoing figures, rent of factories was probably included in the value of product, but none was allowed for places where writing and teaching are done, and nothing for contingent expenses. Including them, a grand total of $100,000,000 does not seem extravagant. I did not start with this sum in mind, or any other; and some investigators entitled to consideration have estimated it much higher than I have.

So far the publisher. The superfluous letters make but a fraction of the trouble in our spelling, but the rest of it is not so directly in the publisher's province.

And now he will emulate the shoemaker venturing above his last, and say a word on some points of which one at least is more important than anything he has said yet.

There is room for but a passing allusion to the waste of time and tissue that many, even among the well educated, have to make thru their whole lives over our perplexing spelling. Dr. W. T. Harris, late Commissioner of Education, says:

"Dr. Morrell, one of the English inspectors of schools, reports that out of 1,972 failures in the civil service examinations in Great Britain, 1,866 candidates owed their failure to poor spelling. Dr. Hagar compiled the results of the examination in spelling of 1,000 candidates for admission to a State normal school in Massachusetts. They were proposing to become teachers, and yet these young women averaged only 80 per cent. of correct spelling in the examination in that branch. Upon an average of one word in five was misspelled."

I can but allude, too, to the obstacle our difficult spelling opposes to the spread of English as a world language. Professor Münsterberg says that it helped him distinguish words with similar sounds and different meanings, which is its one merit, and also called attention to many interesting etymologies and peculiarities. But things may be mere stepping-stones to a Münsterberg which will be obstacles to the average man. Yet his big intellectual stride carries him into some queer reasoning. He says that increasing the number of words when *ed* final is spelt *t*, because pronounced so, forces the foreigner to memorize those where the change has not been made. Did he not have to memorize the misspelt ones before the change was made? He says, too, that superfluous letters make it easy to recognize words. What percentage of superfluous letters? Just about the five that we have now? Why not ten better than five, or twenty than ten? Or if not that way, why is five better than two, or two better than none? The argument for any reminds one of the superfluous *words* which play so large a part in German philosophy and criticism.

And now comes what seems to me the most serious consideration of all.

In a *system* of spelling, if we had one, each step would lead to the next, no one would overturn another, all would lead to a definite result. But in our spelling books, the child has to struggle as if the logs for a corduroy road, instead of being laid in order, had been dumped pointing every which way; his path is full of immense difficulty, and instead of being introduced to a conception that the path of knowledge is one of order, that the world of ideas is a symmetrical whole of causes and consequences, he starts with impressive evidence that it is a world of arbitrary haphazard, that there is no reason why anything is as it is, and that the only ground for believing anything or doing anything, is that somebody of greater authority tells him to. And yet if there ever was a time when the child needed to be impressed with the truth that he is growing into a world regulated by natural law, that time is now. Government has gone from the custody of the educated into the custody of the ignorant, who are ready to believe in all sorts of magic. What may be more serious still, the old belief in a world regulated at every move by a special exercise of divine will, is losing its hold. A more efficient guide to right living and high thinking can be found in the belief that the world is governed by divine *laws*, but that belief is as yet of slow growth and of dim apprehension, even in the greatest minds. How im-

mense, then, the twofold necessity of clearing obstacles to its conception from the path of the young! And yet the first avenue to knowledge that we place in their hands—the spelling book—is probably our greatest example of chaos. There is in it scarcely any sign of that order and coherence which is the first indication of law. Nearly everything contradicts nearly everything else. When a child is taught a bookful of such stuff as that t h r o u g h spells *thru* and r o u g h spells *ruf,* and given no reason but that somebody says so, you have got him ready for the demagog — ready to follow any plausible person who tells him that the most authoritative entity of all—the Government—can make anything so, because it orders it to be so—make something out of nothing, make everybody rich thru plenty of greenbacks or depreciated silver or protective tariff or unimproved land; make gravity raise a given body of water higher than its source — produce wisdom from the votes of fools, make energy and capacity continuously sow that indolence and stupidity may reap, and make a society orderly by removing all restraint from the vicious.

Lawless spelling works counter to law: it makes words that mean Bryan and Hearst; and opens the switches for trains of reasoning that end in Guiteau and Czolgosz.

BURLINGTON, Vt.

Corrupting the Innocents

BY JOHN BURROUGHS

ONE of the most familiar practices of our modern American democratic life is the way we load our children up with toys. A modern house where there are several children is a perfect chaos of toys, from picture books of every description to all types and sizes of dolls in all stages of decomposition, and all manner of mechanical devices. And still they come, new and ingenious contrivances to catch and hold the jaded attention of our offspring and make them forget for a moment the tedium of life. It is the crime of the age; it is a sin against our children; it corrupts their simplicity; it stimulates their destructiveness; it sates and blunts their curiosity and hastens the time of their general discontent with life. We try at the outset to destroy their interest in the plain and wholesome things of life by the multitude of strange and startling devices we shower upon them. We would have them believe that the world is one great toy shop made simply for their amusement. We create a false taste, a craving for ceaseless novelty, everything new every day, every hour. The last surprise only sharpens their appetite for a greater, till they go from blond dolls to brunette dolls, or to Japanese or negro dolls, and from jumping-jack to jumping-jack with utter weariness and disquiet. It is like feeding a child only condiments and sweetmeats. A sane and joyous interest in simple things is killed. We give them milk to drink and bread to eat. Why not provide as few and as common things for their amusement? Why sophisticate them? Why foster a craving for novelty and variety that life cannot satisfy? By and by they will cry for the moon or the stars. What are we going to do then?

'Tis a pity the whole army of toy inventors and toy makers cannot be banished from the land.

Lucky is the child that has but few toys and those home made. Let it have such things as will help educate its senses and prepare it for life. Let the boy have his blocks and his ball and his cart, and let the girl have her home-made rag doll.

Christmas is fast becoming a positive curse. What between gorging ourselves with rich foods, bestowing upon each other useless and senseless gifts and corrupting our children with a multi-

tude of toys, the day is of evil omen. It is a day of over indulgence all around. The Christmas tree becomes a deadly upas if we are not careful. Nothing is as salutary with children as to keep them living on a low key and close to common things. Let them find joy and entertainment, as they surely will, if you give them a chance, in the simple and near at hand. Do not seek to excite and intoxicate them with the strange, the bizarre, the extraordinary. Let them alone. If their craving for novelty is stimulated there is danger that they will find life flat, stale and unprofitable.

I doubt if I had one boughten toy when a child. I had a ball when I got old enough to go to school, but I made it myself. I made many balls out of the yarn of old stockings and covered them with leather. I had kites, but I made them myself. A boy learns many things in making a kite. I had sleds, carts, stilts, strings, pin boxes, darts, cross bows, tops, puzzle blocks, etc., but I made them all myself. I made most of my own slate pencils by cutting them out of soft pieces of slate that we used to get one and a half miles from school. I earned my playthings, and they never surfeited me. They each meant something.

Look into any of our wealthy homes at Christmas time where there are several children, and see the wicked extravagance in the bestowal of toys. It is a regular toy debauch. The children become sated and lose their interest before half the presents are distributed. In a few days most of them are discarded; the boy contents himself with some simple thing like a wagon or a cart, and the girl with something equally simple and commonplace. Let us stop this wicked corrupting of the innocents.

Japanese Exclusion

BY DAVID STARR JORDAN

President of Leland Stanford, Jr., University.

AN influx of people of less intelligence, less self-reliance and less patriotism than our own, whether these people come from China, Japan, Poland, Africa, or anywhere else, is a source of grave danger to the Republic. It is true, however, that in a civilized country it is no crime to belong to another race and there can be no toleration on our part of incitement to race riot and race prejudice in attempting to guard against such danger. It is even more important that a nation should be decent than that it should be white. A brave, just and generous nation should treat all its neighbors alike, insulting none, oppressing none, cringing before none.

On the Pacific Coast we have no economic asset more valuable than the good will of China and Japan. It cannot be denied that great dangers lie in our relations with the Orient. There is danger for us in China. There will always be danger so long as China is regarded by other nations as a region to be exploited and her people a race without national rights of its own. But the advantages of our relations with these countries are also great. It is foolish for us to alienate their good will. Fair play is cheaper and more effective than bullying. "It is a bad policy," as Franklin observed, "in trading to knock your customer on the head." There is no room in dealing with these questions for snap-judgment, mass meetings, emotionalism of any sort. Agitation can do little but mischief. The matter is, moreover, not one to be settled by the people of San Francisco or of California alone, but by the whole United States. If the end in view is to keep California a "white man's country," we must grant to other nations certain exclusive privileges of their own. The open doors of world politics swing

both ways. We cannot grow rich with Asiatic trade unless we do our part to enrich Asia.

Any sort of exclusion act is an evil. It may be the lesser evil, but if we choose by such means to guard ourselves against the dangers of the situation, we should not make the acts offensive to those we do not need to exclude. We ought to give our neighbors a chance to "save their face." In my judgment exclusion of Chinese from the Philippines is a greater factor in the present bitter feeling toward America than exclusion from California.

I do not favor the admission of Japanese laborers into this country, if we can amicably arrange to keep them out. But friction with Japan is a more serious matter than the presence of a few thousand industrious Japanese. Japanese officials have freely expressed their willingness to meet us half way in this regard, if our wishes are made known diplomatically and courteously. The Japanese government has for a number of years rigidly prohibited the emigration of Japanese laborers to the United States. That they have come to us from Hawaii is a matter over which Japan has no control, nor does the small number who come in this way affect the situation much.

On the other hand, we ourselves have no means of checking the entrance of the Japanese except by mutual agreement with Japan. Japan is a nation of the first class, and we can no more turn the Chinese exclusion act against her than we could against France or Germany.

A Japanese friend writes thus to me regarding the attitude of his nation:

> The remedy against immigration of lower-class Japanese is to be sought in coming to a diplomatic understanding in the matter and by eliminating the objectionable features. The Japanese Government without doubt would be open to reason. But to pass a law condemning the Japanese wholesale, for no other reason than that they are Japanese, would be striking a blow at Japan at her most sensitive point. The unfriendly act would be felt more keenly than anything else conceivable. An open declaration of war would not be resented as much. The reason is not far to seek. Japan has had a long struggle in recovering her rights as an independent state and of obtaining a standing in the civilized world. If now her old friend, almost responsible for starting her in this career, should turn her back on her and say she will no longer associate with her on even terms, the resentment must necessarily be very bitter. The entire loss of prestige in Japan may not seem much to Americans. In the Far East there will be stupendous convulsions from which great nations like America cannot keep themselves clear; and in such crises those with community of interests should not misunderstand each other.

These words are worthy of the serious consideration of the American people.

PALO ALTO, CALIFORNIA.

A Glimpse of the Goal

BY O. C. AURINGER

ALL things in springs of spirit have their rise,
  All things in gulfs of spirit find their close;
  And onward the great stream of magic flows,
And every murmuring runnel forward flies
To swell the mightier marvel and surprise;
  Our lives are shadows which the spirit throws
  On undulating gardens flushed with rose,
The happy world o'er which the great lights rise.
And time shall be when greeting face to face,
  No longer shall our eyes as now behold
  Mere form and color and opacity,
But spirits postured in their native grace;
When, tongues fallen useless while the worlds waxed old,
Soul unto soul shall speak immediately.

GRANT, N. Y.

Men We Are Watching

BY A WASHINGTON JOURNALIST

[A journalist sees official life as it is; not always as it is thought to be. Intimacy with small men often develops features of greatness. Intimacy with great men sometimes reduces their proportions. Now, at the opening of Congress, when the eyes of the whole country are turned toward the Capital City, these intimate sketches of the men of the week should prove to be especially interesting.—EDITOR.]

The Secretary of the Navy

WE are watching Secretary Bonaparte. It is not because as Secretary of the Navy he needs watching. There have been few there who would have been more safely let alone. No one is overanxious as to what he does about ships, and he has proved to his bureau officials that he proposes to do as it pleases him. And the best ships are not his specialty.

It is all because he is about to quit the sea and slip into the Attorney-General's shoes. It is the magnates and mergers, the big trusts which try to pass Uncle Sam's law office in the night, that will soon be dodging his searchlight, and that are setting the fashion of watching out to see what manner of man the new Attorney-General bids fair to be. For law—so far as profound learning is concerned—is his specialty. He has never done much at it in a practical way, having been occupied with his private affairs, but he is a giant of industry and a genius for detail. It all depends upon what he purposes, what he will perform. That is what the magnates are trying to discover. But few there be who by searching are more difficult to find out than this same Bonaparte of Baltimore.

THE NEW ATTORNEY-GENERAL.

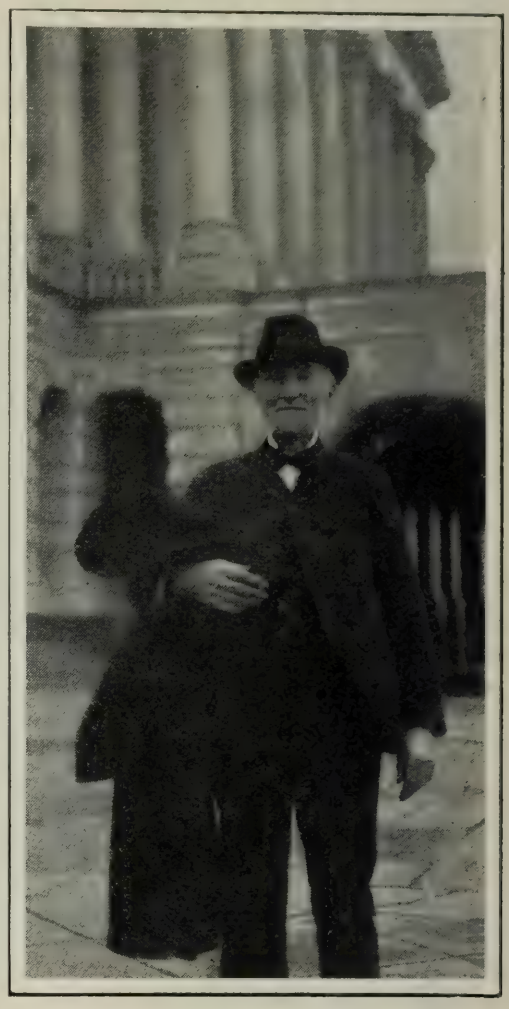
He is a small man—most great men are small men—with the heart of a Plymouth Rock Yankee and the head and neck of the kings whence he sprang. When one meets him for the first time one sees, on the instant, only that bullet-round head, mostly forehead, bald enough to make it bold; then one notes a dominant nose and full eyes, fenced in by heavy eyebrows, and a short, stubby mustache over a sensitively retiring chin—with a little dimple in it—retiring into an increasingly aggressive second chin below. By that time one notes a smile—the prodigiously perplexing, confusing, confounding peculiarity of our Bonaparte.

It starts at the eyes, drops to one corner of the mouth, is passed along to the other corner, scintillates in the dimple, then becomes audible in a queer kind of chuckle, down in the throat, which shakes the double chin. When it comes to that, look out! It is what is behind that smile which no fellow can find out, till he discovers, later, how badly he is hurt. Be it bane or blessing, pain or pleasure, commendation or condemnation that is coming, the smile always comes along with it, and the chuckle that shakes the double chin frequently means that the feather is about to cut your throat. Those who put faith in that smile as indicative that they are "right side up with care" are not wise. It is simply an emotion hider, and it ef-

fectively hides all kinds of emotions. Secretary Bonaparte is an inherent aristocrat. He cannot do a rude thing rudely unless you insist upon it; but if you are not satisfied with the feather business and answer back, you'll find an adept at cynicism and sarcasm, and even a backwoodsman with a brute of an ax, if you require it.

A more delightfully courteous man could hardly be found, but, born of kings, he was born to command. He does his own thinking, and a very lucid article, by the way, his mental machinery turns out, barbed with wit and bladed with ivory when his ire is roused.

While he was growing, in Maryland, he had many a struggle with himself and with both parties before he discovered whether he was Democrat or Republican. Only after McKinley's first campaign did he begin to cleave more to one and slash more at the other and so convince himself where he was at.



He is a strong supporter of Civil Service reform and a fierce antagonist of graft and spoils. He used to assail "Bossism," too, and mercilessly. But if ever on earth there was a political boss, Bonaparte today is Republican boss of Maryland. Goodness knows what he would do to any one who said so, for he hates the word; but he is, nevertheless.

He has said that he would rather be Attorney-General than President, and being the aristocrat he is, with an inherent hatred for the vulgarity of greedy rich, we might risk something on the guess that when he comes into his own he will prove at least no less a terror to the trusts than the retiring Moody.

The Speaker of the House

The world is watching Uncle Joe because he knows, and when he is good and ready he may tell. We watched for his speech out at Danville, accepting renomination. There were a lot of words in it but there was no news. We've watched interview after interview from the homespun plutocrat since then, and they were all like his reply to the sub-committee of the Appropriations Committee who asked his advice as to what to do about simplified spelling. "Spelling?" he said. "I don't bother myself about spelling, one way or the other. I leave all that to my stenographer."

Papa Cannon stops at what he calls "a little hole in the wall," for ten cents' worth of coffee and egg sandwich, then with a big black cigar tipped upward he goes into the White House and talks for an hour with the President and comes out to meet a bevy of reporters who have been watching and waiting. He orders up a grim kind of smile at one corner of his mouth while he smokes with the other corner, and from somewhere along in the middle he answers the anxious questions with the statement that he has been telling the President about his prowess as a sportsman out in Indiana, when he walked his host, Senator Hemenway, fairly off his legs, kept right up with the dogs, got five quail out of thirty-five shots and an appetite which took in a bagful which Hemenway got, besides his own five.

THE SPEAKER.

Cannon looks a little—not much—like Lincoln. He acts more like Lincoln. He fosters the idea, for he has no little pride in being considered Lincoln's equal. You'd never dream, to see him, that he

was a millionaire. It is true, however, and just as true that no one bothers him about "where he got it"; for all who know, know that his brother Bill, who died four or five years ago, was a born financier and did the queer things all by his lone, going halves with Joe, who did politics for the family. The history of the two brothers, from Guilford, N. C., thru Tuscola to Danville, Ill., is a story.

Only one thing everyone must know of Speaker Cannon—any one who ever saw him facing overanxious members or eager reporters—and that is that he is a stand-patter. It speaks without a word from every angle. For the rest who knows? We should all like to know, for the whole country lies, practically, in the hollow of Papa Cannon's hand.

As a general thing it is safe there—as safe as it would be anywhere—for he has no more personal axes to grind than anyone else; but those who object to one-man power should see the way the Speaker of the House manipulates legislation. He is not very fond of the Senate and rather delights in holding up Senate bills in House Committees until the Senate does other things which he wants it to; as witness the Ship Subsidy bill which passed the Senate almost unanimously last February and has never come out of the House Committee to which it was referred. Ask the Speaker about it as he sits with his hands in his pockets, smoking, in his room at the Capitol, and he will roll the big black cigar to one side, smile with the other side and from between he will say that he has nothing to do with it. It is in the hands of the committee. It is quite true, only he looked out, in advance, that there should be on that committee a majority who were opposed to the bill. At the other end of the Capitol they say he is trying to force the Senate to act on the Philippine tariff bill.

If that is it he will succeed. He always does. He is Papa Cannon.

The Incendiary Senator

The world is watching Tillman—Tillman the Terrible—and wondering most unnecessary things, all because it has been sprinkled with sparks from the firebrand he has been flourishing. But Tillman is not so bad—so awfully, awful bad. He is only two-sided. Not two-faced! Far from it. He is a six-footer and a two-hundred-plus pounder, and every inch and pound of him is as honest as pure gold.

For that matter, everything has two sides. There are never two right sides, but there's always a right side and a wrong side. It's the wrong side of Tillman that swings the firebrand and the pitchfork. It's the right side that his colleagues in the Senate have learned to love—just so far as his crotchety nature

SENATOR TILLMAN IN REPOSE.

will allow—and to respect, whether he will or no.

The firebrand is stock in trade. He swings it on the platform to crowded houses. He earned $25,000 lecturing last summer, beside which his Senatorial salary isn't an inch high. And the queer thing about it is that the demand for his lectures all comes from the North. Southern towns do not send for him and crowd halls for him except when there is stumping going on. It is Michigan, Illinois—even New England—where he

draws according to the intemperate radicalism he proclaims.

More and more he has abandoned that kind of thing in the Senate, except when some one begins to play the tricks on him which Chandler used to play, and gets him to swinging his firebrand and twanging the tines of his pitchfork before he knows it. And when he realizes where he is at he shows his chagrin by flinging himself all of a heap into his chair, hurling one leg across the other, digging his chin into his collar, and twirling his glasses on their string like a slingshot.

SENATOR TILLMAN IN ACTION.

Tillman has rare and attractive qualities, which won the confidence and admiration of the scholarly Hoar and captured the lifelong friendship of William E. Chandler. The opening day of the session there was not a member more cordially and universally greeted. Within his intellectual limits—and they are by no means contracted—he is a clean, broad, potent statesman There have been bigger men in the Senate, but few of Tillman's honesty of purpose and indomitable courage.

The race question is his fad. Other people have fads. He believes what he says—in a way. That is, he believes what he means to say; what he tries to say; but his incendiary tantrums are reserved for the North because the North so evidently enjoys them.

You should see Senator Tillman under his Virginia felt walking down the avenue beside the proud little wife he calls "Mother." Better still, you should see him at his plantation home among his children. One who only knows him by report of what he has said about negroes will be surprised to find there a devoted black, who, for a quarter of a century, has not only had charge of the plantation, but of the Senator's family when he comes alone to Washington; yet more to learn of the thoughtful, generous care which Tillman takes, not only of his own people, but of a great many dependent negro families in the neighborhood.

He is not a handsome man. The loss of one eye did not help matters, nor does his habit of constantly screwing his face into all kinds of contortions. He is left-handed, physically and mentally. He knows what he *wants* to say, and those who know him know pretty well what he *means;* but they both know that he never really says it. But "England, with all thy faults, I love thee still," and South Carolina does well by her sisters when she sends Ben Tillman to the front.

He said the other day that out in Chicago he felt like a lion in a den of Daniels, but those who tried to suppress him thought that they understood better than before what Hearst meant when he talked of swimming up Niagara Falls. Suppress Ben Tillman!

WASHINGTON, D. C.

Editorials

Our Preacher President

Of all rulers Theodore Roosevelt would be unique as a preacher if it were not for the similar homiletic passion of the Emperor William. The German Emperor preaches his sermons on Sunday to the seamen on his yacht, and publishes them to his people in a book; but President Roosevelt addresses his to Congress, and all the newspapers print them. And who will deny that the world is growing better when his hortations are received not only with respect, but it is regarded as perfectly proper and right that he should turn aside from his constitutional duty of advising Congress as to legislation and should address the people as a whole as to what they should feel and do?

Thus he gives a large portion of his message to the crime of lynching. Certainly we need preaching on that subject, for it is the one sin of our people, which more than any other characterizes us and dishonors us before the world. As to the folly and wickedness of lynching he quotes two Southern Governors and a Southern bishop, shows how the crime exasperates race feeling, says that all men, whatever their race or color, should be treated with even-handed justice, tells what colored men should do about their criminals, and how white people should recognize the fact of the deterioration in the moral nature of those who take part in or approve the torture of their fellow beings. Then he turns to the correction of the evil of lynching, not by law, but by education, and shows how the South ought to take pains to educate the negroes as well as the white youth, and how education will more than anything else prevent the crimes which are the excuse for lynching. Here he makes one assertion, the truth of which is not so obvious as all the rest of his excellent sermon. He says:

"Of course, the best type of education for the colored man, taken as a whole, is such education as is conferred by such schools as Hampton and Tuskegee, where the boys and girls, the young men and young women, are trained industrially as well as in the ordinary public school branches."

It is that clause "as a whole" which saves it. That kind of education is no better for the colored man than for the white man. It is well for both races to have industrial education given with the lower grades, and there are properly higher technical institutions which are equally industrial. But just as President Roosevelt does not send his children to industrial schools for whites of the type of Hampton and Tuskegee, so colleges like Harvard or Yale or, to speak of the higher negro colleges, Howard and Fisk and Atlanta are better for those colored youth who can go to them, because they go beyond the lower grades of instruction.

That all this is preaching, and very good preaching, appears in the fact that the President gives no recommendation to Congress as to legislation. All he says about enactments is his "judgment" as to what States should do in making rape punishable by death. But with that Congress has nothing to do, scarce even in the few remaining Territories.

Equally the President gives us an excellent sermon on marriage and divorce. To be sure he says that, in his opinion, this matter ought to belong to Congress, but recognizing the difficulty, and doubtless impossibility, of securing a constitutional amendment, he contents himself with speaking strongly, not only of the evil of divorce and the importance of pure homes, but he talks to the people, not to Congress, on the wrong of "wilful sterility," which he thus describes:

"The one sin for which the penalty is national death, race death; a sin for which there is no atonement; a sin which is the more dreadful exactly in proportion as the men and women guilty thereof are in other respects, in character, in bodily and mental powers, those whom for the sake of the State it would be well to see the fathers and mothers of many healthy children, well brought up in homes made happy by their presence. No man, no woman can shirk the primary duties of life, whether for love of ease and pleasure or for any other cause, and retain his or her self respect."

That is sound preaching, and needed.

Equally a lesson in morality is what the President has to say definitely on international ethics, and especially on our treatment of Japanese and other foreigners. They should all be treated alike, in accordance with their behavior and not their race or color. The hostility to the Japanese he says truly is only sporadic, but it is most discreditable to us. This could not have been plainer or truer:

"Here and there a most unworthy feeling has manifested itself toward the Japanese—the feeling that has been shown in shutting them out from the common schools in San Francisco, and in mutterings against them in one or two other places, because of their efficiency as workers. To shut them out from the public schools is a wicked absurdity, when there are no first class colleges in the land, including the universities and colleges of California, which do not gladly welcome Japanese students, and on which Japanese students do not reflect credit."

Because "good manners should be international," he begs the States to deal wisely and fairly in this matter; for Congress, tho he does not say so, can do very little under our somewhat obsolescent Constitution. All he asks is that we pass a law allowing the naturalization of Japanese who wish to become American citizens. The present ruling under our laws which forbids their naturalization is absurd and insulting and wicked.

Another topic which calls for a sermon is "Peace and Righteousness." Under this topic he speaks of the approaching Hague Conference and also of the necessity of avoiding war in every possible way, while yet protecting the rights of our citizens. To the surprise of many he does not ask for any enlarged navy. He simply desires that single battleships be built as those longer in commission become antiquated and comparatively useless. Whether single ships, differing in type with each new improvement, are wise in these days when, even in naval conflicts, so much depends on "team play," we leave at present to naval experts; but the purpose of the President to avoid extravagant expenditure and to depend mainly on justice in international diplomacy, is absolutely ethical and wise.

And the great sermon ends, as good sermons should, with an optimistic peroration, in the form of a quotation from Secretary Root, on the Hope of Humanity, the grandeur of the union of all nations in the coming Hague Conference, and the hope that "the weakest and most unfortunate of our republics may come to march with equal step by the side of the stronger and more fortunate."

President Roosevelt's Message is not a bit the worse for being more of a sermon than a message. It does not ask very much legislation of Congress, but it tells the American people what is their duty—and the people are back of their Congress.

Mr. Roosevelt's New Tax Plans

In the President's long message, the tariff and excise taxes which yield nine-tenths of our national revenue are mentioned only once:

"The National Government has long derived its chief revenue from a tariff on imports and from an internal or excise tax. In addition to these, there is every reason why, when next our system of taxation is revised, the National Government should impose a graduated inheritance tax, and, if possible, a graduated income tax."

There ought to be a Federal income tax, and inheritances should be taxed by the State or the nation. It is only guesswork to estimate how much such taxes would yield, if both should be imposed by Federal authority, but the total might easily be from $200,000,000 to $300,000,000. Would Mr. Roosevelt have them levied "in addition to these" other taxes, which yielded $550,000,000 last year? Probably not.

Here lies a part of the meaning of his proposition, which some may have overlooked. Present Federal taxes are more than sufficient to supply the Government's needs. An addition of $200,000,000 or more would encourage extravagance. The President does not propose the new taxes on the ground that they are needed for revenue, but in order that "the burden of supporting the Government may be distributed more equitably." Therefore we must think that he has in mind a substitution of the new taxes in part for old ones—in other words, a sharp reduction of the tariff and an enlargement of the free list.

This would be a more equitable dis-

tribution of the burden. But legislation for the new taxes, because it involves reduction of the old ones, will be opposed by many advocates of high protection, and the inheritance tax will probably find no favor with the representatives in Congress of those States in which such a tax is now collected. States will not readily give up this source of revenue.

Mr. Roosevelt points to the fact that there was a majority of only one in the Supreme Court against the income tax law of 1894. Even now, such a law might be sustained in the same court. A year or two hence it may be possible to obtain a favorable decision there. He is so confident that public opinion demands such a tax that he says: "There will ultimately be no alternative to a constitutional amendment" if attempts to establish the tax without it shall fail. The attempts will be made and will be approved by a great majority of the American people.

The prime object of the proposed inheritance tax should be, he says, "to put a constantly increasing burden on the inheritance of those swollen fortunes which it is certainly of no benefit to this country to perpetuate." He has been seeking in other ways to prevent the accumulation or the enlargement of swollen fortunes by dishonest and unlawful practices. But enormous fortunes built up by such practices exist, are growing, and are used to the injury of the public. He would now attack them, so to speak, at the other end.

In his remarks about the proposed inheritance tax and the purpose of it, he does not say that the swollen fortunes in question have been wrongfully acquired. But the history of his projects of legislation, of the investigations made by his Commissioner of Corporations, and of the work of the Department of Justice under his direction, furnishes abundant evidence that a large majority of the very great fortunes have been acquired by violation or evasion of law, by the corrruption of legislators, and in other wicked ways. No one knows this better than he. For proof, one need not look beyond the suits brought by his direction and the scores of indictments found by grand juries upon information furnished by his trusted subordinates.

Popular support of a graduated and cumulative inheritance tax will be due mainly to a popular belief that a majority of the enormous fortunes in evidence today have been obtained dishonestly or unjustly, partly by violation of law, partly by evasion of law under the guidance of those "astute attorneys" whom the President has frequently denounced. A great majority of our people do not hate the rich because they are rich. They are not hostile to millionaires who acquired their wealth fairly and are making a good use of it. It is the fortunes that have been made by manipulation of trust funds, the corruption of Legislatures and municipal Councils, the stealing of land, the oppression and ruin of weak competitors, the taking of unlawful rebates, and such rascality as was disclosed by the recent railway investigation at Salt Lake City, that they regard with indignation and would be glad to reduce by taxation or any other lawful method of attack.

It is at the unlawful or unjust acquisition of wealth that many of the President's recommendations are aimed—especially those for the regulation of railway rates and methods, for the supervision of great industrial corporations doing an interstate business, and for an amendment of the Sherman act which will permit railways (under official supervision) to make and to maintain lawfully those traffic agreements which now exist in violation of that statute. If all this marks a rapid development of national or centralized power, it is a development required by the conditions of these times. In the interest of the whole people certain work should be done. It cannot be done by the States. No power is available for it except that of the Federal Government.

The Functions of the Banquet

THIS is the season when co-operative mastication is most in vogue. Family reunions are brought about under the pretext of satisfying the hunger; the triumphs and misfortunes of our ancestors are memorialized by eating, and moral causes and mining stock promoted in the same manner. Men who come from the same State come together for a meal, and

men who weigh too much add to their weight by a simultaneous effort. The Society for the Relief of the Starving Russians meets for the purpose of collectively spoiling enough costly food to satisfy the hunger of a village of mujiks. As soon as it becomes known that a man has plenty to eat at home he is invited out. The richer he is the more free dinners he gets.

Some speculative philosophers have ventured to predict that as mankind became more civilized eating, like all the other bodily functions, would be performed in private. There are no indications of progress in that direction at present visible. The communal meal was never so popular since it has been unnecessary. It has become a ceremonial, and when an institution becomes a ceremonial it is fastened on humanity forever. Ceremonials are customs that have outlived their usefulness, and have therefore become indispensable. They are former necessities of life that have become so common as to be luxuries.

The banquet had its origin in the early but not the earliest stages of human life, the period in which one of our popular novelists finds his heroes and heroines. So long as man lived on casual meals snatched from bushes and trees, there was no reason for communal eating. And when he robbed a bird's nest or caught a fish in his hands, his altruistic impulses were not aroused. He hid in the bushes to eat, or at the best shared his prize with his mate and offspring. But when he had risen to the triumph of catching a deer in a grapevine entanglement, he could, for the first time in the history of the world, afford to be generous. He had no cold storage warehouse and preservaline had not been invented. The only way to save the meat was to eat it, and, as he could not do that alone, he called in the neighboring troglodytes to share it with him.

The eating bee thus originated prevails to this day, retaining vestiges of its primitive signification. The barbecued pig or ox being more than one family could dispose of became an excuse for getting together a crowd. Any family can finish a chicken, but the sacrifice of so large a bird as a goose or a turkey involves such a train of left-overs that the host is willing to extend his hospitality. If our dinner invitations retained their original meaning we would have engraved upon them: "We are going to have more than we can eat at our house on such a day, and you can have some if you come."

The dinner invitation is, of course, a polite fiction. The meal is merely an excuse, superfluous but indispensable. Certain people want to get together or the host wants to get them together, and the only practical way is to give them a dinner. We have been made so wary of each other by the exigencies of our civilization that to get acquainted with a man you have to stalk him as you would a deer. You cannot approach a stranger and say to him, "You seem to be my kind of a man. I think it would be to our mutual advantage to become acquainted." That would be altogether too blunt and presumptuous. The more modest and diplomatic way is to assume that you have no more in common than a dependence upon food, and say to him: "I have to eat and you have to eat. Let us eat together. Possibly between mouthfuls we may indulge in a little casual but profitable conversation." By this subterfuge his natural suspicion is disarmed and you sidle up to each other while ostensibly looking in another direction. Head-on collisions are avoided in good society. By mutually agreeing to adopt some such fictitious objective as a dinner, people can travel on converging lines and gradually approach one another.

We can endure human beings best when they are stuffed. The object of putting a heavy banquet before the speeches is to get the guests in a comatose state, so they will not be bored, or, if they are, they will not know it. When a man has eaten until he can eat no more, he will swallow anything. Food does not stimulate the mind. It withdraws blood from the brain, rendering one dull. To still further stupefy the gorged subjects, narcotics, such as tobacco and alcohol, are used, until it is safe for the speakers to begin. It used to be the custom, as the Gospel according to John bears witness, to palm off poor wine on the guests at a marriage feast when they

were too far gone to know the difference. Nowadays we palm off poor stories when the banqueters are in an uncritical state. The hungry man is critical. You cannot catch him with old jokes and please him with platitudes. His wits are sharpened by his empty stomach. Fill it and he is tamed. The most successful after-dinner speakers eat sparingly and drink nothing. This gives them an advantage over their auditors, who are busy digesting while they are speaking, so anything they say sounds brilliant and plausible. Read the speeches you applauded last night in the morning's paper, when your brain is freshened by sleep, and see what they amount to.

Thus the common meal, while losing its original purpose, has acquired new functions, and as a means of reuniting reluctant relatives, of promoting acquaintance and of securing a patient hearing for any and all causes, it is a useful piece of social mechanism.

The Social Unrest as Archbishop Ireland Sees It

While it may be true that Roman Catholic members of the working class in America have long since ceased to take their economic and political philosophy from their Church, it is also true that they are by no means ready to act in apparent defiance of the Church's admonitions. There has been a great deal of quiet sizing up of one another's strength by the authorities of the Church on the one hand, and the laity on the other hand, in respect of these practical matters. Neither side has cared to provoke the other into an explicit statement of principles.

Archbishop Ireland has long been regarded as an exceptionally progressive prelate, and in some quarters with suspicion, as a man who easily might go too far. His Americanism has been of a rather vigorous sort, and he has sympathetically given countenance to a good many of the plans and undertakings of organized labor.

When, therefore, the Archbishop puts forth, as he did the other day, a carefully worded statement on the social unrest, in which he warns his readers against tendencies which he regards as subversive of social order, his words have significance.

As would be expected, the statement consists in part of excellent advice of a purely moral sort, good as rhetoric and wholly inoffensive in substance of doctrine. To the poor man the Archbishop preaches ambition and energy and careful respect for the rights of others. To the rich he preaches justice and charity, with avoidance of "senseless extravagance," and of "mere reckless ostentation." People who clothe "dogs and horses in purple and fine linen and feed them from golden platters" he thinks may be described as "enemies of the country."

In addition to this general instruction the Archbishop expresses himself upon two specific questions with positive conviction. One is that of the right of the non-union workman to labor; the other is that of public ownership.

In the Archbishop's view the workman who, refusing his own labor, deters by violence a brother workman, is an enemy of public order. On this question all reasonable and law-abiding men will certainly agree with the Archbishop as far as he goes. Violence in the interest of organized labor cannot be tolerated. But there is a deeper question, which the Archbishop does not answer. Granting that violence is intolerable, how far may we accede to the contention of the trade-unionists that in the struggle of labor against capitalism it is the duty of every workingman to join the organized forces and loyally support them? Can we concede that the laborer who refuses to join the union is an unsocial man, hostile to the interests of his class and, therefore, a provoker of enmity and strife? The Archbishop had a wonderfully good opportunity to answer these two questions, and a clean cut answer to them from a Roman Catholic authority would have been interesting.

On the subject of property the Archbishop stands for individualistic and conservative principles. Private property, "sacred and inviolable," he regards as the corner stone of the social structure. Inequality in the holding of private property "is inevitable." Coming to the very kernel of the matter, he says:

"A chief panacea put before us is common ownership, thru city, State and nation, of the chief agencies of productivity and of transportation, hither and thither, of the results of this productivity. Let all be on their guard. Common ownership in one direction leads readily to common ownership in another—all the more so when the purpose really held in mind is to grasp wealth without much personal effort, to despoil others to make up for one's own deficiencies."

Possibly this is the most indicative utterance that has yet come from any important quarter, on this issue of public ownership, apart from the Papal condemnation of Socialism. Obviously the most liberally minded of Archbishops thinks it well to proclaim that, while public ownership may not be essentially evil, it is dangerous in tendency, and to be looked upon much like moderate drinking. Evidently he wishes the followers of the Church to fear, if they do not see, that no clear line can be drawn between a public ownership that might be permissible and a collectivity which had no other object than to despoil the rich for the betterment of the poor.

It will be interesting to keep this incident in mind, and one of these days to observe just how many years it has by that time taken the Church to perceive distinctions that are not obvious to it now.

A National Child-Labor Law

THERE is much to be said for Senator Beveridge's bill aimed at child labor. It will not, it is true, if enacted into law, directly reach all, or even the worst cases of child exploitation. But if it puts a stop to the practices of the greatest and most powerful offenders, it will tend to make them in turn the advocates of further measures setting more rigorous bounds to this great evil. Those who are prohibited from making use of the cheap labor of children will, of course, feel the competition of those whom a Federal law cannot reach; and we may have before long the instructive spectacle of Georgia manufacturers and Pennsylvania mine-owners exerting their utmost efforts before their State Legislatures in behalf of the abolition of child labor.

The bill forbids carriers to accept for interstate transportation the products of factories or mines which employ children under fourteen years of age, when such products are offered by the establishments themselves or by any of their agents. It furthermore forbids the acceptance of products for such transportation from factories or mines which have not filed affidavits attesting a full compliance with the law. The form of these affidavits is to be prescribed by the Secretary of the Department of Commerce and Labor. Penalties for violations are provided of not more than $10,000 nor less than $1,000 fine, or imprisonment of not more than six months nor less than one month, with approximately double penalties for making false statements in the affidavits required.

Jobbers who ship child-made goods are beyond the provisions of the bill. A carrier of interstate commerce may freely transport for them goods made in the worst of factories. Sweatshops and other child-exploiting establishments that serve only a local demand are also immune. Nor does the bill touch the department stores. But if made a law and honestly enforced, it would do much toward stamping out child labor in the Southern cotton mills, the New Jersey glass works, the Pennsylvania and West Virginia mines, and the various textile factories of Rhode Island and Maine. Who shall say that when such powerful interests, which for so many years have held the Legislatures of their States in so unyielding a grip, are prevented from utilizing this source of profit to the same extent as of old, they will not bend their energies toward placing all other child-robbers on the same level with themselves?

The threatened manufacturers might conceivably make but a show of resistance to the bill, intending, should it be passed, to evade its provisions by selling their product outright to local jobbers. But nothing is more unlikely. They will assuredly fight the bill with every resource at hand. They will have the effective aid of the "constitutional" Representatives and Senators—those Johnsonian patriots whose first as well as last argument against a truly democratic measure is invariably its unconstitutionality. One may anticipate, some months in advance, the inevitable adverse argu-

ments. All of these patriots will nobly uphold the cause of the children. In hackneyed metaphor, their tears will be shed, their hearts will bleed, for the enslaved little ones. All good men, they will piously avow, should resolutely antagonize this withering blight, this deadly curse, of child labor. But—and here come into play the well-worn conventional demurrers. We should not go too fast, etc. We should beware of doing the little ones more harm than good by ill-advised legislation, etc. We should always bear in mind the wise provisions of the Constitution, etc. And with the keenest disappointment, the most tearful regret, they will find that the Constitution does not permit this particular measure. Mr. Beveridge no doubt allows for all this, but expects, despite it, a majority over the "Constitutionalists."

The child labor evil has grown to such dimensions that it must be met, and soon. The quinquennial census of 1905 shows an inappreciable reduction in the number of child workers in manufactures from the census of 1900, but each of the States wherein the evil is particularly conspicuous—Alabama, Georgia, New Jersey, North Carolina, Pennsylvania, Rhode Island and South Carolina—shows increases. These increases are believed by investigation in this field to be larger than the census indicates. The Rev. A. J. McKelway, assistant secretary of the National Child Labor Committee, estimated a year ago that there were 60,000 children under fourteen years of age in the Southern mills. The recent Pennsylvania law prohibiting the employment of children under fourteen is virtually inoperative, and Mr. Owen R. Lovejoy estimates that from 9,000 to 10,000 such children are employed about the mines and breakers of the anthracite region. Glass works, department stores and textile and canning factories are still demanding their yearly tribute of thousands of these little lives, and the tribute is paid with hardly a demur. It would sometimes seem as if the exploiters of children, apprehensive of some imminent prohibition of their crime, have resolved to avail themselves to the utmost of its rewards while their license lasts. The living force of the American people is being pulled up by the roots. But while profits can be reaped, while dollars can be made, what matters it? Let us hope that the passage of Senator Beveridge's bill may supply the answer.

The Education Bill in the House of Lords

Dr. Brown, the successor of Dr. Harris as Commissioner of Education, has just issued the first number of the "Bulletin" of the office for the current year, and announces other numbers to follow at intervals, all dealing with matters of timely interest to officers, teachers and students of education.

This first number of the series treats of the English Education Bill as it passed the House of Commons, now being hotly debated and so amended in the House of Lords as surely to defeat its purpose. The main objects proposed by the bill are briefly summarized on the first page of the "Bulletin" and their full significance set forth by extended citations from speeches delivered in the House of Commons during the three months' discussion of the measure. Thus the controversy between Liberals and Conservatives over the main question appears complicated by the demands of the Nationalists, who in this matter stand for the Roman Catholic ideal, and those of the Labor party, whose call is for secular schools. The fundamental principle of the measure, namely, that popular control shall follow the public tax, was so insistently maintained thruout the contest in the House that it seems certain no compromise on this point is possible. This result, as pointed out in the speech cited from Mr. Birrell in support of his measure, was plainly foreseen in 1902, when the Balfour Act brought the denominational schools upon the rates without control by the local authorities, and excited thereby the remarkable movement of passive resistance which culminated in the present Liberal majority in the House of Commons.

Clause 1 provides:

"After the 1st of January, 1908, every school supported by public taxes is to be under the control of the local authorities. . . .

"So far as the public provision of religious teaching is concerned, the simple Scripture lesson, the famous 'Cowper-Temple' teaching allowed by the law of 1870 in board schools, is to be the universal system."

Further, all religious tests for teachers in schools provided by the local authorities are abolished, and thus some 18,000 positions hitherto closed to Nonconformists will be opened to their candidacy.

The principle thus laid down, and the equality which it establishes, seems so essential to the American mind that the concessions with which it is accompanied would be to us intelligible apart from that long sweep of educational history briefly summarized in the "Bulletin."

The British and Foreign School Society, undenominational, but deeply religious, and the National Society of the Church of England organized popular education in England, won the support of great statesmen, and secured Government grants for the cause before public schools were thought of. The Act of 1870 created board schools to supplement these agencies, which vainly strove to meet the demands of increasing city populations and the pressure of industrial competitions. When the Act was passed no one foresaw the phenomenal progress of the board schools. Supported by municipal taxes and responsive to municipal demands, within thirty years the board schools so far exceeded the denominational schools in all conditions of efficiency that the difference had become a national calamity. The placing of the denominational schools upon the rates by the Balfour Act of 1902 was a counsel of despair, but, in the opinion of so pronounced an opponent of that measure as Dr. Macnamara, it swept "away once and for all the dangerous anachronism of endeavoring in part to maintain the education of more than half the children attending the elementary schools out of voluntary contributions." In the light of those early and persistent efforts on the part of the Church, and the sentiments which they have inspired, must be estimated the special arrangements for denominational teaching, the so-called "facilities" which have imperiled the ultimate fate of the present bill. The special forms of religious teaching are to be allowed only in "voluntary schools" transferred to the local authorities, and are "not to be given at public expense, nor during the recognized school hours, nor by the regular teachers, excepting in special cases coming under the 'extended facilities clause.'"

The latter clause, with the "contracting-out" scheme by which, under certain conditions, a denominational school may share in the Government grant as a private school, was the storm-center of debate in the House of Commons. Intended professedly to meet the demands of the Roman Catholics, the extended facilities are denounced by the Church of England as an unjust discrimination against its own schools, and by the Liberals as a departure from the vital principle of the measure. Only strict party discipline carried the concession, which in the end lost the vote of the Irish party because their full demands, as voiced by Mr. Redmond, were not met.

In schools where denominational teaching is allowed the rights of Dissenting parents are protected under this bill by what Mr. Birrell termed a "perfected conscience clause." For the first time in the history of English popular education, a parent may cause his child to be absent altogether from school until after the religious lesson has been given. This clause was carried by only 47 votes, while the proposition to secularize the schools was lost by a majority of 414 votes, swelled by accessions from every party in the House.

Apart from the two pivotal points, *i. e.*, popular control and the religious question, the bill deals mainly with the problem of local school administration, and with what Mr. Balfour termed "a constitutional change of the utmost gravity and moment," the Council which secures to Wales independent control of its school affairs.

A significant sign of the social changes which England is undergoing is found in the fact that this bill, forced upon Parliament by political and sectarian controversies, touches also the higher realm of educational ideals. The influence of the Labor party is seen in the provision of vacation schools and play centers, of medical inspection for schools, and of means for prolonging the school training of the humbler classes. These re-

forms, which, in the opinion of Mr. Asquith, Chancellor of the Exchequer, "are worth all the rest of the bill," are impressive signs of a new and as yet unmeasured power in Parliament.

But the Lords will have none of the bill. They have amended so as to leave little but the title. The House of Commons will not accept the amendments, and no compromise is likely. This raises more radically the serious question whether the House of Lords shall be mended or ended.

Stretching the Constitution

It is somewhat new to have it laid down by a President in his Message that the powers given to the National Government are so limited under the Constitution that they should be stretched to the utmost for beneficial purposes. Thus he says, speaking of industrial training:

"Under the Constitution the National Legislature can do but little of direct importance for his welfare save where he is engaged in work which permits it to act under the Interstate Commerce clause of the Constitution; and this is one reason why I so earnestly hope that both the legislative and judicial branches of the Government will construe this clause of the Constitution in the broadest possible manner."

We have been obliged in various ways to interpret the Constitution "in the broadest possible manner," understanding that the preservation of the Republic and the benefit of the people are of more importance than holding to letter. But this very frank utterance suggests to us necessarily that there are evils in a written constitution which do not concern a people, like Great Britain, which have none. Perhaps we shall, before many decades, cease to idealize our Constitution as we now do. Before the United States and Canada, for example, become one nation, it will probably be necessary completely to reconstruct our organic law. The process of amending our Constitution is very difficult, while the British can amend theirs any day. Accordingly we have to amend ours chiefly by interpretations by the Supreme Court; or we invent methods, like interstate commerce laws, to get around the Constitution. We are not at all unwilling to see so bald a statement of the need of strained interpretation as the President has given us.

The President's Spelling Attacked

The President's Message was in the simplified spelling, but how little difference it made in the appearance of it is to be seen in those journals that followed the spelling. But there is a majority probably in Congress, and in the Republican party, that is a bit suspicious of the President and fear he is going too fast in various ways, and they seem ready to take a small advantage to rebuke and if possible humiliate him. Accordingly the Committee on Appropriations puts a paragraph in the bill to the effect that Webster's spelling, or one like it, be used in all documents printed by an appropriation. This is evidently meant as a slap at the President, and it may carry Congress, which is not composed of learned philologists. We do not expect the President to fight Congress on this matter. He did not think it worth a word in his Message. But he is right, and the Committee is wrong, altho it may take some years to make our lawgivers see it. There is nothing more sacred about Webster's limit in reforms than there is in Walker's or in Andrew Carnegie's.

The Good Name of Pittsburg

The newspapers, for some time past, have been giving a good deal of prominence to an alleged wave of crime in Pittsburg. The only foundation for all the stories that are being circulated thruout the country is the murder of a citizen by highwaymen on a public street and the killing of a boy in the East End by a burglar. The first was deplorable and might have been prevented by proper police protection, but it is the first of the kind in Pittsburg in nearly a dozen years. The second was something that might have happened in any city at any time, and was simply the result of a rash youth attempting to capture an experienced burglar. These two murders occurring within a week have quite naturally aroused the citizens of Pittsburg. Councils were forced to take action, which they should have done years ago, and the police force has been increased. The secretary of a responsible organization in Pittsburg is authority for the statement that the stories that have been appearing in the newspapers are simply

the output of a Scandal Bureau that is sending telegraphic news from Pittsburg to centrally located cities. It is sending this news at about a profit of $20,000 a year. Today the news relates to murders and robberies. Tomorrow it will deal with a divorce or any other sensational item that can be gotten hold of. In a majority of instances there is little, if anything, in the stories of this kind. We had another such case lately in the stories of crimes, largely invented, which provoked the late Atlanta massacre. The good name of Pittsburg is now, thru the defamation of such jackals, traduced in the Eastern and the Western press. The good name of a city deserves protection as well as that of a citizen, and those are base criminals who make their living by public slander.

Mr. Carnegie on Sport

We commend to the students of all other American colleges and universities the definition of sport given last week by Mr. Andrew Carnegie to the Princeton undergraduates, on the occasion of his presentation to them of a six-hundred-thousand-dollar lake. "Proper athletic exercise," said he, "is, like virtue, its own reward, and both winners and losers must be equally benefited. Here seems to me the true spirit of genuine sport. The more and the oftener we play with each other, the closer and warmer the ties of friendship become." It is in this spirit that two Western football elevens recently dined together before the match, and it is in this spirit that, during one of the sets in the international championship, one of the Doherty brothers—the English tennis champions—served on purpose his ball into the net rather than take a point which he thought the umpire decided unjustly in his favor. Happily, signs are not wanting that the time is not far distant when such courtesies shall be the rule rather than exception in the American world of sport.

That man is not only fortunate but deserves praise who is not satisfied with the business that gives him a living, but also looks abroad for chances to use his surplus energy for the benefit of his race. Such a man the company interested in Southern education found in Mr. Robert C. Ogden, as they came together last week to honor his seventieth year. The presidents of various Southern colleges and other educators and friends of education met, to the number of more than one hundred and fifty, and gave praise to the man who has been at the head of the education boards to whose work Mr. Rockefeller has given so liberally. Mr. Ogden's work has been of the greatest value in developing a public sentiment in the South in favor of general education.

The Nobel prize for peace has this week been awarded by the Norwegian Storthing to President Roosevelt for his efforts in effecting the settlement of the Russo-Japanese War. It is fitting that the First Citizen of the United States should be the first American to be honored by a Nobel prize. Mr. Roosevelt announces that he will use the whole of the $40,000 for the establishment of a representative committee to promote industrial peace. This is an admirable use of the money, and we suggest that it be put in the hands of the National Civic Federation, which is the best qualified of any existing body to handle these funds.

It was a case of inconceivable stupidity which led Mr. Storer, formerly Ambassador to Vienna, to write a pamphlet defending his course in the incident which led to his sudden removal by the President. The trouble was, too much Mrs. Storer and too much meddling with Catholic ecclesiastical politics. President Roosevelt's reply is long and conclusive. Mr. Storer had no authority to go to Rome and tell the Pope that the President wished a certain Archbishop made Cardinal. That kind of meddling has done the Archbishop great wrong, and has misrepresented both President McKinley and President Roosevelt.

It is a sudden turn by which the Pope refuses even the compromise with the French law proposed by Archbishop Lecot. It means war, because the French Government has not gone to the Vatican and asked terms of surrender. Pius X. says that under no terms, whether of the late law or the previous law as to associations, can any agreement be reached; for the French Republic must yield. But yield it will not, and there may be troublous times ahead, when peace was quite within reach. Evidently Archbishop Lecot is greatly astonished.

Insurance

Closing of the Insurance Campaign

THE campaign for the control of the Mutual and New York Life Insurance companies draws toward its close, as the votes must all be in by December 18. Published statements in the daily press indicate that upward of 500,000 votes had been cast up to the close of last week. The large number of votes cast is indicative of the tremendous interest the present election is exciting. The figures in this election are all the more spectacular when it is recalled that in 1904 only 158 votes were cast in the Mutual's election, and most of these were the votes of the company's employees. In 1905, following the Armstrong Investigation, when the attention to insurance matters had reached a larger audience than ever before, only 199 votes were cast. In the New York Life 117 votes were cast in 1899, 130 in 1900, 237 in 1901, 803 in 1904, and 2,328 in 1905. More than 6,000,000 circulars have been sent out by the International Policy-holders' Committee during the present campaign, the total cost of which will have been at least $300,000.

Did the Mutual Reserve Pay for a Favorable Report?

THE question of whether Frederick A. Burnham, president of the Mutual Reserve Life Insurance Company, actually paid $40,000 to Lou Payn, as State Superintendent of Insurance, for a favorable report of the company named, is an incidental feature of the trial now in progress before the Supreme Court in this city. The methods of the Mutual Reserve appeared as interesting side lights, and the admission was forced from William Rand, Jr., counsel for George Burnham, Jr., who is accused of the larceny of $7,500, that the Mutual Reserve Company settled many suits with beneficiaries under its policies. Testimony at the trial brought to light a curious system of warrants for monetary outlays. In one illustrative case that was cited a warrant for $5,000, entered as having been paid to James, Schell & Elkins for legal expenses, really went to Baldwin & White, lawyers, according to the testimony of Burnham. Other irregularities of a similar kind came out in the testimony. The trial has not yet been concluded.

The Mutual's Suit Against Haldeman

IN the suit begun last week in London by the Mutual Life Insurance Company against D. C. Haldeman, formerly the Mutual's manager in that city, and the North British and Mercantile Insurance Company, praying for an injunction and damages, it was alleged by the plaintiff that, while Mr. Haldeman was still in the employ of the Mutual, he entered into communication and agreement with the defendant company, which had for its object the transfer of the Mutual's English policy-holders to the North British company. It was further alleged that circulars were sent to the Mutual's policy-holders in this connection on the very day Mr. Haldeman's engagement with the Mutual terminated, and that names and addresses belonging to the Mutual were used for this purpose without the knowledge or consent of the Mutual.

THE Preferred Accident Insurance Company, of which Kimball C. Atwood is president, is now issuing a policy that is styled the "advanced" accident policy $10,000 combination form. The special features of this policy include the following items, viz.: The extension of the time limit from the usual ninety-day period heretofore prevailing to any time within the two hundred weeks' disability; the increasing of the $5,000 benefit for death, limbs or eyes to $10,000 or to $20,000 under the double clause; the possible increasing of the $2,500 for loss of one limb or one eye to $7,500 or to $15,000 under stipulated conditions; this $10,000 advanced accident policy under certain conditions may pay a total sum in excess of $27,500; and it insures the wife and children as well as the insured—thus covering the whole family; the beneficiary insurance includes loss of one eye and a weekly indemnity, also a $7,500 death benefit—thus making it, as its name happily implies, a pronounced example of advanced accident underwriting that has no equal.

Financial

Currency Questions

THE prevailing stringency in the money market excites interest in the recommendations of the annual reports of Secretary Shaw and Comptroller Ridgley. Such a plan for emergency credit issues as has been proposed by the Bankers' Association and the New York Chamber of Commerce would not be "viewed with apprehension" by the Secretary, if the total should be restricted to $200,000,000; but he would prefer to solve the problem by a grant of extraordinary power to himself or his successor. He would have the Secretary authorized to control by his order an increase of reserves, "at times fixed by him," and to release the same at times determined by his judgment. He would also like to have a fund of $100,000,000, to be deposited or withdrawn, "as he might deem expedient," and he would like to be empowered "to contract the national bank circulation at pleasure." Such power will not be granted. The Secretary already has too much power to affect the money market. Comptroller Ridgley's plan—for issues of notes uncovered by bond deposits, under a graduated tax, with facilities for prompt redemption — closely resembles the one proposed by the bankers and the Chamber of Commerce. Before the end of the present session, Congress ought to provide for such additional issues, under proper safeguards, and it should also empower the Secretary to deposit current customs revenue.

Telephones in New York

A LONG report of an investigation concerning the telephone service of thirty-six cities has been submitted to the New York Board of Estimate and Apportionment by Harry P. Nichols, Assistant Engineer, of the Bureau of Franchises. The information is designed to aid the Board in deciding whether a second telephone company shall be allowed to do business in New York City in competition with what is commonly called the Bell Company. In the report such benefits as have been derived from competition elsewhere, together with the disadvantages or inconvniences due to it, appear to be set forth impartially. Mr. Nichols refers to the progressive policy of the Bell Company in New York during the last two years, its reduction of rates and its energetic attempts to develop the use of the telephone. He recommends that an official investigation be made concerning the value of the company's property, its profits and the fairness of its capitalization. The company has offered yearly compensation to the city, and also so to reduce its rates from time to time that the earnings shall not exceed 10 per cent. upon the capital actually invested. "If such an investigation should show a fair capitalization," the report says, "and if the company's offer be adequate in other respects, there would seem to be no advantage in granting a franchise to an independent company." The claims of independent applicants in behalf of the automatic system should, however, in his opinion, be tested upon submitted plans and detailed statements. It appears that the Bell Company is perfectly willing that an investigation of its affairs shall be made, and in all possible ways will assist the city in making it. Duplication of telephone service in New York would be an economic waste and a cause of inconvenience and additional expense to the public. But the one company controlling the service should be subject to official regulation in the interest of the public, and its rates should be reasonable in their relation to cost and the capital invested. During the past two years the Bell Company has reduced its rates, has invited investigation, and has taken action suggested by the results of such inquiry.

....Dividends announced:

The N. Y. C. & H. R. R. Co., 1½ per cent. on capital stock, payable January 15th, 1907.

Chicago & G. Western Ry. Co., semi-annual $2 per share on debenture stock, payable January 15th, 1907.

German Svgs. Bank, semi-annual 4 per cent., payable December 31, 1906.

The Plaza Bank, 10 per cent., payable on and after January 2, 1907.

Amer. Car & Fdy. Co., preferred, 1¾ per cent., payable January 1, 1907.

Amer. Car & Fdy. Co., common, ½ per cent., payable January 1, 1907.

Manhattan Railway Co., 1¾ per cent., payable January 2, 1907.

Interborough-Metropolitan Co., preferred (quarterly), 1¼ per cent., payable January 2, 1907.

Atchison, Topeka & Santa Fé, semi-annual (preferred), $2.50 per share, payable February 1, 1907.

VOL. LXI NEW YORK, THURSDAY, DECEMBER 20, 1906 No. 3029

Entered at the New York Post Office as second-class mail matter.

Survey of the World

Politics and Washington Topics

Mr. Bryan says to Democrats that there is no probability or prospect of Mr. Roosevelt being a candidate for the Presidency in 1908. It is fair, he continues, to take the President at his word:

"Even if he desired to be nominated, he would have difficulty in securing a nomination. There is a division in the Republican party, and that division extends from the top of the party to the bottom. Mr. Roosevelt's radicalism has displeased the party leaders, and his last message has very much aggravated the situation. The Republicans who do not favor the President's policies, when supported by the Republicans who earnestly oppose a third term, would be strong enough to prevent a renomination; so the thought of his nomination can safely be put aside."

In a letter to the Oklahoma Constitutional Convention, Mr. Bryan urges the delegates to provide for the adoption of the initiative and referendum and for the election of officers by direct primary. ——When the Senate ratified the Algeciras treaty, or general act, last week, it attached the following declaration:

"That the Senate understands that the participation of the United States in the Algeciras conference, and in the formulation and adoption of the general act and protocol which resulted therefrom, was with the purpose of preserving and increasing its commerce in Morocco, the protection as to life, liberty and property of its citizens residing or traveling therein, and of aiding by its friendly offices and efforts in removing friction and controversy which seemed to menace the peace between Powers signatory with the United States to the treaty of 1880, all of which are on terms of amity with this Government; and without purpose to depart from the traditional American foreign policy, which forbids participation by the United States in the settlement of political questions which are entirely European in their scope."

——The Census Bureau has prepared a statement showing that in 1902 about one-half of the States were collecting inheritance taxes, the revenue thus obtained amounting to a little more than $7,000,000. New York collected $3,304,000; Pennsylvania, $1,231,000; Illinois, $523,000, and Connecticut, $334,000. That was four years ago. The total this year, the Bureau says, probably is from $10,000,000 to $12,000,000.——On the 14th, the House refused, by a vote of 188 to 107, to increase the salary of each Representative to $7,500, but voted in favor of increasing to $12,000 the salaries of members of the Cabinet, the Vice-President and the Speaker.——The pending subsidy bill will probably be so amended in the House committee that it will provide only for grants to steamships going to South America, or from Pacific ports to Oriental countries.——John W. Riddle, now Minister to Rumania and Servia, has been nominated to be Ambassador at St. Petersburg. Other nominations transfer Henry White from Rome to Paris, Lloyd Griscom to Rome from Brazil, and Irving B. Dudley to Brazil from Peru. Mr. Riddle, who has been in the service a dozen years, is not a man of great wealth. It is reported that the President has not regarded with pleasure any lavish display of riches in the diplomatic service. Mr. Riddle, while Secretary of the Embassy at St. Petersburg (being Chargé at the time), commended himself to our Government by his clever presentation to the Foreign Minister of the memorable petition of American Jews concerning the Kishineff massacre. He proceeded to read it to Count Lamsdorff, and finished the read-

ing before the Minister declined to receive it.——In the Senate last week, Mr. Burrows made a long and elaborate argument for the resolution which declares that Senator Smoot is not entitled to the seat he now holds. Mr. Dubois spoke on the same side of the question, denouncing the Mormon Church and asserting that in the recent campaign President Roosevelt "threw the weight of his mighty influence" against the opponents of Mormonism, in Idaho and Utah, and for the election of Republican Mormons in those States.——Reviewing his campaign against land thieves, Secretary Hitchcock says that 490 persons have been indicted for violating the land laws, that 89 have been convicted, and that indictments against 401 are still pending. ——It is shown by the official canvass in New York that Mr. Hughes's plurality at the recent election was 57,973, and that the pluralities of the Democrats who were elected with him range from 5,442 for Mr. Chanler, elected Lieutenant-Governor, to 14,251 for Mr. Glynn, who will be Comptroller.——Foreign bidders will be excluded from the competition for Panama Canal contracts.

Railway Questions

C. Goodloe Edgar and Edwin Earle, of Detroit, the wholesale merchants who were indicted in connection with the rebating of the New York Central road on shipments of sugar from the Sugar Trust, appeared before Judge Holt, in the United States Circuit Court, at New York, on the 10th, and pleaded guilty. The fine imposed was $6,000 for each defendant, or $1,000 on each of six counts. On the following day the Sugar Trust (the American Sugar Refining Company), also entered a plea of guilty with respect to five indictments on which it was to be tried on the 12th, for accepting rebates in connection with the same shipments of sugar. The company's counsel said that the company's executive officers had not known of the rebate agreement. The fine imposed was $150,000, or $10,000 on each of fifteen counts. Within the last thirty days Judge Holt has imposed fines of $312,000 for rebating. This total includes $126,000 paid by the New York Central, and $6,000 imposed in the case of its traffic manager, Mr. Pomeroy, who has since died.——Finance Minister Limantour, of Mexico, made a remarkable address before the Mexican Congress, on the 14th, in connection with the presentation of a bill providing for the acquisition of the Mexican Central Railroad by the Government and for the consolidation of it with the Mexican National, control of which the Government obtained in 1903. The Government had been forced to take this step, he said, because it feared that the great railway combinations of the United States would attempt to absorb the Mexican lines which the Mexican Government did not own:

"You are familiar with the aspect offered by the transportation question in the neighboring nation; the problem there is only a phase of the Trust question which may be characterized as a peril. Those great corporations are being extended every day, and many of them cover considerable areas of territory. The tendency to expansion has been so pronounced in recent years that it may be added that the aim of most of the financial interests controlling the great transportation systems of the United States is to absorb as many other lines as possible. The United States Government, alarmed by this tendency and desirous of initiating a reaction against it, as you well know, has taken action which aims at preventing the combining of those organizations and checking their continued expansion. Under these circumstances, it was natural that we on our side should endeavor to prevent the powerful corporations in question, attacked as they are being by all legal means in their own country, as well as harassed by the pressure of public opinion, from coming hither and seeking to absorb those Mexican railroads which are not already under the direct control of the Government."

——It has been decided by the Interstate Commerce Commission that its inquiry concerning the Harriman roads shall begin on the 28th inst.

New Spelling Rejected by the House

Simplified spelling, as advocated by the President, has been rejected by the House of Representatives. On the 10th the question was the subject of debate for three hours, the pending Legislative appropriation bill containing a provision that no money appropriated for the expenses of the Government Printing Office should be used in connection with the printing of any document except in conformity with the orthography generally accepted in dictionaries of the

English language. It was asserted by the opponents of the simplified forms that the use of them would be expensive and would cause much confusion in the Printing Office. On a point of order the provision was stricken out, but immediately afterward a provision to the same effect was reported and passed by a vote of 142 to 25. It was seen, however, that it would not become effective until July 1st, 1907, the beginning of the next fiscal year. Therefore, on the 13th, Representative Landis introduced a resolution declaring it to be the sense of the House that "hereafter, in printing reports, documents, or other publications authorized by law, ordered by Congress or either branch thereof, or emanating from the executive departments, their bureaus and branches, or from independent officers of the Government, the Government Printing Office shall observe and adhere to the standard of orthography prescribed in the generally accepted dictionaries of the English language." Mr. Gillètt, who had argued in favor of the simplified spelling, said that his views had undergone no change, but that he realized the necessity of having uniformity in the public documents. He moved the adoption of the resolution, and there was no dissenting voice. It was stated that the resolution had been submitted to the President at a conference on the evening of the 12th, and that he had assured Mr. Landis that he would interpose no objection, if it expressed the desire of the House, but would issue a new order directing the Public Printer to use the old spelling. It is said that the new forms will be used at the White House in correspondence with public officers and generally in communications which are not required to be put in type at the Government Printing Office.

Japan and San Francisco

The president of the San Francisco Board of Education said on Saturday last that Japanese children who had passed the primary grades of the public schools had not been and would not be excluded from the high schools. But the Board did not intend to change its attitude concerning the admission of Japanese children to the primary grades in the general schools. A statement of facts to be used in a case before the courts has been prepared and forwarded to Attorney-General Moody. The test will be made with respect to Kei Kechi Aoko, a Japanese boy of ten years, who attended one of the primary schools until excluded by the order requiring him to go to the school set apart for Japanese. The local district attorney is said to have expressed the opinion recently that application might be made to the Federal Court for an injunction to restrain the Board of Education from enforcing its segregation order.——In the Senate, on the 12th, Mr. Rayner spoke at length in support of his resolution declaring that the Federal Government has no right to interfere with the school system and regulations of a State. He denied that the treaty with Japan provided for such treatment of Japanese school children as is now demanded by those who object to segregation, and asserted that if it did contain any such provision it would be void. Incidentally, he criticised with much sarcasm the President's methods and the remarks in his message about race suicide.——Dispatches from Honolulu assert that Japan is seeking to obtain possession of one of the small islands of the Hawaiian group, which is privately owned and has two good harbors, and that George D. Gear, an attorney, on the 14th applied for an injunction to prevent the sale of the island to a syndicate representing Japanese interests.

Mr. Roosevelt on Porto Rico

On last Tuesday the President sent a special message to Congress on Porto Rico. with the main purpose, as he promised the Porto Ricans when he visited them on his way back from Panama, to ask Congress to confer upon them the rights of American citizenship. He first describes his delightful trip thru Porto Rico, but says he could not embark at San Juan because the harbor had not been dredged out and could not receive an American battleship.

> "I do not think this fact creditable to us as a nation, and I earnestly hope that immediate provision will be made for dredging San Juan harbor."

He says he was especially pleased with the Government officials of the island.

"It would be impossible to wish a more faithful, a more efficient and a more disinterested public service than that now being rendered in the island of Porto Rico by those in control of the insular government."

He visited a dozen towns on his automobile tour across the island and was especially impressed with the school system.

"It was evident at a glance that the teachers, both Americans and native Porto Ricans, were devoted to their work, took the greatest pride in it, and were endeavoring to train their pupils, not only in mind, but in what counts for far more than mind, in citizenship—that is, in character."

He was also much struck by the character of the insular police and the Porto Rico regiment. The growth of prosperity seemed to him marvelous.

"Last year was the most prosperous year that the island has ever known before or since the American occupation. The total of exports and imports of the island was $45,000,000, as against $18,000,000 in 1901. This is the largest in the island's history. Prior to the American occupation the greatest trade for any one year was that of 1896, when it reached nearly $23,000,000. Last year, therefore, there was double the trade that there was in the most prosperous year under the Spanish régime. There were 210,273 tons of sugar exported last year, of the value of $14,186,319; $3,555,163 of tobacco, and 28,290,322 pounds of coffee of the value of $3,481,102. Unfortunately, what used to be Porto Rico's prime crop—coffee—has not shared in this prosperity. It has never recovered from the disaster of the hurricane, and, moreover, the benefit of throwing open our market to it has not compensated for the loss inflicted by the closing of the markets to it abroad."

In regard to the question of citizenship the President said:

"There is a matter to which I wish to call your special attention, and that is the desirability of conferring full American citizenship upon the people of Porto Rico. I most earnestly hope that this will be done. I cannot see how any harm can possibly result from it, and it seems to me a matter of right and justice to the people of Porto Rico. They are loyal, they are glad to be under our flag, they are making rapid progress along the path of orderly liberty. Surely we should show our appreciation of them, our pride in what they have done and our pleasure in extending recognition for what has thus been done by granting them full American citizenship."

The President does not think, however, that it would be safe to give a larger measure of self-government to the Porto Ricans than they now enjoy. They have absolute autonomy in municipal government and the only power over them possessed by the insular government is in removing corrupt or incompetent officials.

"The lower house is absolutely elective, while the upper house is appointive. This scheme in working well; no injustice of any kind results from it, and great benefit to the island, and it should certainly not be changed at this time. The machinery of the elections is administered entirely by the Porto Rican people themselves, the Governor and Council keeping only such supervision as is necessary in order to insure an orderly election. Any protest as to electoral frauds is settled in the courts. Here again it would not be safe to make any change in the present system."

The President finally suggests that the insular governments of the United States should all be put under one bureau, either in the Department of War or the Department of State, and concludes his message by expressing his admiration for the law already enacted by Congress under which the island is now being administered. He thinks it would be impossible for Congress to provide any other law which in the actual working would have accomplished better results.

Chicago's Railroads

It is reported from Chicago that an agreement between the city authorities and the street railway companies will probably be reached within a short time, upon the basis of a plan approved on the 15th at a conference in which the Council's committee on transportation and representatives of the companies took part. The value of the railway property and of the unexpired franchises has been fixed at $50,000,000. This is the sum which the city must pay if hereafter it shall own and operate the roads, and it must also compensate the companies for the cost of rehabilitating the service. It is a part of the proposed agreement that the work of improving the lines and service shall begin at once and be carried on under the supervision of a board of engineers in which both the city and the companies shall be represented. The companies undertake to supply new cars, new rails, etc., and to double the seating capacity of the lines within one year. The city is to have a share of the net profits. The reports thus far published do not clearly explain what the franchise rights of the companies will be.

The British Education Bill

The Education Bill, which past the House of Lords in an amended form by a vote of 105 to 28, was rejected when it was returned to the House of Commons. The Premier, Sir Henry Campbell-Bannerman, moved that the amendments made by the Lords be rejected as a whole. This was the way, he thought, the action of the peers should be received, because the bill had been perverted to a purpose directly antagonistic to that of the original bill. He still believed that certain modifications could be made that would bring the Government bill into closer harmony with the friends of denominational education, and he thought it possible, even probable, that counsels of moderation and peace would prevail. Mr. Balfour, leader of the Opposition, regarded this action as a direct challenge to the House of Lords. The amendments made in the House of Lords were rejected by a vote of 410 to 107. The chief changes made were the following: Religious teaching every day for half an hour is made compulsory, instead of voluntary on two mornings in the week; extended facilities for religious instruction shall be given on petition of a majority of the parents in any district—the original bill stated that such facilities may be given in urban districts on petition of four-fifths of the parents; the local authority is compelled to permit the regular teachers in the school and voluntary teachers to give religious instruction if they are willing and qualified; children are required to attend the religious lesson unless the parent withdraws it, in which case secular instruction shall be given to it at the same hour.——The House of Lords rejected, by a vote of 143 to 43, the bill, which past the House of Commons, to do away with plural voting. The Trades Disputes Bill was past by the Lords after considerable amendment, but without modifying its most important feature, which protects the funds of the trades unions against seizure on account of illegal acts of their members. ——Another demonstration in the precincts of the House of Commons in favor of woman suffrage was attempted by the Women Workers of Manchester and East London. The police dispersed the crowd and carried the kicking and screaming leaders off to jail, where they were committed to prison for a fortnight, as they refused to pay the fine of $5. The "suffragettes," who were recently released from prison, were given an elegant banquet at the Savoy by their admirers.

The Reichstag Dissolved

The Catholic Center and the Socialist Left made a joint attack upon the Government on the question of colonial administration, and Chancellor Von Bülow has in consequence dissolved the Reichstag and called for a new election. The scenes in the Reichstag during the discussion were tumultuous, for the Opposition did not hesitate to accuse the officers of the Government and even their own colleagues of corruption, suppression of the truth and protection of colonial officials guilty of the most atrocious crimes. The barbarities inflicted upon the natives in German Southwest Africa were given in full detail, with the names of the guilty parties. They surpass in atrocity anything that has been reported from the Kongo. Prince Bülow introduced the new Director of the Colonial Department, Herr Dernburg, to the Reichstag in a speech in which he stated that it was absolutely impossible to think of abandoning the colonies. Germany has been a colonizing nation for 2,000 years, and would remain such as long as she existed. The reports of scandal had been greatly exaggerated, altho he admitted that some of the minor officials had been guilty of breaches of service regulations. Herr Dernburg followed with an explanation of his policy of colonial administration. The contracts for clothing and supplies which had been granted to a single firm had been rescinded. A special commission would be instituted to investigate the charges against the colonial officials. He asked for an appropriation for railways in Southwest Africa on the ground that it would open up the country and make it profitable. If one-half the money that has been expended in suppressing the insurrection of the natives had been put into railroads the insurrection would never have broken out, and the colony would have had all the railways it would require. Germany must do its share toward main-

taining the supremacy of the white race in Africa. Herr Bebel, the Socialist leader, made a furious attack upon the administration, supporting his charges with many instances of gross cruelty and outrage, the details of which are unprintable. One German officer sent to punish a tribe captured a village and shot all the inhabitants except the children. The soldiers then made wicker baskets, and putting the children, to the number of fifty-two, in them, threw them over into the Nachtigall Rapids. Horrible forms of mutilation of the natives were required by the German officers as proof of the number of natives killed. A German sergeant had placed his black concubine in command of one of the stations when he was ill, and she caused three natives to be blown to pieces from the muzzle of a cannon. Dr. Peters, who had been found guilty of maltreatment of native women and dismissed from the service ten years ago, had been re-invested with his former title of Imperial Commissioner by the Emperor. Members of the Reichstag who had criticised the colonial administration had been offered lucrative positions by the Government if they would cease their attacks. On the following day Herr Rören brought out still more evidence of brutal treatment, emphasizing his remarks with a whip which had been used by the German soldiers in flogging the natives, sometimes to their death. The Catholic missionaries in Togoland, who had protested against the wholesale abuse of the Christian girls by the district official, had been arrested without warrant and imprisoned for three weeks. Herr Dernburg in reply stated that the charges of the missionaries were unfounded and that he had notified the Chapter of Cologne Cathedral that unless the missionaries ceased to complain of the officials in Togoland he would take extreme measures against the missions. When the question of appropriations came before the Reichstag, it was voted to cut down the garrison in Southwest Africa to 2,500 men, altho the General Staff had affirmed that 8,000 was the smallest possible number by which the natives could be kept in subjection. Each soldier in the colony at present costs $2,400 a year for maintenance. The Government asked for $15,000,000 for colonial expenses in the next fifteen months. The Kaiser took a hand in the question, telegraphing to Count von Ballestrem, the President of the Reichstag, his deep indignation against the proposed rejection of the colonial estimates. This aroused great resentment in the Center. When the Reichstag had expressed its determination, by a vote of 178 to 168, to refuse the supplementary budget of $7,350,000 for Southwest Africa, Chancellor von Bülow, in accordance with the instructions from the Emperor, dissolved Parliament. The elections for the new Reichstag are fixed for January 25th. The Center party is the strongest in the Reichstag, holding 104 seats, and not since the time of Prince Bismarck's Kulturkampf has the Government dared to defy it.

Church and State in France

The first week of the operation of the new régime past off more quietly than was generally expected. Notwithstanding the greater provocation there were no such disorders as marked the taking of the inventories a few months ago. The Catholics are following the policy of passive resistance directed by the Pope, abstaining in most cases from violence or noisy demonstrations, yielding under protest to a show of force, and refusing to comply with the formalities required by the law. Premier Clemenceau took the initiative promptly on December 11th, the day the law went into effect, by arresting and banishing Mgr. Montagnini, former secretary of the Papal Nuncio at Paris, who, since the rupture of diplomatic relations between the Vatican and the French Government, had remained in an unofficial capacity in charge of the papal archives and correspondence. All of the papers in the former Nunciate were seized by the agents of the Government, which by that means gains knowledge of the communications that have past between the French clergy and the Pope and other diplomatic papers of the Vatican. M. Clemenceau was sharply criticised for this action in the Chamber by M. Groussau, who called attention to the fact that Clemenceau had in the past vigorously denounced the practice of arbitrary domiciliary search

and confiscation of papers. The Premier defended himself on the ground that since the breaking of diplomatic relations the building no longer had the privilege of extraterritoriality, and that Mgr. Montagnini was a foreigner who was guilty of inciting the French clergy to rebellion against the law. Since the Vatican cannot consistently ask the aid of the Quirinal to protect Mgr. Montagnini as an Italian subject, the only thing left to be done is to make an official protest to the Catholic Powers. Masses have been held every day as usual in most of the churches of France without regard to the law of 1905, which requires that they be in charge of local associations of laymen, or that of 1881, which forbids the holding of any public meeting without previous declaration to the authorities by two responsible persons. M. Briand, Minister of Public Worship, in his recent circular suggested that compliance with this formality of the law of 1881 would be regarded as sufficient by the Government, but the Pope refused this concession on the ground that it implied that the State had a right to regulate the services of the Church, and he forbade all ecclesiastics making the required declaration. Nevertheless, in many parishes two laymen have made the declaration to the authorities, sometimes with the connivance of the priest, and these declarations have been accepted by the Government as sufficient to make the services legal for a year, even in cases where the persons making the application for authorization had no apparent right to make it. Where this was not done detectives were sent to the churches to take note of the fact that an unauthorized assembly was held and to obtain the name of the officiating priest. Action will be brought against them for violation of the law of 1881, the extreme penalty for which is $100 fine. In a few places the Government commissaries were prevented from entering the churches or from obtaining the name of the priest by the worshippers, who crowded around them, and in the vicinity of Brest the police commissary was obliged to draw his revolver to defend himself against a woman who tried to stab him and the mob that pursued him with stones. But in most cases they excited no disorder. It was feared that rowdies and anti-clerical fanatics would attempt to create disturbances, since the services were technically illegal and so not under the protection of the law, but no such attempts were made, and where disorderly persons appeared they were ejected by the police, as usual. Notices were served on the occupants of the ecclesiastical buildings which, by the refusal to comply with the conditions of the law by the formation of lay associations, revert to the state, and in three days after the law went into effect forty-three residences of prelates and seminaries had been evacuated. When it was rumored that Cardinal Richard, Archbishop of Paris, was about to be expelled from his palace, a crowd of five hundred Catholics assembled to protect him, but dispersed when it was found that the Government did not intend to use force. The Cardinal, who is eighty-eight years old and bedridden, agreed to leave at the end of the week. Minister Briand has presented to the Chamber of Deputies a bill for additional legislation on the church question. In some respects it seems to be a compromise and may be acceptable to the Vatican. It provides that the churches shall remain open for public worship, and grants the use of religious buildings not merely to the lay associations required by the law of 1905, but to ministers nominated in the yearly declarations under the law of 1881. In case the clergy refuse to comply with the formalities of the law, the pensions allowed them by the Government in lieu of the salaries hitherto paid will be withdrawn. Premier Clemenceau threatens to have a law passed declaring that clergy who obey a foreign potentate (the Pope) in opposition to the law of France have forfeited their rights as French citizens, and are to be treated as foreigners, and, if necessary, expelled from the country.

Reorganization of Protestant Churches in France

In view of the new law separating Church and State in France, which went into force the 11th instant, the two Protestant Churches have also been compelled to adapt themselves to the changed circumstances. This has proved

an easier task for the smaller section, the Lutheran, because this branch has hitherto stood doctrinally practically as a unit. The Church is organized into two general groups of congregations—those of Paris and those of Montpelier. At the recent general synod held in the latter place it was decided unanimously to readopt the doctrinal basis of 1872, agreed upon after the Alsace-Lorraine section had been united with Germany, which agrees "to recognize the supreme authority of the Holy Scriptures in all matters of faith, and also accepts the teachings of the Augsburg Confession." This was passed without a dissenting vote. It was further decided that church inspectors be elected for a period of seven years and that nobody over seventy be eligible; that the right of voting belongs to every member over twenty-one, and that all above twenty-five be eligible to office; and that women, too, have the right to vote in all church matters. A number of mission congregations were united, and the Paris Lutherans divided into twelve parishes, each with a church council of its own. The reorganization of the Reformed churches met with more serious obstacles, chiefly because of the various schools of theological thought represented. Even as it is, no union of the different branches was effected. The positive branch met in Montpelier, with 99 representatives from 20 conferences. Fifteen sessions were necessary to reach an agreement, which finally ended in the adoption of the platform of 1872, according to which the congregations recognize the great biblical facts of redemption, but does not compel every pastor or member individually to accept this. Only those can be appointed pastors who recognize the rights of independent theological research. This was passed by a vote of 65 to 30. The liberal section of this Church has not yet completed its organization, but evidently there will in the future be two Reformed bodies in France. A third party, consisting of some thirty pastors, effected a temporary organization at least on the basis of a positive yet non-denominational faith. One of the results of the separation law is a notable decrease in the number of congregations, two or three being united into one, in order to secure means of support. The Paris theological faculty also ceases to be a part of the University of Paris, but a special society has been organized to secure its continuance, which proposes to raise 60,000 francs a year for this end, the bulk of which has already been secured.

Foreign Notes

Muzaffar-ed-Din, the Shah of Persia, is suffering from a fatal disease and his death is expected at any moment, if indeed it has not already occurred. Mohammed Ali Mirza, the heir apparent, one of the sixteen offspring of the Shah, has gone to Teheran, for the country is in a critical state. The new Persian Parliament demands an immediate signing of the constitution which it has prepared, and disorder is prevalent in many of the provinces. —— Admiral Dubassoff, former Governor-General of Moscow, had a narrow escape from assassination in St. Petersburg. As he was walking in the garden of the Tauride Palace a revolutionist fired seven shots at him from a revolver, but all missed. He then ran, pursued by the Admiral, who had nearly caught him when he turned and threw a bomb which he had in his pocket. Admiral Dubassoff was wounded in the leg, and as he was rising from the ground he was attacked by another Terrorist, who threw a bomb at his head and fired three revolver shots, but without hitting him with any of them. Dubassoff seized his assailant and held him till the police came and captured both. Dubassoff's life has been many times attempted since he put down the rising in Moscow with such severity.——Anti-clerical riots occurred in Rome on Sunday, in sympathy with the French Government in its fight against the Church, and the Vatican was threatened by a mob of several thousand, which was repulsed by charges of the Italian cavalry. Maxim Gorky, the Russian revolutionist, who has been living at Capri since he left this country, has been ordered by the Government to leave Italy. His latest drama, "The Children of the Sun," has been prohibited, and in consequence of this action a riotous demonstration against the police took place in Naples.

A Christmas Glee

BY FRANK DEMPSTER SHERMAN

Across the vale of Ages
  Our eyes behold them still,
The Shepherds and the Sages,
  The Star above the hill;
The Manger and the Mages,
  And Mary as she lay,
    And sweetly smiled
    On Christ the child,
  On that first Christmas Day!

Still live the shining embers
  Of that thrice-blessèd star,
Whose constancy remembers
  That Bethlehem afar:
Out of the world's Decembers
  They bring the hopes of May!
    Then let us sing,
    To Christ our King,
  On this glad Christmas Day!

New York City.

The Somnambulists

BY JACK LONDON

"'Tis only fools speak evil of the clay—
The very stars are made of clay like mine."

THE mightiest and absurdest sleep-walker on the planet! Chained in the circle of his own imaginings, man is only too keen to forget his origin and to shame that flesh of his that bleeds like all flesh and that is good to eat. Civilization (which is part of the circle of his imaginings) has spread a veneer over the surface of the soft-shelled animal known as man. It is a very thin veneer; but so wonderfully is man constituted that he squirms on his bit of achievement and believes he is garbed in armor-plate.

Yet man today is the same man that drank from his enemy's skull in the dark German forests, that sacked cities and stole his women from neighboring clans like any howling aborigine. The flesh-and-blood body of man has not changed in the last several thousand years. Nor has his mind changed. There is no faculty of the mind of man today that did not exist in the minds of the men of long ago. Man has today no concept that is too wide and deep and abstract for the mind of Plato or Aristotle to grasp. Give to Plato or Aristotle the same fund of knowledge that man today has access to, and Plato and Aristotle would reason as profoundly as the man of today, and would achieve very similar conclusions.

It is the same old animal man, smeared over, it is true, with a veneer, thin and magical, that makes him dream drunken dreams of self-exaltation and to sneer at the flesh and the blood of him beneath the smear. The raw animal crouching within him is like the earthquake monster pent in the crust of the earth. As he persuades himself against the latter till it arouses and shakes down a city, so does he persuade himself against the former until it shakes him out of his dreaming and he stands undisguised, a brute like any other brute.

Starve him, let him miss six meals, and see gape thru the veneer the hungry maw of the animal beneath. Get between him and the female of his kind upon whom his mating instinct is bent, and see his eyes blaze like an angry cat's, hear in his throat the scream of wild stallions, and watch his fists clench like an orang-outan's. Maybe he will even beat his chest. Touch his silly vanity, which he exalts into high-sounding pride—call him a liar, and behold the red animal in him that makes a hand-clutching that is quick like the tensing of a tiger's claw, or an eagle's talon, incarnate with desire to seize.

It is not necessary to call him a liar to touch his vanity. Tell a plains Indian that he has failed to steal horses from the neighboring tribe, or tell a man living in bourgeois society that he has failed to pay his bills at the neighboring grocer's, and the results are the same. Each, plains Indian and bourgeois, is smeared with a slightly different veneer, that is all. It requires a slightly different stick to scrape it off. The raw animals beneath are identical.

But intrude not violently upon man, leave him alone in his somnambulism, and he kicks out from under his feet the ladder of life up which he has climbed, constitutes himself the center of the universe, dreams sordidly about his own particular god, and maunders metaphysically about his own blessed immortality.

True, he lives in a real world, breathes real air, eats real food, and sleeps under real blankets, in order to keep real cold away. And there's the rub. He has to effect adjustments with the real world and at the same time maintain the sublimity of his dream. The result of this admixture of the real and the unreal is confusion thrice confounded. The man that walks the real world in his sleep becomes a tangled mess of contradictions, paradoxes, and of lies that he has to lie to himself in order to stay asleep.

In passing, it may be noted that some men are remarkably constituted in this matter of self-deception. They excel at deceiving themselves. They believe, and they help others to believe. It becomes their function in society, and some of them are paid large salaries for helping their fellow-men to believe, for instance that they are not as other animals; for helping the king to believe, and his parasites and drudges as well, that he is God's own manager over so many square miles of earth-crust; for helping the merchant and banking classes to believe that society rests on their shoulders, and that civilization would go to smash if they got out from under and ceased from their exploitations and petty pilferings, from their cent per cent and tit-tat-toe.

Prize-fighting is terrible. This is the dictum of the man who walks in his sleep. He prates about it, and writes to the papers about it, and worries the legislators about it. There is nothing of the brute about *him*. He is a sublimated soul that treads the hights and breathes refined ether—in self-comparison with the prize-fighter. The man who walks in his sleep ignores the flesh and all its wonderful play of muscle, joint and nerve. He feels that there is something god-like in the mysterious deeps of his being, denies his relationship with the brute, and proceeds to go forth into the world and express by deeds that something god-like within him.

He sits at a desk and chases dollars thru the weeks and months and years of his life. To him the life god-like resolves itself into a problem something like this: *Since the great mass of men toil at producing wealth, how best can he get between the great mass of men and the wealth they produce, and get a slice for himself?* With tremendous exercise of craft, deceit and guile, he devotes his life god-like to this purpose. As he succeeds his somnambulism grows profound. He bribes legislatures, buys judges, "controls" primaries, and then goes and hires other men to tell him that it is all glorious and right. And the funniest thing about it is that this arch-deceiver believes all that they tell him. He reads only the newspapers and magazines that tell him what he wants to be told, listens only to the biologists who tell him that he is the finest product of the struggle for existence, and herds only with his own kind, where, like the monkey-folk, they teeter up and down and tell one another how great they are.

In the course of his life god-like he ignores the flesh—until he gets to table. He raises his hands in horror at the thought of the brutish prize-fighter, and then sits down and gorges himself on roast beef, rare and red, running blood under every sawing thrust of the implement called a knife. He has a piece of cloth which he calls a napkin, with which he wipes from his lips, and from the hair on his lips, the greasy juices of the meat.

He is fastidiously nauseated at the thought of two prize-fighters bruising each other with their fists; and at the same time, because it will cost him some money, he will refuse to protect the machines in his factory, tho he is aware that the lack of such protection every year mangles, batters and destroys out of all humanness thousands of working men, women and children. He will chatter about things refined, and spiritual, and god-like like himself, and he and the men who herd with him will calmly adulterate the commodities they put upon the market, and which annually kill tens of thousands of babies and young children.

He will recoil at the suggestion of the horrid spectacle of two men confronting each other with gloved hands in the roped arena, and at the same time he will clamor for larger armies and larger navies, for more destructive war machines,

which, with a single discharge, will disrupt and rip to pieces more human beings than have died in the whole history of prize-fighting. He will bribe a city council for a franchise or a State Legislature for a commercial privilege; but he has never been known, in all his sleep-walking history, to bribe any legislative body in order to achieve any moral end, such as, for instance, the abolition of prize-fighting, child-labor laws, pure food bills, or old age pensions.

"Ah, but we do not stand for the commercial life," object the refined, scholarly and professional men. They also are sleep-walkers. They do not stand for the commercial life, but neither do they stand against it with all their strength. They submit to it, to the brutality and carnage of it. They develop classical economists who announce that the only possible way for men and women to get food and shelter is by the existing method. They produce university professors, men who claim the *rôle* of teachers, and who at the same time claim that the austere ideal of learning is passionless pursuit of passionless intelligence. They serve the men who lead the commercial life, give to their sons somnambulistic educations, preach that sleep-walking is the only way to walk, and that the persons who walk otherwise are atavisms or anarchists. They paint pictures for the commercial men, write books for them, sing songs for them, act plays for them, and dose them with various drugs when their bodies have grown gross or dyspeptic from overeating and lack of exercise.

Then there are the good, kind somnambulists who don't prize-fight, who don't play the commercial game, who don't teach and preach somnambulism, who don't do anything except live off of the dividends that are coined out of the wan, white fluid that runs in the veins of little children, out of mothers' tears, the blood of strong men, and the groans and sighs of the old. The receiver is as bad as the thief—aye, and the thief is finer than the receiver; he at least has the courage to run the risk. But the good, kind people who don't do anything won't believe this, and the assertion will make them angry — for a moment. They possess several magic phrases, which are like the incantations of a voodoo doctor driving devils away. The phrases that the good, kind people repeat to themselves and to one another sound like "abstinence," "temperance," "thrift," "virtue." Sometimes they say them backward, when they sound like "prodigality," "drunkenness," "wastefulness" and "immorality." They do not really know the meaning of these phrases, but they think they do, and that is all that is necessary for somnambulists. The calm repetition of such phrases invariably drives away the waking devils and lulls to slumber.

Our statesmen sell themselves and their country for gold. Our municipal servants and State legislators commit countless treasons. The world of graft! The world of betrayal! The world of somnambulism, whose exalted and sensitive citizens are outraged by the knock-outs of the prize-ring, and who annually not merely knock out, but kill, thousands of babies and children by means of child labor and adulterated food. Far better to have the front of one's face pushed in by the fist of an honest prize-fighter than to have the lining of one's stomach corroded by the embalmed beef of a dishonest manufacturer.

In a prize-fight men are classed. A light weight fights with a light weight; he never fights with a heavy weight, and foul blows are not allowed. Yet in the world of the somnambulists, where soar the sublimated spirits, there are no classes, and foul blows are continually struck and never disallowed. Only they are not called foul blows. The world of claw and fang and fist and club has passed away—so say the somnambulists. A rebate is not an elongated claw. A Wall Street raid is not a fang slash. Dummy boards of directors and fake accountings are not foul blows of the fist under the belt. A present of coal stock by a mine operator to a railroad official is not a claw rip to the bowels of a rival mine operator. The hundred million dollars with which a combination beats down to his knees a man with a million dollars is not a club. The man who walks in his sleep says it is not a club. So say all of his kind with which he herds. They gather together and solemnly and gloatingly make and repeat certain noises that sound like "discretion," "acumen," "initiative" "enter-

prise." These noises are especially gratifying when they are made backward. They mean the same things, but they sound different. And in either case, forward or backward, the spirit of the dream is not disturbed.

When a man strikes a foul blow in the prize-ring the fight is immediately stopped, he is declared the loser, and he is hissed by the audience as he leaves the ring. But when a man who walks in his sleep strikes a foul blow he is immediately declared the victor and awarded the prize; and amid acclamations he forthwith turns his prize into a seat in the United States Senate, into a grotesque palace on Fifth avenue, and into endowed churches, universities and libraries, to say nothing of subsidized newspapers, to proclaim his greatness.

The red animal in the somnambulist will out. He decries the carnal combat of the prize-ring, and compels the red animal to spiritual combat. The poisoned lie, the nasty, gossiping tongue, the brutality of the unkind epigram, the business and social nastiness and treachery of today—these are the thrusts and scratches of the red animal when the somnambulist is in charge. They are not the upper cuts and short arm jabs and jolts and slugging blows of the spirit. They are the foul blows of the spirit that have never been disbarred, as the foul blows of the prize-ring have been disbarred. (Would it not be preferable for a man to strike one full on the mouth with his fist than for him to tell a lie about one, or malign those that are nearest and dearest?)

For these are the crimes of the spirit, and, alas! they are so much more frequent than blows on the mouth. And whosoever exalts the spirit over the flesh, by his own creed, avers that a crime of the spirit is vastly more terrible than a crime of the flesh. Thus stand the somnambulists convicted by their own creed — only they are not real men, alive and awake, and they proceed to mutter magic phrases that dispel all doubt as to their undiminished and eternal gloriousness.

It is well enough to let the ape and tiger die, but it is hardly fair to kill off the natural and courageous apes and tigers and allow the spawn of cowardly apes and tigers to live. The prize-fighting apes and tigers will die all in good time in the course of natural evolution, but they will not die so long as the cowardly, somnambulistic apes and tigers club and scratch and slash. This is not a brief for the prize-fighter. It is a blow of the fist between the eyes of the somnambulists, teetering up and down, muttering magic phrases, and thanking God that they are not as other animals.

GLEN ELLEN, CAL.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root is a member of the staff of THE INDEPENDENT. For years he has devoted much attention to the general course of financial and industrial affairs. Obviously, it was not possible within the limits of the following article to set forth all the details of the record of American financial and commercial activity during the year, or to indulge in elaborate analysis. His aim has been merely to touch upon the salient points in that record, and to direct attention to the statistical evidence which especially deserves to be considered. —EDITOR.]

IN the second half of 1904, a buoyant recovery in all branches of industry followed the uncertainty of the first six months and the depressing decline of 1903. In trade and industry, 1905 was a year of practically continuous upward movement. Among the proofs of this were an increase of 27½ per cent. in bank clearings, an addition of nearly 40 per cent. to the output of pig iron, larger dividends, the sale of 40 per cent. more shares on the New York Stock Exchange and higher prices for securities. It will be noted that in a list of twenty-five representative stocks (to be printed in this article) every one shows a gain in 1905, and that in several instances the increase of price was extraordinary. One bounti-

ful harvest had followed another. Great crops in 1906 were to make broader the foundations of national prosperity.

A close market for loans was a leading feature of the situation in the last three months of 1905. The supply of currency was, as usual in that season, insufficient to meet the demand for moving the crops, for speculation and for active general trade. On December 28th, the rate for loans on call in New York rose even to 125 per cent. But rates soon became normal. In the space allotted for this review, the references to the course of the market for securities must be brief. While the entire market was shaken at times by certain events, its prevailing characteristic was irregularity, or a lack of uniformity. In our table of twenty-five leading stocks it will be observed that, altho all of them had advanced in 1905, there has been for them no such uniformity of experience in 1906; for in December twelve are lower and thirteen are higher than they were at the beginning of the year. Single stocks and groups of stocks have been at times sharply affected by influences largely confined to themselves.

In the first three months of the year Congressional action was a cause of some disturbance. The passage of the Gillespie resolution of inquiry concerning the relation of the Pennsylvania road to the Baltimore & Ohio, the Chesapeake & Ohio, and the Norfolk & Western (on January 29) caused heavy sales of coal road stocks. [The Pennsylvania has since sold a majority of its shares of the stock of the three companies.] Values were also temporarily affected by the passage of the Rate bill in the House (February 8), and by fear of a strike at the anthracite coal mines, where a suspension of mining was ordered for April 2. Money rates advanced to 30 per cent. early in April. A deficiency in the New York banks' surplus reserve was disclosed on the 7th; one week later, Secretary Shaw began to facilitate the importation of gold by giving to importing banks additional deposits to make good the loss of interest in transit. On the same day, in his "muck-rake" speech, Mr. Roosevelt proposed a tax on the transmission of "swollen fortunes."

Such was the situation when, on the 18th, the earthquake at San Francisco, involving enormous loss, precipitated a decline, which culminated on May 2d. Sales on that day were 2,541,200 shares. The disaster had accelerated a natural reaction and forced speculative pools to unload. Losses in these two weeks ranged from 11 points in Pennsylvania and 18 in Union Pacific to 60 in Anaconda. From this break, however, there was a prompt recovery, due mainly to easy rates for money, a settlement (on May 7th) with the anthracite coal miners for three years, and indications of a large crop of winter wheat. The imports or engagements of gold up to the end of May, when the Treasury's facilitating order was revoked, amounted to about $51,000,000. The Pennsylvania road sold $50,000,000 of short-time notes here and negotiated a loan of $50,000,000 in Paris. Among the events of May at Washington were the passage of the Rate bill and the Meat Inspection bill in the Senate, and the publication of the Garfield report on Standard Oil rebates.

Liquidation in June on a dull market was followed by increased dulness in July, when sales were less than 17,000,000 shares. A wage increase of 14 per cent. at the Fall River cotton mills marked the beginning of a movement which was to attract much attention in the year's last quarter. Official inquiries, indictments and State legislation concerning freight and passenger rates continued to disturb the railway world. Money rates were low and were to be so until the end of August. General conditions were highly favorable. In July, $30,000,000 of Panama bonds were placed at high prices, owing partly to the ingenious devices by which Secretary Shaw stimulated the bidding. Fiscal year records showed a great increase of external trade, exports having risen to $1,743,763,602 (an advance of nearly 15 per cent,), while the favorable balance, with due allowance for gold and silver shipments, was $481,000,000.

August saw a notable revival of activity and an upward movement in securities, due to the sure promise of record-breaking crops, the resumption of dividends on the $508,000,000 of Steel common stock (announced on July 31st) and an extraordinary increase of Union Pacific and Southern Pacific dividends. The allowance of a dividend on

Steel common at the annual rate of 2 per cent., for the two quarters already elapsed, was clearly warranted by the Corporation's enlarged profits. Net earnings, by quarters, are shown below:

STEEL CORPORATION EARNINGS.

	1904.	1905.	1906.
First ..	$13,445,232	$23,025,896	$36,634,490
Second	19,490,725	30,305,116	40,125,033
Third .	18,773,932	31,240,582	38,114,624
Fourth	21,466,633	35,278,688	.....
	$73,176,522	$119,850,282	$114,874,147

Earnings for the full year of 1906 will be in the neighborhood of $155,000,000.

On the morning of Friday, the 17th, it was announced that the dividend on Union Pacific had been increased to a basis of 10 per cent. (from 6), and that a beginning of dividend payments on Southern Pacific had been made, at the annual rate of 5 per cent. This caused extensive buying for the rise. Sales on that day were 2,529,422 shares; in the two hours of Saturday they were 1,544,950; on Monday they rose to 2,716,073. For the six business days beginning with the 17th they exceeded 11,500,000. Advances up to Tuesday were 28 points for Union Pacific, and 14½ for Southern Pacific, but nearly twice as much had been gained since the question of dividend rates was referred to the Union Pacific's executive committee. It was afterward alleged that great sums had been won in speculation by persons acquainted with the committee's decision. The public had expected nothing more, in the case of Union Pacific, than in increase to 7 per cent. Later in the year, the Government ordered an investigation to ascertain whether these and other Harriman roads were in an unlawful combination. At the end of August, the autumn demand for currency began to be felt, and very little relief was given by the Secretary's deposit of $22,000,000 with the banks.

Beginning in September, the dominant influence upon the market for securities was the scarcity of money for use in business as well as in speculative trading. All over the world there were unusual demands upon capital, due chiefly to prosperity on both sides of the Atlantic; to the continued absorption of capital in great projects of construction (especially in the United States), and to the requirements of unprecedented speculation here in real estate and mining property. Loans on call rose to 40 per cent. in New York early in September; on the 8th, a deficit of $6,500,000 in the banks' surplus reserve was announced.

Secretary Shaw renewed, on the 6th, his concession to facilitate the importation of gold. But the European banks began to fight for the retention of their gold supplies. On the 13th, the Bank of England's discount rate was advanced to 4 per cent.; Germany's Imperial Bank increased its rate to 5. The Secretary sought to restore, by depositing $26,000,000, a part of the money which the Treasury had withdrawn from the channels of trade.

On October 11th the Bank of England increased its rate to 5 per cent.; on the 19th it made the rate 6 per cent. for the fourth time in twenty years. The Bank's ratio of reserve had fallen on the 10th to 35½ per cent.; by December 5th it had risen to 44⅞ per cent. Berlin had preceded London in making a 6 per cent. rate. Exports of gold to America were checked. For this movement, to the end of October they amounted to about $47,000,000. Loans to Americans in the London and Paris markets were shifted to New York. Sales of American shares carried abroad were caused by this contest for gold and this change in relations. But the foundation of all investment and speculation was as broad and firm as ever. The great cereal crops had been harvested. Traffic on the railways had never been so great or so profitable. From all parts of the land arose complaint of delays in transportation. The congestion of freight traffic was of an unprecedented character.

In November and December, money rates, fluctuating widely, were high for a considerable part of the time. In the first of these months, Mr. Hill's plan for distributing among Great Northern stockholders the income to be derived from the sale or lease of what were known as the Hill iron ore properties to the Steel Corporation was announced. Thruout the year the market value of the Hill railway stocks had been affected, first by rumors concerning the disposition of these vast ore deposits, and, later, by the published agreement with the Steel Corporation, which was signed on

October 6. This agreement calls for the payment of at least $93,000,000 by the Corporation in the coming ten years, and for the payment of more than $500,000,000 eventually. In the first half of December, public attention was directed to the Hill railways by announcements of forthcoming new issues of stock—$93,000,000 for the Northern Pacific and $60,000,000 for the Great Northern. These new shares are to be allotted at par. While investors were thinking of this cutting of huge melons, the Attorney-General of Minnesota interfered, holding that the projected issue of Great Northern stock would be illegal. Whereupon the market values of all the Hill stocks sharply declined. On December 8th there was another deficit in the banks' surplus reserve. Secretary Shaw anticipated the interest on Government bonds, deposited $10,000,000, and offered to buy $10,000,000 of bonds maturing in 1907. The following table of twenty-five leading or representative stocks shows the gains in 1905, with quotations at the opening and at three subsequent dates in 1906:

STOCKS.

	Gain in 1905.	Jan. 2.	May 2.	Aug. 20.	Dec. 15.
Atchison	½	89	85⅜	105	102
Balt. & Ohio	7¼	112⅞	105¾	119¼	118½
Bklyn. R. T.	27⅝	87½	72	80⅜	82¾
Can. Pacific	40¼	173½	155⅜	171½	200
St. Paul	9¼	180	155¼	193⅝	197½
Northwestern	14¼	220½	194⅛	212½	205¾
Del. & Hud.	38½	224	189	226	228½
Gt. Northern	54¾	288¼	275	309½	214
Lou. & Nash.	12	151⅞	136¼	151	148¼
N. Y. Central	11⅛	151¼	130½	146	132¼

Nat. Lead	58¾	82¾	66	82½	73⅞
Tenn. C. & I.	60	129	133½	161	160½
U. S. Rubber	20	53¼	48½	47¾	52½
U. S. Steel	12¾	42¾	36¾	46	49⅛
" " pref.	⅜	106⅛	102	109¼	105⅛

Below are shown the number of the shares and the value of the bonds sold each month on the New York Stock Exchange:

SHARES AND BONDS SOLD.

	Stocks. Shares.	Bonds, Par Value
January	31,528,390	$72,836,600
February	21,699,800	59,444,800
March	19,467,684	54,194,350
April	24,330,919	63,342,100
May	24,026,040	60,909,600
June	20,340,391	53,832,200
July	16,346,211	36,502,900
August	31,804,816	55,031,500
September	26,018,270	44,266,000
October	21,894,130	57,236,800
November	19,400,130	43,268,800
Eleven months	256,856,787	$600,865,650
1905	263,081,156	1,084,418,770
1904	187,312,065	1,040,146,455

A general increase of wages was made in November, the additions in many instances having been ordered without solicitation from employees. As a rule, the increase was 10 per cent. This was the rate granted by the Pennsylvania Railroad Company, at an annual cost of $12,000,000, on the ground that it was required by the higher cost of living. Increases have been reported from nearly all the railroads and express companies. the Standard Oil Company, the Steel Corporation, the copper mines, the gas company in New York, and the cotton mills of New England, 10 per cent. having been given to the 25,000 employees at Fall River, in addition to the 14 per cent. granted in June. It is estimated that the changes of this kind already made involve an additional wage expenditure of more than $100,000,000 a year.

These payments followed increases of dividends. Of such increases there is a long list. Among the railroad companies thus advancing their dividend rates were the Union Pacific, Pennsylvania, New York Central, Baltimore & Ohio, Atchison, and Norfolk & Western. Beginning in January, Amalgamated Copper's dividend was increased three times.

Railway earnings, both gross and net, showed an extraordinary growth. It was estimated, upon returns from more than 90 per cent. of the mileage, that the increase of gross earnings in the first half of the year amounted to $135,000,000. Rate legislation, deplored by some as threatening the insolvency of railway corporations, had no depressing effect upon the companies' business. They gained by the prevention of rebating and the prohibition of passes. In many in-

stances, freight rates were voluntarily reduced.

No industry was more active or profitable than the manufacture of iron and steel. Last year's great output of pig iron was surpassed. Thruout the year, the demand for consumption was enormous. At the end of September, the Corporation's unfilled orders on hand were for 7,936,000 tons, a quantity exceeding any previously reported. The Corporation's earnings are printed above. In the following table is shown the monthly output of pig iron, with annual totals for recent years:

OUTPUT OF PIG IRON.

	Tons.
1903	18,009,252
1904	16,497,033
1905	22,992,380
1906—	
January	2,068,893
February	1,894,032
March	2,165,632
April	2,073,645
May	2,098,746
June	1,970,733
July	2,013,402
August	1,926,736
September	1,970,962
October	2,196,808
November	2,187,665
Eleven months	22,567,254

If about 300,000 tons be added for the product of charcoal furnaces, the year's total will probably exceed 25,000,000. On December 1st, the weekly capacity of furnaces in blast was greater than ever before.

Owing to increased demand, the price of copper rose from about 19 cents, at the beginning of the year, to 23⅞ cents in December. This accounts for the active speculation in the stocks of copper mining companies, and the remarkable increase in their market value. In the ten months ending with October, American copper mining companies paid $48,500,000 in dividends. Wide speculation in the shares of other mining companies was, like speculation in suburban real estate, a prominent feature of the year's activity. It suffered a check in December, owing to a great decline in the price of shares of the Nipissing mines (Cobalt district), following the sacrifice of the Guggenheim option for the purchase of one-third of the capital stock at five times its par value.

Fortunately, the lack of elasticity in the volume of our currency, and the continuous withdrawal into the Treasury of money that should be currently available for use in business, caused no financial disaster in the year now drawing to a close. When one looks at the record of high rates for loanable capital, of repeated deposits of Government funds in the banks, of the banks' deficient reserves, and of the Secretary's devices to counteract the effect of antiquated laws, he must wonder how the business world escaped a crisis that would have shaken credit and impaired confidence. The lesson of it all is that the Government's receipts, a safe balance excepted, should be freely deposited every day for the use of the people, and that the national banks should be empowered to issue additional currency, under proper safeguards, when such currency is needed. It is to be regretted that Congress does not intend, at the present session, to enact the substance of the amendments submitted by the Bankers' Association and the New York Chamber of Commerce.

NEW YORK, DECEMBER 15.

BUILDING FOR UNION TRUST COMPANY, SPRINGFIELD, MASS. PEABODY AND STEARNS, ARCHITS.

Christmas in Bethlehem

BY BENJAMIN W. BACON, D. D.

Professor of New Testament Criticism and Exegesis in Yale University.

THE Church of the Nativity in Bethlehem at Christmas time! Few places or occasions in the world can furnish such a picture of the contrast between the devotional spirit of medieval Christianity, the Age of Faith in ecclesiastical authority, form and tradition, and that of the modern Age of Science, with its instinctive craving for historic fact.

Approaching from the north, one follows the modern carriage road from Jerusalem, crossing the broad plain of Rephaim and following the eastward slope of the long ridge nearly 3,000 feet high, which constitutes the backbone of central Judah. On the left open enchanting views down the successive valleys, which slope toward the wilderness of the Dead Sea, and across the sea itself, 4,000 feet below, to the purple wall of the Mountains of Moab. There below, where the more desolate, waterless moorlands begin to give way to the grain fields, olive orchards and vineyards of the fruitful vale of Bethlehem, is the scene of David's shepherd days, here the field of Boaz, forever endued with charm by the gleaning of Ruth, yonder "the pastures of the wilderness." There, too, are still the flocks of sheep gathered around or following their shepherds, as in the night

> "When such music sweet,
> Their hearts and ears did greet,
> As never was by mortal finger strook."

Soon we pass by the roadside, on the right, the Tomb of Rachel still marking the spot held sacred when our first Evangelist told his story of the slaughter of the babes, borrowing from the prophet Jeremiah his figure of the bereaved mother of the tribes to apply it to the tragedy "in the days of Herod the King." Great blocks of hewn stone pierced with a circular opening four-

CHRISTMAS DAY IN BETHLEHEM.

BETHLEHEM FROM THE SOUTHEAST.

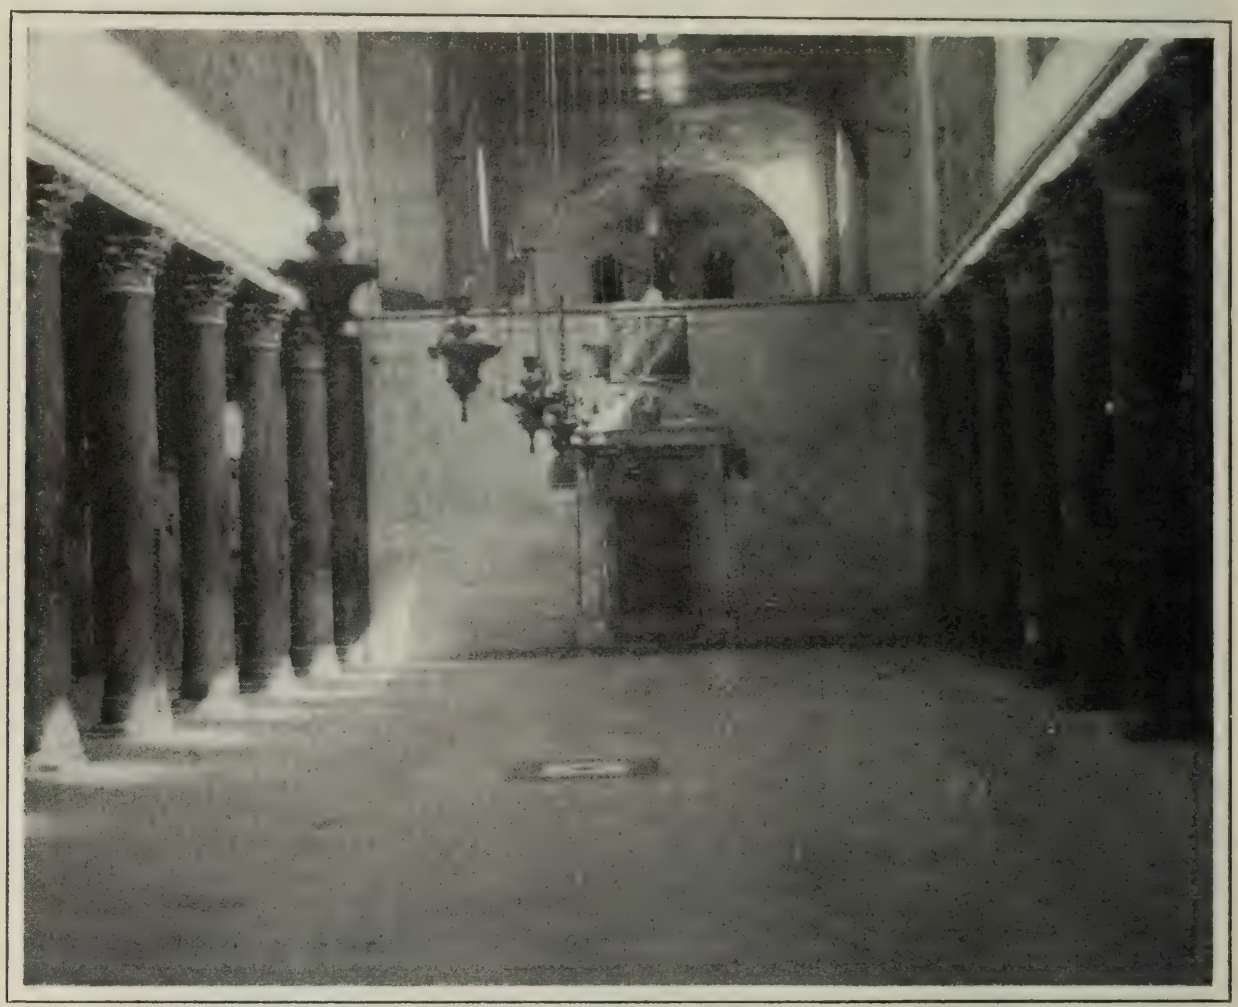
teen inches in diameter and fitted each to each by collar and socket joint lie beside the road, inscribed fragments of the Roman aqueduct which siphoned water from the Pools of Solomon across the valley and northward to Jerusalem. And there, as we lift our eyes, Bethlehem, with its gray walls, its flat-roofed houses, its olive orchards and gardens, its monasteries and hospices and its ancient Basilica of the Nativity lies before us. Near the city gate we turn aside to visit the cisterns tradition points to as the well by Bethlehem's gate whence David's heroes drew the draft esteemed too precious by the king for even his fever-parched lips; then we ride slowly thru the narrow, crooked streets to the little market-place before the ancient church. The crowd is already assembling, tho it is not yet noon of Christmas eve.

Only a heavy, forbidding façade confronts us, the unadorned exterior wall of an irregular mass of buildings encircling on north and east and south the Church of Constantine; for the ancient Basilica is now flanked and supported everywhere by chapels and monasteries of Latins, Greeks and Armenians, each jealously guarding their traditional rights. Even the ancient portal is walled up, leaving barely space for a single man to enter stooping thru the heavy-linteled door, a mute testimony to the war and bloodshed that have raged here incessantly since the downfall of the Empire of the East. Within there is a vestibule once communicating by three great portals with the nave and aisles; but now the great oak doors, with their crusaders' crosses carved in strong relief, are closed. One more low and narrow entrance admits to the stately nave, flanked on each side by a double row of Corinthian columns. The nave, lighted only from the clerestory above the columns leads to the transept and apse above the sacred crypt. We are standing here in the most ancient church of

Christendom. These columns were reared by Constantine while men around could yet remember the fate of those who had given their lives for their faith in passive resistance to a heathen empire. These walls were adorned with their crumbling mosaics by Byzantine emperors, and here on Christmas Day 1101, Baldwin the crusader hero saint, was crowned king of Jerusalem.

There is scarcely time to wander thru the shrines and chapels of Armenians, Greeks and Latins, descending the narrow stair into the grottoes hewn in the rock and connected by long, dark corridors, where tradition first fixt, before the building of the church, the scene of the Nativity, and later the abode of St. Jerome and his devoted pupil, Paula. All is hung with tapestry and overlaid with marble and jewels, while lamps of brass and silver and gold, shrines and pictures and images testify the age-long devotion of countless pilgrim worshippers. Alas, no less significant is the never ceasing watch of the Turkish soldier, who stands, musket in hand, beside the high altar itself; not even here a sufficient guard against the riot and murder which are ever breaking out between sect and sect.

We must hasten thru the court of the Armenian monastery, up its flights of stone stairs, past the whitewashed, vaulted room we are to occupy for the night, bare of every article of furniture or ornament save the rugs in which we are to wrap ourselves and the earthen jar of water. We are to look down from the roof on the approaching pageant of the advent of the Latin patriarch from Jerusalem. Already a trumpet from the city gate announces his approach, and from the narrow entrance to the church issues a long file of vested monks, acolytes and priests, bearing their tapers and insignia, and chanting as they form in double row. At the further limit of the square the Patriarch alights, where a bit of matting has been laid over the muddy pavement, and dons the gorgeous vestments which the procession has brought with it from



RACHEL'S TOMB ON ROAD TO BETHLEHEM.

the church. Then, surrounded by his chanting retinue with crucifix and crozier, candles and cloth of gold, he makes his solemn entrance into the church while the motley crowd of pilgrims and sightseers, peasants and town folk of Bethlehem press close upon them, and only ten yards away a troop of gipsies stroll indifferently about beside their black goats-hair tents.

And now the elaborate service is to begin, which will last uninterruptedly thruout the night, an endless succession of chanting and genuflections and symbolic ceremonial robings and incensing. and all the pomp and circumstance of Roman ritual. It is better that we take ourselves away from the strange spectacle of mingled magnificence and squalor, the narrow, filthy streets, the crowds of bedraggled fellahin, poverty-stricken pilgrims and ragged Turkish soldiers, in their strange contrast with the ecclesiastical splendor. The culmination of this ritual will not be reached till midnight, when the procession takes its way from the altar of the Latin chapel, the patriarch at its head bearing in his arms the wax figure made to represent the Babe, and after depositing it in the sacred grotto, returns again followed by his retinue to resume the chanting and masses at the altar.

We must out from this stifling atmosphere, down to the changeless fields, where flocks are even now gathering homeward for the night. There, a mile below the village, on a little olive crowned knoll, lifting itself above the gentle slope of the broad valley, are the ruins of an ancient shrine. A few Corinthian capitals, a bit of sculptured ornament or two, gathered in spacious subterranean vaults, mark the site of the mediæval church of Gloria in Excelsis, where in the time of Paula there stood "the Tower of the Flock" (Gen. 35:21 Mic. 4.8). Here, where Christians of Jerome's day had echoed the songs of the angels, in the sweet silence of the twi-

THE NAVE OF THE CHURCH OF THE NATIVITY AT BETHLEHEM.

light we read the idyl of the Redeemer's birth, and pictured to ourselves the shepherds of Bethlehem's hills, as the unchanged surroundings gave us to see them again.

What a contrast that was when again we stood at midnight in the midst of the worshippers under the ancient columns of Constantine! On his golden cathedra sat the Patriarch, surrounded by lesser orders of clergy, one set of gorgeous vestments exchanged for another thru the long hours, while before him wheeled and bowed and chanted the endless succession of priests. In the nave kneeled the crowd of worshippers, here a group of Syrian women covered with their long white veils, there the French consul in full regalia, his coat stiff with gold embroidery and covered with decorations, his place surrounded by only less gorgeously uniformed cavasses. At last, amid the smoke of incense, pealing organ, and chanting priests, the patriarch advanced to the altar and drew aside the silken curtain that concealed the figure of a babe. Then, surrounded by lighted candles, in miter and vestments, crozier and crucifix carried in advance, acolytes swinging their censers behind, he led the procession to the sacred cave. From the beginning of the long pageant to the end all spoke of one effort, one instinctive craving of the devout soul, the effort to humble itself, to thrust between itself and the object of its devotion a screen of marble and silver and gold, of priestly vestment and ritual,

"Confounded that her Maker's eyes
Should look so near upon her foul deformities."

The pilgrim, if he seeks for one moment physical contact with some spot of earth consecrated by the authoritative declaration of his Church, has no sooner felt the momentary sense of reality than he shrinks away. It is anything but the historical reality in its plainness, its unadorned simplicity that his spirit craves. No; for eighteen centuries the effort of piety has been to cover up with marble and tinsel and embroidery the all too plain and simple coming of the Divine into our human life.

Strangers we were and felt ourselves, with all our reverence for the centuries of devotion that linger round these storied walls, with all our effort to enter into the spirit of pilgrim, Crusader and devotee. It was a different spirit that spoke in us as we looked out from the smoke of incense and the glare of candle-light to where, under the half-shadow of the columns, could be seen the shrinking, ragged figures of fellahin, peasants and women of Bethlehem, yes, and a group of shepherds, too, curiously peering out from behind the crowd, naïvely unconscious of their tattered sheepskins. How strange that they alone in all that multitude were unknowingly depicting before us the real historic truth, speaking to us out of the simplicity of the ancient past of David's shepherd days and the birthright of "David's greater Son."

A Christmas Prayer

BY EDITH LIVINGSTON SMITH

We thank Thee deeply, little Christ, first for the gift of Thee,
For peace on earth and sweet belief in Immortality;
For hearth-stones warmed and brightened as for tenderness alight
In every mother's breast which glows with love this sacred night.
We pray Thee, Holy, Lowly King, make humble hearts in men;
We glorify Thee, Great High Priest, for grace beyond our ken;
We thank thee, Lordly Stable Waif, for home and shelter, blest;
Grant at our Inn of plenteousness we give Thy poor to rest:
God's star in Heaven, smiling, shines above Faith's open door,
That we who seek may find Thee there to praise Thee, evermore.
Amen.

The Confessions of a Stockbroker

[The author of the following frank article is a very well known Wall Street stock broker. For obvious reasons he prefers his name should not be known.—EDITOR.]

OUR firm is an ordinary "commission house" with a membership in the New York Stock Exchange. We do not advertise or operate any wires to other cities and have no branch offices. All our business is done in one office near the Stock Exchange. We have three partners—one on the floor of the Exchange, one in charge of the office force and books, and one on duty in the "customers' room," who also attends to our correspondence. We employ a capital of $300,000 in our business, besides having a Stock Exchange seat, which is supposed to be worth $90,000 at present, but which we carry on the books at $50,000, and we allow our board member interest on that amount, as a contribution to the capital of the firm. Thus we may say that our capital account is really $350,000, and we credit each partner with interest at 4½ per cent. per annum on his share of that capital every year, as also on such additional sums as they may have at their credit in the books of the firm. Our office expenses of all kinds are about $20,000 a year. Thus, before there are any profits to divide over and above interest on capital, the firm must earn $36,000 a year. The partnership agreement prohibits speculations for account of the firm, but individual members thereof may speculate if they please on their own account, provided that they keep within limits set by the amount of money they may have with the firm, over and above their capital contributions. In 1905 we divided a net sum of about $68,000, arrived at as follows (in round figures):

"Commissions account"	Cr.	$80,750
"Interest account"	Cr.	24,000
Total	Cr.	$104,750
"Office expenses"	Dr.	$21,000
Interest on capital	Dr.	15,750
	Dr.	36,750
Balance profits		$68,000

How did we do it?

The figures given show two sources of profits to our firm, viz., "Commissions account" and "interest account." We have no other profits than those which come under these two heads.

For buying or selling stocks or bonds we receive from the customer one-eighth of one per cent. on the par value of stock or bonds purchased or sold. This is the rate prescribed by the Stock Exchange, and it is absolutely rigid. This commission amounts to $12.50 for each hundred shares of stock or $10,000 par value of bonds, and it must be charged whenever a purchase or sale is made. It is known as the "brokerage" or broker's fee. The "commission account" in 1904 therefore represented purchases and sales amounting to 646,000 shares of stock, assuming no bonds were bought or sold, being an average of something over 2,000 shares a day for 300 working days. As a matter of fact, we did in all that year about 610,000 shares of stock and about $2,500,000 par value of bonds. And, speaking roughly, of the 610,000 shares of stock done, about 575,000 were done "on margin." This brings me to the second source of profits, viz., "interest account."

Over ninety per cent. of our business is speculative, or "margin," business. The procedure is as follows: The customer wishing to buy a hundred shares of stock "for a gamble" deposits with us a "margin," which we never allow to be less than 10 per cent., or rather, $10 per share on the stock purchased. As all transactions on the Exchange have to be settled the next day in cash, we have to provide the difference between the amount of the customer's "margin" and the cost of the stock purchased, so as to pay for the stock when delivered to us on the day following its purchase. The case stands this way:

Cost of one hundred shares at $100	$10,000
Of which provided by customer's "margin"	1,000
Balance to be provided by us	$9,000

Our books show the customer "in debit" to the amount of $9,000, and we charge him interest on this amount at a rate fixed monthly according to the rates ruling during the month. But, the acute reader will say, the only money the firm can then make on its capital employed is simple interest, and simple interest on $300,000 would not produce $24,000 per annum under ordinary circumstances or anything like it. Very true. And the seemingly paradoxical fact is that we cannot make anything worth while on "interest account" unless we are borrowing money continually thru the year.

It is very evident that with only $300,000 of available capital in our firm we could not "carry" for our speculative or "margin" customers more than about 3,000 shares of stock (at par) at any one time, for, after allowing for the "margin" deposited by the customers ($30,000) and deducting our bank balance (which we always keep at $10,000), there would be left only $20,000 of our capital when we had paid for 3,000 shares. Our profit on "interest account" comes from our borrowing money from banks to carry our customers' stock and charging a small profit on the rate. Banks usually lend on security collateral to the amount of 80 per cent. of the market value. Suppose one of our "margin" customers instructs us to buy him 1,000 shares of stock at par (depositing with us $10,000) and carry it for him; the transaction works out thus:

Cost of 1,000 shares at par		$100,000
Of which provided by customer	$10,000	
Of which borrowed from bank	80,000	
		90,000
Leaving to be provided from our capital		$10,000

And consequently the purchase of 1,000 shares ties up only $10,000 of our capital. Now "interest account" works out in this way on this transaction, the rate having averaged 3½ per cent. for the month at the bank, we charging our customer 4½ per cent.:

Customer. Dr. to "interest account," 4½ per cent. on $90,000 for one month		$337 50
"Interest account" Dr. to bank, 3½ per cent. on $80,000 for one month.		233 34
Net credit to "interest account"		$104 16

which, you will observe, is at the rate of $1,249.92 per annum on $10,000 capital, or 12½ per cent. Now to produce $24,000 per annum or thereabouts on "interest account" at this rate we should be borrowing, on an average, about $1,500,000. As a matter of fact, our "profit" on interest averages more than 1 per cent. per month in a year when interest rates are normal, thanks to careful borrowing. Our average borrowings in 1904 were about $1,100,000, rising to a maximum of about $1,600,000 and declining to a minimum of about $400,000 for a short time. When rates are very low or very high our profit tends to become smaller than when they are normal, as customers are prone to "kick" in either case. (It may be mentioned here that the hardened "margin" speculator usually grumbles over his "interest" charge!) We usually expect to carry at least $300,000 or $400,000 of "time money," borrowing the rest of our requirements "on call." When we have "money over" we lend it in the Exchange. We do not as a rule "lend stocks" there unless under special circumstances, when the "loaning rate" on a stock is less than the money rate. Another source of interest profit to us is in borrowing "short" stocks when some of our customers are "short" of the market. We generally divide the "rate" on "short stock" with the customer. Not many of our customers, however, sell stocks "short," and the contribution to "interest account" from this source is not very large in a year.

I have now explained where our profits come from. It is very clear that the more stock our customers buy and sell and the more money we borrow for their account the more money we make for ourselves—and we are in business to make money for ourselves! We desire our customers to be active; we want as many commissions as we can get. When a customer has bought something we are glad to "carry" it for him, because we make something on "interest account" by doing so, but we would rather sell it for him and buy him something else, because we make two more commissions thereby, and one "brokerage" is worth much "interest." "In" and "out" as often as possible is the motto that we would wish our customers to adopt. We

aim to do 2,000 shares a day of eighth business as a general average. And we want our customers to make money, because a customer who makes money is a constant producer of commissions, whereas a customer who loses his money is "dead" for our purposes. Thus we are vitally interested in the success of our customers—but it is a frankly selfish interest!

The one thing we want at all times is business, or—in plain language—customers. At the close of 1905 we were mailing our "market letter" to about six hundred people, for practically all of whom we had done business at one time or another. Of this number about sixty were what we term "active"—that is, had accounts with us which brought us a more or less continual supply of brokerages. About twenty more were accounts which occasionally became active for a time and then lapsed into "innocuous desuetude" for weeks together. About half the remainder were probably "dead," but we kept the names on our mailing list because it cost little or nothing. The rest were the names of people and firms for whom we transacted occasional investment business. Now the ever-present problem with us is to increase the number of active customers. How do we do it?

The question is hard to answer, except by the statement that we rely upon personal influence exerted indirectly. The main burden naturally falls upon the partner who is in charge of the "customers' room," for the board member is busy on the floor from ten to three o'clock every day, and the partner in charge of the books, loans, securities, etc., spends a good deal of his time in the "cage." (Moreover, he is the man who has the unpleasant task of seeing that margins are kept good and so on!) None of us, however, in season or out of season, forgets that we must have customers if we are to do business, and each of us uses every opportunity that presents itself for the securing of more accounts.

We have allocated to the use of customers the best room in our suite of offices, and have furnished it with a large "blackboard" on which all quotations are kept as they come out on the ticker, also rows of comfortable chairs facing the blackboard. We subscribe to all the "news bureaus" that issue printed news-slips and typewritten matter, and the financial papers we keep on file—all for the benefit of the customers who sit in our chairs and watch our blackboard. Our "customers' room" partner has his desk in a corner of this room and he spends the day—while the market is open—chatting with the customers, taking their orders and reporting to them the execution thereof. All orders are written on blanks provided for the purpose and given to him. He transmits them over the "board phone" in the back-office and reports are brought to him, he transmitting them to the customer. His job is to extract as much business as he can. How does he do it?

I despair of being able to describe the method, but perhaps it is easier to approach in a negative way, by remembering certain fundamental facts with respect to the tribe of speculators.

The average speculator knows that most of his tribe lose money—but he is ever buoyed up by the belief that he is the exception.

The average speculator knows that "tips" and "rumors" are for the most part a delusion and a snare—but he is ever inclined to believe that the "tip" he has just heard is a "real one" and safe to follow.

The greater the ignorance of the average speculator upon the facts and figures of stocks the greater is his belief in the "market wisdom" of the man who knows something of these things, and the greater his reliance upon the market opinion of such a man. (Such a man is our office partner.)

The average speculator knows perfectly well that the "financial gossip" of the newspapers is written by men who do not receive an average of $3,000 a year for the task, and who, in the nature of the case, cannot know much more about the probable market fluctuations than he does—but he has immense faith in the printed word.

The average speculator is almost always a "bull" on the market, *i. e.*, he perpetually expects prices to rise. A speculator rarely becomes a "chronic bear" until he has lost all his money.

Now our office partner knows all these things by instinct, and all are made to serve his purpose. Let me here again remind the reader that it is always to the broker's interest that the customer shall make money. The more money the customer makes the better the broker likes it, because a customer without money can produce no brokerages and a customer with profits produces many brokerages! Then our office partner is actuated at the outset by a genuine desire for the success of his clients. Nevertheless experience has taught him that he knows practically little or no more about the future than does the least of his clients, and that his opinion on the market is quite as likely to be wrong as right. Consequently. his first rule is to let the customer follow his own bent, and not to thwart his desires. No customer will usually ask his broker's opinion—that is to say ask it with a genuine desire to get it—without having some opinion of his own to start with. A man who wants to buy something will ask his broker what he thinks, as will a man who wants to sell, but a man who does not himself want to either buy or sell does not usually ask for an opinion. Our office partner, when asked by a client for an opinion, usually ascertains what it is the client wants to do and then gives him such arguments in favor thereof as seem to him to be good—unless, as occasionally happens, there are really strong arguments on the other side which seem to him sufficiently important to warrant him interfering for the customer's own good. This does not often occur, but it does sometimes, and our "office partner" has more than once prevented a customer from doing something foolish—at the cost of a brokerage.

He is a man who carefully reads up on statistics and knows a good deal about investments. He keeps posted on earnings, dividends and so on of most of the railroad and industrial companies whose stocks are active, and can talk intelligently on these things in any company. Thus he appears to most of our customers to be a man of learning deeply versed in the mysteries of financial lore—and as such a good guide on the market. But, more than this, he is a man who devotes a certain time every week—mostly the hours from 4.30 or so till dinner time on one or two days—to the frequentation of certain clubs and hotels where men gather who talk stocks and bonds. Here he picks up news and gossip of all kinds and also customers. The news and gossip serve to whet the appetite of his office customers, for when in Wall Street one man says to another: "I hear So and So, etc.," the other man's attention is always aroused. The new customers he obtains serve to maintain the "active list" and offset the "list of the dead," to which additions are always being made.

For the necrology of the Street is an ever-growing list, as every stockbroker's ledgers will show. The average commission house — unless it is fortunate enough to do business for real magnates —must reckon on obtaining a constant supply of new customers to replace those who drop out. The average speculator "on margin" lasts but a limited time as a rule. The reason is that the average speculator loses money at the game. It is safe to say that the man who is constantly trading in the market will, in nine cases out of ten, have a short life—if a merry one!—and that his broker must expect to replace him pretty frequently. Our firm has not been long enough in business to enable me to give any figures of value on the mortality question, but our experience, moderate as it is, demonstrates very clearly that the population of our "customers' room" is constantly changing, and that only a mere handful of our customers have "staying powers"—that is, make money on balance with any regularity. We have been thru two "panics"—those of 1899 and 1901—and the slaughter wrought in both cases upon our customers was painful! In 1903 also we lost a good many. Of those who sat opposite our blackboards when we commenced business in our present office barely ten remain on our active list, and those ten are by no means so "active" as they were.

Thus, the ever-present problem with us is to find new customers. The reader may say: "You admit that speculators on margin mostly lose money, and that you cannot guide your customers with any certainty in their speculations—yet you are all the time encouraging your customers to speculate and looking for

more customers! Do you call that a proper kind of business?"

That question cannot be answered with a plain "Yes!" or "No!" We admit that people who speculate will, in nine cases out of ten, lose money if they keep at it. We admit that we cannot guide them with any certainty in their market operations. We admit that we want as many customers and as many brokerages as we can get. And yet, if a man came to us and said that he wanted advice as to whether he should speculate or not—he knowing nothing about it—I think we should candidly advise him not to do so if he could not afford to throw away the money he proposed to risk (which no man in his heart expects to do), but we should also say that if he insisted upon speculating we should be glad of his business. That about represents our attitude. People *will* speculate and *will* lose their money whether we do their business or not, and we feel that we might as well do their business as let some other firm do it. When people speculate with us we do the best we can to help them to be successful, but our best, we must admit, is very small.

What kind of people are our customers? All kinds. Lawyers, doctors—the learned professions contain any number of inveterate stock gamblers—merchants of all sorts, men of leisure, clergymen (a few) and women. We do not like women customers, and execute orders for them only when we cannot, for one reason or another, refuse them, as they are usually very bad speculators and troublesome as clients. Nevertheless, we have a few who insist on speculating from time to time. We will not do business for bank officials or clerks except for cash, as experience shows it is not safe to do so. (Nevertheless, a great many of them speculate constantly in Wall Street.) We have a dozen or so of "professional" speculators—*i. e.*, men who have no occupation but that of "playing the market" and who sit in our office all day from ten to three o'clock. These men furnish steady grist to the brokerage mill, as they constantly change their views and their market position. Moreover, their discussions, comments, etc., are stimulative of business from others who may be sitting around waiting for an opportunity, and they are valuable to us in that way as well as for the commissions they actually pay. Then we have a large number of clients for whom we do a little investment business every year. This is mostly done by correspondence. We have a few customers out of town in the smaller cities of the State who occasionally speculate a little in times of excitement. We get a good many orders by telephone from customers who never come to the office in person. In a word, so far as our experience goes, everybody speculates to some extent, and we have some of everybody on our books. Moreover, as I have already said, almost everybody seems to lose money.

I am no philosopher, and in writing this "confession" I am trying to state facts as they are, leaving the reader to draw his own conclusions therefrom. But if I were to generalize from experience I would say that the following general statements were true:

First—Almost all speculators "overtrade"—*i. e.*, assume a risk out of proportion to their capital. This causes them to be forced to sell at the wrong time.

Second—Almost all speculators are willing to take small profits, but allow losses to run against them, so that even if they guess right as often as wrong they lose money on balance.

I believe that most of the money that is lost in Wall Street is lost for one or other of these reasons. When a speculator has learned to "cut a loss" he has learned a great deal, but few ever learn it. The tendency to overtrade grows out of the idea that speculation is a method of getting rich quickly, and that a speculator should be able to keep on doubling his capital—which is surely false in practice, whatever the theory may be. The few constantly successful speculators I have had experience of in our office are men whose accounts are always largely over-margined, and who are constantly "taking small losses," but who about once in so often turn up with a large profit which wipes out all the losses and leaves a surplus.

A treatise on speculation, however, is no part of the "Confessions of a Stockbroker"—for, after all, he knows very little about it.

New York City.

SKATING

BY SUSIE POLSON ROLLINS

Far on the river's icy face
A vision fair in furs and lace,
Rose cheeks and lips—who could withstand?
As, naïvely, she takes—his hand!

But near the bank, the skating past—
Steel shod withal—she stops at last.
Uncertain steps. In mock alarm
Then bends; and quickly takes—his arm!

He sees 'neath curling lashes, shade,
Blue laughing eyes in ambuscade;
Deep subtle lightnings from them dart.
And then—she coolly—takes his heart!

Resistless spell of dimpling smile
From earth his spirit lures meanwhile
To empyrean hights instead.
Only, alas! to lose—his head!

Capitulating for his life,
He gains then in return—a wife!
Ah crafty youth, well might you part
With hand and arm and head and heart!

London, Ontario.

Photographic Study by Alice Boughton

President Roosevelt and The Hague

BY JOHN W. FOSTER, LL.D.

[We can do no less than publish the reply of the Hon. John W. Foster, former Secretary of State, to his single point of criticism in our review of his admirable volume, "The Practice of Diplomacy." Without detracting in the least degree from the credit due to President Roosevelt for his successful efforts to bring to an end the war between Russia and Japan, for which he has justly deserved and received the Nobel Prize, we said that Mr. Foster was in error in giving Mr. Roosevelt the credit for bringing the Venezuela conflict before The Hague tribunal. Mr. Foster defends his position in this matter; and we have asked the Hon. Herbert W. Bowen, who represented Venezuela at the time, to give in a succeeding article his understanding, which agrees with that given in our review of Mr. Foster's book.—EDITOR.]

IN the very flattering review of "The Practice of Diplomacy" in the issue of THE INDEPENDENT for November 29 I am charged with an error of fact. If it related merely to my accuracy as an author it might be passed over in silence, but, as it involves an important historical event and a high honor attributed to the President of the United States, I deem it important to ask THE INDEPENDENT to examine the matter.

The alleged error is the statement that in the Venezuela troubles of 1902, "thru the influence of the President of the United States, an agreement was reached to submit the claims of the allies and also those of other countries to arbitration." Your reviewer says:

"As a matter of fact the President of the United States had absolutely nothing to do with the agreement to refer the controversy to The Hague."

Happily for the determination of this question, all the facts are officially published in the Foreign Relations for 1903.

On December 11, 1902, after the ports of Venezuela had been blockaded and all her war vessels seized by Great Britain and Germany, Mr. Bowen, our Minister to Venezuela, cabled Secretary Hay that he had received a written communication from the Venezuelan Government proposing to Great Britain and Germany "that the present difficulty . . . be submitted to arbitration." (Foreign Relations, 1903, p. 791.) Secretary Hay, on December 12, cabled the proposal to London and Berlin (pages 420, 453, 792). No reply being received, on the 16th Secretary Hay repeated to London and Berlin the arbitration proposal and urged its desirability. (Pages 421, 453, 798.) Before a reply was received, Venezuela first asked that Mr. Bowen act as its arbitrator, and later conferred on him full powers to settle the difficulty by "negotiations in the most favorable manner possible." (Pp. 790, 799.) On December 20, Mr. Hay cabled Mr. Bowen that Great Britain and Germany had invited President Roosevelt to act as arbitrator, and to ascertain if that would be the wish of Venezuela; and on the 21st Mr. Bowen replied that Venezuela "accepts with pleasure the President of the United States as arbitrator." (Page 800.)

On the first intimation to Mr. Hay that the Allied Powers were likely to invite President Roosevelt to act as arbitrator, and before the formal invitation reached him, he cabled our representative in London, Mr. White, to discreetly and unofficially make it known that the President regarded "it as altogether desirable that the matter should be referred to The Hague." (Page 457.) Mr. White replied that the Allied Powers desired the President to arbitrate, "but, if impossible, both Governments are prepared to refer the questions at issue to The Hague Tribunal of Arbitration." (Page 460.) Whereupon Mr. Hay cabled Mr. Bowen, asking if Venezuela was also willing to take the same course, and he replied: "The Government of Venezuela declares itself in favor in principle of arbitration by The Hague Tribunal." (Page 802.) As soon as this reply was received, President Roosevelt, thru Secretary Hay, announced his declination of the position of arbitrator, stating:

"After a thorough consultation with all the Powers, . . . the President has been great-

ly gratified to learn that in the event of his not undertaking the important duty to which the Powers have invited him they would be willing to accept a reference to The Hague." (P. 463.)

I need not review the steps in detail which ultimately brought not only the belligerent powers, but all othar nations concerned about Venezuelan claims, before The Hague Tribunal. They are given in the volume of Foreign Relations cited, and are succinctly stated in the President's message to Congress of December 7, 1903.

After the agreement to submit the questions in dispute to The Hague, as above stated, Mr. Bowen had the distinguished honor, as the Plenipotentiary of Venezuela, of meeting in Washington the Ambassadors of the Allied Powers, and reaching an agreement with them whereby the unadjusted questions were submitted to The Hague Tribunal. It was a unique diplomatic service, creditably discharged, but it in no wise qualified the great act of President Roosevelt in bringing these belligerents to a peaceful settlement of their differences by arbitration thru The Hague court.

Baron d'Estournelles de Constant, in referring to this act last year in the French Senate, used this language:

"On the initiative of President Roosevelt, The Hague Court, boycotted by Europe, was set on its feet and saved."

And such will be the verdict of history.

WASHINGTON, D. C.

Venezuela and The Hague

BY HERBERT W. BOWEN, M A.

FORMER UNITED STATES MINISTER TO VENEZUELA.

OUR Red Book, "The Foreign Relations, 1903," does not contain all the documents and cablegrams in the Venezuelan case; and it is a well-known fact that our Red Books generally give simply selections from official communications. The cablegrams to which I shall refer, however, are in the archives of the Department of State and of the Legation at Caracas, and if Mr. Foster had had the opportunity to inspect them he would doubtless have refrained from claiming for President Roosevelt an honor which belongs to Venezuela. During the heat of the controversy in Washington and at The Hague I frequently heard the same claim made by enthusiastic Americans, and I remember seeing newspapers which stated that I gave all the credit to President Roosevelt. I certainly desired to seem appreciative of his permission to me to represent Venezuela, but when I found time to review the case I saw clearly that "the verdict of history" ought to ascribe the honor to Venezuela of getting the case brought before The Hague Tribunal. If Mr. Foster will now ask at the Department of State for the Blue Book, "Correspondence and Cablegrams relating to the Venezuelan Protocols," he will find the source from which the material about Venezuela in the Red Book of 1903 was mainly derived, and from which I shall copy the cablegrams that bear on the subject under discussion.

On December 9th, 1902, the date on which the combined British and German warships captured all Venezuelan war vessels in the harbor of La Guayra. I cabled to Mr. Hay that the Venezuelan Government had sent to me a note stating its belief that its differences with Great Britain and Germany could be settled by arbitration, and requesting me to represent Venezuela as arbitrator.

Mr. Hay, the following day (December 10th, 1902) authorized me to act as arbitrator on the part of Venezuela "if Venezuela proposes arbitration and Great Britain and Germany acquiesce." The next day (December 11th, 1902) I cabled to Mr. Hay:

"The Venezuelan Government requests me, as temporary representative of British and German interests to propose to Great Britain and Germany that the present difficulty . . . be submitted to arbitration."

I concluded the cablegram with these words:

"Please answer whether you will forward this and will advise me promptly when reply is made."

The British and German Ministers, having departed from Caracas just before the Venezuelan warships had been seized and the blockade had been instituted, and having left me in charge of British and German interests without instructions as to how to communicate with their respective Governments, I naturally transmitted to Mr. Hay Venezuela's request, but I was not sure, as the language of my cablegram indicates, that he would be willing to forward it to Great Britain and Germany.

On December 12th, 1902, Mr. Hay cabled to me that he had telegraphed "without comment" to the United States representatives at Berlin and London "the Venezuelan proposal to arbitrate."

No answer having come to me, I cabled to Mr. Hay on December 15th, 1902, "Very important for me to know without delay whether England and Germany will answer my cablegram proposing arbitration."

Finally, on December 27th, 1902, I received from Mr. Hay a cablegram giving Great Britain's answer, which began with these words:

"His Majesty's Government have, in consultation with the German Government, taken into their careful consideration the proposal communicated by the United States Government *at the instance of that of Venezuela.*" (The italics are mine.)

The answer of Great Britain concluded with words to the effect that Great Britain and Germany would be pleased to have the President of the United States act as arbitrator, or in case he could not, to refer the questions at issue to arbitration by The Hague Tribunal. In the meantime Mr. Hay had cabled to me asking whether Venezuela would accept the President of the United States as arbitrator. I answered affirmatively. At the same time the news reached Caracas that the President was anxious to serve, but that the Senate and press were opposed to the plan.

The next cablegram that came from Mr. Hay elicited this very general and non-committal answer:

"The Government of Venezuela declares itself in favor *in principle* of arbitration by The Hague Tribunal." (The italics are mine.)

No attempt was made by Mr. Hay to secure the consent of Venezuela to submit the controversy to The Hague Tribunal, and consent was not given for the reasons stated in the following cablegram, which I sent to Mr. Hay December 20th, 1902:

"Arbitration at The Hague is objectionable because very slow and expensive, and, in the present case, prejudicial to the interests of the Venezuelan Government, which wishes its war vessels returned at once, and the control of its rivers and ports, so as to prevent arms and ammunition from being imported by the revolutionists."

But it was the following cablegram, which I sent to Mr. Hay January 6th, 1903, that ended all the discussion relative to submitting the entire controversy to the President of the United States or to The Hague Tribunal:

. . . "President Castro has done all in his power to come to a fair agreement with the Allied Powers. He has been ready and anxious to settle his controversy with them, and has believed that if he could send a representative to Washington to confer with diplomatic representatives there of the Allied Powers his representative could convince them that the terms he has to offer are reasonable and would be so satisfactory that it would be unnecessary to carry the controversy to The Hague. The claims against him are purely commercial in character. . . . President Castro thinks it strange that, as he is willing to pay what he owes and to offer a good guaranty that will satisfy his creditors, he should not be allowed to come to an agreement with them without delay, but is forced to carry the controversy before the Tribunal at The Hague. President Castro has the greatest respect for that tribunal, but does not see why he should be forced to submit a controversy to it which could be settled at Washington quickly, easily, and at little expense."

Two days later, January 8th, 1903, Mr. Hay cabled to me that an American warship would be sent to take me to Washington. I was to go there to negotiate directly with the representatives of the claimant nations a settlement of all their claims, and to get the blockade raised as speedily as possible.

The foregoing cablegrams prove beyond a cavil or a doubt that Venezuela was the first to suggest arbitration; that Mr. Hay obtained the consent of Venezuela to ask President Roosevelt to act as arbitrator; that Great Britain and Germany requested that the dispute be set-

tled at The Hague in case the President declined to act as arbitrator, and that Venezuela finally succeeded in getting both propositions to arbitrate *dropped*, and in having her plan accepted of sending a plenipotentiary to Washington to treat with the representatives there of the claimant nations.

I sailed from Venezuela January 10th, 1903. Before I left President Castro conferred on me full power to act for Venezuela. He put his entire trust and confidence in me, and naturally I was bound in honor to protect the interests of Venezuela to the best of my ability, and to secure for him a speedy and fair settlement that would reflict credit on him and Venezuela, and that would terminate at once the blockade of his ports.

On my arrival at Washington I treated at first with the Ambassadors of the three blockading Powers, and we came to a final agreement about all the questions in dispute except the one question as to whether or not they should have preferential treatment, that is, should be paid before the other Creditor Nations instead of at the same time. They argued that they had been put to the expense of blockading and bombarding, and I maintained that blockades and bombardments should not entitle a civilized Power to preferential treatment. I wrote to Sir Michael H. Herbert, the British Ambassador, proposing that this remaining question be referred to The Hague, and some correspondence followed on this basis. As I would not yield the point in contention, they appealed, without my knowledge or consent, to the President of the United States to act as arbitrator as to that remaining question. The President commissioned Mr. Hay to obtain my consent. Up to this point neither the President nor Mr. Hay had ever sought to influence my plans or purposes in any respect; but Mr. Hay was now anxious to have his mission successful. I explained to him that I desired to carry the question of preferential treatment before The Hague Tribunal so as, in the first place, to secure a decision from it that would be authoritative, and, so as, in the second place, to assemble the nations before it in such numbers as to give it the prestige it lacked. Mr. Hay was greatly disappointed, and for the first and only time during my fifteen years' acquaintance with him addressed language to me that was very unfriendly; but when he saw that I could not be moved, he became gracious again, and stated that he would communicate my refusal to the President. I went to my rooms and prepared a statement to issue to the press detailing my reasons for not consenting to submit the question to the President, and as to the wording and tone of the statement I sought the advice of a distinguished member of Congress, who, tho an ardent admirer of the President, had expressed himself as opposed to the plan already mentioned in the papers, of having the President act as arbitrator; but that evening I received a note from Mr. Hay asking me not to issue any statement. So I complied with his request. My refusal I put in writing in a letter to Sir Michael:

"You never gave me a copy of your note of February 6 to Mr. Hay, and I have never possessed a copy of it. I cannot be bound by what you wrote to Mr. Hay on February 6, for, if I remember rightly, your letter to him of that date was a proposition that the question of preferential treatment be left to the President of the United States to decide. That proposition I opposed the moment your said letter was read to me. There the matter ended; and I am surprised that you should now intimate that I am in any way bound by the terms of a proposition I declined to accept."

The next day Mr. Hay notified the Ambassadors of the blockading Powers that the President would not act as arbitrator. Thereupon they resumed their negotiations with me, and on the 13th of February, less than a month after I had arrived in Washington, the Protocols were signed settling all the claims of the blockading Powers, and agreeing to refer the question of preferential treatment to The Hague. The blockade was now raised, and the controversy was considered to be practically ended. Protocols settling claims were signed now with the claimant nations that had refrained from using force. They were the United States, France, Spain, Mexico, Belgium, Holland, Norway and Sweden, and on May 7th, 1903, The Hague Protocol was signed by the Ambassodars of the three blockading Powers and myself, and then the pacific Powers were invited to adhere. In other words, the United States, France and the other pacific Powers were

not parties to any protocols until Venezuela and the Allied Powers had settled practically the whole controversy. What the pacific Powers were called upon to do was to approve and concur. If they had attempted to assert themselves too strongly I might have been forced to intimate to them that Venezuela's interests might compel me to grant preferential treatment to the blockading Powers, and end the case at once. Now, as the only question that was referred to The Hague was the question of preferential treatment, and as the Ambassadors wished that question to be decided by President Roosevelt, and as Mr. Hay used all of his influence over me to induce me to permit President Roosevelt to act as arbitrator of that question, and only desisted from his attempt when he learned that I was determined to carry that question to The Hague, it is perfectly clear that there is no foundation whatsoever for the claim that it was owing to President Roosevelt's influence that the Venezuelan case was submitted to The Hague Tribunal. In short, it has been shown that Venezuela was the first to suggest arbitration after the controversy arose; that the plans of the United States and the blockading Powers to have the whole controversy referred to President Roosevelt or to The Hague was dropped, as it was impracticable; that Venezuela devised and proposed the plan for settling the controversy by sending a Plenipotentiary to Washington; that the plan was accepted by all of the creditor Powers; that Venezuela made a settlement with them all regarding all questions in dispute, except the question of preferential treatment; and that Venezuela, alone and unaided, against all opposition, succeeded in preventing that question from being referred to President Roosevelt and in having it carried to The Hague.

The credit, therefore, for setting The Hague Tribunal "on its feet," so that it was "saved," must be given to Venezuela.

WOODSTOCK, CONN.

The Greatest Life Insurance Wrong

BY LOUIS D. BRANDEIS

[Mr. Brandeis is a Boston lawyer who is at the head of a movement that has already attracted much attention in Massachusetts and elsewhere, looking towards the extension of the savings bank system so as to include industrial insurance.—EDITOR.]

FOR the greatest of life insurance wrongs—the so-called industrial insurance—the Armstrong Committee failed to offer any remedy. And yet nearly three-fourths of all level premium life insurance policies issued are of this character. On December 31, 1905, the day after the committee closed its hearings, there were 16,872,583 industrial policies outstanding in the United States. In New York alone their number was then 3,898,810, and while the committee was sitting, an average of 67,200 such policies were being issued in that State every month.

Industrial insurance, the workingman's life insurance, is simply life insurance in small amounts, on which the premiums are collected weekly at the homes of the insured. It includes both adult and child insurance. The regular premium charge for such insurance is about double that charged by the Equitable, the New York Life, or the Mutual Life of New York, for ordinary life insurance. In the initial period of the industrial policy, the premium rate rises to eight times that paid for ordinary insurance, since, by a clause which will be found in most industrial policies, it is provided that if death occurs within the first six months after the date of the policy, only one-fourth of the face of the policy will be paid, and if death occurs within the second six months, payment will be made of only one-half. So heavy are the burdens cast upon those least able to bear them.

The disastrous result to the policyholder of this system of life insurance

may be illustrated from the following data, drawn from Massachusetts official reports:

In the fifteen years ending December 31, 1905, the workingmen of Massachusetts paid to the so-called industrial life insurance companies an aggregate of $61,294,887 in premiums, and received back in death benefits, endowments or surrender values an aggregate of only $21,819,606. The insurance reserve arising from these premiums still held by the insurance companies does not exceed $9,838,000. It thus appears that, in addition to interest on invested funds, about one-half of the amounts paid by the workingmen in premiums has been absorbed in the expense of conducting the business and in dividends to the stockholders of the insurance companies.

If this $61,294,887, instead of being paid to the insurance companies, had been deposited in Massachusetts savings banks, and the depositors had withdrawn from the banks an amount equal to the aggregate of $21,819,606 which they received from the insurance companies during the fifteen years, the balance remaining in the savings banks December 31, 1905, with the accumulated interest, would have amounted to $49,931,548.35 —and this, altho the savings banks would have been obliged to pay upon these increased deposits in taxes to the Commonwealth more than four times the amount which was actually paid by the insurance companies on account of the insurance.

Perhaps the appalling sacrifice of workingmen's savings thru this system of insurance can be made more clear by the following illustration:

The average expectancy of life in the United States of a man 21 years old is, according to Meech's Table of Mortality, 40.25 years. In other words, take any large number of men who are 21 years old, and the average age which they will reach is 61¼ years.

If a man, beginning with his 21st birthday, pays thruout life 50 cents a week into Massachusetts savings banks, and allows these deposits to accumulate for his family, the survivors will, in case of his death at this average age of 61¼ years, inherit $2,265.90 if an interest rate of 3½ per cent. a year is maintained.

If this same man should, beginning at age 21, pay thruout his life 50 cents a week to the Prudential Insurance Company as premiums on a so-called "industrial" life policy for the benefit of his family, the survivors would be legally entitled to receive, upon his death at the age of 61¼ years, only $820.

If this same man, having made his weekly deposit in a savings banks for 20 years, should then conclude to discontinue his weekly payments and withdraw the money for his own benefit, he would receive $746.20. If, on the other hand, having made for 20 years such weekly payments to the Prudential Insurance Company, he should then conclude to discontinue payments and surrender his policy, he would be legally entitled to receive only $165.

So widely different is the probable result to the workingman if he selects the one or the other of the two classes of savings investment which are open to him; and yet life insurance is but a method of saving. The savings banks manage the aggregate funds made up of many small deposits until such time as they shall be demanded by the depositor; the insurance company manages them ordinarily until the depositor's death. The savings bank pays back to the depositor his deposit with interest less the necessary expense of management. The insurance company in theory does the same, the difference being merely that the savings bank undertakes to repay to each individual depositor the whole of his deposit with interest; while the insurance company undertakes to pay to each member of a class the average amount (regarding the chances of life and death), so that those who do not reach the average age get more than they have deposited (including interest) and those who exceed the average age less than they have deposited (including interest).

It is obvious that the community should not and will not long tolerate such a sacrifice of the workingmen's savings as the present system of industrial insurance entails; for the causes of this sacrifice are easily determined and a remedy lies near.

The extraordinary wastefulness of the present system of industrial insurance is

due in large part to the fact that the business, whether conducted by stock or by mutual companies, is carried on for the benefit of others than the policyholders. The needs and financial inexperience of the wage-earner are exploited for the benefit of stockholders or officials. The Prudential (which was the first American company to engage in the business) pays annual dividends to its stockholders equivalent to more than 219 per cent. upon the capital actually paid in; the Metropolitan dividends are equivalent to 28 per cent. of such capital; and stock in the Columbian National Life Insurance Company, a corporation which commenced business but four years ago, has risen from par to $296.

LOUIS D. BRANDEIS.

But the excessive amounts paid in

dividends or in salaries to the favored officials account directly for only a small part of the terrible shrinkage of the workingmen's savings. The main cause of waste lies in the huge expense of soliciting insurance, taken in connection with the large percentage of lapses, and in the heavy expenses incident to a weekly collection of premiums at the homes of the insured. The commission of the insurance solicitor is from ten to twenty times the amount of the first premium. The cost of collecting the premiums varies from one-fifth to one-sixth of the amount collected. And yet commissions for soliciting and collection are only a part of the expenses. The physician's fee, the cost of supervision, of accounting and of advertising must all be added; with the result that no industrial policy "pays its way" until it has been in force about three years. In other words, if the policy lapses before it has been in force three years, not only does the policy-holder lose (except the temporary protection) all that he has paid in, but the company (that is the persisting policy-holders) bears a part—generally the larger part—of the cost of the lapsed policy.

And only a small percentage of industrial policies survive the third year. A majority of the policies lapse within the first year. In 1905, the average payments on a policy in the Metropolitan so lapsing continued little more than six weeks. The aggregate number of such lapses in a single year reaches huge figures. In 1905, 1,253,635 Metropolitan and 951,704 Prudential policies lapsed. The experience of their young and energetic rival, the Columbian National Life Insurance Company, is even more striking. On January 1, 1905, that company had outstanding 40,397 industrial policies. It wrote, during the year, 103,466. At the end of the year it had outstanding only 63,497; and yet, of the 143,863 policy-holders, only 699 had died, while 79,677 policies—that is, one hundred and fourteen times as many—had lapsed.

The results of this system of insurance establish conclusively that, in the conduct of the business, the interests of the insured are ignored. A life insurance company for workingmen should, as to each policy-holder, be conducted, like a savings bank, as a benevolent institution. No one should be induced to take out a policy unless it is advisable for him to do so in the interests of those whom he wishes to protect by it. No one should be lured into becoming a policy-holder. No one should take a policy unless he will probably be able and willing to continue it in force. Furthermore, economy in the management of the insurance savings is as essential to satisfactory results as the economy on the part of the workingmen, which alone makes it possible to pay premiums.

The supporters of the present system of industrial insurance declare that a reduction of expenses and of lapses is impossible. They insist that the loss to the insured and the heavy burden borne by the persisting policy-holders from lapses, as well as from the huge cost of premium collection, must all be patiently borne as being the inevitable incidents of the beneficent institution of life insurance, when applied to the workingman. It is obvious that a remedy cannot come from men holding such views—from men who refuse to recognize that the best method of increasing the demand for life insurance is not eloquent persistent persuasion, but to furnish a good article at a low price. A remedy can be provided only by some institution which will proceed upon the principle that its function is to supply insurance upon proper terms to those who want it and can carry it, and not to induce working people to take insurance regardless of their real interests. To attain satisfactory results the change of system must be radical.

The savings banks established on the plan prevailing in New York and generally thru the New England States are managed upon principles and under conditions upon which alone a satisfactory system of life insurance for workingmen can be established. These savings banks have no stockholders, being operated solely for the benefit of the depositors. They are managed by trustees, usually men of large business experience and high character, who serve without pay, recognizing that the business of collecting and investing the savings of persons of small means is a quasi-public trust, which should be conducted as a benefi-

cent, and not as a money-making institution. The trustees, the officers and the employees of the savings banks have been trained in the administration of these savings to the practice of the strictest economy. While the expenses of managing the industrial departments of the Metropolitan, the Prudential and the John Hancock companies have, excluding taxes, exceeded 40 per cent. of the year's premiums, the expense of management in 1905 (exclusive of taxes on surplus) of the 130 New York savings banks, holding $1,292,358,866 of deposits, was only 0.28 of 1 per cent. of the average assets, or 1 per cent. of the year's deposits; and the $662,000,000 of deposits held in 1905 in the 189 Massachusetts savings banks were managed at an expense of 0.23 of 1 per cent. of the average assets, or 1.36 per cent. of the year's deposits.

Savings institutions so managed offer adequate means of providing insurance to the workingman. With a slight enlargement of their powers, these savings banks can, at a minimum of expense, fill the great need of cheaper life insurance in small amounts. The only proper elements of the industrial insurance business not common to the savings bank business are simple, and can be supplied at a minimum of expense in connection with such existing savings banks. They are:

First—Fixing the terms on which insurance shall be given.

Second—The initial medical examination.

Third—Verifying the proof of death.

The first is the work of an insurance actuary; and the present cost of actuarial service can be greatly reduced both by limiting the forms of insurance policies to two or three standard forms of policy to be uniform thruout the State, and by providing for the appointment of a State actuary, who, in connection with the insurance commissioner, shall serve all the savings insurance banks.

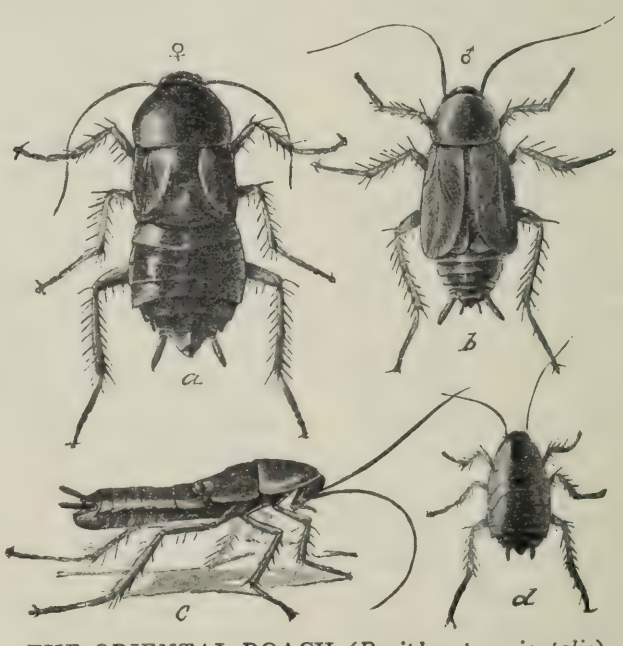
The initial medical examination and the verification of proof of death are services that may be readily performed for the savings banks at no greater pro rata expense than for the existing insurance companies.

The insurance department of the savings banks would, of course, be kept entirely distinct as a matter of accounting from the savings department; but it would be conducted with the same plant and the same officials, without any large increase of clerical force or incidental expense, except such as would be required if the deposits of the bank were increased. On the other hand, the insurance department of savings banks would open with an extensive and potent goodwill, and under the most favorable conditions for teaching the value of life insurance—a lesson easily learned when insurance is offered at about half the premium now exacted by the industrial companies. With an insurance clientele composed largely of thrifty savings banks depositors, the expensive house to house collection of premiums could be dispensed with, and more economical payments of premiums could probably be substituted for weekly payments. Indeed, it is probable that the following simple, convenient and inexpensive method of paying premiums would, to a large extent, be adopted, namely, making deposits in the savings department from time to time, and giving, when the policy is issued, a standing order to draw on the savings fund in favor of the insurance fund to meet the premium payments as they accrue.

The safety of savings banks would, of course, be in no way imperiled by extending their functions to life insurance. Life insurance rests upon substantial certainty, differing in this respect radically from fire, accident and other kinds of insurance. Since practical experience has given to the world the mortality tables upon which life insurance premiums rest and the reserves for future needs are calculated, no life insurance company has ever failed which complied with the law governing the calculation, maintenance and investment of the legal reserve. The causes of failure of life insurance companies have been excessive expense, unsound investment or dishonest management. From these abuses our savings banks have been practically free, and that freedom affords strong reason for utilizing them as the urgent need arises to supply the kindred service of life insurance.

In Massachusetts, the proposition of permitting savings banks to establish insurance departments has already taken definite shape. The plan has been recently submitted to the Recess Insurance Committee of its Legislature, and many of its eminent and public-spirited citizens have associated themselves under the name of Massachusetts Savings-Insurance League, for the purpose of securing the passage of a permissive act.

Massachusetts laid the foundation of America's admirable system of savings banks by chartering in 1816 the Provident Institutions for Savings in the Town of Boston. Massachusetts established for the world the scientific practice of life insurance by the work of its great insurance commissioner, Elizur Wright. It seems fitting that Massachusetts should lead in another great advance in the development thru thrift of general prosperity by extending the functions of savings banks to the issuing of workingmen's life insurance.



BOSTON, MASS.

Household Insects

BY L. O. HOWARD, Ph.D.

CHIEF OF THE BUREAU OF ENTOMOLOGY IN THE DEPARTMENT OF AGRICULTURE

ALTHO insects abound in extraordinary numbers in the tropics, and many forms sometimes almost swarm in houses there, housekeepers in the United States and other temperate regions must constantly watch for and fight a number of species which otherwise would render home life very disagreeable if not unendurable. The most annoying of these are: the bedbug, several species of clothes moths, the so-called buffalo carpet-beetle or "buffalo bug," one or more species of fleas, several species of cockroaches, the house fly, the white ant and one or more species of true ants. Nearly all of these insects are cosmopolitan, and have followed civilization around the world. In other words, wherever civilized man has gone and has rested long enough to build a home, these home-loving creatures have followed and philanthropically have done their best to help create the homelike atmosphere. It follows that the excellent little English book, entitled "Our Household Insects," by E. A. Butler, and the work entitled "Principal Household Insects of the United States," by myself and C. L. Marlatt, both published in 1896, considered largely the same species of insects.

THE ORIENTAL ROACH (*Periplaneta orientalis*).

a, female; *b*, male; *c*, side view of female; *d*, half-grown specimen—all natural size.

There are four species of cockroaches found commonly in houses in the United States. The most abundant ones are the common Oriental cockroach or so-called "black beetle" of England (*Periplaneta orientalis*). This insect is of Asiatic origin, and was probably introduced into Europe within the last three hundred years, coming early to America on board ships, in the holds of which this species swarms. The Oriental roach is no more numerous, however, in many localities, than the so-called "Croton bug" or German cockroach (*Ectobia germanica*), another common European species whose

original home was possibly also Oriental. Altho occurring along the river fronts of cities, it first became noticed as an extensive household invader with the introduction of the Croton water works system in New York City; then, spreading rapidly by means of the water pipes, it forced itself into general notice, and the name "Croton bug" was given to it for the reason that it was supposed to have been carried or developed by the Croton water. The other two species are the Australian roach (*Periplaneta australasiæ*), a native of Australia, and the American roach (*P. americana*), a native of subtropical and tropical America, which has since become cosmopolitan by the aid of commerce. The American roach is occasionally found in the United States as far north as New York, but is not abundant except in the South. The Oriental roach and the Croton bug are the great nuisances in New York, Philadelphia, Baltimore and Washington and other northeastern cities.

Roaches love the dark, work principally by night, migrate from old houses or shops to new ones sometimes in great swarms by night, feed upon almost everything in the way of food supplies, eat or gnaw leather, and, attracted by the paste in book bindings, frequently damage the covers of books. They also soil almost everything with which they come in contact, and leave an odor behind them which is extremely disagreeable. They are, to a certain extent, cannibalistic, and have the good quality of feeding upon bedbugs.

It is frequently possible to rid a house of roaches, when the infestation is not very great, by means of the free use of

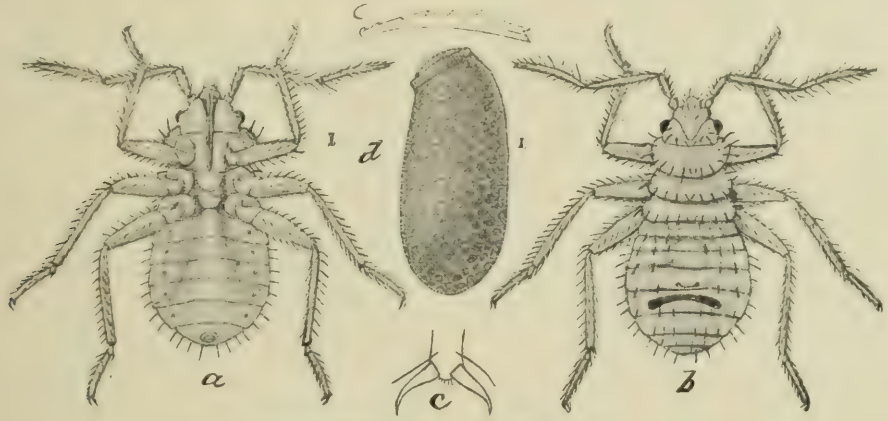
pyrethrum powder or buhach. If this is dusted about at night, many roaches will be killed or paralyzed so that they can be swept up in the morning, and its persistent use night after night often results in complete success. Flowers of of sulfur, dusted about where roaches abound, has proved effective as a roach killer, and, of the many proprietary substances which are on sale, a phosphorus paste, consisting of sweetened flour paste containing one or two per cent. of phosphorus, spread upon bits of paper or cardboard and placed where roaches abound, is fairly successful. In cases of extreme infestation, however, fumigation of the entire house must be resorted to, and this will be mentioned in this article as a remedy for all household insects.

The household flea of the United States, in every instance brought to my attention, is not the true human flea (*Pulex irritans*) so well known to European travelers, but the common cat and dog flea, formerly known as *Pulex serraticeps,* but now known as *Ctenocephalus canis.* In the larger northeastern cities, in damp summers, where houses have been closed in the absence of the family at the seashore or in the mountains, and where in the earlier months one or more cats or dogs have been living, the opening of the house in the fall often reveals an extensive infestation of fleas. The eggs of the cat and dog flea are attached rather loosely to the hairs of cats and dogs and accumulate in numbers in places where these animals sleep. The eggs hatch and the larval fleas—the successful development of the larvæ, thin, wormlike creatures—feed upon such organic matter as may be found among the dust in the cracks of the floor and eventually transform to adult fleas. Considerable moisture is necessary for and the absence of sunlight and of the frequent sweeping of the rooms afford, with the moisture conditions, most fa-



BEDBUG (*Cimex lectularius*).

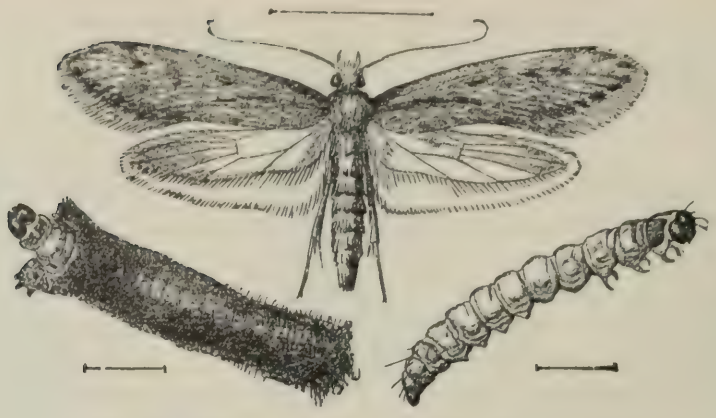
vorable opportunities for development. Fleas also are brought in upon the persons of human beings, or they may migrate to some extent from dog-houses in the garden.

Aside from the fumigation, which will be treated in the final paragraph, a perfect remedy has not been found. The free use of pyrethrum is not always effective. Even spraying the floors with benzine has in more than one instance proved ineffective. A removal of all floor covering and a thoro washing with hot soapsuds will produce the desired result in the majority of instances. In a mild infestation, a remedy tried the past summer may prove well worth trying: place a white cloth in the center of a room, and all of the fleas in the vicinity will jump for it and alight upon it; then with a basin of soapsuds at hand they may be picked up by wetting the finger and touching them; wash them off into the basin and repeat the operation until all are caught. A friend of mine told me that his house had been rid of them in this way this summer, and in my own house a number were caught in a single room to the complete relief of the household.



The house fly is a ubiquitous nuisance, and, thru its carriage of disease germs, a menace to health which should not be allowed to exist in any modern community. Ninety-nine per cent. of the house flies which are such nuisances in summer time have bred in the horse manure of stables, and almost complete relief may be gained by the proper care of this substance. If the proper measures are undertaken, the screening of houses against flies will be unnecessary and all danger of the carriage of typhoid fever by the house fly will be avoided. A single untidy stable in which horses are kept will breed house flies enough to stock a large neighborhood. They breed rapidly, each female laying about 120 eggs, and generations follow one another at periods of ten to fifteen days. Estimates based upon count indicate that as many as 1,200 house flies may issue from a single pound of horse manure in ten days. To mitigate the pest it is only necessary to bring about the prompt gathering of horse manure, which may be variously treated or kept in a specially prepared receptacle, and city ordinances compelling horse owners to follow such course are necessary. All stables should have the surface of the ground covered with a watertight floor. There should be a bin or pit, provided with a suitable cover, in which manure should be placed daily, and from which it should be removed twice a week and carried away. The boards of health in most of our cities have the power to establish ordinances calling under penalty for such procedure on the part of stable owners, and that such a course is not generally adopted is little short of an outrage upon the long-suffering public.

The disagreeable creature known as the bedbug, while usually prevalent in dirty houses occupied by careless people, very often gains access to clean and well-kept houses thru being carried in the luggage of travelers or thru being brought in by servants, and even by migration from adjoining houses. It is a thoroly domesticated species, and

seems to live practically only in connection with the habitation of man. The belief that it is brought into houses with certain kinds of timber is erroneous and due probably to the great similarity between the bedbugs and certain out-of-doors bugs of the genus *Aradus*. The bite of the bedbug is very poisonous to some persons, and its odor is very disagreeable. The insect is probably of Asiatic origin, was well known to the old Romans, and is said to have been introduced into England about the year 1500. It is as abundant in the North as it is in the South, and is found commonly in Kamschatka. Its facility of concealment renders it a difficult insect to reach. The ordinary insect powders, such as pyrethrum or huhach are of practically no use. The general adoption of iron or brass bedsteads has rendered the question of remedies much easier than it was formerly in the days of the large wooden bedsteads with many cracks. The use of benzine or gasoline or any of the petroleum oils about beds is an excellent remedy. Corrosive sublimate and oil of turpentine have also been used in the same way. Hot water will also destroy both the eggs and the bugs. The energetic use of these remedies repeated every few days should result in the extermination of the insect. Often, however, it does not confine itself to beds, but may be found in bookcases or under some wall covering like a canvas frieze or dado. There, too, one of the lighter petroleum oils, when it can be used, will be effective. Moreover, the use of sulfur dioxid has proved effective in many instances. The burning of two pounds of sulfur for each thousand cubic feet of space, the room or building being closed for treatment at least twenty-four hours, is recommended; but, of course, with this method all silver, brass and gilding is liable to be damaged unless previously removed. The use of the hydrocyanic-acid gas mentioned in the closing paragraph is, after all, the most effective remedy.

The commonest of the clothes moths of the United States are of two species, the so-called case-making clothes moth (*Tinea pellionella*) and the webbing or Southern clothes moth (*Tineola biselliella*). The case-making species in the larval state makes a case for itself out of the cloth upon which it is feeding, and carries this case about with it, while the webbing clothes moth, which is more abundant from Washington southward, in the larval state constructs no case, but spins a silky path wherever it goes. When full-grown it constructs a silken cocoon intermixed with bits of wool, resembling the case of *Tinea pellionella*, but more irregular in outline. The damage done by both of these insects, and particularly by the webbing moth of the Southern States, in nearly all uncared-for houses during the summer is very great. It is practically impossible to leave clothes hanging in a closet during the summer months without frequent brushing and sunning; and, of course, furs must be carefully packed away or placed in cold storage. Cold storage, as a matter of fact, is a perfect preservative of all articles of wearing apparel from clothes moths, since the larvæ of these insects are not active at a temperature of less than 40° F.

After furs and woolen goods have been thoroly beaten and aired and exposed to sunlight, they may be packed in boxes or trunks or other receptacles lined with heavy tar paper, or tar paper moth-bags may be used, or they may be packed away in linen or cotton sheets with the naphtha moth balls. A good plan is to use, for suits of clothes or dresses, the large paper boxes in which tailors send clothes home. After thoroly airing and beating the garments, they may be packed into these boxes, which may be made moth proof by gumming a strip of wrapping paper about the edge. To protect cloth-covered furniture and cloth-covered carriages which are not used during the summer, they should be sprayed twice or three times, say in April, June and August, with benzine.

The so-called buffalo carpet beetle, or buffalo moth as it is sometimes erroneously termed, is one of the small beetles of the museum-pest group, known as *Anthrenus scrophulariæ*. It is a species of European origin which has been known in the United States only since about 1874. It has spread thru the northern part of the country, but is not injurious as far south as Washington. The adult insect is a small, broad-oval beetle about three-sixteenths of an inch in length, light in color and covered with exceedingly minute white scales which give it a marbled black and white appearance. It also has a red stripe down the middle of the back, widening into projections at three intervals. The beetles begin to appear in the autumn and continue to issue in heated houses thruout the winter and following spring. The females lay their eggs in convenient spots and these eggs hatch in a few days. The larvæ, with plenty of food, develop quite rapidly. They feed on furs and woolen goods of all kinds, and in certain Northern houses are especially injurious to carpets, often working along a crack and cutting a long slit. There are probably two generations each year. The beetles are day-fliers, and are attracted to light. They fly in windows and may often be found upon sills or panes. In the spring they fly out thru the open windows and are strongly attracted to the flowers of certain plants, particularly *Scrophulariceæ*, and also to certain composites as milfoil. The flowers of *Spiræa* are also strongly attractive to the beetles. In Europe this insect is not especially noted as a house pest, altho it is known as a museum pest, feeding upon the skins of stuffed animals. It seems, therefore, that only in this country, where carpets are so extensively used, does the insect become so greatly increased in numbers as to become a pest. Carpets once put down here are seldom taken up for a year, and in the meantime the insect develops uninterruptedly. This is an added reason for the doing away with carpets. The carpet habit is a bad one from almost every point of view, and if carpets were generally discarded in the United States the "buffalo bug" would gradually cease to be a serious household pest.

Where this insect has once invaded a house it is a difficult matter to get rid of it, except by hydrocyanic-acid gas fumigation. There should be more frequent house cleanings, and one or two rooms should be attended to at a time. The carpets should be taken up, thoroly beaten and sprayed out of doors with ben-

BUFFALO MOTH (*Anthrenus scrophulariae*).
a, larva, dorsal view; *b*, pupa within larval skin; *c*, pupa, ventral view; *d*, adult—all enlarged.

zine, and allowed to air for several hours. The rooms themselves should be thoroly swept and dusted, the floors washed down with hot water, the cracks carefully cleaned out, and kerosene or benzine poured into the cracks and sprayed under the baseboards. Where the cracks are wide they should be filled with plaster of paris in a liquid state. Tarred roofing paper should be placed upon the floor before the carpets are relaid, and the carpet itself should be tacked down rather lightly, so that it can be occasionally lifted at the edge and examined for the presence of the insect. If later in the season the insect be found a good but somewhat laborious remedy consists in laying a damp cloth smoothly over the affected spots on the carpet and ironing it with a hot iron. For furs, rugs and woolen goods the remedies are practically those suggested for clothes moths.

The white ant, the common species of true ants, the so-called silver fish and a number of other insects commonly found in houses, cannot be treated in this short article, but full accounts of all of them, together with fuller accounts of the species just mentioned, are published in circular form by the Bureau of Entomology of the United States Department of Agriculture, and may be had on application.

The fumigation of houses by hydrocyanic-acid gas has come to be a well-established means of ridding establishments from all household insects and from the pest of rats and mice. It is not what may be termed a popular remedy on account of the danger in its use. For a detached house it is perfect when properly done, and it is not dangerous where the proper precautions are used. It is hardly applicable, however, to one of a row of houses where the solidity of the adjoining walls is not certain, nor can it be used for an apartment in an apartment house without danger to the occupants of adjoining apartments. But for such cases in which it is available, the method consists in using for an ordinary dwelling house containing 16,000 cubic feet of space, ten pounds of cyanide of potassium and nineteen pounds of sulfuric acid, the rate being one ounce of cyanide and one fluid ounce of sulfuric acid to 100 cubic feet of space, each fluid ounce of the acid being diluted with two fluid ounces of water. The house is measured and the cubic contents of each room determined; the cyanide is weighed and placed in paper bags, and a three-gallon stoneware jar for each two thousand cubic feet of space is provided. All food material containing moisture should be removed from the house, and all standing water as well; silver and jewelry should also be removed. All crevices around windows and doors should be stopped up and registers and chimney flues should also be closed. Then the water and acid in the jars should be placed for the operation, and the requisite amount of cyanide in the paper bags placed beside each jar. The operator then proceeds to the top of the house, and drops the cyanide into each jar, running rapidly from the top of the house to the bottom, remaining not a second longer than necessary in each room, closing all doors behind him. He leaves the house as rapidly as possible, closing the final door, and the structure is allowed to remain thus closed for twenty-four hours. At the expiration of that time the doors and windows are opened and the house is allowed to air. Every care must be taken in performing the operation, because the fumes are violently poisonous, and it would be extremely dangerous to inhale a single breath. The process, however, has been repeatedly carried out with perfect success by a number of the entomologists connected with the Department of Agriculture at Washington and by others as well. Circulars of instruction in this method have also been published by the Department of Agriculture at Washington, and may be had on application.

New York City.

The Winter Session in London

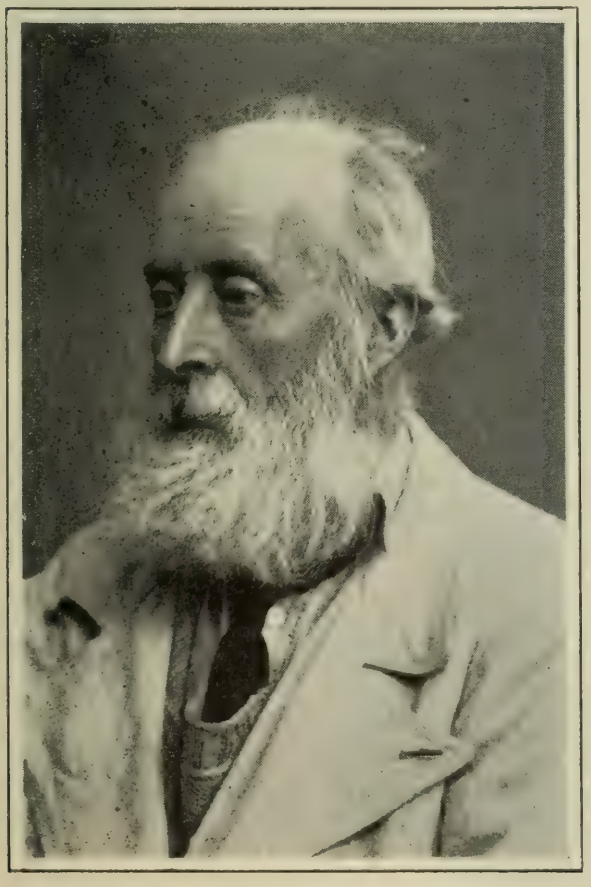
BY JUSTIN McCARTHY

FEW of us can fail to have read some story, perhaps with a moral purpose supposed to be attached to it, telling us of the misadventures of a personage whose principal troubles began with the fact that he had more money than he quite knew what to do with. There seems to be a growing impression among the opponents of the Liberal Government in England and among some who do not proclaim themselves hostile to Liberalism that Sir Henry Campbell-Bannerman and his colleagues in the Ministry have a larger majority than they quite know what to do with and that the fact is likely, if anything can, to bring them into trouble. Now there is something more in this assumption than might at first occur to an unconcerned observer. When a Government has a substantial, but not a very large, majority, its supporters may be expected to stand firmly together in maintenance of the Government's central political fortresses and not to indulge in any alarms or excursions on their own account. But the present Government has obtained from the country by the last General Election a majority absolutely overwhelming, a majority never given to any other administration within my time, and the event has, according to visible evidences, supplied an encouragement to many Liberals to act on the assumption that the time has come when they may safely indulge themselves in the promotion, or at least in the proclamation, of certain convictions, or it may be crochets cherished by themselves. There are even in the Cabinet itself some members who were never regarded as advanced Liberals in the true sense of the words, and who do not enjoy the thoro confidence of the Liberal voters in general. There are outside the Cabinet some members of the Administration who would have been described in days not far from the present as mere Whigs. Then among the Liberal party not occupying ministerial benches there are groups of men acting usually with the Unionists—in other words, with those who oppose the principle of home rule for Ireland—or else forming into organized groups with the object of bringing forward and maintaining some political favorites or fancies of their own. Such men as these find very plausible excuse for following out their own plans in the knowledge that the Ministerial majority is so large as to render a Ministerial defeat impossible on any question which secures the votes of the whole Liberal party, and these votes, it is urged, can always be called together if ever any really critical occasion should arise.

All this sounds very well, but in the meantime it often happens that to the outer world there seems a lack of cohesion just at present in the Liberal party, and the Conservatives are ever and anon brought into confident expectation that some new crisis may arise when it will be found that the Ministerial majority have squandered their wealth of votes merely because of the over-assurance that such a majority never could be frittered away. On the other hand, of course, it may fairly be assumed by all but the most partial observers that a Ministry with Campbell-Bannerman at its head and with such men as John Morley, James Bryce and Herbert Gladstone among its leaders, may reckon upon their majority to follow them when any great question arises on which they feel called upon to take a decisive action.

The Irish National party, and not the Irish National party alone, but the House of Commons, have just had a most valuable addition to their members by the election of Mr. Stephen Gwynn as representative of the city of Galway. Stephen Gwynn is a man of intellect and of high education, who won much university distinction and has made for himself a great success as an author of books and a writer for reviews and magazines. The family to which he belongs would secure for him of itself a

welcome to the hearts of all true Irishmen at home and abroad, for he is by the mother's side a grandson of Smith O'Brien, who was condemned to death for the leading part he took in the Irish Rebellion of 1848. According to the barbarous practice which was still maintained by the criminal laws in those days he was sentenced in the courthouse of Clonmel to hanged, drawn and quartered. The sentence was, however, commuted by the late Queen Victoria into one of transportation for life, and some eight years after he received a free pardon. Smith O'Brien was himself a man of high family and of an absolutely stainless life, which he devoted thoroly to what he believed to be the service of his country. His attempt at insurrection was indeed wild and hopeless, but his feelings, like those of the vast majority of Irishmen, had been stirred up to wildness by the extravagant measures of repression which the English Government had been putting into force with the hope of crushing the Young Ireland movement. My countrymen thruout the United States will certainly not be inclined to welcome Stephen Gwynn's political triumph any the less because he is the grandson of Smith O'Brien. Gwynn would himself be a valuable addition to any political party, and he has ever proved himself a sincere and devoted Irish Nationalist. He comes out from his literary and scholastic study to lend his help toward the great national movement, and I am confident that he will win for himself a distinction in that path of life, as he has already done in other paths. I may mention the fact that he is the author of the life of Thomas Moore, published last year in Messrs. Macmillan's series, "English Men of Letters," which won wide favor among the reading public here. Let me add that a Celtic Cross has been or is at once to be planted by a large number of Moore's admirers over his grave in an English county, and that the cross is to be unveiled with appropriate ceremonial on the 24th of the present month. My friend, Stephen Gwynn, therefore, comes doubly recommended to the admiration and the hopes of his fellow countrymen all over the world as the grandson of Smith O'Brien and the biographer of



STEPHEN GWYNN.

Thomas Moore. His new book, "The Fair Hills of Ireland," has lately been published by Messrs. Macmillan, and I hope to write something more about it in my next letter. It appeared shortly before the Galway election. Gwynn's novels are, I am sure, well known to my American readers; they are both about Ireland—"The Old Knowledge," a story of the present day, and "John Maxwell's Marriage," a very powerful story of the Georgian epoch. He has also done great work for the revival of Gaelic in Ireland, and has both written poems in and translated poems from the Gaelic. His election speeches show that he is likely to have a great success in the House.

I have read with much satisfaction the announcement that *Punch* is about to give to the world his cartoons beginning with 1841, and closing for the present, I presume, with 1901. These cartoons are to be in four handsome volumes and are to be published by Bradbury, Agnew, and The Masterpiece Press. The greater part of this most attractive display is the work of John Leech and John Tenniel. These volumes are sure to find as large

a proportion of admirers in the United States as in England. As works of art they are beyond praise, and even as satirical sketches they are not open to much censure on the score of personal offense. I observe that they have been already described as the history of the years taught by cartoons. I should, however, feel more inclined to describe them as the history of those years taught by the genius of men who represented what the average public opinion of England believed that history to be. Not all the events in that history turned out exactly as the cartoons predicted nor did all the figures in the cartoons quite realize the judgment for good or evil which *Punch* thought it right to predict for them. But I can safely say that the volumes will be a treasure to every library.

The Suffragettes, as we have got in the way of describing here the women who agitate openly for woman's right to the suffrage, are still making themselves conspicuous at public meetings and in political affairs generally, and if they only wanted to be talked about might feel themselves perfectly happy. Many of those, however, who have lately been making themselves conspicuous are, as I feel well assured, animated by much better and higher motives, and are working merely in the cause of what they believe to be a great political reform. But they certainly do adopt measures sometimes which give ample opportunities to the opponents of woman's suffrage for insisting that this is the sort of political life we should be certain to have if we men who never display any unseemly violence whatever in our electioneering contests were to allow to the wearers of petticoats the right of taking part in parliamentary elections. There is no more familiar subject of ridicule now in most of our newspapers than the behavior of the Suffragettes, who get up disturbances at public meetings and occasionally even come into collision with the police.

THE LATE AUBERON HERBERT.

Some of the Suffragettes, however, find an opportunity of reminding us that men have occasionally got up disturbances at elections and have come into very active antagonism with the police and are even inconsiderate enough to ask us whether there are not living members of the House of Commons who have had to be removed by force when the Speaker of that House could not otherwise maintain his authority. I am not concerned to justify, and have not the slightest inclination to justify, all the recent actions of the Suffragettes, but I cannot call to my recollection any great political movement which did not become the occasion of violent proceedings on the part of crowds of men, and I have never heard it gravely asserted that man is a being disqualified naturally for the right to give a vote at the election of a member of the representative assembly.

Mr. Keir Hardie has lately announced his intention to test the opinion of the House of Commons at the earliest possible opportunity on the question of woman's suffrage, and has actually introduced a measure for the giving of the vote to women qualified by the same conditions of citizenship as those which now secure the vote to men. On the first day when an opportunity can be secured this measure is to be brought up for second reading, and if it can be pressed forward thru its allotted stages we shall be enabled to judge for ourselves how far the present House of Commons, with its

immense Liberal majority, has advanced beyond its predecessors on the question of woman's right to citizenship on equal terms with men.

Mr. Keir Hardie is the leader of one of the parties of workingmen who now have seats in the representative chamber. There are two such parties in the House as most of my American readers already well know, and that which is led by Mr. Keir Hardie is the more extreme, and if I may put it so the more socialistic of the two. Many even among the most sincere advocates of woman's suffrage, are of opinion that the present time is illsuited for such an attempt because of the discredit which recent scenes have brought on the whole agitation for giving the vote to women. But when every allowance has been made for such a difficulty I must say that for myself I hope that Mr. Keir Hardie may obtain his opportunity and that we may trust to the common sense of Liberals in general not to act on the assumption that a few instances of unbecoming conduct and even of disorder on the part of certain individual members of a movement for reform are enough to settle the claims of a vast majority and to condemn the reform itself to rejection by the present generation. I am afraid, however, there is little chance of Mr. Hardie being able to press his measure forward during the present session. There are many subjects under debate which have an immediate and an urgent interest, and even these will fully occupy the time of parliament until after Christmas, and I do not suppose that even the Suffragettes have made woman's suffrage a subject calling for immediate and imperative decision.

The death of the Honorable Auberon Herbert, son of a former Earl of Carnarvon, will recall to many of my readers the memory of a most remarkable and brilliant figure during many years of English public life. Auberon Herbert had not been much heard of during recent days but he had enjoyed a long career of distinction, a career which he valued only because it enabled him to be of some service to the human race. He had been distinguished as a university man; he had served in a Hussar regiment; had been for some years a member of the House of Commons; had been an author and a journalist. He attached himself to no political party and only assisted this or that political or social movement according as he believed it qualified to contribute towards the improvement and the happiness of the people in general. He was the opponent of all class privileges; the advocate of human equality in its highest and its noblest sense; a philanthropist of the most genuine order.

London, England.

The Pacemakers

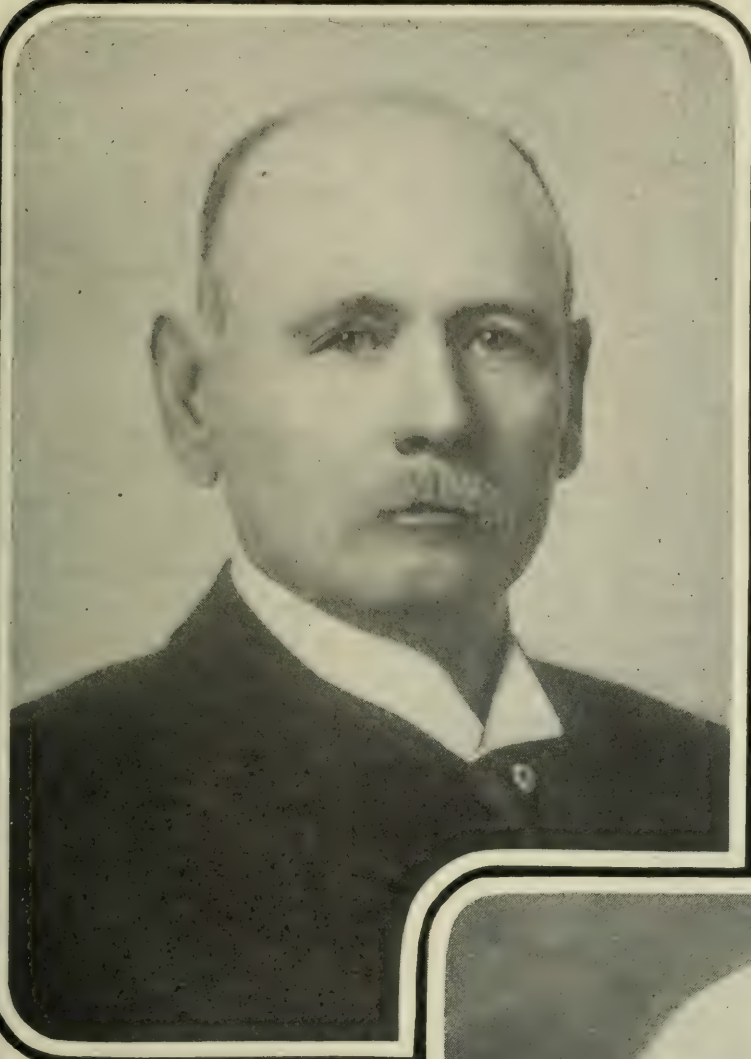
BY BOLTON HALL

Author of "Things as They Are," Etc.

I WATCHED the progress of Man as he raced toward Perfection. Greece sprang forward to make the pace, whispering to him, "Beauty is before you." When Man reached Beauty the pacemaker dropped exhausted, and Rome ran in before her with the cry, "Teach order," and Man ran until he reached a desert, where this pacemaker also fell.

Next came the Teuton, urging Man to freedom of thought. The pacemaker grew old and grey, but the pacemaker beside him was stronger than ever.

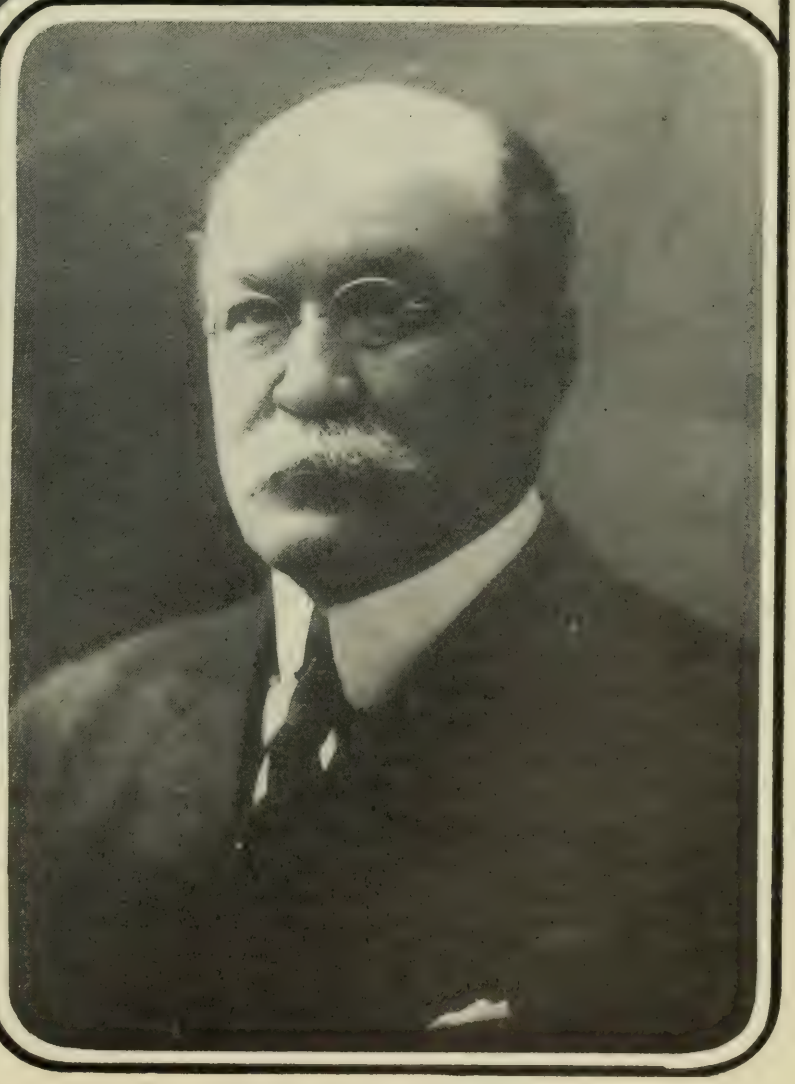
"A new world!" cried Spain, as she took the vacant place, and the young giant redoubled his strides. When the new world was found this pacemaker also stopped.



Britain sprang on the track, and as she ran she cried, "The freedom of the Individual," and when Man had arrived at that she also fell behind.

Then a young giant took her place, crying, "Brotherhood is the goal," and with this pacemaker Man made mighty strides——

And so he passed beyond my sight.



New York City.

Two New Railroad Presidents.

JAMES T. HARAHAN.

James T. Harahan, who recently succeeded Stuyvesant Fish as President of the Illinois Central Railway, representing the Harriman control, entered railway service in 1861 in a very humble capacity. In point of fact his first job was that of switchman in the yards at Alexandria, Va. By dint of persistent application he rose thru successive stages until within eight years he was in charge of the operation of the Shelby Railroad, subsequently becoming general manager of the Louisville & Nashville. He has since been active in the management of a considerable number of important roads in the Middle West and in the South. His age is sixty-three.

WILLIAM W. FINLEY.

At a special meeting of the Board of Directors of the Southern Railway Company, held in New York on December 5th, Mr. William W. Finley, second vice-president, in charge of the Traffic Department of the company, was elected president, succeeding the late Samuel Spencer, whose tragic death was recently extensively commented upon. Mr. Finley stands as one of the foremost railroad traffic officials in this country. He has held the position of second vice-president of the Southern Railway since September 15th, 1906. He entered the railway business on May 1st, 1873, and has occupied successively positions as stenographer, secretary and other posts in the general freight department of various railroads. He was general traffic manager of the Great Northern and Montana Central Railroad from 1892 to 1895, when he became commissioner of the Southern States Passenger Association. He was made third vice-president of the Southern Railway on October 1, 1895. He was recently the second vice-president of the Great Northern Railway.

Literature

Prince Hohenlohe's Memoirs

But for the German Emperor's telegram, it is doubtful if these memoirs* would have seen the light so soon in an English translation. The greater part of the first volume is, indeed, only of strictly German historical interest, because, in the general perspective of world history, at this distance of time, the events in Germany from 1848 to 1866, and thence to 1870, the development of affairs that led to the foundation of the new Empire, have already become, in their multitudinous minute details, of but secondary and local interest, especially when they are considered, as in these pages, from the South German point of view. In the making of that period of continental European history, Prussia, Austria, and, in a bungling, involuntary fashion, France, were the leaders, the rest of Germany (Bavaria included) but followers, often unwilling, generally suspicious, altogether unable to help themselves, and fully aware of their helplessness. In the larger, broader outlines which history assumes with the lapse of time there can be no room for the difficulties, intrigues, doubts, suspicions, fears, hopes, negotiations, jealousies, enmities, advances, checks and counter-checks of the tortuous diplomacy that led to Sadowa and thence to Sedan. In the retrospect Bismarck's cigar at the Diet of Frankfort alone appears to have retained its historical picturesqueness for us.

But if the diplomatic and historical value of this first volume be comparatively slight for non-Germans, it is of genuine biographical interest. It presents a capital portrait of the early development of a true patriot and able statesman, whose clear insight and firmness of purpose are perceptible even in the earliest years of his career, a picture of a man who began to dream in youth the dream of German unity, and who remained faithful to his ideal, and served it steadfastly till its realization. Then came his reward, which was more service still in high places, in the Reichstag, as Ambassador to the French republic at a period when the relations between the two countries were still most delicate, as Governor of the conquered provinces, and, finally, as Chancellor of the Empire. A man of solid ability, if not of brilliant endowment, safe, tactful, deliberate, Prince Hohenlohe was unquestionably helped much in his career by his exalted station and his Bavarian birth. There can be little doubt of the fact that he was selected for his important posts not only in consequence of his earlier services, but also as a compliment to Bavaria, the second member of the federation in importance, whose good will the old Emperor and Bismarck were ever anxious to win in the early Imperial days. The Iron Chancellor's policy of obstruction toward Hohenlohe began with his appointment to the governorship of Alsace-Lorraine, a post which Bismarck had reserved for his son.

Bismarck looms large in the second volume, as he is destined to loom in all the memoirs and biographies still to come of the Germany of the second half of the last century, and, unfortunately, the impression one receives of the personality and character of this man of genius grows more unfavorable with each new revelation. Hohenlohe's report of the Emperor's account of his final rupture with his grandfather's Chancellor is still too fresh in the mind of every American newspaper reader to need repetition here, but thruout this second volume there are glimpses of a man of imperious intolerance of all powers besides his own, capable of descending to the pettiest meannesses, swayed by the smallest jealousies. Prince Hohenlohe, whose revelation of himself in these memoirs shows him to have combined a strong pride of birth with a sane liberalism of statesmanship, asserts that the dream of a "Bismarck dynasty" was very real. The first step toward its realization would have been the Stadtholdership of Alsace-Lorraine, which went to Hohenlohe, but which Bismarck, he declares, aspired to make hereditary in his family.

The second volume deals with what has been most important in the international relations and policies and the internal developments and complications of the German Empire since its foundation.

* Memoirs of Prince Chlodwig of Hohenlohe-Schillingsfuerst. Authorized by Prince Alexander of Hohenlohe-Schillingsfuerst, and edited by *Friedrich Curtius*. English edition supervised by *George W. Chrystal*. New York: The Macmillan Co., 2 vols., $6.00.

It confirms much of what has been said before in the matter of the Hohenzollern-Bismarck episode, not only as regards William II, but also in its bearing upon the great Chancellor's constant quarrels and disagreements with the Empress Augusta, and the Crown Prince Frederick and his English wife. To his dear friend and master, the old Emperor, Hohenlohe pays a notable tribute. He observes in 1871, speaking of the unfailing tact of William I:

"It requires great self-abnegation to look on, without envy, at the ovations that Bismarck and Moltke receive. My respect for the old man has greatly increased on that account."

Hohenlohe's notes of his course during the *Kulturkampf* have a special interest owing to his dual eminence as a servant of the Empire and one of its greatest Roman Catholic nobles. The diary of his ambassadorship to France is also of considerable interest.

MARY McNEIL FENOLLOSA.
(Sidney McCall.)
Author of "The Dragon Painter."
Little, Brown & Co., Boston.

It is likely that these memoirs would have lost much of their piquancy if their author had lived to carry out his intention of preparing them for publication. The experienced old diplomat would unquestionably have excised many an indiscretion which the editor has allowed to remain—not diplomatic indiscretions, be it understood, but amusing personalities. It appears that Prince Hohenlohe revenged himself for hours of diplomatic boredom and official suavity with such entries in his diary as these from its Paris pages:

"Reception in the Elysée to bring New Year's congratulations to the Marshal [Macmahon]. The whole ceremony was badly arranged. When one is President of a Republic it does not do to play the King." . . . "Opening of the exhibition. . . . *Soirée at* the Elysée. . . . The Crown Prince of Denmark, a courteous young man; the Duke of Leuchtenberg, an uncourteous noble. . . . A fat Chinese Ambassador, who looks like Frau von Binzer."

The Far East in Fiction

THE description of a once unknown country and its people, manners and customs, when given under the disguise of fiction, is easier to read than a formal work, stating facts instead of weaving dialogs, and touching details with fancy. It is thus the revelation of a civilization. This is the explanation of the tale of *Ewa*.[1] The narrative in the first person pictures by a Korean the experiences of the son of a native officer and his loved ones during the Chino-Japanese war. It has six good pictures and the book is fairly readable. "The American steamer" (p. 50) was the schooner "General Sherman." The conclusion is hopeful — "Korea shall be free." The story shows how the truth as Jesus taught it is Korea's only hope.

The transformation of Japan, from hermitage into the world's battlefield and market-place naturally offers a tempting field to the literary beginner, and the story of *Shibusawa*[2] shows that the writer has read several books on Japan, learning perhaps more also from his Japanese friends. Still it does sound strange to read in the sober matter "Introductory," of the Kanazawa "prefecture" of 1834. Those who have lived in the region indicated smile at the idea of seven provinces (in reality, the fiefs of feudal lords, each as independent as was the daimio of Kanazawa) being comprised within that geographical expression. There are other similar amazing statements. The story, while for the most part descriptive, with little dialog and

[1] EWA: A TALE OF KOREA. *By W. Arthur Noble.* New York: Eaton & Main. $1.25.

[2] SHIBUSAWA: OR, THE PASSING OF OLD JAPAN. *By L. William Adams.* New York: G. P. Putnam's Sons. $1.50.

only ordinary fancy, lacks snap and fire, while perhaps a good general picture of old Japan. It explains the changes in mind that made the old sword wearers, who bullied the unarmed classes, pay taxes and earn their own living. Love and heroism have a foremost place.

As delicate as the silky films of an August morning spider's web, and as lustrous as the dewdrops threaded upon it, are the fancies of the author of *The Dragon Painter*[3]. The story in shorter form was given to the public first in *Collier's Weekly*. Since then it has been practically rewritten and so perfected in detail that it now stands as a work of high literary art. The main theme is one which has been rather overworked in the fiction of writers from lands where love between married man and woman is not only legitimate, but reckoned beautiful; whereas in Japan what we think of as love has been virtually by law and custom outside of the marital contract. Yet the Japanese, like other peoples in the world who respond to nobler culture, have changed so far that those who love the odd and strange go into mourning over the change. So the literary artist must needs go back into old Japan, even into "Yeddo," or find some survivor of ancient days who worships the past. Then comes the problem of picturing this old world of thought and habit in contrast to the new world, in which pre-ancient passions have been transformed and in which new conditions await even the artist and the lover. To set the one over against the other — not like the multitudinous and catch-penny bookmaker, who is a vulgar dauber in black and white only, but with Rembrandt subtlety and power—is the task of the true artist. In *The Dragon Painter,* Mrs. Fenollosa has superbly succeeded. Living long in the Land of the Cherry Blossoms and in the city which, as an artist, she refuses to call Tokyo, her background is homelike and familiar, she falls into none of those absurd and ridiculous anachronisms which mar the works of the feeble scrawlers who show on every page their lack of long literary apprenticeship. Her Japanese talk their own mother tongue, and the imagery of their speech is that of their ancestors. At times in her descriptions of scenes that enthrall all lovers of the divinely beautiful in Japan, Mrs. Fenollosa occasionally runs into a use of metaphors which would be difficult to find yet acclimated in the native thought of Nippon. Nevertheless, old dwellers in the Land of the Kami are acquainted with all her characters, and her situations are far from impossible. Umé is a real Japanese daughter standing in the familiar situation of danger between a passionate lover and an imperious father. As for Mata, the old family servant, we have seen her and known her, finding it great fun to translate her language and her vigorous Billingsgate (or, rather, the lingo of the Nippon Bashi fish market). We cannot give away the plot of the story, but the reader must get acquainted with the wild, untutored artist youth among the mountains, the real "go-between" who was a Government officer. the aged artist in Tokyo, whom we well knew in nature, if not in name, and the maiden Tatsu—dragon as namesake only —who, as this literary artist limns her, might well tame a creature of cosmic vigor, or make a man sell his kingdom. Priest and nun are tenderly portrayed, and Buddhism is shown to be as manifold in its sectarianism as is our religion. The book is a noble expression of the old Japanese passion for art and beauty incarnated in the senile father, reborn in a youth, and joined in hope by a bride of heavenly beauty and sweetly human tact. The author is fortunate in having as her illustrative artist Gertrude McDaniel, who matches text with pictures of insight, accuracy and power.

[3] THE DRAGON PAINTER. *By Mary McNeil Fenollosa.* Boston: Little, Brown & Co. $1.50.

Mes Origines

IT is refreshing to read an autobiography by a poet—and a poet with a mission at that—who does not take himself, his poetry or his mission too seriously. Frédéric Mistral, the young old man, the grand old man of Provence, was born, if ever a human being was, under a lucky star. His very name, Mistral, is a passport to poetic fortune, and Mirèio (Mireille), the title of his principal work, which came to him he knows not when nor how, is the one word in ten

* MES ORIGINES: Mémoires et Récits de Frédéric Mistral. Paris: Plon-Nourrit et Cie. 3 fr. 50.

thousand wherewith to weave a poetic spell.

He has only pleasant memories of his parents and grandparents, of their neighbors, their domestics and their farm laborers, and only good words for his cousins, uncles and aunts. When he finished his classical studies at Avignon, he was—to use his own words—"gay as a colt, as a young colt turned out to pasture"; and when he finished his law studies at Aix he was—to use his own words again—"proud as a cockerel who has just found an earthworm." Mistral sang because it was his nature to sing, because he came into the world "with his mouth full of birds" (*"la bouco pleno d'aouvelous"*). He sang of the homely things about him, of the daily life of his people; and his people loved him, from the beginning, for his songs and for himself. Content to cultivate the soil and to live simply, as his fathers had done, he had no harrowing bread-and-butter problem to solve. Content, likewise, with the ethical code and the faith of his fathers, he had no season of mental and moral conflicts—no *sturm-und-drang* period—to traverse.

He has no reproaches to make, no grievances to ventilate, no slanders to refute, no spites to gratify, no injuries to avenge. There is no anger, no moroseness, no morbidness, no bitterness in his book. He deplores the passing of the traditional life of Provence, as he would the withering of a beautiful rose, but he does not indulge in tantrums about it. He mourns sincerely over the death of his father, but not rebelliously, for he died rich in honors and in years. He regrets deeply being obliged to leave the old homestead after his father's death, but he knows this arrangement to be inevitable, and he blames no one for it.

Barring these and a few similar sweetly melancholy reflections, Mistral's autobiography is a merry exposition of the buoyant philosophy which he denominates *le gai-savoir* and a merry narrative of his efforts and the efforts of his boon companions of the Félibrige to make *le gai-savoir* prevail thruout Provence—a hand-book, and almost a missal, of mirth.

One of the most remarkable things about this blithe autobiography is its entire freedom from self-consciousness, its objectivity, so to speak. It is never introspective; never, that is, in the common acceptation of that word. This is another way of saying that it is synthetic rather than analytic in method and Catholic and Latin rather than Protestant and Anglo-Saxon in spirit. The numerous characters introduced (admirably drawn tho they are) are types, not individuals; and when the author portrays his own character—as he must often in the nature of the case—he makes himself a type, not an individual, also. He sees himself, thanks to a marvelous faculty for visualization, as a spectacle, objectively instead of subjectively, and he deals with himself accordingly. Not for worlds would Mistral dissect any soul, least of all his own. It would not be in his meridional temperament to do so, and, besides, the soul, from his viewpoint, is the exclusive domain of the Church.

The Collected Works of Henrik Ibsen. Copyright edition. Eleven volumes. Vol. II, "The Vikings," "The Pretenders"; Vol. VI, "The League of Youth," "The Pillars of Society"; Vol. VII, "The Doll's House," "Ghosts." New York: Charles Scribner's Sons. $1.00 each.

Now that Ibsen is being widely read and even occasionally seen in the United States, this new and complete edition is much needed. William Archer, who did valiant service in behalf of Ibsenism in England in the days when that required courage, has contributed new introductions to his translations. The Ibsen correspondence recently published has given us an insight into the significance of the plays and the conditions under which they were written, and Mr. Archer makes good use of the material that has appeared since the first editions. The introduction to *The Doll's House* is especially interesting because of Mr. Archer's theory that it was in the middle of this play that Ibsen abandoned the Scribe style of play for his new method. Altho it may be doubted whether this theory is literally true, it serves admirably to mark the contrast between Ibsen drama and its predecessors, and it would have been well to have reprinted the whole of the *Fortnightly* article as an introduction to the edition.

Highways and Byways of the Mississippi Valley. Written and illustrated by Clifton Johnson. New York: Macmillan Co. $2.

In fifty or a hundred years from now Mr. Johnson's *reise-bilder* will be republished in some ponderous series of "Early Western Travels," with exhaustive notes by antiquarians giving intricate and erroneous explanations of his allusions and dialect. In the meantime his sketches are of interest to us of the present day for exposing some little known nooks of our country. We take exception to the word "highways" in the title, for Mr. Johnson tells us very little of the commercial and industrial prosperity of the Mississippi Valley and nothing of its civil and educational triumphs. He is looking for *genre* pictures of quaint survivals of primitive conditions, and he finds them in the eddies of the great current as he passes up the river from the lands of rice and cotton to those of corn and wheat, taking snapshots with pen and camera in the Arkansaw backwoods, the Ozark Mountains, and the country of Joseph Smith and of Mark Twain. We reproduce one of his admirable photographs.

SOFT SOAP MAKING.
From Johnson's "Highways and Byways of the Mississippi Valley." Macmillan.

The Soul of an Artist. Translated from the Italian of Neera by E. L. Murison, with an Introduction by L. D. Ventura. New York: Paul Elder & Co. $1.50.

In the new school of Italian fiction there is no female writer who takes a higher rank than Signora Radius-Zuccari, famous over the continent of Europe for more than a dozen years under her pen-name of "Neera," borrowed, we suppose, from the somewhat frisky and fickle young woman to whom Horace addresses his fifteenth epode. She, therefore, deserves a legitimate place in the sympathies of those who admire and love modern Italian literature by the side of Matilde Serao and Grazia Deledda, and even very close to d'Annunzio, Fogazzaro and Verga. Yet, if we are not greatly mistaken, this is the first time any of her works has represented her in English. It confirms the exceptional qualities of psychology and narrative attributed to her; altho it is quite unlike some of her books, which display realistic, and sometimes naturalistic, leanings. In it the author appears under a new light, and it is hard to classify the book. Its value consists in the subtle analysis of a woman's soul and of a temperament out of harmony with its environment. At times we are puzzled by the heroine. What does she want to prove or to show forth? Has she been simply induced to convert her dramatic and suggestive adventure with the shadowy Marquis of Middleforth into an opportunity for the exercise of her magnetic genius? Questions that will probably remain unanswered. In any case this novel, or romance, or prose poem, or whatever it it, contains pages of exquisite beauty, and it is a noble triumph of art. The lovers of paradox will find a number of strange and audacious paradoxes in the book: a eulogy of disdain, a glorification of hatred, an attack on the family, and the development of a great many other theses calculated to make the reader sit up. Such subtle shades of feeling as Neera's must have been difficult to represent in a language so alien as English, and it is to the translator's credit that she has done her work fairly well. There are a few slips here and there, however. *Vespro,* p. 45—we presume it is *vespro* in the original—should be translated evening, not vespers, which does not make sense; the latter may be said also of *opera,* p. 62. The literal translation of the author's title, *Anima Sola,* A Lonely Soul, would have been a better title than the Soul of an Artist. The souls of artists are not necessarily lonely. We have even known some of them that have been rather jolly. Mr. Ventura's introduction is a piece of mawkish sentimentality in bad English, and should be skipped by the reader. The book is printed on toned paper, and the binding and typography make it a pleasure to the eye.

Canzoni. By T. A. Daly. Pictures by John Sloan. Philadelphia. Catholic Standard and Times Publishing Co. $1.00.

This little volume contains some unusually good light verse, mostly dialect, part of it Irish, part Italian. Both are handled skillfully, but Irish poems at present are less novel than those in "Dago dialect," for this is an almost untouched field for the maker of *vers de société,* if that term can be extended in this land of equality to include the ballads of the peanut peddlers. To quote one of these is better than talking more about the book:

O! Angela ees pretta girl,
She gotta hair so black, so curl,
An' teeth so white as anytheeng,
An' O! she gotta voice to seeng,
Dat mak' your hearta feel eet must
Jump up an' dance or eet weel bust.
An' alla time she seeng, her eyes
Dey smila like Italia's skies,
An' makin' flirtin' looks at you—
But dat ees all w'at she can do.

Carlotta ees no gotta song,
But ees twice so big an' strong
As Angela, an' she no look
So beautiful—but she can cook.
You oughta see her carry wood!
I tall you w'at, eet do you good.
When she ees be som'body's wife
She worka hard, you bat my life!
She never gattin' tired, too—
But dat ees all w'at she can do.

O my! I weesh dat Angela
Was strong for carry wood,
Or else Carlotta gotta song
An' looka pretta good.
I gotta lov' for Angela,
I love Carlotta, too.
I no can marry both o' dem,
So w'at I gona do?

The Universal Elements of the Christian Religion. By Charles Cuthbert Hall, D. D., LL. D. New York: Fleming H. Revell Co. $1.25.

These lectures were delivered at Vanderbilt University, Nashville, Tenn., and they are dedicated to the reverend Bishops of the Methodist Episcopal Church South. They contain an arraignment of sectarianism as earnest as it is gracious, and a plea for Church unity full of noble and convincing eloquence. They declare, uncompromisingly, for largest liberty and tolerance in Biblical criticism, a declaration all the more commendable in that the author differs profoundly from prevailing higher criticism in his interpretation of the New Testament. One may not share President Hall's anticipation of the "blessing that would come to the Western world if the great, religious East were to become the teacher and the interpreter of the religion of Jesus Christ," and may also disagree with him in his idea that metaphysics are any part of the essence of Christianity, but no friend of progress and tolerance can refuse to rejoice that the union of Christians and the liberty of scholarship have found so persuasive and tactful an advocate. These lectures were delivered shortly after President Hall's return from the East as Haskell lecturer, and they testify to the deep influence which contact with the religious life of India and Japan exerted upon their author. The passion for the Christianization of the world is not less ardent within him than in the heart of the most zealous missionary, and he seeks to discover and set forth those elements of Christianity fitted to be universal, that he may persuade the Churches to exalt these and these only and so to fulfill their world-wide destiny.

Sir Nigel. By Conan Doyle. New York: McClure, Phillips & Co. $1.50.

Those who read "The White Company" and recall the interest with which they followed the fortunes of Sir Nigel Loring will be delighted to learn that he is hero of Conan Doyle's new novel. This time, however, he is represented as being young, and the tale is of those adventures in war by which he won the golden spurs of knighthood. The initial chapters are perhaps the best in the book, but it is all good. The truth is, if an author has the gift of story telling, it matters little what the story is, or even if he tells the same one over, we read entranced. Conan Doyle has this gift, and so, whether he writes of a modern detective like Sherlock Holmes or of a fourteenth-century knight like Sir Nigel Loring, the charm is perfect. He is the master of two distinct kinds of literary expression, and whether he uses the one or the other he is master of his readers.

Dramatic Opinions. By G. Bernard Shaw. With an introduction by James Huneker. 2 vols. New York: Brentano's. $2.50.

In general there is no form of literature that the world lets die more speedily or deservedly than the newspaper criticism of current plays. But the series of articles that Bernard Shaw contributed to the London *Saturday Review*, 1895-8, was very different from what people have been accustomed to see, and his sharp pen punctured many a traditional dramatic bubble. Now, the drama in America is about ten years behind that of England, and we are passing thru a transition period similar to that when these *Opinions* were written, so they are especially pertinent. Brentano's have done us a service in rescuing them from the oblivion of the files. They contain many of his most characteristic hits, which will ultimately find their way into a Shaw Calendar.

"It is an instinct with me personally to attack every idea which has been full grown for ten years, especially if it claims to be the foundation of all human society."

"Depend upon it, the miserable doctrine that life is a mess and that there is no way out of it, will never nerve any man to write a truly heroic play west of the Caucasus."

"He made the mistake—common in an irreligious age—of conceiving a religious man as a lugubrious one."

"Nietzsche's epigrams are written with phosphorus on brimstone."

"To tell the truth, I disliked the play so much that nothing would induce me to say anything good of it. But my criticism has not, I hope, any other fault than that of extreme unfairness."

"In this world, if you do not say a thing in an irritating way, you may just as well not say it at all, since nobody will trouble themselves about anything that does not trouble them."

"I can endure, for a strictly limited time, the splenetic, cynical pessimist, who lashes and satirizes the abundant follies and weaknesses

of mankind to excuse himself for giving it up as a bad job. But your maudlin pessimist who says: 'We are all hopeless scoundrels; so let us be kind and gentle to one another'—him I find it hard to bear."

"Sir Henry Irving does not merely cut plays; he disembowels them."

"In dealing with Englishmen you must make them believe that you are appealing to their brains when you are really appealing to their senses and feelings. With Frenchmen the case is reversed: you must make them believe you are appealing to their senses and feelings when you are really appealing to their brains."

"As a rule, when an Englishman can act, he knows better than to waste that invaluable talent on the stage; so that in England an actor is mostly a man who cannot act well enough to be allowed to perform anywhere except in a theater. In France an actor is a man who has not common sense enough to act naturally."

Katrina. By Roy Rolfe Gilson. New York: Baker, Taylor & Co. $1.50.

Some books are indescribable. The authors write as if they were drunken upon wine and honey, as if they had the incense of Heaven in their nostrils and had been caught up out of great tribulations to remember whatsoever things are of good report. Booth Tarkington can cast his eyes up out of his depths and write like this about his beautiful ladies; Margaret Deland does so when she interprets an old man or a little child, and now here is another, Roy Rolfe Gilson, who tells of the little girl Katrina with that indescribable charm. Without divorcing life from any of its sorrows, he has lifted the plain of it up somewhere in the region of those table lands known as the Delectable Mountains. He has filled it with innocency and fresh love, not the worn passions of the fevered world, but as it comes to earth in the flowering thorn or blossoms in a maiden's cheek. We may laugh and call this absurd sentimentality, but it is an absurdity which few of us can achieve. For it is the truth of life sweetened with whatsoever things are of good report. Gilson has fallen heir to the scriptures of the human heart as they are before it is perverted. The book is a book of revelations, showing the prim purity of girlhood, the wonder and commonplaceness of the youthful mind; showing sorrow in the relief of sunlight and love which warms even that. The author has such use of his faculties as a bird has of its wings in mid-air, and he has told his story with that whimsical, bright movement of the mind which accounts in part for its indescribable charm and grace. However, as we have already intimated, it must be read to be appreciated.

Sophy of Kravonia. By Anthony Hope. New York: Harper & Bros. $1.50.

Royal scandals furnish much material to writers of fiction. Mr. Anthony Hope has dramatized the tragedy which occurred in Servia several years ago. Many will recall the fact that Prince Alexander married an adventuress and in other ways so incensed the people that a body of soldiers, lead by the Commander-in-Chief, went to the palace at night and murdered the Prince and his wife. The details are changed or modified in this novel, but it is easy to recognize certain historical characters and circumstances. Sophy was not always Sophy of Kravonia. She was a poor English girl with a birthmark upon her cheek, which was regarded as "a bad sign," who had had a checkered rather than a dishonorable career. Chance brings her to Kravonia, and chance enables her to save the Prince's life. The story of their love is well told, but it is not till he is mortally wounded that the Prince marries her. After his death for one brief hour she is Queen of Kravonia and leads her husband's faithful shepherd soldier in a battle against the revolutionists. It all ends sadly, but not so sadly as fell the dynasty of the real Servia, and Mr. Hope has told it in that thrilling style which made the "Prisoner of Zenda" the most popular novel he has ever written.

Literary Notes.

One of the most beautiful chapters in Maurice Maeterlinck's scientific poem, "The Life of the Bee," is that on *The Swarm*, and we are glad to see that Dodd, Mead & Co. have published it separately in a volume, with page decorations in green. [$1.20.]

....Here are two quotation yearbooks: *The Friendly Year*, chosen and arranged from the works of Henry van Dyke by Dr. G. S. Webster [Scribner's, $1.25], and *A Sentiment in Verse for Every Day in the Year*, compiled by Walter L. Sheldon, of the St. Louis Ethical Society. [S. B. Weston, Phila. 50 cents.]

....The Sunday School lessons for 1907 are contained in a handy vest-pocket *Lesson Handbook*, together with a surprising amount of condensed information and suggestion, by H. H. Meyer. A *Superintendent's Helper*, of the

same form, by Dr. Hurlbut, contains also blackboard schemes, a teacher's roll and talks to the school. [Eaton & Mains, N. Y. 25 cents each.]

....The unique feature of the new edition of *Romola,* published by McClurg & Co., Chicago, is the introduction by Dr. Guido Biagi, Librarian of the Laurentian Library, Florence, who has been able to ascertain just what books were consulted by George Eliot in her studies for the novel by looking up the call slips of the library, signed by G. H. Lewes, in 1861. The historical value of the work is further enhanced by 160 full page photographic illustrations from fifteenth century prints and paintings, and other contemporary material. [2 vols., $3.00.]

....All who are interested in music should become acquainted with *The Musicians' Library,* published by Oliver Ditson Company, Boston. This series includes a selection of the best songs and piano music, old and new, printed in attractive folio volumes, and preceded by introductions by competent editors, giving information about the music and its composers, which add greatly to its interest, for both amateur and professional. Recent issues are *Early Italian Piano Music,* a collection of pieces written for harpsichord and clavichord, edited by M. Esposito; *Fifty Shakespeare Songs,* for high voice, edited by Charles Vincent; and *Songs and Airs by Handel,* edited by Ebenezer Prout; Vol. I for high voice, Vol. II for low voice. [Paper, cloth back, $1.50; full cloth, $2.50 per vol.]

....Paul Elder & Co., who made a lightning change to New York when they were shaken and burned out of San Francisco, have succeeded in getting ready their holiday books on time, altho to do this required the reprinting of the entire edition in some cases, and in others the preparation of new plates and the procuring of new drawings. Their specialty continues to be originality in the printing and style of their books, which are sometimes artistic, sometimes merely odd, but always novel. Of the new books, *The Princess of Manoa,* by Mrs. Frank R. Day, is the most interesting. It is printed on Bjornson Golden Brown paper with inserted illustrations of a tint in perfect harmony with the page. These pictures, from paintings by D. Howard Hitchcock, show great imaginative power and picturesque inventions. Tho they are sometimes crude in drawing, they are well adapted to these Hawaiian folk myths. [$1.50.] *Ye Gardeyne Boke,* a collection of quotations on flowers and trees, gathered by Jennie Day Haines, is printed in the old English style, with woodcut borders [$1.50]. Other volumes, that we cannot describe for lack of space and vocabulary, are two additions to the Elder recipe books, *101 Mexican Dishes* and *202 Cleansers* [50 cents each, $1.00 bound]; *The Auto Guest Book* [$1.00]; and several volumes of quotations such as *The Philosophy of Ingersoll* [$1.50], *Mosaic Essays* [$1.50], *Fear Not* [75 cents], and *Sunday Symphonies* [75 cents]. Those who are looking for something out of the ordinary in the way of gift books should send for their full list.

Pebbles

A Peep Into the Future.

(From the *Sun* of December 7, 1956.)

Washington, December 6.—The President today ordered the summary dismissal of all officers of the army and navy above the age of forty-five. It is hoped to lessen by this means the complaint about the slowness of promotion and to bring more active men to the front.

Terre Haute, December 6.—In accordance with the new Federal labor law, 313 boxes of cigars shipped from New York were seized by the resident Government inspector on affidavits that they were the product of cigarette using labor.

Washington, December 6.—The President removed the Governor of Oregon today for insubordination.

Washington, December 6.—The President prorogued the Pennsylvania Legislature today.

Wilmington, Del., December 6.—It is said that Delaware, which has not had a United States Senator since 1933, will be made a Federal district shortly.

Camden, Me., December 6.—The multiplication law is being enforced with great rigor in Maine. Twenty-two childless couples in this town were fined $1,000 each by the Federal Population Commission yesterday.

New Brunswick, N. J., December 6.—In the Federal Shooting Gallery this morning Benoni P. Spitz, sixteen, was accidentally shot in the calf of his right leg by Federal Sharpshooter Valentine Gosops.

Washington, December 6.—The Federal Spelling Board has ordered the destruction of all books, pamphlets, newspapers or other printed matter in which the old fashioned spelling is used.

Washington, December 6.—The President's health is giving much uneasiness to his physicians. It is believed that within a week at latest he will start for France, Spain and the Mediterranean, accompanied by the navy.—*The New York Sun.*

If you see it in the *Sun* it's so.
If you see it in the *American* it's so-so.
If you see it on the toothbrush it's so-so-don't.—*Princeton Tiger.*

"Mrs. Nagget and her husband," said Mrs. Hicks, "have had a dreadful quarrel just because he carried around for a week a letter she gave him to mail. Isn't it silly of her?"

"Well," replied Mr. Hicks, "perhaps that would make you mad, too."

"Oh, no, dear, I wouldn't lose my temper over a little thing like that."

"I'm glad to hear you say so, dear. I just recall that I've still got that letter you gave me last Saturday."—*Catholic Standard and Times.*

Editorials

The Christ-Birth

THEY say that when the Babe was born in Bethlehem the gates of the temple of Janus were closed — that all the world was at peace. They say that there was a song of angels heard in the sky proclaiming peace on earth and good will to men. But the peace was not the great event of that day, not the closure of temple gates that no legion of war might march out; but the great central fact was the birth itself, the coming of the Christ.

And they are now sometimes telling us we shall lose our Christ. They are saying that the stories of his birth are a legendary "gospel of the infancy," and that Jesus was born as other men, and remained in the tomb as other men, and that he was man and not very God of very God. They tell us we have been quite too ready to accept old superstitions, and are too submissive to ancient creeds written by men less wise than are we. And yet, somehow, we observe that Jesus does not cease to hold the love and the worship of men. This may be an age of science, and it is true that we try all things and old faiths crumble. But yet the salvation which Christ taught spreads over the world. More men cling to him than ever before. Christianity is conquering the nations. Humanity is becoming more Christian. We cannot help seeing that it is the spirit that was in Christ, taught by him, which inspires and controls all the progressive reform which is fighting evils and making the world better.

So if we are told that this is an age of skepticism we are not disturbed. Even skepticism is becoming Christian. Those who are not certain about the miracles, who find it hard to believe in the virgin birth and the visible physical resurrection of our Lord, are yet his disciples. They hold him the great teacher and revealer of God. From him they learn the fatherhood of God and the brotherhood of man, and they reverently say "Our Father" and follow the Master.

So behind all the clash of sects, beyond all the spyings and searchings of doubt and criticism and denial, we still see one great, placid, benevolent, gracious figure stand supreme to the world's heart, that of the world's teacher and Savior, for he teaches goodness and love, and he saves from selfishness and wrong and sin. Above his instruction in righteousness no moralist can ascend; superior to his example of sacrifice no martyr can reach. His life, his death, his lessons, his cross are the supreme gift to the world, never lost, ever supreme, of Christmastide.

Income or Inheritance Tax

THE discussion of President Roosevelt's recommendations on income and inheritance taxation at the meeting of the National Civic Federation was good educational work. The public utterances of men like Mr. Carnegie and Mr. Melville E. Ingalls, formerly president of the Big Four Railroad, and now chairman of its executive committee, are listened to by the people with something more than respect. They are rightly regarded as, in a sense, expert opinions. They reveal the mental attitudes of men who have enjoyed great privileges and greatly profited by them. It is quite as interesting to know how they look at taxation as to know how the farmer or the wage earner looks at it.

The careful reader of what these two gentlemen said to the Civic Federation will agree with us, we think, that these particular utterances are worth thinking about for another reason also. Mr. Carnegie and Mr. Ingalls really exhibit more knowledge of industrial conditions and a better grasp of public finance than most men do when they "let loose" on these subjects, and Mr. Carnegie showed, as he has showed more than once before, that he sees the working of certain great social forces that certain other men in his class are strangely unacquainted with.

Mr. Carnegie, as might have been anticipated by any one familiar with his

opinions, objects to an income tax and favors an inheritance tax. The income tax he thinks inquisitorial, as most people do, and he believes that it works to the disadvantage of comparatively young men starting in business. It tends, he says, to make a nation of liars. We are not prepared to dispute these propositions. The personal property tax, some people suspect, is productive of similar results. For the United States, however, the whole question will continue to be academic until Congress and the Supreme Court arrive at a better understanding than has yet been reached upon the constitutionality of any practicable scheme of income taxation.

It is Mr. Carnegie's reflections upon the other possibility—a graduated inheritance tax—that are, therefore, of chief interest. If we may take Mr. Carnegie's words at their face value, he holds that great fortunes are created chiefly by the community, rather than by any ability, foresight or industry of the individual. This statement is a distinct contribution to human knowledge, because it is precisely on this point that Mr. Carnegie is qualified to speak as an expert. He knows, and like the honest Scotchman that he is, he tells the truth. The community, therefore, is entitled to take possession of a great part of the vast private fortunes that are now accumulating. As a principle of public policy, Mr. Carnegie would not have the state appropriate its own from this source during the lifetime of the rich man. Let him, like the honey-making bee, use his wealth in business. But when he can no longer use it, let it not go to children, who certainly have not created it, and who cannot be depended on to use it wisely.

Mr. Ingalls's views contradict Mr. Carnegie's at nearly every point. He believes in an income tax at the same rate for all incomes, small and large, of one thousand dollars and over. He objects to inheritance taxation, and wants legislation providing that, after minor legacies are paid, every estate shall be divided equally among heirs. Compared with Mr. Carnegie's philosophy, that of Mr. Ingalls is conservative. But upon one detail he speaks out in a way that is worthy of all commendation. He would take away from every citizen the right to tie up his property in trust for life or any time. "Take," he said, "the case of the man who died in Chicago last year, and who tied up his estate for fifty years, until the little children of today will be old men, and will be not only millionaires, but billionaires. Will any man say it is a wise condition of law that permits this state of affairs?"

The real significance of this opposition of views promulgated by Mr. Carnegie and Mr. Ingalls lies in the fact that it discloses a line upon which the public itself will divide. Men who hold that the only legitimate function of government is to keep the peace, protect life and property, and enforce contracts, leaving all else to individual initiative, will take the positions held by Mr. Ingalls. They will insist that taxation should be used only for the purpose of obtaining mere necessary revenue for carrying on a government economically administered for these few specific ends. Men who believe that the state must become the supreme organization of human society, and that it must try to achieve the realization of substantial justice, may see a good deal in Mr. Carnegie's contentions—at least, until they are ready to go further and demand an abolition of the privileges thru which great private fortunes are made.

The Little Enemies of Man

EARLY in the history of the human race man learned how to conquer the mastodon. He has yet to learn how to master the microbe. Whales and elephants are now almost extinct, but mice and flies still increase and multiply, and the bacteria, smallest and most dangerous of all, find new ways of attacking us. It is only within the last few years that man has learned which his greatest enemies are, and he has not yet found weapons against them. The explorer in tropical jungles used to fear the lions, tigers and pythons; now he protects himself most carefully against the mosquitoes and tsetses. Mars has afflicted the human race less than Beelzebub.

Altho we theoretically accept the con-

clusion of science that a man's foes are those of his own household, we are not yet aroused to the necessity of waging war in earnest against them. We have a Secretary of the Navy and we give him millions for defense, but we have no Secretary of Sanitation, tho that is a more necessary office. It is quite improbable that any American will be killed by Japanese in 1907, even if we do not construct a 25,000-ton battleship, but our shores are invaded by millions of anopheles, armed with deadly weapons and certain to slaughter thousands. Years of study and experimentation will be necessary before we learn how to fight our insect foes, but already enough has been done to show what can be accomplished if we go about it in the right way. Many of the sanitary measures of the past we now know to be crude, clumsy and misdirected, yet they are fixed in the popular mind and remain on our statute books. People still talk about the dangers of miasma and sewer gas, and think a deodorizer is a disinfectant.

The best example of what can be done in the way of eradicating disease by scientific sanitarians with unlimited power and plenty of money is given by Panama. We have been in control there for two years and a half now. We have spent more money than the French did in the same length of time, and we have dug less dirt, but we have done one thing that they could not do—we have made Panama habitable. In 1852, when General Grant took the Seventh United States Infantry to California, 15 per cent. of the regiment died of disease while crossing the Isthmus. Our troops now permanently stationed on the Isthmus maintain their usual health. Once Panama was continually infested with yellow fever. It has been over a year now since a case has been discovered there. It has been banished by killing off the stegomyia mosquito that carries the disease. All the houses in Panama are fumigated at regular intervals to rid them of insects and vermin.

In an article in this issue Dr. Howard describes the general method of fumigation, but we wish to make some additional suggestions. In particular we would disavow responsibility for any bad results that may follow from the use of hydrocyanic acid gas for fumigation as he advises. It is undoubtedly efficient, but it is also very dangerous. A breath of it may be instantly fatal, and it does not give warning of its presence by an irritating odor like sulfur dioxid.

The latter, produced by burning sulfur, is most commonly used as a disinfectant and culicide because it is cheap and anybody can handle it, but it attacks furniture, fabrics and metal work. In Panama pyrethrum has been extensively used, especially in the big office building of the Commission. In the beginning when Colonel Gorgas sent up an order for a few tons of pyrethrum the members of the Commission at Washington, who were used to buying it in ounce packages marked "Persian Insect Powder," thought that there was some mistake and scaled down the order to what they considered a reasonable supply. But Colonel Gorgas succeeded in persuading them that he knew what he was about, so now he has pyrethrum to burn.

The difficulty with pyrethrum is that it does not always kill the mosquitoes but only stupefies them, and unless they are all swept up and burned the building is not rid of them. The Panama Board of Health is now using a new culicide that is better than any of those mentioned by Dr. Howard. This is campho-phenique, which consists of a mixture of equal parts of camphor and carbolic acid. This is much cheaper than pyrethrum and quite as efficient as sulfur. It does not injure household furnishings and is not poisonous like hydrocyanic acid gas. It is volatilized by heating it in a basin over an alcohol lamp. The only difficulty is that if it takes fire it fills the room with soot. To avoid this a special form of apparatus has been devised which is fully described in Bulletin No. 2, which may be obtained free from the Isthmian Canal Commission at Washington. Dr. Kendall has made a number of practical experiments with the three culicides, hiding cages of wire netting filled with counted mosquitoes in furniture, behind curtains and in bunches of bananas, and he finds that the fumes of campho-phenique kill them all in less than an hour. If formaldehyde is added to the mixture it acts as a bactericide and destroys all the disease germs in the room.

Reconstructive Movements in Atlanta

THE terrible tragedy in Atlanta on the night of September 22d has served to awaken the better element of its citizens from their lethargy, and as a result there are three distinct concurrent reconstructive movements in progress in the Gate City of the South. We have watched these movements closely from their incipiency, and have hesitated to write in regard to them until their promise had been established. Altho these movements are still in the experimental stage, still their originality, nature, and the kind of men behind them, invest them with a significance that is sectional, if not national. At last some constructive thinking is being put into the question by native Southern men, and the co-operation of the negro is involved in the scheme.

The first of these may be termed the industrial, which contemplates the establishment of a great central industrial school for the State and schools of domestic science for the cities. The last Legislature of Georgia passed a provision which establishes an agricultural school in each of the eleven Congressional districts of the State. Altho these schools will involve a cost to the public of $300,000, the negro, who forms 42 per cent. of the population of the State, will not receive any direct benefit from them. The negro leaders have refrained from attacking this provision, but are insisting that, since they have no direct share in the benefits of these agricultural schools, it is but right that they should have such industrial schools as will cover the pursuits in which so many of them are engaged. These schools would possess a number of advantages. They would benefit the white race by providing competent service out of the raw material at their doors instead of their turning to the foreigner. They would benefit the colored race. Taking no whit from the schools of higher learning, they would reach that element of the race that does not care for the higher training, and is likely, thru its inefficiency and indifference, to fall into crime. Then, too, it would help the relation between the races by turning the attention of the races away from their differences and uniting them on lines of harmonious co-operation. This movement is meeting with great favor, and it is likely reference will be made to it in the message of the retiring Governor. Behind this movement is Mr. Clark Howell, the editor of the Atlanta *Constitution.*

The second is the civic movement, whose object, in its own language, is "to take such steps, thru an executive committee, as will tend to promote peace between the races, see that offenders of both races are apprehended and justice impartially administered, and permanently to secure protection to both white and black." Colored leaders have formed a "Colored Co-operative Civic League" with identically the same object, and the words in which the object is stated form a covenant between the two. Each league has an executive committee of twenty, and they are to meet from time to time for conference. Already the prime movers in this league have performed the unheard of feat of securing the acquittal of a negro charged with rape and identified positively by the white prosecutrix in open court! After securing five thousand names of citizens, both white and black, to support the movement (and that number is almost secured) the league will get down to practical work. One of the features they propose is to put colored policemen in colored localities, thus putting responsibility on the race for controlling itself; and we predict that the race will meet the responsibility. Behind this movement is Mr. Charles T. Hopkins, a native Southerner, a graduate of Williams College, and one of the most influential men at the bar in the political life of Atlanta.

The third is the religious movement, which has grown out of the Business Men's Gospel Union, an established organization. Believing that "the relations of the two races in the South require to be readjusted by a conference between representatives of each, with a view to promoting the good of both," the Gospel Union seeks to unite approved men of both races in a Southern legion

of honor to promote "the highest type of citizenship, maintain all existing laws, promote peace and good will between the races and propose from time to time such further legislation as conditions may require." To the proffer made by the white men the colored men responded with reciprocal good will, and men of both races have been meeting weekly in the rooms of the Colored Y. M. C. A. for the purpose of prayer and conference, the utmost good will prevailing. After a week of prayer in the homes, the second Sunday in December was set apart as a day on which sermons on law and order were to be preached from the pulpits of both races, extracts from the sermons of both white and black ministers to be printed alternately in the daily press thruout the State. The very general compliance with this request produced a profound effect. Other practical measures are contemplated. Behind this movement is the Hon. W. J. Northen, formerly Governor of the State and the president of the Southern Baptist Convention. He has entered into the movement heart and soul, and is planning to make this the crowning work of his life, not confining it to his native State, but planning to make it effective thruout the South.

We are heartily glad to note these movements; and after the most careful investigation we are confident they are genuine and full of promise. The whole nation will watch them with interest and hope; and if they succeed, and we see no good reason why they should not, who will not say that the ancient saying that blood is the price of progress is verified?

The Mischief of Religion

THERE is no greater influence for good in this world than that religion which is the love of God and man; and no greater nuisance in the world than religion perverted to strife and hate. The three greatest nations of Europe are now experiencing that mischief.

All the nations of Europe have had a long experience of religion in the wrong place, in government, holding the sword, constraining men by physical power, supported with taxes collected by the secular arm, so that religion and politics were inseparably connected. And yet the religion of Christ is not of this world, and his disciples do not fight. It is, then, impossible that there should not be conflict between the two, and that conflict is just now extreme in Germany, Great Britain and France.

In Germany there has been for years a Catholic party, definitely so recognized, Catholics against Protestants, having the special purpose of getting that sort of legislation which Catholics want. Not unnaturally, the Catholic party, calling itself the Centrists, has allied itself with extreme conservatism and royal prerogative. But now, for some reason or other, the Center is out with the Emperor and his policy. It can afford to do so, for while in power it has got pretty much all it could ask. The drastic legislation against the Catholic Church under Bismarck has all been repealed. The cruelties inflicted on the natives in German West Africa have provoked them to anger, and much to their credit. They have heard the stories of wanton murder told by both Catholic and Protestant missionaries, and they refuse to give the money asked to maintain the colonial policy of war. They are quite right, but the turning of the Catholic Center against the Emperor has created a very strained position and is the occasion why the Emperor William has dissolved the Reichstag, and no man can tell whether a new Reichstag will again defy him. About once in ten or fifteen years the Reichstag has been dissolved because not amenable to the sovereign's will, and each time a more pliant Reichstag has done as it was asked. But this may not be repeated, for a combined opposition of both the Catholics and the Socialists will be hard to beat.

More distinctly is it the religious question which has brought the British House of Lords and House of Commons into a deadlock. Let it be clearly seen that the great question is one of religion; not that religion in the heart which is satisfied to love God and man and which tries to do good, but that other pestiferous kind which wants to get and keep the support of the state for its teaching,

and which punishes those who refuse to give such support. So the Church party in politics has been putting men in jail because they refused to pay taxes to support religion of a sort in the schools. The House of Commons has freed the schools of this incubus, and the House of Lords has put back the burden. There is danger, not of war in Great Britain, but of long and bitter conflict, which can have but one end, and that is the disestablishment of the Anglican Church in England and Wales and that of the Kirk in Scotland; and before that is accomplished there is likely to be a radical reorganization of the House of Lords, possibly its abolition.

In France the position is even more difficult. It all comes from the same old blunder—that of the active relation between the state and the clergy. At last the nation—for the French are quicker to draw logical conclusions than the English—have decided that the union of Church and State must end, and the process of ending is a hard one. Old ties are not easily sundered. There will be some friction in the process, and perhaps some injustice. But the union of the two is essentially unjust and mischievous, and the separation kindles passion. It is not for us to understand just how much wrong is done in this breaking of bonds, but this we know, that the end must be freedom of religion and its spiritual betterment. Always an established religion does not know its own misfortune, does not feel its fetters, always it fights its liberation and clings to its chains.

In our own country we are free of this cumbersome entanglement. It is a blessing we do not sufficiently appreciate. Here there is no religious quarrel. We have no religious politics. Protestants and Catholics and Jews and atheists are all scattered in the political parties, and can afford to be, for all know that the nation will leave each religion free and will help or hurt none. Each religion can support as many churches as its adherents wish, and as many schools, but the state will not pay a cent to support any religion, and will not allow any religion to take charge of our public schools. Even more than our republican form of government is our separation of Church and State peculiar to us, and a chief occasion of our peaceful prosperity.

Agriculture in 1906

No greater evidence of the rapid development of industrialism can be found than the report of our Secretary of Agriculture, James Wilson—his tenth annual report. In many ways it is one of the most important documents laid before Congress and the people. Mr. Wilson demonstrates the elasticity of our industrialism. He shows us that the yield of our acres and the labor of our farmers are responding to the imperative demands that are made upon them for larger crops, to meet the needs of a rapidly growing population. The farmer is becoming a scientist, and our experiment stations and agricultural colleges are the very center of scientific investigation. Not only are millions of acres of fresh land coming under culture, and yielding their crops faster than domestic consumption requires, but scientific agriculture is multiplying crops which require not only our home market, but an open door of trade all over the world. Mr. Wilson was the selection of Mr. McKinley, and he carries into his work, in no doubtful way, the conviction of that great statesman concerning the need of putting an end to commercial warfare. The American farmer must have the world's markets; the home market he has got, and no power on earth can take it away from him.

Mr. Wilson feels certain that no miracle will be required to double or even treble the production of cotton per acre; that the corn crop can be increased at last one-half per acre, and that this can be done during the next twenty years; while the same may be said of wheat and many other crops. One-fourth of the dairy cows of the country "do not pay for their feed, and more than one-half of that pay no profit"; of course our milk and butter production and cheese production are in a condition inexcusable for shiftlessness and ignorance. He believes that the egg production will be increased by at least double within a few years. In fact, the

farmer is learning, not only that the old ways of doing things must be improved, but that not a single one of his crops has reached anywhere near its maximum output. Every farm must become an experiment station and must do its share in applying scientific knowledge to production. Our farmers' clubs must become, and in fact are becoming, the centers of economic and social discussion. The Department at Washington has already added hundreds of millions of dollars to our annual produce, but Mr. Wilson assures us it has scarcely crossed the threshold of its mission of discovery and education. We believe it is a general sentiment that no one of our Commissioners of Agriculture or Secretaries has even approached Mr. Wilson in effective work.

Among the more novel and perhaps popular efforts of the Department is the introduction of new plants from foreign countries. This sort of work is not confined to the effort to grow tea and coffee and other plants hardly adjustable to our climate and soil, but the world is being ransacked for new fruits and new vegetables and new cereals. Among those now promised are a seedless persimmon, adapted to our Southern and Middle States; new varieties of wheat; new melons and new sorts of semi-tropical fruits. Much more important to the United States are the experiments made in the way of producing valuable fruits and vegetables from seed. These experiments have been talked about so much, and the new citrus productions have excited so much interest, that we need not recall them here. Suffice it to say that the orange belt will surely be widened, camphor will certainly be produced in the United States, while the apple belt and grape belt will be widened southward. Mr. Burbank and similar workers are brought into close alliance with the central work at Washington. The Department can justly boast of great progress made in the work of reforestation. The reserves have been increased within a single year by twenty millions of acres, while the revenue from the same has been increased over twelvefold; that is, these reserves, while of immense value to the people, will cost us nothing. They guarantee future supplies of timber and greatly increase the value of adjacent farm land. It is proposed considerably to extend the forestry work of the United States by planting deserted farms.

Road improvement is a direction in which the department is moving with a good deal of success. It does not undertake the construction of roads, which belongs to the States and counties, but furnishes expert advice on construction, and wherever possible creates object lesson roadways. The local authorities furnish the material, the common labor, the teams and the fuel, while the engineers come from the Agricultural Department. Co-operation with the Post Office Department has been inaugurated in order to facilitate rural mail delivery. Engineer inspectors are detailed to examine roads that are complained of and give advice to local officials. The public, during the last year, has heard of Secretary Wilson in connection with the meat inspection law. The department has undertaken the inspection of the entire output of every packing establishment except those doing their business entirely within State limits.

It is difficult to grapple mentally with the figures that are thrown at us by recent farm valuations. The total farm products of the last year have come up very close to seven billions—half a billion higher than the products of 1905, and two billions higher than the figures of the last century. According to *Bradstreet's,* the corn crop for 1906 was two billions eight hundred and eighty-one millions, and Secretary Wilson estimates this in terms of one billion one hundred millions of dollars. The wheat crop, according to *Bradstreet's*, has been nearly seven hundred and forty millions, and worth four hundred and fifty millions of dollars. The total six leading cereals of the country, including corn, wheat, oats, barley, rye and buckwheat, figure at four billions six hundred and seventy-two millions of bushels; potatoes at three hundred and three millions; sugar at two billions eight hundred and twenty-two millions of pounds, and apples at thirty-six millions of barrels. Comparing exports and imports, the trade balance cre-

ated by the farm in favor of the United States, for 1906, was four hundred and thirty-three millions; while all other industries gave a balance in our favor of only eighty-five millions. Possibly a faint conception can be obtained of what agriculture is doing for the United States when we consider the exports of the past seventeen years—six thousand millions in excess of imports. Nothing more is needed than the report of Secretary Wilson and the annual showing of *Bradstreet's* to demonstrate the truth of what Mr. James J. Hill has been so emphatically urging—that the wisest course of our Government is to foster agriculture, with the understanding that the people of the United States are naturally and must be substantially an agricultural folk.

The imports of agricultural products also reached their maximum in 1906, as they should, in order to sustain an industrial balance between ourselves and our neighbors. If real estate, domestic animals, implements and machinery are estimated together, the farmers' capitalization has increased since the last census by at least eight billions of dollars, making the present valuation somewhere about twenty-eight billions. Secretary Wilson gets away from this overflow of figures by telling us that "every time the clock ticks a second, during ten hours of a day, the farmer drives nine meat animals to the butcher, and the national retail meat bill exceeds two billions of dollars." But what we are really most intersted in is the fact, in every direction, agriculture appears to have barely begun to show its power to call crops out of the soil. The farmer who avails himself of the best scientific information as to soil culture becomes a scientist of the highest rank. He must be a chemist, a botanist and an entomologist, at the very least. Within the next twenty-five years we may look to see our farm population become the best educated of all classes, from a practical standpoint. Perhaps, at the present moment, the one chief lesson that our whole population has to learn, and more specifically the producer, is economy in the way of waste. Not less than one-sixth of all our magnificent production is now the prey of insect fungoid or other enemies.

The Reformation of Socialism

Mr. H. G. Wells's recent articles in The Independent on certain aspects of Socialism have emphasized the fact that Socialism, not less than the historical religions, is subject to reformative influences. At the present moment it is undergoing a development which may almost be described as a regeneration, and becoming so much broader, so much saner, so much finer than the Socialism of even ten years ago that, unless it should again yield to narrowing and ignoble influences, will make it command the respect that is freely given to all strivings of the human mind toward ideal excellences.

Socialism, as the Socialists are fond of relating, was in its inception Utopian. It pictured ideal communities, scattered here and there in sheltered places, in which selected spirits might dwell in an Eden-like happiness. The Owenite, the Fourrierite, and various other experiments were, for the most part, such pathetic failures that the very name Socialism came to be associated with the most impractical social dreaming.

Then came the revolutionary socialistic movement of the "Communist Manifesto." It was a workingman's movement, and it had a distinct scientific basis. The Marxian philosophy of history set forth: that all great social developments have been caused by materialistic forces; that not ideals, but economic conditions, have determined moral relations, legal rules and the structure of institutions; that the feudal scheme of land tenure produced one kind of society, while capitalist industry has produced another kind of society; that machinery has introduced the wholesale exploitation of a working class having no ownership in the great material means of economic production; and that a class struggle has been precipitated, which is irresponsible until the means of production shall be owned by the producers.

Meanwhile, the influences that must create yet another kind of Socialism have been multiplying. In the great middle class itself, and even among the owners of vast wealth, there has been a growing recognition of enormous trans-

formations of the social order. Competition is giving place to combination, corporation has combined with corporation. A few great organizations control the major part of industrial and commercial operations. The control of the great organizations has been passing into fewer and fewer hands. Therefore the new Socialism declares that the economic life of the modern world must inevitably be as thoroly integrated, unified, as is the political system.

Therefore Socialism now asks whether a plutocratic industrial organization shall dominate the State until it destroys everything that has hitherto been associated with the names "republicanism" and "democracy"; whether we shall have a world of equal opportunities and equal rights, or a world in which gradations of privilege shall assort the population into graded classes, as distinct as the hereditary ranks of the feudal days.

Thus Socialism finds only one way of escape from plutocracy and privilege. It demands a larger integration, a more comprehensive unity than that of the industrial organization. The public, in its entirety, with all its interests, political and educational, no less than industrial, must be recognized and maintained as the supreme social organization, the supreme object of individual loyalty and devotion.

Such a development of the public implies more, however, than the Marxian program of the collective ownership of the means of production. It implies a recognition of something more than material causes working in history. It implies the creation of ideals and of idealistic conduct. It assumes a vast intellectual awakening and a spiritual regeneration of mankind.

It is the growing recognition of these new conditions that is reforming Socialism, that is broadening it out into a new conception of social possibilities, of new devotions, of a reconstructed morality. It is probably not too much to say this of a co-operative commonwealth, to be built not upon the narrow lines of a merely class movement, whether proletarian or any other.

The fundamental principles of this larger Socialism will be these two: First, that exploitation is abhorrent to every instinct of righteousness, and, second, that exploitation can be prevented without destroying economic progress only by perfecting social organization. But with these fundamental principles others also are necessarily combined. With justice and organization we may expect the Socialist movement to put special emphasis on education, knowledge and culture, as well as on a generous enthusiasm for ideal ends. If the new Socialism can prove that it will be not only an economic reconstruction, but just as much a new citizenship, a wider sympathy, a sounder public opinion, a larger unselfishness, a more general enlightenment, the present economic system will have to give way to it. Yet we must remember that under the present system we are aiming toward similar ideal ends, and whichever theory will secure the noblest civilization will have the support of good-willing men.

"Clean Town" Clubs

A THRIVING Western city has organized a "Clean Town Club," its object being to rid the back streets of rubbish, to cultivate civic pride and to make the community proud of the surroundings of home and highway. Of course it had its beginning in a women's club, where so many good things have their origin, and it is particularly commendable as a sensible outlet for the energy and enterprise of women associated for helpfulness.

In this instance, it is explained, the members being far from public libraries and reference material, could not easily study archeology or ancient history, hence they took up the matters nearer at hand and endeavored to improve their home city.

Far be it from us to deprecate the study of archeology or of ancient history, but there is something in the "clean town" idea that seems a great deal more personal and helpful than either. Where is a community that does not need such an organization?

Large or small, busy or lethargic, the American town has too many loose ends. It has streets that end aimlessly in cow lots or in back yards littered with weeds and tin cans. It has alleys that are hideous with tipsy fences and unpleasant

heaps of refuse. It endures signs that offend eye and taste because there is none who has courage to lead in a movement for their abolition. The field for the exercise of mutual interest in the correction of abuses is limitless.

The reason why our towns are not clean from a physical point of view, is not that the dwellers therein lack perception, not that they are satisfied with conditions, but that they have not awakened to such an enthusiasm for changing the situation as will induce them to act. The "clean town club" furnishes this needed stimulus and brings concerted action in the direction in which it is most needed.

So many persons are content to let things go as they will, and so few are willing to lead toward better things! In a little city of the interior a merchant offered, last spring, $100 for the best kept lawns in the town. The amount was divided into several prizes and the specifications limited the contest to certain classes of homes. For instance, properties costing more than $10,000 could not compete; those worth $1,200 and less were in one class; those from $1,200 to $3,000 in another, and so on, with certain extra prizes for the owner who did all the work on his lawn, hiring no assistance. The editor of the daily paper, a preacher and a laborer were made a committee on awards. All summer the townspeople, as they drove around the city in the evenings, looked at the lawns and wondered which would win. All over the city were smooth-shaven swards, cannas, salvia, ferns, ornamental plants in a profusion never before seen. It awakened the artistic side of the home-makers and the result was worth any amount of lecturing on the duty of real estate improvement. The prizes were forgotten in the interest taken in the flowers and the grass and the vines. It roused the better side of the contestants and did the town good.

Financial interest is responsible for most of the loose ends. It means a sacrifice for somebody to make the change needed. A prominent lot is heaped with old machinery because it is conveniently near an implement store. Obnoxious signboards disfigure the lot opposite the church because a small rental is paid by the sign poster. The back street is not graded and improved because it would mean increased taxes. Until the spirit of town pride rises high enough to overcome these things and the community is willing to give up some of its possessions and selfish desire for the good of the whole, the towns will be ragged and lacking in beauty.

The "clean town" idea goes farther than expensive improvements. It does not cost much to keep the highway free from refuse, to rid the alleys of rubbish —if these things be done the club has accomplished much. It if will go a step farther and help clean the community of business houses that are unworthy, of saloons and cigarets and loafers, it will add much to its helpfulness. The task is a large one.

It is a mistaken notion that only in the city is there opportunity for reformation; that only in centers of population may the spirit of helpfulness be invoked. In the small town, in the hamlet, is as much demand for the good offices of sturdy men and women who have the good of the community at heart. Indeed it often takes more courage to act thus in the face of acquaintances than in the city among strangers. The "clean town" idea, the city without loose ends and ragged edges, is one that well may be studied and followed, both East and West.

Congress Conservative

It is nothing surprising that the lower house of Congress should quarrel with the President's reform in spelling and should pass a bill requiring that all documents printed at public expense should "follow the rules of orthography established by Webster or other generally accepted dictionaries of the English language." Of course the President will yield, as he has to, with a smile, and he will not try to evade the meaning of the law. But it is a fact that there is not one of the simplified spellings of the three hundred words which is not admitted by one or more of the "generally accepted dictionaries of the English language." Most of them are in Webster, and the rest are in either the "Century" or the "Standard" dictionary, or in both. To be sure they are not put

in the place of preference, but they are there as allowed alternatives; and they are put second, not because the compilers did not prefer them—for they did—but because they are not yet the prevailing form. Of course the members of Congress are conservative. They are not philologists or scholars. They have, with a great price of labor, obtained their ability to spell after the lawless fashion—those who can do it—and they are proud of their skill in mixing letters to form words. They do not want the task of learning made easier to their young people. But the reform will go on, and the conservatives cannot help it, for all the reason is against them, and only prejudice is on their side.

The Samaritan Manuscript

When that Samaritan manuscript of the Pentateuch—we presume it was the same one—was brought to this city last winter, we did not make so much fuss about it as they seem to be making of it just now in London. It is certainly genuine and doubtless old, but not so old as is represented. The age is indicated after the Jewish and Samaritan style, by certain letters, specially marked, in a central inscription between the two columns of text. These were first interpreted as indicating a greater age by several centuries than a better interpretation would show. Prof. Richard H. Gottheil, of Columbia University, made a careful study of this intricate marginal dating, and showed clearly that it had been misunderstood. It was a valuable manuscript, but by no means as valuable as was represented, not being the oldest known Hebrew text of the Pentateuch. It is possible, but not likely, that it is another manuscript now offered for sale. A yet older one is claimed to be in the possession of the Samaritans at Nablûs, which has been shown, as is said, only to a very few royal visitors.

Car Shortage

For years the big railroad companies have complained that freight cars sent out to other lines do not come back, but are used and practically stolen. If this is the case there ought to be inspectors to prevent it, and even legislation to punish it. This is said to be one reason for the bitter complaint in the West that it is impossible to get coal to keep warm, and we are told of houses deserted and the entire population gathering in a central hall or church to economize fuel. Another excuse is given by the railroad companies, that the local sidings are congested, and that other freight trains are not sent because there is no room for them. This seems absurd. If there is congestion it is the fault of the companies that they do not provide sidings enough, or do not see to it that cars are promptly emptied and removed. Where people are freezing we cannot blame the local authorities for seizing trains as they pass thru and emptying the cars of coal. We may need further power in the Interstate Commerce Commission not only to prevent favoritism in rates, but also favoritism in localities, so that none may be ruled out. And all this helps public ownership and control, under which there can be no favoritism. Yet one cannot help asking why those towns which are complaining that they have no coal and can get none, did not stock up during the summer. Much hind-sight is not so good as a very little fore-sight.

The requisition of a poll-tax receipt as a condition for voting is an odious contrivance to keep poor people from the ballot . A poll-tax is proper enough, if it be small; but the same methods should be employed to enforce its collection as for any other tax. Especially is this provision odious when it is required that the tax be paid six months before election, or when it becomes cumulative as applied to a poll tax that has not been paid for a series of years. The policy sometimes is to neglect collecting the tax for the very purpose of reducing the number of voters. We have a case now in Arkansas in which the Supreme Court has rendered a decision which indircetly seems to make a late amendment of this sort to the State Constitution invalid, and the Governor declares that if any election officer accepts the vote of those who have not paid their poll tax, and is condemned for it, he will pardon him That is going too far before the Su-

preme Court has reached a direct decision; but such a restriction of the vote is undemocratic and is worthy of Rhode Island.

The report comes from Rome that the Vatican will establish a Catholic university in Tokyo, to be controlled by American Jesuits, and that an American prelate will be appointed Apostolic Delegate to Japan. Very likely, and we will make the guess that the coming Delegate will be the late Bishop of Portland, who was transferred to Boston to assist Archbishop Williams, against the choice of the bishops of the province and the priests of the diocese, and who does not seem to find much given him to do at his new post. Perhaps it does not please the Catholics of Massachusetts as much as it did Cardinal Merry del Val that he gave his help in Rome to the Spanish in our late war. He might well be sent to Japan as Delegate, and then, after two or three years, be called to Rome and made a Cardinal in residence there.

By a majority of one the Appellate division of the Supreme Court of this State has declared unconstitutional the law forbidding the employment of women and minors in factories after nine o'clock. Our respect for the minority on the Bench allows us to say that this decision is unfortunate. It is another of those cases in which a constitution is applied against the will of the people on a point which was not at all in the minds of those who framed and adopted it. There are 131,433 women employed in Manhattan in trades which either regularly or in the rush season employ women at night work. Regular night work is unhealthful for men and still more for women. It is the State's business to have healthy citizens, and particularly to have its women saved from miscellaneous night associations. The Attorney-General should appeal this decision at once to a higher court.

We are very glad to know that the officers of those negro companies that were disbanded "without honor" are to be tried by court martial. If those negro soldiers were off without authority, and made a raid on the town, perhaps a dozen of them, it would seem as if the officers were somewhat to blame for not keeping discipline. But the main advantage of this court martial is that it will bring the whole matter to a more formal investigation. Those officers will have the chance to defend themselves, and very likely their troops. It may be that the report brought to the President was not accurate. So it is stoutly declared. It would be a great pleasure to learn that there was no such raid as is asserted, but that there was a plot to drive the soldiers out of Brownsville.

The defense of Professor Burgess for his asserted attack in his opening lecture in Berlin on the protective tariff and the Monroe Doctrine, comes late, from a letter of Prof. Monroe Smith in the New York *Times*. It is clear that Professor Burgess did not represent these two political doctrines as no longer valued in the United States. On the other hand he spoke of them as being looked upon as being "almost as sacred as Articles of Faith," altho he did frankly express his own view that they are now practically "almost antiquated." There he is in error, but he did not deceive the German people. We observed that the London *Times*, in its report, did not even include the parenthetic remark which so stirred up our people.

The proposal that President Woodrow Wilson, of Princeton, should be the next Democratic candidate for President looks serious. He has been brought forward as the principal speaker at a Southern society dinner in this city, and he made a speech which said many general truths that sounded sonorously and might be interpreted as a criticism on the Republican party and President Roosevelt. For example, he attacked too much centralization, which is always a safe cry, and has a Democratic accent. Woodrow Wilson is himself of Southern birth, which is the next thing to being a Southerner, for they say the Democratic party cannot yet afford to put a real Southerner up as candidate.

THE PRICES OF BONDS IN 1906*

In the fifteen pages immediately following, we publish comprehensive tables giving the income, yield, highest and lowest prices in 1906, and prices at the latest sales, of

RAILWAY, UNITED STATES GOVERNMENT, STATE, COAL AND IRON, GAS AND ELECTRIC LIGHTING, INDUSTRIAL, STREET RAILWAY, TELEGRAPH AND TELEPHONE BONDS.

These tables have been prepared at our request by MR. FRANCIS E. FITCH, a recognized authority concerning financial statements of this kind.

We have procured for his use the facts relating to certain local issues in Boston, Philadelphia and Baltimore, for the benefit of investors in those markets. This is our eighth annual financial number. Like its predecessors, it will be called for in many parts of the country several months after its publication. We give these fifteen pages to this bond list because it cannot fail to be of special interest and permanent value to investors. It should be noted that the prices include accrued interest.—EDITOR.

Survey of the World

The Japanese in San Francisco

Mr. Roosevelt sent several special messages to Congress last week. One of them, relating to the treatment of Japanese in San Francisco, and accompanying a long report from Secretary Metcalf, was received on the 18th. In it the President says:

"I call your especial attention to the very small number of Japanese children who attend school, to the testimony as to the brightness, cleanliness, and good behavior of these Japanese children in the schools, and to the fact that, owing to their being scattered throughout the city, the requirement for them all to go to one special school is impossible of fulfillment and means that they cannot have school facilities. Let me point out, further, that there would be no objection whatever to excluding from the schools any Japanese on the score of age. It is obviously not desirable that young men should go to school with children. The only point is the exclusion of the children themselves. The number of Japanese children attending the public schools in San Francisco was very small. The Government has already directed that suit be brought to test the constitutionality of the act in question; but my very earnest hope is that such suit will not be necessary and that as a matter of comity the citizens of San Francisco will refuse to deprive these young Japanese children of education and will permit them to go to the schools."

Concerning violence against the Japanese, he commends the Secretary's remarks on this subject and expresses a belief that the overwhelming sentiment of California is for law and order and for the protection of the Japanese in their persons and property. He had directed the Secretary to say that if the local authorities should fail to give the needed protection, "the entire power of the Federal Government, within the limits of the Constitution, would be used promptly and vigorously to enforce the observance of our treaty." Mr. Metcalf says, in his report (dated November 26th), that the action of the Board of Education, whose order became effective on October 15th, was due largely to the influence of the Japanese and Korean Exclusion League. The League seeks to procure Federal legislation for the exclusion of Japanese and Korean laborers. It is said to have 78,000 members. Nearly all of them are members of labor unions, and three-fourths of them reside in San Francisco. Citizens had complained about the attendance of adult Japanese in the primary schools. These complaints were reasonable, in the opinion of Mr. Metcalf, who points out that a remedy could have been applied by a simple rule concerning the ages of primary pupils. On October 15th, there were only ninety-three Japanese children in the schools; twenty-five of these had been born in this country, and only fourteen were more than sixteen years old. The separate "Oriental" school is in the burned district, and it is impossible for a considerable number of the Japanese children to reach and use it. He found only one there. All political parties in their platforms ask for the exclusion of Japanese and Koreans, and the press generally commends the action of the Board. There are only 6,000 Japanese in the city, the total population being about 350,000. Teachers commend the Japanese children, saying they are clean, well-behaved, and intelligent. The State's foremost educators disapprove the Board's action, and Japanese are welcomed in the universities. In October the Japanese restaurants were boycotted, altho no boycott resolution had been passed. Pickets stood in front of the restaurants urging customers not to enter. The Japanese

say that they bought off this boycott by a payment of $350. As to this, the testimony of the Japanese Consul and others seems to be conclusive. A long list of the names of Japanese attacked and beaten in the streets is given by Mr. Metcalf. Among those at whom stones were thrown were Dr. Omori, of the Imperial University at Tokio, a distinguished scientist and one of the greatest living authorities on earthquake movements, and Dr. Nakamura, professor of architecture in the same university. They had been sent to San Francisco by the Japanese Government to study the causes and effect of the earthquake. These gentlemen desired that there should be no official recognition of the assaults. Mr. Metcalf was assured by the acting mayor and the chief of police that the persons and property of Japanese would be protected. He says that if local authorities fail to give protection, it will be demanded from the Federal Government by "all the considerations which may move a nation, every consideration of duty in the preservation of our treaty obligations, and every consideration prompted by fifty years or more of close friendship with the Empire of Japan."——The Board of Education declines to modify its order. Its president says that Mr. Metcalf's assertion that the order was due to the League's influence is not true. Two Senators and several Representatives from Pacific Coast States have started for the Panama Isthmus, intending to obtain there information to be used in opposing the employment of Chinese on the canal.

A Message on the Panama Canal

The President's message on the Panama Canal is a very long one and is illustrated by nearly thirty reproductions of photographs. It is mainly a readable narrative of what he saw and did and heard during his stay of three days on the Isthmus. Near the beginning of it he commends the French Company for what it accomplished "under difficult circumstances," and says that this country never made a better investment than the purchase of the canal and railway property for $40,000,000. Much of the message relates to the achievements of the sanitary workers under the direction of Dr. W. C. Gorgas. "Of the 6,000 white Americans, including some 1,200 women and children, not a single death has occurred in the past three months," altho there would probably have been about thirty deaths out of this number in the average American city. In October only eighty-six of the 19,000 negro laborers died of disease. Only one of several hundred Spanish laborers has died of disease since their arrival in February last. Yellow fever appears to have been eliminated. "But a single mosquito, and this not of the dangerous species, was seen by any member of our party during our three days stay on the Isthmus." Hygienic conditions there, in the opinion of the Surgeon General, are now about as favorable as at the Norfolk Navy Yard. The health of the employees is now so remarkably good that the President does not "believe it can possibly continue at quite the present average." He describes the progress made in draining and paving the cities, and in supplying them with water. Since March, he says, Colon has had "the very best water" in ample quantity. Referring to the assertion of a critic—"who usually confined himself to vague general mendacity"—that there was no water in the vicinity fit for a reservoir, Mr. Roosevelt says: "I drank it, and it was excellent." Colon's streets at their worst are "as bad as Pennsylvania avenue before Grant's administration," but are being improved. It may be said that the message is wholly optimistic. The President praises the hospitals, the schools, the Zone police, the housing and the feeding. There are too many saloons, but after January 1st a new high license law will close four-fifths of them. The Americans employed are of "a high class." All are satisfied with their quarters. He took dinner, without warning, at one of the Government boarding houses. "This thirty-cent meal struck me as being as good a meal as we get in the United States at the ordinary hotel in which a fifty-cent meal is provided." The new Spanish workmen are quite satisfactory; thousands of the negroes employed are not. It is not practicable to obtain ordinary laborers from the States.

"It certainly ought to be unnecessary to point

out that the American workingman in the United States has no concern whatever in the question as to whether the rough work on the Isthmus, which is performed by aliens in any event, is done by aliens from one country with a black skin or by aliens from another country with a yellow skin. Our business is to dig the canal as efficiently and as quickly as possible; provided, always, that nothing is done that is inhumane to any laborers, and nothing that interferes with the wages of or lowers the standard of living of our own workmen. Having in view this principle, I have arranged to try several thousand Chinese laborers. This is desirable both because we must try to find out what laborers are most efficient, and, furthermore, because we should not leave ourselves at the mercy of any one type of foreign labor. At present the great bulk of the unskilled labor on the Isthmus is done by West India negroes, chiefly from Jamaica, Barbadoes, and the other English possessions. One of the governors of the lands in question has shown an unfriendly disposition to our work, and has thrown obstacles in the way of our getting the labor needed; and it is highly undesirable to give any outsiders the impression, however ill founded, that they are indispensable and can dictate terms to us."

Speaking of the work of construction, he remarks that the Gatun dam offers the most serious problem, but he is confident that the problem will be satisfactorily solved. Reasons for letting out the work by contract are given. The "seven-headed Commission" is called "a clumsy executive instrument," and the President would prefer only one Commissioner. There has been no accusation affecting the honesty of officers. "The whole atmosphere of the Commission breathes honesty, as it breathes efficiency and energy," and the "work has been kept absolutely clear of politics." With many adjectives, the President expresses his "hearty contempt" for those critics who are "reckless slanderers" and "wanton libelers," and also has something to say about "doubting Thomases" and "timid folk of little faith." Of the "success of the enterprise" he is "as well convinced as one can be of any enterprise that is human." A badge will be given to every American citizen who has taken part in the work for a specified time.——In its annual report, the Commission says that bids for supplying Chinese labor at from 9 to 11 cents an hour have been received, but the successful bidder has not yet been selected. President Gompers, of the Federation of Labor, continues to oppose the employment of Chinese, insisting that the use of them would be a violation of the Chinese Exclusion law.

*

The Discharged Negro Soldiers In response to resolutions of the Senate, the President sent to that body, on the 19th, a message in justification of his dismissal, without honor, of the three negro companies of the Twenty-fifth Infantry for the shooting affray at Brownsville, Tex., in August last. With the message were a report from Secretary Taft and the reports of General Garlington, Major Blocksom and other officers who made the investigation. The President says that he ordered the discharge of the negro soldiers in the exercise of his Constitutional power and in pursuance of his Constitutional duty as commander-in-chief of the army. To those who point out that General Garlington is a Southerner, he says that the same, or even more severe, action would have been taken if the troops in question had been white; also, that the disclosure of guilt was made in the report of an officer (Major Blocksom) who was born in Ohio, and that the officer (General Garlington) born in South Carolina sought to shield the innocent by procuring information that would enable the Government to punish the guilty. But he "resents with the keenest indignation" any effort to draw, with respect to these officers, a line based upon birthplace. He narrates at length the facts as they were ascertained and reported, describing the firing upon and into dwelling houses at midnight, the killing of one man, etc. "The act," he says, "was one of horrible atrocity, and, so far as I am aware, unparalleled in the annals of the United States army." One cottage was riddled with bullets just after a children's party in it had broken up. The escape of those remaining in the cottage "was astonishing." As to the beginning of the controversy, he thinks blame attached to both sides, the citizens and the soldiers; but nothing that had occurred could excuse or justify "the atrocious conduct of the troops." The assertion that citizens shot one another to discredit the soldiers is "an absurdity too gross to need discussion." The comrades of the guilty combined to shelter the criminals, thus mak-

ing it necessary to leave all the men, the murderers included, in the army, or to turn them all out:

"The evidence proves conclusively that a number of the soldiers engaged in a deliberate and concerted attack, as cold blooded as it was cowardly; the purpose being to terrorize the community, and to kill or injure men, women and children in their homes and beds or on the streets, and this at an hour of the night when concerted or effective resistance or defense was out of the question, and when detection by identification of the criminals in the United States uniform was well-nigh impossible. So much for the original crime. A blacker never stained the annals of our army. It has been supplemented by another, only less black, in the shape of a successful conspiracy of silence for the purpose of shielding those who took part in the original conspiracy of murder."

Every effort was made to persuade those innocent of murder to separate themselves from the guilty by helping to bring the criminals to justice. They were warned that if they did not do this they would be discharged, and they were discharged. "If any organization of troops in the service, black or white, is guilty of similar conduct in the future, I shall follow precisely the same course." Discharge was not a punishment, because as punishment it was utterly inadequate. "The punishment meet for mutineers and murderers such as those guilty of the Brownsville assault is death." He regretted most keenly that he could not punish the guilty as they deserved. It was his clear duty to terminate the enlistment contracts of this "body of mutineers and murderers." Concerning the race aspect of the case, he referred to the remarks in his annual message on lynching. We should judge each man by his conduct and not by his color. He warned colored men who chose to stand by colored criminals because of their color that they were "laying up for themselves the most dreadful day of reckoning." He also pointed to the record of his efforts in behalf of the colored men's rights. ——Secretary Taft's report discussed the law, the evidence and the precedents in support of the President's action.——In the Senate, Mr. Foraker, supporting a resolution for an investigation, has argued that the President went beyond his Constitutional power and misconceived the testimony. It is asserted that the President resents the criticism of his action and has said that if a bill restoring the dismissed soldiers be passed, he will veto it and take all other lawful means to enforce his order.

Chicago Railway Agreement

In the new agreement between the street railway companies of Chicago and the Council's committee—an agreement quite satisfactory to Mayor Dunne and his supporters, who expect that it will be adopted—it is provided that the companies shall completely rehabilitate their lines, at a cost of from $40,000,000 to $50,000,000, supplying new cars, using electric motive power, establishing long thru routes, giving universal transfers, and contributing $5,000,000 toward the cost of a new subway. They are allowed 5 per cent, brokerage for raising the money, 5 per cent. interest on the entire investment and 10 per cent. for contractors' profits on new construction. Then the city is to have 55 per cent. (estimated at about $1,250,000 a year) of the net profits remaining, and the companies 45 per cent. To the companies the city is to give a franchise for twenty years, reserving the right to buy at any time for municipal ownership and operation, after giving six months' notice. If it buys, it is to pay $50,000,000 as the present value of the property and unexpired franchises, and also the cost of rehabilitation and additional construction, or about $100,000,000 in all. Improvements and additional construction are to be under the supervision of a board of three engineers, one representing the companies, one appointed by the city, and the third chosen by these two. Mayor Dunne thinks the people should vote on the agreement, but says he will urge them to accept it.——By an overwhelming majority, the people of the Canadian province of Manitoba have voted for Government ownership of long-distance telephone lines and municipal ownership of local telephone exchange systems.

Various Notes

Congress adjourned on the 20th, for two weeks. In the Senate, resolutions relating to the reserved rights of States, and apparently suggested by Secretary Root's re-

cent speech on the growth of Federal power, were introduced by Mr. Whyte and Mr. Rayner. The first declares that an extension of Federal powers beyond those enumerated in the Constitution can rightfully be accomplished only in the manner provided by the Constitution, and not by a strained construction of that instrument. The second expresses the opinion that the President's functions should be limited to the duties assigned to him by the Constitution and the laws, and that he should not interfere with the legislative department, the judicial department, or the reserved rights of the States.——Commenting upon Secretary Root's speech, Mr. Bryan says he seems "to rest his argument for centralization upon the idea of destiny, which is the refuge of the man who wants to do a thing which he cannot defend." He adds that if Mr. Root has in mind the Japanese question, he will find the American people unwilling to turn the school system over to the Federal Government merely to please a foreign nation, however friendly.——On the 17th, Mr. Moody took his seat as a Justice of the Supreme Court, Mr. Bonaparte succeeded him as Attorney-General, Mr. Metcalf became Secretary of the Navy, and Mr. Straus entered the Cabinet as Secretary of Commerce and Labor.——On the following day Secretary Straus made known an important decision or ruling of his Department, to the effect that when a State induces immigration by agents abroad and by paying the passage money of immigrants, it does not violate the law forbidding the importation of labor under contract. The question was raised in connection with the recent arrival at Charleston of 475 immigrants who had been induced to come to South Carolina by the authorities of that State.

Parliament Prorogued

The King has prorogued Parliament for the holidays to meet February 2d. In the speech he expresses regret at the failure of Parliament to settle the education question, and he reviews recent events in the foreign relations of Great Britain; the Algeciras Conference; the agreement with France and Italy for the maintenance of the status quo in Abyssinia; the improvement in the affairs of Crete; the settlement of the disputed boundaries of Anglo-Egyptian Sudan and the Kongo Free State; the marriage of Princess Ena and King Alfonso, and the visits of the King and Queen of Norway to England and of the Amir of Afghanistan to India. On receiving notification that the House of Commons refused to accept the amendments made by the Lords to the Education Bill, the House of Lords declined to consider the matter further, and adopted a resolution to the effect that

> "this House records its protest against the innovation in constitutional procedure by which the House of Commons rejected the whole of the Lords' amendments, including those proposed by his Majesty's Ministers, without assigning in any case specific reasons for the rejection."

The Government accordingly announced in the House of Commons that the bill had been withdrawn. The Liberals are preparing for a determined fight for the reconstruction or abolition of the House of Lords. It is understood, altho not officially announced, that James Bryce, author of "The American Commonwealth," and now Secretary for Ireland, will be appointed Ambassador to the United States to succeed Sir Mortimer Durand. It is reported also that Mr. Bryce has declined a peerage.

France and the Vatican

The conflict between Church and State in France is as intense as ever, tho both parties are wary of provoking violence and there is less bitterness manifested in the Chamber and outside than was to be expected. It is realized that the fight will be long and stubborn, to be settled by political methods, and that nothing is to be gained by bringing matters to an acute crisis. The churches remain open and masses are said as usual, altho the number of services is curtailed. The Government having obtained evidence of the disregard of the law of 1881, requiring the filing of a declaration with the authorities whenever any public meeting was held, has desisted from any further prosecutions on this ground. Most of the episcopal palaces and seminaries thruout France have been evacuated and are in

the hands of the Government officials. No serious opposition was met in any case, altho the ecclesiastics made formal protest against their expulsion, and compelled the police to "resort to force," which means that the officer laid his hand on the shoulder. The greatest disorder occurred at Nantes. Here the Prefect early in the morning broke in the doors of the bishopric and turned out the priests and nuns. The Bishop, after protesting, withdrew to the Church of St. Clement, followed by a crowd which later made a demonstration before the newspaper offices and the Masonic lodges. The troops, which had been placed at strategic points in the street, charged the crowd, and several persons were trampled by the horses. Two women were arrested for biting and spitting upon policemen. Cardinal Richard, the aged Archbishop of Paris, in leaving his palace, was escorted by several thousand of his parishioners. Men of high rank drew the carriage, and the crowd joined with the priests in the singing of hymns. The Cardinal took refuge in the home of a Deputy, M. Denys Cochin, where the smoking-room has been fitted up as a chapel. The new Ministry of Labor is being installed in the palace vacated by the Cardinal. At the evacuation of the famous St. Sulpice Seminary, the foreign students from Great Britain and America filed a legal protest on the ground that they were there at the invitation and expense of the French Government, which had no right to violate its agreement with them. The Chamber of Deputies granted promptly and without difficulty the additional legislation demanded by the Ministry for the enforcement of the law separating Church and State. Premier Clemenceau met the first interruption with characteristic directness:

"We do not cling to power. We are ready to yield to any one who will take it, but we are now grappling with difficulties that no Government has experienced since 1870. We are fighting the foe under insufficient law with moderation and energy. If you haggle about our means of fighting take the responsibility before the country."

On the following day, after a continuous session lasting seven hours, the new law regulating public worship was passed by a vote of 413 to 166 without important modifications. It is expected to pass the Senate without difficulty. The Deputies of the Right voted solidly against it, but made no attempt to amend it. M. Briand, Minister of Public Worship, in presenting the bill, said:

"The situation is not disturbing. Separation is accomplished already. The churches are open. There is no religious budget. The priests are not functionaries of the State. The country is calm. We have the consciousness of having with us the entire country. To enter into negotiations with Rome would be to plunge the country into civil war. Rome wanted persecution, hoping in that way to revive faith. Systematically we have met her measures. Whatever her moves we will not fall into her traps. We have given the Church liberty, to which the Protestant and Jewish churches have readily conformed. The Right wishes only one thing—that we close the churches. This we shall never do. We shall continue our work with calm confidence."

The new law has been generally regarded as a compromise in some respects, but the Vatican declares that it is just as inadmissible as the law of 1905. A semi-official statement from Rome says:

"The text of the new French Government bill is inspired by the same principles as the former acts of the Clemenceau Cabinet, namely, the maximum of oppression with the minimum appearance. In fact, the bill aggravates in the hardest manner the former position of the Church in everything without its being apparent to the general public. It provides for the immediate devolution of ecclesiastical property and the immediate cessation of the pensions of priests who do not accept the new law.

"On the other hand, the Cabinet understanding that public opinion blamed it for the distressing position in which M. Briand's circular has placed priests who officiate in the churches seemed to have introduced some secondary and apparent improvements in the new bill, but in reality they do not ameliorate the measure. Besides, the bill is based on rendering possible the organization of assemblies for the practice of worship, according to the Church and State Separation law of 1905, or the laws of 1881 and 1901 governing public meetings. The Separation law is regarded as unacceptable by the Church, while it is clear that M. Briand's recent circular, as well as his other two circulars, are not applicable to public worship, having been drawn up for the regulation of the meetings of other kinds of associations.

"In short, the Separation law, M. Briand's recent circular, and the new bill, are only three forms of the same conception—that of enslaving and compromising the Church, while at the same time enabling the Government to allege that it did everything in its power to find a way out of the difficulties, but was unable to do so because of the systematic tenacity of the Holy See.

"The Holy See will not desist from its present attitude until a bill is presented containing as a minimum to be tolerated an acknowledgment of the essential rights of the Church, beginning with the Catholic hierarchy, which is the divine foundation of the organization of the Church."

Count Ignatief Assassinated

Count Ignatief, a member of the Council of the Empire and leader of the court reactionary party, was assassinated at Tver on December 22d. He had been attending a conference of nobles for the purpose of preparing the electoral program of the party supporting the Government, and was sitting with other members of the Zemstvo in the refreshment room when a young man arose and fired six shots from a revolver at the Count. All the bullets took effect and he died instantly. The assassin, who was dressed as a workingman, ran into the adjoining room, and, finding he could not escape, put two more cartridges in his revolver and shot himself in the breast twice. Count Alexis Pavlovitch Ignatief was the second son of the great Count Ignatief and was born in 1842. He entered the administerial service in 1885 as Governor-General of Irkutsk, and afterward held the same office at Kief. In the early part of 1905 he favored some concessions to the people and for a time advocated the extension of the powers of the Duma, but when the Government showed that it was able to put down armed rebellion he adopted a very reactionary attitude and is believed to have been largely instrumental in promoting the rigorous and repressive measures, such as the drumhead courts martial, which have been recently adopted. The long promised ukase granting concessions to the Jews has been issued and proves to be of very little importance. By it the Jews are permitted to live in the villages of the Pale as well as in the cities. The restrictions resting upon merchants and artisans residing in cities outside of the Pale are somewhat mollified. These concessions are regarded by the Jews as of little value, and they are very much disappointed that their legal disabilities are not altogether removed so that they can travel and settle in any part of the empire at will. Hitherto they have been confined to the cities within the Pale, but while the peasants are so irritated against the Jews and are suffering from famine conditions, it would neither be advantageous nor safe for Jews to live in the villages. The ukase remits the 300 rubles fine which has been imposed upon Jews who were liable to military service, but were refused admission to the army. Inhabitants of Jewish settlements within the Pale are allowed to rent small holdings for the term of one year. The Jews are still prohibited from voting for members of the Zemstvos and municipal officers. The new ukase does not even restore to the Jews the privileges they possessed before 1882. February 19th is designated as the day for the parliamentary elections.

New School of Liberal Theology

Signs are increasing that go to show that within the liberal school of theological thought in Germany a new school, still liberal in character, but more positive in its teachings, is beginning to find favor. Its activity appears especially in the Old Testament department, with Winckler, of Berlin; Jeremias, of Leipzig, and Baentsch, of Jena, as leaders. The first mentioned, an Assyriologist and not a theologian, has, with assistance of the others, undertaken to undermine essential positions of the Wellhausen school, especially by showing that Israelitish monotheism is an adaptation of and a higher development of originally primitive Semitic monotheism, so that the evolutionary scheme of the prevalent school, in placing monotheism at the head of Israel's religious development, is in conflict with the facts taken especially from Babylonian literature. Stäck, also of Jena, has joined these men, and in a lengthy discussion in the *Christliche Welt,* No. 28, declared that "not evolution, but reaction and reformation constitute the motive powers in Israel's religion." Professor Manhi replies at length in No. 45 of this periodical. A similar movement, but in the sphere of active church life, comes to a head in the publication of a new theological journal named *Bremer Beitrage*, declared to be the organ of a "churchly liberalism" against religious radicalism," the posi-

tion maintained being that the reconstructional restoration of the Church to pristine power must be the work of a moderate type of religious thought and cannot be accomplished by the Ultras.

The Shah of Persia

In the present critical stage of Persian politics the death of the reigning Shah, which as we go to press is reported imminent, becomes an event of more than ordinary

THE SHAH OF PERSIA.

importance. The Mejilis, the first Persian Representative Assembly, is now in session awaiting the signature of the ruler to the constitution which they have prepared for Persia. Only a third of the members have yet been elected. The present Shah, Muzaffar-ed-din, spent much time in London, Paris and other European capitals, and became inoculated with liberal ideas to such an extent that he acceded with little reluctance to the demands of the merchants and mullahs for a share in the government. Some fear has been felt lest the Valiahd or heir apparent, Mohammed Ali, should prove more conservative in temperament, and on his accession to power check the movement toward popular government which his father has inaugurated, but on his arrival at Teheran the Valiahd adopted a very conciliatory attitude toward the deputation of six members of the Mejilis who received him, and assured them that he was in hearty sympathy with their action. He stated to them that he had read the proposed constitution and approved of it with the exception of two clauses. These relate to the responsibility of the ministers and the freedom of the press, and in regard to these he would ask for further consideration by the Mejilis, but if they refused to modify them he would accept the constitution as it stands. The Seyd Jumal, who has been preaching in the mosques that the Valiahd must accept the constitution or the people would not accept him, was personally called to the palace by Mohammed Ali and assured that he would follow in the footsteps of his father in promoting constitutional government. The Seyds, or descendants of the Prophet, and a great part of the priesthood, have always denied the claim of the Shah to be the Vicegerent of the Prophet. The Valiahd was born in 1872. The dying Shah is now fifty-six years old.

Famine in China

A very severe famine prevails in the Yang-tse Kiang Valley and the people are starving by the thousands. The able-bodied part of the population have in many cases deserted the infirm and old and have gone to the cities. Refugees to the number of 30,000 are reported to be camped in the vicinity of Nanking, and a much larger number near Yangchow. Conditions are the worst in the province of Kiang-su, but the provinces of Ngan-whei, Shan-tung and Ho-nan are also in distress. Bands of brigands sweep thru the country uncontrolled, and the disorder has taken the form of rebellion against the Government. The German engineers and other foreigners who are in charge of the Ping-Kiang coal mines in the province of Kiang-su have been forced to flee for their lives, and have taken refuge in Chang-Sha. The rebels have seized the town of Li-Ling, and 200,000 foreign-drilled troops have been dispatched to the province to put down the rebellion.

Notes on America and Americans

BY GEORGES CLEMENCEAU

Prime Minister of France.

[The paragraphs which follow are selected, with the permission of the author, from a series of unsigned letters from New Work, published in an influential Paris daily during the Reconstruction Period in our history, extending from 1865 to 1875. These letters have never been translated into English, and our attention was kindly called to them by M. Clemenceau himself.—Editor.]

THADDEUS STEVENS is dead. It is nearly eight months that this extraordinary man has kept up the desperate struggle against old age, disappointment and a fatal disease. In him the country loses a great citizen and the Republican party one of its most eminent leaders. Tho it is true that Mr. Stevens devoted his whole life to but one idea—the immediate emancipation of the slaves—he has the grand credit of having fought for this idea when it was unpopular and of having powerfully contributed to its triumph. A man's existence has been well filled, when the cause to which he has consecrated his intelligence and his labor is a just cause. Thaddeus Stevens will live with Garrison, Wendell Phillips, Sumner and Lincoln as one of the most interesting figures of the second American revolution.

The Americans, like all cool-headed people, have at bottom a touch of excentricity in them. They are apt to judge severely men of southern climates whom they declare to be too demonstrative, and consequently to be lacking in dignity. And yet these sages, so proud of their Saxon reserve, sometimes find it necessary to give vent to their animal spirits by indulging in very extravagant actions. But they do this just as one takes a medicine, in regular doses and at fixt intervals, like those who, forced to yield to the exigencies of human nature, pretend to regulate, if not the folly itself, at least the manner of manifesting it. But free rein once having been given to their imagination, it overflows all bounds and indulges in the most unexpected freaks. Not having satisfied this need by degrees, they finally let their pent-up feelings display themselves as they will and at one bound. This American carnival season comes around every four years, lasts about two months, and is known as the Presidential Election.

Altho General Grant is trying openly to conciliate the South, this justice must be done him that far from deserting the cause of the black race, as President Johnson did with such a light heart, he has surprised even the radical Republicans themselves by his persistency not only in sustaining but even in himself practising the doctrine of the political equality of the two races. He is, in fact, the first President of the United States who has dared to give office to a black man. It is difficult to say what Mr. Lincoln would have done in this respect if he had lived, but it seems to me very likely that he would have hesitated doing what Grant has just done. He might even never have given a thought to the subject, for, tho circumstances pushed him into revolutionary acts, he was at bottom essentially conservative and was blamed more than once for his moderation by the leaders of the Republican party. But even if the idea had occurred to him, it is doubtful whether he would have acted upon it, and all those who remember how strong and ardent was the prejudice of the Republican party against the African race when the Civil War broke out, will understand that Mr. Lincoln might have feared to stir up against his own party a reaction which might have proved dangerous by its intensity and its duration.

But the unpolitic policy of President Johnson having had the happy effect of provoking a reaction in the very opposite direction, changing the moderate into radical Republicans and the war Democrats into moderate Republicans, public opinion became sufficiently modified so that the country was not frightened when it learned that a negro had

been chosen as American Minister to Haiti. Since then a number of black men have been given office, and altho the Democratic newspapers feel called upon to protest, public opinion sanctions this act of just reparation of which the President has bravely taken the initiative. I say bravely, because Lincoln and Grant, tho they played an important part in the most radical revolution known to history, were simply the instruments of this revolution and not the authors of it. General Grant, a tanner at Galena, would have been greatly surprised if he had been told eight years ago that he would one day be President of the United States; but I think he would have been still more astonished if it had been predicted that he would make a negro an ambassador. Since then the country has progressed and Grant with it.

In a year* the Fifteenth Amendment to the Constitution will be ratified, and the blacks will finally enjoy their civil rights. But political and civil equality secured, there will still remain unsolved the grand and difficult problem of social equality, which cannot be settled by laws. The last barriers are now removed, which trammeled the free expansion of the negro. The blacks now have the right to acquire an education; therefore, let them educate themselves. They have the right to work under the same conditions as the whites; then let them go to work. They enjoy their civil and political rights, which are an efficacious and powerful arm; let them defend themselves therewith. The negro must now gird up his loins, and, in accordance with Darwin's principle, must begin the struggle for physical and moral existence. These slaves are free; now let them become men.

Will this dream ever become realized? A race, which, left to itself, has not shown in history any traces of civilization, even of the most rudimentary kind—is such a race susceptible of modification when brought into contact with a progressive race? Will the native indolence of the African make it possible for him to compete in the field of work with the white man? These are questions which it would be puerile to hope to answer *a priori;* the future alone can solve them.

It appears highly probable that the future of the African race will be decided on American soil. The question to be solved here is whether the black man is capable of assimilating the principles of this white civilization which they had nothing to do in founding and which has developed quite outside of them. History will tell how the problem is worked out. The experiment is only just beginning, but is being tried under the best conditions for the negro, for, at the very start, he finds himself called in to enjoy all the benefits of liberty. Invited to govern themselves and to participate in the incessant series of elections which are the life of the American citizen, they cannot complain that any obstacles are thrown in the way of the free development of their initiative. Thus the negro finds himself suddenly pitched into the middle of the river, and he must sink or swim.

Since the end of the war I have made two trips thru the South, and so have had an opportunity to study close at hand the negro population of the United States. While I have for this people a feeling of sympathy which its misfortunes must always inspire, I cannot help being filled with doubts concerning its aptitudes for incorporation into this society in the midst of which its lot has been cast.

With the admission of Texas, the last of the rebel States to re-enter the Union with the ratification of the Fifteenth Amendment, this second American revolution is brought to a close. It is but the truth to say that the American people submitted to, rather than desired, this revolution, and it would be far from correct to declare that they rushed into a conflict in order to redress a great wrong and expiate a grand crime. But it must be admitted that it bore up bravely under the heavy burden which it had not sought, that it never drew back from the dangerous path upon which it had entered, and that, if it sometimes changed its course, this was done for the purpose of getting nearer and nearer to the ideal of justice and humanity which it had set up. A more chivalrous people would probably have entered more readily upon this enterprise, but there is not one which would have better accomplished the end in view, with more indefatigable effort and with-

* This was written in November, 1869.

out ever oscillating between revolutionary ardor and conservative timidity.

It is quite true that the American is easily led to maltreat England by word of mouth. But it is well that no other foreign nation take the same liberty, for if this happens, you will find that the American means to be alone in this sort of thing. These are family quarrels, which the outside world would do well not to mix up in, and they only prove in what high esteem America really holds England. This respect for a rival nation, which, because of the identity of race and language, is an indirect way of honoring one's self, is, nevertheless, a source of serious embarrassment to the sturdy spirit of American patriotism.

The feelings which we Frenchmen awaken in the breasts of the Anglo-Saxons of the New World are of quite another kind. The robust sentiment of self-satisfaction, which is one of the traits of their race, renders it difficult for them to understand and appreciate justly what is going on outside of their own particular orbit. If we do not clash with them and if they are not jealous of us, this is due to the fact that our society does not appear to them to develop on lines running parallel with theirs. Consequently it is easy for them to treat us with affection, and hence it comes about that they like us better but respect us less than they do the English. For this it is that they are prone to participate in our recreations, which later they are quite ready to condemn, while they never dream of borrowing our ideas or our peculiar views, which they could never assimilate. So, tho there may be some exaggertion in the form in which I state this truth, it may be said that Americans like Frenchmen because of our vices and despise us because of our virtues.

While in Boston recently I asked a Senator who is one of the leaders of Grant's party if he did not think that there was a secret understanding between Mr. Greeley, now candidate for the Presidency, and the Democratic chiefs, by which he would be forced, if elected, to accept a Cabinet chosen by them. "There can be no truth in this," was his reply; "I render Mr. Greeley this justice, that he is incapable of such a bargain or of keeping a promise of this sort if, in a thoughtless moment, he made one. If chosen, you may expect him to offer the State Department to Charles Francis Adams, and if, on account of his age, he declines the post, perhaps it will go to Mr. Sumner. This will give you an idea of what the Cabinet would be as a whole."

An ex-Governor of Massachusetts who powerfully aided the election of Grant for the first time, said to me recently, *apropos* of this Greeley-Grant campaign:

"While it cannot be exactly said that Grant is unpopular, it is surely within the truth to declare that he is not popular in the sense that his acts, words and general conduct give rise to even the simplest legends. We Americans do not demand of our public men very much in the way of personal distinction, but we do expect that, if they are wanting in good manners, which sometimes happens, they will at least possess dignity, and, I may even say, a nobility of conduct which implies an elevation of mind. For example, Mr. Lincoln, who was so rough in many ways, was a perfect gentleman from head to foot. The cultivated European might sometimes have found him trivial, but never vulgar. Those who knew him were struck, not so much by his intellectual culture as by the uprightness of his character and his elevated idea of the human conscience, which enlarged the horizon of his mind; by the nobility of his heart, which education brought out into greater prominence, but which it could never have implanted in his breast.

"Grant is unquestionably the simplest and most modest of men; but he has the defects of his qualities. His rare good sense and his remarkable mental balance seem to be surpassed by a mediocrity of intelligence, which, if not really the case, appears to be so. He has never made a speech, which is a grave defect in an American politician. A more serious ground of complaint is his unwillingness to talk on any other subject than horse. Has he a personal opinion or a view of his own on any subject? Nobody knows. Add to this that he smokes as other peo-

ple breathe, continuously and everywhere, and you will understand how hard it is to make up out of such elements a personality which strikes the popular imagination."

The death of Napoleon III has not made much of an impression here in New York. The Mexican Expedition lost the empire whatever sympathy it at first enjoyed in this country, and I am sorry to say it had some. The American nation was profoundly shocked by the encouragement given to the Southern rebellion by the French Government. On the American continent, as in Europe, the clearest result of the imperial policy was to bring about its isolation and to break off with the United States a traditional feeling of good will which it cost us so little to keep up. It should be added, however, that Americans were inclined to distinguish between the French people and its Government, and to reserve the larger part of their resentment for that Louis Napoleon whose "providential mission" they had praised during so many years. Several times I have heard General Grant express his opinion very openly, and of course in a condemnatory way, on this head. It is scarcely necessary to say that the Sedan campaign was not of a nature to regain for the ex-Emperor these lost sympathies. I am told, however, that he retained to the end the esteem of American snobs and the more or less cultivated rich upstarts, who were eager to display their wives' toilets in the Tuileries drawing-rooms. However, it must be said, to the honor of the American press, that the newspapers are nearly unanimous in passing severe judgment on the baneful adventurer of whom our country was the unfortunate victim.

The other evening, at the commencement of the New York City College, I witnessed a rather amusing scene. One of the orators who had been speaking for a few minutes was evidently destined to make a complete fiasco. The subject of his oration was "The Language of Shakespeare," and what he said was not bad. It was well thought out and soberly delivered. In fact, perhaps the young man was a little too sober. His intonation was too monotonous, and he was terribly frightened. When he came forward, nobody applauded. The text of the program showed that he was from Michigan. It was evident that none of his family had come on to New York to applaud him, and his embarrassed manner and badly fitting clothes did not conspire to awaken sympathy for him among the fashionable young people of our city.

Next to me sat a smart young lady who held in her hand a large bouquet, and who was greatly amused at the orator's rather sorry necktie. She listened to him, however, and after a few minutes remarked to the young lady who was with her:

"Well, that boy has more sense than you would be led to think from that cabbage leaf which he has stuck under his chin instead of eating it. If he came from Connecticut his friends would be on hand, he would feel at home, and consequently would speak like the rest, instead of putting us to sleep with his humdrum delivery."

At this moment the young man paused to collect his thoughts and get over his fright, if this were possible. But the public remained icy cold. Thereupon the same young lady remarked again:

"I don't think he deserves such treatment," and then, a sudden impulse seizing her, she continued: "I don't believe John will blame me," and with that she threw the forlorn youth on the stage the bouquet evidently intended for another speaker.

After a moment's hesitation, the young man picks up the bouquet, makes a low bow to the young lady who threw it, takes a sip of water, and then starts off again on his oration, but now with such ease and eloquence that he quits the stage amid a shower of applause.

Thereupon, forgetting American etiquet, which requires that you be introduced before speaking to a stranger, I could not refrain from turning to my neighbor and saying:

"You did quite right, miss, and if I only had the pleasure of your personal acquaintance I would ask permission to replace the bouquet which you intended for Mr. John."

I am sorry I cannot give you an idea of the disdainful look which the young woman gave me as she answered in the coldest manner:

"If you were he, sir, then I could accept your offer."

The Theological Aspect of the Late Heresy Trial

BY THE REV. ALGERNON P. CRAPSEY

[Our readers know that the late trial of Dr. Crapsey resulted in his forced withdrawal from the Protestant Episcopal Church. He was charged with heresy in that he did not accept in its literal sense the clauses in the Apostles' Creed which declare that Jesus was "born of the Virgin Mary" and that he "rose from the dead." In his defense he asserted that he was only one of hundreds of the clergy and thousands of the laity of that Church who hold his views. In this article he gives his view of the evil effects of heresy trials.—EDITOR.]

IN the recent heresy trial which ended in the enforced retirement of the writer of this article from the ministry of the Protestant Episcopal Church, there were many questions before the court for adjudication. The vast importance of these questions demanded for their consideration a ripeness of scholarship, a judicial experience, a practical wisdom such as are seldom found in this world, and it is no reproach to say of the gentlemen who made up that court that such scholarship, experience and wisdom were not found on the bench at Batavia. It was little less than cruel to call these men from their rural parishes to sit in judgment on the weighty matters that were brought before them.

These clergymen, who whatever their virtues and other qualifications had made for themselves no reputation for Biblical scholarship, were requested to pass on the validity of the scientific, historical method as a means of arriving at truth. In spite of every effort to keep this question out of the case it was there and had to be reckoned with. It is true that the court was unconscious of the gravity of the situation: the gentlemen on the bench having no experience in the use of the scientific method were not aware of its presence in the court room; but there it was to be approved or condemned by them. It is by the scientific method that the whole system of knowledge, upon which present civilization rests, has been built up; and here were five country pastors sitting in solemn judgment to decide whether the scientific method were valid or not. It the scene had not in some aspects been so tragic, it would have been grotesque. In the interests of dogma these gentlemen gravely determined that the scientific method could not and must not be used by an Episcopal minister in the investigation of the phenomena of religious life and history. The court was blissfully ignorant of the fact that by this decision it set itself and the Episcopal Church in opposition to the whole thinking world. The result of such opposition will not be the arrest of human thinking, but it will be the arrest of the growth and influence of the Episcopal Church. It is another case of "bad for the cow."

Not content with this condemnation of the scientific method these country clergymen took it upon themselves to pronounce adverse judgment on the Protestant Reformation, with its principles of the paramount authority of Scripture and the duty of private interpretation. The accused pleaded in defense of his action that he had arrived at the conclusions, for the utterance of which he was on trial, by a long, careful, conscientious study of the Holy Scripture. This plea was set aside peremptorily as an impertinence. The prosecution held that the accused had no right to study the Scripture for any other purpose than to find in Scripture proofs in confirmation of the received dogma of the Church. It was, in the estimation of his accusers, a crime for the defendant even so much as to inquire into the validity and truth of the dogma. With the truth of the matter he had nothing to do. It was his duty to teach the dogma without any regard to the fact as to whether in his own judgment the dogma were true or not true. It was said openly that a minister of the Epis-

copal Church was not ordained to teach or preach what seemed to him the truth. He was ordained to preach and teach the dogma of the Church. He was the paid advocate of his Church's dogmatic system. The effect of such conditions upon the intelligence and morals of the clergy calls for no discussion. The decision of the court, based upon this principle of the paramount authority of the Church, was in effect to reverse the action of the Protestant Reformation. This decision bases the Church fairly and squarely upon the doctrine of the infallibility of the Church as that Church expresses itself in the declaration of bishops and the decisions of courts. If this decision were final the Episcopal Church, shut away from the great intellectual movements that are carrying the world of mankind to a clearer knowledge of God and man, separated by an impassable barrier from the Reformation conception of religion, would be compelled to seek for refuge the strength in the Church of Rome, having as its only alternative a barren existence as an isolated sect of non-conformists. That the gentlemen of the court did not see the plight into which they were putting their Church is owing to their inexperience in the larger vision in which such questions as these should be and are seen and determined. Owing to this lack on the part of the court their decision settles nothing but the ministerial status of one man. It has already been brushed out of the way by the standing committee of the Diocese of Ohio in the case of Mr. Cox.

But these considerations of the validity of the scientific method and the finality of the Protestant Reformation for the Protestant Episcopal Church, important as they are, were secondary in interest to the philosophical and theological conceptions which were at issue in the trial at Batavia. The remarkable interest that was manifested in the trial was owing to the fact that the general public was awake to the real problem presented for solution in the case. It was evident to the onlooker that this contention involved the cause of nature against supernature; of monism against dualism. The school theology of the Christian Church has from the first been based upon a dualistic conception of the universe. Theology did not have its origin in the teachings of the prophets and apostles, nor in the words of Jesus as reported by the evangelists. Christian theology finds its source in Greek philosophy, and Greek philosophy is dualistic. It predicates God and the world. God is an existence absolute and complete in Himself. He is unchangeable. Outside of time and space, He knows nothing of either; for Him there is no yesterday, today or tomorrow; for Him space is void of meaning. He is neither here nor there. Complete in Himself, nothing can add to or take away from His perfection. This God is the creation of philosophic thought in its effort to arrive at the absolute and the perfect.

Over against this unchangeable God is set the ever-changing world—a world of multitudinous activities, which never is, but is always becoming; a world in which day follows day and year follows year; a world in which each thing has its place; where the stars are set each in its circle in the heavens and the nations have their appointed boundaries on the earth. In this world you hear the rush of planets and the whirl of suns. In its upper air the storm cloud gathers and the lightnings flash; here winds blow and waters flow, here grasses grow and flowers bloom and birds are on the wing. Here everything is in flux. Nothing is ever the same for two seconds of time. Newman says of the world that "it changes and changes until we are weary of the change."

Now the whole problem of Greek philosophy and Christian theology was to bring about some connection between the unchangeable God and the changeable world. Every sort of scheme was devised of mediation and emanation to release the absolute and perfect God from His philosophic imprisonment and bring Him into relation with the world.

We are all of us unaware of how entirely we are under bondage to this school conception of the unchangeable and the changeable. It is this that underlies all our speech about the natural and the supernatural. Under the term natural we include all the facts and forces of which man has any definite knowledge. All the subtile laws which

the study of the facts and forces of the universe reveal to the intelligence of man we call natural laws. Under the term natural we also include man himself, with his memory and his reason, his loves and his hatreds, his joys and his sorrows. As soon as we come to have any definite, reasonable notion of any fact or force then that fact or force becomes natural. Thus the realm of the natural ever increases with the increasing knowledge and intelligence of man.

Now besides this universe of which man has some knowledge, the Church dogmatic predicates that other universe of which it has learned from Greek speculation. Of this universe man has and can have no real knowledge. Its only inhabitant is the unknown God. It is the mere impertinence of vulgar mythology that surrounds this philosophic Being with a retinue of seraphim and cherubim, with choirs of angels and archangels. He who is perfect in Himself needs no service. He who is Himself music needs no choir. As this God of philosophic dogma is not to be found in nature and cannot be known by natural means, He can only make His existence felt by some *outre* act by which He breaks in upon the order of nature. The outgoings of the morning and evening do not bear witness to Him, for these are natural. It is only when at His command the sun stands still on Gibeon and the moon in the Valley of Ajalon that the natural world, by the jar of its system, is made aware of the existence of this supernatural Deity. It is not in the conception of man in the womb of the married wife that we are to look for the presence and the power of this supernatural Divinity. It is only once or twice in the ages when a virgin conceives that He deigns to be present at the origin of life. God dwelling as He does in the supernatural has no lawful way of entrance into the natural. A certain bishop has said that only by way of miraculous conception could God get into the world. It was not without reason that the dogmatists rushed to defend this notion, for if it is exploded their whole dualistic conception is shattered and gone.

And this was the real question at issue in Batavia. The crime of the accused was that of denying the dualistic conception of the universe. The accused was a monist before a court of dualists. His dogma was not God and the world, but God in the world. He could cry not only God was made flesh, but God was made star dust. God was incarnate not only in Jesus, but God began to be incarnate in the first movement of life in the slime of the primeval ocean. The dogmatic Deity takes no part and apparently has no interest in this great process of development. The spirit of life evolves from the dust of earth, thru all succeeding stages, to the soul of Socrates, and the dogmatic Deity does not so much as know about it, much less bring it to pass. According to the dogma, God never knew Socrates and Socrates never knew God. The crime of the accused at Batavia was not that he denied the incarnation, but that he gave the incarnation too long a reach, too wide a scope. The incarnation to him was not an historical, it was a cosmic event. To him the universe is one, and God is all in all. The defendant was a monist; his judges were dualists, hence his condemnation and deposition.

ROCHESTER, N. Y.

Hammerstein's Opera Company

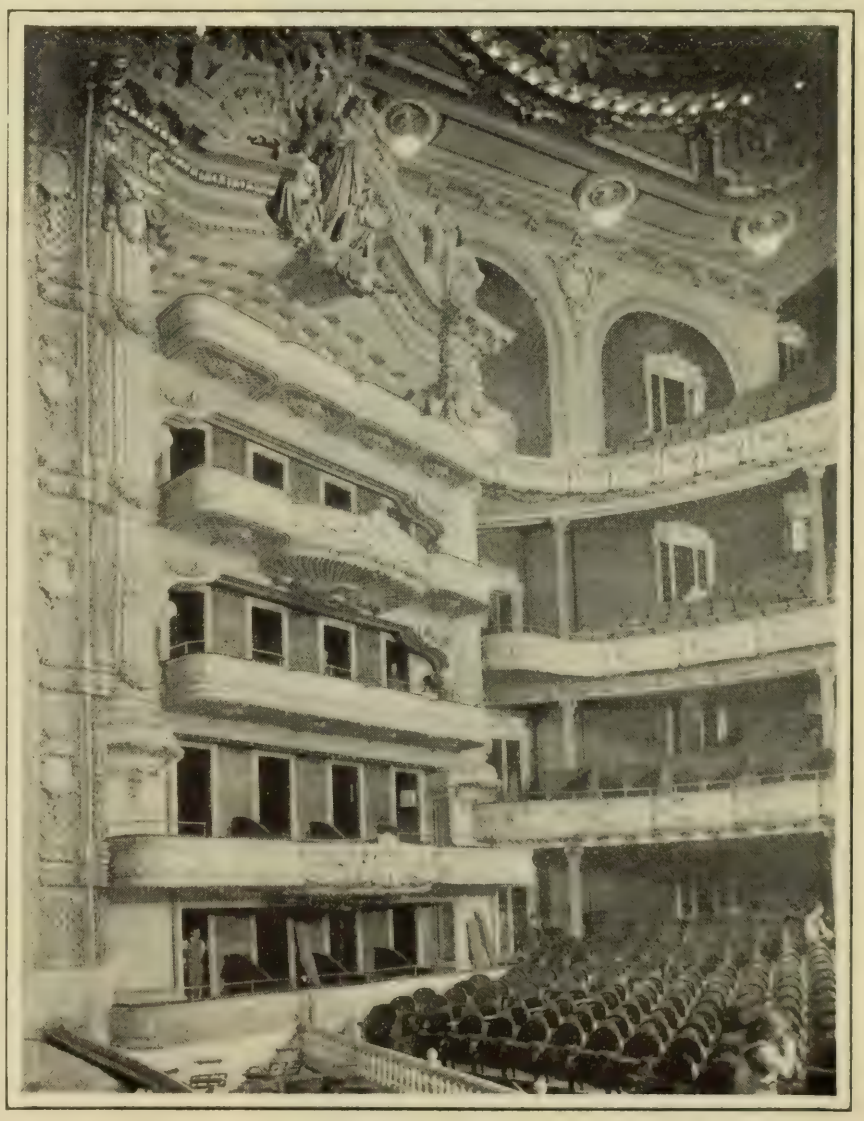
Are we entering a new era of operatic popularity and prosperity? Italy has always been devoted to opera and so has France, while Germany, the great concert land, supports more opera companies than any other country in the world. In England and the United States, on the other hand, grand opera has heretofore been regarded as an exotic, which could be made to bloom only a few months a year and in an artificial, fashionable hothouse atmosphere. It has been such, but within the last few years things have changed on both sides of the ocean. A London journal refers to the time, not so long ago, when any opera season at all in that city was in the nature of a wild and hazardous speculation. It might be a big success or a huge failure—more probably a failure; but no one could foretell the result. Today London has more months of opera in a year than Italian cities have, and nearly as many as may be heard in German capitals; and the regular Covent Garden season, at any rate, is established on a firm basis, both artistic and financial, with no uncertainty as to results.

New York still has only four months of grand opera, but within the last three or four years there has been such a steady increase in its popularity that one can fitly speak of an operatic "boom." If the subscription list at the Metropolitan Opera House keeps growing another year or two as it has during this period, the whole house will be practically sold out in advance. In other words, grand opera is on as firm a basis here as in London.

It was the recognition of this fact, no doubt, that persuaded Mr. Oscar Hammerstein, the theater-building specialist, to make an opera house of his latest structure on Thirty-fourth street near Eighth avenue. It would serve, he doubtless thought, as an operatic overflow meeting place. If Paris can support two opera houses and Berlin three, why should not New York, with nearly as many inhabitants as Paris and Berlin combined, be able to support two?

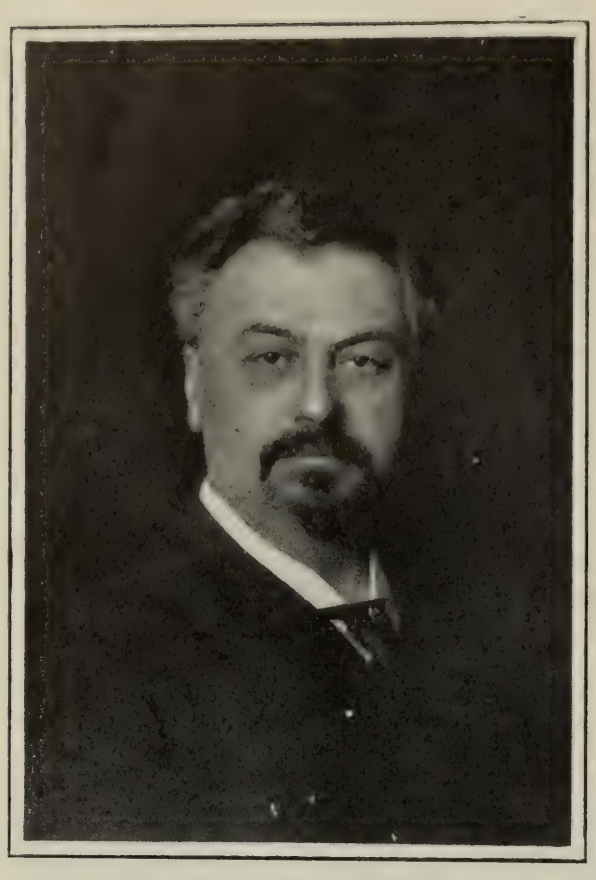
There was no question of the ability to do so. The number of New Yorkers and visitors who can afford to pay from $1.50 to $5 for an opera ticket is amazingly large; but would they patronize an opera house that has no "horseshoe" of boxes tenanted by millionaires in their costliest array?

It is too early to forecast the ultimate outcome of Mr. Hammerstein's bold venture. He has had several audiences that tested the capacity of his house, while some of the performances were not so well attended as they deserved to be. Society has, for the most part, held aloof, but the musical masses have been aroused. Mr. Hammerstein has brought together a company which is particular-



ly strong in its tenors, baritones and basses. Bonci has proved, as was to be expected, a tower of strength, and has already become immensely popular. While his voice is not as big as Caruso's, and lacks the resonance and sensuous beauty of his rival's organ, it is managed with consummate skill. Too much cannot be said in praise of his tone emission, his phrasing, shading, taste and interpretation; and, what is most remarkable of all, he is no less satisfactory as Don Ottavio in Mozart's "Don Giovanni" than as the Duke in Verdi's "Rigoletto."

Besides Bonci, Mr. Hammerstein has three other tenors that any opera house might be proud of—Dalmores, Bassi and Altchefsky. Among his baritones there are the eminent Parisian, Renaud, and Ancona, well known to New Yorkers, but a greater artist than he was when last heard here. Edouard de Reszke, unfortunately, has not come; his incomparable Leporello was sadly missed in "Don Giovanni." The parts intended for him are being taken by Brag and Arimondi. Among the women, Mme. Pinkert has so far earned the warmest praise for her florid song. Mme. Melba will soon join the company, and then Mme. Sembrich will have a dangerous rival.



Mr. Hammerstein has wisely restricted his repertory for the first season to such operas as can be sung in Italian and French. The first three weeks brought seven operas—Bellini's "I Puritani," Verdi' "Rigoletto," Gounod's "Faust," Mozart's "Don Giovanni," Bizet's "Carmen," Verdi's "Aïda" and Donizetti's "Lucia"—not a bad record for so short a time, especially when it is borne in mind that the theater was not completed till the very day of its opening, on December 3d, and that therefore facilities for rehearsing had been lacking. Under these circumstances, Mr. Hammerstein was particularly fortunate in having secured so admirable a conductor as Cleofonte Campanini, who has a marvelous control of the complicated factors that make up an operatic performance, and who enters into the inner spirit of the German Mozart and the French Gounod and Bizet as thoroly as he does into that of the Italian Verdi, Donizetti and Bellini. He is a brother of the famous tenor, the late Italo Campanini.

Metropolitan Opera House

At Mr. Conried's opera house the December operas, up to the end of last week, were "Romeo et Juliette,"

INTERIOR OF THE MANHATTAN OPERA HOUSE.

OSCAR HAMMERSTEIN.

"Marta," "Fedora," "La Damnation de Faust," Tannhäuser," "Lucia," "La Bohême," "Lohengrin" and "Aïda." It is quite unprecedented that only two of Wagner's operas should be brought forward in a whole month at this house, but there are two obvious reasons for this. In the first place, it was good strategy on Mr. Conried's part to bring forward his strongest Italian and French battalions to meet his opponent on his own ground. In the second place, Mr. Conried has had bad luck with his Wagnerian prima donnas. A sort of epidemic, which has been dubbed "aphonitis," has seized upon nearly all the sopranos of the Munich Opera, two of whom, Ternina and Morena, had been engaged for the Metropolitan but had to be released. Mme. Nordica refused to sign a contract unless she were given a larger number of performances than was offered her. Mme. Gadski, however, was fortunately available, and she will appear later in the season as Isolde, Brünnhilde, and in other dramatic rôles.

Two of the operas in the list just given were new to New York—"Fedora" and "La Damnation de Faust." The composer of the first-named is Giordano, whose specialty seems to be a lack of originality. He was wise in hitching his wagon to a star-play like Sardou's "Fedora," which Sarah Bernhardt made a sensational success. Yet even this could not win for his opera a wide success. It was produced here obviously less because of its intrinsic allurements than to give Lina Cavalieri a chance for an effective début. She certainly made the most of it. She is an artist who, not content with being reputed one of the most beautiful women in the world, made up her mind to win fame as an actress and a singer. In both she succeeded. It cannot be said that she is a vocalist of the first rank; but she has an agreeable voice and sings with dramatic intelligence and feeling. Together with Caruso, she sang the love duo at the end of the second act so fervently that the audience insisted on a repetition of it, altho the curtain had been lowered.

Of much greater interest was "La Damnation de Faust," Berlioz's masterwork. When this work, which the composer called a "dramatic legend," had its first performance in Paris as a concert piece, sixty years ago, it resulted in a serious deficit. In the year in which Berlioz died (1869) two of its orchestral numbers were played at one of Litolff's opera concerts, to the great delight of the public. A decade later the Parisians began to realize that they ought to have a national composer to pit against Richard Wagner, who was conquering French musicians notwithstanding the quarantine established against his music. Berlioz's name was put on the banner and soon his "Damnation of Faust" was performed nearly every week. The cult spread to other European cities and to New York. Then came a lull, which was broken a few years ago by the director of the Opera at Monte Carlo, Raoul Gunsbourg, who conceived the ingenious plan of staging the work as an opera. Signal success crowned his efforts—so much so that both Conried and Hammerstein included "La Damnation de Faust" in their list of novelties.

Some amusing incidents occurred at the first performance in the Metropolitan Opera House. It would seem that not a few of the spectators had come in the belief that they were to see Gounod's

"Faust." They waited and waited for their familiar airs and choruses, but there was only an occasional suggestion of the plot set to music by Gounod—just enough to deepen the mystery. As a matter of fact, Berlioz did not content himself (he might have done so had he planned an opera) with the love story of Faust and Marguerite. He departed from that simple scheme even more widely than Boïto did subsequently in "Mefistofele." Boïto tried to combine scenes from both parts of Goethe's "Faust," but Berlioz deviates entirely from the German poem in several of his scenes. For the sake of introducing the Rakoczy march, he places his first scene in Hungary; his Faust makes the compact with the devil, not for the sake of enjoying worldly pleasures, but to save Marguerite; and while Goethe ultimately saves his hero, Berlioz sends his Faust to hell, thus providing an opportunity not only for fiendish music of the kind he loved to write, but also for spectacular effects of which Gunsbourg and Mr. Conried's scene painters made gruesome use.

A sensation was made by the aerial ballet, in which winged maidens dance in the air and flirt their garments *à la* Loie Fuller, to the accompaniment of Berlioz's airy music. It was like a dream, and it had to be repeated. Much of the music proved tiresome, even with the scenic setting and the action. The best solo numbers are assigned to Mephistopheles, and they were admirably sung by M. Plançon. M. Rousseliere made the most of the part of Faust, and Miss Farrar's Marguerite was almost as enchanting as her Juliette. No American prima donna has ever equalled her as an actress, and as a singer she already ranks with Emma Eames and Lillian Nordica, altho she is only twenty-four.

"The Children's Crusade"

New choral works are seldom produced in these days of operatic favoritism. England has its Elgar, but in the other musical countries of Europe—Germany, Italy, France and Russia—choral novelties are few and far between. For this reason especial importance attaches to "The Children's Crusade," by Gabriel Pierné, which has been produced here by the Oratorio Society, with sufficient success to warrant a repetition on December 22d. Some account of this work and its composer was given in THE INDEPENDENT of November 22d; a few words of comment on the music are therefore all that is called for on this occasion. M. Pierné is, fortunately, not one of the modern French cacophonists. While not afraid of dissonances where they seem in place, as in his strikingly effective storm music in the last part, he also loves euphony. There is much beautiful choral writing in his score, revealing rare skill in the manipulation and combination of voices and instruments. The solo parts are less satisfactory, being weak in invention. They were well taken care of by Mmes. Blauvelt, Gould, Stoddard, MM. Ormsby and Ericsson Bushnell. Mr. Frank Damrosch conducted with zeal. The most touching pages were those sung by a choir of two hundred school children, admirably trained. Those persons who consider

BONCI IN "PURITANI."

school music a mere fad would promptly change their minds could they see how music arouses the enthusiasm of the children for the great things in life, which is, after all, the main object of education.

Orchestral Concerts

New York now has not only a Russian Symphony Orchestra, which plays only Russian music at its six annual concerts, but a Russian conductor for her oldest orchestral association, the Philharmonic Society. It was natural that Mr. Safonoff should have a Tchaikovsky symphony—the fifth—on his first program. He interpreted it in a way that made almost as great a sensation as his conducting of the sixth ("Pathetic") last year. But he proved once more that he can enter as deeply into the spirit of Beethoven and Mozart as of his compatriot. It is not only his emotional force that makes him popular. He discovers a sort of plot in every great work and makes the unfolding of it as interesting to the audience as a stirring story of love and adventure. To hear the Philharmonic at its best one should go to a Saturday evening performance. The Friday afternoon "public rehearsals," as they used to be called, are seldom on quite so high a level.

THE EXHIBITION OF THE BOOKS OF THE YEAR AT THE NATIONAL ARTS CLUB GALLERIES.

Mr. Walter Damrosch was well advised when he changed the dates of the New York Symphony Orchestra's concerts to Saturday evening and Sunday afternoon. His orchestra has been improved, and he has appreciative audiences, larger on Sundays than on Saturdays. The appetite for Sunday music seems, indeed, to be growing fast. Both of the opera houses give Sunday concerts, and there are always plenty of others of various grades. Mr. Dam-

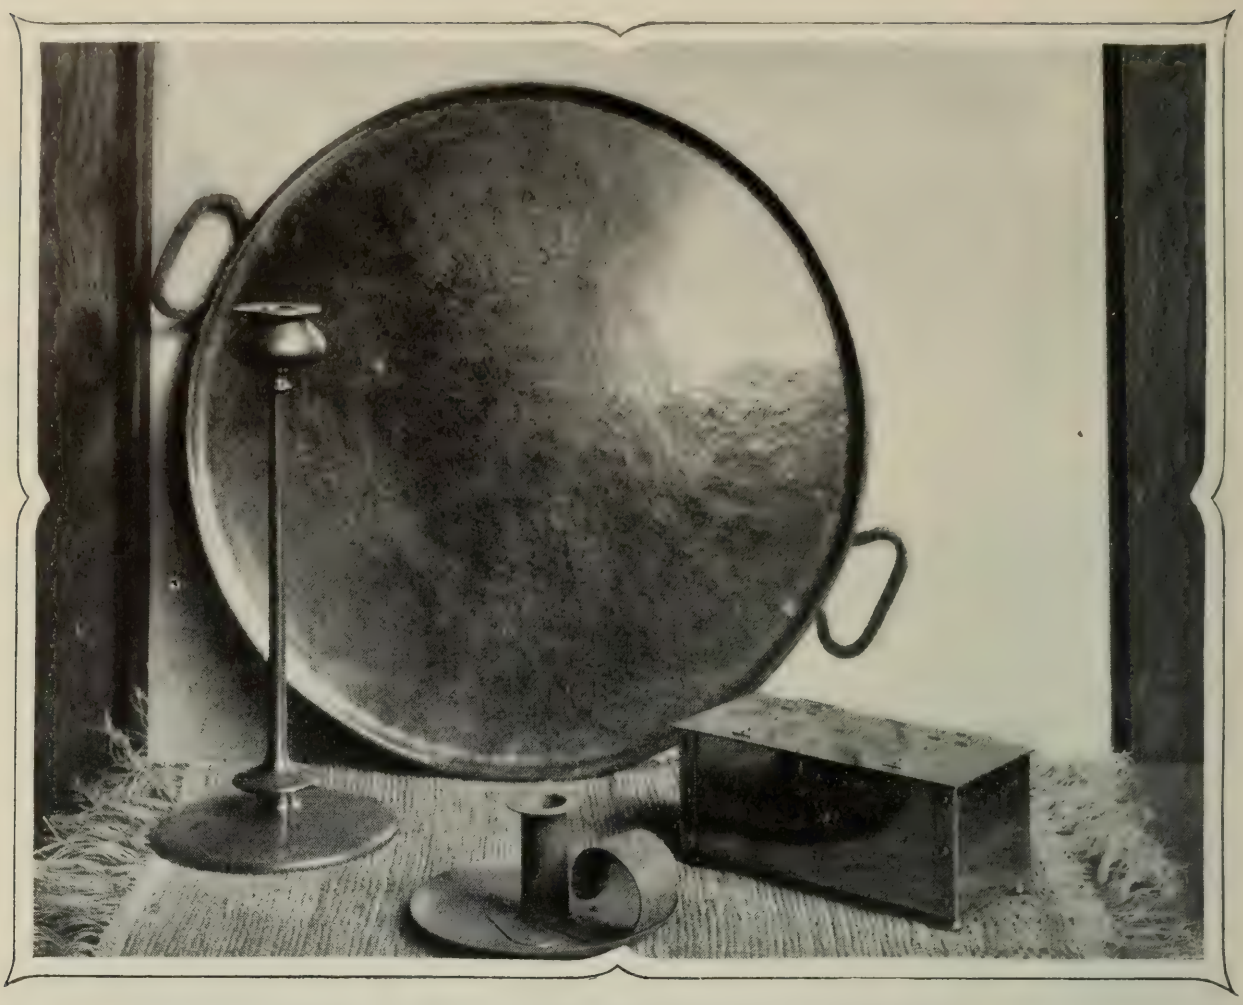
rosch has made a special feature of his soloists. Saint-Saëns, Schumann-Heink, Gadski and Rosenthal appeared in succession at his first four concerts. He also has a keen instinct for interesting programs. He will go on a tour of the West with his orchestra during January.

The Boston Symphony Orchestra is prospering more than ever under its new conductor, Dr. Muck, who, unfortunately, will be here only this season, as his contract compels him to return to Berlin in spring. Oddly enough, this musician, who is one of the Bayreuth interpreters of "Parsifal," gave less satisfaction to critical listeners in Carnegie Hall by the Wagner numbers on his first program than by his interpretations of Brahms and Bruckner symphonies at subsequent concerts. The Bruckner episode was particularly interesting. Brahms we have always had in abundance—superabundance, some think—but Bruckner, whom Brahms and his allies antagonized so bitterly thruout his career in Vienna, had been sadly neglected until Dr. Muck revived his seventh symphony. It proved both a joy and a disappointment — a joy because of its undeniably superb passages, orchestral splendor and emotional depth; disappointment, because of its extreme prolixness. Like Bruckner's other works, it would have gained immensely by being "boiled down," in journalistic parlance.

Soloists

The number of soloists heard before the Christmas holidays has been smaller than in some previous seasons. Sembrich, Schumann-Heink and Gadski have given song recitals along their usual familiar and successful lines. Miss Cottlow added much to her stature as a pianist by a concert at Mendelssohn Hall, at which one of the numbers was MacDowell's "Sonata Tragica," which is coming much into vogue. The Mendelssohn Glee Club is collecting funds in honor of its unfortunate composer, whose mental faculties are now almost paralyzed.

Maud Powell earned praise not only as a great violinist, but as an explorer, by her splendid performance, at a Philharmonic concert, of the concerto of Sibelius, the Finnish composer, whom some consider the coming man in music. His composition is ruggedly northern and virile rather than alluring and feminine, yet Miss Powell played it with such tremendous power and energy, as well as consummate art, that had she been behind a screen, no one could have guessed the sex of the player. It is not to be forgotten, in connection with this remark, that no one can also play in a more enchantingly feminine fashion than Miss Powell.



Moritz Rosenthal has conquered America as an artist. Heretofore he never failed to make a sensation as a brilliant virtuoso, but this season, for the first time, even his most obstinate detractors have been compelled to admit that his interpretations of Chopin, Liszt, Schumann, Beethoven and the other great masters are instinct with poetic taste, original fancy and emotional warmth. As a Chopin player he is far superior to Pachmann.

Mr. Josef Lhévinne has also given two recitals, which increased the high esteem he won last year. He was the soloist at the first Philharmonic, and is a truly wonderful performer.

Royal honors have been paid to Saint-Saëns. Orchestral players have stood up when he came on the stage, and his appearance in an opera box is followed by a fanfare in the orchestra. He is much pleased with America and America is much pleased with him, as the true representative of French art, a composer of music which will long outlast that of his younger colleagues, because it is more beautiful, more melodious, more sane, more piquant, more human. His two appearances with the Damrosch orchestra led to a demand for two more special Saint-Saëns concerts at which he played the piano. He also has given recitals, and in all of them has proved himself a pianist who is not seventy-one years old, but seventy-one years young.

Art Notes of the Month

December has brought us several small exhibitions of the work of men who are beginning to represent our best experi-

METAL WORK AT THE CRAFTSMAN'S EXHIBITION.

ments or our most delightful attainments in art.

At Montross's until December 29th are twenty-five pictures by Childe Hassam, some of which have been seen before, but now seen again beside the newer canvases add to our pleasure thru showing his development. To sit in the pleasantly shaded center of Mr. Montross's gallery and let the sense of the beauty of out of doors in the country rest one from a dreary city day is to find upspringing in one's self a feeling of gratitude to the painter. He gives us so very nearly the free air of a field or a hillside or a glade into which, besides the sun, only light and radiant nudes dare walk with the artist's permission, but which we feel ourselves quite as well entitled to enjoy thru the windows his frames make. He always gives us living atmosphere, whether the hour be of a June morning, or in golden October, or during a New York winter's day; whether he be painting in Old Lyme, or Manhattan's view of the Brooklyn Bridge. His "Brooklyn Bridge" is one of his best pictures, but a "Sunset" of 1903 most completely realizes his power to get the perfect beauty of a moment of changing light.

As different as canvases can be from Hassam's are those by Perrine at the new gallery. He is enthralled, not by beautiful, pleasant and joyous landscapes, but by Nature in her awe-inspiring and maddest moments. Each work shows wonderful concentration on a single effect which is attained by absolute suppression of all non-essentials for the attainment of the force of it. His canvases are like good short stories—terse and striking and, when his sense of design is at its best, even beautiful. He seems to have too early struck a formula for brushwork, and misses a chance of becoming subtle in his passionate earnestness thru the monotony of his handling.

A few exhibitions of portraits have been presented. Those by Müller Ury, at Knoedler's, are sad proofs of the lack of knowledge of what can be called a

possible picture among many of those who can order portraits of themselves. It is absolutely true that the eyes of most people have to be taught to see, not only pictures, but the actual world, or they would never submit to being painted by men like Ury.

At the Modern Gallery the portraits and landscapes by J. Campbell Phillips are the vigorous work of an experimental painter. Force is present, but this artist has not yet accomplished much beyond the achievement of facility in getting character in its most obvious form. His activities are too varied to go very deeply into the beauty of things.

The portraits by Carroll Beckwith, at Schaus's, of prominent men like Jacob H. Schiff, Dr. Newbold Morris, General W. W. Gordon, Richard H. Ewart and others are in his well known manner, perfectly commonplace as works of art, probably satisfactory to the sitters as likenesses.

Charles Caryl Coleman, an expatriated American who has his studio in Capri, was fortunate in knowing Vesuvius so well from being so long its neighbor that when the eruption began last April he was exactly the right one to record all its impressive and majestic phases. He shows at Noé's thirty-four "Songs of Vesuvius," done in pastel and as exquisite as Japanese water-colors. In most of them the element of tragedy is not felt, only the decorative beauty of the colors and masses of fire and lava and smoke. Mr. Coleman is in no way a romanticist, and his calm presentation of that awful catastrophe is almost a denial of its terrors. His oil paintings are hard and uninteresting.

George Hitchcock showed at Knoedler's nineteen studies of the "Flowers of Holland," absolutely lacking in imagination but interesting at least in convincing one that in Holland flowers are grown by the acre, especially tulips, hyacinths and nasturtiums, those bold and least seductive of Nature's attempts. His "Birth

GRUEBY, WALKER, NEWCOMBE AND OTHER POTTERIES
At the Craftsman's Exhibition, Studio Building, National Arts Club.

of Venus" is something of a picture. To go from the popular portrait painters' shows to the rooms of Durand Ruel, where Mary Cassatt's work is shown, is to experience a cheering up process. She is a knowing and loving and absolutely sincere painter, whose very uglinesses are frank and forgivable. Her children are almost as splendid as real ones, and her color arrangements never weary one. Often her technique is admirable and she is gaining yearly in depth.

It is a pleasure to all those who have

AGE OF INNOCENCE.
By Alfred Drury, A.R.A.

watched the work of the art classes of the Y. W. C. A. in Fifteenth street with growing interest, to learn that the judges of the Milan Exposition, Italy, have awarded it a gold medal. No other art school in the city gets so near to the root of the matter of art education as this too little known school. Miss S. A. Walker and Miss Turner, who have charge of the classes, are exceptionally broad artists themselves, and the training of mind and hand go along together. Their pupils, who do not go immediately into professional work, are especially ready to begin academic work with some chance of learning how to draw the figure with results other than the usual raw realism of the average unthinking league student who starts life drawing with no mental culture to make it of use to him. Designs here, always made with a definite purpose and carried out in wood or clay or needlework, art history and historic ornament, put the pupils in touch with works of the past, and give them a power of choice among their own capacities.

With water-colors at the Salmagundi Club, mural studies at the Catholic Club, Frederic Remington's pictures at Knoedler's, Everett Shinn's at the new gallery of the Chase School, up at Broadway and Eightieth street, Jonas Lie's Norwegian pictures following Perrine's at the New Gallery, etchings by Lalauze at the Lenox Library, and by John Sloan at Chase's, the Photo-Secessionists at their gallery at 291 Fifth avenue, English mezzotints at Knoedler's, French paintings of the seventeenth and eighteenth century at Ehrich's, and beautiful textiles at the Benguiat sale, it has been an entertaining month for those who frequent the galleries.

The Craftsman's Society, founded last spring, held its first exhibition since December began. It is probably a distinctly representative showing of the work being done thruout the country, for the interest in it was widespread among the workers and all the crafts are duly presented. The general average is high in some fields and low in others. The metal work is not remarkable, nor is the jewelry. The pottery in colors and glazes is most often successful. tho form of the best is not always found among the pieces. The embroidery by the Italian lace school in Macdougal street and some of the simple textiles are of much beauty. A few little statuettes are good among modeled things, but on the whole the exhibition is more successful in the mere fact of being a beginning in the way of a chance for contacts and comparisons among the workers themselves than in having brought out of obscurity any unknown geniuses.

The galleries of the Craftsman's Society are to be permanently a salesroom

for the work of the members and will doubtless become one of the most interesting places in town in which to find objects of unusual character.

Among the recent acquisitions at the Metropolitan Museum of Art is a bronze bust by Alfred Drury, A.R.A. This bust, which is herewith reproduced, shows a young girl beautifully modeled and full of life. Mr. Drury belongs to the modern English school and shows in his work a revolt against the trend toward ornamental sculpture that has been dominant of late years.

THE MAYOR'S OFFICE.
From "The Man of the Hour," at the Savoy Theater.

An exhibition covering the books published during 1906 formed an interesting feature at the National Arts Club from December 1-15. It was a novel and very happy idea of the library committee of this club to assemble the current publications and to exhibit them, together with framed original drawings, pages of manuscript, original cover designs, and bookbinder, succeeded in securing for other units which might perhaps be termed raw material entering into the books, and to give the whole an artistic setting such as was done at the Arts Club. The comparison between the original drawings and the results obtained from them by their color printers, made possible by massing them together, was extremely interesting. Noteworthy exhibits were made by the leading publishers, and Miss Emily Preston, the art bookbinder, succeeded in securing for the club exhibition about one hundred examples of hand binding, including examples from the club bindery. Bradstreet, Morris Lee King, Rosa Taussig, Ellen Gates Starr, R. F. Chatfield-Taylor, M. E. Wood, Emily Preston, Constance Purdy, Stikeman & Company, Helen G. Haskell, Marie Loehr, A. Saunders, Minnie Louise MacLean, the Misses Ripley, the Village Press, the Merry Mount Press and some illuminated work by Florence Gotthold.

The Drama

In accordance with our purpose of assisting our readers to select the plays that are worth while from the overwhelming multitude that are not, we mention a few titles, which for some reason seem to us to deserve special attention. Of the plays given in New York this season we would select four: "Pippa Passes," a tasteful presentation of Browning's most beloved dramatic poem; "The Great Divide," a romantic problem play, by William Vaugn Moody; "The Man of the Hour," dealing with the problem of municipal corruption, and "Cæsar and Cleopatra," one of Bernard Shaw's pseudo-historical plays. The native drama seems to be coming to the front, for the two new plays of the four mentioned are by American authors and deal with American subjects, and we could add to the list six other successes which are also purely American: "The Chorus Lady," "The Rose of the Rancho," "The New York Idea" and "The Daughters of Men," which we review in this issue, and "The Three of Us," discussed in our last month's dramatic number.

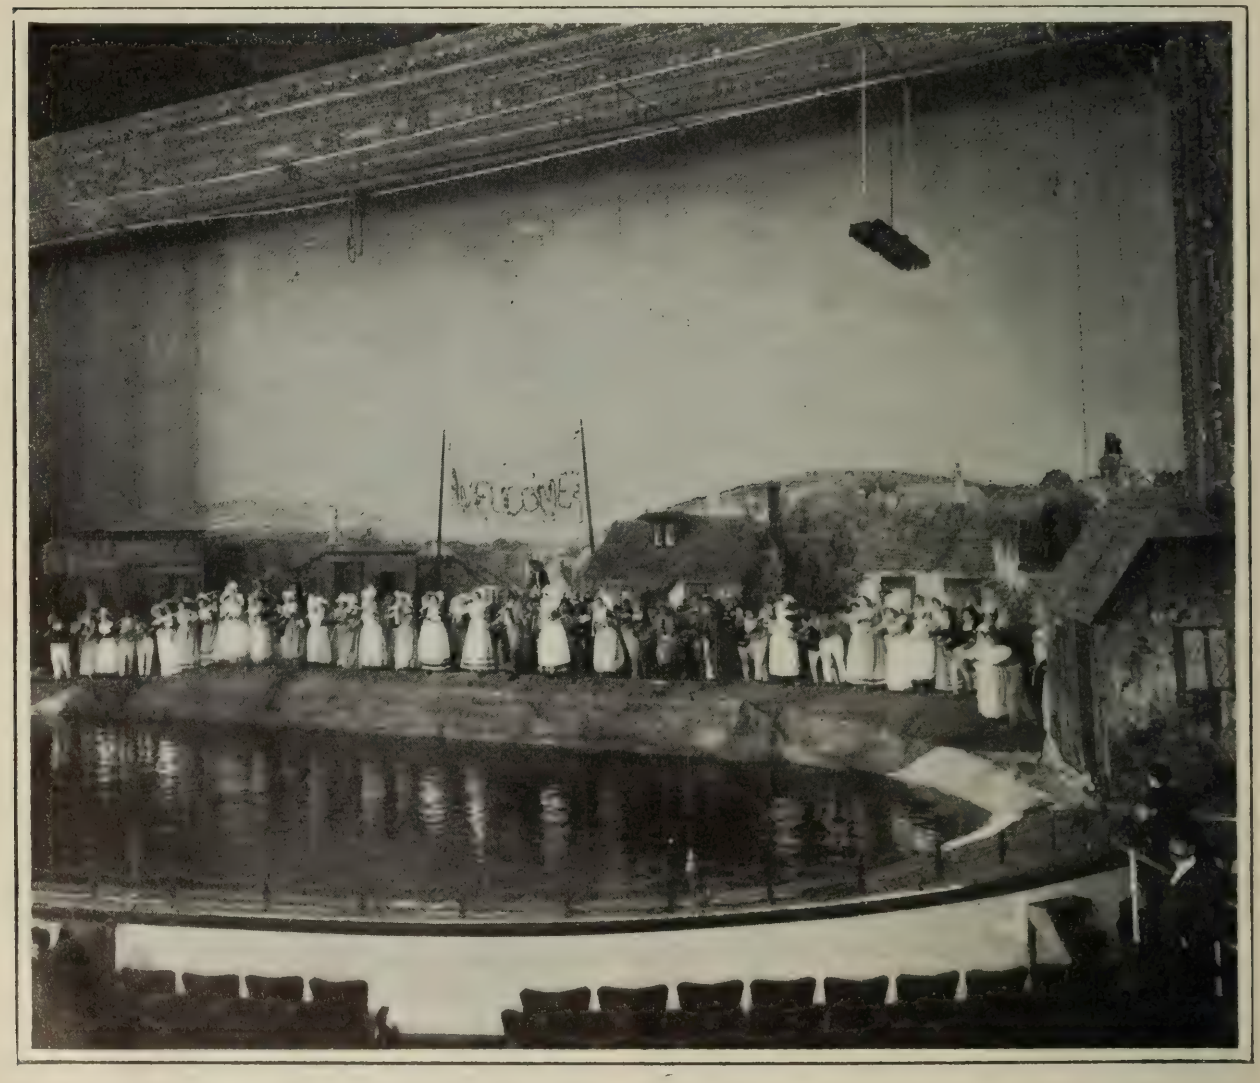
HAMILTON REVELLE AND FRANCES STARR IN "THE ROSE OF THE RANCHO" AT THE BELASCO.

We are inclined to rate "The Man of the Hour," by George Broadhurst, as the best American play that has been produced in New York this season. The

play is intensely modern, dramatizing, as it does, the typical politico-economic situation in any of our large cities, where the president of the traction company, with the aid of the political boss, tries to obtain a perpetual franchise, and the young leaders of the good government movement are fighting the corrupt deal. With this plot is interwoven a pretty love story. The play is remarkable in that no situation occurs where the characters do those stagey things that they would never do in real life, merely that the plot can continue. Every action follows inevitably from the preceding action, and the audience is never disappointed in the uprightness of the young mayor, upon whom almost crushing pressure is brought to bear. The political boss and the ward politician are the two characters best acted. It is encouraging that in a theater where people pay $2 for a seat crowds will come to see a play like this, which five years ago only the members of labor unions would have appreciated. The times are changing and changing for the better.

Much inferior to "The Man of the Hour" is Charles Klein's latest play, "The Daughters of Men." The two plays deal with vital sociological problems of the present day, but the author of "The Music Master" and "The Lion and the Mouse" has fallen short of his previous successes, tho this is not saying that the play is not meritorious or that it will not have a long run. Mr. Klein tries to depict all the stock types of capitalist and laborer. We have the old-fashioned financier with a heart, and the new-fashioned financier with a will, the young radical college-bred champion of the people, the John Mitchell type of labor leader as well as the Sam Parks and John Most types, and last but not least the honest, home-loving workingman who hates to follow his leaders and only wants to work for his wife and babies. The feminine complements to these types are a daughter of wealth and a daughter of poverty, neither important creations. Mr. Klein's solution of the capital-labor problem is *love*—an idea which has been preached more than practised these 2,000 years. The dialog is frequently bombastic, but the acting is fairly good, with the exception of Effie Shannon, the heroine, who is temperamentally unsuited to the part. Now that the stage is following the example of the magazines in "going in" for social reform, it only remains for the church to step into line. Except as another sign of the times "The Daughters of Men" is not important.

Our American dramatists have generally thought that it was necessary to go to a foreign country and a past age when they wanted to get a romantic setting for their plays, but Mr. Belasco and Mr. Tully, in "The Rose of the Rancho," have proved that this was a mistake, for they have found as rare and exotic a *milieu* as the most poetic playwright could wish without going outside the United States or further back than 1848. Yet the opening scene in the mission garden at San Juan Bautista, Southern California, with a Franciscan priest asleep in his chair under the grape arbor and a Spanish cavalier stretched out on a bench on the other side and a girl filling her porous red water jar at the fountain in the center, presents a picture that catches the applause of the audience and puts them at once into sympathy with the siesta civilization that is unduly awakened by the Yankee invader. For the play is not a patriotic one. Even the chivalry and fortitude of the *Americano* hero is not sufficient to cover the scoundrelism of his associates, altho he overcomes the racial repugnance of the coquettish Juanita. The play appeals to the sentiment if not to the intellect, and in watching the rapidly changing and beautiful scenes one has no time or inclination to criticize its lack of serious purpose or fundamental reality.



Mrs. Fiske's new success this season is by Langdon Mitchell and is entitled "The New York Idea." It is a play of modern divorce or "trial marriage," which seems to be the same thing. A divorced husband and wife desire to remarry respectively another divorced wife and husband. On this situation the plot is woven, and an amazing one it is. Clever satire, polished wit and the most up-to-date social philosophy are grounded on such an unnatural situation that it is wellnigh impossible to discuss the play seriously. It goes without saying that "The New York Idea" violates all ac-

cepted standards of marriage—even in New York; and it would not be tolerated by an average audience except for its evident satire and cleverness. Mrs. Fiske plays her part well or ill according to whether you are one of those who think her the greatest American actress or just the reverse. As her company is perhaps the most proficient in New York, an interesting evening is assured, whatever one may think of the play.

"The Light Eternal" is a somewhat crude example of the religious melodrama of the persecutions of the Christians under Diocletian. The text is very poor from a literary standpoint, but with the help of some pretty stage scenes and the artistic costumes of the period, with fair acting and a stunning miracle, the play goes very well, and the audience applauds the Biblical verses, whenever introduced, as tho they had never before appreciated their dramatic significance. The only originality the author shows is in escaping the temptation of a happy ending.

Miss Eleanor Robson, with the possible exception of Maude Adams, is the most winsome and charming young American actress. Her latest play, "The Girl Who Has Everything," makes an admirable setting to her best capabilities. Mr. Clyde Fitch has produced a simple and domestic melodrama, with pretty children, a brutal widower father and a pair of charming lovers. What more of a plot is necessary? The acting of the whole cast is splendid, especially that of the little boy and girl. Those who love love and hate hate will enjoy this play.

May Irwin is *sui generis*. In low comedy no other actress can approach her. Her latest play, "Mrs. Wilson-Andrews," by George V. Hobart, keeps the audience in such roars of laughter that half the time they cannot hear her. Not much can be said about the plot of

THE FISHING VILLAGE IN "NEPTUNE'S DAUGHTER" AT THE HIPPODROME.

the play or the rest of the cast, for there is no plot, and despite the numerous other people on the stage, Miss Irwin is the whole thing during the entire four acts. It would have to be a pretty dyspeptic person who would not feel healthier for having heard her.

James T. Powers, in "The Blue Moon" at the Casino, strikes a joyous English musical comedy note that entertains many people. Mr. Powers can do a lot of ridiculous things that please and interest an audience where another man might, and probably would, repel and fail to excite any interest whatever. It is only the simple twist of the wrist, a change of facial expression, or a new costume quickly assumed, and Powers captures the house.

No one who visits New York should fail to see the Hippodrome. This entertainment institution, which is a combination of vaudeville, circus, ballet, spectacle and Wild West, is unique in America. It has the largest stage in town, and has more people on the stage than many other theaters have in the audience. How the ordinary vaudeville shows can live in competition with it is a wonder. It is one of the sights of New York.

Shopping in America

BY MRS. T. P. O'CONNOR

[Mrs. O'Connor, who is the wife of the celebrated Irish statesman and author, has just returned home with her husband after a few months' stay in the United States. If the theme is somewhat outside the scope of most of THE INDEPENDENT'S articles, we are sure it will be read with no less interest on that account.—EDITOR.]

NEW YORK is an eminently satisfactory place for shopping, provided the exchequer be large enough, altho working girls, shop assistants, typewriters, telephone girls and women of occupation will find it possible to dress far better and cheaper in America than abroad. There are certain necessaries of dress in which the American market excels beyond every other country. The ready-made suit, the ready-made shirtwaist or blouse, neat and cheap boots, shoes and slippers, pretty and good-fitting machine-made underlinen, and cheap and good, well-shaped stockings. This list of items virtually clothes the working women. A ready-made suit for $20, $30 or $40 is incomparably better cut and better designed than those for the same price in the European markets. The wool materials are excellent in England, but the skirts hang badly, and the bolero or jacket is a mere sack. The English tailor for men gives in his fit too much room; a coat collar will often set out at the back from the shirt, and the whole garment is deplorably loose, except a very tight sleeve at the top, which instantly gives a man a narrow, consumptive appearance. But in fitting women the English tailor goes to the other extreme; either in cutting a ready-made suit or one to order, he almost invariably makes a skin tight fitting. The back is nearly always too narrow between the shoulders, the sleeves are then cut in a sort of crescent, this fills up the back. And remarkably pinched, provincial and ugly it looks. The skirt, particularly a short skirt, is never quite round. And even on the stage of the best theaters in London, the chorus will wear dresses to the knee in front, while in the back there is a little pointed train about five inches longer than the front of the dress. This to an eye observant of line is most distressing. The cheap ready-made suits in New York may not be fashioned of such serviceable material as all-wool English serge, but the cut is smart, it is accurate, the lines follow the figure, and it is trim and stylish in appearance. And the ready-made tailor gowns for $50 are quite as good as those made to measure in England for $100. The white shirt-

waists also are a better cut than those either in Paris or London. The waist gives more breadth across the front, has a better fitting neck and trimmer armholes. One of the well-known and expensive tailors in London (Ernest of Regent street) holds out as a bait in his advertisements, "American shirtwaists by American cutters and fitters." Whether this advertisement holds good I cannot say, but it shows the trend of the times. English shopkeepers have taken note of the trimness of the American woman, and there are American shoes sold in many shops in London, but they are not nearly so satisfactory as those bought in the United States, for they are manufactured for the English market, where the high Louis heel, the thin sole and the pointed toe hold undisputed sway. It is a most usual thing to see an Englishwoman swathed to the ears in furs and walking out on a cold, muddy day in low summer shoes of the thinnest description, and lacy, openworked silk stockings. "Low-heeled, broad, solid English walking shoes" are simply an outcome of the inventive American mind. For muddy roads in the country they are occasionally used, but even there thin shoes are more often worn than not by the Englishwoman.

"English breakfast tea" is also an American invention, and many other things advertised from this country are quite unknown in England. I bought a beautiful vase in New York of Sheffield plate, of a noble design; the shopkeeper first said, "An English antique"; then seeing that I was firm in refusing this statement, he temporized by adding that it was a perfect copy of an ancient English vase. I bought it, as a matter of fact, because it is purely American and not procurable in England. But that in no way detracts from its beauty or its worth. It may have been made in England, but of American design. There was some lovely table glass on Broadway, of a graceful and elegant pattern, which the tradesman informed me was of English manufacture, somewhere near Manchester, and doubtless it was, but of American design, and it is not procurable in any of the London shops. The stockings made in America are a genuine pleasure to an American woman accustomed to English stockings. It is impossible to get No. 8½ here. The smallest ladies' stocking is No. 9, and all English stockings are "beef at the heel and at the ankle." They are absolutely never slenderly made, unless for children, and then the legs are too small for women, and they are very dear—a good Balbriggan cotton stocking in white or black ranges from $1.50 to $2, and no matter what the price paid, the baggy ankles are just the same. Friends of mine have had stockings made, but they have not been a success. The English manufacturer cannot get over the idea of a too generous foot. The stockings in America are, on the contrary, a delightful shape, are very reasonable, and without doubt the export of stockings will soon be as popular as the export of shoes. It is possible to get nice hand-made underclothes in England, and at a fairly reasonable price, but they are all of one size, and the patterns and designs have not changed in twenty years. Miss Cholmondeley, the author of "Diana Tempest," "Red Pottage," "Prisoners" and other delightful novels, once told me that her mother had all of her underclothes made when she was a girl of good, stout material, and no trimming whatever on them. As for ribbons, such horrible, unmaidenly immodesties were not even spoken of. The English underclothes are even now not coquettish. The night dresses are high necked and long sleeved and long on the shoulders, and never too long in the skirt. And either they are trimmed far too much or not at all. And the shape and fashion is invariably of one commonplace design.

There are several firms like Russell & Allen who make a specialty of evening and ball dresses. The question of high and semi-high gowns for small dinners and theaters has been agitated from time to time, but the English aristocracy are very conventional and they cling to an established fashion. Queen Victoria, who was very healthy and hardy herself even to the last of her life, wore every day a square cut gown for dinner, and she required all of her ladies in waiting to appear in evening dress, no matter where they were or how severe the weather. In Scotland, in the autumn, when the days were sharp and often bit-

terly cold, it was *en régle* for everyone to appear in evening dress. There was some grumbling and dissatisfaction about it, and occasionally severe colds, but the unwritten law of low gowns was never changed. Usually speaking English women, particularly matrons, have fine shoulders, but fat or thin, when they go to Court, when they go to balls, when they go to dinners, the law of decolletage is inexorable. Consequently, English dressmakers have made a study of this particular branch of sartorial art and excel in it. There are several firms in London that are renowned for black evening dresses. These are made most beautifully, because the Court is very often in mourning, handsome mourning has to be worn. The evening dresses in America I thought dear, altho not so very much dearer than the first class dressmakers in London. In Paris, the French dressmakers excel in afternoon gowns, and it seems to me that the best dressed women in the world in the morning are the Americans; the best dressed women in the afternoon are the Parisians, and the best dressed women in the evening are some English women—those who study the old pictures and rare colors, and have ideas of their own. The Duchess of Rutland, who was Lady Granby, dresses in an entirely individual style. Her features are beautiful and she is very thin and refined looking. This year I saw her at a reception and she wore a silver-grey velvet gown made with a very full skirt, a folded bodice and a bertha composed of the richest embroidery of grey and white pearls. She wore no jewels. Formerly English women were loaded with jewels, but they have seen how very distinguished and how simple American women look without them, and that when they wear them at all they are put in the right place, and now comparatively little jewelry is worn.

The shopping in America I found excellent for toilet articles—powders, soaps, toilet water—all the paraphernalia of the bath is simply perfect, and the little silver gifts for Christmas, the pincushions, the baskets, the pretty feminine things are far more ingenious and quite as cheap and even cheaper than anything in England. In fact many American manicure sets, scissors with silver handles, little silver cases to hold dental silk, and things of that kind are now brought to England and sold as English manufacture.

The hats in New York are beauitful and much superior in design to anything sold on either Regent street or New Bond street. The buyers sent over from New York to Paris, to London and to Vienna have all of them excellent taste. They invariably select the best model procurable, and more often than not they have it changed to suit the requirements of New York. They have told me in the French ateliers that no English buyer ever asks for a change in a French model. He simply takes it as it is. But an American buyer will very often have, perhaps, only two things left of the original model—say the sleeves and the skirt; the bodice he will select from another model.

As for children's clothes, they are nowhere in the world as simple, as pretty and as appropriate as in America; in fact they are quite adorable. Both in France and in England the clothes for children are far too ornate, too much cheap embroidery is used and cheap lace. The hats are loaded down with bows and feathers, the children's clothes indeed look like the clothes of grown people made small. In America they have a perfectly distinct *cachet* of the child.

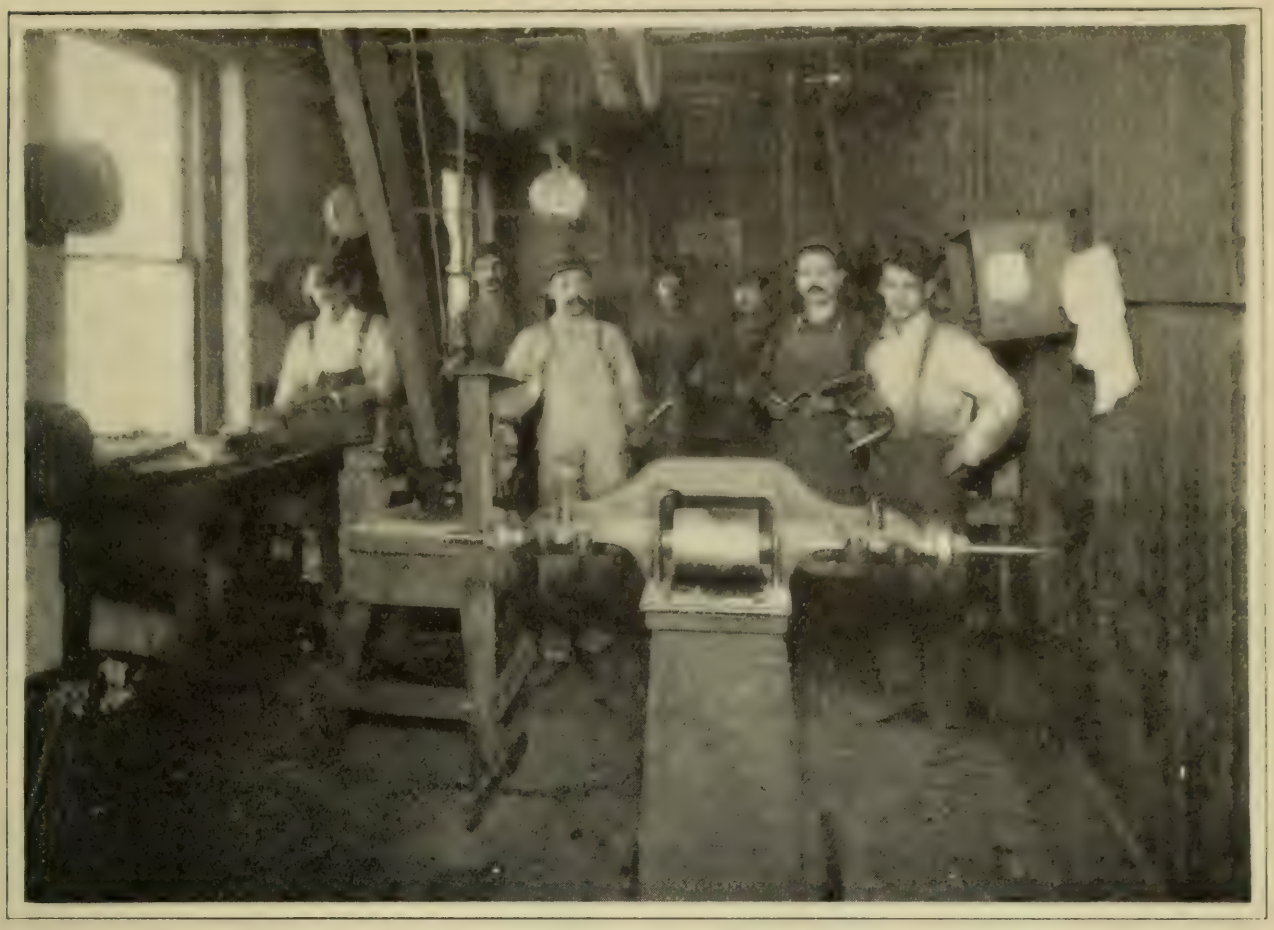
As for American shoes, there are none to be compared to them in shape and in cut anywhere. They are very fond in Paris of wearing a shoe that looks very much like a small canoe—men and women alike—and it is the most hideous thing in the whole world. In fact, French shoes do not compare with American shoes any more than do English shoes. It is possible to get very excellent material in England; the soles are watertight and the uppers are made of good leather, but an English bootmaker more often than not leaves a little puff of leather on each side of the instep, which instantly widens the foot and gives it a sloppy appearance. Occasionally an English bootmaker will turn out a well-made boot, but very occasionally. There is a good deal of complaining in England that American boots do not wear well, and that they let in the wet. This may be quite possible, as people in

America expect, when the weather is very muddy, to wear galoshes. They are, however, very seldom used in England. Notwithstanding these complaints, there are many hundreds of English people that say they never had a boot to fit until they wore an American boot, and the American shoe is gaining ground every day in popularity. As for the Oriental shops in New York, they are simply ravishing; and evidently the things in them—the beautiful lamps, the shades for lamps, the lovely screens, with just enough embroidery on them to give color—are all made for the American market, as they are far superior in design and in reticence to anything sold in London. The colors are quieter and richer and will tone in more easily with other furnishings. Here in Oriental shops the designs have not changed in the very least in twenty years. The American furniture, particularly for bedrooms, is most satisfactory. The copies of what is called "Colonial furniture," of good and pure design, is beautiful and most artistic. There is, however, no such furniture in England of any period. I fancy that the designs were originally French, and were made in New Orleans of mahogany brought over from Cuba. The little four-post, modern, single beds of carved mahogany, copies of the old ones, shown in the good shops, are perfectly charming; and indeed, all the furniture in America seems to me quite satisfactory, and oh, the bathrooms! Those beautiful, commodious, glittering, white, easily cleaned, luxurious bathrooms! There is nothing whatever like them in England or abroad. They are so practical, so hygienic, small and yet spacious, on account of the happy disposition of the articles in the space.

But why should not all shopping be of the very best in America? They are a progressive people; they adopt all the new fashions and new inventions with the greatest rapidity; the country grows the finest cotton in the world; it grows good wool, and the silkworms, I am told, are producing excellent silk. These various products promise well for fine fabrics in the future. America also produces beautiful woods of all colors and descriptions, marble and stone and onyx—all that is needful for the furnishing of a beautiful house, so that whatever dissatisfaction American women have in their lives, it certainly cannot extend to their opportunities for shopping in every and in all directions.

DUBLIN, IRELAND.

The Death Claims



BY ANDREW HELLTHALER

[Mr. Hellthaler is organizer and business agent of the Metal Polishers', Buffers', Platers', Brass Molders' and Brass and Silver Workers' Union of North America. He is now engaged in attempting to enforce the law which requires that exhaust fans be used in all metal-polishing shops. He believes that this law strictly enforced will do much to save the lives of his comrades.—EDITOR.]

I AM like a man sent out by the garrison of a besieged city, to bring them help. If I fail my comrades will all die. In fact, they are dying now, fast, being killed by something more deadly than bullets or bayonets. They are being stifled, suffocated, choked, killed by lung diseases, to which present conditions of their work absolutely doom them. The average working life among them is only fifteen years, and practically they all die of consumption.

These are the members of my union—the Metal Polishers, Buffers, Platers, Brass Molders and Brass and Silver Workers of North America (comprising the United States and Canada).

Five years ago I was a silver polisher in New York (as I had previously been for fifteen years) and also a delegate to the National Union, and the condition of our treasury attracted my attention. It was always empty. We were paying in from 25 cents to 35 cents per man per

INTERIOR OF POLISHING ROOM WITHOUT ANY PROVISION TO CARRY OFF THE DUST.

month, yet when we wanted to help some cause—for instance, a strike for better hours or wages—we couldn't do it. Our treasury was empty. If any one asked why the treasury was empty, he was informed that the death claims ate up all the money.

The metal polishers are not the most thoughtful men in the world; nevertheless the behavior of the death claims puzzled them, and we determined to have an investigation. John J. Flynn, J. J. Cullen and I were the investigators. We went and examined the death claims which are filed with the General Secretary. We found all straight and square there. The deaths were real deaths of members of our organization whose families were entitled to the benefit. The money was all properly paid out and the totals agreed with the totals given to us by the General Secretary.

The death claims accounted for the empty treasury—but what accounted for the deaths?

Attached to every claim was the death certificate signed by the doctor in attendance and showing the cause of death. An examination of these explained the mystery—the men were all being killed by consumption.

Aside from accident or suicide, the story of the death claims was all the same, so far as regarded metal polishers. They were dying of consumption, pneumonia, something the matter with the lungs, directly traceable to the conditions under which they carry on their industry.

Below will be found a table which shows the death claims paid by our organization during the last four years. Each claim has attached to it the affidavit of the president of the local union to which the deceased belonged and a transcript from the Board of Health, stating cause of death:

Year.	Total of all claims paid.	Metal polishers.	All other branches combined.	Metal polishers Tuberculosis and lung trouble.	Metal polishers, all other causes.
1903....	66	45	11	43	2
1904....	45	38	7	35	3
1905....	88	70	18	65	5
1906....	6	5	1	5	1

Dated to February of this year.

There must be something radically wrong when a local union of 170 men, working exclusively on the precious metals, has eight death claims in two years, with seven of them directly due to tuberculosis, while the 400 men employed in all the other branches of the same industry have not had three deaths in the same space of time. Apart from tuberculosis, deaths among metal polishers, as shown by the certificates, are mainly due to accident or suicide, which goes to show that if a man works at it long enough, barring other causes, the business is sure to kill him.

As I have said, metal polishers are not the most thoughtful men in the world; still, the startling story of the death claims impressed them, and reading their own experiences in the light of the death claims, they could see what they ought to have known long before—that their business was being carried on at an appalling sacrifice of life.

Before we got this light from the death claims we had known that there was something the matter. The moment we got over our wheels in the mornings and the wheels got to turning at the rate of 2,000 revolutions per minute—toward us—the fine dust of abrasive from the wheel and metal from the article we were holding against it began to spout in our faces. Every breath we drew in was filled with millions of particles, and by the end of a ten-hour day we were in a bad way.

Men could not stand steady work at the business. They would work a week and then lie idle for a week. Breathing dust all day long gave them an oppressed, stifled feeling and splitting headache, with thirst, and they drank a good deal.

Everybody knew that there was a great deal of discomfort attached to the business, but no one knew that it was equivalent to slow suicide till the investigation of which I have spoken.

When the results of that were made known and realized there were many who thought that the business should be stopped altogether. It seemed brutal and uncivilized to allow it to go on attracting boys in, only to strangle and slaughter them before they even reached middle age.

But, of course, stopping the business altogether is the last desperate resort, and so we sought a remedy, and there did not appear to be any except to put an exhaust fan over each wheel to carry off the dust or fumes. Some one suggested that the men wear something like a diver's helmet, with a pipe attached, carried up to good air; but this would not do, because in that case a man would have to look out thru glass, which is impracticable. A man needs sharp eyesight in the trade. Wearing glasses ruins him as an operator, and he has to retire when his eyes become weak.

It was suggested, also, that the wheels might turn away from the men, instead of turning toward them, but that also is impracticable. A wheel turning away from the man would snatch the metal out of his hand. It must turn toward him, and therefore he must stand in a storm of dust and metal particles unless the exhaust fans are used.

It was also suggested that machines could take the places of men at the wheels, holding the pieces of metal to be polished; but that would not do either. No machine could be made to study conditions and adjust itself to them as the intelligent man has to do. Tiffany tried machines in the polishing-rooms for "stoning" bottoms, and they could be worked in case of something like the bottom of a round, silver tray, but not on a square tray.

Practically, in polishing, every article is different and needs different treatment. The workman must study before he begins just how he is going to do each job, what wheels he is to use, etc., and how he is going to get at different corners.

In polishing the baser metals—iron, brass, copper, etc.—the principal abrasive used is emery, which comes in many different degrees of fineness, some as coarse as granulated sugar and some as fine as flour, called "flour emery." It is very black, sharp, hard.

When a man stands over one of these emery wheels holding an article to be polished, the particles flying up from wheel and metal are red hot on account of the great speed of the wheel and the severe friction. These particles burn their way into the flesh of the operator, perhaps in the lungs, perhaps in the face.

Each splinter sticks till a little festering sore forms around it, when it becomes dislodged and falls out. The metal polisher may be recognized on the street by his pimpled face, caused by these particles. The pimples look bad and cause some discomfort, but the real damage is done by the red-hot splinters that enter the lungs. I believe that the most deadly metals are brass and copper. I never worked on them, but the results of my investigations prove that this is so, and when one considers that after being a metal polisher for years a man's lungs and digestive system are lined with brass and copper, it is easy to be sure that considerable verdigris must form. Some of these men working on the baser metals have their stomachs washed out, and the washings show the terrible conditions that might reasonably be expected. As a result such men never return to the work.

It might be imagined that the men working on the baser metals would receive more pay than those employed on gold and silver, where the effect on the health is not so bad; but this is not the case. They earn only from $2.50 to $3 per day, while those handling gold and silver earn from $2.75 to $3.50 per day.

The buffing process is practically all the same, no matter what the metals. The buffs are woolen cloths sewn together in the shape of a wheel. Tripoli and paraffin are used on them for cutting the metal. These wheels revolve at the rate of 3,000 revolutions a minute, always toward the operator, and the lint from the wool can be seen adhering to everything in a polishing-room, walls, ceiling, etc., and it only takes one sweep of the hand along the walls of any polishing-room to get a handful of lint which is finer than the finest wadding.

"Coloring up" the metals is like the buffing process, but the buffs in this case are made of canton flannel, and rouge is used upon these, just as oil is used upon an oilstone. Tho the abrasives used here are not as sharp-cutting as emery, pumice-stone or even paraffin, they are just as deadly, because the lint, combined with the rouge, forms a cloud of dust which clogs all the air passages.

A man engaged in "coloring up" changes all his clothes when he goes to work, even to his underclothes and shoes, for fear that he may carry off some of the precious particles. In Tiffany's polishing-room there is an iron matting on the floor to protect the dust there from disturbance. Twice a year walls and ceiling are swept down, all the dust collected and sold to an assayer.

The dipping process to remove the "fire" is also deadly. The articles needing the treatment are dipped in nitric acid, and the acid fumes penetrate all thru the factory. I have seen factories so full of these fumes that the men had to put their heads out of the windows in order to breathe.

A stranger to the trade might expect that lunch time would bring some relief to the men, but in that he would be greatly mistaken. Lunch in those hell holes (some of which are underground) is among the most deadly of all the contrivances for shortening men's lives.

In nearly all factories the men are only allowed thirty minutes for lunch. Can any one picture a man taking a bath, changing his clothes from head to foot, going out, getting his lunch, and returning to his lathe in thirty minutes? Of course that is impossible, so the men take half a wash, sit in filthy polishing rooms where the dust has not yet settled from the morning's operations, and there eat lunches which in most cases they have brought to work with them. It is no uncommon sight in a polishing room to see men eating sandwiches turned red by the rouge, or black by the grease that is all about them. These lunches have been in a factory filled with smoke and acid fumes for five hours before they are eaten. Just to give an example of the condition caused by this terrible atmosphere I will mention that I have seen polishers spit red three hours after leaving the factory. It looked as though they were spitting blood, but the red was caused by nothing else than the rouge vapor they had been inhaling all day long. Another testimony is given by men's underclothes; I mean the underclothes of those who work upon the baser metals. When these underclothes are washed they turn green, and the longer they are worn the greener they become.

In the days when I was working at the trade the fumes often made me feel so

ill that in spite of trying to hold out I would be compelled to go to the foreman and inform him that I had to go home. When I got out on the street the fresh air would revive me and then I would be ashamed to go home and say I was ill. I wasn't ill. There was nothing the matter except that the fumes choked me.

The exhaust fan remedy is the only one, and if properly applied it will be adequate.

Matters have recently been growing worse in the trade. For instance, when I worked, sixteen years ago, they did not then use acids to remove the "fire," and the man that was finishing was away from the lathe ten hours on a twenty hour job, stoning and scraping the fire away. Today a similar job takes only fifteen hours, but the man is at the lathe all the time. The acid process is a comparatively new wrinkle.

Matters are worse, also, because more of the shops are underground than was the case twenty years ago. Under any conditions the underground rooms would be bad, but, as used for metal polishing, they are simply murder shops.

One would think that such conditions would only have to be exposed to secure instant remedy, but that is not the case. The masters are opposed to exhaust fans because they cause expense to install and operate them, even tho provision has been made to guard against the fans stealing any of the precious dust by making them gather it into boxes. But the masters find that they can preserve all the dust by keeping the windows and doors closed, and the fact that this hastens the murder of their men does not disturb them.

Beautifully finished metal articles look very fine in the shop windows and people delight to buy them, but I doubt that they could possess them with comfort if they realized the unnecessary cost in the lives of their fellow men.

NEW YORK CITY.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Mr. Justice Moody

"A thing for Moody is a job forever."

So went one of the proverbs perpetrated by the Gridiron Club at its fall dinner Saturday night. A few hours before I was chatting with the Attorney-General on the same subject. Now that he has quietly slipped from his department seat into the vacant chair at the Supreme Bench—just a bit, in days, ahead of schedule time—the eyes of the watching world are on him, too, with a touch of wonder as to why he did it and what will come of it.

The Hon. William Henry Moody is beyond cavil a man for the place, and without two chances one may guess why the President appointed him. But there are so many other places at the beck and call of such a man as Moody, that a good straight wonder is why he accepted. Judge Grey urged him for the seat eventually occupied by Justice Holmes. Justice Brown, before and after his retirement, strongly favored Moody as his successor; but Moody himself declared for Knox, then for Taft, before the boomerang came back. Unless the bee buzzes too vigorously, it is a fair guess that he will yet have Taft for a colleague before the Administration day is done.

Moody came into the Cabinet from Boston, which is almost enough to say of any man. He came thru Harvard College, thru the district attorneyship of the Eastern District of Massachusetts and the National House of Representatives. Thru them all his exceptional abilities had been guided by convictions corresponding with the President's. Therefore his call to the Cabinet, from the Navy Department to the Department of Justice, and now to the Supreme Bench. No one who knows him doubts that Moody will carry himself—no other man—to the high seat. Even the crotchety Senate put up far less opposition to his nomination than has met many another.

But Moody himself. You see him,

and at once his face, his voice, his figure and his way with them, suggest to you what a rattling good general he would have made. That is the point. He is fifty-three years old, but except for a few deep character lines about his face you'd never think it. Brown hair curls over his head in a fresh, frostless way. His brown mustache is crisp and crinkly—just enough of it to emphasize the self-reliant lines of his lips, over a chin one glance at which convinces you that Moody is a man to say what he means, and, what is quite different albeit the same, mean what he says.

He is tending just a touch toward the portly, with gathering years, but every line of his solid frame has something athletic about it, something of the brisk, business world, something—why, the first impression of the soldier keeps coming back. You almost hate to think of him buried in a black robe, sitting so still in the great high-backed chair in that awful little room up at the Capitol.

JUSTICE MOODY.

By the will of nature, Justice Moody is a baseball crank. He has seldom had time for the league games in Washington, but when he is out on horseback and comes on a local game, in a vacant lot, he'll sit there watching it for half an hour, and cheer the amateurs in great shape when their play pleases him. His weakness is toward grooming, and there are few who can better display correct tailoring.

Moody does not smile like Bonaparte, but he is democratically cordial and accepts every one as a gentleman till he proves to the contrary. Really the worst thing about him for the Supreme Bench is that he is a bachelor. A judgeship—especially when it's a matter for life—carries one constantly and insidiously away from his fellow men. He loses vibratile sympathy with the soul of humanity, and most of all men needs the family to hold him in touch with the frail but pretty part of life.

John Sharp Williams

There's a man in the National House of Representatives called John Sharp Williams, who advertises himself as the only American who ever studied at Heidelberg who was not a classmate of the German Emperor. Albeit, if the German William is as well posted as they claim, on things American, it is probable that he knows more about Williams than about all of his American classmates bunched.

The world is never tired of keeping tabs on Williams, for something is always sure to happen, and it's well to watch out. Even Speaker Cannon will indorse this sentiment, chary as he is about indorsing any such thing as a sentiment—even if it's his own. Williams came first from Tennessee, then from Mississippi; down where they raise good cotton and good men—when the weather is favorable—and say "Right smart," rain or shine. He has been Democratic floor leader in the House for a good bit back, and Democratic choice for Speaker—if the Democrats could ever get a chance to choose—and hot stuff he has made himself for the Speaker to handle, more times than two or three. Yet Cannon and Williams are "right smart" friends.

Williams is about the only man on earth of whom Uncle Joe is afraid. When Williams gets into his war togs and proceeds to make the minority felt, Speaker Cannon knows that in eternal vigilance lies his only hope for any show of safety. Cannon was born down in North Carolina and knows a good Southerner when he sees one. They are as different as chalk and cheese. They are at sword-points from the fall of the gavel to the motion to adjourn. Then they're chummy as brothers.

Williams is a small man — very small when you compare him with himself — slender, frail and a little deaf besides. Goodness knows what he would be if he were not deaf, for he always hears enough, as it is, to keep himself well ahead of the game of answering back. For scintillating wit, barbed satire and jabbing irony go to Williams when he is roused. He can do it.

He has a fine head that without any help is overlarge for his body, but it is helped, nevertheless, by a shock of curling brown hair — a bit thin at the crown now, and just a touch frosty — that reminds one a little of Mark Twain.

JOHN SHARP WILLIAMS OF MISSISSIPPI.
Photograph copyrighted, 1906, by Clinedinst, Washington, D. C.

Williams is a humorist at heart—crushed, to the best of his ability—and moreover he is one of the best hearted and kindest of men—sometimes. But he is such a combination of nerves and flashlights, so intensely earnest and constant in his efforts to be taken seriously and accomplish more than any other living man, and so southernly sensitive withal, that it is, sometimes, the other thing which greets the inopportune interrupter. He can do it beautifully without half trying. His overhanging forehead and shadowing brows help, masterfully, the manipulation of his eyes and there's not too much of the short brown moustache to blur the straight cut of his lips and the determined set of his square chin.

Williams is one of the most unconscious of men; but if he were self-consciousness personified, before a mirror, he couldn't do better. When he jumps to his feet on the floor, drops his big forehead forward and looks out under his heavy brows and over his gold-rimmed glasses, swings behind him the paper he has apparently been innocently reading and throws out the other hand with a straight index—it is a favorite pose with him—it makes the man at the other end feel like Tom Scott's coon, and while silvern silence hangs on Williams's tongue, waiting for the finger to have full effect, the strongest advocate of bimetalism is tempted to say: "Don't shoot, mister, I'll come down."

I doubt if Williams himself really knows whether the inspiration was an inclination to be a Senator or an overwhelming determination that the fire-spitting Vardaman should not represent his State in that great tribunal. Whatever it was, he entered the field calm, strong, dignified; the personification of sober, conservative sense, appealing to the reason and honest judgment of his people; without a sentence smacking of demagogism, but apparently carrying all before him in a way to insure Mississippi a representative in the next Senate assembling, of whom the State may be distinctly proud and to whom it can point with just pride.

Literature

New Books on Astronomy

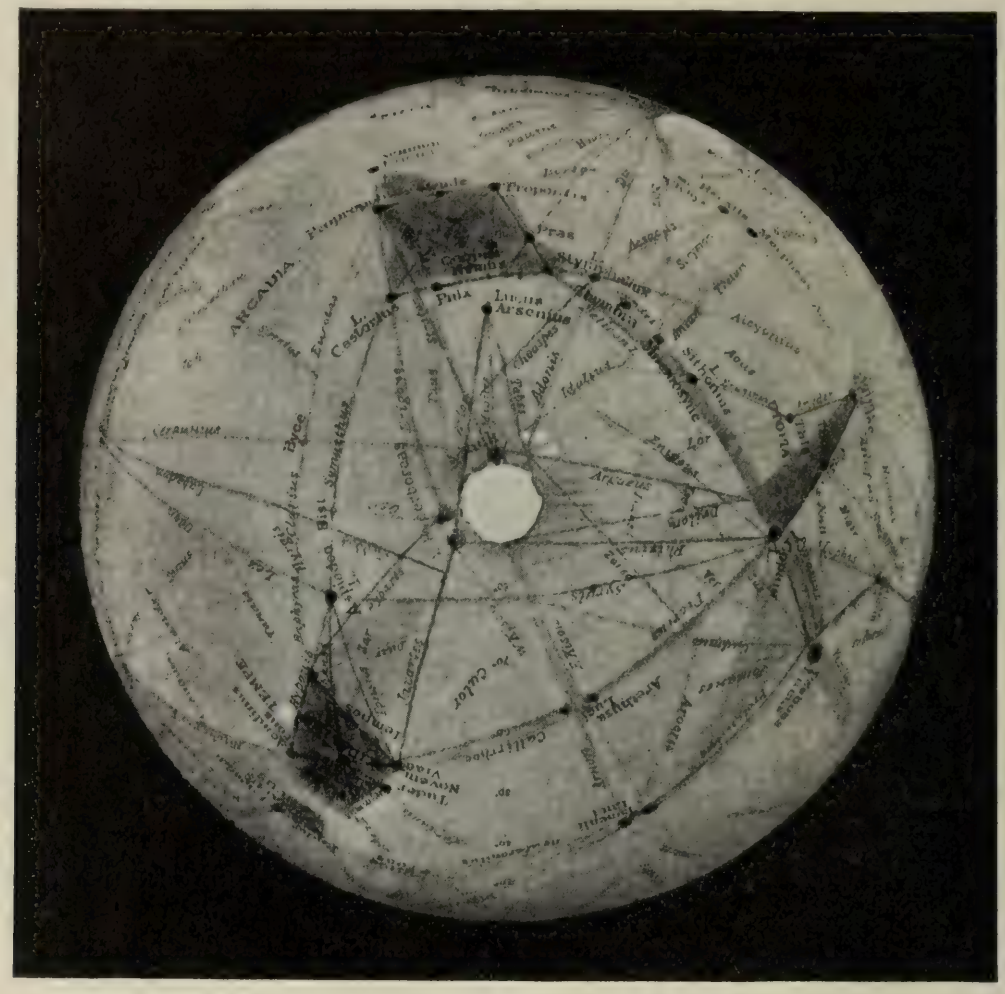
THE frequent appearance of popular books on astronomy indicates a still vigorous interest in the earliest of the sciences. The stars have always kindled the imagination and wakened the sympathy of men interweaving in poetry and myth, and they have roused the questionings of the thinkers. In all earliest history those "knowing the stars" were deemed other and wiser than their fellows.

The impelling of questions involving the earth and stars induced the study of mathematics, and the two sciences moved much together. With the recent advance of knowledge in all directions these have made great advance. Mathematical processes have linked detached observations toward assured conclusion, and the demands for more actual knowledge have led to the perfection and multiplication of appliances.

Yet astronomy cannot in many ways become a popular subject. The swarm of observations which sprang up in this country as a result of the fascinating lectures and addresses of General Ormsby M. Mitchell have mostly passed; they, some of them, gained resources to continue valuable service. The pursuit of astronomy requires instruments of such delicate accuracy and all the surroundings must be so absolutely in harmony with incalculable nicety of sight and of record that there are very few localities suitable. Climate, elevation, temperature, moisture, atmosphere, the "seeing air," the movements on the earth without must all be considered. There can be few astronomical observatories and few real astronomers. Little can be taught in high schools or even colleges; for this work the texts are mostly badly written. The books under consideration are all efforts to make popular processes and conclusions of astronomical work.

The first of these, *Mars and Its Canals*,[1] is by Percival Lowell, an astronomer of high repute, who does his work in his own observatory at Flagstaff, Arizona. Mr. Lowell is one of the fortunate men who, on completing his university training, was not obliged to trundle a barrow or run a motor. He was an enthusiastic student of astronomy and gave to it his work.

Soon after the Italian Schiaparelli announced his discovery of certain markings on the surface of Mars, Mr. Lowell was convinced of the validity of the Italian's views and became his earnest supporter. Mr. Lowell then determined to make for his chief work as thoro, exact, complete examinations of Mars as were possible under present conditions. On the hills of Northern Arizona he found nearly ideal conditions. There he built him an observatory, furnished it with the best obtainable appliances and sat down for a lifework of looking at Mars. Thence, at proper intervals, he informs the world of science how things are on and about Mars. So far as we can see, the accounts of the observation are accurately and fully given. Only one familiar with such observations and their reports would find it easy reading. The mechanical work is very fine; the maps and photographs are excellent. In every way the work is a worthy presentation from a recognized Martian leader. Mr. Lowell's observations have every claim to acceptance. The theories propounded are by no means so clear. There are sometimes presumptions which a broad mind would hesitate to accept. But the work gives as strong statement of his side of the case as can be given.



The second book, *Mars and Its Mystery*,[2] is the outcome of the same influences—in fact the author spent some time at the Lowell Observatory. He is a strong partisan advocate of Mr. Lowell's view and evidently admires him. The accounts of the observations are very fair and there are several good photogravures of prominent terra-martian. There is an excess of positive assertion where the basis seems like that in "Symzonia," an account of an alleged

[1] MARS AND ITS CANALS. *By Percival Lowell.* New York: The Macmillan Co. $2.50.

[2] MARS AND ITS MYSTERY. *By Edward S. Morse.* Boston: Little, Brown & Co. $2.00.

interior crush of the earth reached thru Capt. Symme's Hole at the Earth's North Pole. The chapters on the reciprocal considerations of Martians and humans are rather cumbrous. Fiction has adopted Mars as ground for fantasy. Mars is not as good as Zenda or Graustark because the environment becomes grotesque; it may be better than the moon, as the greater distance might soften the incongruities. After reading and the other "go on," the dictum of effort and hope. The papers in the volume have already appeared as magazine articles or published addresses, and a meager knowledge of great definitions and general processes will suffice for a good understanding.

There are lines where in human effort searching is as futile as the fantastic search for the "Identical" in George Meredith's "Shaving of Shagpat." It is

MAP OF THE NORTH POLAR CAP OF MARS SHOWING "CANALS."
From Lowell's "Mars and Its Canals." Macmillan.

Mars and Its Canals the other is—boyish enthusiasm—and a book.

The third book, *Side Lights on Astronomy*,[3] overlooks the entire field. Dr. Newcomb holds without general question a place with the foremost mathematicians and astronomers of his generation. He has so considered the whole matter that he may write of the insoluble and the unsolved; the dictum of the "thus far" not of despair but of content well for men to recognize these lines. It is well also to consider the fields of questioning where conditions yet unknown may solve the problem yet unsolved. Dr. Newcomb's papers are good for any who think that there may be recognition of the inevitable "stop!" and an eager acceptance of the call "go on." Dr. Newcomb's clear generalization of the progress of astronomy has great interest and reveals some romance in the work of the "farseekers" which is lost in the tracing of the details.

Henry Northcote

MR. SNAITH is either a madman or a new kind of a genius. He has written one of the most powerful books of the year,* and he has deliberately cut it off from being a great book by founding it upon the egotism of one long-shanked, big-headed young man. Now, we all know that Mr. Kipling has based all of his writings upon the egotism of a nation, of the British Empire, and that is what lends an almost solemn prestige to his work. But when Mr. Snaith impacts the egotism of a whole generation in one half-starved young tyro of the "Old Bailey" Court, he challenges the humor rather than the admiration of his readers. The point is that Snaith does not appear to care what he challenges any more than Northcote cared when he stood up and squeezed an acquittal out of judge and jury for one of the most abandoned criminals who ever stood in the docks.

The scene opens in an attic at the top of Shepherd Inn, and it does not change till the reader has been fascinated by the strength, horror, beauty and brilliance of the mind and body of this strange young man who sits there in the last extremity of poverty between his genie and his memories of that august, unlovely woman of impenetrable simplicity and indomitable courage who had given him birth. The whole period of time covered by the story is less than four days. In the first one we find Northcote holding a brief by a lucky chance and by main strength to defend a murderess. The egotism and ferocity with which he antagonizes the distinguished lawyer who gives it to him are notable features of the story. The reader begins to suspect that he is a magnificent madman, and if an absolute lack of modesty in mind or manner is an evidence of madness, no one can defend Northcote from the charge of insanity.

The next day he has held a mysterious conversation with the prisoner, suffered a frightful reaction from his own joyous intellectual excitement, and he has prepared himself for the defense. And the third day finds him in court. Incidentally, the author gives a vivid picture of the whole British intelligence so far as legal matters go, its dignity, conservatism, and Northcote betrays its secret debauchery in his cross-examination of the witness. But bare words can give no impression of the dramatic effects created out of this commonplace material. Northcote summons his genie. He addresses the jury in language that is the gaunt skeleton of huge ideas. He will not be denied. He makes his plea upon an impregnable basis of mercy. He terrifies the jury into giving him the verdict.

The next day finds him distrait, humiliated, conscience stricken by his victory. He realizes that he has used the noblest means to thwart justice, that he has saved a criminal by preying upon the godlikeness in the minds of her judges. At this juncture the liberated murderess herself enters, and now the story takes on a new and astonishing significance. It would not be fair to betray the sequel here, but the author has achieved it with some of the naked, terrible courage which made the old tragedies memorable. The average writer of fiction caters to the reader's sensibilities or to some convention or polite prejudice, usually, which mitigates the sequel, makes it easy by some miracle. But in this book nobody's feelings are consulted. Northcote is an obsession who steps like a fire-winged god to a magnificently adequate damnation.

* HENRY NORTHCOTE. By J. C. Snaith. Boston: Herbert B. Turner & Co. $1.50.

National Control of Corporations

PRESIDENT ROOSEVELT'S plan of solving the "trust" problem of compelling corporations engaged in interstate and foreign commerce to incorporate under Federal statutes appears not to be without constitutional warrant. At least from the recent study of corporation control* by Mr. Frank Hendrick, of the New York Bar, set forth with reference to over two thousand cases involving questions of constitutional law, we are led to believe that the only regulation of private corporations properly permitted

* THE POWER TO REGULATE CORPORATIONS AND COMMERCE. *By Frank Hendrick.* New York: G. P. Putnam's Sons. Pp. lxxii+515. $4.00.

to the States is the exercise of the police power and the taxing power. "The true legal home of every corporation formed under American law is the Nation." According to Mr. Hendrick's opinion, the present system of State incorporation has as its chief function the promotion of piratical corporations formed outside the very State or States in which corporations are intended to act. "The modern corporation is not an octopus, but a beast of forty-five heads, each self-sufficient and sufficient to the whole body, so that all forty-five must be killed at once." Yet as far as legality is concerned, the grant of bare corporate capacity by a State creates nothing, except when a public franchise is granted. Constitutionally, the State does not possess a more extensive privilege of creating corporations than the Nation. The right of incorporation is the oldest and most precious right known to civilization and has its basis in the common law.

The mooted question whether there exists a body of "unwritten" constitutional principles that can be properly called the "Common Law of the United States" is discussed at some length by the author, who is decidedly of the opinion that a "common law" is required, not only as a basis of remedy for the violation of rights guaranteed by the Constitution of the United States, but also as a basis of jurisdiction for United States courts. Publicists as a whole will not readily assent to this theory. The Supreme Court of the United States has adhered to the principle that the Federal Government is a government of limited powers. It can only exercise the rights and privileges that are expressly granted to it by the Constitution, and that can be implied as being "necessary and proper" for the execution of its granted powers. Unless the "comprehensive body of principles" which Mr. Hendrick designates as the "unwritten constitution" and the "common law" of the United States are within the scope of the implied powers of the written Constitution, they are legally ineffective and void. Congress, therefore, when acting as the legislative body of the United States, can create only such corporations as are "necessary and proper" to the exercise of powers granted by the Constitution. It is merely as a means and not as an end that Congress may create corporations. Whether under present conditions, Federal incorporation of companies engaged in interstate commerce is "necessary and proper" to the exercise of Congressional control over commerce between the States can be determined in the last instance only by the Supreme Court of the United States.

Most writers on Constitutional Law will agree with the contention of Mr. Hendrick that the corporation problem cannot be dealt with effectively by the States separately. It is practically impossible for one State to control or regulate the capacity or status of corporations created by a sister State. Since corporations are persons within the meaning of the Fourteenth Amendment, it is a constitutional violation for one State to exclude a corporation created by another State from exercising a private calling. An ouster is merely from the exercise of franchises in the State, and "the only connection between a franchise and a State lies in the fact that those who enjoy the franchise are by *contract with the State* enjoying State property." Undoubtedly, incorporation under Federal laws of companies transacting business in more than one State would do much toward remedying the inability of the States to cope with the corporation problem. To legally accomplish this end, however, an additional amendment to the Constitution may be necessary.

The Plow-Woman. By Eleanor Gates. New York: McClure, Phillips & Co. $1.50.

The author of this story should be able to earn a handsome income drawing natural scenery in words for other writers who do not know how. There is distinction, refreshment and reality about her descriptions of the Dakota prairie, an original charm also about Dallas, the plow-woman, so long as she follows the lean mule team in the brown furrow, but that is the best that can be said. The incidents which go to make up the tale have served often in prairie romances already. Even the Indian fighting is a kind of plagiarism upon what it once was. However, it may be that these are the only things that can possibly happen in such a story, and that we are more exacting about Indians than in our youthful

days when we read Leatherstocking tales. The only fair thing to do is for all prospective readers to buy the book and see for themselves if the redskins are too puerilely near civilization to make good warriors, or if our taste has been so vitiated that we no longer enjoy these simple midnight assaults upon a defenseless white settlement, with a barrack full of United States soldiers next door. Possibly this is where the charm is broken. We cannot get the shivers because we know the United States troops will interfere before the babes are brained and before the golden-haired, pale-faced maiden can be snatched from the arms of her family. The trouble is that our Government does not give sufficient latitude to the Indians and to the imagination now to enable any writer to produce any of those old-fashioned blood-curdling illusions. And, of course, it is all for the best; we cannot have people scalped in the interest of fiction. Still there is something savage in us all which has not been satisfied by a reality in a very long time, and there is no telling how it will end.

From Libau to Tsushima. A Narrative of the Voyage of Admiral Rojestvensky's Fleet to Eastern Seas. By the late Eugene S. Politovsky. New York: E. P. Dutton & Co. $1.50.

This is the personal diary written in letters to his wife by the engineer-in-chief of the squadron who was killed in the battle of the Sea of Japan. It presents with greater vividness than any formal history can the life on the Russian vessels during their seven months' cruise from the Baltic around Africa, the long, tedious stay at Madagascar and Kamranh Bay and the preparations for the last fatal fight. We understand for the first time the causes of the delay and the disaster; the constant dread of Japanese torpedo attacks which made them fire upon the Dogger Bank fishermen and hit their own ships; the ignorance of the officers and the incompetency of the men; the frequent breaking down of one ship after another; the monotony and worry which drove men to mutiny and insanity, and all the privations and inconveniences, the lack of food and water and ice in the tropics, the officers' cabins filled with coal and the rats gnawing the toes of the sleepers on the floor. It explains many things that a year ago we were wondering about.

Jesus. By W. Bousset. Translated by Janet Penrose Trevelyan. Edited by Rev. W. D. Morrison, LL.D. New York: G. P. Putnam's Sons. $1.25.

THE INDEPENDENT has several times called attention to the excellent series of *Religionsgeschichtliche Volksbücher*, which aim to present to intelligent laymen in a concise and interesting way the results of the recent studies of liberal German theologians in the higher criticism of the Bible and the history of religion. These little books are written by the very best scholars in clear, succinct style, and have been sold broadcast over Germany at from ten to twenty cents each, exciting both opposition and commendation in a notable degree. One of the best of them is the sketch of the ministry and teaching of Jesus by Professor Bousset, of Göttingen, who is a recognized authority on Jewish religion in the time of Christ, and this is the first of the series to be translated. The translation is faithful and readable, and the result is a clear presentation of the character of Jesus, his relation to his contemporaries and his ethical and religious teaching, as seen in the light of the most thoro and able criticism of the gospels and of investigations in the religious history of New Testament times. The book presupposes some such knowledge of literary criticism of the gospels as is offered by Wernle's book on the "Sources of the Life of Jesus," its companion in the series, and it is to be hoped that this also will soon be done into English. Without such preliminary study Professor Bousset's conclusions may often appear arbitrary, yet many of them will carry conviction at first reading by their manifest good sense. This book was written before Professor Schmidt's "Prophet of Nazareth," but it contains a good summary of the reasons for not accepting the Cornell professor's view that Jesus did regard himself as the Messiah. Bousset holds to the reliableness of the report both of the scene at Cæsarea Philippi, where Peter confesses Jesus as the Christ, and of the in-

scription over the cross. On the whole the work is not extremely radical: it seeks to be constructive, is written in good spirit, and is valuable both as showing what the younger generation of German critics are doing and as presenting an unusually graphic account of what a scientific historian of religious and Christian sympathies believes concerning Jesus of Nazareth.

Literary Notes

....Mr. Frederick L. Colver, for many years prominent in the publishing business, has purchased an interest in the *Success Magazine*. He has been elected secretary and director of The Success Company.

....The Rev. Hugh Black, who has recently left the pulpit of Free St. George's, Edinburgh, to accept a professorship in Union Theological Seminary, New York, sends out a volume of "Edinburgh Sermons," entitled *Listening to God*. (New York: Fleming H. Revell Company. $1.25.)

....A good manual for class or individual study of the Apostolic Age is Prof. George Holley Gilbert's *Short History of Christianity in the Apostolic Age*. (Chicago: The University of Chicago Press. $1.00.) The volume is a companion to the "Life of Christ," by Professors Burton and Mathews.

....Those who like to mingle a little good literature with their daily work or recreation will find *Traveler's Joy* very convenient. It is a very light weight volume, that is, physically, and contains a large number of choice and unhackeneyed quotations in prose and verse, just long enough to fill in the time while waiting for a train, if it is not very late. [E. P. Dutton & Co., N. Y. $1.25.]

....The editors of "His Life," a booklet giving the Gospel narrative of the life of Christ in the words of the Scripture, which has reached a circulation of 120,000, have also prepared two other booklets which complete the New Testament series, entitled *His Friends* and *His Great Apostle*. Paper, 15c.; cloth, 25c. (Hope Publishing Company. Chicago and New York.)

....We commend to all teachers the Second Bulletin of the Bureau of Education, Washington, which is to be obtained free. It is an abstract of the report of the Royal Prussian commission, which made a study of our system of education in 1906; and criticism and praise are frankly assigned. The report covers the courses of study in this country from the kindergarten to the university and the institute of technology.

....*The Administration of an Institutional Church*, by George Hodges and John Reichert, is a detailed account of the methods which have been in operation in St. George's Church, New York, during the rectorship of Dr. Rainsford. Few have any knowledge of the amount of business necessary to the conduct of a large city parish, especially one which does institutional work. This book describes the methods which have been found to work well. (New York: Harper & Bros. $3.00.)

....*McClure's Magazine* publishes in the January number the first instalment of a life of Mary G. Baker Eddy. Those of our readers who thought we were too lenient to Christian Science, when in an editorial accompanying Mrs. Eddy's article in our issue of November 22d, we commended the marked devotion and reputable character of her followers, will perhaps find this sharply critical life more to their taste. The discussion promises to be an interesting one, for the Christian Scientists have been preparing for the fight and have fired their first shot by producing affidavits to prove that the portrait used by McClure is not Mrs. Eddy, but another woman. Our readers will find this article absorbingly interesting.

Pebbles

THE PARSON—When I became a minister, I gave up playing the piano.

The Elder—Then you became an expounder in the double sense of the word, didn't you?—*Yonkers Statesman.*

MOTHER—Why, Bobbie, what do you mean by making baby eat that yeast cake?

Bobbie—Boo-hoo, he swallowed my fifty cent piece, and I'm trying to raise the dough.—*Cornell Widow.*

"AH," said the enthusiastic friend, "your father-in-law gave you a check for $10,000, I understand."

"Yes," responded the young man who had married the daughter of a trust magnate, "but, confound him, he made me give him a secret rebate."—*Houston Chronicle.*

A LOVE SONG OF THE STATES.

OH, won't you come and stay with ME.,
And bear me no ILL. will?
I've lots of shares of copper ORE.,
And riches to your fill.

Ah, lovely MISS., just marry me!
LA.! how pleased I would be!
I'd be so GA. I'd never need
To visit an MD.

I'd CONN. new ways of pleasing you;
To know you're ever by
Would make me feel as ALA. mode
As Kaiser Bill, R. I.

Then let me ask your PA.'s consent
As soon as you see fit,
And all our married life, O. love,
Be sure you shall be I. T.

A TENN. you'll have at any time,
And lest my love you doubt,
We'll dine each day at a hotel,
And put our WASH. all out.

—*Baltimore American.*

Editorials

What Has France Done?

THE separation of church and state in France marks an epoch in modern history. A fundamental principle of the French Revolution, which Napoleon I had set aside, has been embodied again in the laws of the republic. France has declared for the equality of all religious sects before the law.

This event in France is the culmination of an age-long struggle for religious liberty, for national autonomy, and for the triumph of republican government.

For more than a hundred years Protestantism and other religions have been tolerated in France; but the stain of the massacre of St. Bartholemew and of the revocation of the Edict of Nantes were not fully removed. Catholicism was a protected and a privileged religion. The Government took a part in its administration and gave it its prestige. The new law means that all sects and all religions shall stand upon the same plane of equality. It means, too, that they shall not be supported by public money derived from public taxation, and that politics in the interior administration of the state shall not be tied to ecclesiasticism. This in itself is a significant step. It means more freedom in religion and more freedom in politics.

But the other aspects of this event are still more important. France has settled once for all the question of her national independence, the right of her own people thru their duly elected representatives, to make laws for themselves, free from the dictation of any foreign power. In settling this question France has helped Christendom to settle another; it has dissolved its alliance with Rome, refused to bend the knee to papal authority, and has extinguished almost the last ember of the pernicious doctrine of the temporal sovereignity of the head of the Church of Rome. No doctrine in history has ever been a greater obstacle to the spiritual advancement of the Christian religion, and to the development of free, independent and Republican government.

One can only understand the situation in France by getting a long perspective thru the pathways of history which lead to it.

When Constantine turned the cross into a scepter and a sword, he laid the foundation of the doctrine of temporal sovereignty, which grew out of the union of State and Church. When in 1070 Hildebrand (Gregory VII) made Henry IV of Germany kneel before him at Canossa, papal absolutism in Europe reached the hight of its authority. The Pope and his bishops reigned supreme. The crown bowed before the miter and the laity were the vassals of the hierarchy.

A reaction against this absolutism followed, and attempts were made to limit the authority of the Pope by councils which were an assertion of the principle of republican government. The Popes refused to accept their decrees. But French nationality and independence found a champion in Charles VII, who in the Pragmatic Sanction in 1438 laid down a principle which the Parliament of France has just reaffirmed and extended. That famous document, whose wisdom more than four and a half centuries of history have vindicated, affirmed that the authority of councils is superior to the Pope; that the Holy See should be obliged to convene them annually; that the right of appeal to the Pope should be limited, and that the bulls of the Pope should not be published in France until they had the approbation of the King. It reduced also the Papal revenue. It was a sad day for France, when, after a bitter struggle, this law, which had been in force about eighty years, was abolished and a Concordat entered into with the Pope by Francis I. The struggles which followed for a time were waged not so much between the people and the Pope as between the kings and the Pope to see who should be uppermost. England under Henry VIII cut loose from the Pope, and maintains a national church to this day. France under Louis XIV, in 1682, and thru the influence of Bossuet, reasserted the principle of the Pragmatic Sanction, declaring that the authority of the Holy See was impotent

against the power of the Gallican Church, and that the judgments of the Pope might be revised by the universal consent of the Church. That was not the logic of a republic, but of an absolute monarchy, which revoked the Edict of Nantes and accorded no liberty to Protestants.

In the sanguinary storm of the French Revolution, monarchical government, both royal and papal, was swept away. A separate Catholic Church was at first set up in France, the property of the Church was declared to be subject to the common law, and without the consent of Rome the estates and edifices of the Church in France were placed at the disposition of the nation. Then the Revolution went further, and in 1794 the complete separation of State and Church was declared, and also liberty of worship. Thus France wrote in blood more than a century ago the law which in milder ink and with more moderation and justice it has rewritten today.

Then came that unparalleled genius, reformer and iconoclast, legislist and outlaw, Napoleon I, who in 1801 concluded the Concordat with the Pope which has remained the religious law of France until its dissolution by the Parliament of France in 1905. Napoleon, as First Consul, was rapidly striding toward the throne; he needed the Pope to help him there. With pietistic zeal Napoleon declared that only the Catholic religion could save France from disorder and storms. Yet the Papal legate, when he came to treat with Napoleon, found that he could drive a hard bargain. Napoleon's ambition forbade him to concede too much to the head of the Church, and he feared that the French people would not consent to abandon too much that had been gained by the Revolution. The Papal Legate fought hard to secure the recognition of the Roman Catholic religion as the only religion or the dominant religion; but Napoleon would only concede that it should be a privileged or protected religion. The provision of the old Concordat of Francis I that the Government should nominate the bishops to be instituted by the Pope was revived. The free exercise of worship was to be in conformity "with such regulations of the police as the Government may deem necessary for public tranquillity." The bishops nominated the *curés*, but their selection was to be "only of persons acceptable to the Government."

In view of recent discussions as to the property, the provisions of the Concordat are important. Articles 12 and 13 provided:

> All metropolitan churches, cathedrals, parochial residences or other buildings for religious use which have not been confiscated shall be placed at the disposal of the bishops.
>
> His Holiness, for the peace, welfare, and happy establishment of the Catholic religion, declares that neither he nor his successors shall molest in any way the purchasers of confiscated Church property. . . .

Article 14 read:

> The Government assures a proper salary to the bishops and pastors whose dioceses shall be included in the rearrangement.

The autonomy of the French Government was protected by several provisions attached to the Concordat and called Organic Articles. To these the Pope yielded without approval. It was provided that no documents emanating from the Court of Rome should be published or circulated unless authorized by the Government; that the decrees of synods outside of France should be examined by the Government before publication in France; and that no synod or council should be held without express permission of the Government. Appeals were taken, not to the Pope, but to the Council of State.

For more than a hundred years the Catholic Church in France has been living under this arrangement, in the enjoyment of special but also limited privileges.

What now has France done by the new Separation Law? Published in full it would fill several pages of THE INDEPENDENT. We have already given a full synopsis and can now only restate its fundamental provisions. It guarantees freedom of public worship, subject only to restrictions of public order.

> "The republic does not recognize or support by salaries or subsidies any religion."

The State retains the title of all church edifices and other buildings which were placed at the disposition of the nation at the time of the Revolution. It grants the free use of these to religious bodies or associations, and designates how such

associations shall be legally formed. The real and personal property of the different denominations, whether Roman Catholic or Protestant, after having been properly inventoried, is placed under the control likewise of these associations, corresponding to the boards of trustees or vestries in our own land. These associations must "conform to the regulations of the general organization of the religious worship of which they propose to assure the exercise." It would thus be impossible for the Jews to take a Protestant Church, or for the Protestants to take a Catholic cathedral. Disputes as to the rights of two parties practicing the same religion are to be settled by judicial authority. Ministers of religion who have completed their sixtieth year and who have served for thirty years receive an annual pension for life equal to three-quarters of their salary; those above forty-five who have served twenty years receive a life pension equal to half of their salary. Provision is made for the gradual reduction of the salaries of others during a period of four years. Other provisions are made in the same liberal and considerate spirit.

The Protestant bodies of France have promptly accepted the law and proceeded to organize under it, tho, small in numbers, they have no such pecuniary resources as the Catholics. The Jews have accepted it and also the Greek Church. Why not the Catholics? The answer is, because they are not Catholic, but Roman Catholic. As Frenchmen they were prepared to accept it. Some of the most eminent Catholics in France, in a formal communication, urged the bishops to assent to it. The bishops in council decided by a strong majority of twenty-two votes to do so. They proposed a form of organization which they thought canonical and which the Government recognized as legal. It was pointed out by prominent Catholics that the French law was much more liberal to Catholics than the German law. When the Pope heard this he is reported to have said of the bishops: "They acted like Frenchmen." Then the bishops found that in spite of the fact that they had taken an oath to obey the laws of France they must first ask Rome whether or not they should obey them. What was the Pope's answer? The ground and basis of all his opposition is stated in his encyclical of February: "*That the State must be separated from the Church is a thesis absolutely false, a most pernicious error.*" He declares it "a great injustice to God and a negation of the supernatural order."

This argument has not convinced the French people, for they have overwhelmingly sustained the Government; but it has set many people to doubting not only the infallibility, but the practical wisdom of the Holy See. It has served to draw with unmistakable clearness the supreme issue. It is an issue between the autonomy of France and the temporal sovereignty of the Pope. No minor eddies of discussion, no dust raised in the stir of debate, can obscure the main contention. Nor can there be any doubt which will triumph. The autonomy of France is safe; the republic is moving forward to its righteous goal of Liberty, Equality, Fraternity. As for the dogma of Papal sovereignty its doom was long since pronounced by the nations of Christendom, and in his encyclicals Pope Pius X is but chanting the requiem of the ghost of an unburied fiction.

Land Frauds and Swollen Fortunes

THE President is "gravely concerned," he says, "at the prevalence of fraud" under the present provisions of the public land laws. He would have the Timber and Stone act repealed because "the effect of it is to turn over the public timber lands to great corporations." The Desert Land act should be radically amended because it "results so frequently in fraud and so comparatively seldom in making homes on the land." It assists "large holders to get control of land and water on the public domain by indefensible means." And it is the "large holders" and the "speculators," far more often than the honest settler, that profit by the commutation clause of the Homestead act.

This story of frauds under the land laws is an old one. It has been told for many years, and for as many years it has

been true. There are unwise provisions of some of these laws which, as the President says, put a premium on fraud, and public sentiment in certain parts of the country has not condemned violations of them. But a majority of the frauds, and the most profitable of them, have been without any excuse whatever. They have been nothing short of stealing, for the benefit of wealthy and unscrupulous men, or of great corporations ruled by such men; and the theft has been accomplished by means of the suborned perjury of poor men who were willing to help the great thieves for a few dollars in hand.

If one could find in the record of land stealing some evidence that the land was occasionally stolen by poor and struggling settlers for their own use, such offenses, while still quite objectionable, would be regarded as less harmful to the public interest than those with which that record is almost exclusively filled. As a rule, however, the lands wrongfully acquired have gone into the possession of the rich and powerful, and possession of them has in many instances been used to the disadvantage, and even for the oppression, of the common people.

Influential politicians, Senators (Mr. Mitchell was one of them), Representatives, and local land officers (several of whom are now awaiting trial), have taken part in the robbery. It was in the face of annoying and sometimes powerful opposition that Secretary Hitchcock proceeded to enforce the criminal laws against such offenders and procured 490 indictments, which have already yielded eighty-nine convictions, 401 remaining to be tried. But conditions have not been exceptionally bad during his term of office. There was warrant for a host of indictments before his term began.

Mr. Roosevelt perceives, of course, that some of those "swollen fortunes," the perpetuation of which he desires to prevent, either had their origin in the stealing of public lands or, from comparatively small beginnings, by reason of such stealing took on what he has called "an unhealthy size." In his messages he frequently speaks of the misuse of great wealth, but commonly lets the prosecutions instituted under his direction speak for him concerning the acquisition of great wealth by unlawful or unjust practices. For example, in his war upon railroad freight rebating by suggested legislation and by prosecution he has attacked a fruitful source of private wealth. There are great fortunes which were built up largely by means of freight rebates and by railway favoritism in other forms, all against public policy and also unlawful. With rebating has been allied the stealing of public land, especially lands containing coal, and also the increase of coal profits by combination and conspiracy.

This is shown by the indictments announced two weeks ago in Salt Lake City and by testimony taken by the Interstate Commerce Commission in that place and in Denver. The Union Pacific Railroad Company, the Oregon Short Line, an officer of the latter company, the Utah Fuel Company (owned by the Denver & Rio Grande Railroad Company) and eight of its officers or agents were indicted. All these defendants are to be tried for offenses in connection with the coal trade, and the nine last mentioned for acquiring great tracts of public coal land by fraud and the subornation of perjury.

Before the Commission at Denver it was shown that practically all the coal mined in Utah was produced by this coal company which the Denver & Rio Grande owns; that the coal company had for years been favored by unlawful preferential freight rates; that from 80 to 90 per cent. of the coal mined in Colorado was produced by the Colorado Fuel & Iron Company, which had enjoyed freight rebates or preferences amounting to great sums every year; and that several directors of this coal company were also directors of the railroad company by which the favors were granted.

The Government has brought suits to recover a part of the coal land which has been developed in these ways. It is asserted that additional indictments will be announced after the holidays. And the testimony taken suggested that investigation of the Union Pacific system which is soon to be made.

It is charged, by indictments and otherwise, that the coal supply of the mountain States, which is controlled by two great railway systems, is taken mainly from land which was acquired from the Government and the people by fraud, and that a coal monopoly has been maintained and the profits of the subsidiary mining companies made large by unlawful freight rebates. Among the officers and directors of the controlling companies are the owners or representatives of some of our most prominent "swollen fortunes."

Mr. Roosevelt would have the Government keep its title to such coal lands as it still owns. He is right. And his more recent recommendations as to the repeal or amendment of certain general land laws should be embodied in new legislation at the present session of Congress.

Breakfast Foods

To change the food habits of a nation is almost as difficult as to change its language. A race clings as tenaciously to its diet as to its deities. So long as cooking was a household art handed down from mother to daughter this culinary conservatism was inevitable. But now the factory system has robbed the shrine of Vesta of its traditional prerogatives. Cooking is done outside of the home and digesting outside of the stomach. To teach a million housewives new tricks is practically impossible, but as soon as the preparation of any kind of food passes into the hands of a few skilled and inventive individuals it begins to make progress. To say that "the demand creates the supply" is to put the cart before the horse. The demand does not create the supply, it is the supply that creates the demand.

A good example of this is the introduction of prepared cereal foods. It cannot be said that twenty years ago the people of the United States began suddenly to hanker after a lot of fancy foods that nobody had ever heard of. Not at all. It was simply that a few progressive manufacturers discovered that it was possible to create an appetite for a new food by advertising. On the billboards and in the magazines kindly old gentlemen, pretty maidens and chubby children conspired to induce us to partake of their diet and so to share in their health, beauty and benevolence. By these methods the manufacturers of cereal products exerted an important influence on American life and letters. For some years periodical literature was fed on breakfast foods, just as now it is run by automobiles.

Of course this dietary revolution—for the introduction of the fancy cereals is nothing less—has cost millions, but it could hardly have been accomplished in any cheaper way. A large proportion of our population has been converted to the breakfast food habit in a marvelously short time. Of course they have paid for their conversion, but it is quite proper that they should. The gain in health, time and money by the partial substitution of convenient and nutritious cereals for the more or less indigestible and time-consuming products on which we used to feed is incalculable. The revolution has extended to other meals. We see the lunch counters of the downtown district stacked high with pictured packages where once there was only to be found "sinkers," "wedges" and that popular comestible invented by Sir John Montagu, Earl of Sandwich, to stay him during long Parliamentary sessions. One of the chief advantages of the new cereals from a hygienic standpoint is undoubtedly that one is not liable to overeat if he confines his diet to them.

Now that these new forms of cereals have become deservedly popular it will do no harm to admit that they were mostly introduced under false pretenses. Like all other reforms the dawn was more roseate than the light of the common day it ushered in. We have said that this reform of our food habits was worth all the money it cost, but to say that it was worth all the prevarication it cost would subject us to the charge of jesuitry. However, it will be safe to say that no one has found a way of influencing such a large mass of people in so short a time without the use of exaggeration to at least as great an extent as the manufacturers of the fancy cereals. A certain degree of gratitude is accordingly due them, since they have thus contributed to the welfare of the

people by the sacrifice of their personal veracity.

We have spoken of this dietary revolution as tho it were merely a change of belief, like the increase in the Republican vote during the same period. It is not so much that the new foods are better than the old as that people have been persuaded to eat them. After all, no cereal food has been invented that is more nutritious, digestible and cheap than white bread made from fine patent flour. This is not a matter of individual opinion, but is proved by the extensive and thoro experiments and analyses made by the Department of Agriculture and the State Experiment Stations. For example, let us quote the figures showing what percentage of the protein contained in different forms of cereals is digested, since protein, which includes all the nitrogenous matter, is the most valuable of the components of food:

	Per cent. digestible protein.
White bread	88.0
Entire-wheat bread	82.0
Graham bread	76.0
Wheat products, rolled, partly cooked.	83.1
Wheat products, malted, ready to eat.	74.7
Wheat products, undecorticated	72.7
Oat products	77.9
Rice products	83.0
Corn products	73.9

In beefsteak about 98 per cent. of the protein is digestible.

It will be seen from this table that the retention of the bran and germ, wholly or in part, as is done in the Graham and entire-wheat flour and in the undecorticated breakfast food, really reduces the amount of available protein altho the chemical analyses of such products show a higher percentage of protein than the patent flour. If, then, a man likes old-fashioned bread and milk or crackers and milk better than any new-fangled notions he can eat it with a good conscience regardless of the fact that beside the plates of the other members of the family stand packages of Foodine, Expurgated Wheat and Bath Mitts.

In short all of the prepared cereal foods are good enough for anybody and there is not such great difference between them as their advertising and their price would indicate. The cereals that cost three or five cents a pound are, if properly cooked, as nutritious as those that cost 12½ or 15 cents. The frugal housewife may make her own breakfast food if she chooses. One of the most deservedly popular brands can be prepared, or to speak more cautiously satisfactorily imitated, by soaking waste bread in a little watered molasses or glucose syrup, drying until hard and grinding in a coffee-mill. This is as good as the "store brand" that costs 15 cents a package but whether it is economical or not depends on the value of time and fuel, and the capacity of the family for bread pudding. To complete the utilization of household by-products, picture postals and Christmas cards may be pasted on the package, and any surplus wit may be devoted to inventing a melodious name for the family cereal.

The great advantage of the new cereals is that they are made in such variety of form and flavor that all tastes can be suited. The package is very convenient and the fact that they are ready or nearly ready for the table is an important consideration in some cases. It should be noted, however, that most of them need longer cooking than is indicated in the directions, and the consumer should not neglect to digest them even tho they are labeled "pre-digested." The breakfast foods as a class are free from adulteration and dirt; in fact they are far superior in purity to the product of the old water-wheel mill and the ordinary kitchen.

Amending the Constitution

THE Constitution of the United States, constructed by wise men a hundred and twenty years ago, is not so sacred that it cannot be touched by wiser men to-day. It had hardly been finished by its first framers before a big bunch of amendments was added to it by the dissatisfied States, and other amendments have followed. Changing conditions require new amendments, as when the conclusion of the Civil War compelled important additions. Other amendments have often been proposed since then, but it is not easy to set the complicated machinery at work. There are two ways of amending the Constitution; one is that such amendments shall be proposed by two-thirds of

both houses of Congress, and then ratified by the legislatures of three-fourths of the States. The other way is by a call by two-thirds of the legislatures of the States for a constitutional convention, the conclusions of which shall be ratified by conventions in three-fourths of the States. Such a national constitutional convention must then be called by thirty States, and its action must be approved by thirty-four States. Neither method is easy, nor can a change be quickly made. As we have previously said, there are disadvantages in a written constitution, and Great Britain gets along very well without any. What it calls the British Constitution is the successive acts of its Parliament.

Secretary Root was guilty of no political crime when he discussed in his late speech the possible necessity of amendments. To be sure, the point of his speech was to warn the several States that they should make such common legislation as would make constitutional changes unnecessary. Thus, to take a possible illustration, if South Dakota should have a marriage and divorce law which offended the moral sense of the rest of the country, it would provoke an amendment to the Constitution which should put marriage laws under the control of Congress. Or, to take another possible example, if New Jersey should selfishly make a law for the organization of corporations which should work injuriously to other States, such States would be provoked to coerce New Jersey by a constitutional amendment.

There is another less desirable way of reaching the needed end. When it is so difficult to amend, it becomes at times necessary to construe, by decision of the Supreme Court; and that construction may be somewhat forced and stretched, and that in all honesty. There are general provisions in the Constitution which may quite properly be invoked to cover conditions never thought of when the Constitution was made in 1787. No one could then have thought of the conditions which have required legislation as to interstate traffic. The Interstate Commission is working under a construction of the Constitution never in the thought of its makers. A corporation has its home in New York or New Jersey, and Congress, by Federal law, tells it what it shall charge for transportation of passengers or freight, and the Supreme Court declares the law constitutional.

This comes from utterly changed conditions. Railroads have made the difference. State lines are obliterated. About the time the Constitution was made a Mr. Hinman, whose grandfather was from Derby, England, left Derby, Conn., to settle Derby, Vt. It took seventeen days to convey his household goods on ox-sleds to his new home. Now we rush across a State in a few hours. Conditions have changed even since Daniel Webster said that if Oregon should ever have the population to make a State, a member elected could not get to Washington before Congress had adjourned. Railroads, telegraphy, telephones and our rapid postal system, which pay no regard to State lines, make us think less of State interests, while we magnify the interests and rights of the nation.

Accordingly the increased centralization of power is necessary and right. The States cannot do what once they could, because all traffic and commerce crosses the State lines. The products of a State are no longer consumed within its limits. The interests of no State can be segregated. If Illinois should make a law which would cripple the railroads of that State, it would cripple all the other States. There must be either more power somehow given to the Federal Government, or there must be common action by the several States. This is the purpose of the meetings of conventions and bar associations—to provide for common legislation on marriage, divorce and other subjects.

Yet there are other matters that cannot be thus adjusted by common legislation or by forced construction of the Constitution. Such a simple matter is that of making the Presidential term six years, without re-eligibility. More serious problems arise as to the power of the nation to protect the lives and the treaty rights of citizens of foreign nations who come to our shores and are under local laws. California has lately made us think of this. And it is quite possible that the late experience of other nations, such as Switzerland, France and Great Britain, in their constitutions, may

suggest more radical improvements still. It is to be kept in mind that our Constitution is not final. It was good for its time, when the States were suspicious of each other and had separate interests. Amendments thus far have been by specified recommendations of Congress. The time may be nearer than we have thought when we shall need a new national Constitutional Convention, which shall be at liberty to initiate its own broader reconstruction of our organic law.

The Mysterious Hittites

NEW light is now promised us on one of the most mysterious and fascinating problems of early history, that of the Hittite Empire, which covered a good part of Asia Minor and Syria at the time of Egypt's greatest glory, of the efflorescence of the Mycenean culture of which we get a glimpse in the Homeric poems, and of the middle Babylonian and early Assyrian empires. David's amour with the wife of a Hittite soldier gives us one of the most striking stories in the Old Testament, and is usually believed to have given rise to the tenderest expression of penitence in all religious literature. While Egyptian and Assyrian and Jewish records tell of the Hittites, their own records had perished, and it is only lately that we have found their scattered and brief hieroglyphic remains, still undeciphered or slowly yielding to much profitless labor.

But the Germans, who have pretty nearly exhausted fruitful classical learning, are now more eager than any other people to seek new fields of exploration, and the *Vorderasialische Gesellschaft* has sent Dr. H. Winckler to Asia Minor to make careful excavations in Hittite centers, and his results are surprising and most hopeful. They are likely to open a new field for investigation in a most important period of history, which is closely related to the early Greek culture.

The campaign of excavation just reported is the second which Dr. Winckler has carried on at Boghaz-keui, about 125 miles east of Angora. It is a well-known site, and the processions of gods figured on the walls of rock were made known long ago by Texier and very lately have been published by Humann and Puchstein. A year ago Winckler unearthed monuments in the triple-walled city which proved it to be a center of Hittite culture, but this year's campaign proves it to be its chief center from which the Hittite land received its name.

Dr. Winckler has found a number of complete and broken tablets in both the Hittite language and the Babylonian, the latter of which can be easily read. They show that the Babylonian was the language of foreign correspondence. A copy of a letter was found addresst to the King of Egypt. But more surprising was a fragment of the treaty between the Hittite King and the Egyptian Rameses II, the full text of which in hieroglyphic characters is engraved on the walls of Karnak. Here we have a copy in Babylonian characters, and the name of the Hittite King, given as *Hatti-sira* at Karnak, is here given as *Hattu-sil*, because Egyptian had no letter l; and his father is *Mur-sil*, in place of the Egyptian *Maura-sir*. Now the name Mur-sil is the Greek *Myrsilos*, a King of Lesbos.

Besides this tablet were half a dozen others a foot square with the text of treaties, or agreements, with other unknown districts in Asia Minor. But one district, that of Kiswatna, was known, as it occurs in the treaty with Rameses II. Its King addresses his over-lord Hattu-sil as "The Sun."

But the most interesting and important discoveries were those of about twenty very large tablets in the Hittite language, each containing several hundred lines of text, besides some two thousand smaller fragments. These contain, in part, correspondence with vassal states, and such familiar names as Carchemish and Arzawa occur. For the decipherment of the Hittite it is of the greatest value that these tablets are written in the Babylonian character, but the language is Hittite. Already it appears that the surrounding lands looked to the Hittite capital as possessing rather a religious than a political supremacy. Among them are mentioned the lands of Mitani, Komana, Egypt and Cyprus. The documents can so far be made out as to show that they are not

all political, but include worship, incantations, lists of houses, owned by women as well as men, which throws an interesting light on the condition of women in the early Orient.

The great amount of new texts found gives every reason to hope that these writings in a Babylonian script will supply the key to the language, and then those other inscriptions in the purely Hittite hieroglyphic may come to be read satisfactorily, and we shall probably get much new light on the early history of a great people who had past utterly out of memory, but who not only had a great part to serve in mediating between the Babylonian and Assyrian culture and that of Greece, but who also added elements of their own, which we are just now beginning to discover. We cannot guess what treasures the spade will yet discover carefully preserved under ground in many ancient lands. Just now we are surprised to hear of the acquisition of an old manuscript in the lost Nubian language, which is likely to prove the key to certain old Egyptian monuments, which no scholar could translate; and from Central Asia there are brought to India buried literary treasures which give a new language and which are spoken of as being as startling as those of Sir Henry Rawlinson. This may be an exaggeration; but all this points to a great increment of knowledge as to the origin of civilization and the elements out of which have come our boasted culture; while out of Cyprus, the palace of Minos gives us yet another source of Greek civilization; and the buried papyri of Oxyrhynchus offer us forgotten early Christian gospels and the works of famous Greek poets and historians. Nothing new can surprise us. Anything is possible.

South Carolina's Assisted Immigrants

The absurdity of the law which forbids the admission to our ports of any immigrant who has a job engaged, and does not have to hunt one, is illustrated by the decision of the Secretary of Commerce and Labor that the prohibitions of the contract labor law do not apply if the contract is made by a State. Thus South Carolina wants foreign immigrants for the various industries of the State, and has appointed a department for the purpose, with a commissioner at its head. He engaged some five hundred immigrants of whom a majority were Belgian mill operatives, wanted for factories in the State, and paid their passage over. If the corporations had done this directly the immigrants would have been excluded, but because the State did the same thing as their agent, and for them, it is allowed. So a State can evade a federal law, and these mill operatives, when they have paid up their passage money, can, if desired, be moved to Massachusetts and there made to compete as "scabs" with labor unions. We make no objection to South Carolina importing laborers, if their rights are protected, but we do not see why the State should have special privilege to act as agent for corporations.

As to Pap for Babes

In a late editorial we spoke briefly of certain modern ways of education of children. That editorial gave occasion to a letter from a mother of unusual discrimination, who has been watching the training of her bright little daughter in a New England public school. She says:

I am hopeless on the subject of my children's education under present conditions. I knew my seven year old girl has a good head and likes to learn. She said somewhat wistfully yesterday: "We haven't had any lessons this week—just singing and rehearsing and playing we are cooks and banging on tin pans. Mother, I hate to bang on a tin pan in school time." They have taken several days for a little play. A few weeks ago they took several days for Teachers' Institute. Every time it rains, even lightly, the bell rings "No school," and the children play out of doors—mine do. They have no books of their own, they do not learn a lesson out of a book; they accept a "suggestion" for "number work" from a blackboard. They have reached the simplified spelling without Presidential aid. Every few moments they change their occupation and "rest their minds"—rest from *what* heaven only knows. I contend that the old way was for better in regard to books. A child owned a school book—took pride in it and the book itself became endeared to him because of his struggle over it. The dirty books the children bring home now go into all sorts of homes. There is a sense of stability and responsibility that comes from having a definite lesson in one's own book and being held to account for book and lesson. They make no use of a child's greatest asset—his *young* memory. At this early age a child may not understand everything, but his memory is better than it will ever be again and it should be put to work. They do not *learn* the

multiplication tables and therefore they stumble constantly as they progress in "number work," which does not keep them at "more" and "less" until they know it. They do not even known the word subtraction. They make a few figures a little more—make them a little less—take a part of them and do nothing thoroly. Then geography—"Mother, teacher says, 'Please find me a picture of a volcano.'" "Mother, teacher says, 'Write me out what's a plain.'"

I had an interesting experience a few weeks ago. I took my little third-grade girl down to New Jersey and entered her temporarily in the school there. I found the school run on a sensible basis. My little girl came home with a good, stiff lesson to learn out of a book, a page of "free examples in arithmetic" (of which she had barely heard before) to do, and after the accomplishment of definite tasks she had a sense of proud satisfaction. Her lessons "from there to there" were thoroly learned, with my help; for in the third grade they were far in advance of our feeble little New Englanders. The child learned more in two weeks there than in half a term at home. The school board in ——— comprises a number of sensible, *elderly,* intelligent men who believe that children are not little frosted cakes to be kept under glass. I do not want children forced or overworked. I was not, but I knew three times as much at seven as my girl knows.

This testimony, which might be indefinitely extended, we commend to those whom it concerns.

Mr. Bryce

No Englishman will be more welcome as British Ambassador than the Right Honorable James Bryce. He will not be a bit the less welcome from the fact that he carries no title of nobility, and that, like Mr. Gladstone, he has refused a peerage. He comes simply as a man like us of American citizenship, standing on his record of work done. He is sixty-eight years old, was Regius Professor of Civil Law at Oxford from 1870 to 1893, and has since been Member of Parliament, president of the Board of Trade, and has held many offices, of which the latest and perhaps most important is that of Chief Secretary for Ireland in the present Liberal Cabinet. It is a very responsible post which he leaves to come to Washington. But it is important that Great Britain should have one of her ablest men here; and as Under Secretary of State for Foreign Affairs in 1886 Mr. Bryce had experience in diplomacy. From his visits to this country and his very valuable book, "The American Commonwealth," he has endeared himself to our people, and we shall be glad to receive one who is not only a friend of America, but who is a distinguished scholar and writer in various fields. We have been in the habit of sending our ablest men of culture and fame to the British Court, and we are more than pleased to receive such a one in return.

It is nothing remarkable that the President should have said to Mr. Storer or to Monseigneur O'Connell, or to any one else, that he hoped Archbishop Ireland would be made a Cardinal. It is somewhat less agreeable that he should, as the correspondence seems to show, have told them that he had no objection to their telling the Pope so, for it was not discreet. But considerably less pleasant is it to learn that the Archbishop himself was in correspondence on the subject and apparently seeking the honor. But it is not really surprising. Such ambition for honor is to be expected in a Church, whether Catholic or Methodist, that has valuable offices and honors to bestow; for ecclesiastical patronage begets ecclesiastical politics and office-seeking. It is not the man John Ireland whom one objects to, for we admire him; but the system which almost forbids the self-abnegation of *Nolo episcopari.* He could easily feel that it would be well for the Church for him to be made Cardinal.

While our English brethren—linguistic scholars excepted—stand aghast at the profanity of touching the sacred spelling of Stormonth, we observe a strange *tendenz* among them toward Germanism in the composition of words. Here is, in a book published by Longmans which we pick up, the neologism *insofar,* which is nothing but *insofern* Englished. We fear it will creep into our American printing offices, just as *anyone* and *someone* have, which are bad because the last element in the vicious compound has not lost its own accent, as *body* has in *somebody* and *anybody,* which are quite different in meaning and accent from *some body* and *any body.*

Information is sent to us that the statement is absolutely incorrect, which we accepted on public report, that Mr. J. P. Morgan was compelled to pay a heavy duty on an ancient illuminated manuscript of the Bible and the writ consigning John Bunyan to prison.

Insurance

The Proposed Life Insurance Union

FOLLOWING invitations issued by Paul Morton, president of the Equitable Life Assurance Society, to more than thirty representatives of life insurance companies and to which there was a very general response, a meeting was held on Friday last at the Waldorf-Astoria at which the following companies were represented as stated below:

Ætna Life, Hartford, Conn., J. L. English, president; Berkshire Life, Pittsfield, Mass., James W. Hull, president; Connecticut General Life, Hartford, Conn., Robert W. Huntington, jr., president; Equitable Life, New York, Paul Morton, president, and Gage E. Tarbell and George T. Wilson, vice-presidents; Fidelity Mutual Life, Philadelphia, L. G. Fouse, president; Germania Life, New York, Cornelius Doremus, president; Home Life, New York, George E. Ide, president; Manhattan Life, New York, N. W. Torrey, secretary; Maryland Life, Baltimore, W. H. Blackford, president; Massachusetts Mutual Life, Springfield, Mass., John Hall, president; Metropolitan Life, New York, Harvey Fiske, first vice-president, and Fourth Vice-President Ayres; Michigan Mutual Life, Detroit, A. F. Moorse, secretary; Mutual Life, New York, C. A. Peabody, president; National Life, Montpelier, Vt., Joseph A. De Boer, president, and James T. Phelps, vice-president; New England Mutual of Boston, Alfred W. Foster, vice-president; New York Life, Darwin P. Kingsley and Thomas R. A. Buckner, vice-presidents; Provident Life and Trust Company, Philadelphia, Asa Wing, president, and Joseph Ashbrook, vice-president; Provident Savings, New York, John W. Vrooman, secretary; Prudential Life of Newark, Dr. Leslie D. Ward, vice-president; Security Mutual Life of Binghamton, N. Y., Charles M. Turner, president; State Mutual Life, Worcester, Mass., A. G. Bullock, president; Travellers' of Hartford, Conn., S. C. Dunham, president; Union Central Life, Cincinnati, Ohio, J. R. Clark, vice-president; United States Life, New York, Dr. J. P. Munn, president.

The opening of the session was marked by a discussion as to just what form the association should take. The consensus of opinion as crystalized was to the effect that the new association should stand for the promotion of the welfare of the policy holders, the reduction of expenses, the encouragement of uniformity and the use of proper means to induce beneficial legislation. The cheapening of the cost of life insurance to the public was another goal toward which the energies of the new organization are to be directed. Mr. Morton made it clear from the very start that what he had in contemplation was entire publicity. He proposed to insist in season and out of season that there should be no going back to the days of a former association, which was actually the forerunner of the pernicious "yellow dog" fund, the "House of Mirth" and other things similar, the legitimacy of which was so much questioned. He urged that the new organization's constitution be so framed as to prevent such abuses. With the appointment of a committee to draft a constitution with all this in view an adjournment was taken until next Friday. The new organization is admirable in plan and scope, and THE INDEPENDENT heartily approves of it.

New Insurance Company Formed to Take Over the Surplus Line of the New York Life

PRELIMINARY announcement was made last week of the formation of the North American Life Insurance Company, under the laws of New Jersey, with a capital of $200,000 and a surplus, paid in, of $150,000, with headquarters at Trenton, N. J. This announcement was particularly interesting because of the close relations that will exist between the new company and the New York Life. It was generally taken to mean that the plan of the New York Life to provide for the transfer of its excess business under the operation of the new insurance law had assumed definite and tangible shape. By incorporating in New Jersey the North American will escape the Armstrong law. The official staff of the new company will be drawn entirely from the ranks of the New York Life.

The new company will not be ready to write actual insurance before February 1st. Its business will not be extended into New York State meanwhile.

The insurance election closed under the new law on December 18th. Both sides claim victory but the actual figures will wait on the counting of the votes which may cover a period of two months or more. Legal proceedings may extend this period. The various companies will meanwhile continue to do business at the old stands and acceptable risks will easily procure insurance.

Financial

The Year's Crops

FINAL estimates of the recent harvest were published last week by the Department of Agriculture. It will be noticed that the crop of corn largely exceeds even the recent preliminary estimate of the Department, which surprised those who had thought that the reports of condition and acreage pointed to much lower figures. This enormous crop of nearly 3,000,000,000 bushels surpasses by far any previous yield. Only once (in 1901, when 748,460,318 bushels were harvested) have we had a greater crop of wheat. The average for the four years ending with 1905 was 2,485,000,000 for corn and 638,000,000 for wheat. In the following table the figures represent bushels, except in the case of hay, where they indicate tons, and of tobacco, where the yield is measured by pounds:

	1906.	1905.
Corn	2,927,416,091	2,707,993,940
Wheat	735,260,970	692,979,489
Oats	964,904,522	953,216,197
Barley	178,916,484	136,651,020
Rye	33,374,833	27,616,045
Buckwheat	14,641,937	14,585,082
Flaxseed	25,576,146	28,477,753
Rice	17,854,768	12,933,436
Potatoes	308,038,382	260,741,294
Hay	57,145,959	60,531,611
Tobacco	682,428,530	633,033,719

The farm value of these crops is estimated to be $3,426,227,073.

Trolley and Steam

BY the purchase of the companies operating trolley lines in and about Providence, and of the trolley lines and lighting and power plants owned by the Connecticut Railway and Lighting Company and the United Gas Improvement Company, absolute control of electric transportation near its lines has been obtained by the New York, New Haven & Hartford Railroad Company. This transaction leaves no trolleys between New York and Boston to be desired by the purchasing corporation. The latter now owns about 1,350 miles of trolley. It has practically all the trolley lines of Connecticut and Rhode Island, and owns all such lines that are parallel to its main line between Boston and New York. In no other part of the country has such a merger of electric and steam railways taken place. The main purpose of the steam company has been to prevent competition in the rich territory between the two cities. This purpose appears now to have been accomplished.

Our List of Bond Prices

IN our introduction to the comprehensive statement as to the prices of bonds in 1906 (which filled fifteen pages in our Christmas number), we ought to have said that the statement was a *special advance edition* of the new publication, *"Income Values and Quotation Record Bonds,"* prepared exclusively for us by Mr. Francis E. Fitch, the publisher of the New York Stock Exchange Lists. We secured the privilege of publishing this statement in advance (the first regular number is to appear January 1st), because we knew that it would be of value not only to bankers and others directly and professionally interested in finance, but also to men engaged in general business and to all who occasionally invest in bond securities.

....The Western Union Telegraph Company's surplus on September 30th was $16,959,535. In the company's report for the current quarter it is estimated that after the payment of the usual dividend (which has been declared) the surplus at the end of the year will be $17,009,824.

....James Quinlan, treasurer, was last week elected president of the Greenwich Savings Bank in place of John Harsen Rhoades, deceased. Mr. Quinlan, born in 1847 in New York and educated at the Brooklyn Polytechnic, entered the service of the Chemical Bank when sixteen. In 1870 he became first teller of the Greenwich Savings Bank, and for nearly thirty-seven years has been in the service of that institution. The Greenwich Savings Bank was organized in 1833 and has 92,000 accounts. Its deposits are $58,000,000 and its surplus is over $5,000,000. The new treasurer is Charles M. Dutcher, formerly assistant treasurer.

130 FULTON STREET, NEW YORK

Artistic designing — tempered by practical knowledge — stimulated by a policy of producing only the best — this has made "Standard" Porcelain Enameled Ware the acknowledged ideal.

"Standard" Ware is a necessity made a luxury, by added convenience and beauty; a luxury made an economy, by lasting service.

Its symmetrical simplicity and white purity hold distinct decorative charm, and afford a constant joy in possession and use, yet underneath its smooth always-white surface are the long-service-giving qualities of iron.

"Standard" Ware is the cheapest — always, because double service is included at its moderate price, yet in artistic beauty, convenience and modernness it is distinctly the model for all emulation.

Our Book "MODERN BATHROOMS" tells you how to plan, buy and arrange your bathroom and illustrates many beautiful and inexpensive rooms, showing the cost of each fixture in detail, together with many hints on decoration, tiling, etc. It is the most complete and beautiful booklet on the subject and contains 100 pages. THE ABOVE FIXTURES Design P. 34 can be purchased from any plumber at a cost approximating $260.75 — not counting freight, labor or piping.

CAUTION: Every piece of "Standard" Ware bears our "Standard" "Green and Gold" guarantee label, and has our trade-mark "Standard" cast on the outside. Unless the label and trade-mark are on the fixture it is not "Standard" Ware. Refuse substitutes — they are all inferior and will cost you more in the end. The word "Standard" is stamped on all of our nickeled brass fittings; specify them and see that you get the genuine trimmings with your bath and lavatory, etc.

THE installation of "Standard" porcelain enameled fixtures is an investment paying sure dividends of health and cleanliness.

The non-porous composition of "Standard" porcelain enameled ware renders it impervious to dirt and microbes. The immaculate cleanliness — the pure white lustre and beauty of design — lifts the "Standard" bathroom from the level of a mere necessity to that of a luxurious possession.

The cost of "Standard" Ware is moderate and its installation economical. Its porcelain surface is as dainty as china, but strong as the iron it covers.

Our Book "MODERN BATHROOMS" tells you how to plan, buy and arrange your bathroom and illustrates many beautiful and inexpensive rooms, showing the cost of each fixture in detail, together with many hints on decoration, tiling etc. It is the most complete and beautiful booklet on the subject and contains 100 pages. THE ABOVE FIXTURES Design P. 38 can be purchased from any plumber at a cost approximating $70 — not counting freight, labor or piping.

CAUTION: Every piece of "Standard" Ware bears our "Standard" "Green and Gold" guarantee label, and has our trade-mark "Standard" cast on the outside. Unless the label and trade-mark are on the fixture it is not "Standard" Ware. Refuse substitutes — they are all inferior and will cost you more in the end.
